DR. BYRON WILLIAMS: I told counsel for the Board that I would try and be done by 3:30. For the record, it's 3:32, so I apologize sincerely for my failures, among many. But thank you, MPI panel. And subject to the undertakings which exist -- I think exclusively relating to Mercers and asset liabilities, that closes our cross-examination of this panel.

THE CHAIRPERSON: Thank you. I'll ask the panel if they have any questions. M-hm.

Okay. I -- I have a few questions. Kristen, we had the chart we talked about yesterday, I can't remember, Exhibit 1. There's the -- I'm sorry, not -- there was the other one that showed the --

687

there was reference to the fact that BC and SGI had the MCT 100. I don't know what table that is. It doesn't really matter. Sorry?

MR. LUKE JOHNSTON: That would -- I think you're referencing the -- our opening presentation graph from MPI. Is that...

THE CHAIRPERSON: That one, yes. Sorry. In terms of this slide, Mr. Johnston, I take it you would agree that there are different factors in different jurisdictions?

MR. LUKE JOHNSTON: Absolutely.

THE CHAIRPERSON: And that each jurisdiction is looking for certainty and stability in it's in -- in -- in rates and financial stability?

MR. LUKE JOHNSTON: Agreed.

THE CHAIRPERSON: So when I look at this in terms of ICBC having an MCT 100, that's simply one (1) factor that may relate to the characteristics of the situation in BC.

MR. LUKE JOHNSTON: I think all we're stating here is that all the other public insurers have at least moved to this as a basis for their target. How they got there specifically, I don't know all the details, some of it's likely confidential.

The -- the -- the hundred percent MCT

688

itself, it does have the benefit stated on here that it is not subject to the same influences that maybe our methodology is subject to, right.

So there's a lot of the assumption making and best estimates and -- and should inflation be in or out, right, which can lead to very -- as you know, very long discussions here and all kinds of models and stuff being built.

And at least in recent years it's created quite a bit of volatility in some of the targets. We don't want that either.

THE CHAIRPERSON: Right. But, for example, B.C. is a tort province.

MR. LUKE JOHNSTON: Yes.

THE CHAIRPERSON: The risk factors may be higher in a tort province versus a non-tort province.

MR. LUKE JOHNSTON: I agree with that, but I will say that, as I mentioned earlier, most of the risk factors, particular with assets, if we hold less risky assets we'll have a lower dollar number.

And then, in terms of the claims, the liabilities that we hold, I would characterize MPI's as some of the most risky that -- in the industry, just because of the length and we talked about forty

689

(40) years of payments and the -- the -- you know, the likelihood of being right on that is -- is low, is very risky.

So ICBC I would say has more of a short-term forecasting risk in the sense that MPI's coverages and product is clearly defined. We have no fault injury benefits. The escalate -- the rapid escalation of severity on the injury side isn't -- doesn't exist in as great an extent as it would in B.C.

So, in terms of that risk I would say ours is definitely lower. That's one (1) of the benefits of the program. But we're looking more -- I would call that -- that pricing risk for -- for ICBC, as opposed to what's on the balance sheet.

MR. MARK GIESBRECHT: If I can just add to that and emphasize some of the points that Mr. Johnson raised.

While the tort system exists in B.C., which typically you would expect could lead to additional costs in the settlement of claims, what it does allow for the insurance companies there is to settle those claims and not carry long-term liabilities, which we have due to our PIPP program here in Manitoba.

690

So while we hope and we expect that we will have lower overall costs, which will allow us to deliver better value to Manitobans, the fact does remain that we do have long-term liabilities which does result in -- in that reserving risk, which is really the focus of our whole ALM program, to ensure that we have adequate funds in the proper matching of those liabilities.

THE CHAIRPERSON: Have either of you two (2) gentlemen spoken to people at ICBC in the past year?

MR. MARK GIESBRECHT: I have not.

THE CHAIRPERSON: Okay.

MR. LUKE JOHNSTON: I have had some conversations with -- it's Bill Carpenter, nothing in great depth, but obviously we had to share some data, but not in terms of, you know, how they count -- what their capital requirement or things like that.

THE CHAIRPERSON: Mr. Johnston, do you know the financial position of ICBC versus MPI at this time?

MR. LUKE JOHNSTON: In detail, no, but ICBC not -- apparently not very good position, yes.

THE CHAIRPERSON: Do you know what the current rate request is to the BC Utilities

691

Commission?

MR. LUKE JOHNSTON: My understanding, it's large. And -- and just to be clear, MPI is not, you know, through this graph objecting to any of the regulatory processes or design we have in this province. We think that we have a great product and a -- and a great regulatory process, right.

So we definitely are not wanting a tort environment or, you know, a hearing every four (4) years, like SGI or something like that. There's a lot of significant benefits here -- here in Manitoba, and that's likely why we have some of the lowest rates and most stable rates, at least, on -- on average.

We're -- we're really just focusing on what's the right capital so we can -- to us that's one of the remaining pieces to really make this a strong public insurance program.

THE CHAIRPERSON: Thank you. Those are my questions. I'm just wondering if we have any update on what the next step is in terms of the next panel and when we will start.

Mr. Scarfone...?

MR. STEVE SCARFONE: I understand that the next panel is ready to present beginning tomorrow morning at 9:00 a.m.

692

And -- but I do have a couple of questions on redirect, Mr. Chairperson, if the ---

THE CHAIRPERSON: Yes, I'm sorry, Mr. Scarfone, that was negligent on my part. Please, go ahead.

MR. STEVE SCARFONE: So then my expectation is after the redirect we would reconvene tomorrow with the next panel.

THE CHAIRPERSON: Good, thank you. Yes. Please proceed.

CONTINUED RE-DIRECT EXAMINATION BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Thank you. And it's just a couple of questions, Mr. Johnston.

Mr. Johnston, you may recall counsel for the Public Utilities Board, Ms. McCandless, was asking some questions this morning concerning the rate stabilization reserve and a rebuild provision for the reserve, as compared against the -- the proposed capital maintenance provision.

Do you recall those questions?

MR. LUKE JOHNSTON: In general, yes.

MR. STEVE SCARFONE: Okay, so a couple of follow-up questions on that, Mr. Johnston.

Would a rebuilding fee, and just to be

693

clear, MPIC, are they requesting a rebuilding fee for the RSR in this year's application?

MR. LUKE JOHNSTON: We're not requesting a capital maintenance fee, but I understand that other parties may see that as rebuilding. But that -- based on how we've define -- defined it, we're simply maintaining our capitalization, not rebuilding -- or not making it stronger.

MR. STEVE SCARFONE: Yes, and so that was my question. With the rebuild provision, if -- if adopted, would that prevent a decrease in the MCT percentage that the capital maintenance provision is designed to do?

MR. LUKE JOHNSTON: Just making sure I understand. So, capital maintenance would just keep the MCT level the same. A rebuild would make the MCT ratio increase. So we're not asking for that. We're asking just to keep it the same.

Was that your question?

MR. STEVE SCARFONE: Well, it kind of does. But if -- if there was a rebuild provision incorporated into the rate application, it could still be that the capital position, as it concerns MCT, could fall from fiscal year 2018/'19 to 2019/'20.

Maybe this is an easier way to approach

694

it.

Could you, following up on the questions of Ms. McCandless, explain the difference between a capital maintenance provision and a rebuilding fee for the RSR?

MR. LUKE JOHNSTON: Okay, so capital maintenance, again, we've -- we've used the MCT as the basis for determining maintenance. We think that's appropriate.

So, for the capital maintenance we're saying, again, that how -- the capital position that the policyholders come into the year with should be the same when they leave that policy year. And we do that by maintaining the MCT at the same level.

If we went into a situation where the Corporation had just suffered major losses, and so let's hypothetical say the -- the MCT ratio had fallen to 10 percent, step 1 would be to figure out the capital maintenance provision to keep the MCT at 10 percent and then step 2 would be to look at the capital management plan to decide how quickly and by how much we would want to rebuild capital per the rules of that -- of that plan.

So, if our lower target was 30 percent, we might have a rule that we want to get there 1/5 of

695

the time, to the lower or to the middle or something like that. We -- we haven't come forward, to PUB with those rules yet, but that would be -- that would be the idea.

MR. STEVE SCARFONE: Okay. Thank you. So I think -- I think you answered my question in that a rebuild provision, if I understand it, would increase the amount that's been held in reserve.

MR. LUKE JOHNSTON: It would -- the rebuild would -- the intent would be to increase the amount in dollar terms and the MCT ratio.

MR. STEVE SCARFONE: Thank you. Can we have pro forma 3 pulled up again, please. Thank you.

I understand from your evidence this morning, again in response to some questions for Ms. McCandless, Mr. Johnston, that at the bottom of that graphic we see the MCT ratio staying the same beginning 2019 forecast.

Do you see that, sir?

MR. LUKE JOHNSTON: I do.

MR. STEVEN SCARFONE: Could you explain what you meant by the inclusion of a 2.1 percent capital maintenance provision into those projections? Is that a one (1) time -- is that a one

696

(1) time inclusion?
MR. LUKE JOHNSTON: Yes. So, if -- if approved the rates will have the 2.1 percent provision built into that rate.
The -- if those rates -- what we're saying here, if those rates were to stay in -- in force, we would not expect to ask for any additional amount, but we would still report to the Board that -- that there is, in fact, the 2.1 percent provision in the rate, to make -- so that everyone is aware of that. But no -- at this time no additional amount is being implied by this forecast over the forecast period.
MR. STEVE SCARFONE: Okay, thank you. And next, Kristen, if you can pull up the -- the Board Order from June, which was the compliance Order that Ms. McCandless asked questions of Mr. Johnston on.

(BRIEF PAUSE)

MR. STEVE SCARFONE: Thank you. If you can scroll down to the -- the -- the -- the issues list please. Thank you, right there.
Mr. Johnston, do you recall the questions put to you concerning the financial forecast

697

in the justification of the naive methodology being used this year?
MR. LUKE JOHNSTON: In general, yes.
MR. STEVE SCARFONE: Yes. Sir, in the Corporation's estimation is the use of the naive forecast for the 2019 GRA a best estimate?
MR. LUKE JOHNSTON: In my opinion and the Corporation's, it is.
MR. STEVE SCARFONE: And last year, sir, you will agree that the Corporation again used -- made use of the naive forecast in its forecasting?
MR. LUKE JOHNSTON: Yes, it did. And just -- just to clarify my original response. There were -- the nave forecast made at this time was our best estimate. When thing -- things happen over the next six (6) months, it's hard for me, I can't say, you know, the best estimate I made six (6) months ago was the same.
So we have new information. But we're suggesting to use that information and maintain a naive forecast as a best estimate. But if you asked me on February 28, 2018 if this was my best estimate, it would be, yes.
MR. STEVE SCARFONE: Thank you. And for the 2018 General Rate Application, Mr. Johnston,

698

do you recall if the use of the naive forecast was your best estimate?
MR. LUKE JOHNSTON: Yes, it was.
MR. STEVE SCARFONE: And that, sir, would have been a departure from the 2017 GRA, when MPIC took the position that the 50-50 forecast was the best estimate. Is that -- is that fair?
MR. LUKE JOHNSTON: That's correct. And just to be very clear here, MPI is struggling with this issue just as much as everyone else in the room.
As I mentioned on -- I don't know if it was yesterday, the higher interest rates mean -- likely mean rate decreases for us and the -- that obviously would be a good result for MPI, government, et cetera. We would all like interest rates to rise, but we've seen, you know, the consequences of making those kind of bold assumptions.
In some of those earlier years, when interest rates were just on the downturn for, kind of in these unprecedented territory, MPI was trying to find a balance between, you know, rapid mean reversion and increases versus the enormous amount of risk that -- the pricing risk that would occur if you were to use those assumptions.
So we've all seen how that as turned

699

out now, and again, we continue to try to find ways to minimize that risk as much as possible.
Compliance filing was one (1) of the ideas put forward. But at least in terms of the recent history, it's hard to justify using the bank's forecast as a -- as a best estimate. Naive has performed the best in -- in all of the comparisons that I've seen.
MR. MARK GIESBRECHT: If I could just elaborate and add to that response as well.
We know over the past number of years that we've had a lot of assumptions made on interest rates, and together the people in this room have done their best to, you know, estimate what those -- those changes will be. And what we've seen based on experience has -- we had banked on rising interest rates. We essentially swung from the fences and we struck out.
And what that meant was serious losses for the Basic line of business. And if not for available funds and other non-Basic lines of bus -- lines of business, it would have meant significant rate increases for ratepayers.
So I think a valid way or another way of looking at the decision around interest rate

700

forecasting is -- or put it -- put it this way, we have heard a lot about economic experts and all -- all these different terminologies and fancy terms that get thrown around.

The one (1) thing that is clear is that nobody can tell the future with any kind of consistency or with any kind of accuracy. And I think one (1) way to look at it may be: What is the outcome?

And so the outcome of banking on interest rates rising and not getting it right means that we are going to have a shortfall and we would have to go back to ratepayers in subsequent years and say, we need a rate increase because we didn't have the rates we thought materialized.

Alternatively, if we let rates materialize, and rates do rise, we can go back to ratepayers and -- and tell them you will have a -- a rate decrease.

And so, our position is that we do not want to go to ratepayers and ask for a significant increase. We would rather be in a position to allow a decrease.

THE CHAIRPERSON: If I could just ask Mr. Giesbrecht. Mr. Giesbrecht, it sounds like the

701

test is being changed from best estimate to least downside.

Would that be a fair comment? Best estimate connotes, here's the best estimate of what we think is going to happen based on rates rising, and least downside is, if we're really conservative, essentially, we -- we've got it -- and rates go up we haven't -- we've got the upside. We don't have much of a down -- we've reduced -- we've reduced our downside.

MR. MARK GIESBRECHT: Yes. I -- I can't speak to prior years and what was determined as a best estimate. Looking at the data and the support that we have, I think it's clear that a non-biased, naive forecast in the -- the -- the recent years is clearly the best estimate.

However, I agree with you. From -- from my perspective, it makes sense that you want to temper that with conservatism with the intent of managing stable and predictable rates.

MR. LUKE JOHNSTON: Just -- just some history here. I'm getting to be the old guy here.

The -- yeah -- so Ms. Reichert started here, I believe six (6) years ago, give or take. And one (1) of the big, initial tasks that -- that she had

702

was to build a new financial model, and that was one (1) of the things that the Public Utility Board also wanted to see for DCAT modeling and scenario testing.

One (1) of the big pieces of that was putting in modeling of interest rates and prior to that, every forecast MPI had ever made was naive interest rates, because we didn't even have the capability to do the modeling of liabilities and bonds, like right. So we would put in the forecasted new yields -- of -- of new money that we invested in. But the liabilities and assets themselves did not change.

When we put that functionality in, all of a sudden there -- you know, and we went into this weird interest rate environment, all of a sudden you saw these dramatic swings in the financial statements created by the interest rates, which is good information to have.

But at the same time, it -- especially in the low interest rate environment, it showed everybody here, well, that 3 percent rate increase all of a sudden is zero if we just use the bank forecast and all is good, right?

And I think that's got us into a little bit of -- of trouble, doing that. I can tell you that

703

the period of time when we weren't doing that, we enjoyed quite a long stretch of almost no rate changes or any, you know, significant amounts. We had about a fifteen (15) or sixteen (16) year stretch where we had one -- one (1) rate increase, not that the two (2) are perfectly correlated, but I believe is was a much safer assumption than making what are really pretty big bets in some of those bank forecasts.

They -- we were talking 200 plus basis points in some of those bank forecasts a few years ago. That's a pretty big -- pretty big bet.

CONTINUED BY MR. STAVE SCARFONE:

MR. STEVE SCARFONE: Thank you. Just one (1) more question for you, Mr. Johnston, then I have a couple questions for Mr. Bunston on investments and I think we're done, subject to my co-counsel's comments.

Kristen, if we could have put on the screen the -- the benchmarking comparisons in the investment returns. I think it's PUB-186, Information Request from the -- from the Board.

(BRIEF PAUSE)

704

MR. STEVE SCARFONE: Keep going down. No, I apologize. So this is on the efficient frontiers. But I can just, without pulling up the document and following up on Mr. Chairperson's comments about the uniqueness of the jurisdictions that have public auto insurer, Mr. Johnston, can you make any comments to the extent that SGI shows better returns than MPIC does in its investment portfolio, what, if any -- what if anything might contribute, in your view, to the difference that can be seen in those investment returns?

MR. LUKE JOHNSTON: Not professing to be an expert on SGI, but in terms of the matching of -- they're very similar in that they have a lot of long-term claim liabilities.

They use a -- a bucketing -- fixed income bucketing approach based on the -- the timing of the cash flows for the first twenty (20) years, and then beyond twenty (20) years the liabilities are matched to growth assets.

Obviously, growth assets are going to have a higher long, long run return, but also are going to have more risk. So, if MPI had followed such -- such an approach as that for this ALM study, you would've seen probably an opposite effect as the one I

705

described earlier in terms of the capital targets. A hundred percent MCT amount would've went up, but our return would've also increased.

So we would have probably came here and said that, okay, the rate indication is a little bit lower than we're asking for, but we need a bigger RSR.

Our direction from our Board and the government is that volatility is not -- we're not seeking greater volatility. So that's -- type of strategy wouldn't be pursued.

The other major concern that I'm sure SGI has with their strategy is this idea of matching equities to their claim liabilities. It's going to be somewhat of a concern when we flip over to IFRS. We don't know the exact mechanics of that yet, but if they're required to use a -- a discount rate based on a -- kind of a hypothetical bond portfolio, their liabilities are going to have to go up in value. The valuation on those is going to increase substantially, so that -- or at least that would be my expectation.

So we will not have that issue, because we're essentially already matched to the bonds. We might get a little bit of a hit, but anyways, does that answer your question?

MR. MARK GIESBRECHT: I'll just --

706

MR. LUKE JOHNSTON: Yeah.

MR. MARK GIESBRECHT: -- I'll just add quickly, if I could. When comparing against SGI, it's important to consider that we do have a different risk tolerance, and it was -- we'll walk through a number of Board Orders about interest rate risk management. And so SGI has taken a different approach where they match a -- a portion of their liabilities with equities, which would have a different effect in terms of interest rate risk management.

And so, given the approach in Manitoba in our risk tolerance, it's not a fair comparison to look at the peer portfolio returns without doing a -- a -- an adjustment that we have provided terms of re-weighting the portfolio to see if we had the same risk appetite, and same tolerance, then it's a fair comparison.

But just the -- the topline returns, given the -- the composition of their portfolio, is not a fair comparison, given our approach to interest rate risk management.

MR. LUKE JOHNSTON: I'm -- I'm just -- I -- I can tell you internally, and Mr. Bunston can attest to this, our Board wants no interest rate deviations of any kind, so we report every single

707

month the impact of the asset liability matching. If we are out by even a few million, we would explain every change in great detail. The goal is for that -- that zero all the time, and to have a -- it hasn't always been, but we're continuing to get, I guess, pushed by our Board to do everything we can to neutralize that risk to as close to zero as possible.

MR. STEVE SCARFONE: Thank you, gentlemen, and I -- I appreciate we're running close on time, here, but one (1) follow-up question to that, then, gentlemen.

Can you explain why it is that a -- a corporation that is better capitalized then a -- a -- another would be in a better position to invest in growth assets to obtain better yields?

MR. LUKE JOHNSTON: Well, I guess step -- step 1 of that is -- is actually really just a mathematical exercise. And what I mean by that is, if MPI had more money in the RSR, we would invest -- automatically invest more in growth assets in the segmented portfolio, because that portfolio has grow -- a percentage of growth assets. So we'd automatically have a higher allocation to -- to the stock market.

But obviously, if a company has --

708

right or wrong, if a company has a lower MCT target, say, of 30 percent, and they're operating around that range, I would expect that they would have to be more cautious than a company with a hundred percent MCT. I don't see how you can draw that -- that parallel.

The -- the implications of even minor -- - not -- we're not even talking about 1:40 deviations, just bad winters, you know, change in interest rates, and all of a sudden, as you've seen by some of our results, you could lose 50 or $60 million, no problem. You're immediately into asking ratepayers for rebuilding fees, and -- and things like that.

Our -- so -- so our -- our recent experience and our -- and our capital levels obviously drive our risk appetite decisions. I'm not saying that that's -- that's wrong, but hopefully, the Board can appreciate why MPI has a lower risk appetite, based on all the, you know, every -- considering everything in -- in its -- in the environment it operates.

MR. GLENN BUNSTON: Maybe I could just add to that. You know, I mean, obviously, growth assets are more volatile than fixed-income assets. So equities, real estate, and infrastructure in -- in our case, which we defined as growth assets, and so the --

709

the downside is much larger, when you invest in growth assets. And so you would require a larger capital reserve to protect you from the -- the downside scenario when you have significant allocation of growth assets.

So the reserves do matter, and you need reserves -- significant reserves to protect you from the downside that is associated with investing in those more volatile asset classes.

MR. STEVE SCARFONE: Thank you, Mr. Bunston. So one (1) quick question for you, Mr. Bunston.

Kristen, if we can have the invest -- the Appendix 17 from the investments chapter, Attachment B, slide 21, please.

(BRIEF PAUSE)

MR. STEVE SCARFONE: Thank you. Mr. Bunston, we heard Mr. Makarchuk describe these portfolios, Basic 1, Basic 2, 3, and 4 as what he described as the -- as the front runners. You'll -- you'll note...

(BRIEF PAUSE)

710

MR. STEVE SCARFONE: Yes. That's fine. Yes. Perhaps scroll down -- or scroll up one (1) page. There we go. Thank you.

We know that MPIC selected the Basic 3. Mr. Bunston, are you able to -- to just provide some insight into why that particular portfolio was selected over Basic 4, which it seems also have some favourable characteristics?

MR. GLENN BUNSTON: Yes, I can. So yesterday, when we talked about this, we talked about Basic 3 relative to Basic 4, the different -- the major difference being that Basic 4 has a -- an allocation of private debt, while Basic 3 does not.

The strategy -- the interest rate risk management strategy for our Basic claims portfolio was duration management and duration matching of our fixed-income portfolio relative to our claims liabilities, and including an allocation of private debt would complicate that duration matching strategy in that the -- the duration of the private debt is -- is harder to control and harder to predict with the precision that we would need.

So there was that factor, and then secondly, yesterday we -- we looked at the risk and return metrics for Basic 3 relative to Basic 4. And I

711

-- the -- the one (1) comparison that we didn't talk about yesterday was comparing Basic 3 relative to the current mix. And there was question about the -- the risk associated with Basic 3, and whether that was acceptable.

We looked at the -- the 97.5 percent VaR, or value at risk measure, for Basic 3, which is $45 million, which means that we could lose $45 million in -- in one (1) year, with 97.5 percent confidence. But for the current portfolio, the -- the value at risk number was $147 million. So, yes, the $45 million -- the VaR risk estimate for Basic 3 is acceptable to us. It is a significant reduction of over a hundred million dollars from the current portfolio.

So it's not as low as Basic 4, but there were reasons that we did not want to invest in private debt, and so that's why we did not select Basic 4.

MR. STEVE SCARFONE: Thank you, Mr. Bunston. And Mr. Guerra, I understand you have one (1) or two (2) questions.

RE-DIRECT EXAMINATION BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: Yes. Thank you.

712

I just have a couple of questions. The first one relates to comparisons between MPI and SGI. We've heard some discussion today and earlier about SGI's use of a capital maintenance provision, and whether or not the -- the style of capital maintenance provision used by SGI is -- is appropriate for -- for use by MPI.

And I'd like further clarification on -- on MPI's position as to why MPI's own CMP is preferred over the SGI model.

MR. LUKE JOHNSTON: Yeah. So -- so our main -- what we see as the main benefit of -- of the MPI model is that it just focuses on the -- the one (1) year, and what is needed to maintain capital in that one (1) -- in one (1) -- that one (1) fiscal policy year, I guess we can call it. That, in our view, makes sense in terms of what's a fair contribution to capital maintenance for a group of policyholders.

If we start looking at the five (5) year forecast period, there are some questions on, you know, what if your risk profile changes, and -- or if there's things in the forecast that could cause swings up and down. To -- in -- in my view, that would be more difficult to normalize over a five (5) year

713

outlook period than it would be to understand the most recent year that you're going in, and at least providing evidence here that the Cap -- Capital Maintenance Provision for that particular fiscal year is approp -- is appropriate.

So not to say the SGI model is -- is bad. I think they're trying to maybe smooth out some of the volatility in it, but we -- we think the focus should be on the -- the test year for -- for that maintenance provision.

MR. ANTHONY GUERRA: Thank you. And one (1) further question. You were asked from the panel this afternoon about comparing the need for a 100 percent MC -- sorry, MCT ratio. There was reference made to the other public insurers, and some private insurers, suggesting that they all have at least 100 percent MCT ratios.

But my understanding, correct me if I'm wrong, is MPI isn't asking for a -- a hundred percent MCT ratio in this year's GRA. Is that correct?

MR. LUKE JOHNSTON: That's correct. The -- we're really just trying to get the -- the idea across, here, that some of these comments, or even reading the newspaper, suggests that MPI is taking people's money away and doing unreasonable things to

714

the public.

We consider our capital targets to be on the lower end, but by no means do we consider them excessive in -- in any way. So we've applied for the -- what equates to about a 35 percent to 85 percent range. That's -- that -- that is what we applied for. We want to maintain within that range.

But this characterization that, you know, MPI's asking for, you know, too much in its rainy day fund, or anything like that, really doesn't check out with a comparison to really any other insurer in the world. We would continue to be on the low end, based on that -- the methodology that -- that we've collaboratively developed, here.

MR. ANTHONY GUERRA: Okay. Thank you. Those are my questions.

THE CHAIRPERSON: Thank you. So we'll adjourn this morning and reconvene at 9:00 -- sorry. We'll adjourn right now and reconvene at 9:00 a.m. tomorrow morning. Thank you.

--- Upon adjourning at 4:11 p.m.

18	MPI to provide an update on the progress the Corporation has made with respect to its DSR public consultation	826

--- Upon commencing at 9:06 a.m.

THE CHAIRPERSON: Good morning, everyone. Ms. McCandless...?

MS. KATHLEEN MCCANDLESS: Good morning, Mr. Chair and members of the panel. Today we have the MPI Panel Number 3, which is revenue, expenses and ratemaking. We expect that this panel will be up and down today. I'm not sure if we'll be taking the full day or not, and then tomorrow we will not be sitting and we'll be returning on Monday for the IT panel. Thank you.

THE CHAIRPERSON: Thank you. Mr. Scarfone...?

MR. STEVE SCARFONE: Good morning, Mr. Chair, yes?

THE CHAIRPERSON: I'm just wondering before we start I believe that everybody's been sworn in except Ms. Campbell?

MR. STEVE SCARFONE: That's correct.

THE CHAIRPERSON: Okay, so if I could have the secretary swear in Ms. Campbell, please.

MR. STEVE SCARFONE: And Mr. Guerra will be conducting the direct examination this morning.

THE CHAIRPERSON: Thank you.

MR. ANTHONY GUERRA: Thank you.

THE CHAIRPERSON: Mr. Guerra...?

EXAMINATION-IN-CHIEF BY MR. ANTHONY GUERRA

MR. ANTHONY GUERRA: Thank you, Mr. Chair and good morning. Just for -- for purposes of introductions, we can state that this panel comprised -- is comprised rather, Mr. Johnston, our chief actuary and VP of Product and Risk Management, Mr. Giesbrecht, our VP of Finance and our Chief Financial Officer, and as -- as is indicated, Ms. Campbell, who is I understand our Corporate Controller.

Also in the back row this morning, Mr. Dean Dunstone, the Assistant Manager of Reinsurance and Forecasting, John Krupinski, the manager of budgeting and Tai Phoa, the Manager of Pricing.

Ms. Campbell, since we've already heard

about the credentials of the other two (2) members of the front row, I'd like to get into a bit of a review of your credentials.

Can you provide us with your background specifically with respect to your education.

MS. CYNTHIA CAMPBELL: Thank you. My education, I am a chartered professional accountant with a CA as my legacy designation. I have a Masters in Accountancy and a Bachelor of Commerce Honours.

MR. ANTHONY GUERRA: And when did you obtain your chartered accountant profession designation?

MS. CYNTHIA CAMPBELL: 1998.

MR. ANTHONY GUERRA: And I understand that you are employed with MPI?

MS. CYNTHIA CAMPBELL: Yes, I am.

MR. ANTHONY GUERRA: How long have you been employed with MPI for?

MS. CYNTHIA CAMPBELL: Just over six (6) years.

MR. ANTHONY GUERRA: And where were you employed before then?

MS. CYNTHIA CAMPBELL: I was with the Canadian Wheat Board.

MR. ANTHONY GUERRA: And what were you

doing with the Canadian Wheat Board?
MS. CYNTHIA CAMPBELL: I was the corporate controller at the Canadian Wheat Board.
MR. ANTHONY GUERRA: And I understand that you're the corporate controller for MPI?
MS. CYNTHIA CAMPBELL: Yes, I am.
MR. ANTHONY GUERRA: Have you held that position for the entire six (6) years you've been employed?
MS. CYNTHIA CAMPBELL: Yes, I have.
MR. ANTHONY GUERRA: And can you tell me of some of your responsibilities as the corporate controller.
MS. CYNTHIA CAMPBELL: It's typical controllership functions. I've got the payroll team, accounts payable, accounts receivable, banking, investment accounting, financial reporting, budgeting and purchasing and I've got a financial operations team as well. So essentially, anything corporate accounting.
MR. ANTHONY GUERRA: Okay. And can you tell me if you were involved with the preparation, review, or other functions related to the preparation of the General Rate Application?
MS. CYNTHIA CAMPBELL: I was.

MR. ANTHONY GUERRA: And what was your role?
MS. CYNTHIA CAMPBELL: Primarily reviewer of the expense section and I also composed and reviewed some of the Information Requests, both Round 1 and Round 2.
MR. ANTHONY GUERRA: And I understand that your panel has prepared a presentation on the topics of revenues, expenses and ratemaking; is that correct?
MS. CYNTHIA CAMPBELL: That is correct.
MR. ANTHONY GUERRA: And my understanding is that Mr. Giesbrecht will be providing the -- the presentation on the issue of revenues; is that correct, Mr. Giesbrecht?
MR. MARK GIESBRECHT: Yes.
MR. ANTHONY GUERRA: And, Ms. Campbell, you'll be providing the presentation on the issue of expenses; is that correct?
MS. CYNTHIA CAMPBELL: That's correct.
MR. ANTHONY GUERRA: And, Mr. Johnston, you'll be providing the presentation on the issue of ratemaking; is that correct?
MR. LUKE JOHNSTON: That's correct.

MR. ANTHONY GUERRA: And just to confirm that the presentations that you will be provided (sic) will be adopted as your evidence; is that fair to say?
MR. LUKE JOHNSTON: Yes, it will.
MR. ANTHONY GUERRA: Yes...?
MR. MARK GIESBRECHT: Yes, is.
MR. ANTHONY GUERRA: Ms. Campbell...?
MS. CYNTHIA CAMPBELL: Yes.
MR. ANTHONY GUERRA: Okay. Previously we've circulated the -- the presentations to the members of the panel, to PUB counsel and advisors and to the Intervenors and advisors. We just would like to make sure that this is marked as an exhibit.
So, if we could have this marked as Exhibit MPI Number 25, please.
MR. KURT SIMONSEN: Thank you very much.

--- EXHIBIT NO. MPI-25: Presentations re MPI Panel No.3

CONTINUED BY MR. ANTHONY GUERRA:
MR. ANTHONY GUERRA: And so with that said, I'll ask Mr. Giesbrecht to -- to begin his

presentation on the issue of revenues.
MR. MARK GIESBRECHT: Yes, thank you and good morning. So you have before you the agenda and as was mentioned, I will speak to revenues, Ms. Campbell will take us through expenses and then finally Mr. Johnston will take us through ratemaking.
These topics fit together nicely in that expenses are key input into our ratemaking methodology which then, ultimately, will flow into the end results in our revenues. As we know for this year MPI has applied for a .01 breakeven cost of policies.
This a good news story when compared to prior years and -- and a prior year rate application in that it's quite a bit lower on an AAP basis. And contributing to this nearly 0 percent rate ask are favourable expenses which contribute to about minus 1.5 percent for its component of the breakeven rate indication which we'll -- we'll hear from later.
If you can go back one (1) side to key issues, please. So a couple of key issues that we'll be discussing, firstly, we'll see under revenues there -- these really pertain not so much to this year's rate application, but more so to future years, but we will get a little bit into these, both service fees and the driver safety rating.

729

Within expenses, salaries and benefits is always a -- a critical item and we'll hear about that as it does represent over half of our total operating expenses. Also in 2017/2018, we did have a write-down of -- and some impairments and so we'll have some discussion on that.

And also with rate -- as it respects to ratemaking, there's no material changes to the methodology. However, we have heard about the CMP as it was discussed yesterday we won't speak at length. However, it will be brought up again briefly.

MR. ANTHONY GUERRA: And, Mr. Giesbrecht, just to confirm, because you're talking about the issue of revenues, just to be clear for everyone, is MPI seeking any changes to service fees or to the driver safety rating in this year's GRA?

MR. MARK GIESBRECHT: Not in this year's application, no.

MR. ANTHONY GUERRA: Thank you.

MR. MARK GIESBRECHT: Okay. On this slide before you you see a breakdown of the composition of MPI's revenues as it pertains to Basic and as we can see, the lion share represented is from motor vehicle premiums, about 93 percent while driver premium represent about 5 percent, and other fees and

730

service fees are 2 percent. So, that gives you a bit of grounding in terms of what makes up total revenues within the Basic line of business.

On to the next slide we'll see the factors that make up our premiums. They've made up of a couple of components; firstly, the rate, volume, upgrade and other factors, and we'll discuss what those -- what those items all are.

Starting with rate for the 2019/'20 application, we know we have a rate change of 2.2 percent requested. This is comprised of a 0.1 cost of breakeven policies and a 2.1 net -- net capital minutes provision. The 0.1 increase to the breakeven cost of policies indicates that the cost of claims and operating expenses has been kept in check, while the 2.1 percent cost of the CMP is necessary to ensure we do not deplete capitals -- that the capital position of Basic.

Volume. Changes in volume essentially are additions to new vehicles on the road. As we have more people come to the province of Manitoba we anticipate to have more vehicles on the road and we forecasted this at about 1.5 percent, which is in line with -- with the recent trending.

Upgrade. The upgrade components

731

forecasted in this application at 2.39 percent. Upgrade factors include changes to makes and models, insurance uses and different territories. And so what we see here is as people are buying and selling vehicles and purchasing new vehicles, there's a shift in the characteristics. So, for example, with an upgrade there could be the average age of the vehicle or for seeing a shift to purchase of SUVs versus small compact cars, that will make a change in the overall makeup and that will contribute to upgrades.

Under the other section we have anti-theft discounts and fleet rebates. The anti-theft discounts, they make about a $2.4 million rebate to customers for this application year. As this program is now in runoff, this will then diminish over the -- the future years going forward.

And fleet rebates, owners of ten (10) or more vehicles may qualify for a fleet rebate. Customers will then either be charged a surcharge or a rebate, depending on their actual claims experience. Historically, rebates have hovered around $16 million, surcharge is at $2 million for a net rebate of about $14 million and this represents about an average discount of 21 percent to fleet owners.

Now moving along, we see how this flows

732

into our pro formas and this is a schedule that shows our earned premiums by the different types. You'll see on the top line for motor vehicles we have anticipated $1.05 billion for this application year. Again, this represents about 93 percent of total revenues. And motor vehicle premiums are forecasted to grow 6.4 percent in this application year, compared to 7.4 percent last year; and that's based on all the factors we talked about in terms of upgrade, the rate, the rebates and -- and so on.

And this year will mark the first year that on an earned basis, we anticipate to be -- to eclipse the $1 billion mark for earned premiums. So, it's a bit of a milestone year for the Basic line of business.

Moving along to revenues from driver premiums. So a couple components here and this chart will depict the base fee of the $45 driver licensing charge, as well as the DSR impacts and surcharges. And this is on a net basis because on the merit and demerit side, there are either rebates or surcharges. On a net basis, what we see is about 43 percent of the total amount comes from those surcharges. And so this equates about $30 million of the total -- of about 70 million, and this serves as a really strong incentive

733

to improve driver behaviour which has been shown to lead to safer roads for Manitobans.

On to the next slide, we will see how that equates to dollars. As I mentioned for driver premiums for this application year at $69.8 million. And you'll notice a bit of a jump in the trend in the '20/'19 budget year and a '20/'20 year and that stems from the changes that were ordered last year as we had changes to the DSR's scale, that was the equivalent to a 1.8 percent rate increase. We're seeing that filter in and after that change will flow through the financials that is then expected to slow down to about a 2 to 3 percent change thereafter.

So you do see a bit of jump in the year over your numbers there, and then it comes down to a more steady growth.

On to reinsurance. Reinsurance, simply put, is insurance for insurance companies. There are two (2) primary reasons for reinsurance; one is to mitigate risk and to transfer that risk and, by default, that will help to reduce volatility. Secondly, it's used to manage capital requirements.

So our current strategy and our current program has two (2) main components: One is on catastrophic risk, where we have a limit of $15

734

million. And a good example of this was in June we had a large hail event. We incurred about $30 million in losses; that was on one (1) single event. And so that triggered reinsurance where we recaptured about $14 million.

Also, we do reinsure large casualty events where we retain the first $5 million. And an example of this could be if one of our insured drivers were to, for example, hit a train, cause a large derailment, you know, a spill that may need to be cleaned up or loss of cargo, those kind of thing, there could be a large loss and we will cap that loss at $5 million.

Moving along, we'll now see how that flows into our financials. So the reinsurance seated. This is a charge. There is a charge to transfer this risk and we see here that it's forecasted to remain in around $11 or $12 million based on new changes to the program and in line with our -- our growth and our program.

Now, these numbers could change if we were to change the structure of the program. And as we heard on the opening day from our CEO and his opening remarks, we are reviewing different options; one (1) could be an aggregate cover which would allow

735

us to, you know, cap our losses in terms of, if we had a number of small storms that were to exceed a certain dollar amount, say, $15 million rather than one (1) large storm it would enable us to -- to manage those losses and -- and help their volatility. So that -- that will be one (1) thing that we'll be looking at that. That is not part of this application. It's not part of these numbers, but to just let you know that these numbers could change if we were to employ a strategy of that nature.

Next we have service fees and other revenues. So we do have various revenue sources that come from transactions and services offered to customers. These include financing and interest costs, late charges and NSF fees, driver's education course fees and other various transaction costs.

Over 50 percent of these fees come from interest revenues. The majority of the fees have not been changed or updated in the last twenty (20) years. So we have completed a jurisdictional scan to -- to evaluate those fees and compare against other areas.

Since this initial re -- review was completed, MPI's been working with government to assess the appropriateness of both the MPI and the government side of these fees. The results of the

736

analysis is currently sitting with government for consideration.

Now, in the next slide we'll see the dollar amounts associated with our service fees, and we can see that it -- that it ranges from a value of about 22.8 million and forecasted to grow to $31.6 million. Again, there are no changes or -- no changes in this application as it pertains to service fees.

The growth here is -- is all based on organic growth and the main driver continues to be from interest on premium financing.

So with that, I'll pass it over to Ms. Campbell to discuss expenses.

MS. CYNTHIA CAMPBELL: Thank you, Mr. Giesbrecht. Thank you for the opportunity to speak today. I'm going to take a couple of minutes and outline the operating expense forecast for the 2019 rate application and how it does not impact the rate request being made.

Prudent fiscal management is a priority at MPI. There is over a 2 percent reduction in operating expenses for the rate years compared to the prior year rate application and, as a result, the operating expenses do not factor into the increase in this application. So, prudent fiscal management is a

737

prominent activity and mindset at MPI. Expenses continue to be actively managed and they do not factor into any rate increase.

Annually, MPI needs to factor in contractually negotiated economic and merit increases associated to salaries. Generally, that's around 3.5 to 4.5 percent per annum. Also coming into play is the general price increases relating to inflation. Those are also contractually bound and they're generally around the CPI rate, which is around 2 percent. So despite these unavoidable increases, the Corporation is still showing normal operating expenses decreasing by approximately 1 percent for the '19/'20 year from the '18/'19 point.

The Corporation continues to seek ways to reduce expenses and one (1) of these is via building expenses. And we do that by either deferring expenses through synergies or avoidance. Other examples include reducing sponsorships or changing our fleet management.

Prudent fiscal management is also being demonstrated through approximately a fifty (50) FTE reduction of FTEs being expected over the next several years due to normal operating decreases and efficiencies related to improvement initiatives.

738

Basic operating expenses do not factor into the 0.1 percent rate increase outside -- which is outside of the CMP increase. In fact, the operating expenses, essentially, hold flat through 2022 to 2023.

On the next slide to illustrate MPI's prudent fiscal management, we've outlined operating expenses compared to net premiums earned. As you can see, this ratio decreases from 25.6 percent in 2014/'15 to 20.4 percent in 2019/'20. This is a 5.2 percent decrease in Basic operating expenses when compared to the growth in net premiums earned.

And if you're wondering about the small blip in '17'18, that has to do with the writeoff -- or the impairments of some of our projects. So there was an increase in expenses in '17/'18.

On slide 17 if you refer to the yellow highlighted line entitled "Total Basic Allocated Corporate Expenses", when you compare the current year rate application to the forecast from the prior year, we've demonstrated that Basic expenses have again reduced. The reduction is $5.1 million or 2.2 percent from the prior year application.

This decrease is due to continued concentration on expense management, as well as improvement initiative reductions. These reductions

739

are despite contractual expense increases embedded into our business.

On the next slide, this chart shows the forecasted basic expenses over the next several years in comparison to the previous two (2) rate applications.

MPI is continually finding new ways to reduce and manage expenses. The expense forecast reductions are part of a solution not driving any rate increases and it continues to demonstrate our corporate prudent fiscal management.

On slide 19, the largest single operating expense category that MPI deals with is compensation which is -- comprises approximately 58 percent of all corporate operating expenses. As I've -- as I've stated, MPI is faced with Manito -- mandatory annual increases relating to economic and merit compensation increases from our negotiated union contract.

Both the economic and the merit compensation increases combined range over 3 percent per annum, however, we've been able to keep our Basic salaries' expected growth on an annual average of 2.9 percent from 2018/'19 through to '20/'21.

Another factor that -- another factor

740

in compensation is overtime. That has reduced significantly over the last several years and it is expected to remain flat through the forecast. If we change to the next slide.

This shows that despite the 1.75 percent merit increase assumption, combined with the economic increase of upwards of 2 percent that the Corporation has managed compensation increases at below these levels. And again, one (1) of the tactics we've used is to reduce the FTEs by re-purposing our FTE need or by reducing it.

On the next slide -- another factor impacting 2019 application compared to the 2018 application are the project impairments which were recognized in '17/'18. We have listed the impairments on this slide and although they mainly impact the '17/'18 year, they will impact future years.

The decision to impair these projects was based on applied principles and standard internal practices. We determine whether a writeoff is applicable based on whether or not there is an absence of future value, or whether or not the work was not eligible to be capitalized such as research work or software investigation.

And as I noted, although the

741

impairments had primarily a negative impact on the '17/'18 year, they also have an offsetting favourable impact for '18/'19 and beyond by reducing the forecasted amortization expense.

THE CHAIRPERSON: Ms. Campbell, I'm sorry to interrupt you.

MS. CYNTHIA CAMPBELL: That's okay.

THE CHAIRPERSON: Impairment -- is that an analogy -- sorry -- the same as termination?

MS. CYNTHIA CAMPBELL: Impairments --

THE CHAIRPERSON: It's the first time I have ever heard this term used in this context.

MS. CYNTHIA CAMPBELL: Okay. An impairment of deferred development costs is actually probably more of an accounting terminology.

THE CHAIRPERSON: Okay.

MS. CYNTHIA CAMPBELL: So, if it's impaired, we've spent the money, we've put it -- cap -- we've capitalized it on our books and what we're saying is, it doesn't have future value -- so --

THE CHAIRPERSON: Okay. So you -- so you, you've terminated the project then, I would assume?

MS. CYNTHIA CAMPBELL: The majority were terminated projects. Some of them were deemed

742

not to be eligible for capitalization because they didn't have future value.

THE CHAIRPERSON: Okay.

MS. CYNTHIA CAMPBELL: Or they were research in nature. There were some that -- there was initial research done. It was capitalized because we thought we were going to take that approach and so it was base work but when we took a look at the final solution we were going to take on the project, it was deemed that it was research work and it wasn't the -- the approach we were going to take it, so, it didn't have the future value.

THE CHAIRPERSON: So this would be the accounting consequence of a decision made?

MS. CYNTHIA CAMPBELL: Correct.

THE CHAIRPERSON: Okay. Thank you. I've never the term used before in this context. Thank you.

MS. CYNTHIA CAMPBELL: My apologies for using --

THE CHAIRPERSON: No, no not your apology. It's something new. Thank you.

MS. CYNTHIA CAMPBELL: So overall what I was going to say was MPI has maintained effective control over expenses and the expense forecast is not

743

a primary driver in any rate increase in the 2019 rate application. I will now turn it over to Mr. Johnston who will be talking about ratemaking.

MR. LUKE JOHNSTON: Thank you. Okay. Basic ratemaking. The first bullet there talks about -- that our ratemaking methodology is -- is -- we consider it very -- proven and stable over time. We recognize that we recently moved to accepted actuarial practice, but as we said at the time, the majority of the ratemaking methodology did not change, just some of the calculations particular -- in particular, moving from a financial statement view to a typical accepted actuarial practice change, but the methodology has remained fairly consistent over time.

In the second points, you heard a little bit about some of the expense savings and obviously those translate into the rates so you'll -- expenses per vehicle are down by half a percent and claim costs growth was inflationary, essentially off -- offset by our natural upgrade.

So on the third bullet point, as you know, those are the -- the three (3) components of the re-ask 0.1 AAP rate indication and capital maintenance provision of 2.1.

Not -- I don't have a lot to say on

744

this chart. It's our major class rate indications. The -- the four (4) biggest major classes on -- on -- the vehicles on the road all have rate indications which I would say are relatively close to the overall average of around 2 percent. And you can see private passenger vehicles are currently paying an average of about $1138 with the other classes are shown there, motorcycles for example, about $822.

Oh, I'm sorry. If -- as mentioned, these numbers in the table don't mean that every vehicle in that class has the same rate change, we look at everything affecting vehicle rates each year -- insurance use, territory, things that -- rate group and -- and we update those -- those rating factors.

In this application, about 70 percent of vehicles have a rate change that's less than a $50 increase or less than a 5 percent increase, so, a rate decrease or -- or a moderate increase.

This table is a bit comp -- complicated looking, but I think it's a good one. What -- what is in the table here is the cost per vehicle of each of the items on -- on the left side. So we -- we men -- I mentioned before that really everything that flows through Basic financial statements likely has an impact on rates.

745

So I'll just use an example here, operating expenses in last year's GRA we were charging the equivalent of $63.44 per vehicle unit to cover the Corporation's operating expenses. Based on this year's updated forecast that's $62.48 for a 1.5 percent decrease.

So in this application we've talked about expense reductions. They flow-through obviously into the -- into the rate setting.

As everyone knows, claims would be the biggest portion of that -- those costs for -- and then -- then this year the -- the average cost of claims per vehicle unit increased by about 2 percent.

CONTINUED BY MR. ANTHONY GUERRA

MR. ANTHONY GUERRA: Mr. Johnston, just before you leave this slide, I wanted to ask you just about the -- the vehicle upgrade factor because, as been mentioned and is seen quite clearly on the slide, it -- it represents at 2.1 percent decrease in the rate ask for -- for breakeven rates.

Can you explain a little bit more about how that upgrade factor applies in this case?

MR. LUKE JOHNSTON: Yes. So, Mr. Giesbrecht spoke about it a little bit. When we set

746

rates every year, the intent is that not only on an overall basis our rates breakeven, but within each of the vehicle classes and -- and -- and really every rate we're hoping is breakeven. So it's not going to be perfect, but that's -- that's the idea.

If -- if a individual has a older vehicle, and has a eight hundred dollar ($800) premium, and they sell it, and buy a -- a new car and then obviously, they have a fourteen hundred dollar ($1,400) premium, that would be a premium upgrade for us. We -- we didn't change our rate -- anyone's rate, but they -- they pay more rate because they had a -- they got a new car. In the -- in the same way, their claim costs are also going to be higher, because our rates are supposed to be correct, and they're supposed to be correct if an eight hundred dollar ($800) car and a fourteen hundred dollar ($1,400) car.

So if -- in -- in this case, basically, what it's saying is claims costs have gone up by about 2 percent and our upgrade factor is about 2 percent. And really, there is a completely offsetting impact between people moving to a higher rate of vehicles and the cost of those vehicles. So really -- it's really a great news story, but really, we've kind of held the same -- we've held the line on collision costs

747

basically at the -- at the rate of the upgrade.

Okay. So that's a little bit hard to follow, but -- but that's -- that's good news. If -- if the cost of repairs, and -- and such are increasing faster than the national upgrade, we would need a rate increase unless we had big savings on the expense side, okay.

On the -- where it says "impact of discounting," all of the costs in the top half the table are discounted, and that's that discount rate interest rates that we talk about here all the time. What is the rate -- rate to discount the -- the cash flows? So in this year's application, the updated interest rates for discounting are lower than they were assumed in the 2018 application, so you see the effect of the -- the discounting is less eighty-one dollars ($81) this year, instead of ninety-three (93).

And so in total, all items that feed into the rate have -- have resulted in a need for a 2.3 percent increase in the required rate. However, 2.1 percent of that occurs naturally through the vehicle upgrades. We don't need to ask for that. It -- it -- we already expect that it's happening.

And then on the second last line from the bottom, there's something that says, "DSR discount

748

for vehicle for hire vehicles." This is the special taxi adjustment that we made. So for taxis, we recognized that there was a new vehicle for hire program being implemented. Obviously, MPI didn't know exactly how their market share was going to be impacted by that -- by that -- by that change.

I can tell you today, there's about as many passenger vehicle for hire vehicles on the road as there are taxis. So there's about four hundred (400) or so taxis, and there is about four hundred-ish (400) non-taxi vehicle for hire on the road. So that taxi group is very likely having a -- maybe losing some business.

But the way we accounted for that in our rating for year 1 was to say, Okay, taxi -- the taxi group can get vehicle -- DSR premium discounts. We expect that to cost us about a million dollars, and we took that off of the -- the rate indications. So that's the point -- the point-one (.1) reduction. Okay. Those items added up -- or how you get the break-even indication of 0.1 percent.

Okay. And so that -- pretty much everything I've just said is -- has been re-summarized on -- on this -- this slide. The three (3) items I just mentioned gives the point-one (.1). And then MPI

749

has requested a 2.1 percent Capital Maintenance Provision for the reasons that we talked about yesterday.

Okay, I'll summarize what -- what the -- the panel has talked about. Revenues continue to be stable, consistent volume, upgrade, and forecasted using the break-even rate-making methodology. On the expense side, we're -- we're definitely seeing some favourable changes to the forecast, and as I just showed you, those flow-through directly into rate-making to the benefit of ratepayers.

And then beyond the rating period, the expectation right now is to -- to attempt to hold the expenses relatively flat.

And then lastly, on the rate-making side, a very proven process, AAP rate indication basically at almost zero, 0.1 percent, and then MPI is asking, as you know, for the Capital Maintenance Provision of two point one (2.1), to bring the total indication to 2.2 percent.

MR. ANTHONY GUERRA: Thank you, Mr. Johnston. And just to confirm again, because I think it bears repeating, for this GRA, expenses are not being factored into -- or not -- are not a part of our request for additional amounts for the break-even

750

rate. Is that correct?

MR. LUKE JOHNSTON: Act -- actually quite -- quite the opposite. Yeah. Mr. Oakes actually went through a whole series of things that were -- I considered good news yesterday, when he was talking about the -- the rates. Really, my response to that would be that many of those things are in the rates, and that's why you're seeing them on -- expense ratios go down.

If we did not do those, you can reverse -- do the reverse math and -- and figure out what the rate indication would have been if not for those expense reductions. So that is -- that is good news.

MR. ANTHONY GUERRA: Sorry. That may be misspoken, or -- or maybe just speaking over each other. But what we're -- what you're saying at the day, though, is that expenses -- the 0.1 percent rate ask for Basic is not the result of additional expenses?

MR. LUKE JOHNSTON: What I'm saying, actually, is that we would have a bigger rate increase if not for expenses reducing that rate increase.

MR. ANTHONY GUERRA: Okay, correct. I think -- I think that's -- that's consistent. All right. Thank you. And I have no further questions.

751

So, subject to any questions you might have on cross-examination, thank you much for -- for your presentation this morning.

THE CHAIRPERSON: Thank you. Before we go to cross-examination, I just want to raise an issue so that we don't have it come up on Monday. On Monday, we have a panel dealing specifically with IT, on the impairment page, page 21, a lot of costs in relation to IT projects.

And I just -- I just want to ensure that everybody understands and counsel understands how we're going to be dealing with it, and which questions go where, because what I -- what I would really not like to see is, on Monday, when that panel is being cross-examined, the response is, well, you should have asked the panel -- the earlier panel the question.

So does everybody understand -- do counsel understand the sort of the scope of the cross-examination on this in terms of the costs and the numbers of the -- the programs here versus the questions that are going to be put to the panel on Monday? Because there may be some overlap, and I also don't want to have to bring back some people from this panel on Monday to ask -- answer those questions if we can avoid it.

752

MR. STEVE SCARFONE: Yes, absolutely, Mr. Chairperson. Indeed, you've identified a concern that Ms. Campbell raised with -- with counsel and MPI in our preparation for this application, because she recognized, as you have that there are number of expenses that she can speak to on a corporate -- on a corporate level, and is prepared to field the questions on that, but she will, to the extent that they involve information technology expertise to answer, she may be deferring some expense questions to the IT panel on Monday, but it would only be to the extent that she's unable to answer the technical aspects of those questions. And -- and that's an accurate representation of what we've game planned, then I -- we should make that clear for --

MR. MARK GIESBRECHT: Yeah. But if I -- if I can add, I -- I think we want to limit the discussion more to the -- the accounting of those transactions and how we came to the decision to impair or write down, not so much about the technical side of, you know, what the project entailed, and -- and, you know, maybe why were they not, you know, maybe deemed successful, like, those kind of questions. But the -- the accounting side, we can speak to today.

THE CHAIRPERSON: Right. And -- and

753

the -- the concern I had was -- and it was sort of in my earlier question -- a decision is made -- a decision may be made for a number of different reasons. There may be technical reasons, there may be financial reasons, which have accounting implications. I just -- what I -- what I want to do is ensure that we have a full cross-examination on all the issues related to that. So that's why I raised it. Mr. Williams...?

DR. BYRON WILLIAMS: I'll just say that we've certainly, even this morning, had some collegial --

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: -- discussions with MPI. Some questions that we might have asked today, we've deferred --

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: -- to next week, so I do expect there may be a -- some challenges. We're experimenting with the panel this year, so -- but I think there's been good faith efforts --

THE CHAIRPERSON: Yes. Though --

DR. BYRON WILLIAMS: -- by all parties.

THE CHAIRPERSON: -- I'm -- I'm sure

754

there is. I just want to -- I just wanted to, you know, I didn't know about the discussions between counsel, but I just wanted to sort of put on the record so we can avoid it, probably, and --

MS. KATHLEEN MCCANDLESS: And yes, just to add to that, Mr. Chair, not with Mr. Scarfone, but I did have discussion this morning with Mr. Crozier about cross-examination on IT issues. So it's my intention to table the majority of the IT questions for next week's panel. 0

My understanding is that -- and it's difficult to tease apart often some of the questions from the accounting side versus the more decision-making, or technical side, but I believe that the panel will be prepared to answer the questions that we've prepared in that regard.

MR. STEVE SCARFONE: And, Mr. Chair, just -- I've just confirmed with Ms. Campbell that she is available and prepared to be in the back row on Monday --

THE CHAIRPERSON: Okay.

MR. STEVE SCARFONE: -- to the extent that there's questions that we don't want the IT panel to say, well, you should have asked expenses.

THE CHAIRPERSON: Yes. Well, quite

755

frankly, if they did, I'd ask for Ms. Campbell to be brought forward, so.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: Having said all that, Ms. McCandless...?

CROSS-EXAMINATION BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Yes. Thank you. So when it comes to my cross-examination, just to give you a roadmap of where I intend to go this morning, and I likely will be finished by the lunch break, I'm going to start with operating expenses and capital expenditures, and I will have some questions about the Q2 financial report as well. Then I will have some questions about rate-making for you, Mr. Johnston, and some questions about the driver safety rating update and the service fee review as well.

So I expect my first series of questions would be directed to Ms. Campbell. Kristen, could you please pull up EXP figure 10. And this table shows the corporate normal operating expenses for -- on the left-hand side of the table for 2017/'18 actual results, and then through the forecast period, yes?

MS. CYNTHIA CAMPBELL: Correct.

756

That's what it shows.

MS. KATHLEEN MCCANDLESS: And if we look to line 28 of the table, we see that the actual -- - the total corporate expenses for 2017/'18 were $278.6 million, yes?

MS. CYNTHIA CAMPBELL: Sorry, did you to -- say two seventy-six (276)?

MS. KATHLEEN MCCANDLESS: Yes.

MS. CYNTHIA CAMPBELL: Yes, two seventy-six point-six (276.6).

MS. KATHLEEN MCCANDLESS: And then if we look to the top of the table there, under the compensation, so line items 1 to 6 -- or 1 to 5, pardon me, we see that -- so $165.5 million of those costs are essentially payroll costs, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And so, according to my math, that's roughly 59 percent of the total spend yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And then at line 28, again, to the bottom of the table for 2018/'19 forecast budget, we see total expenses of $297.6 million, yes?

MS. CYNTHIA CAMPBELL: Correct, two

ninety-seven point-six (297.6).
MS. KATHLEEN MCCANDLESS: And then up again to line 5, under 2018/'19, we have payroll costs of $174.9 million, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: And so according to my math again, that's approximately 58 percent of the total spend, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: And then just to confirm for the record, we have at the bottom of the table for 2019/'20, a forecast of total expenses for corporate of $293.2 million, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: Then if we go to figure EXP-32, and this is the cost allocation flowchart. So I understand this is the method by which the corporate expenses are allocated to Basic, yes?
MS. CYNTHIA CAMPBELL: Yes, it is.
MS. KATHLEEN MCCANDLESS: And we can see in the narrative below the graphic, there, if we scroll a little bit lower. Thank you. We see that of those $297.6 million in expenses for fiscal 2018/'19, that approximately $227.1 million is allocated to

Basic, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: And my understanding is that there have been no changes in the methodology that would materially change the allocation of costs from corporate to Basic as compared to last year?
MS. CYNTHIA CAMPBELL: Correct. There's been no material changes.
MS. KATHLEEN MCCANDLESS: Thank you. If we could go to figure EXP-37. Now this figure here represents the percentage of corporate normal operating expenses allocated to Basic for '27/'18 (sic) through to 2022/'23, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: And we see at line 1 that the expenses allocated to Basic are consistently around 76 percent, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: And forecasted to be 76.3 percent in 2018/'19, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: Thank you. And then to figure EXP-43, this table shows the Basic ongoing depreciation and amortization expenses, yes?

MS. CYNTHIA CAMPBELL: Yes, it does.
MS. KATHLEEN MCCANDLESS: And we see at line 43 for total that they increase from twenty-three point-five (23.5) -- pardon me -- they decrease from 23.5 million in 2018/'19, so at the top of the page, we would see 2018/'19 there. Perhaps we could just scroll quickly.
Thank you. And they are down to twenty point-nine (20.9) -- pardon me, twenty (20) point -- they're down from -- or up from twenty point-nine (20.9), pardon me, in 2017/'18, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: And then there's a decrease in 2019/'20 to 20.1 million, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: Thank you. With respect to the increase from 2017/'18 to 2018/'19, what does that relate to?
MS. CYNTHIA CAMPBELL: If you take a look to lines -- about 22 to 27, those are new projects that came on and started to depreciate in the '18/'19 year. So those are -- those are the adds for the current year, which would take it from twenty point-nine (20.9) to twenty-three point-five (23.5).
I would have to -- I'd have to get out

my calculator -- and I'm an accountant, I like that and actually add those up, but it should -- it should -- those -- those lines there should represent the change.
MS. KATHLEEN MCCANDLESS: And I'll accept your evidence that -- there subject to check. Thank you. At line 40, we see disaster recovery HR management system, and phase 1 and 2. So HR management system phase 1 and 2 are expected to be completed in 2018/'19, yes?
MS. CYNTHIA CAMPBELL: The amortization of the disaster recovery and the HR management system phase 1 and 2, the -- and -- as well as IT optimization will all finish in '18/'19, correct.
MS. KATHLEEN MCCANDLESS: And are these -- as far as you're aware or able to answer, are these projects still expected to be completed on time?
MS. CYNTHIA CAMPBELL: This -- can you go up to the top, sorry, so I can see the heading on this? This is the amortization expense. So these are finishing the amortization. So that means that their useful life, the five (5) years that we would have amortized them over, that is finishing.
So those projects were well and truly

761

done, so yes, the amortization will finish in '18/'19.
MS. KATHLEEN MCCANDLESS: Thank you. Now if we go to figure EXP-6, and this shows total corporate operating expenses. At line 6, we see that compensation is expected to increase by 4.9 percent in 2018/'19, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: And then as we heard this morning already, it's going to continue to increase to 2.9 percent for 2019/'20, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: And then for 2020/'21, we have two (2) point -- a 2.2 percent increase, yes?
MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: And it appears from the table that the largest increase would be in salaries at line 1 and benefits at line 3. Is that correct?
MS. CYNTHIA CAMPBELL: Those are the two biggest components of compensation, yes.
MS. KATHLEEN MCCANDLESS: Thank you. Now if we could go to figure EXP-11. Now in the bullet below the figure here, there is a narrative about step in scale increases, yes?

762

MS. CYNTHIA CAMPBELL: Yes.
MS. KATHLEEN MCCANDLESS: And I understand that MPI has used the step up scale increase at a forecasted rate of 1.75 percent under the assumption that 50 percent of the employees will receive -- and the economic increase will be 2 percent. Is that right?
MS. CYNTHIA CAMPBELL: So which year are you referring to for the 2 percent? For '18/'19? Yes. You're -- you're correct that for '18/'19, the economic increase is 2 percent, and the step in scale increase is one point seven-five (1.75), which is the 50 percent of the 3.5 percent mandated under our union contract. Correct.
MS. KATHLEEN MCCANDLESS: Thank you. So can you reconcile the forecasted increase of 4.9 percent that we just reviewed in the previous table with the figure here, and the forecasting assumptions of the 2.2 percent and the 1.75 percent?
MS. CYNTHIA CAMPBELL: So the economic negotiated increases, the steps in scale, and the -- as well as the economic one -- so the 2 percent and the one point seven-five (1.75), those will relate to the compensation salary line. Included in the benefit lines are items that can be actually larger than those

763

percentages, such as our pension. The pension expense is in there, post-retirement health benefits are in there, and so those depend on other factors. They depend on the aging of the population, and right now, I'm at a loss. There's about four (4) different factors that impact. It's an actuarial calculation. And so our expense can actually be greater than what the economic increase is.
So that is approximately 3 million of the $9 million increase. So that's a large percentage of it. If I were to get the math done, and I'll actually ask for the math to get done...

(BRIEF PAUSE)

MS. CYNTHIA CAMPBELL: So the salary increase line is about 4 percent, which is the 2 percent and one point seven-five (1.75). So it is slightly greater than that. We have also changed, for '18/'19, the compensation model that we're looking at internally. I'd have to take a look and see what percentage increase that may have contributed to it.
So the other is in '17/'18, we actually ran below budget on an FTE level to a extremely large extent. It was a corporate initiative in order to be

764

able to reach our -- our strategic initiative of reducing our expenses. When we budget for '18/'19, we do budget presuming that all FTEs will be fully filled, and then we take a vacancy allowance against that.
MS. KATHLEEN MCCANDLESS: You mentioned -- thank you for your answer. You mentioned in the context of that explanation that the compensation model has changed?
MS. CYNTHIA CAMPBELL: For out-of-scope employees, yes, during the year.
MS. KATHLEEN MCCANDLESS: Okay. And are you able to elaborate on what that change is?
MS. CYNTHIA CAMPBELL: That's actually better spoken to by HR, which I don't believe we have any representatives here. What it was was they took a look -- there was seventeen (17) different pay bands, and they've actually decreased it to ten (10) pay bands. They did a market comparison, and they regraded all of the out-of-scope positions to ensure that they aligned with the compen -- the new compensation model.
And it's -- so during '18/'19, it's been rolled out to out of scope, and they are investigating it for in scope as well.

765

MS. KATHLEEN MCCANDLESS: And I think you mentioned in your response previously that the percentage of the change in the corp -- that compensation model is something that you would be able to determine, or the -- the extent to which it contributes to that increase of 4.9 percent?

MS. CYNTHIA CAMPBELL: Sorry. With some analysis, we would be able to take a look at where the positions previously stood to where they do stand in the new model. I am not suspecting it's going to be a significant contributor, might it be a .1, .2 percent, it may lead to some of the change, but I don't believe it will lead significantly to the change.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go to figure EXP-17. And this table represents the variance in salaries between this year's forecast and last year's forecast, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And we see at line 1 that the actual results for 2017/'18 are approximately $2.65 million lower than the 2018 budgeted amount, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And we can

766

see in the first bullet under the table there that the decrease relates to less overtime than expected of about $720,000?

MS. CYNTHIA CAMPBELL: Yes. As I mentioned, there was active management of our payroll costs last year in order to meet our strategic stretch target. And one (1) of the things we did look at was overtime and whether or not we could control it.

It is absolutely also dependent on the weather and extreme -- extreme weather incidences, such as hail, but where possible, we did manage that to ensure that we were not -- we did not have excessive overtime.

MS. KATHLEEN MCCANDLESS: Thank you. And then at figure EXP-12, this table shows the five-year historical and five-year forecast of actual and budgeted staffing levels, yes?

MS. CYNTHIA CAMPBELL: Yes, it does.

MS. KATHLEEN MCCANDLESS: And at line 5, it appears that the actual full-time equivalent was 49.1 lower than budgeted for fiscal 2017/'18, yes?

MS. CYNTHIA CAMPBELL: Yes.

MS. KATHLEEN MCCANDLESS: And we can see in the asterisk under the table there that this table here shows an increase in thirteen (13) full-

767

time equivalents for 2018/'19 and onward, and that relates to the personal injury protection plan case managers, yes?

MS. CYNTHIA CAMPBELL: Yes, it does.

MS. KATHLEEN MCCANDLESS: And these positions are not taken into consideration for the compensation analysis, is that right?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And I also understand that it -- MPI is anticipating that it will reduce staff full-time equivalent counts by approximately fifty-one (51) positions by 2020 through -- 2020/'21, is that right?

I think if we scroll down the page it may assist you at lines 14 to 18 there?

MS. CYNTHIA CAMPBELL: Yes, that's correct.

MS. KATHLEEN MCCANDLESS: Are you able to provide the breakdown of management positions in these cuts?

MS. CYNTHIA CAMPBELL: At this stage, I don't believe decisions have been finalized as to which positions.

What has happened is there's been position -- there has been numbers earmarked, they're

768

predominantly related to improvement efficiencies relating to projects.

And so there is the belief that we'll be able to reduce by three (3) or five (5) people when a project goes live and the new system is providing the efficiencies we're looking for. Which positions and -- is -- that has not been finalized.

MS. KATHLEEN MCCANDLESS: And do you know when you would expect that to be finalized?

MS. CYNTHIA CAMPBELL: It tends to be finalized closer to the end of a project. When -- when we actually see where the -- when the efficiencies start to come to fruition.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go to PUB-MPI-1-38. And at page 2. So the figure, Figure 1 at the bottom of the page, shows that there are additional costs estimated to be about $930,000 per year, and that's in respect of the increased staffing resources of thirteen (13).

If we scroll to the top of the page, it may provide some assistance for you there. You see that information there?

MS. CYNTHIA CAMPBELL: Yes, I see it. Yes.

MS. KATHLEEN MCCANDLESS: Now, this

769

staff increase, is this a one-time staff increase or does MPI anticipate an increase in staffing levels for operational needs every year going forward?

MR. MARK GIESBRECHT: Right now we expect it to be a one-time increase, subject to growth in the business and we -- we would continue to evaluate the need to ensure we can deliver appropriate service and -- and manage our claims, so. But right now we would anticipate this is a one-off adjustment.

MS. KATHLEEN MCCANDLESS: Thank you. If we go to PUB-MPI-1-47. Now, in this Information Request, the Corporation was asked to explain why the number of management positions had decreased but the employee positions had increased, that's at question A there.

And if we scroll to the response, we see that by December 2017, the Corporation was able to reduce its management FTE count by 15 percent, yes?

MS. CYNTHIA CAMPBELL: Correct, that's what the response says, yes.

MS. KATHLEEN MCCANDLESS: And if we can scroll down to the top of the next page, we see here that the number of FTE positions increased by 24 non-management FTEs, which represents a 1.35 percent change overall in the total number of employees, yes?

770

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And we can go back up to the bottom of page 1, just for your reference, Ms. Campbell. I believe the increase in the non-management FTE positions by twenty-four (24) was to respond to various business needs?

MS. CYNTHIA CAMPBELL: Yes.

MS. KATHLEEN MCCANDLESS: Yes. And it's stated here that MPI -- MPI's information is that HR and business leaders had collaborated to identify opportunities to combine leadership portfolios and like functions in order to gain efficiencies and allow leaders to take on broader portfolios, yes?

MS. CYNTHIA CAMPBELL: With respect to the management decreases, correct.

MS. KATHLEEN MCCANDLESS: And these newly created positions, they're not just eliminated manager positions with title changes?

MS. CYNTHIA CAMPBELL: Not to my knowledge.

MS. KATHLEEN MCCANDLESS: And are you able to provide the cost savings between eliminating the 15 percent management count or the management count by 15 percent, and the twenty-four (24) new positions created?

771

(BRIEF PAUSE)

MR. STEVE SCARFONE: Can we provide that information by undertaking, Ms. McCandless?

MS. KATHLEEN MCCANDLESS: Yes, thank you.

So just to clarify for the record then, that would be to provide information as to the cost savings realized between eliminating the management full-time equivalent count by 15 percent, and creating the twenty-four (24) new positions.

MR. STEVE SCARFONE: Yes. Thank you.

--- UNDERTAKING NO. 14: MPI to provide information as to the cost savings realized between eliminating the management full-time equivalent count by 15 percent, and creating the twenty-four (24) new positions

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Thank you. Now, continuing down this IR response at B on page 2,

772

we see at Figure 1 here, improvement initiative staffing efficiencies at line 4 that MPI is anticipating $762,000 in savings a year for non-basic initiatives for staffing efficiencies for 2020/'21 and 2021/'22, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: Can you explain what these initiatives are?

MS. CYNTHIA CAMPBELL: They're initiatives in lines of businesses -- in lines of business that are not Basic.

So we do have three (3) other lines of business where we do take a look at our staffing requirements. And if there's a staffing reduction there, it will show up in our corporate members, but it doesn't relate specifically to Basic.

MS. KATHLEEN MCCANDLESS: Thank you. Now, Kristen I apologize because I didn't give you a heads-up for the next reference, but it's EXP-4.2.6.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: And my next few questions relate to road safety expenses, bearing in mind that in the context of this GRA that road

773

safety initiatives are not being reviewed in detail, but road safety expenses are part of the issues list approved by the Board.

So if we look to the bottom of the page that's before you here, part of the lot -- road safety and loss prevention co -- cost categories comprise of expenses, including the immobilizer program for 2018/'19 only.

I understand that the Corporation is -- has discontinued the immobilizer program for 2019/'20, yes?

MR. MARK GIESBRECHT: Yes, that's correct.

MS. KATHLEEN MCCANDLESS: And I appreciate that your information as to the reason for the discontinuation may not -- may be somewhat limited.

My understanding, though, is that it has to do with the fact that vehicles hitting the market now would have that built-in, so that there's no need for that program, is that right?

MR. MARK GIESBRECHT: I believe that to be correct, yes, it was a requirement of older vehicles, but it's really built into the -- the technology of new vehicles now.

774

MS. KATHLEEN MCCANDLESS: And does MPI have information as to the cost savings associated with the discontinuation of the immobilizer program?

(BRIEF PAUSE)

MR. MARK GIESBRECHT: So there would be savings in terms of no reimbursement of the installations of that equipment.

We're just trying to track down what that equates to in dollar terms.

So it's roughly a million dollars in savings.

MS. KATHLEEN MCCANDLESS: Thank you. And then, Kristen, at PUB-MPI-1-40, and Figure 1 in this IR response shows a breakdown of certain forecasted savings for 2018/'19.

At line 9 here we see a forecasted savings of $650,000 for the entry-level professional truck driver training, yes?

MS. CYNTHIA CAMPBELL: That's correct.

MS. KATHLEEN MCCANDLESS: And based on the information here that's the largest reduction on the Figure 1.

Are you able to provide the reason for

775

the -- that large reduction?

(BRIEF PAUSE)

MS. CYNTHIA CAMPBELL: Sorry, can you repeat the question, just so I'm clear. Sorry.

MS. KATHLEEN MCCANDLESS: Yes, what was the reason for the reduction of $650,000 in the entry-level professional truck driver training?

MS. CYNTHIA CAMPBELL: It was a cancellation of that program, so that program was -- we reimbursed people for taking the professional truck driver training, and we've cancelled that program.

MS. KATHLEEN MCCANDLESS: Thank you. Mr. Chair, I am moving into some questions regarding the Q2 financial report, it might take perhaps five (5) minutes. I could close that off and then we can take the break? Okay, thank you.

So Kristen, that's MPI Exhibit Number 24, and I have some questions about staffing.

So on the bottom of -- well, now it's -- it's the bottom of the page, but it's in the centre of the screen here before you, on the left-hand side we see the total full-time equivalent average for staffing at the end of Q2, yes?

776

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And then if we jump to expenses Appendix 10, and these are total corporate staffing levels.

At the very top of the page at line 12, we see actual full-time equivalents on the left-hand side of 1,878.1 full-time equivalents at the end of fiscal 2017/'18, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And then jumping back to the Q2 report, we see the actual staffing level full-time equivalent average is 1,762, as compared to a target of 1,889 as of Q2, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And 1,884 annual target for the year, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: Now, if we could jump to the AR section of the filing, Appendix 2, and this is the Q1 financial report. It's in part 8 of the application, Kristen. Thank you.

There's a graphic on page 3, it's a similar graphic, but it's for -- for the first quarter, yes?

MS. CYNTHIA CAMPBELL: Correct.

777

MS. KATHLEEN MCCANDLESS: And we see that for Q1 that MPI reported an average full-time equivalent of 1,762 as well, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: So as -- as at the end of the second quarter then there's been no change in the average reported FTE count from that experienced in the first quarter, as we see before us, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: Now, if we could go back to the second quarter financial report.
So the average staff level then, at the end of August 2018 is 1,762. Can you explain why it is lower than the target for Q2?
MS. CYNTHIA CAMPBELL: Our actuals often sit below our targeted levels because our target is full complement within the Corporation for all needed positions.
There is regular turnover such that people retire, people move on to other positions and they are not as -- as good as our HR team is, they -- you know, two (2) weeks is not a lot of time to be able to necessarily fill positions on a regular basis. So we will often run below our targeted amount.

778

Often when somebody also retires, you will take a look at how that position should look going forward. Sometimes it's a very short look, it's exactly the way the position was, and you need it to continue. Sometimes you can change the skill set needed, and that will take longer in order to be able to get somebody into the position.
MS. KATHLEEN MCCANDLESS: Now, when the Corporation compares its operations with the staffing level of Ia -- for last year, so past Q2, it was 1,901, in front of you, yes?
MS. CYNTHIA CAMPBELL: Correct.
MS. KATHLEEN MCCANDLESS: And to what extent is this lower level of staffing? So 1,762, as compared to 1,901 reflected in the quarterly results?
MS. CYNTHIA CAMPBELL: The decreased staffing will show lower operating expenses.
It will potentially also, though, drive up over time, depending on where the vacancies are, which I do not have detailed out in front of me. So those are the other impacts.
MS. KATHLEEN MCCANDLESS: Thank you. Now, with respect to the actual staffing level of 1,762, does the Corporation intend -- or expect to run the business at this level for the remainder of the

779

fiscal year?
MR. MARK GIESBRECHT: I would expect that we would have this number increase as we continue to -- to fill vacancies. So you can see that it is quite a great difference to the target, and as Ms. Campbell had discussed, there is always going to be a level of turnover. However, you know, we try to manage as best we can and fill those roles in an appropriate time frame.
And so I would say that would move closer to the actual target. But would expect it to remain under target given the nature of -- of turnover.
MS. KATHLEEN MCCANDLESS: So if it remains under target then we would expect that the payroll costs would be coming in at less than forecast ultimately, yes?
MR. MARK GIESBRECHT: But it depends on the level that it's under target, because we do build in a vacancy allowance, and that's meant -- we do understand to start the year that while we have about 1889, or 1884 planned positions, we know that over the course of the year, based on history and our experience that MPI, that there will be a level of turnover.

780

And then you multiply that by how long it takes to fill the position and that -- that then leads to a vacancy allowance, which is baked into the -- the forecasted and budgeted numbers.
The variance will be, do we have more turnover than we expected, or does it take longer to fill those positions than we had expected in that -- that computation.
MS. KATHLEEN MCCANDLESS: Thank you. If we could go to page 3 of this report, under Results of Operations, we see right at the first line there that the Corporation earned net income of $72.8 million for the -- to the end of the second quarter, yes?
MR. MARK GIESBRECHT: Yes, that's correct.
MS. KATHLEEN MCCANDLESS: And that includes net income of $39.4 million for Basic, yes?
MR. MARK GIESBRECHT: Yes.
MS. KATHLEEN MCCANDLESS: Now, I understand this would represent and shown before you here is an improvement of -- so it was 42.3 million for the same period last year, so that will be an improvement of roughly $48.6 million from last year, yes?

781

MR. MARK GIESBRECHT: So, it would be an improvement for the Basic line of business of about $30 million.
MS. KATHLEEN MCCANDLESS: We see that corporate net income increased from the previous year by 30.5 million, yes?
MR. MARK GIESBRECHT: Sorry, are you talking on a corporate basis or on --
MS. KATHLEEN MCCANDLESS: Corporate.
MR. MARK GIESBRECHT: Oh, I apologize. Yes.
MS. KATHLEEN MCCANDLESS: And at item (I) under the paragraph there, we see an increase in earned revenues of $44.8 million higher than last year, offset by an increase in total expenses of $6.7 million, yes?
MR. MARK GIESBRECHT: Yes.
MS. KATHLEEN MCCANDLESS: And that would include volume and upgrade factor?
MR. MARK GIESBRECHT: Yes.
MS. KATHLEEN MCCANDLESS: And as well, higher demerit DSR premiums, yes?
MR. MARK GIESBRECHT: Yes.
MS. KATHLEEN MCCANDLESS: How much of this increase in revenue would be related to the DSR

782

scale changes?

(BRIEF PAUSE)

MR. MARK GIESBRECHT: We would need to take this as an undertaking. We would estimate at a high level, but to give a -- a clear number, it would take some analysis.
MS. KATHLEEN MCCANDLESS: That would be appreciated. So if the Corporation could provide the increase in revenue associated from the higher DSR generic premiums.
MR. STEVE SCARFONE: Yes, we'll undertake to do that, Ms. McCandless. Is that a percentage or in dollars?
MS. KATHLEEN MCCANDLESS: I would say dollars.
MR. LUKE JOHNSTON: And can we -- I think the request is through Q2 of the current fiscal year?
MS. KATHLEEN MCCANDLESS: Yes, that's right. Thank you.
MR. LUKE JOHNSTON: So what we'll do, just to make sure our team understands, we will just show you what the revenue would've been if we didn't

783

change the scale, and then what the actual revenue turned out to be. The difference would be the effect of the new rates.
MS. KATHLEEN MCCANDLESS: Yes, thank you.

--- UNDERTAKING NO. 15: MPI to provide the increase in revenue associated from the higher DSR generic premiums in dollars, through Q2 of the current fiscal year, i.e., show what the revenue would've been if MPI didn't change the scale, and then what the actual revenue turned out to be. The difference would be the effect of the new rates.

CONTINUED BY MS. KATHLEEN MCCANDLESS:
MS. KATHLEEN MCCANDLESS: Now, the second paragraph under Current Year and Last Year, we see that MPI reported that it had a hail claim on June

784

14, 2018. Yes?
MR. MARK GIESBRECHT: Yes.
MS. KATHLEEN MCCANDLESS: And that was mitigated by reinsurance in the amount of $14.6 million?
MR. MARK GIESBRECHT: That's correct.
MS. KATHLEEN MCCANDLESS: And what was the total loss of the claim?
MR. MARK GIESBRECHT: I believe approximately 30 million.
MS. KATHLEEN MCCANDLESS: And roughly how many vehicles did that impact?
MR. MARK GIESBRECHT: I'm thinking 6,000, roughly, subject to check.
Yes, I just confirmed it's roughly 6,000.
MS. KATHLEEN MCCANDLESS: And has MPI put the reinsurance coverage back in place?
MR. MARK GIESBRECHT: Yes, we have.
MS. KATHLEEN MCCANDLESS: What was the cost to reset the reinsurance coverage?
MR. MARK GIESBRECHT: There's a reinstatement charge of $2 million.
MS. KATHLEEN MCCANDLESS: Thank you. In the same paragraph we see that there has -- appears

785

to have been a favourable decrease in PIPP claims, so bodily injury claims. That would be the fourth line from the bottom of the paragraph?

MR. MARK GIESBRECHT: Yes, I see that.

MS. KATHLEEN MCCANDLESS: And that -- there was a -- it was impacted by a $22.5 million favourable interest rate impact on unpaid claims offset by an increase in direct claims incurred of $25.7 million, yes?

MR. MARK GIESBRECHT: Correct.

MS. KATHLEEN MCCANDLESS: What happened with interest rates that caused this positive variance?

MR. MARK GIESBRECHT: So, with the movement of interest rates, as they -- they rise, we'll see a decreasing in other liabilities. And conversely, as rates decrease, we would see a opposite effect.

And so it moves really in an inverse relationship to where interest rates go.

MS. KATHLEEN MCCANDLESS: Thank you. I think this would be an appropriate time to take the morning break.

THE CHAIRPERSON: Thank you. We will resume at quarter to 11:00. Thank you.

786

--- Upon recessing at 10:26 a.m.

--- Upon resuming at 10:47 a.m.

THE CHAIRPERSON: Ms. McCandless...?

CONTINUED BY MS. KATHLEEN MCCANDLESS

MS. KATHLEEN MCCANDLESS: My next set of questions relates to capital expenditures for Basic. If we could pull up PUB-MPI-1-45.

And the question here in the Information Request was to have the Corporation elaborate, where possible, on the root cause of differences noted for the decreased spending by expenditure type and if we scroll to the response, the significant differences in capital expenditure forecasting from the prior year's GRA are related to a number of factors.

So first we see that the Corporation replaced only three (3) of the twenty-nine (29) vehicles that were disposed of during the year. Yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And then on to page 2. There's reference to cancellation of redevelopment projects at CityPlace in low -- lower

787

level space re-developments at the main -- Bison and Gateway Service Centres. Yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: There's also a reference to reduce spending on data processing equipment?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And cancel or deferred building projects at CityPlace.

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And also lower level re-development at -- at the three (3) service centres that we discussed.

Just if you could advise, Ms. Campbell, that these are true cost savings and not deferred expenses to be incurred on at a later date?

MS. CYNTHIA CAMPBELL: The automobiles are a true cost savings in the fact that we've changed the way in which we're managing our fleet and the number of vehicles we need within our fleet. Office equipment, land and building, the majority of it is a cost savings. We are looking at how we -- how we -- deal with CityPlace on a going-forward basis. There is some strategic decisions being made so there may be future costs there, but the original planned

788

expenditures have been cancelled.

MS. KATHLEEN MCCANDLESS: Thank you. Next, if we could pull up Figure EXP-41?

And this table shows Basic capital expenditures for '27/'18 (sic) through the forecast period?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: I just have a question with respect to unassigned capital. So, at line 10 on the right-hand side of the -- the table there we see unassigned capital of six hundred and forty-eight thousand dollars ($648,000), yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: Now, if we jump to the same figure from last year's GRA at line 11 there -- so this is the 2018 GRA figure EXP-43, the unassigned capital is seven million -- or $7.1 Million approximately. Yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: Can you explain the variance there?

MS. CYNTHIA CAMPBELL: So unassigned capital is -- what ends up happening is there is a budget provided for some of the projects. They -- it is portioned out as to where it's going to be spent

789

within the project itself, and some of the budget remains unassigned at the times, so we don't know which year it's going to be spent in. We don't know exactly how it's going to be spent, and -- but we don't want to lose sight of it.

So it's gone from 7.1 million of an estimate down to less than a million dollars, and that is because we have changed some of the projects that had the unassigned capital and we've either changed, cancelled, stopped or have assigned the capital because we've got a further definition of it.

MS. KATHLEEN MCCANDLESS: Thank you. And I would suggest for the record then that we mark figure EXP-43 from the 2018 GRA as the next PUB exhibit. I believe that would be Exhibit 18.

--- EXHIBIT NO. PUB-18: Figure EXP-43 from the 2018 GRA

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: And, Kristen, if we -- we could please go to EXP Appendix 16 and this figure shows Basic capital expenditures on a comparison basis between what was budgeted last year and actual results, yes?

790

MS. CYNTHIA CAMPBELL: Sorry, which year are you referring to?

MS. KATHLEEN MCCANDLESS: So on the left-hand side of the table we see the difference between what was budgeted and what the actual results were for last year's GRA as compared to this year's GRA?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And then on the right-hand side we have the forecast for last -- for 2018/'19, for -- that was filed in last year's GRA and the forecast budget for 2018/'19 that's been filed in this GRA and the difference between the two (2). Yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: Thank you. So on the left-hand side of the table at line 1 we see the budget for land and buildings was $5.6 million and the actual was $3.6 million, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And so there's a difference there of approximately $2 million, yes?

MS. CYNTHIA CAMPBELL: Correct.

MS. KATHLEEN MCCANDLESS: And what's

791

the reason for that change?

MS. CYNTHIA CAMPBELL: As per the -- as PUB 1-45, we had explained that the land and buildings -- the main contributor there is the $1.3 million saved by -- by changing what we were doing with respect to the lower levels in Main Bison and Gateway as well as CityPlace.

MS. KATHLEEN MCCANDLESS: Thank you. And then at line 6 we see imp -- impairment of deferred development. The difference from the last year's budget to the actuals as filed in this GRA is approximately $18.7 million, yes?

MS. CYNTHIA CAMPBELL: Correct, that's the Basic component. Yes.

MS. KATHLEEN MCCANDLESS: And I understand that that relates mainly to IT projects, is that correct?

MS. CYNTHIA CAMPBELL: Correct. I believe we provided a listing of what they were. My presentation had it, and then it's also in an IR.

So in CAC 1-54, we list what the deferred development write-offs were and those are at a corporate level, so the 18.7 million is the Basic component.

MS. KATHLEEN MCCANDLESS: Thank you.

792

MR. ANTHONY GUERRA: Just to confirm for the record, when you reference IR, you are referring to Information Request and MPI's response to the Information Requests, when you cite the dash -- 1-45 or 1-54?

MS. CYNTHIA CAMPBELL: Correct. My apologies.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: That's fine. Thank you.

Mr. Johnston, now I'm going to have a series of questions for you. First, if we could pull up the presentation from this morning, so MPI Number 25, pardon me, at slide 25.

Now, as I understand it, the impact of discounting, the increased rate need was due to a decrease in the assumed discount rate from the 2018 GRA to 2019 GRA, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And in this table, what discount rate underlies the 2018 GRA impact of discounting of negative 93.12?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: The -- the 2018 column uses a discount rate of 3.82 percent per last year's Order. And the 2019 uses a 3.21 percent discount rate per MPI's application.

MS. KATHLEEN MCCANDLESS: Thank you. If we could pull up PUB-MPI-1-3, and it was the response to question (a) of this Information Request at page 2.

The Corporation provided support for the selected cash flow discount rate of 3.21 percent used in the derivation of the rate indications, which it describes as an estimate of the new money yield as of September 1, 2019, yes?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: Please walk us through this derivation, including what the values shown represent and why the September 2019 date is used.

MR. LUKE JOHNSTON: Okay, so the date used for discounting purposes was actually discussed at this hearing and probably a little bit on the side between Mr. Pelly and myself.

But September 1 would be the average written date of the policies, and it's the discount rate on that particular day that we're using as a

basis for calculating the discount rate.

So for a naive interest rate, that date really doesn't matter. It could be the beginning of the year or the middle because the rate is the same the whole time. But for any other interest rate forecasts, the date is relevant because rates could be rising or falling.

So, that's the 'as of date' of the -- of the assumed interest rates, and then in the table below what you're seeing is our assumed allocation to those bond categories at that point in time and the expected yields on -- on those bonds at that -- also at that point in time. And the weighted average of those yields is 3.21 percent.

MS. KATHLEEN MCCANDLESS: Thank you. And if we go back to the preamble of this Information Request, it quotes from the ratemaking section of the application and then where it's stated that:

> "The basis of the estimation of the cast -- cash flow discount rate is described as the market value weighted yield of MPI's marketable bonds portfolio."

Yes?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: And then in the second paragraph here, the preamble also quotes from the response to PUB-MPI-1-12 (a) from last year's proceedings, where the Corporation stated at that time that the use of a portfolio yield rate was intended as an approximation of a new money yield rate, yes?

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: Is that estimation approach still in use in this application?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Yes, there is a slight difference between what we've proposed in previous applications and -- and the new methodology.

So in prior applications we were tying the discount rate purely to the discount rate of the claims liability valuation. And that would include things like nonmarketable bonds. It could include other assets that, you know, we don't plan on purchasing anymore, non-marketable bonds again is another example of that.

So through this process we've changed the discount rate to reflect the actual new investments and allocations that we anticipate to make

relative to the -- the new money or -- that we're investing. So that's -- that's why it doesn't include something like non -- non-marketable bonds anymore.

MS. KATHLEEN MCCANDLESS: So why describe this as a forecasted portfolio yield when the bond portfolio includes investments made in the past, as well as new investments?

MR. LUKE JOHNSTON: Can you repeat that? Sorry.

MS. KATHLEEN MCCANDLESS: Why would the Corporation describe this as a forecasted portfolio yield when the bond portfolio includes investments made in the past, as well as new investments?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Perhaps the naming could -- could be reconsidered, but the basis for the allocations in the respective bond categories would be reflective of what we anticipate in the actual portfolio.

But the calculated discount rate will not reflect the actual bond portfolio, given that there is other types of assets in there that are not

being considered in this calculation. But we'll recognize your point and will consider maybe re-naming that.

MS. KATHLEEN MCCANDLESS: Thank you. Does the estimated cash flow discount rate of 3.21 percent include any offsetting provision for investment expenses?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: I can't recall the exact provision for that, but we'll undertake to let you know what that number is.

MS. KATHLEEN MCCANDLESS: So I believe then the answer is yes, it does include an offsetting provision?

MR. LUKE JOHNSTON: My expectation is that it should. But I was looking for a reference in the ratemaking section, but there isn't one, so I'll get that for you.

MS. KATHLEEN MCCANDLESS: So to clarify for the record then, the Corporation will provide the amount of the offsetting provision for investment expenses?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: Thank you.

MR. LUKE JOHNSTON: I'll maybe just add to the end of that, in the discount rate used for ratesetting.

MS. KATHLEEN MCCANDLESS: Right. 3.21 percent.

--- UNDERTAKING NO. 16: MPI to provide the amount of the offsetting provision for investment expenses in the discount rate used for ratesetting.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Now I have some questions with respect to the driver safety rating related revenue changes arising from vehicles for hire. So if we could go to RM 4.2.6. And if we scroll down the page a little bit, Kristen. Thank you.

So this section of the application indicates that the rate level change requirement for the breakeven cost of policies was reduced by .1 percent, or about a million dollars in anticipation of the revenue impact of introducing driver safety rating

for certain vehicles not previously eligible, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: Does the Corporation have a means of providing the Board with a fiscal year-to-date account of the actual revenue impact of the change?

MR. LUKE JOHNSTON: Oh, sorry, I thought there was more to that.

The -- so we've been watching this closely. There's -- I think it's pretty clear that there's a lot of subjectivity and judgments we had to make and -- for a completely new class of vehicles and then -- and then in particular I talked to how the taxi mark -- market share would be affected.

So we can -- I've seen some data recently showing the loss ratios in the different groups. We can provide that.

So, to the -- if we just show you the revenue reduction, that wouldn't be fair if actually taxis were having a really low loss ratio too, because that would mean that their premiums are actually okay.

So we'll -- we'll provide the year to date observed loss ratio for the -- for the four (4) vehicle-for-hire categories.

Is that sufficient?

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: Perhaps to re-state the undertaking that would be of assistance, Mr. Johnston. If it could be providing the Board with a fiscal year-to-date account of the actual revenue impact of the change, the rate level change and how close it is to being in line with the original estimate of a million dollars per year.

MR. LUKE JOHNSTON: We can do that. The -- the reason I was adding the additional context there was that I wouldn't want the Board to see, say, a bigger number than we thought and assume that that was inappropriate, because that pricing might be okay.

MS. KATHLEEN MCCANDLESS: Thank you.

--- UNDERTAKING NO. 17: MPI to provide a fiscal year-to-date account of the actual revenue impact of the change, the rate level change and how close it is to being in line with the original estimate of a million dollars per year. And provide the

premium and claims
information and loss ratio
for the four (4) vehicle
for hire categories,
latest available
information MPI has.

CONTINUED BY MS. KATHLEEN MCCANDLESS:
MS. KATHLEEN MCCANDLESS: Now, if we could go to the CI section of the filing 10.2.1, --
DR. BYRON WILLIAMS: Mr. Chair, just to I -- I apologize. Just for my understanding of the undertaking, is the loss ratio data contemplated to be included? Because it will assist me in -- in my future questioning. I do apologize for the...
MS. KATHLEEN MCCANDLESS: We can certainly add that to the undertaking, Mr. Johnston, if the Corporation is prepared to provide it?
MR. LUKE JOHNSTON: Well, I'm already going to look since I volunteered all the data.
But we do have it and I do want the Board to see what's actually happening. Even with the recognition that it's immature data and it's new, but it still gives us some information. So we can do that.

MS. KATHLEEN MCCANDLESS: Perhaps for the record then, you could just restate what that additional information would be.
MR. LUKE JOHNSTON: We'll provide the premium and claims information and loss ratio for the four (4) vehicle for hire categories through second quarter of -- or the latest available information we have.
MS. KATHLEEN MCCANDLESS: Thank you.

CONTINUED BY MS. KATHLEEN MCCANDLESS:
MS. KATHLEEN MCCANDLESS: So, this section of the filing is just before you for your reference, Mr. Johnston, it relates to the paintless dent repair.
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And it references the technique of paintless dent repair as a relatively new industry standard adopted by the Corporation in 2017?
MR. LUKE JOHNSTON: That's right.
MS. KATHLEEN MCCANDLESS: What can you tell the Board about paintless dent repair techniques?
MR. LUKE JOHNSTON: I can't tell the Board a lot about -- about paintless dent repair

techniques.
The -- I do -- I was going to say earlier that the actuary is generally the -- the messenger, so if they want to do paintless dent repair and lower the claims cost and I get to tell the Board, then that's -- the good news, then it's good for me, but all I -- all I can really say to this section is at least preliminary data shows that repair claims are seeing some benefit in terms of severity reduction from paintless dent repair.
The business tells me that we've got to be cautious if it's a really bad -- like, a high severity storm, that the technique may not work as effectively or we won't be able to use it on as many vehicles.
But in the -- the last fiscal year we had fairly light hail and it apparently is very effective in -- in reducing severity.
MS. KATHLEEN MCCANDLESS: Do you happen to know when in 2017 that paintless dent repair was adopted?
MR. STEVE SCARFONE: Ms. McCandless, Mr. Wennberg, we're happy to have him answer all the questions concerning this topic on Monday, because he's -- he's the guy.

MS. KATHLEEN MCCANDLESS: All right, I will table some of these questions then for Mr. Wennberg. Thank you.

CONTINUED BY MS. KATHLEEN MCCANDLESS:
MS. KATHLEEN MCCANDLESS: I believe this a -- an area that you may be able to speak to though, Mr. Johnston, with reference to figure CI-49.
How significant -- how significantly in terms of percentages does the cost of a typical hail damage claim decrease under paintless dent repair?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Yeah, I was looking for a reference. I'm sorry, we don't have one there. My recollection is around the 30 percent range, but it depends on the -- again, on the type of storm.
You can see in this -- in this graph that we are looking at -- so the blue line being the comprehensive hail severity for repairs. We have looked at the 2017 year and you can see a pretty substantial drop from about 4200 or so to about 3000.
We didn't think it was appropriate to

805

bank on the full benefits, there could be other things, just a lighter hail than usual, but we did give a pretty substantial portion of the weight to the 17-year, and that -- you see where the forecast is kind of in -- I believe it's about 67 percent weight to the -- to the recent experience.

MS. KATHLEEN MCCANDLESS: Thank you. In recent years prior to the adoption of paintless dent repair, about what level of total claims dollars related to hail damage?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Hail is a tough one to -- to -- to give a firm figure because it's kind of all over the place, one year you get almost nothing and then another year you get a lot.

But our budget is -- is in the $25-$30 million range for Basic, but there have been some recent years that it was 50 plus million, and then you see last year it was barely 5 million.

So, on average, we figure around 25 to 30 million of total -- if you see total Basic claims they're kind of in the $800 million range. I guess that would mean 5 percent or so.

806

MS. KATHLEEN MCCANDLESS: Thank you. Given that level of total hail claims, what would be the annual level of expected savings achievable using paintless dent repair?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: If you go to -- well, my first comment I think in the future years we'll actually have the -- incurred by coverage. I'm not sure why we don't have that in this document, actually.

But if you go to figure CI-60, that's the total comprehensive cost of all -- all perils. So the -- the -- the major driver of the reduction in the comprehensive forecast is hail. So you can see between this year and last year's forecast, comprehensive in total, the forecast dropped about 15 million.

I think a reasonable estimate at this time would be that the -- that that assumption that the decrease in repairs severity that we had would -- would probably fall in the -- around the 5 to $10 million a year range.

We'll have better information after

807

this year is complete. Because we've had quite a bit of hail this year, so the effectiveness of it will be a lot more clear.

MS. KATHLEEN MCCANDLESS: And does the -- or is the number of hail events generally increasing year after year, perhaps due to climate change?

MR. LUKE JOHNSTON: Well, I won't profess to be an expert on that topic, but we are definitely with the -- well, with the exception of the last fiscal year where we actually had a pretty good year, the frequency of small storms has been our main issue.

There used to be a time where we would either have a big hail storm or we would have pretty much nothing. But then I believe the '15/'16, '16/'17 year we had just really a peppering of a bunch of small storms that we weren't able to claim reinsurance on because none of them were more than $15 million, the amount needed to collect reinsurance. So maybe. But I -- I am not an expert on that.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go to part 8 of the filing, attachment B, page 44. This references the external actuary -- appointed actuary's report on the valuation of Basic

808

policy liabilities, as of 31 October 27,(sic) yes?

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: Right at the bottom of the page, at the bullet there, the external -- external actuary states:

> "We switch from duration adjusted yield to market value weighted yield in selecting the discount rate. The Corporation's asset liability management policy strives to minimize the impact to its income statement due to a change in market interest rates. This change was made to reduce the mismatch between the Corporation's assets and liabilities from fluctuations in market yield."

You see that?

MR. LUKE JOHNSTON: Yes, I do.

MS. KATHLEEN MCCANDLESS: Thank you. From the last sentence here, does this mean this change was made to have the movement in assets due to a change in market interest rates better match the corresponding movement and liabilities?

MR. LUKE JOHNSTON: Yes, it was.

809

So as I mentioned I think yesterday, we report every month on -- to our Board and management the net impact of interest rate changes. One (1) of the most complicating factors of -- of the analysis is the nonmarketable bonds, because they're held at a book yield, and they're a pretty substantial portion of that portfolio.

So, those bonds don't move really with the -- with the interest rate changes. So we have to use the marketable bonds, essentially, to neutralize the -- the impact of interest rates and the duration weighted methodology was -- was creating problems for us to do that.

So, we did some research on it and the outcome was that we should use the market weighted yield as a -- to reduce the volatility.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: The Corporation is phasing out the use of MUSH bonds, yes?

MR. LUKE JOHNSTON: Yes. Yes, we are.

MS. KATHLEEN MCCANDLESS: So will the Corporation adjust its mess -- methodology as the use of MUSH bonds becomes phased out, back to what it was

810

prior?

MR. LUKE JOHNSTON: I'm hoping that we don't have to change anything, it will just -- it will just, you know, we'll have less and less in there and it will be less of an impact.

The history behind using the duration weighted yield is that sometimes we would have floating-rate notes or really short-term money in that portfolio and it would be getting weight in the calculation, even though it had a short-term focus and really low yield. So we didn't want to give -- have the discount rate be impacted by sudden -- sudden injections of things like that.

But now that we have a very clear ALM policy we didn't feel that that was a real concern anymore. So, this approach should serve us well given that the detail or retaking to match -- so I don't anticipate changing it.

MS. KATHLEEN MCCANDLESS: Thank you. Could we go to PUB-MPI-2-14. And Appendix 1, last page, that's page 19. We need to get to the bottom of the table, so if we could maybe minimize it a little bit. Thank you.

So as part of this Information Request response, the change in approach to the selection of

811

the valuation discount rate caused the selected claims discount rate to rise from 3.31 percent to 3.47 percent, yes? At the very bottom, on the left-hand side of the table?

MR. LUKE JOHNSTON: That was the impact, yes.

MS. KATHLEEN MCCANDLESS: Now, if we go to the response to the B question in this Information Request response, the -- this increase in the valuation discount had a one-time impact on fiscal 2017/'18 Basic results to reduce net claim -- claims liabilities by $25.8 million, and the internal loss adjustment expense provision by $2.7 million, yes?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: With a total one-time decrease in liabilities of $28.5 million, this flows through the income statement to produce a one-time increase in net -- net income for the same year by the same amount, yes?

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: Thank you. So just to confirm for the record, then at the bottom of paragraph B, we see that no further impact is anticipated on operational results on a go-forward basis, yes?

812

MR. LUKE JOHNSTON: No -- no significant impact is expected, yes.

MS. KATHLEEN MCCANDLESS: Thank you. I'm now going to ask some questions about the driver safety rating update. And of course, Mr. Johnston you're aware that in Order 130/'17, after last year's GRA, the Board had initially ordered a few things and they're found at the bottom of the DSR section.

So if we scroll a little farther. So yes, in the -- the Board had initially ordered that in this GRA the Corporation was to file proposed driver premium rates more statistically consistent with the estimated average claims cost per driver for each level on the demerit side of the DSR scale, yes?

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: And we know that that ultimately was varied by the Board.

MR. LUKE MCCANDLESS: Yes, it was.

MS. KATHLEEN MCCANDLESS: And similarly, the Board had initially also ordered that in the '20/'21 GRA the Corporation would file proposed vehicle premium discounts that were actuarially indicated based on principal driver performance evaluation, yes?

MR. LUKE JOHNSTON: Yes, I -- I recall

813

that, yes.
MR. KATHLEEN MCCANDLESS: And then ultimately the Board did vary that. And I'm not sure we need to go to the reference, but just to set some context for my questions.
In Order 29/'18 the Board had ordered that the -- the two (2) directives that we just spoke about, 11.8 and 11.9, be held in abeyance until such time as the issues of driver premiums more statistically consistent with the average claims cost per driver by demerit side of the DSR scale and the vehicle premium discounts fully supported by actuarial indications based on principal driver performance evaluation had been fully considered and reviewed in this GRA, yes?
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And at DSR-4 we -- we see that a technical conference was held on March 20, 2018 on the driver safety rating, yes?
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And then below there we see MPI's position on its interpretation of the essence of the initial Order 130/'17?
MR. LUKE JOHNSTON: I do.

814

MS. KATHLEEN MCCANDLESS: And so MPI interpreted that Order to -- to mean that it needs to improve the actuarial soundness of the DSR-based driver premiums and vehicle premade -- premium discount calculations, which are currently set by policy, yes?
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And MPI does agree that actuarially sound rates should be the objective for rate-making?
MR. LUKE JOHNSTON: Agreed.
MS. KATHLEEN MCCANDLESS: And then MPI, its interpretation is also that any rating variable that is used in the determination of rates should be fully supported by MPI with a strong statistical framework, yes?
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And if we scroll below, MPI's position is that it does agree that rating variables should be supported with a strong statistical framework, similar to that used for rating territory insurance use rate group, et cetera, yes?
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And lastly,

815

that MPI interpreted the order to be that the improved DSR based ratemaking methodology should be based on principal driver performance evaluation.
MR. LUKE JOHNSTON: Agreed.
MS. KATHLEEN MCCANDLESS: But the Corporation, while it understands the rationale for the request, does not yet fully support the concept, yes?
MR. LUKE JOHNSTON: Correct, yes.
MS. KATHLEEN MCCANDLESS: So at DSR-4.3 we see a -- a list of the alternatives to the current registered owner model that's used by MPI for driver safety rating, that -- the alternatives that were discussed at the technical conference, yes?
MR. LUKE JOHNSTON: Yes.
MS. KATHLEEN MCCANDLESS: And perhaps at a high level, if you could just summarize each of the alternatives listed and MPI's position on the alternatives.
MR. LUKE JOHNSTON: Okay. So the first option listed here is called the primary driver model. As noted right now, the rate charged is based on the registered owner's driving record. So we've talked in here before that, you know, the common example is mom comes in and insures all four (4) cars

816

for the whole family and she has a 33 percent discount. So everybody wins. But we haven't asked or necessarily considered who else is in the household.
Driver safety rating, driver premiums would do some of that right now, but as we've admitted here, they're not actuarially sound so they're not doing the -- the job completely, maybe partially but not completely.
The -- so we -- could we just scroll back up for a second. This concept of asking people who the primary drivers are or listing all the drivers on their policy is not something that we currently record. It would be new. We'd have to build IT functionality to do that and all the associated ratemaking analysis that would be required to understand what that information even means.
So, we don't have it today, so there is no data. There might be some connections we can make, but there's no available data so it might take some time to collect. So one (1) option would be just to start asking people and not use it for anything. That's something we've considered. Okay.
The second option is something we're calling the forced assignment model. So, if we can go back to the example I just gave with the -- with the

817

mom in the house, MPI should know who lives at that address, and in theory you could say, well, mom, you can't insure all four (4) cars, because I'm pretty sure you're not driving all of them as the primary driver. Maybe mom can insure the highest rated car, get the discount, but then it falls to the next rated driver, the next rated driver.

So at least we're getting some recognition of the other people in the house. That model is a little bit easier to implement because it is somewhat automatic. We don't have to know anything other than who's in the house and the assignment of the discounts is essentially forced on -- based on who lives in each house, so we don't have to ask anything.

Oh, sorry. I think I confused 1 and 2 a little bit. So number 1 was the primary driver, so that would be really just asking who the primary driver is.

Number 3 is literally declaring all the drivers and -- and using that information to rate the policy. So if you -- there's many different ways you can do this. I won't pretend to know them all.

I know in some jurisdictions it seems like the worst or the riskiest driver is the basis for rating the policy, but in theory we could use, you

818

know, the average DSR level, or other means to -- as a basis for, you know, there's three (3) drivers declared using this vehicle, let's use some kind of average DSR, the worst DSR or whatever. Something like that.

MS. KATHLEEN MCCANDLESS: And just to stop you there, Mr. Johnston, and just to summarize MPI's views on the declared driver model.

MR. LUKE JOHNSTON: The -- the declared -- so the primary driver model, going back to the first one, in our view isn't going to be significantly different than the registered owner model. So right now registered owners come in and we expect that most households would want to register under the best driver.

So if there is a primary driver for sure that you might get some people say, okay, you know, let's split up the cars by primary driver, but we suspect that a lot of people would continue to register whoever, based on whoever is the best driver and it would probably be difficult for MPI to dispute that information if -- as long as that person is driving some of the time, likely, it would be hard to -- like, say for claims denial purposes or things like that.

819

The -- maybe I'll jump to 3. Declared driver model is more -- would be more accurate and more easier to enforce from a claims handling perspective, because if you list three (3) drivers and then someone is driving that's not one (1) of those people, that's pretty obvious. And it's more than just having information on primary driver, you actually know if there's a teenager driving or something like that. So it would be more accurate, but more costly to implement and -- and monitor.

The second one, just -- I can't remember which one -- oh, forced -- forced assignment is not as accurate as listing of the drivers, but more accurate than primary driver or registered owner model because at least you're getting some recognition of who the other individuals in the household. And -- although maybe not as accurate, again, you're getting a better reflection of the risk in the modeling. That one (1) is also easier to implement from an IT standpoint.

The fourth one, which we're calling residual risk model, so what we mean by this is if you -- we've likely shown this in these hearings. If you were to just ignore who registers the vehicle completely and -- and plot the costs of a driver by

820

DSR level, the -- we have our DSR scale from plus 15 to minus 20, the cost per driver increases in a very consistent fashion from that line. It -- it does the same thing whether you own a vehicle or not. So, having the license is see -- at least seems to be the main risk factor.

The ability to drive, not necessarily ownership of the vehicle seems to be the main driver. There is a slightly higher cost for people that own vehicles, but not significantly higher.

So, what this concept is -- is saying is that in theory you could get a lot of the -- the risk covered by purely charging people on the license, and then the incremental risk for -- you know, I have a Cadillac versus I have an old beater, would be the extra -- the extra piece that you would charge. And that would almost really be just a physical damage charge based on what -- what you have.

So that's that idea. But this concept is really dramatic in terms of its implications. CMMG has come and talked about this idea, why don't you charge for, you know PIPP on the license, something like that. So while this has -- definitely has merits, it would be real -- very dramatic in its implementation.

821

MS. KATHLEEN MCCANDLESS: Thank you. And among the models that you just discussed, Mr. Johnston, is MPI supportive of a particular model?

MR. LUKE JOHNSTON: So as -- as you know, we're -- we're still researching these topics. The current model is set up as a form of residual risk type model. So we're -- we've said, particularly on the demerit side, we, you know, that's where the -- those drivers create the risk. We need to collect more premium from that particular group. But the issue is that it's -- it's not actuarially sound.

So -- so we could move towards a model like this, but there is a -- and -- and decide at this hearing, like, how gradually or -- or how quickly we want to do that, but there's a lot of other players that would probably be interested in how we do this, like the government, the public, and others.

So this one is logical. It doesn't cause massive disruption in how people currently renew, and policies, and their driver's licence, but there's more work to be done to -- to have MPI fully make a recommendation.

MS. KATHLEEN MCCANDLESS: And just so that we're clear on the record, when you refer to this one, you're referring to the residual risk model, yes?

822

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: And then from among the models discussed, is there one (1) or more that MPI would not be supportive of using?

MR. LUKE JOHNSTON: I don't want to -- I don't want to -- until this is fully surveyed, I -- I don't want to say too much about my particular views, but the primary -- as I mentioned, the primary driver model and registered owner model don't seem to -- I -- don't see a huge benefit to move to primary, but -- but all the other models do have merit, and they could be considered.

MS. KATHLEEN MCCANDLESS: Thank you. If we could just scroll, continuing down DSR strategy, we see at lines 6 through 8 that MPI believes that all options should be thoroughly considered and analyzed prior to transitioning from the current registered owner model to a primary driver, or to some other type model, yes?

MR. LUKE JOHNSTON: Agreed.

MS. KATHLEEN MCCANDLESS: And then directly under DSR 5.1, we see that the initial phase of MPI's DSR strategy is to develop a public consultation plan to invite Manitobans to share their views on the proposed changes to the driver and

823

vehicle rating models, yes?

MR. LUKE JOHNSTON: Yes.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: And we see that the plan will identify a variety of mediums to inform and educate Manitobans, and the qualitative and -- qualitative and quantitative research methodologies used to gather and tabulate feedback may include -- and then there are a number of methodologies below, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And then continuing down this section, we see that MPI, at lines 11 through 13, expects to plan and undertake this work through the balance of 2018 and tentatively plans to provide the Board with an update or results in the 2020 GRA, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And then at DSR.9 -- this is the conclusion and next steps -- at line 17 to 20, MPI anticipates that by next year's GRA, it'll be in a position to report on the results of the public consultation efforts, yes?

824

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: And the primary research on no or low cost options, as well as on its decision on whether to proceed with data collection for higher cost options, yes?

MR. LUKE JOHNSTON: That's right. And may -- maybe if I could just add to this, you heard Mr. Graham speak at the -- on the first day about product suite review. So I believe his slide deck had deductibles, and maximum insured values, and -- and those types of things.

To me, driver safety rating, deductibles, those types of items are things that customers would actually want to be involved, and -- and be consulted on. The Capital Maintenance Provision -- I don't think they would know what that is. Things like that, but these are real things that customers will care about. So DSR is one (1) of the items that would be considered as part of that product review, so there may be some of these other topics also reported on to the -- to the Board.

MS. KATHLEEN MCCANDLESS: Thank you. I don't think I need to take you to the see -- this Information Response, but just -- the Corporation was asked in PUB/MPI-1-51 about the progress on its public

consultation process. And maybe so it's not a memory test, we could pull up for your reference, Mr. Johnston.

But essentially, the response there is that the DSR consultation process is in its initial stages and key dates, and expected timing of pub -- public consultation have not been determined at this time.

Is there any update or progress on public consultation?

MR. LUKE JOHNSTON: I don't have one, but that doesn't mean that it's not ongoing. The -- the product suite review team, of which DSR is a part of, has definitely been formed, and we're -- and looking at these topics. I'm not as involved in the public consultation media piece, but we -- we could get an up -- update, I suppose, on that. But I'm not aware of any major initiatives that have -- that have begun.

MS. KATHLEEN MCCANDLESS: Perhaps by way of undertaking, then, we could have an update on the progress that the Corporation has made with respect to its DSR public consultation?

MR. LUKE JOHNSTON: We can do that, yes.

--- UNDERTAKING NO. 18: MPI to provide an update on the progress the Corporation has made with respect to its DSR public consultation

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Thank you. And, Mr. Johnston, are you able to advise as to whether the Corporation is on track to provide the updated information on a -- or a proposal in the 2020 GRA on the DSR changes?

MR. LUKE JOHNSTON: Yes, we are.

MS. KATHLEEN MCCANDLESS: Thank you.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: No, Mr. Johnston provided the information. Thank you.

Now with respect to the service fee review, at last year's GRA, we heard from the Corporation that it would be conducting a review of service fees, and the Corporation was ordered to file the results in this year's GRA, and it -- it has done so. And we have heard that no changes are being

requested at this time, yes?

MR. MARK GIESBRECHT: That's correct.

MS. KATHLEEN MCCANDLESS: And I understand that the rationale for requesting no changes is that increasing fees will not result in increa1sed revenue because the net zero overall effect of the break-even rate-setting model will correspond as -- correspondingly reduce premium revenue, or at least in part, that's the rationale. Is that correct?

MR. MARK GIESBRECHT: Yes.

MS. KATHLEEN MCCANDLESS: And also that it would be premature to seek changes to the Basic service and transaction fees prior to the Corporation knowing the outcome of any change that might be made by the Government of Manitoba to the Driver and Vehicle Act service fees that are charged through MPI?

MR. MARK GIESBRECHT: That's right.

MS. KATHLEEN MCCANDLESS: Does the Corporation foresee any change to service fees in the future?

MR. MARK GIESBRECHT: It's -- it's a possibility for sure, yes.

MS. KATHLEEN MCCANDLESS: And if we turn to slide 12, at MPI Exhibit 25, in the evidence

this morning, you referred to the -- the review of service fees as a jurisdictional scan. In addition to a jurisdictional scan, will there be more to this review?

MR. MARK GIESBRECHT: Yes. As part of the review, we will undertake to understand what is the time required to offer these services, what is a reasonable charge at -- that should apply to those things, looking at whatever -- what are the prices that were charged in the past, and applying a -- CPI factor as another basis for what could be a reasonable cost of those. It'd be a number of factors that go into that, along with a comparison to other jurisdictions.

MS. KATHLEEN MCCANDLESS: Okay. And so that would include having fees che -- charged vary reasonable relationship to the underlying costs of the fees --

MR. MARK GIESBRECHT: Correct.

MS. KATHLEEN MCCANDLESS: -- services? Thank you.

All right. Thank you. Those are my questions for this panel.

THE CHAIRPERSON: Mr. Williams, I'm just wondering, do you have a timeframe for your

cross-examination?

DR. BYRON WILLIAMS: I think my original estimate was an hour. I'm thinking somewhere between forty-five (45) minutes and an hour and --

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: -- ten (10) minutes.

THE CHAIRPERSON: Thank you. So we'll break until one o'clock. Thank you.

--- Upon recessing at 11:44 a.m.

--- Upon resuming at 1:02 p.m.

THE CHAIRPERSON: Mr. Williams...?

MR. STEVE SCARFONE: Mr. Chairperson, just before Mr. Williams begins, over the lunch hour we did retrieve some information that the Corporation would like to read into the record, if -- if it pleases the Board. It's just with respect to the hail damage over the past five (5) years.

So, beginning with the fiscal year 2017 and '18 and -- and we'll move backwards; 2017/'18 the total hail damage was 8.3 million; 2016 and '17 45.1 million; 2015/'16 52.6 million; 2014/'15 13.8 million and, lastly, 2013/'14 23.5 million for combined damage

of $143.3 million over the past five (5) fiscal years.

And Mr. Johnston tells me that he can retrieve the information that Ms. McCandless is looking for, which is the effect of the paintless dent repair at least forecasted on those numbers.

MR. LUKE JOHNSTON: Thank you. We can provide this breakdown, if necessary, but I'll -- the hail repair forecast which that -- Ms. McCandless showed us the -- the slide where the severity was reduced dramatically, that forecast has been lowered by about -- about $5 million.

So on an approximate basis we've -- we've baked in about $5 million of savings; could be maybe more or less for sure, but that's --that's -- what we've taken in the -- in the forecast right now.

MS. KATHLEEN MCCANDLESS: Thank you. Just one (1) question of clarification for Mr. Scarfone.

The numbers that you read into the record, are those gross or net of reinsurance?

MR. STEVE SCARFONE: That's probably a better question for Mr. Johnston.

MR. LUKE JOHNSTON: I believe those are directly gross from the annual report, yeah.

MR. STEVE SCARFONE: Yes, and -- and

just so the Board is aware, those are cited from the 2017 annual report, which I believe is in section 8 of the application.

MR. LUKE JOHNSTON: Yeah, our last time using our re-insurance was 2011. So those numbers are all gross. So the example I gave you about is there a global warming or not, some of those numbers -- one (1) of them was over 50 million. We had no re-insurance recovery because they were all small storms. So, Mr. Graham talked about perhaps looking at new re-insurance options. An aggregate would say, if the total amount is more than 25 million kick in and that -- and you can see why that make sense.

MS. KATHLEEN MCCANDLESS: Thank you.

MR. STEVE SCARFONE: The Corporation is trying to encourage its customers to park inside their garages but we don't know if that message is getting out.

Sorry, Mr. Williams, go ahead.

DR. BYRON WILLIAMS: Thank you and good afternoon, members of the panel. I'll just indicate further to the Chairperson's comments of first thing this morning, after discussions with My Learned Friends from Manitoba Public Insurance, there

were two (2) exhibits and some questions which are properly related to ratemaking but are most appropriately put to Mr. Graham.

So, I -- I think by agreement what we have dec -- we are recommending to the Board is that we -- we set those aside and come back to them when my cross-examination of the next Manitoba Public Insurance panel takes place.

MR. STEVE SCARFONE: That's correct. We have no objection to that, Mr. Chair.

CROSS-EXAMINATION BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: And the good news for those hoping to get out earlier today is that will help us to get out earlier today.

Ms. Campbell, I don't know if we've really met in the regulatory process, so, please to meet you. I don't have many questions for you, but I do want us to just start with a couple.

You recall a conversation you had with the Chairperson regarding the impairment of deferred development costs in the range of $20 million?

MS. CYNTHIA CAMPBELL: Yes.

DR. BYRON WILLIAMS: And following that impairment those items are no longer assets of

Manitoba Public Insurance; agreed?
MS. CYNTHIA CAMPBELL: Correct.
DR. BYRON WILLIAMS: And, in essence, that is reflected in a writeoff or reduction of equity, correct?
MS. CYNTHIA CAMPBELL: Correct.
DR. BYRON WILLIAMS: Thank you. Ms. Schubert, if we can go to -- yes, thank you. It's amazing how you can anticipate me and read my messy handwriting.
Mr. Johnston, when we look at the -- under figure RM-15 Summary of Premium Increases and direct your attention to the private class, there's around 800,000 vehicles in the private class, sir?
MR. LUKE JOHNSTON: That's right.
DR. BYRON WILLIAMS: And in terms of this General Rate Application, if -- if Manitoba Public Insurance is successful, that class will experience a premium change in the range of 2.37 percent?
MR. LUKE JOHNSTON: Correct.
DR. BYRON WILLIAMS: And it's -- that's about $21 million higher, sir?
MR. LUKE JOHNSTON: That's right.
DR. BYRON WILLIAMS: And that would

account -- that class accounts for about 90 percent of the 2019 premiums, sir?
MR. LUKE JOHNSTON: That's correct. And -- and as you see almost all of the premium change.
DR. BYRON WILLIAMS: Ms. Schubert, if we could go to RM-16.
Mr. Johnston, this is an aggregation of the -- the impacts all in of the rate application on different vehicles; that's -- this is the estimate of what will happen; agreed?
MR. LUKE JOHNSTON: Agreed.
DR. BYRON WILLIAMS: And if I draw your attention to line number 8, it would be correct to suggest that there will be almost 290,000 vehicles experiencing a premium increases of between 5 and 10 percent, sir?
MR. LUKE JOHNSTON: Yeah, that's true and it's not too surprising if -- if you consider the -- the average rate changes are, you know, 2.2 percent there's going to be somewhat of a -- a bell curve around that. Unfortunately, the range is 5 to 10 instead of maybe more detailed, five or six, seven but correct.
DR. BYRON WILLIAMS: So in that range

of increases of between 5 to 10 percent that will account for 25 percent of the vehicle population, sir?
MR. LUKE JOHNSTON: That's correct.
DR. BYRON WILLIAMS: And again, in terms of increases of between 10 to 15 percent that will be another 40 -- approximately 40,000 vehicles, sir?
MR. LUKE JOHNSTON: Correct.
DR. BYRON WILLIAMS: So well over 300,000 vehicles will have increases over 5 percent, sir?
MR. LUKE JOHNSTON: That's correct.
DR. BYRON WILLIAMS: And, sir, if we go up to figure RM-15, line 11, that line tells us, sir, that there will be over 200,000 vehicles experiencing premium increases of between 50 and $99; agreed?
MR. LUKE JOHNSTON: Agreed.
DR. BYRON WILLIAMS: Accounting for between 17 1/2 and 18 percent of the -- of the vehicle population; agreed?
MR. LUKE JOHNSTON: That's correct.
DR. BYRON WILLIAMS: And again, going to line 12, an additional 98,000 vehicles experiencing premium increases of between a hundred and $149, sir?

MR. LUKE JOHNSTON: That's correct.
DR. BYRON WILLIAMS: Another 8 1/2 percent?
MR. LUKE JOHNSTON: Correct.
DR. BYRON WILLIAMS: So whether one looks in terms of the percent change or increases over $50 in terms of premium, sir, either way that accounts for over 25 percent of the vehicles?
MR. LUKE JOHNSTON: That's right.
DR. BYRON WILLIAMS: Mr. Johnston, yesterday you were kind enough to help me out with the Corporation's consideration of the concept of rate shock.
You recall that discussion, sir?
MR. LUKE JOHNSTON: Yes, I do.
DR. BYRON WILLIAMS: And as I recall that discussion and if you need a transcript reference, I'll give it to you, but as I recall that tran -- discussion, sir, you indicated that there was no definition of rate shock, but for Dynamic Capital Adequacy Testing the assumption was that the Board would not approve rate increases in excess of 5 percent?
MR. LUKE JOHNSTON: That's correct, and that -- that the intent of those comments were on

837

an overall basis. So, the graphic that we're still looking at on the -- on the screen does occur in every rate application whether it's 0 percent ask or 2 percent ask, this graphic here if -- so, let's say we didn't do the capital maintenance provision which maybe what you're interested in, would all shift down by 2 percent essentially.

So there is still -- be people that pay, you know, more than 5 percent or more than $50.

DR. BYRON WILLIAMS: And, Mr. Johnston, I don't want you to misunderstand the intent of my questions. I'll suggest to you that while our client fully understands the need to set driver and vehicle premiums in a manner that reflects the collective insurance risk they represent, would it be fair to say that if we were to look at rate shock from the perspectives of the bills of individual consumers rather than the overall rate increase, it is arguable that 25 percent of vehicles experience rate shock based -- based upon their individual bills?

MR. LUKE JOHNSTON: So that's a difficult question to answer. As the -- as the Board's aware, there are rules that we have, so, the experience adjustment rules plus or minus 15 percent, an overall cap of 20 percent, those in -- in some ways

838

are to control extreme rate shock, but I'm not going to pretend that, you know, 5 percent or a hundred dollar increase for a customer isn't a -- tough for them to swallow.

If we're talking about the need for perhaps a lower threshold or something like that to control those types of things, we would have to look at that in terms of the overall methodologies. It's 15 or 20 percent to high of a number, for example.

DR. BYRON WILLIAMS: And fair and I appreciate the thoughtfulness of that answer, Mr. Johnston.

It would be fair to say that as the Corporation currently looks at rate shock, it's a concept that applies to the collective average not to the individual consumers, sir?

MR. LUKE JOHNSTON: My -- my comments about the -- about 5 percent as being kind of a judgmental benchmark for rate shock on the overall basis, I -- that -- that would apply.

On the individual vehicles our historical threshold, at least in this regulatory process has been that 15 to 20 percent level. That was not set by me, obviously, but that's what it's been.

839

DR. BYRON WILLIAMS: Mr. Giesbrecht, I'm going to be coming to the Corporation's response to Information Request CAC-2-25 in a second but while we're going there, sir, to the extent that consumers are expressing concerns about rate stability, are they expressing concerns about their individual bills, sir, or some theoretical average?

Do you have an opinion on that?

MR. LUKE JOHNSTON: I can't speak for consumers but being a consumer I'm likely to compare -- look at my own rate and -- but I would in -- in some cases so, for example, if I heard MPI was going to have a 8 percent rate increase I would be very shocked by that, but at the same time, if I looked at my individual bill and it was zero, I would be like, well, lucky me right but...

So I would guess that consumers are most -- more concerned about their own bills.

DR. BYRON WILLIAMS: Mr. Giesbrecht, k recognizing that Manitoba Public Insurance employs quantitative opinion surveys as described in response to CAC-2-25 -- and we'll come to that in a second -- has Manitoba Public Insurance tested on a qualitative basis, i.e., through focus groups or similar tools whether consumer concerns about rate stability are

840

based upon individual rate changes, or the overall rate change to your knowledge, sir?

MR. MARK GIESBRECHT: I -- I'm not aware specifically around focus groups and speaking to those matters. I know we have a number of rolling polls and -- and surveys that assess a number of questions, including the appropriateness and reasonableness of rates and -- and what customers value.

But to your question specifically, I'm not aware of any.

DR. BYRON WILLIAMS: And I thank you for that, sir. To -- to your knowledge, in essence, Manitobans have told you they want stable rates, but you have not asked Manitobans to define what they mean by stable rates?

(BRIEF PAUSE)

DR. BYRON WILLIAMS: And Mr. John -- or Mr. Giesbrecht, we are going to go through CAC-2-25, and in particular question 36.

But I -- my understanding is that to your knowledge through qualitative tools such as focus groups, Manitoba Public Insurance has not explored how

841

Manitobans define basic -- stable rates?
MR. MARK GIESBRECHT: I am not aware of any of that qualitative definition or understanding through focus groups. That doesn't mean it doesn't exist. I'm not aware.
I know in the Information Request that you mentioned, there is information in terms of the rolling poll that we can have a look at.
DR. BYRON WILLIAMS: Yes and we'll get right to that answer. And, sir, I'm not asking for an undertaking, but if someone downstairs or otherwise lets you know that there are stable rate definitions through focus groups we would love to -- we'd love to hear about it, but that is not an undertaking, just so I'm clear.
Directing your attention to the response to this Information Request. And the third paragraph. The fourth line, Mr. Giesbrecht, you'll see a reference that presently public comments are not subject to testing and do not assist the Public Utilities Board in making decisions relating to approving changes to the rates charged.
Do you see that, sir?
MR. MARK GIESBRECHT: I do.
DR. BYRON WILLIAMS: And -- and, sir,

842

and if you're not aware, this is -- we certainly won't hold it against you, but has Manitoba Public Insurance explored how, if at all, consumer presentations were treated during the last Manitoba Hydro General Rate Hearing?
MR. MARK GIESBRECHT: Not that I'm aware of.
DR. BYRON WILLIAMS: And, sir, are you aware whether or not rate peer panels have been employed by the Public Utilities Board in hearings relating to Manitoba Hydro or payday loans?
MR. ANTHONY GUERRA: Sorry, just with respect to this -- this line of questioning. This is the hearing before the Board on the application by Manitoba Public Insurance not Hydro.
So, to the extent that these questions relate to the situation before Hydro, MPI fails to see the relevance of further questioning on this issue.

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: I don't explore -- intend to explore it at length, but certainly the Manitoba Public Insurance since the start of this hearing has talked about best practice and looking at - at consumer engagement and our client, we would

843

submit, is entitled to, at a light basis, explore what efforts it has made to -- to explore this concept.
MR. LUKE JOHNSTON: I -- I think in some cases, Mr. Giesbrecht and myself are not like the actuaries in conducting these type of polls, so, there may be work being done, but neither of us are deeply involved in -- in that work. So I know there's been talk of some of these E-panels and other -- other things that are happening in -- in MPI, but neither of us are intimately involved in that, that's all.
DR. BYRON WILLIAMS: Fair enough, and maybe taking this conversation outside this hearing to the next hearing, Mr. Giesbrecht, would Manitoba Public Insurance be open to a process prior to the filing of the next General Rate Application aimed at collectively collaboratively working with PUB advisors and stakeholders on key potential issues for public engagement such as, for example, the definition of stable rates.
MR. MARK GIESBRECHT: We currently have a project underway to work with our stakeholders and customers to understand their -- their needs and desires and expectations. And so I would want to defer and speak with that group in terms of the work that they're doing and how that could fit into that

844

project work.
DR. BYRON WILLIAMS: Sir, would you be prepared to come back after speaking to that group by way of undertaking and just share your thoughts?
MR. MARK GIESBRECHT: Yes, I would.
DR. BYRON WILLIAMS: So, the undertaking is to engage with the public engagement working group and provide feedback on whether or not Manitoba Public Insurance would be prepared to collaboratively engage with stakeholders such as my client as well as PUB advisors on potential tools of public engagement directly related to the ratesetting process.

(BRIEF PAUSE)

MR. STEVE SCARFONE: We're going to take a moment before we can make that undertaking, Mr. Williams. We want to check on -- the back row wants to check on some information.
DR. BYRON WILLIAMS: Yeah, that's -- that's fine. And we'll -- we'll move on. And Mr. Scarfone, because of my aging memory, if you can just -- I'll -- I'll ask you to come back with that response.

845

MR. STEVE SCARFONE: I -- I --
DR. BYRON WILLIAMS: Let's not trust me to --
MR. STEVE SCARFONE: Let's not trust me, either. Okay, no. I will -- I will remind you that we've promised you an answer on that undertaking.
DR. BYRON WILLIAMS: Okay.
THE CHAIRPERSON: Can I just ask a question on this? You're talking about that they would proceed with this, have a response back to you after talking to their group, before the end of this hearing. After -- I -- I'm trying to figure what the timing is on this. There -- there wasn't anything put forward, but they have to go through a process in order to respond to -- to you. I don't know how long their process going to take. I don't know if you're talking about -- you want a response prior to the end of this hearing or if we're going to have a response some time in the future.
The -- the other -- the other concern I have, Mr. Williams, is that your -- your suggestion essentially creates an obligation on the PUB, because you're -- the way you phrased it was in conjunction with the PUB, which doesn't have a policy in this --
DR. BYRON WILLIAMS: That's fine.

846

THE CHAIRPERSON: -- in this matter --
DR. BYRON WILLIAMS: Let me --
THE CHAIRPERSON: -- and -- and assumes that the PUB -- whether we would or not, but assumes that the PUB would be part of a process that we've never discussed.
DR. BYRON WILLIAMS: Let me rephrase my suggestion, then, sir. And I'm focused on the engagement with ratepayers -- with stakeholders.
MR. STEVE SCARFONE: Yes, and -- but the -- the reason --
DR. BYRON WILLIAMS: And in terms of the temporal -- okay. What I'll do, Mr. Chair, is I'll engage in some con -- conversations offline with Manitoba Public Insurance on this, and we'll see where it takes us, if it all.
THE CHAIRPERSON: Thank you.
MR. STEVE SCARFONE: Yeah. Thank you, Mr. Williams, because I think that the concerns that Mr. Chair raised were -- or what we're -- why we were reluctant to commit to that undertaking, because we don't know what time constraints -- or if that's going to be something that can be done before the end of the hearing, or next week, or next month.
DR. BYRON WILLIAMS: And I thank both

847

Manitoba Public Insurance and the Chair for his guidance.

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: Directing your attention to the -- the bottom paragraph on this page, Manitoba Public Insurance does see public opinion polling as guiding its corporate approach to rate setting at a strategic level, agreed?
MR. MARK GIESBRECHT: Agreed.
DR. BYRON WILLIAMS: And one (1) of the insights from that polling that is important to Manitoba -- Manitoba Public Insurance is the desire of Manitobans expressed to maintain stable and fair rates, correct?
MR. MARK GIESBRECHT: Correct.
DR. BYRON WILLIAMS: And we've also agreed that your knowledge, it's not -- there's no definition of -- of what that means, whether it relates to the individual ratepayer, or -- or on average, agreed?
MR. MARK GIESBRECHT: I'm not aware of any, correct.
DR. BYRON WILLIAMS: If we could go now to Appendix 1 to CAC-2-25, and specifically page 1

848

of 8 for a second.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: And just to the second bullet, sir, this is a summary of customer research flowing from the results of the twenty-seven (27) rolling -- 2017 rolling poll, but building on historic results, agreed?
MR. MARK GIESBRECHT: Agreed.
DR. BYRON WILLIAMS: And the -- as the second bullet demonstrates, in terms of the value that Manitoba Public Insurance is perceived to provide to repay -- payers, price relating var -- price related varial -- variables have a strong impact, sir?
MR. MARK GIESBRECHT: Agreed.
DR. BYRON WILLIAMS: As we've discussed, the strongest driver is stable and fair rates, correct?
MR. MARK GIESBRECHT: Correct.
DR. BYRON WILLIAMS: Another important driver is the cost of vehicle insurance?
MR. MARK GIESBRECHT: I see that.
DR. BYRON WILLIAMS: You're agreeing, sir?

849

MR. MARK GIESBRECHT: Yes.
DR. BYRON WILLIAMS: And sir, just in terms of -- going to the bottom of 2 -- of page 2 of 8, rate -- underneath rate, at the very bottom, please, Ms. Schubert. Sir, again, you'll see the reference to stable and fair rates. But I'll also suggest to you that in terms of the cost of vehicle insurance, it's described as being a moderate to key driver of perceptions of value consistently over time. Would that be fair, sir?
MR. MARK GIESBRECHT: That is fair.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: And sir, just to direct your attention to page 6 of 8, under -- underneath "price related independent variables," sir, in terms of how the polling tests the concept of maintaining stable and fair rates, under question 36, you'll -- this is how well that question is posed to ratepayers, agreed?
MR. MARK GIESBRECHT: Agreed.
DR. BYRON WILLIAMS: There's no definition of what is meant by stable, agreed?
MR. MARK GIESBRECHT: Agreed.

850

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Ms. Schubert, if we can go to AR Appendix 4, section 2.32. Mr. Giesbrecht, captured in this -- this is the discussion from the Manitoba Public Insurance business plan, agreed, sir?
MR. MARK GIESBRECHT: Agreed.
DR. BYRON WILLIAMS: And captured under section 2.32 are some discussion of public support, agreed?
MR. MARK GIESBRECHT: Agreed.
DR. BYRON WILLIAMS: And on the third line there, sir, you see a reference to a perceived lack of appeal options for unsatisfied customers. Do you see that reference, sir?
MR. MARK GIESBRECHT: I do.
DR. BYRON WILLIAMS: And sir, in terms of that perceived lack of appeal options for unsatisfied customers, does Manitoba Public Insurance possess research on the perceived lack of appeal options?
MR. MARK GIESBRECHT: I am not aware of any research that suggests a level of a perceived lack of options. I know there are number of options

851

available to customers that do exist. However, the -- the perception of that in the public, I am not aware of.
DR. BYRON WILLIAMS: Okay. In terms of -- in terms of the appeal process, are -- are you aware of what issues specifically you're talking about? Is it the no-fault plan? Is it the -- just for example, sir, what -- what are -- what is -- what is the Corporation talking about here?
MR. MARK GIESBRECHT: I believe what we're talking here is more on a -- a generalized basis, not specifically around a -- a particular portion or coverage of the policy that we offer to customers. It -- it is a potential risk that we have identified and want to ensure that we do mitigate and have things in place to address it. However, it was not put in place specifically to address an ongoing issue today.
DR. BYRON WILLIAMS: Okay. Thank you. So there's no research in the Corporation's poss -- possession suggesting that your -- your -- you have concerns at -- at a significant level from consumers on this issue?
MR. MARK GIESBRECHT: That will be subject to check. I -- I am not aware, but that

852

doesn't mean it does not exist, or others are not aware of information that could speak to that.
DR. BYRON WILLIAMS: Thank you. I want to turn to the issues relating to the management and reserving of long-tail claims, Mr. Johnston, and we're going to start with con -- CAC Information Request 1-57.
And just to the -- to the Board, we're focused on the claims, not on the BI3. But Mr. Johnston, just when one hears that acronym, BI3, can you generally and concisely describe what -- what is meant by that, to the Corporation's understanding?
MR. LUKE JOHNSTON: BI3, and correct me if I'm wrong, the Bodily Injury Improvement Initiatives are the three (3) 'I's. I haven't called it that probably since the first day it came out, but.
The -- it was a new claims management system for injury claims that was implemented in September 2010.
DR. BYRON WILLIAMS: And, Mr. Johnston, you'll agree that over the last number of hearings, our client, through -- through my commentary and -- and yourself, have been engaged in a discussion about adverse experiences the Corporation is experiencing in the post-BI3 era in terms of claims

853

that are longer than twenty-four (24) months?
MR. LUKE JOHNSTON: Yes, that's correct. We've -- we've seen a few issues, one (1) related to claims duration, so claims staying open longer, and the other one related to inadequate case reserving would be the other issue.
And just to be clear, obviously, a system doesn't cause these things to happen, but it's part of a -- a process where that occurred.
DR. BYRON WILLIAMS: And sir, whether it is claims -- well, when it's claims that lasts longer, whether through anyone's fault or not, all other things being equal, that means more costs to the Corporation, correct?
MR. LUKE JOHNSTON: Yes, it does. Yeah.
DR. BYRON WILLIAMS: And when it relates to issues such as inadequate reserves, sir, that has an influence in terms of the forecast of historic costs, as well as future costs, agreed?
MR. LUKE JOHNSTON: In a -- in a general sense, and I'll -- I'll explain what I mean. If -- in -- in today's world, if case managers suddenly stop putting reserves on the files, the actuaries would try to add IBNR reserves to cover for

854

that deficiency. New, or more pre -- like, more claims, or -- or increased persistence of claims is a different thing, that is you had an expectation, and I will say there is 20 percent more of them. That would, in normal course, not have been anticipated, and that would generate higher costs and increase the -- the forecast going forward.
DR. BYRON WILLIAMS: And if we can go to page 5 of 5, under subquestion (c) of CAC-1-57. And, sir, directing Mr. Johnston -- directing your attention to the second paragraph here, the Corporation provides its belief that their incremental claims costs that were incurred as a result of reducing case management employee base and the process changes, that created a more passive approach to injury management since 2010, agreed?
MR. LUKE JOHNSTON: Agreed. There's -- - there was -- there was very clear evidence that there were less employees in this area. There is a number of positions eliminated immediately on implementation of the system in 2010, and there some under -- other indicators that indicate that a more passive strategy, or less -- or the opposite, less aggressive claims management strategy was being employed at that time.

855

DR. BYRON WILLIAMS: And when we speak of a more passive approach to injury management, Mr. -- - Mr. Johnston, all other things being equal, that would tend to result in longer claims and more costs?
MR. LUKE JOHNSTON: As -- that's -- that's a -- a difficult one. Passive doesn't always mean bad, so mayb -- maybe if, by way of example, maybe there is a -- a large number of small claims where it makes more sense just to, you know, administratively deal with them through, you know, some kind of automated process.
But in this case, what we mean by passive is maybe more the claim wasn't maybe aggressively worked at the intake process, and it was allowed to maybe persist a bit longer, and -- and end up being a -- a longer-term claim than -- than necessary.
DR. BYRON WILLIAMS: And sir, if we could --
MR. ANTHONY GUERRA: Sorry, just to interrupt. And I don't mean to interrupt, but at the same time, this issue is going into the depth that we had suggested would be best explored by the IT, PDR, and value management panel. And so all I would suggest, Mr. Williams, is that some of these questions

856

may be best put to Mr. Wennberg.
DR. BYRON WILLIAMS: I -- I'm going to respectfully disagree. Absent guidance from the Board with -- because, Mr. Chair, from our perspective, these questions do not go to information technology. They go to the management of claims.
Now, if Manitoba Public Insurance would prefer us to -- so I'm not talking about the IT problems. I'm talking about the management problem, unless Manitoba Public Insurance is expressing a preference to have those questions which are properly part of the expense control put to Mr. Wennberg.
THE CHAIRPERSON: Quite frankly, I -- I think if this panel can answer it, then they can answer it. If this panel feels uncomfortable, or thinks that somebody is better qualified to answer it, then we can, you know, deal with it on Monday.
DR. BYRON WILLIAMS: And the challenge I'll pose, Mr. Chair, just to finish -- to finish the thought, is that some of the questions are -- I'm sure, go directly to Mr. Johnston. Other ones, you know, I can't.

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: So, Mr. Johnston,

857

you'll advise me if you feel unable to answer them?
MR. LUKE JOHNSTON: Yeah. What I was going to say is that there are definitely questions related to the valuation of claims liabilities that I need to understand. If I think that the question is to deep into the claims management process, I'll defer that to Mr. Wennberg. And then if it's -- yeah, if that's IT related, I'll defer those as well.
DR. BYRON WILLIAMS: Going to page 3 of 5, and, Mr. Chair, I'm open to guidance on the Board on this. I -- going to page 3 of 5 --
THE CHAIRPERSON: I just want to make -- I just want to make it very clear, so that the panel understands, if you don't feel comfortable answering the question, and somebody is better able to answer, just say so. If you -- if you feel that you're the proper person, or you can answer it, I -- I think that's the way we should proceed.
MR. STEVE SCARFONE: Thank you for those comments, Mr. Chair.

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: Mr. Johnston, going to page 3 of 5, the first full paragraph, I guess this just reenforces the point, I'll suggest to

858

you, that some of the reduction in terms of long-tail claim -- or some of the increase in terms of long-tail claims that may be attributed partially to the reduction of employees, agreed?
MR. LUKE JOHNSTON: So that -- that is one (1) of the theories on why some of the increases occurred. So as I said, there's no question that staff were released, and that long-term claims increased, so we're investigating, I said, basically, whether that is, in fact, true.
DR. BYRON WILLIAMS: And sir, directing your attention to Information Response CAC-1-35(b), page 3 of 4, Mr. Johnston, you'll see a comment on the first two (2) lines of this that the reserving guidelines have not changed for PIPP claims open for twenty-four (24(months, but that the existing guidelines were not being followed post-BI3 implementation.
MR. LUKE JOHNSTON: Yes, I see that.
DR. BYRON WILLIAMS: And, Mr. Johnston, can you assist us in understanding for how long the existing guidelines were not being followed? Is this covering the period from 2010 to 2017, sir?
MR. LUKE JOHNSTON: In the actuarial valuation, pretty early in the process, I was clear

859

that case managers are having some difficulty putting reserves in the new system. So a pretty obvious result was that case reserving levels were down pretty dramatically. So, the response of the actuary in that case would be to add actuarial reserves or I -- IBNR reserves to -- to cover that.
And, yes, as the question states, one (1) of the reasons that the new Board decided to create the centralized reserving team and put it under -- under my accountability was to make sure that never happens again.
DR. BYRON WILLIAMS: And, Mr. Johnston, in terms of the failure to follow existing guidelines, how long did it endure til, sir?
MR. LUKE JOHNSTON: There were really issues from the date of implementation until last year was when we converted everything to centralized reserving. And by doing that, really, every claim more than twenty-four (24) months old on the income replacement side, I was -- the reserving was no longer in the hands of the -- the case manager and it was being reserved by the centralized reserving team.
So up until that point when those -- reserving was converted over, there were still not all, but -- but there were still claims that were

860

clearly not being fully reserved per guidelines.
DR. BYRON WILLIAMS: So, roughly, sir, we're talking a period of six and a half (6 1/2) years?
MR. LUKE JOHNSTON: Roughly.
DR. BYRON WILLIAMS: If we can go to attachment A to Information Requests CAC-1-36(a), and starting -- actually, that's perfect there, Ms. Schubert, in terms of the executive summary.
And -- and Mr. Johnston, this is a PowerPoint somewhat redacted, but which was presented to the Board of Directors of Manitoba Public Insurance in April of 2018, sir?
Subject to check, it's the page before.
MR. LUKE JOHNSTON: Okay, so this is a -- just look -- this is -- what IR is this?
DR. BYRON WILLIAMS: CAC-1-36(a), sir.
MR. LUKE JOHNSTON: I'm going to just go to that question, but yes, that's correct.
DR. BYRON WILLIAMS: And on the next page, the first bullet, you see the -- that this report or PowerPoint was in response to a request by the Board of MPI to examine the year-over-year variability in claims incurred in growth and reclaimed -- and retained claims? Agreed, sir?

861

MR. LUKE JOHNSTON: Agreed.
DR. BYRON WILLIAMS: And again, sir, when we speak of a growth in retained claims, that's a growth in cost to Manitoba Public Insurance ratepayers?
MR. LUKE JOHNSTON: That's correct.
DR. BYRON WILLIAMS: And the suggestion in this report is that that growth has been occurring since 2008, due to a variety of factors, sir?
MR. LUKE JOHNSTON: Yes. And I -- when we say a variety of factors, that's kind of getting to the point that there are other things happening in the world, like for example, you know, the treatment of mental health claims as an example of, you know, how maybe claims are handled differently. And this isn't necessarily all related to the system or number of staff that we have, some -- some of these issues may exist even without that. So we don't just throw all the blame on one (1) particular thing. So we'll do a proper deep dive and review those.
DR. BYRON WILLIAMS: And sir, if we go to slide 8, and direct your attention to the right-hand side, there is a suggestion on the fourth bullet

862

that one (1) of the challenges was that the majority of the case managers were ill-equipped to manage the complexity of claims. Agreed?
MR. LUKE JOHNSTON: I do see that at -- this area would start going on to Mr. Wennberg's expertise, because again, I know the general, yes, the general issues, but not the details.
DR. BYRON WILLIAMS: Okay, I'll reserve that question for the next witness.
Let's go to slide 11, sir. And was another of the concerns expressed that complex claims were only being actively managed in the later stages of the claim?
MR. LUKE JOHNSTON: Yes, that's true, and that again deals with -- with intake, the idea if you don't get on these claims early and immediately they -- they will become issues. So that -- that's surrounding that topic.
DR. BYRON WILLIAMS: And that again affects claim retention, agreed?
MR. LUKE JOHNSTON: That's the expectation, yes.
DR. BYRON WILLIAMS: And there is costs to claim retention. Agreed, sir?
MR. LUKE JOHNSTON: There is.

863

DR. BYRON WILLIAMS: On slide 12 there is a reference to a triage pilot project, agreed, sir?
MR. LUKE JOHNSTON: Agreed.
DR. BYRON WILLIAMS: And on slide 12 at the bottom, there is a suggestion that there was a small increase in claims closure rates so far.
Do you see that reference, sir?
MR. LUKE JOHNSTON: I do.
DR. BYRON WILLIAMS: And are you in a position to provide an update in terms of the analysis of claims closure rates?
MR. LUKE JOHNSTON: Well, I can tell you there's two (2) things working here, so on the actuarial side we monitor claims closure rates every month and monitor that.
I can tell you that at least in the area I'm most concern with the -- the longer term, I'm not seeing any substantial improvements, at least to date.
The -- the claims management area that's dealing with the -- we get about 17,000 injury claims per year. Obviously I'm not going to look at 17,000 claims, but -- so those are reserved more globally.
Once they become, you know, beyond a

864

year and they start falling to a few hundred claims, then I start tracking them a little more closer, but they -- this group may have -- have seen some small improvements in the -- in the minor claims coming in. So they would have to speak to that.
DR. BYRON WILLIAMS: And just so, and I thank you for that -- that delineation of duties, sir.
Just so that I understand your answer in terms of the longer-term claims, which are your focus, my understanding of the evidence is that you're not seeing a substantial improvement to date.
MR. LUKE JOHNSTON: I'm not the -- the recent years, right now, look very similar to the other years post at 2010. Obviously we're watching that very closely. The -- the intake staff or the additional thirteen (13) staff that are -- are being hired, that process just completed last month. So, obviously not reasonable to think that they would necessarily have an effect not being there.
But yeah, we do continue to watch that. And we obviously would be very happy to report if there was a change, but I haven't seen any yet.
DR. BYRON WILLIAMS: Slide 22, sir. You see reference on the last bullet to reviewing

865

overall progress quarterly with MPI actuarial department, agreed?

MR. LUKE JOHNSTON: Agreed. And I -- we actually meet every week.

DR. BYRON WILLIAMS: And are there reports prepared for that purpose, sir?

MR. LUKE JOHNSTON: There is a few different reports we look at, I mentioned one about tracking the claims persistence and -- and budgets would be another example.

We're working right now with -- a lot of the focus is on hiring the staff and making sure centralized reserving is working as intended. But our Board has made it pretty clear that we want to have regular reporting come to the Board in terms of compliance, tracking of persistency of claims types, things of that nature.

So those metrics and dashboards or whatever term you want to use are being developed with the intent of having them completely in place for next fiscal year.

But -- but that doesn't -- that's not to say there aren't -- there isn't regular reporting that we're monitoring, but a more formal kind of monitoring compliance, benchmarking framework is being

866

created.

DR. BYRON WILLIAMS: And that's a framework that will be in place for the next fiscal year, sir?

MR. LUKE JOHNSTON: That's correct.

DR. BYRON WILLIAMS: And Manitoba Public Insurance would be in a position to share that for the purposes of the next General Rate Application?

MR. LUKE JOHNSTON: We would.

DR. BYRON WILLIAMS: Mr. Johnston, I'm not sure if this is more properly put to the other MPI panel or not.

But you -- you would understand that Manitoba Public Insurance, in partnership with the Worker's Compensation Board, implemented an opioid medication policy on or about November of 2012?

MR. LUKE JOHNSTON: That one would definitely be better for the other witness. Thank you.

DR. BYRON WILLIAMS: Thank you.

Mr. Johnston, if -- if Ms. Schubert could pull up DSR page 10.

You'll recall a conversation that you had with My Learned Friend, counsel for the Public Utilities Board, regarding the residual risk model,

867

sir?

MR. LUKE JOHNSTON: Yes.

DR. BYRON WILLIAMS: And I'm going to be careful not to put words in your mouth, sir.

I understood you to say that you had some -- that in some ways that this model was attractive to you, but that -- but some of the consequences, and I wrote down the words "dramatic disruption."

Whether or not those are your exact words, sir, could you discuss the disruption, if any, that might be anticipated through this model to assist my clients to understand this?

MR. LUKE JOHNSTON: Okay. I guess I'll find out tomorrow if I said "dramatic disruption." I have now, I guess.

The -- so I guess the disclaimer output on -- on that, like the phrasing of the -- of the model is -- could create dramatic disruption if implemented, you know, just let's move right to the indicated numbers at a rapid speed.

So I understand that we wouldn't do that in this forum, at least that wouldn't be my expectation. But the -- the -- my comments were more around the -- the model so the -- the idea that maybe

868

more of the premium should be charged on an individual's driver's license, perhaps a lot more, would be pretty dramatic change to this model and it would -- you know, it would take some -- we would have to be very cautious in its implementation.

DR. BYRON WILLIAMS: And Mr. Johnston, in -- just -- it's dramatic in what way?

In the shift from -- from the vehicle premium to the driver premium? Is that what you're indicating?

MR. LUKE JOHNSTON: Yeah, well that's -- that's one (1) piece of it.

So, as you may or may not know, the -- the -- base driver's license is $45 right now and it's been that way for a long time, probably twenty (20) years, maybe -- maybe -- maybe more or less. But around that period.

I think regardless of what happens on the vehicle premium side, if we told everybody, you know, in a couple of years that that base driver premium was going to be $300 or $400, that might be a bit shocking to them, even though we wouldn't be asking for any more money, in total, so like the -- the revenue we're asking for today, that wouldn't change.

869

But the -- who is paying it and like, whether it's coming from the license or the vehicle insurance wouldn't dramatically change if you just blindly followed the indications of this model. That's where I think people would see the dramatic impact.

DR. BYRON WILLIAMS: And I appreciate that and just the last question on this, sir. And if you can't answer this, I totally understand.

But conceptually might go to a residual risk model have any implications for the magnitude or actual existence of the vehicle discount, sir?

MR. LUKE JOHNSTON: That would be a logical result, because if -- we do -- so these aren't hypotheticals that I'm talking about when I say that the driver DSR level is very predictive of the risk level regardless of whether you own a vehicle or not, that's factual, that's our own -- our own data.

So if you were getting at the driver ability through the license, then agreed that the need for a vehicle premium percentage discount would likely be dramatically reduced.

DR. BYRON WILLIAMS: And just conceptually, sir, in terms of the actual risks associated with the type of vehicle, you know, whether

870

it's more likely to be stolen or whether the consequences of someone injured in a crash, that is already addressed significantly through CLEAR and -- is that right, sir?

MR. LUKE JOHNSTON: That's correct.

DR. BYRON WILLIAMS: And again, the logic of the residual risk model is that it would be aimed at the risk associated with driver behaviour?

MR. LUKE JOHNSTON: Yes. The idea -- if we were to, as I mentioned, plot all drivers who are non-owners of vehicles on the costs -- cost per individual, in theory that could be the minimum that everybody should pay if -- just for having a license, because these, by definition, are several hundred thousand people that don't own a car, or at least not in their name.

That, in theory, could be the minimum that you charge those folks and the residual amount would be those additional things like what kind of car you bought, what territory you live in and things like that, that -- that said though, the territory and such as well may also apply to the license. It might -- in theory it could be cheaper to have a license in rural than in Winnipeg.

So DSR would just become a rating

871

variable in the same manner that the territory is today. Right now it's not. It's set by policy.

DR. BYRON WILLIAMS: There are some questions that -- from this conversation that I'm deferring to the other panel based upon Mr. Johnston's advice.

We have the two (2) exhibits that -- and discussion that I'm deferring as well to the discussion of Mr. Graham.

I don't think I have any undertaking, so Mr. Chair, with thanks to the MPI panel, that closes my discussion.

THE CHAIRPERSON: Thank you. I would ask the panel if they have any questions. Ms. Hamilton...?

BOARD MEMBER HAMILTON: To Ms. Campbell, you talked about the decrease in FTEs of 15, I believe, over four (4) fiscal years.

Can you tell me where those FTEs were vacant, or whether it required severing out existing incumbents.

MS. CYNTHIA CAMPBELL: There was probably a combination of both. In the fact that there would've been some vacant positions where they -- where it was restructured so that the position was

872

no longer needed.

There would have been, especially when it came to our management reductions, those were severed out.

BOARD MEMBER HAMILTON: Okay. Do you have an idea of what the cost -- the severance costs were and can you point to where they're reflected in your statements?

MS. CYNTHIA CAMPBELL: Severance is reflected within our compensation line. It is included in there. I would have to go to my detailed financials to be able to pull out a severance amount.

Yes, sorry. We don't know it off the top of our head.

BOARD MEMBER HAMILTON: Thank you. I have one (1) question for Mr. Johnston.

With regard to the vehicles for hire, my question is whether MPI at this point has enough claims experience for that group to determine whether the premium costs are appropriate for vehicles for hire or not.

MR. LUKE JOHNSTON: I would -- I would say no, but at the same time there -- we have that issue for a lot of other existing vehicle groups where there's a small sample.

873

So we're six (6) months in this -- this is clearly an evolving class of vehicles and it's -- the experience is probably going to change a little bit as we move.

But as you'll see in the undertaking, that we've -- we've agreed to do on the loss ratios, it at least appears right now that the -- the lowering of the premium for taxis appears to be reasonable. Again, very preliminary data. And there is a little bit of upward rate pressure on the passenger vehicle for hire.

So we -- we did the 20 percent increase on the -- on the -- on the all-purpose rate. Their loss ratio is above 100 percent right now, but it's not anywhere near the level that taxis are -- are operating at.

Could that all change? Maybe. But at least in the six (6) months, seven (7) months of data, it doesn't look like dramatic changes are needed.

And maybe just to expand a little bit more. MPI's intention was to follow the ratemaking model that we currently use, where, you know, we give a certain amount of credibility to the class's data and weigh that against their current rate and then gradually move that -- those classes to the indicated

874

rates. So they would be no different than how we treat anybody else.

BOARD MEMBER HAMILTON: Okay. Thank you.

THE CHAIRPERSON: I don't know if this is to Mr. Giesbrecht or Mr. Johnston.

Aggregate insurance, how long has it been in the marketplace? Sorry, for the re-insurance.

MR. LUKE JOHNSTON: We've talked about aggregate coverage for a -- for a while with our reinsurers. It's been more of a recent phenomenon for us in terms of why we need it. Prior to that, right. So in some of the previous years the recommendation from our re-insurance broker, Aon, was that the price ask was too much.

They were asking for, you know, maybe talking like $3 million to, you know, to get something that may be of questionable value. We're going to have to have that -- that conversation again this year.

So we have a particular -- what we would like to do is kind of lock in that hail budget at a maximum amount. But again, we have to evaluate the cost benefit of that. So we might be coming back and saying, for $2 million more, you know, we can lock

875

in the hail budget and take that volatility away. Is that worth the trade? So, it's always been available.

THE CHAIRPERSON: Kristen, could you go to page 25 of MPI's presentation?

Maybe I didn't catch it before, but right at the -- at the bottom you have this natural upgrade of the negative 2.1 percent.

Was that in last year's -- has this been -- this is the first time I can remember it. I'm just wondering if it was produced previously.

MR. LUKE JOHNSTON: Yeah, we have always included the upgrade. The intent of this table was to show everybody how this works and hopefully it achieved that. So you know, it's just a breakdown that per unit costs of everything, so --

THE CHAIRPERSON: But it has -- it was broken down previously as well?

MR. LUKE JOHNSTON: I don't know if we've ever presented the --

THE CHAIRPERSON: Part of just a big -- of a different category, because I -- I don't remember it actually sort of in this format where it was actually separated.

MR. LUKE JOHNSTON: It's quite possible that this -- this format has never been shown

876

to the Board, so the intent was to make it easier for everyone to understand. So hopefully that's -- that's been achieved.

THE CHAIRPERSON: Okay. The Professional Truck Driving Training Program was cancelled. Why?

(BRIEF PAUSE)

MR. MARK GIESBRECHT: We don't have the exact answer, but we'd be happy to get that back to you.

THE CHAIRPERSON: Yes, if you could. I mean, the world has changed since Humboldt. And I'm just wondering if MPI is -- if you could also find out if MPI is considered -- reconsidering it. I note that Alberta cancelled it and now they've gone to the Ontario model, which is actually an enhanced training program.

You know, I don't know, is there -- are there other training programs that are available or are -- are people able to get licenses to drive semi-trailers without the necessary training?

(BRIEF PAUSE)

877

MR. MARK GIESBRECHT: So, yeah, there is training in the marketplace. I mean, this was the -- MPI's subsidization of that training. I'm not aware of any plans that may have changed as a result of -- of the Humboldt tragedy.

THE CHAIRPERSON: Okay. Mr. Johnston, you -- you spoke about -- you were asked about rate shock and you mentioned that anything -- you thought anything over 5 percent would be considered rate shock. I'm just trying to go by memory, which is a dangerous thing.

Last year, the acting CFO made a comment as to what MPI thought rate shock was. Do you remember that discussion?

MR. LUKE JOHNSTON: I don't remember the details, no.

THE CHAIRPERSON: Okay.

MR. STEVE SCARFONE: I do, Mr. Chair.

THE CHAIRPERSON: Was it 3 percent?

MR. STEVE SCARFONE: Three percent.

THE CHAIRPERSON: Yes. So I'm just wondering last year Mr. Yien said 3 percent. This year you're saying 5 percent.

Has anything changed or is it just a different view or...?

878

MR. LUKE JOHNSTON: The context where I gave the original 5 percent was just -- we can check the transcript, but I believe what I said is in the Dynamic Capital Adequacy Test, we've -- we needed something that was considered -- there's a little bit of precedent in the past where past boards haven't asked for more than a 2 percent rebuilding fee at a time. And we also needed some sort of cap on the overall ask. We put in 5 percent in the DCAT.

So the only kind of guidance I have is that those DCAT assumptions, at least for approval of the range, have been approved by the Board through the approval of the DCAT, and so that's kind of my guide as to what seems reasonable.

THE CHAIRPERSON: Okay, thank you.

Any re-direct, Mr. Scarfone -- sorry, wrong counsel.

MR. ANTHONY GUERRA: Thank you, Mr. Chair. Actually, if we could, I know what we're getting close towards the end of this day, but we -- we really would like to have at least a five (5) minute break before.

THE CHAIRPERSON: Certainly, yes. That's fine.

So you know what, we'll adjourn until -

879

- we'll give you until 20 after and you can advise if there are any questions.

MR. ANTHONY GUERRA: Thank you.

THE CHAIRPERSON: Thank you.

--- Upon recessing at 2:08 p.m.

--- Upon resuming at 2:23 p.m.

THE CHAIRPERSON: So if we could resume. Is there any direct?

MR. STEVE SCARFONE: There is a few questions on re-direct, Mr. Chair. So, Mr. Guerra is going to start and then I'll have a couple of questions.

THE CHAIRPERSON: Okay. I just want to point out, because I was going to raise it before, the purpose of re-direct is to deal with issues raised for the first time in cross-examination or issues that couldn't be contemplated.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: They're not intended to reinforce your case.

I let it go the first time. There were, in the earlier re-direct, many issues which were raised in your direct, were dealt with in cross-

880

examination and then raised in re-direct. And it was simply repeating information put forward.

So I just -- I would like to just avoid that if we could.

MR. STEVE SCARFONE: Yes, thank you.

RE-DIRECT EXAMINATION BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: Thank you. Kristen, can I ask you to pull up the Information Request CAC-1-36, and in particular Appendix 1, slide 2? Yes, that's right. Thank you. This question I will pose to Mr. Giesbrecht or to Mr. Johnston.

You were asked questions on cross-examination about point number 3, the -- the modification of the PIPP claims reserving process in 2010, which resulted in a systemic under-reserving in operations and my understanding, based upon the questions being asked, was that it was being suggested that there was a deviation from -- from previously established guidelines or guidelines that had been established were not being followed.

Can you -- can you please explain further MPI's position on that? Were -- were guidelines actually not being followed, and if so, was there anything being done to respond to that?

881

MR. LUKE JOHNSTON: Yes, to be -- and Mr. Wennberg will talk a little bit about this, when I talk about these things I'm talking from the actuarial perspective, expecting reserves to be put in a certain way and they're not.

My understanding from the business is that the -- in particular the additional portion of claims, case managers had an optimistic view that they were going to return these folks to work and it was -- that was their expectation, and for that reason they didn't feel it was appropriate to put in the lifetime case reserves per the guidelines at -- at the twenty-four (24) month stage.

Obviously, as those claims didn't materialize as planned, they started having to put those reserves in, but it was -- it was delayed. So there -- there wasn't any sort of -- I don't know what, intent there to ignore the rules that we had there. It was an optimistic view, but it didn't turn out as they expected.

MR. ANTHONY GUERRA: Okay, thank you, Mr. Johnston.

My colleague will have some further questions on re-direct.

882

RE-DIRECT EXAMINATION BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Thank you. Kristen, could you please pull up rate-making figure 13, please?

Mr. Johnston, one (1) question concerning this figure that addresses some questions that Mr. Oakes put to you yesterday on ratemaking. Under the motorcycle column, you may recall he asked you to look first at line 23 and line 24.

As I understood your evidence, sir, where it reads 1.3 percent and underneath that at line 24, 3.4 percent, that reflects the inclusion of the capital maintenance provision. Is that correct?

MR. LUKE JOHNSTON: That's correct.

MR. STEVE SCARFONE: And you may recall from yesterday's testimony, that Mr. Oakes had suggested to you that that 3.4 percent could in fact be any number, whatever MPIC management may have deemed appropriate.

Do you recall that?

MR. LUKE JOHNSTON: I recall that, yes.

MR. STEVE SCARFONE: And he had suggested to you, sir, that for example, MPIC's management could include in that particular line a 5

883

percent increase if they so chose.

Do you recall that?

MR. LUKE JOHNSTON: I do.

MR. STEVE SCARFONE: If indeed we adopted what Mr. Oakes was suggesting and had a 5 percent number instead of the 2.1 percent, would that still, in your view, be a capital maintenance provision?

MR. LUKE JOHNSTON: No, it would not, for the -- well, we've laid out why we want the capital maintenance, but in that case, that really would be just an arbitrary number greater than the amount needed for capital maintenance. So I would call that a surcharge or a rebuilding fee, if -- if we did that.

MR. STEVE SCARFONE: Thank you. And then my last question, Mr. Chair, deals with CMMG 1-11, Appendix 1.

And again, Mr. Oakes asked you questions about the historical RSR ranges. Do you recall that, sir?

MR. LUKE JOHNSTON: I do.

MR. STEVE SCARFONE: And that there seemed to be a significant jump in those ranges in recent years.

884

Do you see that from the graphic?

MR. LUKE JOHNSTON: Yes, I do.

MR. STEVE SCARFONE: Is there anything other than the methodology that you mentioned yesterday that would account for those changes in your view?

MR. LUKE JOHNSTON: Yes, there is. So actually one -- one (1) particular item Mr. Oakes asked for, and I was only able to approximate. But I've since looked at the data.

So the one (1) question was at what kind of -- I believe this was Mr. Oakes -- at what rate are the li -- claim liabilities growing right now.

And using five-year averages they're growing at about 4 1/2 to 5 percent. This data could be provided to the Board, if necessary.

And so one (1) of the -- if we go back to, say, the beginning of this time period, 2003, the lia -- claim liabilities of the Corporation at that time were 883 million. And today they're 1.8 billion.

So, that's -- that's more than double. So the other reason that this would grow is for the reason we've talked about the -- we call -- and the growth in the -- in the business.

MR. STEVE SCARFONE: Thank you, Mr. Johnston.

So Mr. Chair, one (1) of the perils of not having Mr. Keith available is the -- that we don't have his expertise available, but Mr. Giesbrecht has -- has discussed with him on the break and has an answer to your question about the truck drivers.

MR. MARK GIESBRECHT: Yes. So, as provided by Mr. Ward Keith, MPI ended the program to support -- or with support of the MTA because of the framework had a well-established supported by industry and the funding was available from under -- other sources.

Also, this program of funding, it did relate directly to the SRE, the Special Risks Extension line of business.

And regarding Humboldt, the government has announced publically, they are looking at mandatory training for all class 1 drivers and MPI is a part of that working group.

The program we put in place and -- and framework we were fine with support of the MTA and industry carriers have been provided as one possible model for consideration by government.

MR. STEVE SCARFONE: Mr. Giesbrecht,

the acronyms that you're using?

MR. MARK GIESBRECHT: The MTA, I believe, is the Manitoba Trucking Association.

MR. STEVE SCARFONE: Thank you, those are all my questions.

THE CHAIRPERSON: Mr. Scarfone has been -- has been trained in the perils of acronyms, so. Thank you very much. That concludes our hearing today. We're going to adjourn now until 9:00 a.m. on Monday.

MS. KATHLEEN MCCANDLESS: Mr. Chair, if I could just pose one (1) question to MPI counsel.

Are there any updates on when PreAsk 1 might be responded to?

(BRIEF PAUSE)

MR. STEVE SCARFONE: So I'm told, Ms. McCandless, that we can have the -- the response to you on -- well, tomorrow, except for the scenarios that -- that Tyler will be running, which we expect to have by Monday.

MS. KATHLEEN MCCANDLESS: Thank you very much.

THE CHAIRPERSON: Thank you, we're

adjourned until Monday morning. Thank you, have a good weekend.

--- Upon adjourning at 2:33 p.m.

--- Upon commencing at 9:00 a.m.

THE CHAIRPERSON: Good morning, everyone, I hope you all had a good weekend.

Ms. McCandless, do you want to take us through today.

MS. KATHLEEN MCCANDLESS: Sure. Thank you. Good morning, Mr. Chair and members of the Panel. Today we have the MPI IT Physical Damage Re-engineering and Value Management Panel. We expect this panel will take us to the end of the day and into tomorrow and -- but we're not sure just how long tomorrow will take, so, thank you.

THE CHAIRPERSON: Mr. Scarfone...?

MR. STEVE SCARFONE: Good morning, Mr. Chairperson. Good morning, panel members. Yes, this morning, Mr. Chair, we have the information technology, physical damage re-engineering program and the value management panel. There's a lot of material that we'll cover here today and over the next day or two (2) perhaps.

So perhaps I'll begin with some introductions, because it has been a while since some of the panel members were before you. And there's some new people here as well. Beginning to my left is

893

Lawrence Lazarko. He's the director of Information Technology. Beside Mr. Lazarko is Brad Bunko, vice-president of Information Technology and Business Transformation. And he is the Corporation's Chief Information Officer. Beside Mr. Bunko is Curtis Wennberg. He returns again. He is vice-president of Customer Service and the Chief Operations Officer. Beside Mr. Wennberg John Remillard. Mr. Remillard is new to this proceeding. He is MPIC's Corporate Business Architect and then beside Mr. Remillard, of course, is Mr. Graham. Ben Graham is President and Chief Executive Officer of Manitoba Public Insurance.

And going down the back row beginning with -- behind Mr. Graham is Joe Riel. Mr. Riel is the senior value management specialist; beside Mr. Riel is Carol Hora offering back row support. She is the director of the Service Centre Operations and Claims Control. Beside Ms. Hora is Gary Dessler. He is the MPIC corporate system architect. Beside Mr. Dessler, of course, is Ms. Campbell who you saw last week, the Controller. Mr. Guerra beside Ms. Campbell. Mr. Crozier from Regulatory Affairs. And lastly, beside Mr. Crozier is Shayon Mitra. He is the Director of Physical Damage.

And sitting beside me to my right is

894

Charles Henry. Mr. Henry will be giving evidence after the panel members are done. He is here to give expert evidence and has been prequalified to speak to physical damage re-engineering report that's in evidence before the Board in this proceeding, and he comes from the Gartner Group.

THE CHAIRPERSON: Thank you. Perhaps I could ask the secretary to swear in those witnesses who haven't been sworn in yet.

EXAMINATION-IN-CHIEF BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Thank you, Mr. Christle. So if we can begin, just with some introductions and some background information on some of the panel members, Mr. Chair. I'll start firstly with Mr. Lazarko, to my left.

895

Mr. Lazarko, you are the Director of Information Technology at MPIC?

MR. LAWRENCE LAZARKO: That's correct.

MR. STEVE SCARFONE: And how long, sir, have you been the Director?

MR. LAWRENCE LAZARKO: In the current role, four (4) years?

MR. STEVE SCARFONE: All right, and how long have you been with MPIC, sir?

MR. LAWRENCE LAZARKO: It will be eight (8) Years in March.

MR. STEVE SCARFONE: All right. And briefly, could you describe for the -- for the panel members, what your role as Director of Information Technology involves.

MR. LAWRENCE LAZARKO: Certainly. As direct -- Director, Information Technology I have responsibility for IT infrastructure. This includes the IBM data centre and the assets within it, as well as personal computing, so, laptops, desktops, printers and related software. I have responsibility for IT vendor management, which includes major contracts, such as the DXC agreement and IBM agreement. I have responsibility for data and analytics. And I have responsibility partnering with John Remillard in the

896

delivery of the Technology Risk Management Program.

MR. STEVE SCARFONE: Thank you, sir. And just for the benefit of the panel members and for later when questions arise, what parts of the application did you have a hand in preparing or reviewing, Mr. Lazarko?

MR. LAWRENCE LAZARKO: Certainly. So I've authored and reviewed the IT chapter. I have participated in the authoring of the IT recommendations related to Gartner benchmarking. I have responded to IRs related to operational expense, IT capital, IRs related to technology, risk management and partnering with Brad and John paired parts of the IT strategy.

MR. STEVE SCARFONE: Okay, thank you very much.

MR. LAWRENCE LAZARKO: Thank you.

MR. STEVE SCARFONE: And, Mr. Bunko, sir, you're vice-president of Information Technology; is that correct?

MR. BRAD BUNKO: Yes, it is.

MR. STEVE SCARFONE: And the Chief Information Officer of MPIC?

MR. BRAD BUNKO: Yes.

MR. STEVE SCARFONE: And, how long,

897

sir, have you been in that role?
MR. BRAD BUNKO: Approximately four and a half year (4 1/2) years.
MR. STEVE SCARFONE: All right. And prior to that, were you working with the Corporation?
MR. BRAD BUNKO: Yes. I've worked with the Corporation for just over nine and a half (9 1/2) years.
MR. STEVE SCARFONE: Okay. And what did you do in your role prior to becoming the vice-president of Information Technology.
MR. BRAD BUNKO: Prior to this role, I had a rule that -- that is similar to Lawrence's that managed infrastructure components, and also the application services side.
MR. STEVE SCARFONE: I see, all right. And did you have a hand, sir, in the preparation of parts of the application before the Board this year?
MR. BRAD BUNKO: Yes, primarily oversight and review.
MR. STEVE SCARFONE: Okay and I understand, Mr. Bunko, that you have a presentation that you will be presenting to the Board momentarily?
MR. BRAD BUNKO: Yes.
MR. STEVE SCARFONE: Okay. And, Mr.

898

Bunko, do you adopt the presentation as part of your examination-in-chief here this morning?
MR. BRAD BUNKO: I do.
MR. STEVE SCARFONE: Thank you, sir. Mr. Wennberg, you're vice-president of Customer Service and the Chief Operations Officer of Manitoba Public Insurance?
MR. CURTIS WENNBERG: That's right.
MR. STEVE SCARFONE: And how long have you been in that role, sir?
MR. CURTIS WENNBERG: Roughly, two (2) years.
MR. STEVE SCARFONE: And have you worked for MPIC prior to becoming a vice-president?
MR. CURTIS WENNBERG: No, sir.
MR. STEVE SCARFONE: What did you do prior to arriving at MPIC two (2) years ago?
MR. CURTIS WENNBERG: I'm born and raised Manitoban, but I'd spent eighteen (18) years outside. I did a Masters in Business in London. Then went down to Australia, worked for a consulting company called Boston Consulting Group. Then five (5) years at GE Capital, switching the roles, and then vice-president roles in marketing, mainly. Then joined HSBC, ran the credit card business in Canada.

899

Then joined Toronto Stock Exchange and so a number of household brand types of companies at the executive level.
MR. STEVE SCARFONE: Okay, thank you for that. And, Mr. Wennberg, I understand you'll be also on the heels of Mr. Bunko's presentation presenting to the Board this morning; is that correct?
MR. CURTIS WENNBERG: That's correct, yeah.
MR. STEVE SCARFONE: And did you, sir, have a hand in preparing parts of the application before the Board?
MR. CURTIS WENNBERG: I did with my role, generally, it's -- it's related to about $75 million of our operating expense with a lot of the operations folks. It's also managing the -- 800 million or in our pro forma going up to close to a billion dollars in total claims cost. So, it's a big portfolio so different areas that touch that.
It also includes topics, whether it be paintless dent repair, the -- also the PDRs you see at CCRS and the business case related to that. Rodents, if there's any questions historically on that, of any other physical damage questions, repair shop negotiations, direct repair. PIPP, whether it's the

900

reserving or the changes we're making in PIPP. High school driver's ed and the drivers and licensing areas.
MR. STEVE SCARFONE: Okay. Thank you, sir. And so the presentation that you'll give, do you adopt that as part of your evidence of your examination-in-chief here this morning?
MR. CURTIS WENNBERG: Yes, I do.
MR. STEVE SCARFONE: Okay, thank you. And next to you, Mr. Wennberg, is John Remillard.
Mr. Remillard, you're the corporate business architect, correct?
MR. JOHN REMILLARD: That's correct.
MR. STEVE SCARFONE: And how long, sir, have you been in that role with MPIC?
MR. JOHN REMILLARD: Approximately eight (8) years.
MR. STEVE SCARFONE: Okay. And prior to that what did you -- I know that you were with MPIC prior to that. What did -- can of work did you do with the Corporation?
MR. JOHN REMILLARD: Sure. Prior to that I was the Director of the Business Process Review which was, in essence, the program of initiatives to oversee the integration of driver licensing with MPI.

901

MR. STEVE SCARFONE: Okay, thank you, sir. And, Mr. Remillard, what areas are you able to speak to today if questions are posed to you?

MR. JOHN REMILLARD: Certainly. The value management chapter and all the associated business cases. I participated in the production of the IT strategy and, ultimately, responded in partnership with Joe Riel to the interrogatories associated with value management.

MR. STEVE SCARFONE: All right. Thank you, Mr. Remillard.

And then lastly, Mr. Chairperson, of course, beside him is Mr. Graham who introduced himself to the panel last week.

So, subject any questions that the Chair has, I think we're ready to proceed with Mr. Bunko's presentation.

THE CHAIRPERSON: That's fine, let's go ahead.

MR. BRAD BUNKO: Good morning. Today we're here to talk to you about information technology, physical damage re-engineering and value management. On the IT side, you'll hear from me on our IT strategy. How it supports our business objectives and how we become -- compare to our peers

902

when it comes to IT performance.

Next, you will hear from Mr. Wennberg who will talk to you about value management processes and how it's shaping a robust and effective corporate decision-making process for large projects. Mr. Wennberg will also talk about the PDR project, some key learnings and how value management will help us implement what we've learned.

Finally, you'll hear from Dr. -- from sorry, Chuck Henry from Gartner. He's an expert witness who will talk to you about the PDR project.

As we go through the presentation, it should become clear how these topics are closely linked, more specifically, how business operations and IT need to work together for MPI to meet its business objectives.

First I'd like to talk about the IT strategy. Purpose of the IT strat -- strategy is to connect strategy to action at MPI and we have a new format this year, one that is clearer in how we start with a business objective found in the business plan, which is actually the anchor document for the IT strategy.

IT defines what business capabilities and IT capabilities are needed to meet our business

903

objectives. We've had Board guidance as part of this IT strategy. They wanted to be sure that we are clearly displaying how we have evolved our IT initiative practices.

The IT strategy focuses on the '18/'19 fiscal year, but needs to be updated annually to stay relevant. Now important consideration is legacy modernization. If approved, this will have a major impact on our IT strategy as it will significantly change our ability to create IT and business capabilities to meet the MPI's business objectives.

Here we just have a graphical represent -- representation of the IT strategy. I think what's important when you look at this is, starting on the far left is the business plan, which is essentially the -- as I mentioned, the anchor document or the driver of all other components of the IT strategy. With the business plan, we determine what business capabilities and IT capabilities are required. It also has a couple more boxes on there being projects at the top and operations on the bottom and those are essentially outputs from the IT strategy.

So once the business capabilities and IT capabilities are determined that need to be created, a project will be created and once that

904

execution is complete, it will be transitioned to operations, both a business operations and technology operations.

I mentioned earlier about, you know, where we were and -- and where we are now. This table is a description of how we've evolved over the last couple of years. And I'd just like to run through since they are quite important.

So where we were is on the left side and -- and where we are now headed on the right. Previously, we were leaders in creating innovation. Where we are headed now is we want to make sure we are adopting proven mainstream technology, very important. An example of that would have been our CCRS project, whereas now we would be looking for a more off-the-shelf mobile first notice of loss application.

Another point of where we were is executing high risk projects. Where we're headed is identifying all risk prior to project initiation and incorporate them into the project decision. This is going across the board on all of our new initiatives coming forward.

Customized out-of-the-box -- I'm sorry, project governance with nonbusiness project sponsors for all projects was what was done in the past, but in

905

the future we've changed that governance structure significantly where we have an operational business champion very much involved in the initiatives.

An example would be for our financial re-engineering we have our controller -- controller Cynthia Campbell acting as the operational business champion.

Another point of where we were is customized out-of-the-box software to suit our process. Where we're headed is to align, wherever possible, our processes to industry best practices that is incorporated in vendor provided software.

Customization can be expensive, both on the implementation but also very expensive ongoing. Every time you want to do an upgrade of that application you are -- you are experiencing a lot more cost than you would if it was just the out-of-the-box functionality that you're upgrading. A good example of where we're implementing that structure is with the analysis that we're doing for Legacy Modernization Assessment.

Another item where we were is candidate projects were not vetted through a detailed value management process. And where we're headed is value management discipline process becomes ingrained in MPI

906

process and culture. This again is applied to all new initiatives.

Where we were, technology driven change within the organization. Where we're headed, IT capabilities are created to support business capabilities. This is well articulated inside the IT strategy. An example of which would be customer self-serve.

The IT scorecard --

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Just be -- before you move on to your next -- thank you, Curtis.

Mr. Bunko, could you -- there's a lot of change there that's demonstrated on the slide, perhaps from a high level, could you just explain what was the impetus for the change that appears to be happening in the direction that the IT strategy is taking?

MR. BRAD BUNKO: Well, we don't like to see projects that fail and a lot of these things pertaining to proper preparation on decision-making for the initiative before we venture into them. Other things pertain to having an extra burden in a -- in technology debt that is not obviously necessary, such

907

as customization is a technology debt that you will put on yourself and you will continue to pay for a very long time to come. So, therefore, that would increase operational cost of IT ongoing and make it very difficult to -- to adopt new functionality that may be provided by the vendors.

MR. STEVE SCARFONE: Thank you.

MR. BRAD BUNKO: IT scorecard. Now Gartner has been doing this for us for a number of years, formerly called the CIO scorecard is now called IT scorecard and it is our independent assessment of MPI's IT progress in peer comparisons.

So we use this scorecard to continually improve. Gartner makes recommendations. We -- the recommendations that we agree with, we make plans to address. There are some recommendations that we are not aligned with, we will have conversations with Gartner and often it is getting to the -- to the clarity of what actually the crux of the problem may be.

But our MPI performance is -- has been improving over time quite consistently over the last five (5) years. Two (2) of the major benchmarks inside of the IT score is our IT spend as a percentage of operating expense, which has decreased 7.1 percent

908

year-over-year over the last five (5) years, that's a compounded annual growth rate of negative 7.1 percent.

MPI's IT maturity growth is 3.9 percent per year compounded annual growth rate over the last five (5) years. Interesting thing about that is that typically it's difficult to increase your maturity while decreasing your costs because increased maturity reflects a higher level of service delivery capability to the organization, and that typically just costs more.

As in one (1) categorization such as information security, if you want to become more capable increase your capacity in that area, you will have to incur expenses to get there to increase your maturity.

IT staffing strategy. So this has been going on for proximally three (3) years and it is the whole idea of making sure that we are making effective use of in-house versus external contractors for IT. Our target was seventy-seven (27) positions starting in '16/'17 and ending in '19/'20, with a projected savings of $2.4 million annually.

And where we are at right now is we have converted twenty (20) positions and the savings -- we anticipate savings by the end of '19/'20, after

909

we've converted all twenty-seven (27) to be between 2.4 million and $3 million in annual savings.

My last slide I -- I talk about the current financial year capital projects. Now these dollar amounts that you see here are just the dollar amounts for the '18/'19 fiscal year. Some of them are multi-year projects.

The business and IT capabilities that will be created through these projects are identified in the IT strategy which is another good thing about the IT strategy, not only is it -- it's defining what capabilities are required and then it does link them to the initiatives that are in flight. If there's capabilities that are required, and we do not yet have an initiative in flight that is an indication of where a new project may need to be created. And now I'd like to turn it over to Mr. Wennberg.

MR. CURTIS WENNBERG: Okay, thank you, Brad. So I've got four (4) pages that are fairly simple to present to everyone and -- and given my role it's -- it's -- it's -- need to be up here with Brad to show you how the IT strategy melds with the value management.

Value management is a cultural shift for MPI and maybe we'll describe that through some of

910

the examples big and small.

So in the -- in the first page here all big projects now go through some expected rigour where we look internally for all costs and all benefits to be -- to be explicit and even if there's soft benefits we want to make sure that we understand those. But we have a full picture of what something actually is.

To give you an example wi -- that can bring what Brad's testimony was, the before-and-after to what happens now, I'll give you a small example that is a microcosm.

We were working for a number of years on video-based estimating, so we were working with a local company. We were going to try and innovate to do -- take videos of a vehicle remotely and then have our estimators review that and hopefully it was going be efficient. But, put a person on it from Operations and really decided to -- to get the business case on this and see -- is our efforts worthwhile because we were out there. There was no others that were doing this in the market in North America.

And when we looked at it there were some benefits we could see. We don't have to do rural road runs. There is a benefit to some customers, but the use of videos, heavy data, intensive, no one's

911

doing this, we'd have to develop some stuff with our use of -- of -- of our own claim system CARS plus -- and Mitchell and it -- was complex. It's that innovator's curse of being the first to do something.

So in the end once we actually business-cased this thing, we -- we shut it down. And ten (10) months later, here I am at -- with Brad reviewing a room full of other insurance carriers who are using now photo-based estimating which is an industry standard that's come out, where they've got firms such as Mitchell or -- they're not the only ones doing it, but it'll allow you to take pictures of your vehicle and upload that to our estimators and we can actually do almost the same thing that we were anticipating doing and by signing on -- on this as a off-the-shelf type of application, we follow best practice, it should be more robust. We're not doing this now, but we're going to take a strong look at it.

So it's an example of where we were trying to be more innovative and more technology and -- and we're pulling back and we're using more best practices.

Point 2 is value-managed checkpoint -- is value management checkpoint is ingrained in the process. So high school driver's ed is -- is on your

912

slide as an example. High school driver's ed is, of course, a multiyear, multimillion dollar program, but we found as we looked at it with Joe and his team, at this point, we didn't have a full business case so, we've gone through and put a business case with the hard and soft benefits, and I think there'll be some more questions about that later. And -- and happy to get into it, but -- but through that process we also learned some of the positives and other things we -- we want to put on with high school driver's ed.

Third point is we know when we do this not everything that we invest in is going to have a positive NPV and we're going to still have to take that up to both our board and this Board and just be honest with ourselves and say that sometimes we'll need to invest in things that are just compliance related or that it's strategically important for us to do and -- and move on. But that's not unusual for other businesses and -- and we just -- we shouldn't be stretching out all the time to show a positive NPV.

And then the final one is even daily operational decisions are requiring business acumen to be done before we adopt something so some of my team that sit behind me will be -- knowing when I say we asked for a one pager sometimes and we're looking at a

913

process change or policy change or even a technology change to -- to do something, we really push on what's the business acumen. So that's -- that's the first page on value management.

To dive deeper on the bigger projects that are subject to this review heavily in IRs, there's the PDR and CCRS. The context for this -- the Board did request a new full NPV and -- and we provided that very early in 2018. The updated NPV, as you know, was -- it was 13 million for years and years and years and not really changed. And that went down to minus 53 million when -- when everything was -- was thrown in there.

There were some key costs that weren't included for various reasons. Some benefits were not negotiated into the Light Vehicle Accreditation Agreement that we had, like the loss of use or -- or how we basically pay for rental cars, for example, that we just didn't get in the Agreement what we had assumed would -- was in the business case and the positive NPV.

We'd -- we'd stopped doing some components of PDR like total loss and -- and some of the -- some of the aspects of it weren't -- weren't really ready from an operational sense to -- to -- to

914

through out there; and then some costs were added in on the LVA, like the eighty-one dollar ($81) direct repair premium. That was -- that was more a -- a new thing from 2016 that was added in but not assumed as part of the costs.

In the CCRS implications we -- we internally recommended another review of CCRS as a component. Historically, the culture was to determine an overall project NPV for a big project like PDR, CCRS being one (1) component. Don't look at it as an isolated unit but certainly it's a size that you would want to make sure that we're making our money from it or understand the cost and benefits.

It is a very innovative piece and we'll probably get into it later on, but -- but we want to take a look at that. And then in April after Ben joined, we finished our analysis of that and we decided to cancel that project for a number of reasons. And -- and that's all on the record already in terms of why, but -- so you can see that even for some of the smaller projects plus then these larger ones we're -- we're reviewing and doing a fairly full net present value and business casing to support decisions.

On lessons learned for PDR and CCRS

915

there's a few of them. One (1) is that corporate culture and the tone from the top is absolutely essential and -- and we need this, not just for the project budgeting upfront, but we need it for post-implementation reviews as it goes forward so that we really learn from what was rolled out and then you correct any mistakes.

Part of the business case on PDR, for example, is recognizing what we did with eighty-one dollars ($81) and the value it's giving us or not giving us in our current negotiations and public stuff that we've put out to our trade. They know that we -- we can't afford the eighty-one dollars ($81) and it's not industry standard practice. So we're working our way out of that as an example.

2. It's gotta stay open to revisiting weak assumptions. So if the assumption, for example, was that we could get direct repair out in shops and do it for nothing but then we had to the eighty-one dollars ($81), you -- you just have to put it in your business case.

Third is, third parties may not find all the weak assumptions or missing costs, so we -- we -- we internally have to be true to ourselves and put the right pieces out there. Gartner may not be able

916

to find everything.

Four is, MPI exec management have to be accountable for the NPV integrity. And...

Five is, you don't need technical skills or new technical skills to correct this historical issue in -- in -- once we effected the cultural shift with the teams we have in place, we produce very high quality business cases and the net present values and -- and so we've got the technical skills to be able to do this.

So the last page, in summary, and then I'll hand it off, the updated IT strategy is aligned with our corporate mission and the -- the operational business champion working the strategy through is -- is part of that cultural shift. It also allows us to build the right business cases. So the two (2) go hand-in-hand quite a bit and -- and really the following industry practices and not leading it -- is -- is quite useful for MPI.

Sometimes it's easy to think as a billion dollar company we have the size to be technology -- technologically leading but there's a lot of bigger players in North America and we can adopt a lot of good standards in a lot better way -- a lot cheaper way.

917

Improvements on IT is improving relative to our peers and there's a number benchmark studies to prove it. We've made some mistakes managing large IT and we're here to -- to talk about that, whether it's the BI3 or the PDR types of projects and the ramifications of those.

The new value management process is operational and we use it for large and small and legacy modernization is underway. One (1) of the things we want to make sure -- or -- or the -- or the feel we give to this Board is that we understand with BI3 and PDR, they were large, multi-year, heavy projects. Legacy modernization is another multi-year heavy project, and -- and we don't want -- we don't want you to think that some of the mistakes in the past are going to be on the future when we go through legacy modernization. We will adopt business cases and be doing with them upfront like what you've seen with -- with the reviews of PDR and others, and -- and work them through the process, and rework them.

So at this point, I'll hand off to -- to Chuck Henry from Gartner, who will complete his view of this, and then we'll be taking cross-examination and questions.

MR. STEVE SCARFONE: Thank you, Mr.

918

Wennberg, and -- and Mr. Bunko. Just before we turn to Mr. Henry, I just have a couple follow-up questions on the presentation. I think Mr. Wennberg or Mr. Bunko can probably answer these.

Relating to the value of some of the information technology projects, with the cancellation of CCRS, Mr. Wennberg, think I know the answer, but would MPIC describe the Physical Damage Reengineering Project as a good investment in the -- with the benefit of hindsight?

MR. CURTIS WENNBERG: PDR -- the overall PDR is -- is a $65 million project. I'd say the core of it was moving off a paper basis of estimating and faxes -- we're getting faxes back and forth from our repair shops, and that just didn't make sense. Most other companies and insurance companies has adopted the standards of -- there's three (3) of them, CCNC (phonetic), Mitchell, and AutoText (phonetic). They -- they do software-based estimating.

The core of PDR was really going and -- and doing that. We -- we also then pieced on or bolted on a few other -- a few other elements that, probably in hindsight, we wouldn't have done. We would have probably scoped down to more of getting a -

919

- a Mitchell system in, and then reviewed the other systems on their merits.

And this is easy to say as an armchair quarterback a few years later down into the road of this project, but -- but that's probably the summary of it, that the overall, it's a -- it's a very deep negative. It probably combined too many things over time, and -- but -- but at its core, there -- there made sense to do it.

MR. STEVE SCARFONE: Thank you. And then my second question was, as it concerns the cancellation of the customer claims reporting system, is anyone able to explain how the value management -- the new value management process was able to -- to capture, if you will, this project, and -- and what -- and lead to its cancellation?

MR. CURTIS WENNBERG: Yes. So -- so over the -- the beginning years, like I said, the -- the -- for right or wrong, and -- and we know better now, but PDR was just evaluated as a great big project, and CCRS was never evaluated on its own merits.

So as we went through this with the value management, and as it being the last big piece to get finalized, it -- it had to. You had to

920

actually split it out, and split out all the benefits, and all the cost structures related to CCRS.

But like I say, with PDR, you could have split out Mitchell, and you could have split CCRS. You -- we could -- we could we could do that. It wasn't -- it wasn't, like, mental gymnastics to be able to strip out the cost and benefits. So, you know, there was a -- there was a few that may have been a little tricky, but it really wasn't too bad, and so it was relatively easy to do.

With CCRS, the acronym is Customer Claims Reporting System, for those in the court that don't know. CCRS, just as a -- as a one (1) minute summary, was our ability to allow a customer in Manitoba to go online and register their first notice of loss, or register their claim online, and we would take them through a series of pictures of it -- of what could have been an accident, like a car turning right, and they be able to go online and -- and tell us what happened in the accident using these pictures and using some questions, and we would be able to adjudicate them, actually tell them, You are not responsible, or you're a hundred percent responsible for your accident. And then they could go on fairly seamlessly and book their car in for -- for both

921

estimating and then -- and then repair.
So the idea is good. The idea actually generally is where the industry is trying to think about, but the industry is also thinking about doing it in -- in slightly different ways as well. So in Australia, for example, you're looking at customers just writing free-form text and having artificial intelligence figure out within the text the probability of -- of liability in certain directions.
And -- and so what we have to do in MPI is just wait a little bit. We have a lot more things we can put online, as -- as Ben or as Brad's submissions have -- have stated, that is following best practice. Let's do that, and then watch where claims go, and adopt that best practice when we get there.
MR. STEVE SCARFONE: I see. So the -- the CCRS project, do I understand that to mean then that it hasn't been entirely abandoned, notwithstanding its cancellation?
MR. CURTIS WENNBERG: No, it hasn't. So there's some very good work done around the intellectual property of how we picture these accidents and -- and can visualize them to customers. So as we watch this develop in the marketplace, we

922

still have that body of work that we can rely on.
MR. STEVE SCARFONE: Thank you. And so now, Mr. Chair, we will have Mr. Henry present.
Kristen, if you could -- could you pull up for me, please, Exhibit number 4? Sorry to put you on the spot. I should have given you a heads-up, but that would be Mr. Henry's curriculum vitae.

(BRIEF PAUSE)

MR. STEVE SCARFONE: There we are. Good morning, Mr. Henry.
DR. CHARLES HENRY: Good morning.
MR. STEVE SCARFONE: Sir, you're with Gartner Consulting. Is that correct?
DR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And how long, sir, have you been consulting with Gartner?
DR. CHARLES HENRY: About seven and a half (7 1/2) years.
MR. STEVE SCARFONE: All right. And what is your title with Gartner, sir?
DR. CHARLES HENRY: Vice-president, solution and pricing.
MR. STEVE SCARFONE: Okay. And

923

briefly, if you could, your duties as -- as vice president of -- of consulting with Golt -- Gartner?
MR. STEVE SCARFONE: I -- I have two (2) roles. One (1) is an internal role. I look at all the jobs that we do in North America to make sure that we're maximizing the value to our country, and secondly, I am a practicing consultant looking at how people are using IT to advance their business.

(BRIEF PAUSE)

MR. STEVE SCARFONE: Thank you. I will give you my mic.
DR. CHARLES HENRY: Okay. Thanks.
MR. STEVE SCARFONE: And sir, I understand that that you took a look at the Physical Damage Re-engineering Program for Manitoba Public Insurance and prepared a -- a report for the Corporation this past year, correct?
DR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And that, sir, was a -- a comparison as against the report prepared by your firm last year. Is that right?
DR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And, sir, you've

924

been prequalified in this proceeding to give expert evidence, which means, sir, that you're allowed to provide your opinion on certain matters. Two (2) areas in which you been so qualified is the use and planning of information technology. Is that right?
DR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And the second area of expertise is with respect to information technology governance. Is that your understanding?
DR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And the first one, it seems to me, is rather self-explanatory, but can you just elaborate a bit for the panel on what information technology governance means?
DR. CHARLES HENRY: For us, governance means making decisions around the investments in IT. So who has decision rights around spending money to use IT to advance your business interests.
So in the previous presentation, they were talking about changing the roles within an IT project to make sure that the business had a larger role. That's part of governance, and something that we -- we very heavily support, and I'll talk a little bit about that towards the end of my presentation.
MR. STEVE SCARFONE: Okay. Thank you.

925

And just before we begin your presentation, Mr. Henry, how long have you been working with Manitoba Pub -- Public Insurance?

DR. CHARLES HENRY: This engagement we started in -- in April. I was here in 2012, I believe, as part of kind of that year's iteration with my colleague Martin Geffen.

MR. STEVE SCARFONE: Yes, and I was just going to touch upon that. So last year, we heard from Mr. Geffen. Did you have consultations with Mr. Geffen in the preparation of this year's report?

DR. CHARLES HENRY: Yes, I did.

MR. STEVE SCARFONE: Okay. Thank you. And then lastly, sir, could you just confirm for me that the presentation that you are about to -- to give to the Board will form part of your examination-in-chief here this morning?

DR. CHARLES HENRY: Yes, it will.

MR. STEVE SCARFONE: Okay. Thank you. And if you're ready to go, we'll proceed with your presentation.

DR. CHARLES HENRY: All right. Thank you. So table of contents is kind of an outline of what I -- I hope to talk about this morning. I'm going to give you little kind of context and

926

background, talk about the team, which is me, primarily, and -- and the approach that we took, a little bit of PDR history and current state, a comparison between our 2017 and 2018 analysis, the lessons that we learned from doing this, our view of the CCRS cancellation decision, and a couple of perspectives from us in our research.

One (1) is on IT project success, so talking about what our database is around how to manage successful IT projects, and the second is what we view as the digitalization of property and casualty insurance, so what we see that MPI is going to be forced to look at over the next, you know, three (3), four (4), five (5) years, so that's some of the challenges that are coming to them going forward. So that's -- that's kind of an outline of what we want to talk about.

So, for context and background, we've been working with MPI for over seven (7) years, providing research and advisory insights. We've helped to benchmark the -- the IT organization. I haven't done it, but colleagues have, so help MPI just understand how it's spending money on IT relative to peers. And also the application of our PPM -- our program and portfolio management research to MPI.

927

In the last year, MPI has contracted with us as requested by the PUB to update the report and to provide an independent assessment of the development and rollout of the -- of the PDR project. So I'm -- I'm here to -- to help fulfill that.

The team -- we assigned some additional resources. So I continue to work with Martin, also a colleague, Rand Guy, who's the managing partner of -- for Gartner Consulting in Western Canada.

Myself, I'm a VP with Gartner Consulting. I'm sixty-five (65) years old, which means I've seen a lot of projects, good and bad, way too many bad. IT projects are hard, and we'll talk a bit about that as we go forward.

In previous roles, I was the chief technology officer of the Government of Canada. So I looked at the 5 billion a year that Canada spends on IT. That was before Phoenix, I might like to add.

We did project reviews of major Crown corporations. I'd helped develop the cloud strategy. We did a digital maturity model for Service Canada. We've done a application program management model just based on our time, which the Government of Canada uses. And I spent thirty (30) years at IBM, from 1975 to 2005. So I've -- I've seen lots of projects and I

928

hope be able to share some of that -- that background with you.

In terms of the approach, we started by reviewing a bunch of artifacts that MPI provided, plus the previous Gartner reports, including a management presentation on the PDR program that was dated April 19th, which happens to be the day we were -- or I'm -- I'm -- the -- Martin and Rand were in Winnipeg, physically present with MPI.

Following that day, we had a large number of conversations as I sought out clarifications on the information that I had been provided, and started writing my report, and I also wrote the report in consultation with Martin to make sure that I fully understood the previous reports that that -- that Gartner had provided.

Some history, over the -- it's been five (5) plus years the MPI's been on a journey to improve service to Manitobans in -- in basically three (3) areas: One (1) is physical damage, the second is loss prevention and road safety, the third is customer service.

And this evolved into a -- business case for PDR with projections for a $65 million cost and the identification of a high-level benefit stream.

929

And -- and what we've observed mainly in the last year, as -- as the program evolved, two (2) things came out, is MPI had difficulty measuring and breaking down those high-level estimates into detailed estimates for each element of the program, as was outlined earlier.

And I will say the Mitchell licence is complex. Parts of it are used and reused in different ways, so it's not completely straightforward how to -- how to do that analysis, but MPI had not done it until this year to start to look at where all the costs were, and how they should be aligned to -- to their use in the project.

And the second thing is that senior executives had been negotiating with the repair industry, which was a significant portion of the -- the savings for the -- for the project. And there was, quite frankly, limited engagement with the business at the business unit level about the impact of some of those negotiations. So the resulting agreements often made it difficult for MPI to realize the benefits that the -- the PDR project had been assuming would be achieved.

So it's a -- it's a complex program. Lots of external factors that affect the benefits, and

930

MPI had been at -- to that point in time, unable to bring all of that information together into an updated business case.

So currently, the overall business case has been analyzed and refined by MPI's value management team and the project team over the past year, and they've conducted a detailed assessment where they now have very current cost of expenditures to date. They understand the balance of the approved available budget, and they have a detailed evaluation of the benefits that could be achieved from the expenditure of the remaining funds, and they concluded that the benefits to be achieved would not be supported by the cost to achieve them. They recommended to the Board that CCRS be cancelled.

So now we talk about the difference between 2017 and '18. So our report from 2017 set a positive NPV of around $13.7 million. The MPI analysis this year says a negative NPV of about 49.9 million, with CCRS cancelled.

We did a discount rate of 3 percent. MPI was not using NPV as a project management technique or tool in -- in 2017, so we introduced NPV. We assumed a discount rate of 3 percent. MPI has adopted NPV as a project management tool, and has

931

actually a couple of different discount rates that they applied based on the risk associated with the project. The high risk of -- of projects like CCRS demands a discount rate of 9 1/2 percent.

We saw costs of $65 million. With CCRS cancelled, MPIC's cost of $57 million in our analysis period was '16/'17, the assumed first year of benefits to '25/'26, and their analysis shows '17/'18 to '26/'27. So basically, move forward a year to follow the benefits.

So obviously, there's a significant difference in some of the costs, and the benefits, and the overall NPV. And there's three (3) things: Obviously, some cost that should have been attributed to PDR in the past weren't.

Secondly, that new evidence shows that some of the benefits of the PDR were -- are going to be lower than what was projected.

And thirdly, that MPI's using this 6 1/2 or 9 1/2 percent discount rate, 9 1/2 percent for high risk projects, and that causes the NPV numbers to change. So those are the -- kind of the three (3) big changes between our '17 analysis and MPI's '18 analysis.

So some lessons learned for us. We

932

made a number of requests to MPI regarding operating cost and benefit projections in '17, and we reported a cost and benefit stream based on the high-level data that MPI provided. In retrospect, we should have highlighted a lot more firmly that the 2017 report were based on high-level numbers, and it not been validated through detailed analysis. That's on us.

And so we've agreed that all analysis going forward will include consideration of detail supporting data, and that the necessary level of detail was not available. That will be clearly defined. So that's the lesson learned for us in -- from our 2017 report.

So our view of the CCRS cancellation decision, we've reviewed the latest iteration of the PDR value management business case. First of all, I'd say it's great that MPI's followed Gartner's advice, and has applied a much more rigourous approach to the business case and the application of the value management framework. It's much more detailed than it was in the past. It's much more complete. It's a lot more sophisticated, and there's a lot more focus on value management as a cultural change in the organization, and we believe that's going to lead to higher project success.

933

So you'll see in some of the -- my subsequent presentation that -- that value management is a key element of successful IT project management. We'll talk a little bit more about that later from a -- from an industry perspective.

MPI has now continued to mature its value management capability. It is now formally tracking benefits with accountability, so that the business is accountable for delivering the benefits that these projects are supposed to deliver. If they can't deliver them, there's analysis to see if it was, you know, an assumption that the IT project perhaps isn't delivering the function that was required, or, you know, there's some process change that needs to be made in the business in order to achieve the -- the savings. So a lot more rigour around looking at the benefits of projects, which is also rate and an element of best practice for -- for project management.

So finally, we support MPI's decision to terminate CCR component and finish the few remaining elements of -- of the PDR program this year.

So Gartner's a -- a research company. We -- what we do is -- is go out and -- and look at what vendors and industry are doing with IT, collect

934

as much data about what they're doing and -- and present that back. We -- our core business is providing research around IT, HR, finance, supply management, material management, marketing, sales. That's -- that's our business.

And if you look at our project database, you'll see that even among those projects that are delivered at least 90 percent on time and on budget, the majority fail to deliver business outcomes. So the top-performing projects in terms of budget and schedule compliance attain an average of only 15 percent of their business outcome expectations.

IT projects are hard --

THE CHAIRPERSON: Sorry to interrupt. I just want to make sure the record's correct. I think you said 15 percent rather than 53 --

DR. CHARLES HENRY: Fifty-three (53) percent, yeah. Yeah. Sorry.

So IT projects are hard. I have personal opinions why, I which I'd be happy to share, but, I mean, the net of it is our database shows that -- that IT projects are hard. Delivering those benefits is difficult. That's why the governance around these projects and accountability for benefits

935

is so important.

So some of our observations for MPI based on -- on what we've learned from our database is -- one (1) is -- big thing is continue to invest in value management. So MPI has made a lot of progress in applying value management principles to its project portfolio. We obviously recommended this focus be extended in the project management teams and to your project management methodology.

So a couple of things specifically emphasize that the general management skill required for project managers. So project managers aren't just experts in Gantt charts. They need to be really that utility outfielder, somebody who can play all the positions, understand the business, understand IT, and help the communications between IT and the business so everybody's on the same page around what's going to be required to deliver the benefits, and continue to explicitly link project objectives to organizational goals.

So it's very easy for a project to get wrapped up in itself and what its own definition of success is. It needs to be continually reminded and forced to look outside and make sure that its project outcomes are linked to the business outcomes that are

936

driving the success of the organization.

Further increase the focus of plans to business outcomes. So had I talked about the IT strategy is starting from the business strategy, which is exactly what we like to see. We like to see a resource management plan that include resources at project conceptualization and stay -- that include both business and IT resources, and that define project success in terms of business outcome.

Well, you know, we're not doing an IT project in order to put a PC on your desk. We're doing an IT project in order to give you a tool to make you more effective in doing your job, and what we should be measuring is, you know, have we helped you do your job more effectively?

And you need to make up-front investment that -- to try and create leading indicates of benefit realization. So as you incrementally go through a project, you'd like to see leading indicators that says that this project is actually going to start. We see good signs that this project will deliver the value that its anticipated it's delivered throughout its life.

And finally, want to talk about harnessing the power of stakeholders. So the people

937

that are in the business at the coal face, as we say, are the ones that have the -- the best possibility of defining what success is, what successful change will look like. If you do that early, that's the best time to foster the collaboration that's needed to drive a successful project and provide the delivery flexibility, because there's always going to be issues, and changes, and unexpected things that happen that need to be incorporated into the projects to make sure you can derive the benefits.

And we need to educate sponsors in what they need to know to take ownership and address issues throughout the course of the project. So just as we need to have, you know, very capable project managers, we need to have very capable sponsors. And we can't expect an executive with no background in, you know, in being an executive in charge of an IT outcome to be able to then manage it. We need to give them training and insights to make sure that they have all the capabilities needed to be a successful sponsor.

And the next thing I'd like to briefly mention is what we call the digitalization of property and casualty insurance. So digitalization is affecting every business, government, to manufacturing, to insurance, to banking. There's a

938

lot of changes coming, and MPI is going to be forced to look at these changes. This is a great time to be out looking at the industry and see what successful organizations are doing, and figure out how you can adopt those things.

The number 1 thing will be mobility. So as I said, I'm sixty-five (65) years old. I'm a PC guy. I've had, you know, a PC or a machine in front of me since the '80s. I have 34-year-old twin daughters that live in Alberta, they are not PC people, they're phone people. They live and die on their phones. That's the future.

So whatever MPI does going forward, they're not going to be -- you know, your customers are not going to be tethered to a -- to a laptop or a PC, they're going to expect mobile service on their phone through mobile devices, things like text messaging and social media.

This has already been mentioned today. Artificial intelligence is going to be moving into this business. So in areas such as claims handling, which is also being mentioned today, where the combinations of cognitive computing, things like chatbots are going to support touchless claims processing so that your client can have a conversation

939

potentially with a -- with a robot around what happened in the course of an accident. From there, the claim will be processed.

Cars are incredibly smart, hundreds of millions of lines of code in the modern car. We know exactly where it is. We know exactly how it's been driven. That's going to radically change your ability to make insurance decisions, to make claim's decisions, but also to change your insurance products.

So there is already companies out there that are offering insurance by the trip. So the actual very fabric of what insurance is going to be is going to evolve over -- over the coming years.

From an IT perspective, cloud-based services such as software as a service are -- are coming into being used by property and casualty firms. MPI is going to -- going to have to look at those, keeping in mind its requirements for security and integrity of -- of the data of Manitobans.

And there's lots of iterations around product development, different ways of doing product development, including on-demand insurance products and improvements in customer experience and management.

So, net of this is we see the next, you

940

know, five, (5) eight, (8), ten (10) years as a time of big change in the insurance business. MPI is going to have to -- to be a part of that change and figuring out the pace of change is going to be a key element of their -- both business and IT strategies going forward.

That's the end of my presentation. Back to you.

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Thank you, Mr. Henry. Just a couple questions following up on your presentation. Kristen, if you could pull up Mr. Henry's report, it's at Value Management, Appendix 6. And we'd have you scroll, when you find it, to the executive summary, page 4, please. Just back up a little bit. Thank you.

Sir, we see there in the executive summary of your report that, as you've indicated, there was a comparison done between last year and this year.

Reading that, the third paragraph, Mr. Henry, you state therein that there is a significant difference in some of the costs and the benefits and the overall net present value between this year and

941

last, correct?
MR. CHARLES HENRY: Correct.
MR. STEVE SCARFONE: And as we've heard, that significant difference, as I calculate it to be, about a $65 million swing in net present value?
MR. CHARLES HENRY: Yes.
MR. STEVE SCARFONE: And we heard Mr. Wennberg speak to some of these factors, if I can call them that.
Would you confirm that these factors would include understating the net present value of the project?
MR. CHARLES HENRY: I would say understating the -- the -- the inputs to the project. So, understating the costs and overstating the benefits. And that results in the change in NPV.
MR. STEVE SCARFONE: Yes, so some of the costs as we understand it were -- Gartner wasn't aware of some of the ongoing operating costs, including the Mitchell license and fees.
Is that correct?
MR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And that, as I understand it, amounted to about $30 million.
MR. CHARLES HENRY: Over the life of a

942

project, that's correct, yes.
MR. STEVE SCARFONE: And the -- the change of the discount rate, initially it was at 3 percent I think you said?
MR. CHARLES HENRY: Yes, that's correct. So, as I said, MPI was not using NPV as a -- as a project management tool. We used it as a way of introducing it, and we picked a discount rate of 3 percent and, you know, we should have gone back to MPI and worked harder with them to -- to determine a discount rate.
But as they weren't using NPV, they didn't have one (1) available to us.
MR. STEVE SCARFONE: Right, and so that's what I meant earlier, sir, when I said that the cost of capital was perhaps understated, because the discount rate was -- that was selected was too low, is that fair?
MR. CHARLES HENRY: Yes, that's fair.
MR. STEVE SCARFONE: And I understand that particular factor, if you will, as it concerns the $65 million swing, amounted to approximately $20 million. Is that your understanding?
MR. CHARLES HENRY: Yes. Although I didn't do that calculation, but...

943

MR. STEVE SCARFONE: And then lastly we heard Mr. Wennberg speak to an agreement with the light vehicle or the trades that had MPIC paying the shops a premium.
Is that your understanding?
MR. CHARLES HENRY: Yes, the $81 premium.
MR. STEVE SCARFONE: And that particular information wasn't known to Gartner when it prepared its report last year. Is that right?
MR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: And then lastly, Mr. Henry, the cancellation of the customer claims reporting system that we understand amounts to about $13 1/2 million dollars toward the $65 million swing?
MR. CHARLES HENRY: That's correct.
MR. STEVE SCARFONE: But as it concerns that, part of the physical damage reengineering program, that cancellation wouldn't have been known to Gartner at this time last year.
Is that correct?
MR. CHARLES HENRY: That's correct.
We -- that decision had not been made and -- and the contemplation of making that decision we were not aware of.

944

MR. STEVE SCARFONE: Are those the main factors, as I described them, but are those the main contributors, if you will, to the $65 million swing that we see this year from the last?
MR. CHARLES HENRY: Yes, that's -- those are the big ones.
MR. STEVE SCARFONE: So I asked Mr. Wennberg this and I'll ask you, sir. With consideration to the difficulties that you mentioned that large information technology projects face, the black swans and -- in your presentation, how would you describe the physical damage re-engineering program?
Would you describe it as a good investment or a poor investment for Manitoba Public Insurance?
MR. CHARLES HENRY: I can't comment on the -- on the whole program, but I can say that MPI had no choice but to get to some technology like Mitchell and standardize how estimating was being done across the project. Without that, things like fraud analysis is impossible because the -- the data wouldn't be reliable enough.
So there is a huge amount of value in getting to, you know, a platform like Mitchell and having this common standard in place with the repair

945

industry.
And from there, lots of things are possible going forward. So by having the standard in place, having good data, you know, there's lots of possibilities of what MPI and the industry together can do with this that -- that was not possible in the past.
So to me, that was essential. I can't comment on all the other components.
MR. STEVE SCARFONE: Very good. And those are my questions for Mr. Henry, Mr. Chair.
THE CHAIRPERSON: Thank you.
Ms. McCandless, did you want to start now or did you want to take the break and then start?
MS. KATHLEEN MCCANDLESS: Mr. Chair, I expect my first area of questioning to take twenty (20) minutes to half an hour, so.
THE CHAIRPERSON: Let's start now.
MS. KATHLEEN MCCANDLESS: And before we begin, I did steal something from Ms. Schubert before the MPI panel began this morning that I need to return to her before I start my questions, so I'll just return that now. Thank you.

(BRIEF PAUSE)

946

MS. KATHLEEN MCCANDLESS: So for the benefit of the MPI panel and for the panel itself, just to give a roadmap of where I intend to take my cross-examination, I will start with questions about value management. I will then move in to questions about specific IT projects. Later on, in to the physical damage re-engineering project and questions for Mr. Henry, and then I will conclude my questions with questions about IT benchmarking.
I will have some questions at the end, the very end, with respect to commercially sensitive information.
I spoke with Mr. Williams before we began the proceedings this morning. He also has some questions in that regard. So, our intention is for me to finish my cross-examination with the CSI questions and then immediately Mr. Williams will begin his cross-examination with those commercially-sensitive questions as well so that we don't need to go to a separate tape twice in the course of this panel.
And one (1) more comment for the benefit of the MPI panel. In the course of my questions this morning, I will -- I'm careful not to reference any commercially-sensitive information. It may be then responding to one (1) of my questions, you

947

do need to reference commercially-sensitive information. If that's the case, just please advise and I will table that question until later in the process. Thank you.
THE CHAIRPERSON: Ms. McCandless, if I could just add that for anybody watching the proceedings, when we get to commercially-sensitive information, the live streaming will be shut down.
MS. KATHLEEN MCCANDLESS: Thank you.

CROSS-EXAMINATION BY MS. KATHLEEN MCCANDLESS:
MS. KATHLEEN MCCANDLESS: So my first series of questions will relate to value management, and I would like to understand how the approval process of major projects and stages of major projects were handled previously within the Corporation and what is now different as a result of the implementation of the new value management process.
I understand that the Corporation established a business transformation office several years ago to manage IT projects, is that right?
MR. BRAD BUNKO: That is correct.
MS. KATHLEEN MCCANDLESS: And did the business transformation office manage all IT projects?
MR. BRAD BUNKO: Yes, over a certain

948

size they would be managing them.
MS. KATHLEEN MCCANDLESS: And what size would they manage?
MR. BRAD BUNKO: It was not always based upon a dollar amount, but it -- more based upon different areas of the organization that would be touched.
We could have had IT projects that were IT-specific and only impacted, say, infrastructure, within the IT. That project would have been done more from an operational perspective and not through a business transformation perspective.
MS. KATHLEEN MCCANDLESS: So is it more in the nature of what the project was rather than a specific dollar value that would move it to the business transformation office then?
MR. BRAD BUNKO: That is correct.
MS. KATHLEEN MCCANDLESS: And how was the business transformation office organized, what was the composition of that office?
MR. BRAD BUNKO: From a personnel perspective?
MS. KATHLEEN MCCANDLESS: Yes.
MR. BRAD BUNKO: So we had a -- or do have a director of the business transformation office,

949

who has the general responsibility for oversight, the business transformation office.

Reporting to them are a couple people, one (1) that is responsible for delivery of BTO, so they are a little more into the details as to what the projects are doing and their status.

We also have a manager of EPMO, Enterprise Project Management Office, who is also very involved in the initiatives to ensure that standards are being adhered to for the -- for the initiatives.

The structure of project managers will -- we'll have several project managers for the various initiatives. They will report to -- up into the EPMO office.

The EPMO office is also responsible for -- for reporting on the projects. And so between those two (2) things of reporting on projects and ensuring that the project managers are adhering to proper project standards, that is their responsibility. That's the bulk of the governance inside of there.

In addition to that, we've had for numerous years a project initiatives sponsor, that is the business liaison between the business and the technology that's being implemented.

950

And for many years that's been a single person, and it's been our corporate business architect, who is with us here today, John Remillard, and he played that role of interacting between the business and the technology in determining what the business requires to be successful. That is a rule where we've made that shift to more of an operational business champion that would come in and play that role.

Lots of benefits by having an operational business champion at the very beginning of the initiative through the project itself, and then accountable for the -- realizing the benefit streams that were indicated inside the business case.

MS. KATHLEEN MCCANDLESS: Thank you. So just to clarify, Mr. Bunko, the business transformation office is still an office that is up and running within the Corporation?

MR. BRAD BUNKO: Yes, it is.

MS. KATHLEEN MCCANDLESS: Now, prior to the implementation of the value management process, was the business -- business transformation office responsible for developing business cases for IT projects?

MR. BRAD BUNKO: They did produce some

951

business cases. It was not, as you've heard from previous testimony, it was not a well-defined process and often cannot be necessarily classified as a -- as a full-on business case.

There were various initiatives that had benefit streams that were indicated, but in my mind a -- a full business case needs to include all the associated initiative and ongoing costs for the program.

So where there were pieces of information throughout the organization prior to an initiative being struck, we did not have the rigour like we have now where all that information is being brought together into a single document.

MS. KATHLEEN MCCANDLESS: Thank you. Was the business transformation office responsible for monitoring the management of IT project costs?

MR. BRAD BUNKO: Yes.

MS. KATHLEEN MCCANDLESS: If we could go to VM section of the application, at -- I believe it's page 43, just towards the bottom of the screen at lines 9 to 12, we see historically all corporate initiative -- initiatives were led from a business perspective by the corporate initiatives sponsor, the corporate initiatives sponsor served as the champion

952

of all corporate projects and was the principal interface between the initiatives and the business community.

Do you see that there, Mr. Bunko?

MR. BRAD BUNKO: Yes.

MS. KATHLEEN MCCANDLESS: To give us an example, who was the sponsor for the physical damage re-engineering project?

MR. BRAD BUNKO: John Remillard.

MS. KATHLEEN MCCANDLESS: Thank you. And if we go to VM2. Now, I understand that this graph depicts the historical view of the project organizational structure and governance for IT projects, is that right?

MR. BRAD BUNKO: Correct.

MS. KATHLEEN MCCANDLESS: And so this is no longer in use, we'll see later on during my questioning that there is an updated org chart in that regard, yes?

MR. BRAD BUNKO: Yes.

MS. KATHLEEN MCCANDLESS: So, with -- perhaps you could just walk us through, at a high level, the process that would have been followed in prior years, forgetting specific IT projects approved to proceed.

953

MR. BRAD BUNKO: This -- this governance chart is -- is more about the running of the initiative than it is about the approval of the initiative to proceed.

MS. KATHLEEN MCCANDLESS: So with respect to approval then, I take it then that we wouldn't refer to this graphic.

What was the approval process then with respect to IT projects?

MR. BRAD BUNKO: Approvals of the initiatives to proceed could have happened in a couple of different ways. They may have just been directed from -- from executive to proceed with the various initiatives.

But you're correct, this is -- this is an operational perspective of the governance of the initiative once it has been approved.

MS. KATHLEEN MCCANDLESS: So what you said with respect to approval it -- of an IT project, it could be -- could have been directed by the executive.

So when you say "the executive," who within that team would you mean?

MR. BRAD BUNKO: I'm going to ask that John help out on this response.

954

MS. KATHLEEN MCCANDLESS: Sure.

MR. JOHN REMILLARD: Certainly. With respect to the approval process, traditionally speaking, prior to value management, the majority of our initiatives are brought forward as part of the budgetary -- budget setting process, which would've been built and of course, to our go-forward expenses from the Public Utility Board projections.

As part of that process, our executive team would review the candidate initiatives. They would agree to the initiatives that would be brought forward to our Board of Directors.

Those would traditionally have been brought forward in around the December timeframe and, ultimately, seeking approval of the Board of Directors in a January timeframe to start executing in March.

Does that provide a better...

MS. KATHLEEN MCCANDLESS: Somewhat, yes. Thank you.

But with respect to the -- so the executive team would bring forward a recommendation to the Board of Directors?

MR. JOHN REMILLARD: That is correct.

MS. KATHLEEN MCCANDLESS: And typically, who among those executives would bring forward the recommendation?

MR. JOHN REMILLARD: Traditionally speaking, it was the CEO.

MS. KATHLEEN MCCANDLESS: So that was Mr. Guimond?

MR. JOHN REMILLARD: That's correct.

MS. KATHLEEN MCCANDLESS: Was that the case prior to Mr. Guimond's tenure as CEO as well?

MR. JOHN REMILLARD: Yes.

MS. KATHLEEN MCCANDLESS: Thank you. Now, with respect to the chart that's on the screen before us, this is the operational organizational chart, then.

For how long was this process in place, historically?

MR. JOHN REMILLARD: This was a genesis out of the business process review that the -- DBL integration initiative. In essence, it was the genesis and creation of the business transformation office.

And through there, we established the need for an enhanced enterprise project management office, the need for an ongoing change management discipline, as well as a multi-stream execution discipline, which is depicted in this chart.

955

956

So with that, and to answer the question as to the timing, it would've been around 2009-2010 that it was formalized, Ms. McCandless.

MS. KATHLEEN MCCANDLESS: Thank you. On the top left-hand side of the screen, we see a project steering committee, yes?

MR. JOHN REMILLARD: Correct.

MS. KATHLEEN MCCANDLESS: And who would be part of this project steering committee?

MR. JOHN REMILLARD: That would depend on the initiative, something as broad as the physical damage re-engineering, Mr. Bunko would traditionally be on all project steering committees, Mr. Wennberg and depending on the nature of the initiative, other executives, up to three (3).

MS. KATHLEEN MCCANDLESS: So with respect to physical damage re-engineering, that was you, Mr. Bunko and Mr. Wennberg?

MR. BRAD BUNKO: Yes, I was a member of the PDR steering committee for some point in time, and had had a variety of business owners through some of that journey.

MS. KATHLEEN MCCANDLESS: And just to clarify for the record, when you refer to "business owners," what do you mean?

957

MR. BRAD BUNKO: Representation from operational business units.
MS. KATHLEEN MCCANDLESS: Thank you. Now, the corporate initiatives sponsor just under the steering committee, would report to the steering committee, yes?
MR. BRAD BUNKO: Correct.
MS. KATHLEEN MCCANDLESS: Thank you. And if we go to VM4, again page 43, we see the responsibilities of the corporate initiatives sponsor, yes?
MR. JOHN REMILLARD: Yes.
MS. KATHLEEN MCCANDLESS: And was this individual responsible for ensuring the -- the IT project would remain within budget and scope?
MR. JOHN REMILLARD: Are you referring to PDR specifically, or any project?
MS. KATHLEEN MCCANDLESS: Well, any project and then specifically with respect to PDR?
MR. JOHN REMILLARD: Yes. Overall, yes.
MS. KATHLEEN MCCANDLESS: For both?
MR. JOHN REMILLARD: Both.
MS. KATHLEEN MCCANDLESS: Thank you. Where it says "authorize and approve adequate budget,"

958

the first bullet there, is that where major spending decisions were made or would those be day-to-day management of the project?
MR. JOHN REMILLARD: Both.
MS. KATHLEEN MCCANDLESS: And who ultimately -- ultimately would've been responsible for the success of a given IT project?
MR. JOHN REMILLARD: Ultimately that's a shared responsibility, between myself and the members of our business transmission office. So multiple leaders.
MS. KATHLEEN MCCANDLESS: Thank you. If we go back to the chart that we were just looking at. Thank you, Kristen. On -- again, on the left side of the screen, we see the corporate initiatives sponsor.
MR. Bunko or Mr. Remillard, could you explain how the corporate initiatives sponsor would have interacted with the director of the business transformation office?
MR. REMILLARD: Yes. On a day-to-day basis we would discuss project challenges and project issues, determine what we were comfortable with in deciding and, ultimately, things that were more complex in nature would ultimately be exe --

959

escalated, sorry, to our project steering committee for executive decision.
MS. KATHLEEN MCCANDLESS: And the director of project delivery, just below the director of the business transformation office, how would the director of project delivery and the program director, who is just below, interact with the business transformation office?
MR. JOHN REMILLARD: Ultimately due to the nature and -- and -- and size of the physical damage re-engineering, the multi layers of management there, you would have multiple projects being executed in parallel, ultimately reporting into the program director and the director of project delivery, each -- each with escalating authority and through the governance structure dealing with, at a lower level, the day-to-day issues, at a medium level, the longer term issue -- issues management, risk management and dialogue and then, ultimately, escalating to the director of BTO for things that are, in essence, a more serious nature.
MS. KATHLEEN MCCANDLESS: Now, with respect to the physical damage re-engineering project, who ultimately from management would've approved the PDR project?

960

MR. JOHN REMILLARD: From a -- can you maybe elaborate on what perspective, please?
MS. KATHLEEN MCCANDLESS: So, I suppose it was ultimately the Board of Directors that would've approved the go forward on the PDR?
MR. JOHN REMILLARD: That is correct, in July of 20 -- 2012.
MS. KATHLEEN MCCANDLESS: And again, just to clarify, that would've been a recommendation from the then Chief Executive Officer?
MR. JOHN REMILLARD: That's correct.
MS. KATHLEEN MCCANDLESS: Thank you. Now, if we go to PUB-MPI-1-66. This Information Request asked at A, the Corporation for information about the lessons learned in the course of the physical damage re-engineering project.
And in response -- in the response at page 2, under "lessons learned" we see that large capital programs like PDR should have iterated business cases with no longer than three-year project funding value management period assessments, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And we see reference to, under "Actions," just below there, value management office in the development of business

961

cases, yes?
MR. JOHN REMILLARD: Yes.
MS. KATHLEEN MCCANDLESS: Now, is that, in essence, a re-labelling of the business transformation office, or is that a completely different business unit?
MR. JOHN REMILLARD: It's a completely different business unit, an independent body.
MS. KATHLEEN MCCANDLESS: And who's in charge of the value management office?
MR. JOHN REMILLARD: Mr. Joe Riel, in the back row.
MS. KATHLEEN MCCANDLESS: What is its composition?
MR. JOHN REMILLARD: Joe, at this time, the -- the office is still growing. So it's Joe and one (1) other member at this time.
MS. KATHLEEN MCCANDLESS: And that member's title would be?
MR. JOHN REMILLARD: Value management coordinator.
MS. KATHLEEN MCCANDLESS: Thank you. Now, if we could go back to VM4, the very first paragraph here under the heading states:
"In recognition of the evolution and

962

increased maturity of the value management process, as well as the involvement of the value management office and the development, review and post-implementation reviews of business case realization, as well as the corporate objective of more actively and engaging operational management in the projects associated with their respective business cases, MPI management has decided to change key project leadership roles and responsibilities and introduce the new role, operational business champion."

And we heard about that being Ms. Campbell this morning, is that right?
MR. JOHN REMILLARD: For the finance re-engineering initiative? That's correct.
MS. KATHLEEN MCCANDLESS: And so I gather then from your response, Mr. Remillard, that the individual who will serve in that role will vary from project to project, is that right?
MR. JOHN REMILLARD: That is correct.

963

MS. KATHLEEN MCCANDLESS: And has there been an operational business champion appointed for the PDR project at this time?
MR. JOHN REMILLARD: At this time, the remaining piece is the parts project, and that is Mr. Mr. Shayon Mitra, to my right.
MS. KATHLEEN MCCANDLESS: Thank you. Now, if we go to page 46, and that's VM-3, this is what I understand is the new project organizational structure and governance for the operations of IT projects within the Corporation, is that right?
MR. JOHN REMILLARD: That's correct.
MS. KATHLEEN MCCANDLESS: And perhaps either Mr. Remillard or Mr. Bunko, at a very high-level, because there is a fair amount of detail here, just explain this organizational chart and some of the key differences between that and what we previously reviewed.
MR. JOHN REMILLARD: Certainly. I'll maybe start at the bottom. So basically, in essence, the -- the changes are highlighted, I'll say the fuschia -- fuschia and blue, the business relationship managers are ultimately a team of staff that report in to myself. And we -- what we provide is the -- we still provide that liaison between our business

964

transformation office, from project execution, and our business units.
The primary difference here is that the business relationship manager, on a day-to-day basis, is more effectively and more directly working what are operational business champions.
Myself, off to the left, is corporate business architect. I'm working in -- in partnership with our enterprise architecture committee, which is Mr. Gary Dessler, our corporate systems architect, as well as Colin McDonald, who is our corporate security information officer.
Ultimately, as corporate business architect, a lot of our operational business champions have not, to date, led large initiatives. And so in the short term I'm providing some -- some coaching or -- or some leadership and advice and -- and not direction. Advice to these -- to these operational business champions as to what things they may want to look out for, things they need to watch for as far as successfully executing that project.
The main difference here is that from a direct accountability perspective, the operational business champion is now ultimately accountable for the project success. So the outcomes that are stated

965

in the business case are ultimately under their purview.

Off to the -- the left is the value management office. The value management office is -- is basically offering multiple things. In the project infancy, validating the business case, they're not responsible for it, but what they do is review it from a quality assurance perspective.

Looking to ensure that all of our ongoing operating costs are accurately depicted; that the impact operations with respect to -- I don't want to say hidden costs, anticipated costs and/or the changes to software licensing, hardware infrastructure, recurring costs with respect to replacing said infrastructure into the future, as well as any impact to staffing.

So that's in the infancy. As the project is being executed, there will be net new learnings and with that the operational business champion is going to have to continue to -- continue to review their business case and determine whether it's still on track.

So, ultimately, they will work with the value management office to ensure that the -- the business case is still accurate on a day-to-day basis.

966

MS. KATHLEEN MCCANDLESS: Thank you. In the -- roughly the middle of the chart we see the executive steering committee?

MR. JOHN REMILLARD: Yes.

MS. KATHLEEN MCCANDLESS: Yes. And what is that current role of the executive steering committee then?

MR. JOHN REMILLARD: The executive steering committee, very similar to the -- the prior chart that -- that we depicted and reviewed, ultimately, the operational business champion will report into the executive steering committee, again for decisions that are beyond, in essence, their purview, advising or seeking advise and/or direction from the executive steering committee where warranted and, ultimately, validating and demonstrating and proving to the executive sponsors that ultimately the project's still on track with respect to budget, benefits and delivery.

MS. KATHLEEN MCCANDLESS: Thank you. And just to clarify, there are two (2), pardon me, VP business owners at the very top of the chart there?

MR. JOHN REMILLARD: In this case, the reason that that's depicted is that for all IT projects, Mr. Bunko will be an active member and then

967

there may be one (1) or more operational business owners as part of that.

MS. KATHLEEN MCCANDLESS: And then on a -- for a given project, who would ultimately be responsible for the approval of submissions made to the Board of Directors?

MR. JOHN REMILLARD: That would be the executive steering committee.

MS. KATHLEEN MCCANDLESS: What size of projects would be required to get approval through the Board of Directors?

MR. JOHN REMILLARD: That's a good question.

Ultimately there -- there's the approval of the business case side of things, where we're adopting value management. But ultimately when we look at capital projects, it's anything that's going to require capital funding, and traditionally that's been anything in excess of 250,000 or so.

MS. KATHLEEN MCCANDLESS: Thank you. Once a project has been approved and when you get to major milestones within a project, are reports going to be prepared on the basis of how things are progressing?

MR. JOHN REMILLARD: Yes, we provide

968

weekly status reports to our executive sponsors and then there's a quarterly status report that's provided to our Board of Directors.

My apologies. There's a monthly report to our executive committee as well.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go back to the response to PUB-MPI 1-66.

And at the top of the page, again under "lesson learned," there's a reference to large capital programs requiring iterative business cases, yes?

MR. JOHN REMILLARD: Correct.

MS. KATHLEEN MCCANDLESS: Could you please explain what is meant by "iterative business cases" there?

MR. JOHN REMILLARD: Well, ultimately, when you're getting projects that tend to be over an 18-month period, things can change. Could be changes in technology, the assumptions that -- that are now getting validated because they were futuristic in the project execution.

And so the intent here is that the business case is a living document, it's -- and when you contrast that to physical damage re-engineering, I don't want -- I don't want to say it was a once and done. In essence we created a financial model and --

969

and forecasted benefits and impact to what it could mean for the organization as an opportunity.

But in this case, it's a living and breathing document, to the end, and actually post-implementation in the validation of said benefits.

MS. KATHLEEN MCCANDLESS: Thank you. And there should be no longer than three-year project funding value management period assessments there as well, yes?

MR. JOHN REMILLARD: Preferably. But when we look at something like a large spend that Mr. Bunko had in his opening, legacy will probably be -- a legacy modernization will be -- I don't want to say an anomaly, it will be another large program, but will require incremental rigour as well in that regard.

MS. KATHLEEN MCCANDLESS: Thank you. Something like a three-year project funding or value management assessment, that was not done for a PDR, is that right?

MR. JOHN REMILLARD: That is correct.

MS. KATHLEEN MCCANDLESS: Thank you. Mr. Chair, I maybe have five (5) more minutes of questioning under this area. Thank you.

Then we see that under "Actions," the first -- at the top of the page there, that the value

970

management office will be involved in active engagements of review and approval of -- in development of business cases, yes?

MR. JOHN REMILLARD: Correct.

MS. KATHLEEN MCCANDLESS: And active engagement of business operations in the development of business cases?

MR. JOHN REMILLARD: Yes.

MS. KATHLEEN MCCANDLESS: And then formal application of BTO project, gating checkpoints and controls, yes?

MR. JOHN REMILLARD: Yes.

MS. KATHLEEN MCCANDLESS: What does "gating" mean?

MR. JOHN REMILLARD: Yes. Ultimately, and I believe we described this in last year's Public Utility Board application, the gating aspect of it is each project is built into multiple phases. And what those phases, what we've implemented now are gates or checkpoints.

With these checkpoints, ultimately, we are expecting a certain level of completion with respect to certain deliverables, key aspects of the project to be complete. And then what we're doing now is incorporating the value management office into the

971

validation of that, and incrementally that the business case is still accurate at that checkpoint.

MS. KATHLEEN MCCANDLESS: Thank you. Then under "lesson learned," the second part of lesson learned, the page that we see before us here, the bullet says:

"Future software licensing, maintenance and operational support resource expenses need to be properly forecasted and included in financial analysis."

Yes?

MR. JOHN REMILLARD: Correct.

MS. KATHLEEN MCCANDLESS: Under the old organizational, I don't know that we need to go back there, but certainly, if you feel we need to let us know.

MR. JOHN REMILLARD: No, no.

MS. KATHLEEN MCCANDLESS: Who would have been responsible for making sure that this happened with respect to business cases?

MR. JOHN REMILLARD: With respect to business cases. I guess the -- the difficulty or -- in answering that question is that right or wrong, we weren't incorporating those costs. It was more of a -

972

- a benefits forecast and opportunity, so.

MS. KATHLEEN MCCANDLESS: And so I guess more generally then?

MR. JOHN REMILLARD: More generally? It was built into our budgeting aspect, so that was occurring and that the go-forward expenses were properly forecasted, but in evaluating projects it wasn't being done, formally.

MS. KATHLEEN MCCANDLESS: And that was more of a widespread issue, not specific to PDR, is that right?

MR. JOHN REMILLARD: Widespread yes.

MS. KATHLEEN MCCANDLESS: Thank you. So now the value management office, I understand, is going to ensure that these costs are properly forecast, is that right?

MR. JOHN REMILLARD: That is correct.

MR. CURTIS WENNBERG: Actually, in addition to that, we will expect as operational business champions, or my team that might be operational business champions, that if Shayon Mitra, for example, is -- is on a parts manager product -- project, he needs to be on top of the business case before it goes to value management office.

So value management office is a -- is a

973

checkpoint and they'll also assist, but -- but we're going to require our office people to -- to build the case properly from the beginning, and then it goes through that group. It's not like it's a complete cold hand-off, if you will.

MS. KATHLEEN MCCANDLESS: Thank you. What is meant at the bottom of page 2, the last bullet there with respect to:

"Active engagement of IT operations enterprise system support in the review of business case development"?

MR. JOHN REMILLARD: I can start and maybe I'll turn it over to Mr. Lazarko if I don't catch it all.

So ultimately, as part of preparing the business case, there are impacts to software licensing, maintenance, infrastructure, and ultimately that affects Mr. Lazarko's budget for the most part. He is responsible for creating the operational budget going forward, so he needs to be aware of said costs so that they're properly built into his budget.

And from the enterprise system support perspective, that is a unit that is responsible for supporting our applications. So ensuring that they

974

have the necessary staffing and support infrastructure to support a large program, there may be met -- new staff that are required in order to do so.

MR. LAWRENCE LAZARKO: Well said. Nothing to add.

MS. KATHLEEN MCCANDLESS: I just have one (1) question for clarification then.

So does that mean that IT operations and enterprise system support will be responsible or involved in the development of the business case, or in the review of business cases?

MR. CURTIS WENNBERG: It would be both, really, because what we want is we don't want ops business champions to recommend, let's say, a version of software that doesn't fit well within the IT architecture.

And so if we have something that -- that seems to make sense, we want to make sure that, architecturally, it -- it isn't going to be a -- a very expensive piece to integrate in.

So they would be both on creating the business case and making sure we got those costs in. And -- and -- and then the review of that.

MR. BRAD BUNKO: And I would add that very similarly to, you know, business impact, may --

975

may it be FTEs, you know, additional processes that are driving additional resources, the same perspective has to be applied to IT in general. And so from an infrastructure and an application services perspective.

MS. KATHLEEN MCCANDLESS: Just one (1) last question in this area then.

Is -- I take it the Corporation is stating that the new approval structure, the new operational structure, will ensure that there are no significant write-offs such as those experienced in the last fiscal year. Is that right?

MR. CURTIS WENNBERG: I think we have to go back to what Gartner presented before, and for us to be in a position where there will never be mistakes within a large project could be very difficult to promise.

What you see in this change though, is us adopting a bit more an industry standard approach to how ops will actually work on some of these projects and -- and work with our IT groups.

We will make sure that we champion the thing so that it makes sense what gets delivered, and then -- and then we'll work with the value management team to make sure that we actually account for

976

everything the way it should be done. That should reduce the probability of those types of eventualities to take place.

MS. KATHLEEN MCCANDLESS: Thank you.

I think this would be an appropriate time to break then.

THE CHAIRPERSON: Thank you.

We will reconvene at eleven o'clock.

--- Upon recessing at 10:40 a.m.

--- Upon resuming at 11:04 a.m.

THE CHAIRPERSON: Ms. McCandless...?

CONTINUED BY MS. KATHLEEN MCCANDLESS

MS. KATHLEEN MCCANDLESS: Thank you. Mr. Remillard and Mr. Bunko, just one (1) follow-up question from my line of questioning earlier this morning -- for clarification.

So with respect to approval of IT projects before the van -- value management process was in place with the prior CEO, Mr. Guimond, can you just again reiterate or explain how IT projects got approved by the Board of Directors?

MR. JOHN REMILLARD: Yeah, I'll start.

977

So, ultimately, an issue is brought -- brought forward as part of our budget establishment process in the fall of each year, usually by the -- the cutoff that would be the Sep -- September timeframe.

Ultimately those we've built into the budget and capital funding which would be brought forward to the December planning session, and that would be the first that the -- the Board would hear about it, but -- the Board of Directors that is -- and then, ultimately, seeking approval from the Board of Directors of the actual budget in January of a -- of a calendar year with the -- with that approval would begin execution in the fiscal year as of March 1st.

MS. KATHLEEN MCCANDLESS: And when you say an issue would be brought forward, who would bring the issue forward?

MR. JOHN REMILLARD: Ultimately issues would be -- identified by the project, be it myself or the director of the business transformation office; that would be escalated to our executive steering committee and usually as a vi -- vice-president business owners and/or steering committee members, they would bring briefings and/or discussion papers and issues for escalation decision, et cetera to the Board of Directors. So it would be the executive

978

sponsors.

MS. KATHLEEN MCCANDLESS: And I believe you said in your evidence this morning that it was -- usually it was Mr. Guimond himself who would make the submission to the Board of Directors, is that right?

MR. JOHN REMILLARD: It would depend on -- on the project. I guess ultimately, with the physical damage re-engineering as a -- as an example, which began in -- in 2012 -- at that time Mr. Guimond was the vice-president so, was in essence, the Vice -- VP business owner.

MS. KATHLEEN MCCANDLESS: And typically was it Mr. Guimond who was -- who would make the recommendation with respect to the larger IT projects?

MR. BRAD BUNKO: Yes, it was. Yes. I think if you -- trying to contrast that to what we have now, a few years ago was -- or several years ago, there was much less business involvement in the initiative and building up of what the appropriate solution may be, and what the value from that solution could be and it was done more in isolation with, you know, as described by P -- IT that -- that Dan ran and -- and it was brought forward to executive committee

979

for -- for final approval -- but pretty much most of the solution was complete and it -- it was more of the formality of going through and having it approved and then having the Board approve it.

MR. JOHN REMILLARD: Ultimately, the organization was a -- we had a different organizational structure back then, as well. There was a division for Business Strategy and Innovation which Mr. Guimond lead, so, hence why a lot of the - net new initiatives are coming from that division and, in essence, why he was, in essence, a champion for them.

MS. KATHLEEN MCCANDLESS: And just to clarify something you said just now, Mr. Bunko. You said in isolation by PIT that Dan ran, so I believe Dan would be Mr. Guimond?

MR. BRAD BUNKO: Yes.

MS. KATHLEEN MCCANDLESS: And when you say "in isolation," what -- what would that mean?

MR. BRAD BUNKO: Well, as -- as John stated, the strategy area is something that -- that reported in through to Mr. Guimond and so between the strategy area and his business knowledge, he had less than maybe optimal business inclusion on -- on an initiative that would be brought forward.

980

MS. KATHLEEN MCCANDLESS: And P-I-T would mean?

MR. BRAD BUNKO: Pardon me?

MS. KATHLEEN MCCANDLESS: You -- yeah, I think you said something P-I-T in the course of your response.

MR. BRAD BUNKO: Not sure what I said.

MS. KATHLEEN MCCANDLESS: Okay. In isolation by P-I-T I think is what you said so I was just going to ask you to clarify with --

MR. BRAD BUNKO: Drop the 'P' and let's call it IT.

MS. KATHLEEN MCCANDLESS: Okay. And so I take it -- I -- I believe, just to clarify, again, from this morning, the approval process for these IT projects wouldn't of been reflected on VM2, the diagram that we see before us, right?

MR. BRAD BUNKO: No.

MS. KATHLEEN MCCANDLESS: Okay. Thank you. I just have -- some few -- a few questions with respect to the direct repair program. And first if you could just explain for the record what direct repair is.

MR. CURTIS WENNBERG: Direct repair is where we'll allow customers to bypass going to an MPI

981

service centre to have an MPI estimator look at their car and then we don't have hoists in those -- in those service centres, for example. So we do the best we can, take a look at the car and then it's up to the customer to take their car to any shop that they'd like to go after that.

Direct repair allows certain types of accidents hits for a customer to bypass that MPI service centre visit for an estimate, and they can go directly to certain shops that we've qualified to be able to do direct repair estimates for us.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go to PUB-MPI-137. And at page 2 of this IR response towards the bottom of the page, this is with respect to DR is the acronym here, and towards the bottom of the response we see significant efficiency gains have not materialized with DR, so direct repair, and as such, the Corporation has announced its intent to dramatically alter the eighty-one dollar ($81) premium and other DR policies with its respect -- repair shop partner network. Yes?

MR. CURTIS WENNBERG: That's correct.

And again could you just explain what the eighty-one dollar ($81) premium reference here is?

MR. CURTIS WENNBERG: Yes. The

982

eighty-one dollar ($81) premium is given to these direct repair shops, but it was negotiated to be provided to them for all jobs they do. So, if it's -- it's -- if they're doing a direct repair estimate, they -- they -- they get eighty-one dollars ($81) for each of those estimates they do.

But then also, you know, those are only 20 percent -- that represent 20 percent of all the work that's out there. So, on the other 80 percent of their jobs they also then get eighty-one dollars ($81). So, MPI does the first estimate, the customer takes the car there, and they -- they follow-up with an estimate. So that's -- that's -- so it's all jobs that a DR shop does.

MS. KATHLEEN MCCANDLESS: Thank you. If we go to page 3 of the response. The very top of the page here there are a couple numbers referenced so at the very bottom of the first paragraph there's a variance from $6.3 million down to $3.63 million for 2018/'19 for direct repair, yes?

MR. CURTIS WENNBERG: Correct.

MS. KATHLEEN MCCANDLESS: And the original estimate of $6.3 million, are you able to explain how that number was arrived at?

MR. CURTIS WENNBERG: Yes. There was

983

some assumptions made around how much penetration, if you wi -- we'd have within our over two-hundred (200) shops which those would qualify for direct repair and we looked at the amount of volume that they did and it was relatively a straight-line view of how much money we'd be exposed to with this direct repair premium.

So -- so that was the end -- end result. The -- it -- it -- the second question that might be in your mind is how did you get down to 6.3 and -- and that's because of some of the restrictions that we had put in in terms of how you would get on to the eighty-one dollars ($81) if you're in probation as a shop or if you just got DR or if there's other modifying features you don't quite get it yet.

So it would be 3.6 million for this year, which is the first year that the eighty-one dollars ($81) gets turned on, but it would very naturally and easily grow to the 6 to $7 million in the -- in the next year or beyond.

MS. KATHLEEN MCCANDLESS: Thank you. And I -- I believe that the subparagraphs here provide some of the explanations for the decrease of 6.3 to 3.6 million.

Under (I), the very first paragraph -- subparagraph here there's a reference to thirteen

984

thousand thirty-one (13,031) in claims paid by the Corporation in Q1 being excluded from the eighty-one dollar ($81) payment due to the change in criteria. Yes?

MR. CURTIS WENNBERG: Yes.

MS. KATHLEEN MCCANDLESS: What's the timeline for the new direct repair policies or premium amount to be implemented to eliminate eighty-one dollars ($81) for every job?

MR. CURTIS WENNBERG: I'm sorry. Could you repeat that question?

MS. KATHLEEN MCCANDLESS: So it -- it appears that the eighty-one dollar ($81) payment will be slowly excluded, yes?

MR. CURTIS WENNBERG: So maybe -- maybe we'll go back on what (I) actually means. The -- at MPI you -- you can have -- you can have a date of loss and just not call us to -- to start a claim, and so what we did was we had to start -- get a starting point, which wasn't explicit in the light vehicle accreditation agreement, or the LVAA, we call it.

So there was no explicit start date. So what we agreed with our -- our trade partners is that, okay, we have to -- we have to just have a start on where you got your claim, or when you got your date

985

of loss. And so we said, okay, you're not going to get paid on -- eighty-one dollars ($81) on any -- any repair job where the customer had the date of loss before that December date. So it just sets a the starting point.

So there's a -- a number of claims, and -- in 2017, for example. Even if they go and get direct repaired tomorrow, we won't pay the eighty-one dollars ($81) on it. So it's just basically starting off the program.

MS. KATHLEEN MCCANDLESS: Thank you. At (3), the third subparagraph, there -- there is a reference to direct repair shops needing to be in good standing to be entitled to the direct repair premium, yes?

MR. CURTIS WENNBERG: That's correct.

MS. KATHLEEN MCCANDLESS: What does -- what's meant by "good standing"?

MR. CURTIS WENNBERG: So they could be in probation if they're starting up, or having -- having issues with our KPIs. We have new key performance indicators where we're measuring shops, and they have to be in -- in certain standing with us. So if -- if there's not -- and there's not many claims are in that bucket, but if a shop's not in good

986

standing, we -- we said they wouldn't get the eighty-one dollars ($81).

MS. KATHLEEN MCCANDLESS: Thank you. And that does take me to my next series of questions with respect the key performance indicators.

MR. CURTIS WENNBERG: M-hm.

MS. KATHLEEN MCCANDLESS: At PUB/MPI-2-18, and this Information Request asked the Corporation for details of the key performance indicators, or KPIs, for the repair shops. And we see the KPIs on the table at page 2, I believe.

Those are them there, Mr. Wennberg?

MR. CURTIS WENNBERG: Yes.

MS. KATHLEEN MCCANDLESS: What score on the scorecard is required in order for the direct repair premium to be applied to a given shop?

MR. CURTIS WENNBERG: To get into, correct -- to direct repair, there's really three (3) things that you needed to have historically. The ask/approve variance was over 2.63 percent. The total composite score that'd you have as a shop had to be over 60 percent, and you had to have an average five (5) jobs per week, so a certain volume size, to get in.

And only this summer, after a number of

987

our teams' review, plus some feedback from shops, we looked at the five (5) per week rule, and we relaxed that. A lot of the direct repair benefits we could see getting in rural areas, and we also didn't see a -- a reduction of quality in terms of writing a -- a direct repair estimate for smaller shops, which was an assumption that was made at the beginning. Really, really small shops do struggle a little bit with it, but we'll monitor that. We'll monitor that with -- with KPIs, and quality controls, and go forward.

MS. KATHLEEN MCCANDLESS: So is there a total composite score that the shops would need, then?

MR. CURTIS WENNBERG: Yeah. The composite score is 60 percent that they would need. And as you can see at the bottom -- so what a composite score means is that we would take percentages of each of these key measures and quality of repair, and we would build one (1) aggregate score, which we call a comp -- composite score.

So they have to do well enough in the all of the KPIs to get over 60 percent from a composite score, and the one (1) KPI that's a driver of KPI is an ask/approve variance. And just so everyone understands, that means that if -- if a shop

988

asked for eleven hundred dollars ($1,100) on every single estimate, and we only approve a thousand dollars ($1,000) on every single estimate, they would have a 10 percent ask/approve variance. So it's how much more they ask for, on average, and how much we say no, you can't have, to put it in -- in real simple terms.

MS. KATHLEEN MCCANDLESS: Thank you. And I understand that MPI is not actively promoting -- or has not actively promoted the Direct Repair Program in the twelve (12) months following its implementation date. Is that right?

MR. CURTIS WENNBERG: That's correct. And -- and there's a few reasons why. I should also note that the scorecard is not just done for direct repair shops. It -- it may be obvious, but we do it for every single shop that we do. And there are some shops who do have qualifying composite scores, and ask/approve variance, and just self select not to be in the Direct Repair Program. It's -- it's not a -- a large number, but it's a small number that -- that do that.

And -- and we find there's -- there's good value, and -- and it -- it's quite useful for us to have the -- the measurements within the shops. We

989

saw some beneficial improvement for all shops, those that were on DR, or even not DR, by just knowing that we're watching, and -- and we know what the ask/approve variances are, and some of the other things.

Part of these -- part of these is -- is what you would consider somewhat of an industry standard, and may have -- really benefit us in terms of average severity of our cars -- repair costs over the last roughly eighteen (18) months.

MS. KATHLEEN MCCANDLESS: Thank you. Does MPI have plans to promote the Direct Repair Program going forward?

MR. CURTIS WENNBERG: Not necessarily, no. So in the -- in the beginning stages, we wouldn't promote it because we had to build up and train people to write direct repair estimates in the way that we want them, so it wouldn't be fair to those shops that were in a pilot and already could do this, so this -- when we roll it out, they could advertise, but others just aren't even on the program yet. So we certainly wouldn't want our voice to be in their advertising it.

We -- we also think -- we've had some pressure from shops, too, in terms of advertising. It's -- it's a bit of a concern for some shops that

990

can't get on the program yet. So we want to make sure that we're really conscious on both the customer satisfaction and our own efficiency benefits out of this before we would ever go into any type of promotional campaign.

And we can also do promotion really simple, if we wanted to. We -- we could put shop performance and direct repair in when we're talking with first notice of loss on customers of the call -- contact centre. So just even making sure the customers got informed -- informed choice on what they could do. Some may consider that advertising, but it's really not. We're just educating the customer on options available to them.

MS. KATHLEEN MCCANDLESS: Thank you. Could we be please pull up PUB/MPI-1-46. And this Information Request asked for anticipated savings from the use of the predictive analytics tool.

And for the record, perhaps Mr. Wennberg -- I -- I'm -- you may be the appropriate person to just describe what pre -- predictive analytics is.

MR. CURTIS WENNBERG: Yes. Predictive analytics was our attempt at MPI to use more mathematics to try and predict what would be a fraud.

991

So today we get between, say, 6 and 8 million in the average year in terms of fraud in our -- in our business. And that's a -- usually a half and half of bodily injury types of fraud, or physical damage, or vehicle repair hits types of fraud.

What we do today, and -- and historically is -- is refer using our adjusters or estimators. They see a piece of damage just doesn't match what they would expect, and their -- their own antenna go up, and they, to their credit, would refer a -- a claim to our SI unit or special investigations unit, that would -- that would track that claim down and ask the customer what was happening.

Predictive analytics was going to give us what you would use very much in a financial services environment like a -- credit cards, for example. They have extremely deep algorithms and databases to determine what triggers you might see within a claim, or in -- in that case, a credit card purchase history, that -- that then triggers automatically whether something should be reviewed by the special investigations office.

We never had anything like this at MPI. There was a lot of talk in the market about these types of things. And so this part of the PDR, overall

992

big project, was looking at getting that algorithm into MPI.

MS. KATHLEEN MCCANDLESS: Thank you. And we see from the first paragraph in the response that the Corporation is applying the tool only to total loss claims, which account for less than 20 percent of all physical damage claims, yes?

MR. CURTIS WENNBERG: Correct.

MS. KATHLEEN MCCANDLESS: And the initial projected savings from the use of the tool was five hund -- five hundred thousand dollars ($500,000) annually, yes?

MR. CURTIS WENNBERG: That's right.

MS. KATHLEEN MCCANDLESS: And it's been amended to project an annual savings of two hundred and fifty thousand dollars ($250,000) by the end of this fiscal year?

MR. CURTIS WENNBERG: Yes.

MS. KATHLEEN MCCANDLESS: Are you able to comment on the cause of the decrease in projected savings?

MR. CURTIS WENNBERG: We've set up -- and it took a bit of work, but we have set up the models. We looked at some of the referrals. Our teams have worked them through, and this is basically

993

using the data in front of us on actual practice, and -- and actual hit rates, if you will, on true frauds within what the model is spitting out to determine that that's more -- roughly where we're going.

There's two (2) ways of combating fraud. It seems like there's a lot of insurance carriers that would go to a third party provider that may run their own black box or algorithm basis, and -- and they would get inputs. I think some would come from MPI. Some would come from the market. Or we could do it internally, like that was done here in MPI, and -- and this is what we've got at this point in time from the internal efforts.

MS. KATHLEEN MCCANDLESS: Thank you. Kristen, would we please pull up PUB -- pardon me, MPI Exhibit number 27. That's the presentation from this morning, and slide 9.

And I understand from the presentation this morning that these are the IT projects that are currently in flight, yes?

MR. BRAD BUNKO: That's correct.

MS. KATHLEEN MCCANDLESS: And could you, Mr. Bunko, just describe what in flight would mean?

MR. BRAD BUNKO: That they were --

994

they had funding budgeted for them for the '18/'19 fiscal year.

MS. KATHLEEN MCCANDLESS: So essentially, they're being worked on in the '18/'19 fiscal year?

MR. BRAD BUNKO: Yes.

MS. KATHLEEN MCCANDLESS: Yeah? Okay. And so with respect to technology risk management, that has the largest budget of the projects we see in front of us at $4.5 million for fiscal 2018/'19, yes?

MR. BRAD BUNKO: Correct.

MS. KATHLEEN MCCANDLESS: And when is the Technology Risk Management Project expect -- expected to be complete?

MR. BRAD BUNKO: This project is something that we do annually. So -- and it's hard. It's about keeping our technology up onto a -- supported platforms and addressing risk within the IT organization. So we have an annual budget of forty-five hundred dollars ($4,500). This specif -- I'm sorry, four mill -- $4.5 million.

The -- we do have, you know, sometimes we are challenged as far as fitting that twelve (12) months of work that we're hoping to perform within the twelve (12) months of the budget cycle. So some

995

things finish, you know, early in the year. Some things actually trickle over into the following year, but the next year, we are still bringing forward the initiatives that we believe are necessary, again, with a budget of forty-five (45) -- $4.5 million each and every year.

MS. KATHLEEN MCCANDLESS: Thank you. High School Driver Education phase 3 has a capital budget of 1.9 million for 2018/'19.

Mr. Bunko, could you just describe what phase 3 of that program is?

MR. BRAD BUNKO: It's primarily a curriculum redesign.

MS. KATHLEEN MCCANDLESS: And high school --

MR. BRAD BUNKO: That would be -- I'm sorry, but that would be understate -- if I only said that, that would be very much understating what it is doing. It is a redesigned -- that is built around much more student engagement, gamification of -- of the course itself, having the students get a lot more interest in learning how to drive the car correctly than most of the examples of regular driver education that you see out there.

MS. KATHLEEN MCCANDLESS: Thank you.

996

And so phase 3, is that something that will be complete within the fiscal year, or is that an ongoing --

MR. BRAD BUNKO: Predominantly finished through this year. There could be a small amount that goes into next year.

MR. JOHN REMILLARD: The majority of the spend, yes, will be in this fiscal year. We are expecting some residual to -- to go into early next year, yes.

MS. KATHLEEN MCCANDLESS: Thank you. Customer Self-service phase 1 has a capital budget for 2018/'19 of 1.5 million.

Again, Mr. Bunko, could you explain what that initiative is?

MR. BRAD BUNKO: Well, Customer Self-serve is in -- in general, putting functionality online so that our customers can directly access via a web portal and transact with us. That is at its highest level.

MS. KATHLEEN MCCANDLESS: And when you say "transact with us," that would involve, I imagine, any number of things.

MR. BRAD BUNKO: Sure.

MS. KATHLEEN MCCANDLESS: What's

997

contemplated by the work being done in this project for 2018/'19?

MR. BRAD BUNKO: I think I'll turn that to John.

MR. JOHN REMILLARD: Sure. My pleasure. Ultimately, the initial phase is just to -- to establish the -- a beginning infrastructure, as -- as Mr. Bunko alluded. We need to establish a -- an authentication means, so in essence, a customer portal to be able to access this type of technology via a mobile device, or a home computer.

To get into the specifics as to the types of transactions, initially, we're looking at things that are primarily driven from a -- an MPI-centric perspective. And what I mean by that is things that are causing customer delays within our service centres. Ultimately, customers are sitting there, waiting fifteen (15), twenty (20) minutes to -- to book and pay for a road test or a knowledge test.

These are high-volume transactions that -- that serve, in essence, low complexity and have high value from a customer as far as what they receive, but low value in the type of knowledge or capacity required in order to sell said service.

So those are the types of things that

998

we're looking at. A couple of other transactions, again, more from an MPI centric perspective versus how the Autopac agents come into the mix would be our driver abstracts and claims experience letters. So, high-volume, low complexity events.

MS. KATHLEEN MCCANDLESS: Thank you. And then we see "legacy systems modernization," second from the top of the table there. And I'm going to ask a series of questions about that initiative.

If we could refer to expenses, Appendix 19-3. And we heard about the legacy systems replacement in the presentation this morning, and I understand, essentially, what the project involves is replacing old IT systems, yes?

MR. BRAD BUNKO: Yes, our core systems.

MS. KATHLEEN MCCANDLESS: And Mr. Bunko or Mr. Remillard, what -- what programs are being considered for replacement?

MR. BRAD BUNKO: Applications.

MS. KATHLEEN MCCANDLESS: If there are many, maybe at a high-level.

MR. BRAD BUNKO: Sure. AOL, which is Autopac Online, the CARS system is being looked at. We also are looking at the bodily injury claim system

999

as a -- as a potential, and also looking at the driver and vehicle licensing system.

And then with all of that, we have to know that it will integrate correctly with our financial systems.

MS. KATHLEEN MCCANDLESS: Thank you.

MR. STEVE SCARFONE: Just for the benefit of the Board members, CARS is the Claims Administration and Reporting System that the adjusters make use of in handling claims.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: And if we look to the table that's on the screen before us now, these are the deferred development costs for corporate capital expenditures.

If we could scroll to the top of the table just for one (1) minute, so we can see 2019-2020 forecast there.

And then scroll down to line 44, we see that the anticipated costs to replace -- replace legacy systems is $10 million starting in 2019, yes?

MR. BRAD BUNKO: Correct.

MS. KATHLEEN MCCANDLESS: And that increases to $20 million in 2021 and following, yes?

1000

MR. BRAD BUNKO: Yes, these were the reserved amounts that were placed in. As you know, we're in the throes of our assessment to actually determine what that legacy modernization replacement would look like, what it would cost and over how many years.

So by next year's GRA, we would have a much better breakdown as -- as opposed to something as static like that. It's unlikely that it would be as neat and smooth as what is shown here.

MS. KATHLEEN MCCANDLESS: So it's expected that the numbers for 2020, 2021 and beyond will change in future GRAs?

MR. BRAD BUNKO: Absolutely, yes.

MS. KATHLEEN MCCANDLESS: And does the Corporation anticipate that there would be a continuation of modernization beyond the implementation of this particular project?

So would it be an ongoing venture on the part of the Corporation?

MR. BRAD BUNKO: No. The -- not for the scope of what we described now.

We would -- you know, through the business case process, which we are currently in right now, determine what makes sense and determine what

1001

order makes sense as well, and that would be the parameters for the scope of the initiative.

Other ongoing initiatives would be based on future business cases and I'm not sure exactly what those would be at this time.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go to expenses, Appendix 17 please, Kristen.

And this table compares Basic capital expenditures for 2017/'18 as budgeted in last year's GRA, so on the left-side of the table, compared with the actuals, as reported this year, and then the difference between the two (2).

And then we see in the second column that we have the forecast for 2018/'19, as filed in last year's GRA and the forecast budget as filed in this year's GRA and the difference, yes?

MR. BRAD BUNKO: Yes.

MS. KATHLEEN MCCANDLESS: So for the last GRA, for 2018, at line 23 we see the budget for legacy systems modernization was $1.6 million for 2018/'19, yes?

In the middle of the page?

(BRIEF PAUSE)

1002

MR. BRAD BUNKO: I could translate the answer from Cynthia, or if it's okay with you guys, Cynthia could answer directly.

MS. KATHLEEN MCCANDLESS: I believe the Panel's okay with Ms. Campbell answering directly.

MS. CYNTHIA CAMPBELL: Yes. The amount for the 2018 GRA is $1.6 million for legacy systems modernization.

This is the Basic component of the project. So if you're wondering how come we said 2 million this year. It's 1.6 last year. This is 1.6 is a component of the total corporate. Some of it would've been allocated to our other lines of business.

The other question I'm thinking you're going to have and I'm going to explain, just so that it's fully transparent. In the 2018 GRA it is shown as a capital expenditure. In the 2019 it is not show as a capital expenditure because we are planning on expensing the project work in the current year, due to the nature of the work.

What the work is occurring this year is research. It is determining what we're going to go forward with, what it's going to look like, how it's going to be put together.

1003

That is an expense, that is not a capital item. Last year when we were taking a look at this when we first started down this path, we thought it might be capital in nature, and so we put it down as a capital expenditure. That has changed for the current year application.

MS. KATHLEEN MCCANDLESS: Thank you, Ms. Campbell.

And just to follow-up to that then, on the very right-hand side of the screen we have the 2019 forecast as reported in last year's GRA, compared to this year's GRA, and there's difference of $8.1 million. So a reduction -- or $8.2 million, roughly.

Can you explain what that variance is about?

MS. CYNTHIA CAMPBELL: Last year we thought we would start with a $20 million in '19/'20, and we're now saying that we would not spend that much in the first year, we would spend less.

So that 8.1 million ties to the 10 million that you were -- you saw on the other table, on Appendix 19, Appendix 19 being corporate and this appendix being Basic.

MS. KATHLEEN MCCANDLESS: Thank you. If we could turn to MPI Exhibit Number 9, and this is

1004

part of an exhibit that was filed by MPI to revise certain hires that were initially filed with the request for confidentiality.

This is now on the record and it's legacy system matters -- modernization. Here we see -- I believe that's a status or sort of charter with respect to the legacy systems modernization project.

Is that right, Mr...

MR. JOHN REMILLARD: That is correct.

MS. KATHLEEN MCCANDLESS: Thank you. And if we scroll to the bottom of the page, we see the total project budget as at March 1, 2018 is 17 -- $72 million, yes?

MR. JOHN REMILLARD: That's the forecasted spend, yes.

MS. KATHLEEN MCCANDLESS: And that's the forecasted spend to -- to what date?

MR. JOHN REMILLARD: That was based on the original projection that was built into our corporate financials, as Mr. Bunko had stated earlier.

MS. KATHLEEN MCCANDLESS: Thank you.

MR. BRAD BUNKO: I would like to add it was -- it was the number prior to any of the -- this year's assessment that we've been doing.

And so essentially took what we

1005

believed would be a manageable amount from a capacity perspective and spread that over what we believe the duration of the project would be.

I think this is showing four (4) years of twenty (20), one (1) year of ten (10) and the -- one (1) year of a two-year assessment. I think if you look at the more detailed sheets. But in other words, it is a high-level forecast.

MS. KATHLEEN MCCANDLESS: Thank you. With respect to managing the budget, can it be reduced into smaller-sized projects or budgets so that implementation and financial risk would be minimized?

MR. JOHN REMILLARD: Are you referring to the -- the large spend ahead?

MS. KATHLEEN MCCANDLESS: Yes.

MR. JOHN REMILLARD: That would be something that we're looking at as part of developing the business case, as to how it should be executed, yes.

MS. KATHLEEN MCCANDLESS: And those business cases would be developed -- when is the Corporation looking to develop those business cases?

MR. JOHN REMILLARD: We are expecting to prepare the business case by end of fiscal year this year.

1006

MS. KATHLEEN MCCANDLESS: Thank you. I now have some questions about the IT staff internalization, we heard a little bit about that this morning in the presentation.

MPI capitalizes int -- internal labour for work on IT projects, is that right?

Maybe a question for Ms. Campbell.

MR. LAWRENCE LAZARKO: Correct.

MS. KATHLEEN MCCANDLESS: If we could go to IT 3, under the heading Effectively Managing IT Labour, we see the bullets there that MPI has transitioned twenty (20) positions from internal to ex -- external to internal with seven (7) more positions being converted by 2019/'20, is that right?

MR. LAWRENCE LAZARKO: That's correct.

MS. KATHLEEN MCCANDLESS: Thank you. And if we go to figure IT Appendix 1–1.

Now, in looking at this table, I understand that after the seven (7) consultant positions are converted into internal full-time equivalents, there is an additional decline of eighteen (18) consultants to eighty-two (82) consultants for 2018/'19, and that would be found at line 7. Is that right? For 2018/'19 budget?

MR. LAWRENCE LAZARKO: So -- sorry.

1007

Line 7 represents both the combination of reductions due to the external labour strategy, but also reductions to changes in project workload.

MS. KATHLEEN MCCANDLESS: So that's why we have -- so it would include the seven (7) consultant positions being internalized?

MR. LAWRENCE LAZARKO: That's correct.

MS. KATHLEEN MCCANDLESS: And then if we go just below, to the table below, IT personnel costs.

This shows a reduction or -- in our projected savings if we look to line 2 of --

MR. LAWRENCE LAZARKO: Sorry, I would like to make an amendment to the previous statement, if we could scroll back up, please.

MS. KATHLEEN MCCANDLESS: Sure.

MR. LAWRENCE LAZARKO: Right. So in 2018/'19, it would include five (5) reductions of the seven and 2019/'20 you would see the remaining two (2).

MS. KATHLEEN MCCANDLESS: Thank you for that clarification.

So at IT Appendix 1–2, if we compare the costs for consultants from 2017/'18 actual to 2018/'19 budgeted, we see a reduction or projected

1008

savings of roughly $3 million. Is that right?

MR. LAWRENCE LAZARKO: Subject to check, yes.

MS. KATHLEEN MCCANDLESS: And then if we go to figure IT Appendix 1–11. This is the average cost per full-time equivalent for consultants versus internal, yes?

MR. LAWRENCE LAZARKO: Correct.

MS. KATHLEEN MCCANDLESS: And this table estimates the actual and forecasted average cost over a ten-year period, is that right?

MR. LAWRENCE LAZARKO: That's correct.

MS. KATHLEEN MCCANDLESS: And if we look to lines 8 through 10, we see that the average cost per full-time equivalent consultant is expected to first increase in 2018/'19, to 140 -- or one forty-six seventy, yes?

MR. LAWRENCE LAZARKO: That's correct.

MS. KATHLEEN MCCANDLESS: And then to decrease to one thirty-four eighty-nine in 2019/'20?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And one thirty-four ninety in 2020/'21, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And what is

1009

the reason for such a reduction in the per consultant cost?

MR. LAWRENCE LAZARKO: In creation of the table we forecasted which potential positions could be converted, we've removed them from the amount and regenerated the averages.

That would be the reason. So the lower reduction -- sorry, the reductions you see in line 9 and line 10 are based on the anticipated conversions, the anticipated changes we at the time made, 2018, when we created this.

MS. KATHLEEN MCCANDLESS: Thank you. I'm now going to move into some questions of Mr. Henry, for the most part, on the PDR evaluation. It is 11:45. I expect that line of questioning will take well over fifteen (15) minutes, maybe an hour or something of that nature, so I could start now and break or we could break early for the lunch.

THE CHAIRPERSON: You know, we'll break early for the lunch. I don't -- I don't like breaking cross-examination, so we'll break early and -- how long do you think you'll be this afternoon, Ms. McCandless?

MS. KATHLEEN MCCANDLESS: That's a good question. Approximately an hour and a half, two

1010

(2) hours. Something like that.

THE CHAIRPERSON: Okay, we'll break until one o'clock. Thank you.

MS. KATHLEEN MCCANDLESS: Thank you.

--- Upon recessing at 11:45 a.m.

--- Upon resuming at 1:00 p.m.

THE CHAIRPERSON: Good afternoon. If we could start. Ms. McCandless...?

MS. KATHLEEN MCCANDLESS: Thank you.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Just one (1) follow-up question to the -- to slide 9 from MPI Exhibit 27.

With respect to the capital budget for 2018/'19 for technology risk management of $4.5 million, is that an ongoing capital expense every year following?

MR. BRAD BUNKO: Yes, it is.

MS. KATHLEEN MCCANDLESS: And that will be at $4.5 million as a capital expenditure throughout the forecast period?

MR. BRAD BUNKO: It's -- yeah, go

1011

ahead.

MR. LAWRENCE LAZARKO: Sorry. In CAC-1-30 part (a), we explicitly talked about this being a multi-year program with annual review of investments, so, that would be what we're looking at doing with this and why it showed up in our capital master summary as an ongoing cost.

MR. BRAD BUNKO: But I believe would have the potential to have part of it expensed. Would that not be correct? Pieces could be expensed if the initiative was small enough?

MR. LAWRENCE LAZARKO: Absolutely correct.

MS. KATHLEEN MCCANDLESS: Thank you.

MR. STEVE SCARFONE: Ms. McCandless, just before you go on, before I lose sight of it, there was some testimony given by Mr. Remillard this morning that he'd like to correct if -- if now is an appropriate time because we are on the issue of capital projects.

MR. JOHN REMILLARD: Yes, there was a question regarding the threshold for capital approvals. My apologies, I had stated 250,000. The actual number is 500,000. My apologies.

1012

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: And that was in the context of the approval process prior to the implementation of the value management process, is that right?

MR. JOHN REMILLARD: That's correct, yeah.

MS. KATHLEEN MCCANDLESS: Thank you. All right, Mr. Henry, I'm going to have some questions for you now with respect to your report or the PDR program evaluation.

MR. CHARLES HENRY: Okay.

MS. KATHLEEN MCCANDLESS: Thank you. And just by way of background, what is the role of Gartner within MPI on an annual basis?

MR. CHARLES HENRY: So we're a research and advisory company. So we -- our core business is selling research that we develop around how to do to -- or how to take advantage of IT technology and -- and -- and how to execute other business processes like HR, finance, et cetera.

We provide a consulting service on top of that, so that people can apply that research to -- to their context. MPI has hired us to do an annual look at the IT program to make sure that it's

1013

following best practices as we've defined to do things like the IT scorecard to look at their spending relative to peers based on our database.

MS. KATHLEEN MCCANDLESS: Now, we know that with respect to the PDR program evaluation that was filed in this year's GRA that you were the lead with respect to that report?

MR. CHARLES HENRY: Yes, I'm the lead author.

MS. KATHLEEN MCCANDLESS: With respect to the IT score which I believe used to be called the CIO scorecard?

MR. CHARLES HENRY: Yep.

MS. KATHLEEN MCCANDLESS: Have you had any involvement in that in the past?

MR. CHARLES HENRY: I have not, not with MPI. I mean, I can talk to you about the Gartner process, but not about any of MPI's results.

MS. KATHLEEN MCCANDLESS: And with respect to the previous PDR program evaluations, there was one (1) filed in last year's GRA and one (1) filed in the GRA previous.

What was your level of involvement with those reports?

MR. CHARLES HENRY: I was not involved

1014

with those.

MS. KATHLEEN MCCANDLESS: I take it you are familiar with those -- the contents of those reports, however?

MR. CHARLES HENRY: I am, yes.

MS. KATHLEEN MCCANDLESS: Thank you. Now if we could go to the PDR program evaluation and that's value management Appendix 6 and just to start off at pages 14 and 15.

To reiterate what we heard from you this morning, Mr. Henry, at the top of the page we see that there is a significant difference in some of the costs and benefits in the overall net pre -- present value between the 2017 Gartner report and the 2018 MPI team restatement; yes?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And as we know, the key difference are an expected project cost of $57 million as opposed to the originally projected 65 million?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And now a negative net present value of 49.9 million as opposed to the Gartner projected 13.7 million; yes?

MR. CHARLES HENRY: That's correct.

1015

MS. KATHLEEN MCCANDLESS: Now, there's some wording in the second line of this paragraph that I would just like you to clarify. It's referred to in one (1) place as the 2017 Gartner report and then the 2018 MPI team restatement.

So, the way I read that is one (1) is - - was Gartner's findings and the second, the 2018, is based on MPI's information, is that the proper way to understand it?

MR. CHARLES HENRY: Correct. So MPI as they built up their value management went back and applied the principles to -- to the PDR program, went back and, you know, updated the costs, updated the benefits, that's what lead them to make a number of decisions, including the cancellation of CCRS so.

We'd done analysis in 2017 when -- when MPI was not using NPV as a project management tool. They are now starting to use NPV and have done their own calculations in 2018.

MS. KATHLEEN MCCANDLESS: And is there significance to the fact that one (1) is termed as, essentially, as Gartner's findings and the other is -- is now MPI's findings? Does that mean that Gartner itself did not make those findings?

MR. CHARLES HENRY: So I -- I checked

1016

the arithmetic, but I did not go in and -- we had a number of conversation so that I could understand the contents of those findings and I checked the arithmetic as it was when -- when I did the work, which is back in May.

MPI has continued to refine those numbers so they're -- you know, they would be a little bit different today than they would've been in -- in May but -- but I'd say they are directionally correct and precisely wrong.

MS. KATHLEEN MCCANDLESS: Thank you. And then we see the bullets here that describe the factors contributing to the change in the net present value.

So first, as we heard some cost that have been attributed to the program were not included in the analysis --

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: -- previously. And new evidence shows that some of the benefits of the PDR program without CCRS are plan to be lower than projected?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And of course, as we also heard the corporate cost of capital

1017

is now being used at -- at between 6.5 percent and 9.5 percent for NPV calculations; yes?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: Thank you. Now, if we go to page 3 of your report, Mr. Henry, under "evaluation approach," we heard again from you this morning about this.

In this year's report, Gartner assigned additional senior resources to conduct an updated assessment, yes?

MR. CHARLES HENRY: Yep.

MS. KATHLEEN MCCANDLESS: So perhaps you could just elaborate on what the change was in resources from last year as compared to this year?

MR. CHARLES HENRY: So last year the work was led by Martin who's had a long-standing relationship with MPI. Because of the restate, we wanted to have another set of eyes looking at the numbers. So, Martin asked me if I would participate, and I was, of course, happy to do that.

MS. KATHLEEN MCCANDLESS: Okay. So the additional resources was yourself being added to the team?

MR. CHARLES HENRY: Yes and Rand Guy who's the managing partner for Gartner Consulting in

1018

Western Canada. He attended the April the 19th meetings in -- here in Winnipeg and did some QA on the report, but I -- I wrote the report.

MS. KATHLEEN MCCANDLESS: Thank you. And I understand your evidence, just a few minutes ago, was that you were not involved in previous PDR program evaluations but you are aware that in 2015 that this Board did order an independent review of the PDR program?

MR. CHARLES HENRY: Yes.

MS. KATHLEEN MCCANDLESS: And then I believe your evidence was this morning that Gartner introduced the net present value calculation into the analysis in the 2017 version of the report?

MR. CHARLES HENRY: Yeah, last year, that's correct.

MS. KATHLEEN MCCANDLESS: Was it not actually introduced in the 2016 version of the report?

MR. CHARLES HENRY: I'd have to look at that vision. I think I have it here but I'm not positive.

MS. KATHLEEN MCCANDLESS: Kristen, would you mind pulling that report up. So that's -- if we just scroll to the top for -- for the record/

So that was the physical damage re-

1019

engineering attachment, PDR (a) --

MR. CHARLES HENRY: M-hm.

MS. KATHLEEN MCCANDLESS: -- from the 2017 General Rate Application?

MR. CHARLES HENRY: Okay.

MS. KATHLEEN MCCANDLESS: And if we go to page 4 under cost, we see that initially the overall program budget was consistently $65 million in 2012 dollars, yes?

MR. CHARLES HENRY: M-hm.

MS. KATHLEEN MCCANDLESS: And then we see at the bottom of that paragraph that Gartner -- and I take it that would be Mr. Geffen who was the author --

MR. CHARLES HENRY: Yep.

MS. KATHLEEN MCCANDLESS: -- wrote that:

> "However, it also introduces the potential for additional cost, extended timeline and differed benefits realization."

Yes?

MR. CHARLES HENRY: Yep.

MS. KATHLEEN MCCANDLESS: And then to the top of page 5, in this previous report:

1020

> "The program as planned and approved shows a lengthy payback period, an internal rate of return of 8 percent and a net present value of $18 million, using a 3 percent cost of capital over the period from inception 2010/2011 until ten (10) years after go live when benefits start to accrue in 2016/'17."

Yes?

MR. CHARLES HENRY: Okay, yeah, I'd forgotten this.

MS. KATHLEEN MCCANDLESS: Okay, thank you. Kristen, (sic) if we could please enter PDR (a) from the 2017 rate application as PUB Exhibit -- I believe it's Number 19.

--- EXHIBIT NO. PUB-19: PDR (a) from the 2017 rate application.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Now, Mr. Henry, I take it because you are familiar with this report, you would also know that the 2016 version of the PDR evaluation did not include an assessment of

1021

the operating and maintenance costs for the program?
MR. CHARLES HENRY: Yes.
MS. KATHLEEN MCCANDLESS: And then if we would go to the PUB Order 126/'16. And so for your benefit, Mr. Henry, this was the Order that the Board issued following the hearing in which the previous report that we just reviewed had been filed.
So if we go to page 29. We'll just skip ahead to the directives from the Order, then, if that's possible -- oh, now we do have the full Order. Twenty-nine (29), please.
So we see the paragraph that starts "with respect." We see:
"With respect to the savings and benefits of the PDR project, Mr. Geffen noted that Gartner had determined the net present value benefit overall, the project of $18 million. The cost benefit analysis by Gartner did not include the cost of maintaining the program. Gartner estimated the maintenance cost based on industry standards to be 18 to 20 percent per annum."
You see that?

1022

MR. CHARLES HENRY: Yep.
MS. KATHLEEN MCCANDLESS: Thank you. And then if we could jump to Directive 10.10.
Now, this is the section of the Order in which the Corporation was directed by this Board to file another independent assessment on the development and rollout of the PDR project. You see that there?
MR. CHARLES HENRY: Yep.
MS. KATHLEEN MCCANDLESS: And the last sentence of that directive states that this project cost benefit analysis -- analysis shall incorporate all maintenance costs in the program evaluation. Yes?
MR. CHARLES HENRY: Yep.
MS. KATHLEEN MCCANDLESS: Thank you and then, Kristen, if we could please jump to Order 130/'17, at page 55.
Now, this was the Order that this Board issued last year after having received in evidence the 2017 PDR program evaluation. If we go five (5) lines up from the bottom of this paragraph we see that the Board makes a finding which is:
"The Board further finds that the net present value and internal rate of return calculations for the PDR program are of limited value as they

1023

do not take into account the cost of operating and maintaining the program and utilize a 3 percent discount rate, which may not reflect the risks of the project. The Board also notes that there has been a deterioration in the assessed benefits of the PDR program since the Gartner analysis filed in the 2017 GRA."
Do you see that there?
MR. CHARLES HENRY: Yeah.
MS. KATHLEEN MCCANDLESS: So with -- with that in mind, having review those two (2) Board Orders, it appears then that MPI or Gartner did not include the cost of operating and maintaining the PDR program in the -- in the two (2) analyses filed previously to the one that you authored; is that right?
MR. CHARLES HENRY: Yeah, correct. We -- you know, as stated in the report we asked multiple times for -- for the breakdowns. MPI didn't have them available so we -- we did the analysis based on the high level data that was available to us.
MS. KATHLEEN MCCANDLESS: So I take it

1024

then that the reason why the operating costs were not included from Gartner's perspective was because the information was not provided to it by MPI previously?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: Thank you. And I take it the updated evaluation filed this year, which you authored, now includes all of the costs?
MR. CHARLES HENRY: Well, all the costs that we're aware of. So -- it's clear that MPI has got a much more holistic view of project management this year than they had in previous years and has done a lot of work at looking at costs.
To the point as I said where their cost documents are now living documents, so you can see the evolution and they can trace -- it will tell you why a number is different, you know, this month from last month which -- which they often couldn't do in the past. So it's a much more fulsome review available today than it was available a year ago.
MS. KATHLEEN MCCANDLESS: Thank you. If we could pull up Slide 17 from MPI Exhibit Number 27, and it's...
Now, I -- it was in the context of, I bel -- it was either Mr. Wennberg or Mr. Remillard's evidence this morning. In reviewing this slide, slide

1025

17.

Pardon me, Slide 13. At item 3 the lessons learned from PDR and CCRS is:

"Third parties may not find all the week assumptions or missing costs."

Yes?

MR. CHARLES HENRY: Yep.

MS. KATHLEEN MCCANDLESS: So -- and this question I would direct to the MPI representatives.

What would be Gartner's role with respect to finding assumptions or missing costs? Is Gartner to audit MPI's information?

MR. JOHN REMILLARD: The role that Gartner's played to date is to review the available information. So, in essence, the project status reports, the issues, register, risk registers and so forth for the program. So they would provide an assessment and opinion whether they were deemed full, whether there was good mitigation strategies, et cetera.

MS. KATHLEEN MCCANDLESS: So it was the response -- pardon me.

MR. CHARLES HENRY: If I could add, we are not an audit firm.

1026

MS. KATHLEEN MCCANDLESS: So it's a -- it was the responsibility and continues to be the responsibility of MPI to provide the information that Gartner requires?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And historically within MPI who has been the main contact to provide Gartner with this information?

MR. JOHN REMILLARD: I have over the last three (3) years.

MS. KATHLEEN MCCANDLESS: Thank you. Now, in undertaking its review last year Gartner had reviewed a number of key program artifacts and interviewed a number of key individuals.

And are you aware of that Mr. Henry?

MR. CHARLES HENRY: In 2017?

MS. KATHLEEN MCCANDLESS: Yes.

MR. CHARLES HENRY: Yes.

MS. KATHLEEN MCCANDLESS: Okay. And I -- perhaps for your reference, Mr. Henry, if we could pull up MPI Exhibit 17 from the 2018 GRA. So that was the presentation that Mr. Geffen gave last year to this Board. And slide 5.

So we see here, Mr. Henry, at the second bullet that the initial initiative and it was

1027

made up of five (5) programs and twenty (20) projects within those programs. Eight (8) were completed, seven (7) were cancelled after determining they were not strategic and did not add to the business case and five (5) restructured projects were created which now comprised the remainder of the PDR program.

Are you familiar with this?

MR. CHARLES HENRY: Yeah.

MS. KATHLEEN MCCANDLESS: Thank you. And then at slide 9. These were the savings and benefits to be realized based on the 2017 PDR program evaluation and we see the second -- under the fourth bullet two (2) lines down we see:

"Ramping up to a steady state ongoing $13.65 million annual benefit."

Yes?

MR. CHARLES HENRY: Yep.

MS. KATHLEEN MCCANDLESS: And for the record, I would ask that this presentation be entered as PUB Exhibit Number 20 and that was MPI Exhibit Number 17 from the 2018 GRA.

--- EXHIBIT NO. PUB-20: MPI Exhibit Number 17 from the 2018 GRA.

1028

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: And we know, Mr. Henry, that the total budget historically had remained unchanged until this year when it was revised from $65 million to $57 million; yes?

MR. CHARLES HENRY: That's correct.

MS. KATHLEEN MCCANDLESS: And now the scope of what is being delivered by the PDR project has changed as a result of this reduction in the budget?

MR. CHARLES HENRY: Correct. I would probably phrase that the other way around. The reduction in scope of the project resulted in a reduction in the budget.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go back to evaluation approach at Appendix 6. So, the current PDR program evaluation.

I gather from your report and from your presentation this morning that the bulk of the analysis undertaken by Gartner was a review of an MPI management presentation dated April 19, 2018; yes?

MR. CHARLES HENRY: And a lot of spreadsheets and project status reports, but yes.

MS. KATHLEEN MCCANDLESS: Thank you. We do see here as well there was an MPI generated

1029

value management analysis. Yes? The second bullet.
MR. CHARLES HENRY: Yep.
MS. KATHLEEN MCCANDLESS: And project status reports, and interviews on site as well. Yes?
MR. CHARLES HENRY: correct.
MS. KATHLEEN MCCANDLESS: Now the refinements in the budget for the program from 65 million down to 57 million, did Gartner review the refinements with MPI management?
MR. CHARLES HENRY: Yes, we did.
MS. KATHLEEN MCCANDLESS: Now if we go to page 3 of your report, we -- there -- if we scroll down we see just above in items 1 and 2 there that the -- as the program involved Gartner found two (2) conditions developed; yes?
MR. CHARLES HENRY: Yep.
MS. KATHLEEN MCCANDLESS: And the first was that MPI had difficulties measuring and breaking out costs, especially licensing due to the complex license schemes that we heard you speak about this morning, yes?
MR. CHARLES HENRY: Yes.
MS. KATHLEEN MCCANDLESS: And then we also heard you speak about number 2, which was that the senior executives had lead negotiations with

1030

repair industry with limited engagement at the business -- at the business unit level, yes?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: Now if we go to page 4 under Gartner Perspective, we see that, second line down in the first paragraph there, that Gartner has found that MPI has followed the advice provided by Gartner and applied a much more rigourous approach to the PDR business case and application of value man -- management framework, yes?
MR. CHARLES HENRY: Yes.
MS. KATHLEEN MCCANDLESS: Had Gartner's independent analysis last year did not reflect this rigourous approach?
MR. CHARLES HENRY: Correct, the numbers in last year were much higher level numbers.
MS. KATHLEEN MCCANDLESS: So knowing that we have a much higher level of detail this year, are you able to speak -- appreciating that you were not involved in the previous PDR evaluations but are you able to speak as to how Gartner was able to have a level of comfort with its previous PDR evaluations?
MR. CHARLES HENRY: I mean, I cannot put words in Martin' mouth. I think you'll see in our comments that we repeatedly said that the information

1031

provided was at a high level, and the lesson learned for us is that we should have been much clearer in our conclusions that the high level numbers showed, you know, the 13.7 million NPV, but that further analysis was required, and we should have been stronger in making the point.
MS. KATHLEEN MCCANDLESS: Thank you. If we could go to page 8 of your report, Mr. Henry.
So we see at the top of the page here that there were a number of deliverables that the PDR program was expected to provide per its report in 2017, yes?
MR. CHARLES HENRY: Yep.
MS. KATHLEEN MCCANDLESS: And I won't review all of them. But if we scroll to the bottom of the page, we now see that based on the evaluation you conducted this year that there -- a number of benefits are now not going to be achieved; is that right?
MR. CHARLES HENRY: That's correct, but it's not just me, right? So this is part of the effect of the value management office having a much more rigourous look at the benefit stream and us reviewing what value management is said and comparing it to our previous reports and the various categories that we built to find benefit, so, it's not just us.

1032

It's us and value management.
MS. KATHLEEN MCCANDLESS: With respect to the second bullet "direction of nearly 85 percent of estimates to distributed estimating shops," that's a benefit that is no longer expected to be achieved?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: What percentage of estimates is currently included in the benefit stream?
MR. CHARLES HENRY: I think we'd have to ask M -- MPI for that.

(BRIEF PAUSE)

MR. CURTIS WENNBERG: We're going to have to take that away. We can bring that back this afternoon.
MS. KATHLEEN MCCANDLESS: Okay. You will be able to provide on the record this afternoon. We could also do it by way of undertaking and MPI could answer in writing if it prefers.
MR. JOHN REMILLARD: We'll attempt to to get to this afternoon. If we can't, we'll take it as an undertaking, though.
MS. KATHLEEN MCCANDLESS: Thank you.

1033

MR. CURTIS WENNBERG: If I can give context to you, it's at 20 percent now in terms of penetration of direct repair. It's -- it's probably going up around the 40 percent mark and that's --

MR. STEVE SCARFONE: But just -- I don't know if we should provide a conditional undertaking. Either we can provide the information later this afternoon or we'll provide an undertaking.

MR. CURTIS WENNBERG: We found it, it's 40 percent.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Thank you. So no undertaking is required. Thank you.

So we also see the fourth bullet that once a vehicle is at a repair shop the claim is ready for repairs 98 percent of the time. No waiting for customer or shop.

So that's no longer expected to be achieved -- will not be achieved, correct?

MR. CHARLES HENRY: That's understanding, correct.

MS. KATHLEEN MCCANDLESS: Similarly, with respect to the fifth bullet:

"Less hands-on MPI involvement for

1034

most processes for simpler claims through a reduction in the amount of adjuster time and effort required for new first notice of loss claims."

Yes?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And then with respect to the sixth bullet, the lower overall claims spend in comparison to current operations which also preserve relative claims costs in relation to industry.

Are these benefits no longer achievable because of the cancellation of CCRS?

MR. CHARLES HENRY: I think the cancellation of CCRS is -- is part of that. But I also think, you know -- and again, I'm speaking for MPI. And I would like them to comment after but the cost of repair is going up year over year as automobiles get more com -- complex, so I think there's an element of that as well that I think MPI should -- should comment.

MR. CURTIS WENNBERG: Yeah, I think while generally cars are going to be more expensive to fix going forward, this is really related to: Are we

1035

going to be finding the RFP savings or our people savings as a result of some of the technology, what's anticipated, plus then some of the parts strategy savings, part of the loss of use of the rental car savings, and -- and total loss savings.

Some of the -- some of this -- the full-time employee reductions that we would get if we got people to put their claims online through the CCRS system just simply won't happen. We -- we're not going to put them out on line.

As some of the estimates around the savings from estimators that we wouldn't need anymore, if you put 85 percent of your estimates through to the body shops, purely, you'd be able to reduce a lot more of those roles than we have today. However, we are studying those and we want to make sure that we go -- we go reasonably and appropriately to -- to the higher number. Even at 40 percent we want to make sure that as shops or underwriting these -- these estimates that -- that they're appropriate and doesn't increase our severity beyond a level when we write our own estimate. So -- so we look at that.

As it -- as it relates in the business case to savings from, let's say, loss of use or rental car savings, we haven't given up, and we, you know,

1036

underneath everything, we pay a lot of money for our rental cars here in -- in MPI. On average it's about forty-nine dollars ($49) a day. And so we've undertaken to do an -- effort to try and reduce that spend anyway, regardless of our decision on PDR and so we just had an agreement with the Car and Truck Rental Association so that we're actually going to -- go after that rental agreement and reduce the amount that we paid.

And I don't think I'll make it public at this point. We just signed that agreement, but it's a fairly significant reduction for us. So, no IT spend's been required just more process change. So -- so while the business case is -- is -- it is going to have some lower spend in certain areas, it's going to have a little higher in -- from the FTEs that we're not able to get out but -- but we'll do the best we can with what we have.

MS. KATHLEEN MCCANDLESS: Thank you. At the very bottom of the page, Mr. Henry, you write that:

"The benefits below are projected to be achieved and have MPI's management commitment to track the achievement of the benefits."

1037

And then we have a number of bullets gain and this is written as MPI's management commitment to track the achievement.

Does Gartner have any view on whether these benefits will be achieved?

MR. CHARLES HENRY: So, we can't predict the future, but we can say is that for things like part saving, MPI has a dashboard so they can actually now accurately track the part savings that have come from using recycled or other kinds of used parts. So that what was conjectured in the past, now there's an actual dashboard in place to -- to -- to track and then you can start to compare your tracking to your assumptions and -- and if there were any flawed assumptions, fix them, make sure the business case is accurate.

So, I can't predict whether all of MPI's predictions will come true, but what I can say is that they have fact-based dashboards in place for -- - for most, if not all, of these commitments, and can accurately then say, Are our assumptions coming true and if they are coming true, are there savings coming as we predicted. If not, what's the flawed assumption? Are there changes we could make in the system in order to -- to recover that money or, you

1038

know, have we been conservative, in fact, we're getting more.

So I can't predict whether the claims will actually come through, but I can say that -- that they now have a fact-based capability upon which they can do the analysis to determine if the benefits are being achieved. If not, why not and -- and what -- what else is possible.

MS. KATHLEEN MCCANDLESS: Thank you. If we go on to page 9 in the middle of the page it stated that:

> "In addition, MPI is achieving other benefits to which it is not possible to assess a finan -- assess financial benefits. These are improved customer service, reduce technical risk and reduced fraud risk."

Yes?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And can you elaborate on each of these three (3) bullets and how the program will prov -- improve these areas?

MR. CHARLES HENRY: So, customer service is either the availability of multiple

1039

channels so, not just, you know, in person, but over the phone, over the web. So different channels that suit the -- the needs of different kinds of clients; the speed of service or getting service in, you know, seconds or minutes instead of hours or days; technical risk.

Part of what MPI has done and doing PDR is refresh a bunch of their infrastructure or move to infrastructure provided by third parties, which is more current, more reliable, also so that their technical risk is -- is going down across the platform. And -- and the Mitchell system gives them a basis of good and consistent information across the entire province around which now you can do the analytics for fraud detection that you couldn't do before 'cause you didn't have a strong information base.

So it's hard to figure out, you know, what is the impact of that other than good data means good data management means good analytics means the ability to come up with positive outcomes.

You know, is there more fraud happening in Manitoba than is being detected? Is fraud -- is Manitoba, you know, a less fraudulent place than Ontario or California? I can't comment on any of

1040

that. I'd like to think, yes, but I don't know.

MS. KATHLEEN MCCANDLESS: Thank you. Now the table that's just below the bullets here, this -- this schedule is now the updated benefits to be achieved from the PDR program; is that right?

MR. CHARLES HENRY: In our view of the benefits and as of that point in time which was, you know, when I wrote this which was, you know, May of -- of -- of this year. So as I said, MPI because they have a much more holistic and interactive, they probably have a, you know, a more up-to-date view of this dashboard than -- than I do.

They may have it in different buckets 'cause that's -- we did spend some time cross-referencing the way MPI tracked the savings versus the way Gartner tracked their savings because I tried to make it consistent with our 2017 report and MPI has moved on.

So -- so, you know, it's -- it's attempting to make the MPI numbers consistent from '17 to '18. They have a different level of granularity, but they've bucketized them somewhat differently. So as I said before, I believe they're directionally correct but probably precisely wrong.

MS. KATHLEEN MCCANDLESS: And from

1041

MPI's perspective, does it have any follow-up to Mr. Henry's comment that MPI may have more up-to-date information on the benefits stream?

MR. CURTIS WENNBERG: Like we mentioned, the predictive analytics is now down to more of a quarter of a million dollars ($250,000).

On the loss of use side, those numbers are still accurate as it relates to the work done through the -- the -- the PDR initiative, but the negotiated reductions in loss of use that we've -- we've secured are -- are to the tune of about a million and a half (1,500,000) a year roughly.

Again, in -- in pure form, though, we can't attribute that to the project. It was -- it -- it's -- it was a different approach entirely in terms of getting those numbers so -- so -- so being purist I wouldn't change that loss of use. The other pieces remain as they are.

In terms of defending the certain numbers, the biggest one there is the 3 million on the labour rate differential and that probably gets into some of the sensitive stuff where we can speak about a component of the Mitchell license that is related.

MS. KATHLEEN MCCANDLESS: Thank you. And if we scroll down to the tenth (10th) page under

1042

PDR Program Progress, we see -- we see that toward the end of fiscal 2016/'17, as reported by Gartner in the May 2017 report, that eight (8) PDR projects were completed, seven (7) were cancelled and five (5) comprised the remainder the PDR program, yes?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: And then if we scroll further down to completed projects, we see now appointment manager number 1, enhanced direct repair capabilities; number 2, and partner por -- portal number 3, yes?

MR. CHARLES HENRY: Yeah.

MS. KATHLEEN MCCANDLESS: And then continuing down the page we see in-flight projects that complete in 2018/'19 so the parts loss of use budgeted with an enhanced direct repair, yes?

MR. CHARLES HENRY: Yes.

MS. KATHLEEN MCCANDLESS: And then the cancelled projects of which we've heard already, the customer claims reporting system, CCRS and remote estimating, yes?

MR. CHARLES HENRY: Correct.

MS. KATHLEEN MCCANDLESS: Now you spoke, Mr. Henry, this morning about CCRS, among others, not being included in the net present value

1043

analysis that was provided last year; yes?

MR. CHARLES HENRY: I believe it was in the NPV analysis provided last year. I'd have to go back and check, but it's not in the NPV analysis that we did this year.

MS. KATHLEEN MCCANDLESS: Okay.

MR. CHARLES HENRY: 'Cause it was part -- CCRS was still part of PDR last year.

MS. KATHLEEN MCCANDLESS: If we go to PUB-MPI-1-68, so question (a) is -- asked the Corporation to identify which costs were excluded from the NPV of an analysis that was prepared by Gartner last year and --

MR. CHARLES HENRY: Like I said, I'd have to go back and -- and look at the report and check with -- and check with Martin, so.

MS. KATHLEEN MCCANDLESS: We -- we do see some bullets underneath (a) here: direct repair operations, direct repair premium, Mitch -- Mitchell software licensing, CCRS software licensing, Partner Portal software licensing; Car Part software licensing and Predictive Analytic software licensing and operations, yes?

MR. CHARLES HENRY: Yeah.

MS. KATHLEEN MCCANDLESS: And I gather

1044

based on what we've heard from you already, Mr. Henry, that the reason that these were not included as part of the NPV analysis was the information was not provided to Gartner?

MR. CHARLES HENRY: It -- it was not provided to Gartner and I don't think MPI could break it out as we -- we talked about earlier, assigning -- I'll use an analogy. You buy a ladder to paint a wall and then you use it to fix your roof. Who paid for the ladder? Right?

So, I -- I don't -- I think MPI was struggling with -- with appropriately allocating the costs of all of those things to all the various components that they're used for. I think value management has done a lot of work in order to figure out how to allocate those costs in an appropriate manner that wasn't available last year and -- and we didn't have the details so it wasn't included.

MS. KATHLEEN MCCANDLESS: Thank you. Kristen, could we please go to Figure VM-1 from the Value Management section and this is likely a question for Mr. -- well, any of Mr. Bunko, Mr. Wennberg or Mr. Remillard.

So at the top of the figure here we see the forecasted benefit stream for the PDR as reported

1045

in the 2017/'18 GRA, is that right?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And then at the bottom under the heading April 19, 2018 those are the CCRS termination, MPI evaluation per the Gartner categories, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: Now, can you explain, Mr. Remillard, what is shown here at line 19?
MR. JOHN REMILLARD: Line 19 depicts the material differences between this year's volume and for projections from a benefits' perspective opposite last year's submission and evaluation.
MS. KATHLEEN MCCANDLESS: And so MPI had cancelled several projects last year and reallocated the funds spent to other projects, is that --
MR. JOHN REMILLARD: That's fair, yes.
MS. KATHLEEN MCCANDLESS: And then if we go to PUB-MPI-1-63 and at question (b). So the Corporation was asked to provide detail of the spending by year in each cancelled PDR project, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And on page 2 are paid -- yes, page 2 at Figure 1 we see the

1046

impairment of deferred development costs at approximately $20.3 million at a corporate level, yes?
MR. JOHN REMILLARD: At a corporate level, correct.
MS. KATHLEEN MCCANDLESS: And so I understand that if MPI determined that there was no future value related to the expenditure, or if the expenditure rate -- rate -- related to investigative platform or software the company had decided not to go forward with then it was part of the -- the differed or the impairment, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And so those were the primary reasons for the $20.3 million writeoff?
MR. JOHN REMILLARD: Overall, yes.
MS. KATHLEEN MCCANDLESS: And at Figure 2, we see the impairment of PDR projects, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And at line 6 on the far right-hand side of the table we see total impairment of $17.5 million, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And the vast majority of the writeoff at line 4 relates to customer

1047

claims reporting system, yes?
MR. JOHN REMILLARD: It does, yes.
MS. KATHLEEN MCCANDLESS: That's $15.6 million for the record, yes?
MR. JOHN REMILLARD: Correct.
MS. KATHLEEN MCCANDLESS: And then if we could scroll to the top of the page again, at line 5 under Figure 1, we see a writeoff for high school driver education Phase 2 of $2.1 million, yes?
MR. JOHN REMILLARD: That's correct.
MS. KATHLEEN MCCANDLESS: And can you explain the reason for that writeoff?
MR. JOHN REMILLARD: Sure. Phase 2 we were look -- we did a proof of concept on quite a few different technologies like Telematics is an example. Determining whether Telematics could serve as a meaningful assessment of how our young drivers were performing; as well, we did a proof of concept with respect to some simula -- simulation software with respect to road test simulations.
We were looking at evaluating that software from the context of (a) the highschool driver ed. program, but even a broader sense as to what it could mean for driver testing period.
What we had found with the Telematics

1048

is that interesting results can be interpreted and/or through that technology, however, it deemed to be a cost prohibitive to do on a large-scale. We are certainly still looking at it and looking at the marketplace as Mr. Wennberg's kind of expanded in his general testimony earlier today, and that we'll always watch what's happening as -- as these advancements occur but right now it's cost prohibitive.
On the simulator technology what we have found with that technology is, again, could -- could serve a meaningful purpose, however, what we are finding is that -- that there -- there was at least 25 percent of the population that was getting motion sickness due to the technology and with that, our concern was, is that they would actually perform this test, be it a preliminary test before getting into a -- performing a road test and, ultimately, they may not be in a state to properly drive.
And so from a road safety context perspective that presented a very large concern to us. So it wasn't necessarily the -- that -- whether the -- the software could provide a meaningful value. From a testing incompetency, it was the outcome that we were concerned about. So, therefore, we did not proceed.
MS. KATHLEEN MCCANDLESS: Thank you.

1049

If we could go to MPI Exhibit 9 and the response provided MPI -- PUB-MPI-1-61(d) at this Information Request, response the Corporation provided detail of the $15.6 million writeoff related to CCRS, yes?

MR. JOHN REMILLARD: Yes.

MS. KATHLEEN MCCANDLESS: And we see at line 3, with respect to optimize adjusting a total write-off of $5.3 million, yes?

MR. JOHN REMILLARD: Correct.

MS. KATHLEEN MCCANDLESS: And are you able to tell us what the opt -- optimized adjusting expenditure is related to?

MR. JOHN REMILLARD: Certainly. In the early aspects of the Physical Damage Re-engineering Program, we weren't -- we were looking at different -- a different software alternative, and we were exploring the utilization of FINEOS as a platform for our first notice of loss.

And so we -- we explored that and worked with FINEOS on that -- on that front only to find that ultimately the advancements on that -- that platform could be meaningful, but there was probably a more strategic benefit of pursuing the Mitchell customer claims reporting system.

MS. KATHLEEN MCCANDLESS: And so you

1050

mentioned that was earlier on in the project, so that would explain why there is little to no spending after 2014/'15?

MR. JOHN REMILLARD: That is correct.

MS. KATHLEEN MCCANDLESS: And then at line 2, we see CCRS spending in 2017/'18 of $4.03 million, yes?

MR. JOHN REMILLARD: Yes, correct.

MS. KATHLEEN MCCANDLESS: Are you able to advise what the nature of that spending was?

MR. JOHN REMILLARD: Certainly. This is where we were looking at -- like I said, we -- we were partnering with Mitchell on -- on trying to establish that -- the platform, and a solution. This was ultimately broken down with our internal -- internal costs, as well as we have external labour consultants of the -- complementing our team to complete that project.

MS. KATHLEEN MCCANDLESS: Thank you. And then interim FNOL, that's first notice of loss, and we see a total write-off of approximately $6.3 million?

MR. JOHN REMILLARD: Yes.

MS. KATHLEEN MCCANDLESS: And can you advise as to the nature of the -- the project costs,

1051

there?

MR. JOHN REMILLARD: The nature of that project cost, again, was primarily consultant resources, as we were exploring the first notice of loss solution. So this is where we were transitioning from the FINEOS-based option, and starting to turn our eyes towards the Mitchell -- Mitchell solution. So we were working in the background to try and create the architecture for that, as well as the intellectual property that -- associated with our accident profiles that Mr. Wennberg provided the testimony to earlier today.

MS. KATHLEEN MCCANDLESS: And so the nature of the spending in 2017/'18, there is nearly a million dollars of spend there. Can you explain what that was for?

MR. JOHN REMILLARD: This is where -- ultimately, it was the -- I'm going to call it a rebranding between what -- what -- for what -- for all intents and purposes, one could lump in term -- FNOL and CCRS into one (1) overall solution. We'll call it a rebranding of sorts.

MS. KATHLEEN MCCANDLESS: Thank you. Mr. Henry, I'm going to have some more questions now for you. If we could go back to your report at page

1052

11.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: If we scroll up a little bit to cancelled projects, we see here that the cancellation of Customer Claims Reporting System had termination costs of $10.2 million, yes?

MR. CHARLES HENRY: Correct.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: Now I'm not sure if this is a question that can be answered on the public record now, so MPI can advise, but the detail as to the termination costs of $10.2 million, is that something that can be provided, or that be deferred to...

MR. JOHN REMILLARD: Sorry, the breakdown of the ten point-two (10.2)? I -- I should be able to find that, if I could just have some time. Yeah.

(BRIEF PAUSE)

1053

MR. JOHN REMILLARD: Did you want me to get back to you in a little bit? My apologies. I don't want to keep you waiting if -- if --
MS. KATHLEEN MCCANDLESS: Why don't we just have that given by way of undertaking, then?
MR. JOHN REMILLARD: Okay.
MR. STEVE SCARFONE: That, I was going to suggest, Ms. McCandless, because I -- I believe Mr. Remillard is -- is -- once he finds the information, he's going to conduct a review of that to see if he has any confidentiality concerns, so maybe we could just defer it to the confidential session, because I understand our Friend Mr. Williams has some questions about the costs of the PDR project and stuff that he's waiting to ask on that -- in that panel. So maybe we just defer to the in-camera session.
MS. KATHLEEN MCCANDLESS: My suggestion would be perhaps over the afternoon break, the determination can be made as to whether or not it's confidential. If it's not, we will answer it on the public record, if not, defer it to the CSI. Thank you.

CONTINUED BY MS. KATHLEEN MCCANDLESS:
MS. KATHLEEN MCCANDLESS: So I'll move

1054

on, then. If we could just go to page 14 of your report, Mr. Henry, and this is just to summarize the analysis of the difference between the Gartner 2017 report and the April 2018 analysis, yes? And if we scroll down, there is a table here. So as we heard from you, the -- one (1) of the major differences was the --the discount rate, yes?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: And then scrolling onto the next page, we have the Mitchell licensing fees that were not included in the total cost of the program correct?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: And the eighty-one dollar ($81) premium, about which we heard this morning, yes?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: The next section is changes in the benefit stream. So we see internal efficiencies were revised by MPI from $2.65 million per year by '21/'22 to $1.65 million per year, yes?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: Part source savings were reduced to $2.05 million from the earlier

1055

$2.8 million by '21/'22?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: Loss prevention and predictive analytics, so that showed an initial increa -- savings of $.5 million, increasing to 1 million by 2019/'20, which was revised to $.5 million, and continuing at that level, yes?
MR. CHARLES HENRY: That's my analysis as of May, but I believe MPI has updated that so that it's now two hundred and fifty thousand (250,000).
MS. KATHLEEN MCCANDLESS: Right. And then from -- for loss of use, we've heard about loss of use benefit. So again, there's a reduction there, from 1.05 million down to a hundred thousand (100,000), yes?
MR. CHARLES HENRY: Correct.
MS. KATHLEEN MCCANDLESS: Total loss benefit was removed, yes?

(BRIEF PAUSE)

MR. CHARLES HENRY: Yes. Sorry.
MS. KATHLEEN MCCANDLESS: And --
MR. CHARLES HENRY: I'll be right back.

1056

MS. KATHLEEN MCCANDLESS: And then lastly, the claims audit recoveries --
MR. CHARLES HENRY: Yeah, so net new benefit.
MS. KATHLEEN MCCANDLESS: Right. That's a -- a new benefit?
MR. CHARLES HENRY: Yes.
MS. KATHLEEN MCCANDLESS: Thank you. Now with respect to Exhibit number 28, so your presentation, Mr. Henry, these are the questions actually for the representatives from MPI.
On slide 12, so there is the first observation for MPI which was to continue to invest in value management. And I take it from MPI's perspective, based on what we're seeing in this year's GRA, that MPI agrees with this recommendation and is continuing to implement it. Is that right?
MR. CURTIS WENNBERG: Yes.
MS. KATHLEEN MCCANDLESS: And slide 13, so the recommendations here include increasing the focus of plans to business outcomes and harnessing the power of stakeholders.
Could I just have some comment from MPI on those recommendations?

1057

(BRIEF PAUSE)

MR. BRAD BUNKO: I'm sorry, could you repeat the question, please?

MS. KATHLEEN MCCANDLESS: What are MPI -- from MPI's perspectives with respect -- or perspective with respect to the observations here, so the increase of focus of plans to business outcomes and harnessing the power of stakeholders, can MPI elaborate on what it is doing, and -- and whether it agrees with these recommendations?

MR. CURTIS WENNBERG: I -- I think -- I think basically, the observation here is -- is a little bit around the power of stakeholders. So when we think about our agreements, whatever we do have in the agreements, we have to go back and check our assumptions in the major business cases that we have, and also if there is implications for negotiations to come up as a result of some of the PDR things that we found through -- through real strong and proper NPV analysis, that we'll put them in and talk to our partners about them, and other stakeholders.

I think from the IT strategy that Brad presented this morning, we -- we are also trying to make sure that there's an operational business

1058

champion, so that if an idea comes up, it -- it -- there really is strong merits to it internally, and we don't end up cancelling it. Like, as we saw, the -- the degree of projects that were cancelled are PDR.

So the -- the new plan that -- that Brad and -- and all of us at MPI have -- have put in front of you is to try and make sure that the key stakeholders that know what's happening in the business or are definitely involved at the outset and -- and build the NPVs up.

MS. KATHLEEN MCCANDLESS: Thank you. And Mr. Wennberg, this morning in your presentation, you made a comment to the effect that sometimes, the -- a -- a given project may not have a positive net present value, but you still would recommend that the Corporation undertake the project. Do you recall saying that?

MR. CURTIS WENNBERG: Yes, that's right.

MS. KATHLEEN MCCANDLESS: And with respect to the PDR project, what's MPI's perspective on it?

MR. CURTIS WENNBERG: Well, we also covered that a little bit this morning, too, when the -- the question came up of -- of is this worthwhile

1059

doing? And the magnitude of the loss, would you do it as an armchair quarterback today? Would you do the exact same thing? No, I think the this executive team and -- and Board wouldn't do that, without putting words in their mouth.

But -- but the nuggets -- we have to understand that the nuggets of getting into a -- a Mitchell-based or an estimating-based system that's software instead of faxes and paper, that made sense to do. And -- and what we need to do is streamline and really double check on some of the other components of PDR, and -- and make sure before we -- we -- particularly as you heard Brad say, before we innovate in-house, given our size, do we -- do we know where industry best practice is that we can lift and shift back in here for all Manitobans?

MS. KATHLEEN MCCANDLESS: Thank you. I'm now going to move into the area of benchmarking in IT. Mr. Chair, I expect this will take, if my estimates bear out, roughly half an hour. So we'll continue.

THE CHAIRPERSON: Okay.

CONTINUED BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Thank you.

1060

Now we heard this morning that the -- the previous CIO scorecard that Gartner would provide for MPI on -- on a yearly basis is now -- they're called the IT scorecard. Is that right?

(BRIEF PAUSE)

MR. CHARLES HENRY: That is correct.

MS. KATHLEEN MCCANDLESS: And I understand that many of my questions will be directed to Mr. Lazarko in this regard. Is that right? And so, Mr. Lazarko, are you able to comment on or explain the -- the nature of the change from the CIO scorecard to the IT scorecard?

MR. LAWRENCE LAZARKO: Yes. One moment, please.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: Could you please bring up CAC-1-46(a).

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: With your

1061

leave, I'd like to walk through this, if you please.
MS. KATHLEEN MCCANDLESS: Yes.
MR. LAWRENCE LAZARKO: All right. So the -- there are two (2) different instruments provided by Gartner to measure the process maturity and compare MPI to benchmark groups. CIO scorecard is the measure -- the instrument we've been using for a number of years.
As part of our ongoing conversations with Gartner, they've indicated that the CIO scorecard was being discontinued, and some of the pure data which we rely upon to compare ourselves to would no longer be up-to-date. So as a result, we worked with Gartner to move from CIO scorecard to the IT scorecard.
What we prepared in this Information Request is Gartner's own words in terms of the differences between the two (2). So again, the key change is that we've moved from an unscored toolset to a newer toolset. We can retain the pure data, which we absolutely desire. The numbers are good, but numbers in context are better, so understanding how we compare to a peer group is a -- a real value for us.
We've also changed the different categories that are being measured so that if you

1062

scroll down, you can see specific ones covered in the assessment. So things like infrastructure and operations, and application organization are continuing. Things like business process management that has been captured and measured for years is no longer con -- continuing, and enterprise architecture, area that is deeply important to us, has changed. So when we talk with the actual benchmarking details, we can show scores before and after.
So to facilitate the change, we worked with Gartner to complete both score -- scorecards this year. So we used the CIO scorecard, completed those questionnaires, that information, complete the new scorecard for the purposes of comparison, then -- to ensure we make a smooth transition. The subsequent year, we'll only using the IT scorecard.
MS. KATHLEEN MCCANDLESS: Thank you. And if we go to Attachment A from the benchmarking section of the application. Now, this is prepared by Gartner, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: But I understand you're able to speak to the contents of the report. Is that right?
MR. LAWRENCE LAZARKO: Yes.

1063

MS. KATHLEEN MCCANDLESS: And it's -- it's called a Benchmark Findings and Recommendations Executive Report, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: So this incorporates findings from the CIO scorecard and the IT score. Is that --
MR. LAWRENCE LAZARKO: And the infrastructure and operations report, yes.
MS. KATHLEEN MCCANDLESS: Thank you. So if we go to slide 2, just at the second bullet here, we see that MPI had engaged Gartner to prepare CIO and IT budget scorecards using 2010/'11 budget data and repeated through the years, right?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: And that this report is based on the 2016/'17 actual financial results, yes?
MR. LAWRENCE LAZARKO: That's right.
MS. KATHLEEN MCCANDLESS: And then going down to page 3, we see that the four (4) structure evaluation instruments are IT budget assessment, CIO dashboard survey, infrastructure and operations scorecard, and the IT score survey, yes?
MR. LAWRENCE LAZARKO: Correct.

1064

MS. KATHLEEN MCCANDLESS: If we go to page 6, and these are key findings on the left side of the page. With respect to some of the benchmarking, we see that the personnel spending and staffing levels remain higher for MPI than peers with a slight increase in IT to company full-time equivalent ratio of 16.7 percent to 17 percent, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: The fourth bullet, we see that similar to previous years, MPI spends 62 percent of the IT budget on personnel, as compared to 45 percent for peers?
MR. LAWRENCE LAZARKO: That's correct.
MS. KATHLEEN MCCANDLESS: And that 32 percent of MPI staff -- IT staff is made up of contractors versus 24 percent for the peers, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: And higher staffing levels relative to peers is pem -- particularly evident in infrastructure and operations?
MR. LAWRENCE LAZARKO: That is what Gartner stated. We can review the details. There are some points that we need to talk about in regard to that one.
MS. KATHLEEN MCCANDLESS: If you could

1065

explain, that would be appreciated. Thank you.
MR. LAWRENCE LAZARKO: Right. So if you progress to slide 14, if you take a look at -- so this refers to the infrastructure and operation staffing as assessed by Gartner. Gartner has a specific method. They count the number of staff in the infrastructure and operations area.
For -- for context, infrastructure and operations is really focused on two (2) key pieces. It's the data centre, so managing server storage, which we have IBM do, but there are also some functions MPI retains, like some database activities, and then personal computing. So this is related to the service desk that takes calls, set up of printers, laptops, desktops, et cetera.
The assertion is that MPI's staffing compared to peer is higher. I would indicate that based on the method used by Gartner, we are actually within peer groups. If you take a look at the chart on the left, MPI 2016/'17, peer average is fifty (50). Peer 25th percentile, which is the bottom 25 percent is thirty-seven point-nine (37.9). Peer 75th percentile is fifty-eight (58). So we are within that range.
Gartner -- what they assert, though, is

1066

because we have some of our services provided by IBM, managed services, that there are additional staff that are included in that number. So while we are thirty-five point-seven (35.7), we are well under the peer average, it is only for a portion of that particular function. Does that help?
MS. KATHLEEN MCCANDLESS: Yes, thank you. If we could go to -- back to the previous slide, so page 6, the last bullet states that business process management and enterprise architecture maturity remains generally low and appears to be an opportunity for improvement, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: And on the right-hand side of the page, we see at the fifth bullet, that MPI should continue its current -- the efforts currently underway to review the size of its retained staff and the number of contractors as it increases the use of third-party support for infrastructure services, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: Now with respect to the bullet we just reviewed, so the review of size of retained staff and number of contractors, is MPI making any progress with respect to a staffing

1067

strategy?
MR. LAWRENCE LAZARKO: Definitely. So we -- in 2016/'17, shared a staffing strategy to replace twenty (20) -- up to twenty-seven (27) external resources with internal resources. We outlined a process to do that, either through posting and potentially converting, or hiring and attracting the right level of talent and replacing over time or cross-training over time.
So as we've reported in this year's rate application, we have twenty (20) out of twenty-seven (27). That was as of May, 2018. We have an additional, I would say, two (2) to three (3) more in progress actively right now, within that twenty-seven (27), and we've increased the benefits from a projected 2.4 million to a range of two point-four (2.4) to three point-o (3.0). So yes, I would classify it actions in progress that are successful.
MR. BRAD BUNKO: I'm sorry, is your question pertaining more to the total number of staffing, or is it pertaining to consultant staffing versus FTEs?
MS. KATHLEEN MCCANDLESS: I would say essentially with respect to consulting versus FTEs.
MR. BRAD BUNKO: Okay. There are some

1068

conditions that drive up the number of consultants that we have -- that we have with the Organization, and it's often tied to the number of initiatives that you have -- that your organization is performing. They are usually staffed initiatives that are primarily staffed with consultants. So the more initiatives you have, the higher number of consultant staffing you have.
What we have done over the last few years is taken a very close look at that and said, well, okay, we do need some flexibility to be able to increase staffing for various initiatives, because we don't know when they're going to come, and how large they will be, but at the same time, what are the staff that we will have year in and year out that we find are supporting the baseline of projects and/or operational type activities? And that is where we've identified the twenty-seven (27) consultant conversions that we've previously identified, and are also investigating other potential consultant conversions from consultants to regular FTEs.
MS. KATHLEEN MCCANDLESS: Thank you. The next bullet down -- so second up from the bottom on the right side says internal skills development and training should be a priority.

1069

Can MPI comment on what types of training the IT staff might need?

MR. LAWRENCE LAZARKO: Absolutely. So one (1) of the areas that Gartner's highlighted has related to infrastructure and operations. So again, that's the personal and enterprise computing piece.

As we roll out new technologies, it's important that our staff are trained on them. So a different database technology or operating system technology has different support tools, different administrative tools. And it's, again, very important that we train our staff in these technologies as or before we roll them out. So that would be a -- a good example.

The other is new development languages, new platforms. That's an area that we continue to look at, especially as we talk about something like legacy. We want to make sure we have the right skills, not just for the platforms we have now, but the platforms in the future.

MS. KATHLEEN MCCANDLESS: Thank you. If we could go to page 10. And the graphic in the -- on the right-hand -- or pardon me, left-hand side of the screen shows that MPI's overall staffing level as a percentage of company employees for 2016/'17 is 17

1070

percent, an increase of the prior year at 16.7 percent, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And the peer average there is 13 percent, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: Okay. Now, on the right side of the screen, under observations, we see that Gartner has observed that MPI's staffing level is 33 percent higher than the peers, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And under implications, just down the page, it states that higher staffing levels may be due to business growth, which limits the ability to optimize costs, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: Can you explain the -- the need for higher staffing levels, bearing this in mind?

MR. BRAD BUNKO: I can. While every organization's IT structure is -- is different, we have legacy applications, and legacy applications takes more manpower to both maintain and to make changes to. We have, through some of the prelim -- preliminary feedback on our legacy modernization

1071

assessment, reviewed the potential reductions in IT staffing by adopting newer technology. It was a belief that we've had in the past, and it's been somewhat solidified through this year of assessment.

So it is -- it is dependent upon the actual organization and what it is that you're managing. Because we have that older legacy modernization, we do have higher staffing levels.

MS. KATHLEEN MCCANDLESS: This bullet references business growth, so perhaps you could explain how legacy modernization would play into business growth.

MR. BRAD BUNKO: Well, the business growth com -- compartment of that is -- is the initiatives that we would be doing. And when you have more initiatives, you are hiring more consultants to make the changes. I think if you compare -- and I'm not sure what page it's on -- the amount of initiatives that we have compared to our peers is considerably higher than the run the operation type activities.

So if we were doing probably the same kind of a ratio, you would see that our staffing would be more in line with our peer group.

MS. KATHLEEN MCCANDLESS: Thank you.

1072

The last bullet on the right-hand side, under implications, states that the move to third-party services comes with additional requirements for oversight and operational processes staff in managing the vendor. Mr. Bunko, this may be a question for you to answer.

Could you please explain or elaborate on the implications of -- of this bullet?

MR. BRAD BUNKO: Sure. So it's very interesting. Gartner is -- is -- when they measure, you know, your cost allocation for -- for IT at a corporation, they can't just leave it at, here's all the dollars and cents. They really have to look at what the service delivery capabilities are that you're providing to the organization, because there is a balance between the two (2).

As I mentioned earlier, a more mature service delivery typically costs more, right? And so in this -- what this bullet point is -- is referring to is that when you do have to outsource some -- some service that you're getting so that you can get a higher level of maturity with it, it will increase your maturity, but it will also increase some staffing that you have internally to manage that outside service.

1073

So it is a combination of those two (2) things, increasing maturity will help -- will increase your staff, in some instances -- actually, quite a few instances, and yeah, and -- and that's -- that's the reason for that.

But I'd also note that our IT spend as a percentage of Op Ex, we have been able to maintain it at a very reasonable level, and actually have shown a very steady decrease of the last five (5) years, again, a difficult thing to do while you're increasing your maturity.

MS. KATHLEEN MCCANDLESS: Thank you. Could we go to page 7. On the right side of the screen, there's a table at the bottom with MPI's maturity score from 2010 to 2011 through to 2016/'17 as compared to peers, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And we see from 2015/'16 to 2016/'17, that the overall maturity score has improved from 3.42 to 3.52, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And this is a composite score of seven (7) key criteria, which I believe are found at page 16?

MR. LAWRENCE LAZARKO: Yes.

1074

MS. KATHLEEN MCCANDLESS: And so, going from -- sorry, back to page 16, Kristen, thank you.

So, going from right to left, we see the change from 2011/'12 through to 2016/'17, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: With respect to business process management, which is the fourth line down in the table, we see that as of 2016/'17 MPI's score is 1.6 compared to the peer average of 1.76, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And to the extent you're able to comment, Mr. Lazarko, what do you know that's being measured when it comes to business process management?

MR. LAWRENCE LAZARKO: Going to move down to section 18 -- or page 18, section 1, which is Gartner's feedback on business process management.

One moment please.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: Sorry, I'll need a minute to find that in detail.

1075

(BRIEF PAUSE)

MR. STEVE SCARFONE: I'm watching them navigate the screens, we're almost there, Ms. McCandless.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: So the key -- key theme is how well does your IT organization understand the Company's critical business processes.

Key things Gartner considers in this, there are six (6) dimensions, culture, process -- sorry, organization and culture, process competencies, methodologies, technology and architecture, measures and metrics and governance.

These six (6) factors are scored based upon MPI responses to questions, Gartner reviews and compares those to industry averages, makes recommendations based upon where MPI could grow further or is below an industry peer.

So Gartner may make recommendations in cases where MPI is ahead of a peer to grow and improve. They don't just make recommendations related to things we are deficient or below.

1076

MS. KATHLEEN MCCANDLESS: And just to clarify for the record, Mr. Lazarko, the source of the information that you just provided?

MR. LAWRENCE LAZARKO: There's a -- so what we review on an annual basis is the executive summary.

Gartner has a supporting document to that which has additional details, including things like recommendations that flow up into the executive summary.

MS. KATHLEEN MCCANDLESS: Is that something that's on the record?

MR. LAWRENCE LAZARKO: It's not.

MS. KATHLEEN MCCANDLESS: Pardon me?

MR. LAWRENCE LAZARKO: It is not something we traditionally file.

MS. KATHLEEN MCCANDLESS: I see. Okay. Are there confidentiality concerns with it, or is it just...

MR. LAWRENCE LAZARKO: I would say there is, yes.

MR. CHARLES HENRY: I'd say that the methodology is Gartner's IP, so we would not want it on the public record, but I'm sure confidentially we would be okay with that.

1077

MS. KATHLEEN MCCANDLESS: Thank you. Now, with respect to page 7. So back to the scoring.

Pardon me, page 16. So back to business process management. We've got the insurance average of 1.76 and MPI score of 1.6, which has remained static since 2014/'15.

Mr. Lazarko, are you able to provide any information as to why that score has remained constant since 2014/'15?

If -- I'm not asking you to provide information that's not available, that you don't have yourself, if it's --

MR. LAWRENCE LAZARKO: No, the hesitation was we're preparing a report for review next year. It's still in progress. I was thinking through what exactly I could share about our interim findings in terms of -- I can tell you what we're doing next and how it would potentially improve things. But that's still draft in progress.

In terms of why we haven't moved on this area, I -- I would say we have had other priorities as shared in some of our responses to IRs. We focused on enterprise architecture extensively this year. It's a very important capability for both our IT strategy and legacy modernization. Business

1078

process maturity is also very important, but when we had to choose earlier in the year, we chose enterprise architecture to focus our efforts on.

MS. KATHLEEN MCCANDLESS: And then if we go down to enterprise architect -- architecture, we see that MPI is higher than peers at 3.18 as compared to insurance average of 2.53. But again, enterprise architect -- architecture has remained constant since 2014/'15.

And so again, my question would be the reason why it has remained constant for three (3) fiscal years?

MR. BRAD BUNKO: Again, I would say given all the other movements in -- in various things that we're trying to make, that was one (1) that did not come to the top as to high-priority.

We are 10 percent off of our insurance peer average, we're not that far off of what the mainstream peers are.

MS. KATHLEEN MCCANDLESS: Thank you. Can we go to page 17 now. This is the IT score, as you see on the right-hand side of the top of the page. This is the new scoring tool that we discussed?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And with

1079

respect to enterprise architecture, and again we see now that the insurance average is 3.0 as compared to MPI at 2.3 percent, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: So I -- I take it then that enterprise architecture scored something different in the IT score than it did in the previous CIO scorecard?

MR. LAWRENCE LAZARKO: That's right. So, when they transitioned from the CIO scorecard to the IT scorecard, Gartner focused on some different measures and metrics, things have changed significantly. Our -- specifically governance and metrics related to enterprise architecture.

So these are areas that are not fully matured MPI, and thus we received lower scores, and thus in the new scorecard it was a lower score than we'd seen previously.

MR. BRAD BUNKO: I think in summary, while the name has remained the same, the criteria for evaluating has changed.

MS. KATHLEEN MCCANDLESS: And can MPI explain how it plans to move forward on improving this score then?

MR. BRAD BUNKO: As part of our IT

1080

strategy, we actively used enterprise architecture concepts as part of our legacy modernization assessment.

We've actively leveraged enterprise architecture concepts as well, and it's an area that we continue to invest in operationally within the Corporation as we progress through the legacy modernization assessment, as we create our next version of the IT strategy next year.

MS. KATHLEEN MCCANDLESS: Thank you. And then with respect to applications organization, we see that MPI is on par with peers at 2.4. Yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And if we go back up to page 16 in the previous CIO scorecard, we see with respect to applications organization, that MPI was higher than peers so MPI score was 3.17, compared to the insurance average of 2.76, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: So I take it then that what goes into scoring applications organization has now changed from the CIO scorecard to the IT score, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And are you

able to provide any information as to how this differs?

MR. LAWRENCE LAZARKO: It would take me another minute or two (2), if that's all right.

THE CHAIRPERSON: I don't have a problem with the minute or two, (2) I'm just a little concerned about proprietary information coming out.

So I guess the -- you know, we'd like to have the answer. You need to look at it and see if there's proprietary information. If there is, we'll deal with it in CSI. If there's not, we'd be happy to hear from you.

MR. LAWRENCE LAZARKO: Absolutely.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: I would recommend that we review this one through the confidential portion.

MS. KATHLEEN MCCANDLESS: Thank you. Mr. Lazarko, are you able to provide any information as to how MPI intends to move forward on improving this score?

So if we go back to page 17 for applications organization.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: MPI has introduced a program called Application Portfolio Management. We've submitted a copy of the program earlier this year. That is a way that measures the health of applications using both business and IT measures and metrics.

So we're going to continue to evolve that program to identify the top applications that require remediation and prioritize those for business cases.

So that is a -- a discipline that we've been using for about a year and a half (1 1/2) to two (2) years, and there are some new ways we can involve that further, better including risks, security, for instance, and including that in business cases such as those that you see for the technology risk management program, application related projects.

MS. KATHLEEN MCCANDLESS: Thank you. Kristen, can we please go to BMK Appendix 1. And this appendix includes a listing of previous recommendations made by Gartner and MPI's status update.

And I understand that with the

transition to the new assessment tool from the CIO dashboard to the IT score, that changes have been made to the status update. Is that right?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: So if we look to the bullets here at lines 18 to 23, the changes are identified there, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And so if we go to page 5 of the update, recommendations 3.02 through to 3.07 start here.

And we see that they have now been consolidated into a recommendation 5.02, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And if we jump to page 9, that's where 5.02 is contained.

So on the left-hand side of the screen, we see the description of recommendation 5.02, which includes to continue to improve the enterprise architecture maturity, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And the second paragraph states that the recommendation or the description is to establish reporting for the enterprise architecture program using metrics to track

value delivered to the organization and business outcomes, as well as metrics to track continuous improvement of the EA practice itself, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And I understand that this recommendation is ongoing?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And it's tied to the current evaluation of the legacy modernization program?

MR. LAWRENCE LAZARKO: The recommendation itself is tied to general process maturity related to enterprise architecture. Our response is tied to legacy and strategic plan.

These are two (2) areas that we plan to use enterprise architecture fully and further.

MS. KATHLEEN MCCANDLESS: And we have the current status as reported at the time of filing of the GRA.

Is there a status update to this recommendation?

MR. LAWRENCE LAZARKO: It continues to be a work in progress in the area of focus, and as we've shared, we will have a great update for this one in GRA 2020/'22 -- or sorry, 2020.

1085

MS. KATHLEEN MCCANDLESS: Thank you.
MR. BRAD BUNKO: I can provide some feedback.
What we've seen is we've gone through the legacy modernization assessment is that it's required an enormous amount of individuals from the organization, quite a -- quite across the organization because we are impacting so many functionalities within the organization.
So we've had a lot of the directors involved in steering committees with both of the assessment vendors. It has been very well participated and very engaging from the employees. And that's an example of enterprise architecture in that they are coming together to describe their needs and to look towards a solution that is going to -- I don't want to say satisfy everybody, but will be the best solution for the Corporation.
So they are not just looking at it from a singular perspective of their own. They get to review everybody else's perspective and get an understanding of what everybody's needs are, and therefore, make a corporate decision as opposed to individual sideload decisions.
MS. KATHLEEN MCCANDLESS: Thank you.

1086

If we could go to page 10, and recommendation or description 5.03. This is to improve IT governance maturity, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: And to summarize the first line, it would be to continue the existing process by matching IT services to business demand and by capturing better metrics to measure the achievement of business outcomes, is that right?
MR. LAWRENCE LAZARKO: That's right.
MS. KATHLEEN MCCANDLESS: And Gartner also indicated that the governance structure needs to be made more explicit and should incorporate multiple levels within the organization that are capable of resolving process and policy discrepancies, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: Now, under current status it's indicated that a further review of the recommendation would occur. Yes?
MR. LAWRENCE LAZARKO: That's correct.
MS. KATHLEEN MCCANDLESS: Has that taken place?
MR. LAWRENCE LAZARKO: It has not. It has not.
MS. KATHLEEN MCCANDLESS: And has the

1087

Corporation determined when that review might occur?
MR. LAWRENCE LAZARKO: I anticipate completion before the end of fiscal.
MS. KATHLEEN MCCANDLESS: Has the Corporation determined a cost -- the cost of complying with this recommendation?
MR. LAWRENCE LAZARKO: Not at this time.
MS. KATHLEEN MCCANDLESS: Is that something that it will cost at some point?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: And prior to the end of fiscal or following?
MR. LAWRENCE LAZARKO: The plan would be prior to the end of fiscal.
MS. KATHLEEN MCCANDLESS: Thank you. If we could go to 5.05 at page 12. This is to improve the IT strategic plan, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: And it makes recommendations on the implement -- implementation of three (3) processes, yes?
MR. LAWRENCE LAZARKO: It does.
MS. KATHLEEN MCCANDLESS: On the right-hand side of the screen, under current status,

1088

it's indicated that the IT strategy and major corporate initiatives address the first and -- first and fourth parts of the further exploration of infrastructure operations, including operational plans linked to corporate strategy will be reviewed further in 2018/'19, with an update provided in 2020, GRA, yes?
MR. LAWRENCE LAZARKO: Yes.
MS. KATHLEEN MCCANDLESS: So what aspects of this recommendation are currently being explored then?
MR. LAWRENCE LAZARKO: The focus of this is talk about infrastructure and operations. As I shared earlier, this is the personal and enterprise computing and it's really looking at specific plans and activities related to the corporate business plan, the IT strategic plan. This would be another level of detail.
So we finished our IT strategic plan earlier in the year. This recommendation focuses on the creation of another level of planning.
The further exploration is to understand that -- the gaps between the current level of planning we do as part of our budgeting process and what Gartner recommends and look at the potential

1089

additional time, effort, cost associated with that and determine if there is additional value.

So there is work done as part of the budgeting process, but not to the level Gartner has recommended in this particular update, and that's what we want to explore further.

MS. KATHLEEN MCCANDLESS: Thank you. At Recommendation 5.07, this is to improve IT financial management disciplines and key performance indicators, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And under current status, it was indicated at the time of filing that MPI is reviewing to determine potential benefits associated with these changes and that review would be in 2018/'19, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And what is the current status of this recommendation?

MR. LAWRENCE LAZARKO: Outstanding. We will have an update for this by the end of fiscal.

MS. KATHLEEN MCCANDLESS: So, has MPI developed any key performance indicators at this time?

MR. LAWRENCE LAZARKO: The focus of this one is less about the key performance indicators

1090

and understanding how the costs of the IT organization are allocated. As we've seen in the Gartner benchmarking scorecard, there's a particular way that we've allocated those costs in order to facilitate benchmarking.

This recommendation indicates some additional ways or different ways of doing that. So that's what we want to explore further is -- is there an alternate way or a complementary way to what Gartner shared with us that we should do. The additional PPIs and metrics are a level above and beyond that.

Some of -- yeah.

MS. KATHLEEN MCCANDLESS: So at the very bottom on the left side of the page, there is a recommendation to develop KPIs for financial management of business applications, et cetera.

So, I take it from your response that MPI does not intend to develop KPIs or...

MR. LAWRENCE LAZARKO: To clarify. So, earlier this year MPI undertook a cost exercise to understand the key applications in its infrastructure -- sorry, its environment for the purposes of supporting the legacy modernization assessment activity.

1091

These -- this was a significant and positive step forward for MPI. The crux of this recommendation is expanding further still. So looking at the work that we did around cost modeling and saying, Are there additional ways to measure that, are there additional KPIs that could be put in place? We still need to do additional work on this one.

MR. BRAD BUNKO: If I could go a little further on that.

So, prior to us getting too far into the legacy modernization assessment, we did an in-depth review of all of our applications and what the ongoing cost of ownership of those applications were.

This is something that will feed into our financial management of these applications. It was also a baseline for going forward if -- if we are looking at replacing some of these applications, what is the true ROI on doing so.

MS. KATHLEEN MCCANDLESS: Next, with respect to 5.09, at page 16. This recommendation is to improve vendor management capabilities, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And we see under current status that in July 2017/'18 MPI consolidated IT vendor management into one (1) team,

1092

yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And who was the team comprised of?

MR. LAWRENCE LAZARKO: We'd previously created a team called IT managed services. This team was put in place to manage the IBM agreement when that first came into being.

So when we're talking about the scorecard or the Gartner scorecard earlier, where they recommended additional resources to support third-party agreements, this is an example of how we did it.

There was an -- a separate vendor management group that supported a number of different business-focused contracts, and we combined these two (2) groups into one (1) unit that managed all IT strategic contacts -- sorry, contracts going forward.

MS. KATHLEEN MCCANDLESS: One (1) of the recommendations is to put in place reporting capabilities for spending management. It's the very bottom on the left side of the page, the screen.

Has MPI implemented any of the vendor management performance metrics?

MR. LAWRENCE LAZARKO: So as part of many of our key agreements we have service-level

1093

agreements and our vendor management team will be responsible to work with our vendors to ensure these standards are met.

These could be levels of service, these could be reviews of levels of spend. There are different metrics by different contracts that are managed by that group.

MS. KATHLEEN MCCANDLESS: So I -- have they been implemented or are they in the planning stages at this time?

MR. LAWRENCE LAZARKO: It varies by contract. So there are some contracts that have very robust sets of measures, there are others that we're in the process of developing or working with our partners to create.

So it varies. That's why we want to focus on a strategy that talks about our approach to each one (1) and what timeframe these things can be reasonably completed in.

MR. BRAD BUNKO: Yes, we are in the process of standardization.

As -- as Lawrence indicated, we had one (1) department managing one (1) of our largest vendors and they were doing a great job. We wanted to be able to extrapolate from that and go across the

1094

organization for other strategic partners, but that requires a little bit of extra effort, certainly from a personnel perspective, and the standardization.

So, it is in the throes of it and we have not gone to the end of that yet.

MS. KATHLEEN MCCANDLESS: Thank you. And does MPI have particular areas on which it will be focusing that need attention with respect to vendor management?

MR. LAWRENCE LAZARKO: The key areas will be continual growth and development of the team. We have some new people with that group and we want to ensure they're exposed to both industry best practices, as well as practical hands-on training.

And we also want to continue to mature our partnerships and governance, specifically around key meetings and the outcomes of those meetings, key deliverables and the outcomes of those deliverables and ensure that's clear and consistent for our major agreements.

MS. KATHLEEN MCCANDLESS: Thank you. This is the last recommendation I will ask you about. It's 5.12 at page 18.

The recommendation on the left side of the screen is to explore the utilization of cloud

1095

services, yes?

MR. LAWRENCE LAZARKO: Yes.

MS. KATHLEEN MCCANDLESS: And on the right side of the screen, we see that the recommendation was reported as complete in the GRA 2018, but needs to be re-evaluated and 2018/'19 fiscal, yes.

MR. LAWRENCE LAZARKO: That's correct.

MS. KATHLEEN MCCANDLESS: And can you explain why the recommendation needs to be re-evaluated?

MR. LAWRENCE LAZARKO: As we explore our legacy modernization assessment, we may have one (1) or more new strategic partners that are cloud-based, and depending on the outcome of that assessment, we need to look at our -- our long-term strategy.

Our previous strategy was assessed when we had limited cloud offerings, so -- and also the markets change. This is an area that's rapidly evolving and we want to make sure that we understand the latest trends and we are leveraging -- leveraging them to the fullest.

MS. KATHLEEN MCCANDLESS: Does MPI have an -- a sense of what applications it might be

1096

using in the cloud?

MR. LAWRENCE LAZARKO: One moment.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: So we have ideas on different types of applications we can look at, but we can't go through the specifics due to our competitive process related to the upcoming RFP.

MS. KATHLEEN MCCANDLESS: Thank you. Are you able to advise as to what extent MPI currently uses cloud services?

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: There are three (3) applications that primarily come to mind. Mitchell, as we've talked about previously, an address validation service and -- a address validation service and a learning management platform.

MR. JOHN REMILLARD: If I could add. We also have a Microsoft portfolio project management service that was recently introduced in the last twelve (12) months.

MS. KATHLEEN MCCANDLESS: Thank you.

And does MPI plan to start investigating other cloud services this coming year or within -- within this fiscal year?

MR. LAWRENCE LAZARKO: Yeah.

MR. JOHN REMILLARD: I'll start the response.

Outside of legacy assessment and where we may go with that, there are no other in-flight initiatives that are pursuing a cloud option at this time.

MS. KATHLEEN MCCANDLESS: Thank you. The remainder of my questions are with respect to commercially sensitive information. So I appreciate that I've gone a while without a break. So I apologize.

THE CHAIRPERSON: We're going to take twenty (20) minutes now.

The reporter is going to switch the tapes. For those who are watching the live streaming that will end the session for today. I expect that the rest of today's session will be on commercially sensitive information.

MR. STEVE SCARFONE: Mr. Chairperson, there is one (1) response that Mr. Remillard can provide on the public record, and that was in response

to Ms. McCandless's question concerning the breakdown of the termination of CCRS.

MR. JOHN REMILLARD: So I'm not trying to test your patience with this response.

Ultimately, when you asked about the 10.6, specifically.

MS. KATHLEEN MCCANDLESS: 10.2, I believe, yes.

MR. JOHN REMILLARD: My apologies. The 10-ish of CCRS, are you looking for the definitive of that number or the overall termination of CCRS overall?

The reason being is that we -- when we evaluated the termination, it was on the basically cost to date. So that assessment, we didn't look at the micro cost, we could take -- certainly take that away and ultimately provide that, or we could show the breakdown of 15.6 when we get into the confidential matters.

MS. KATHLEEN MCCANDLESS: We would be looking for the full cost determination.

MR. JOHN REMILLARD: Okay, so including the historical, the other five (5) that was written up?

MS. KATHLEEN MCCANDLESS: Yes.

MR. JOHN REMILLARD: Is that fair? Then we have that.

MS. KATHLEEN MCCANDLESS: So we'll -- you'll provide it by way of?

MR. JOHN REMILLARD: It would be confidential.

MS. KATHLEEN MCCANDLESS: It would be? Okay, thank you.

MR. JOHN REMILLARD: Yes.

THE CHAIRPERSON: Okay, we will -- sorry, further to that, are we going to deal with that in CSI now?

MS. KATHLEEN MCCANDLESS: Yes.

THE CHAIRPERSON: Okay, good. So we will break for twenty (20) minutes and then we'll be back into commercially sensitive information.

I'm going to check and make sure that the live stream is terminated. Thank you. I will be -- 10 after.

--- Upon recessing at 2:48 p.m.

(CSI PORTION UNDER SEPARATE COVER)

--- Upon commencing at 9:00 a.m.

THE CHAIRPERSON: Good morning, everyone. Ms. McCandless...?

MS. KATHLEEN MCCANDLESS: Good morning, Mr. Chair and members of the panel. Today we will continue the cross-examination of the IT value management and physical damage re-engineering panel, and that should be complete today.

MR. STEVE SCARFONE: Just before we begin, Mr. Chair, MPIC has some exhibits it would like to read into the record that have been previously filed.

MPIC has on Friday filed to Exhibit Number 26 which was PreAsk Number 1, circulated in draft form. The final version of PreAsk 1 we understand will be circulated and filed by the end of today which will include the pro formas and the DCAT modelling.

--- EXHIBIT NO. MPI-26: Final version of PreAsk 1.

MR. STEVE SCARFONE: MPI Exhibit Number 27 was the information technology and physical damage re-engineering presentation that was made to

the Board yesterday.

--- EXHIBIT NO. MPI-27: Information technology and physical damage re-engineering presentation

MR. STEVE SCARFONE: Exhibit Number 28, was Mr. Chuck Henry's presentation on physical damage re-engineering from the Gartner Group.

--- EXHIBIT NO. MPI-28: Mr. Chuck Henry's presentation on physical damage re-engineering from the Gartner Group

MR. STEVE SCARFONE: Exhibit Number 29, yesterday filed Undertaking Number 3 was responded to.

--- EXHIBIT NO. MPI-29: Undertaking Number 3 response.

MR. STEVE SCARFONE: And Exhibit Number 30, Undertaking Number 4 was responded to by MPIC.

--- EXHIBIT NO. MPI-30: Undertaking Number 4 response.

THE CHAIRPERSON: Thank you. Mr. Williams...?

RESUMED:

MPI WITNESS PANEL 4 - IT/PHYSICAL DAMAGE RE-ENGINEERING PROJECT VALUE MANAGEMENT PANEL

BEN GRAHAM, Previously Sworn
CURTIS WENNBERG, Previously Sworn
BRAD BUNKO, Previously Sworn
LAWRENCE LAZARKO, Previously Sworn
JOHN REMILLARD, Previously Sworn
CHARLES HENRY, Previously Sworn

CONTINUED CROSS-EXAMINATION BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Good morning, members of the panel. Just by way of outline, there are a couple of questions for Mr. Graham that might properly have been asked last week, but by agreement with Manitoba Public Insurance we -- we moved them to -- to this part of the hearing.

So, I'll start off with those and then I'll move into areas of IT. We have a number of

exhibits, first, is a media release dated June 15th, 2016 regarding framework letters for Crown agencies which we are proposing be mark as CAC Exhibit 18.

--- EXHIBIT NO. CAC-18: Media release dated June 15th, 2016 regarding framework letters for Crown agencies.

DR. BYRON WILLIAMS: Next is the actual mandate letter to Manitoba Public Insurance to Mr. -- to the chair of their board which we're suggested be marked as CAC Exhibit 19.

--- EXHIBIT NO. CAC-19: Actual mandate letter to Manitoba Public Insurance to the chair of their board

DR. BYRON WILLIAMS: Next should be a document dated May 20th, 2014 titled PD Re-engineering Program Charter which we're suggesting be CAC-20.

--- EXHIBIT NO. CAC-20: Document dated May 20th, 2014 titled PD Re-

engineering Program
Charter

DR. BYRON WILLIAMS: PUB-MPI Information Response 1-75 revised September 5, 2014, we're asking be marked as CAC-21.

--- EXHIBIT NO. CAC-21: PUB-MPI Information Response 1-75 revised September 5, 2014

DR. BYRON WILLIAMS: The Board should then have before it a one-page excerpt from the minutes of the January 26th, 2017 Audit Finance and Risk Committee minutes which have -- we would recommend be marked as CAC-22.

--- EXHIBIT NO. CAC-22: One-page excerpt from the minutes of the January 26th, 2017 Audit Finance and Risk Committee minutes

DR. BYRON WILLIAMS: Then should be an excerpt from the MPI board meeting dated February 2nd, 2017, CAC-23.

--- EXHIBIT NO. CAC-23: Excerpt from the MPI board meeting dated February 2nd, 2017

DR. BYRON WILLIAMS: And finally, as CAC-24, excerpts from Board Orders from Order 151/'13 up to Order 130/'17.

--- EXHIBIT NO. CAC-24: Excerpts from Board Orders from Order 151/'13 up to Order 130/'17.

DR. BYRON WILLIAMS: And, Kristen, if you can pull up just from the transcript page 120 towards the bottom line 24.

And, Mr. Graham, a few questions for you. As a provincial Crown Corporation, you'll agree that it's important for Manitoba Public Insurance to be aware of government expectations for it; agreed?

MR. BEN GRAHAM: Yes.

DR. BYRON WILLIAMS: And as part of that role, it is incumbent upon Manitoba Public Insurance to be aware -- aware of government statements as they relate to Manitoba Public Insurance; correct?

MR. BEN GRAHAM: Correct.

DR. BYRON WILLIAMS: And without asking you to elaborate, I'll ask you to confirm that on page 120 and 121 of the transcript, you have set out one (1) of the expectations of government to -- in terms of a reduction in volatility; agreed?

MR. BEN GRAHAM: Correct. If I can clarify that just a little bit. It would be remiss to think that I had not spoken about the volatility and the earnings of MPI over the last few years.

I can guarantee you that there has never been a discussion in relation to rights, what those rights should be and we are very much in compliance with the Crown Corporation Governance and Accountability Act.

DR. BYRON WILLIAMS: And I thank you for that clarification, sir. And on that theme, if we can go to MPI Exhibit 18, and specifically, paragraph 2. We'll just wait for that to come up, sir. I had misspoke, I meant CAC Exhibit 18. Paragraph 2.

And, sir, in the last sentence of that second paragraph you see the express intention of the government to work with the corporations without political interference.

Do you see that reference, sir?

MR. BEN GRAHAM: Yes.

DR. BYRON WILLIAMS: And that's consistent with what you've just indicated to me that you've received no direction from government in terms of rates?

MR. BEN GRAHAM: No, nothing in relation to rates. Remembering that it is the Minister responsible for, so, we obviously are going to discuss the financial outcomes of the Corporation.

DR. BYRON WILLIAMS: And referring you to CAC Exhibit 19, the framework letter sent by Minister Schuler to Mr. VanKoughnet.

MR. BEN GRAHAM: Yep.

DR. BYRON WILLIAMS: And specifically, paragraph 4, you see again in the last sentence the express need for government to find the right balance between performance and respecting the operational independence for Crown corporations.

You see that reference, sir?

MR. BEN GRAHAM: Yes, correct.

DR. BYRON WILLIAMS: And, sir, by your references to government expectations on the transcript, you were in no way suggest -- let me back up.

Speaking of independence, sir, you

1114

recognize the importance of the Public Utilities Board as an independent evidence base forum to test whether rates are just and reasonable?

MR. BEN GRAHAM: Absolutely.

DR. BYRON WILLIAMS: And, sir, by your references to government expectations, you were in no way suggesting that the PUB surrender its independent point of view to -- or subordinate its independent functions?

MR. BEN GRAHAM: No.

DR. BYRON WILLIAMS: Okay. Thank you. Mr. Bunko, was I right in -- well, it doesn't matter whether I was right, did you testify yesterday that in -- you've been in your current role for about four and a half (4 1/2 years), sir?

MR. BRAD BUNKO: Correct.

DR. BYRON WILLIAMS: And so that takes you back to 2015/2014, in that period, sir?

MR. BRAD BUNKO: Yes.

DR. BYRON WILLIAMS: And you've been with Manitoba Public Insurance for about nine (9) years, sir?

MR. BRAD BUNKO: Yes.

DR. BYRON WILLIAMS: And, sir, prior to joining Manitoba Public Insurance as an employee,

1115

did you have any relationship with it as an external consultant?

MR. BRAD BUNKO: No, I did not.

DR. BYRON WILLIAMS: I wonder if we can go to CAC Exhibit 22. And I'm not sure who's best entitled to speak to this or best suited.

Kristen, I wonder -- pull of that quote but then I wonder if you can go to, for a second, to the PUB exhibit from last year -- or it's PUB Information Response 1-2, Appendix 1, Slide 16.

To the MPI panel -- Kristen, yeah, go up just to the top of the page. You see that this is a -- minutes from the Audit, Finance and Risk Committee minutes that were filed as part of last year's hearing?

MR. BRAD BUNKO: Sure, yes.

DR. BYRON WILLIAMS: And in terms of attendance at the audit, finance and risk committee, would it be fair to suggest that it includes committee members as well as members of the Public Utilities Board?

THE CHAIRPERSON: Sorry, Mr. Williams, did you mean the MPI board rather Public Utilities --

DR. BYRON WILLIAMS: I totally misspoke.

1116

THE CHAIRPERSON: I don't remember us ever being there.

DR. BYRON WILLIAMS: It's early, Mr. Chair.

CONTINUED BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: In terms of who attends these minutes, you'll see at this particular one that there were board members present, Mr. Bunko?

MR. BRAD BUNKO: Yes, yes.

DR. BYRON WILLIAMS: As well as representatives from management? Scroll down a little bit, Ms. Schubert.

MR. BRAD BUNKO: Yes.

DR. BYRON WILLIAMS: And now if we can go back to CAC Exhibit 22. Mr. Bunko, you'll see a reference to Mr. Martin Geffen presenting a Gartner strategic assessment, which included advice on security and risk management of IT, along with the risk assessment of strategic initiatives.

Do you see that reference, sir?

MR. BRAD BUNKO: M-hm, yes.

DR. BYRON WILLIAMS: And Mr. Geffen was one (1) of the authors of the Gartner reports on the Physical Damage Re-engineering Project, sir?

1117

MR. BRAD BUNKO: Correct.

DR. BYRON WILLIAMS: And, sir, when we think of the Physical Damage Re-engineering Project, it's clear that it was an important strategic objective and initiative of Manitoba Public Insurance?

MR. BRAD BUNKO: Yes.

DR. BYRON WILLIAMS: And so would it be fair to presume, sir, that Mr. Geffen and as part of his briefing to the audit, finance and risk committee, would have provided a brief -- a briefing in terms of the PDR in January of 2017, sir?

MR. BRAD BUNKO: That would've been one (1) of the components of his presentation. On an annual basis, Martin Geffen as -- as far as a risk service that he provides to the Corporation gives us an overview of the risk position of the majority of our initiative portfolio.

DR. BYRON WILLIAMS: And if we could pull up CAC Exhibit 23, being the excerpt from the Board minutes dated February 2nd, 2017.

And, sir, what you see here is a motion by members of the board to ratify the recommendation of the planning technology committee and directing your attention specifically to the second bullet, to finalize negotiations for coal development agreement

1118

to create a customer claims reporting system; is that fair, sir?
MR. BRAD BUNKO: Correct.
DR. BYRON WILLIAMS: And, sir, are you part of the planning and technology committee?
MR. BRAD BUNKO: I'm not a member, but I do attend the meetings.
DR. BYRON WILLIAMS: And would you have attended meetings of the planning and technology committee in 2017 as a -- or 2016 as it related to the customer claims reporting system?
MR. BRAD BUNKO: I believe I did.
DR. BYRON WILLIAMS: I'm going to turn to CAC Exhibit 20 which is the PD re-engineering program charter filed as part of the 2015 rate application as AI.10.
I'm not sure which MPI witness to -- to refer this to but I want to direct your attention to page 7 at the bottom and towards the top of page 8. So that's perfect, if you can leave optimized adjusting project at the top of the page, Kristen, that's -- that's great. Thank you.
Mr. Bunko, I see your mic's still on so I'm going to ask you -- oh, no, that was okay, I was going to ask you the question. Who should -- or is it

1119

you, Mr. Remillard?
MR. JOHN REMILLARD: Ask the question.
DR. BYRON WILLIAMS: Okay. In the 2014 program charter, I'll suggest that an important element of the charter is -- and the conception of PDR is it then stood was an optimized adjusting project; agreed?
MR. JOHN REMILLARD: Correct.
DR. BYRON WILLIAMS: And when we look at this dialogue relating to the optimized adjusting project, an important thing to understand, I'll suggest to you, is that on the bodily injury claim side of the business Manitoba Public Insurance as part of the BI3 initiative was using a product from FINEOS, F-I-N-E-O-S for the record.
MR. JOHN REMILLARD: That is correct.
DR. BYRON WILLIAMS: And what this -- MPI had also undertook a -- a fit assessment with FINEOS to determine it's fit both for a first notice of loss application, as well as replacement of the C-A-R-S, CARS, legacy system replacement; agreed?
MR. JOHN REMILLARD: At that time, that's correct.
DR. BYRON WILLIAMS: And directing your attention to the bottom of that paragraph, the --

1120

the hope of the Corporation, at that point in time, with that FINEOS would provide the Corporation with a common platform both for bodily injury and physical damage claims; agreed?
MR. JOHN REMILLARD: Correct.
DR. BYRON WILLIAMS: And at that point in time, FINEOS was also hoped to be a -- a good fit as a replacement for the CARS legacy system; agreed?
MR. JOHN REMILLARD: At that time, correct.
DR. BYRON WILLIAMS: And if we can pull up CAC Exhibit 21 being the ex -- the response to PUB-MPI-175 from the 2015 General Rate Application. And the second in page towards the bottom.
Mr. Remillard, you'll see that the intent at this early date was to provide a -- a breakdown of the project budget and forecast for the Physical Damage Re-engineering Project; agreed?
MR. JOHN REMILLARD: Agreed.
DR. BYRON WILLIAMS: And if we look to the bottom under "total project costs" we'll see a seven (7) year estimate in the range of $65 million, sir?
MR. JOHN REMILLARD: Correct.
DR. BYRON WILLIAMS: And if we look to

1121

the fourth (4th) line down from the top under Initiative, sir, you'll see reference to optimized adjusting, agreed?
MR. JOHN REMILLARD: Yes, I see it.
DR. BYRON WILLIAMS: And that's what we were just speaking of in terms of the intent to use it for first notification of loss, as well as the CARS legacy replacement, sir?
MR. JOHN REMILLARD: Yes.
DR. BYRON WILLIAMS: And if we go out to the extreme right we'll see that the estimate for -- for optimized adjusting at that point in time was around $32.6 million, sir?
MR. JOHN REMILLARD: Correct.
DR. BYRON WILLIAMS: Almost half of the total project cost?
MR. JOHN REMILLARD: Agreed.
DR. BYRON WILLIAMS: Mr. Remillard, if I could ask you to turn to MPI or the Public Utility -- sorry, let me back up. CAC Exhibit 24, tab 2, page 23.
And towards the bottom of the page that last paragraph and about five (5) or six (6) lines down, Mr. Remillard, you see the -- you'll agree that the Public Utilities Board was reporting back in 2014

1122

that Manitoba Public Insurance was expecting to realize 13 million in annual savings as a result of the PDR project to be offset by about 5 million in additional software licensing and other costs, correct?

MR. JOHN REMILLARD: Correct.

DR. BYRON WILLIAMS: And if we flip to page 33 of that decision, sir, towards the last two (2) paragraphs.

You'll see a reference, sir, in the second last paragraph to the Public Utilities Board in Order 151/'13 directing MPI a year previously to provide a five (5) year strategic plan and cost-benefit analysis for all IT -- IT projects having cost implications for Basic. Do you see that, sir?

MR. JOHN REMILLARD: I do.

DR. BYRON WILLIAMS: And just above that you'll see that the Public Utilities Board observing that MPI did not do so?

MR. JOHN REMILLARD: Agreed.

DR. BYRON WILLIAMS: And is that consistent with your recollection of the time, sir, subject to check?

MR. JOHN REMILLARD: Yes, subject to check.

1123

DR. BYRON WILLIAMS: And directing your attention, sir, to the second bullet on the last paragraph you see the Board ordering in 2014 MPI to file with regard to the PUB physical damage re-engineering or PDR project an updated estimate of projected costs and benefits associated with the project, sir?

MR. JOHN REMILLARD: Confirmed.

DR. BYRON WILLIAMS: I'd like to take you, Mr. Remillard, to tab 3 of this same Exhibit being Exhibit 24, slide -- or page 36 -- actually just page 37 at the top.

And again, sir, at -- at -- at -- on this page being an excerpt from 2015, you see the Board expressing concerns with the delay in implementing PDR, as well as the risks associated with the project, sir?

MR. JOHN REMILLARD: Yes.

DR. BYRON WILLIAMS: And it ordering MPI to file an independent assessment on the development and rollout of the PDR project, sir?

MR. JOHN REMILLARD: Yes.

DR. BYRON WILLIAMS: And that assessment was it to include the cost of the project and anticipated savings, as well, sir? Agreed.

1124

MR. JOHN REMILLARD: Agreed.

DR. BYRON WILLIAMS: Kristen, Ms. Schubert, if I could ask you to pull up PUB-MPI-2–25, figure 1, which is on page 2 of that Information Response.

Mr. Remillard, you'll agree that this figure sets out details of expenditures for certain impaired initiatives of Manitoba Public Insurance?

MR. JOHN REMILLARD: Confirmed.

DR. BYRON WILLIAMS: And if we can go down a bit farther on the page, Kristen, to the -- line 27 through 31 relating to the customer claims reporting system.

So, Mr. Remillard would it be fair to say that the expenditures set out in -- with regard to the '16/'17 year on customer claims reporting system or CCRS were in the range of $3.4 million, sir? 3. -- 3.385?

MR. JOHN REMILLARD: Oh yes. Thank you. Yes.

DR. BYRON WILLIAMS: And the expenditures in '17/'18 were in the range of $5 million, sir?

MR. JOHN REMILLARD: Yes.

1125

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Mr. Bunko, would you have read the commentary of the Public Utilities Board relating to information technology as set out in Order 128/'15 back in 2015, sir?

MR. BRAD BUNKO: I could say I would've, yes. I read each of the Orders as they come out.

DR. BYRON WILLIAMS: And, sir, would it be fair to say that before Gartner did its first report, i.e., the 2016 Report, concerns were being expressed about the PDR business case by the Public Utilities Board? Would that how you -- would that be how you interpret the decision, sir?

MR. BRAD BUNKO: I do see you requesting definitely more analysis on the project.

DR. BYRON WILLIAMS: And, sir, did you share those concerns in 2015?

MR. STEVE SCARFONE: Just -- can you -- help them with that question a little bit, Mr. Williams, share those concerns with --

CONTINUED BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: All right, let me

1126

-- let me -- thank you. I appreciate that.
Mr. Bunko, in terms of the feasibility of the business case as it related to PDR globally, as well as indiveg -- individual aspects, did you have concerns with the business case as it stood in 2015?
MR. BRAD BUNKO: In 2015 we didn't have the wholesome business case that we have today. In fact, we did not have that thorough business case that contained all of the ongoing costs until very recently.
DR. BYRON WILLIAMS: So does that mean, sir, you were not concerned with the status of PDR in terms of the feasibility of its business case?
MR. BRAD BUNKO: That's correct.
DR. BYRON WILLIAMS: Mr. Remillard, in terms of --
MR. JOHN REMILLARD: What I would -- same question?
DR. BYRON WILLIAMS: Yes.
MR. JOHN REMILLARD: Ultimately, as Mr. Bunko, stated our business case at that time was focused on the benefit stream and the project costs. Ultimately, those were the areas of concern and -- and identified through the PUB.
At that time we had confidence that we

1127

would be able to deliver the project within said budget and that we were on track to deliver said benefits of the 13 million annually.
DR. BYRON WILLIAMS: Mr. Henry, I'd like to draw your attention to PUB Exhibit 19 which is the Gartner Report from 2016.
And, sir, I'm aware you had some conversation with My Learned Friend yesterday, so I'll try not to duplicate it --
MR. CHARLES HENRY: Thank you --
DR. BYRON WILLIAMS: -- too much, but I'm making no promises.
But, sir, when Gartner's commissioned to do such a report who is it preparing the report for; is it for MPI management, the MPI Board, the Public Utilities Board? Who does it -- Gartner see it -- it preparing the report for, sir?
MR. CHARLES HENRY: We see MPI management as our customer.
DR. BYRON WILLIAMS: And so, sir, you would not see, in this case, the Public Utilities Board as being the -- the body to whom you were presenting this report?
MR. CHARLES HENRY: We're working with MPI to help them satisfy their business requirements,

1128

so to the extent that this information is useful for the Public Utility Boards, then, yes, but MPI's the one who contracts with us, who pays our bills, who gives us our statement of work. So MPI's our customer.
MR. BRAD BUNKO: I -- I would like to add, the engagements that we have with Gartner and included in the statement of work is the specific Board Order that is produced by the PUB.
MR. CHARLES HENRY: Yeah, that -- that's correct.
DR. BYRON WILLIAMS: Okay.
MR. CHARLES HENRY: And you'll see that in the cover of my report.
DR. BYRON WILLIAMS: Now I want to direct your attention to -- in the -- page 2. Kristen, this is the PDF page 4 under Projected Program Schedule.
And, sir, in 2016 Gartner is characterizing progress on the progra -- program being the PDR program is steady but slow due to a number of changes in direction regarding the definition of the program and due to a number of shifts in the overall delivery structures, sir?
MR. CHARLES HENRY: That's correct.

1129

DR. BYRON WILLIAMS: And turning to page 21 which is probably PDF page 23, Kristen.
On the third bullet at the top of the page, Mr. Henry, you see Gartner expressing, I'll suggest to you, some -- articulating that there are some issues or there may be some issues regarding Mitchell's ability to develop and deploy the FNOL or first notification of loss product meeting MPI's requirements, sir?
MR. CHARLES HENRY: That's correct.
DR. BYRON WILLIAMS: And in the first full paragraph under those bullets you were advising Manitoba Public Insurance that one (1) of the key risks with the pro -- project was the ability of Mitchell's to deliver the expected outcomes of the FNOL project, sir?
MR. CHARLES HENRY: Yes, so Mitchell needs to build a product that would both meet MPI's requirements, but also be hopefully generally available to the marketplace so they had pressure on them to develop a product that would be extensible to the marketplace.
DR. BYRON WILLIAMS: And just to direct your attention to page 22, PDF page 24, at the top under Costs.

1130

Mr. Henry, you heard my earlier discussion with Mr. Bunko about the original desire to use pl -- FINEOS, F-I-N-E-O-S, to re-platform the CARS application, sir?

MR. CHARLES HENRY: I heard that, yes.

DR. BYRON WILLIAMS: And you -- you see that here in -- by 2016 Gartner's reporting that the re-platforming of the CARS application has been rejected, agreed?

MR. CHARLES HENRY: Sorry, I didn't write this report, my colleague did, so -- so, in fact, --

DR. BYRON WILLIAMS: That's not in your personal knowledge, sir?

MR. CHARLES HENRY: Correct.

DR. BYRON WILLIAMS: I want to direct your attention, again under Cost, to the bullets in the middle of the page under Key Risk.

The second bullet you see a description of the FNOL project as being innovative and fairly complex and new to the industry, sir?

MR. CHARLES HENRY: Yes.

DR. BYRON WILLIAMS: And, sir, you can take or reject this analogy, but when in law we use the word "innovative" or "novel argument," that's

1131

often a warning that -- that it's fairly risky.

When -- in your profession, when one uses the word of "innovative" and "new to the industry," what do those words mean?

MR. CHARLES HENRY: Risk is one, opportunity is another, right? So if -- if it's new to the industry then there is an opportunity to make more money, improve customer satisfaction, improve quality of service.

So, "innovative" carries lots of connotations around the ability to better serve clients, as well as a potential connotation of risk.

DR. BYRON WILLIAMS: Sir, on this page, just going down, still staying on the bullets, the fourth bullet you -- you flag a key risk area that there's no budget for ongoing support.

Do you see that, sir?

MR. CHARLES HENRY: Yes.

MR. STEVE SCARFONE: Mr. Williams, I just want to be careful when you're indicating "you." Just to make it clear, you're meaning Gartner, obviously, that Mr. Henry didn't author the report.

DR. BYRON WILLIAMS: And I -- I accept that, Mr. Scarfone. Thank you.

1132

(BRIEF PAUSE)

CONTINUED BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: And ultimately, at page 24, PDF page 26 at the bottom, as you discussed with My Learned Friend yesterday, Gartner projected a positive net -- positive present value of -- in the range of $18 million for this program, sir. Agreed?

MR. CHARLES HENRY: Agreed.

DR. BYRON WILLIAMS: Now, directing your attention to page 27 -- sorry, PDF page 27, page 25, in actuality. And Kristen, down to the fourth bullet.

Sir, you again see a -- a reference to the fact that while there is a budget for one-time expense, there is not an estimate for ongoing support and maintenance costs.

Do you see that reference, sir?

MR. CHARLES HENRY: Yep.

DR. BYRON WILLIAMS: Now, Mr. Henry, you've described Gartner as a research firm?

MR. CHARLES HENRY: Correct.

DR. BYRON WILLIAMS: In your roles with Gartner, would you or -- does Gartner profess

1133

expertise in information technology, business analysis, or the conducting of net present value analysis, sir?

MR. CHARLES HENRY: Yes.

DR. BYRON WILLIAMS: Sir, in -- in your professional view, do you believe a credible net present value analysis can be conducted without ins -- insight into annual operating costs?

MR. CHARLES HENRY: Net present value is a tool to look at a project. There's many tools to look at a project.

So, the NPV of a project could focus on various elements of the project, but yes, to be a fulsome NPV analysis it -- it should include the ongoing operating costs.

DR. BYRON WILLIAMS: And sir, so as we look at the Gartner report in its totality, we have both observations about it, a net present value analysis, as well as warnings that -- that there is not an estimate for ongoing support and maintenance cost underlaying that analysis, would that be fair?

MR. CHARLES HENRY: Correct.

DR. BYRON WILLIAMS: Sir -- and if you cannot speak to this I'll -- I understand, but when presenting to the MPI risk and audit committee, what,

1134

if any, duty would Gartner have to flag the absence of operating and maintenance costs from the business analysis, sir?

MR. CHARLES HENRY: Yeah, I wasn't there. I don't know the contents of the report. So I -- I can't comment.

DR. BYRON WILLIAMS: And sir, I'm not speaking about what was actually done, but in that type of role, providing advice to MPI management.

MR. CHARLES HENRY: So I can say, yes, in other circumstances where I have been engaged we would say that there's elements missing of the analysis.

DR. BYRON WILLIAMS: Thank you for that.

MR. CHARLES HENRY: Which, if I might add, MPI is working on rectifying through their value of management process.

DR. BYRON WILLIAMS: Mr. Bunko, you read the Gartner 2016 report, sir?

MR. BRAD BUNKO: Yes, I did.

DR. BYRON WILLIAMS: And sir, after reviewing the Gartner group report from 2016, what, if any, concerns did you have with the viability of the business case for PDR, generally or FNOL specifically?

1135

MR. BRAD BUNKO: The benefit stream continued to look encouraging. The development that we had done on the CCRS project was still progressing. The project, in general, was -- still seemed very viable.

DR. BYRON WILLIAMS: I want to turn to CAC Exhibit 24, tab 4, being an excerpt from PUB Order 162/'16 and specifically to page 35. Towards the top of the page.

Now, Mr. Bunko, you indicated that you read the Public Utility Board Orders when they come in, sir?

MR. BRAD BUNKO: Correct.

DR. BYRON WILLIAMS: I take it -- I suspect that you read the Board's findings a little more closely than mo -- than the arguments of our clients, sir? I'm just teasing you, sir.

But you see here at the top of this page, our client arguing that the Board can have confidence in the cost benefit analysis conducted in support of the PDR because it didn't take into account the cost for maintaining the system.

You see that reference, sir?

MR. BRAD BUNKO: Yes, I see that.

DR. BYRON WILLIAMS: Turning to page

1136

37 of that same decision, Mr. Bunko, in the second paragraph there, you would -- you see the Board expressing concerns with the lack of business cases in the IT area, sir?

MR. BRAD BUNKO: Yes.

DR. BYRON WILLIAMS: And at the top of that page you also saying -- see the Board expressing its understanding that the scope of the PDR has changed, yet there's no -- no change in the overall budget, sir? Do you see that reference?

MR. BRAD BUNKO: Yes.

DR. BYRON WILLIAMS: And Mr. Bunko, from your perspective the findings of the -- sorry, not the findings but the observations of the Board did not cause you to question the viability of the PDR business plan case, generally?

MR. BRAD BUNKO: Again, the -- the benefit stream still looked very positive, which was the -- culturally the focus at MPI.

The -- the need for improved business cases I believe had started to be evaluated and it was probably the early stages and us maturing business case methodology.

And pertaining to projects that were not continuing on, that had happened a couple times

1137

with the long duration of a project. It needs to be re-evaluated every so often to see what is still feasible, what -- what is still contributing to the overall project and -- and what is not.

DR. BYRON WILLIAMS: Mr. Henry, I wonder if I can take you to PUB Exhibit 20, which is the Gartner report from 2017, and specifically to page 2, which is PDF page 4, under PDR Program Costs.

Sorry, we've got the wrong document here. This is -- I may have misspoke. I'm referring to PUB Exhibit 20, from the 20 -- from the current GRA. Page 2. PDF page 4.

Mr. Chair, if I might step down for a minute, we just need to make sure we're on the correct page.

THE CHAIRPERSON: Certainly.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Mr. Chair and to MPI legal counsel, I may need some clarification. I'm -- I'm seeking to refer to the Gartner report from 20 -- the 26 of May, 2017.

My understanding was that that was referred to in the cross-examination yesterday and ---

1138

MS. KATHLEEN MCCANDLESS: It was Mr. Geffen's presentation.
DR. BYRON WILLIAMS: It was the presentation.
MS. KATHLEEN MCCANDLESS: Yes.
DR. BYRON WILLIAMS: So I -- so I would like to -- to bring forward the actual Gartner report from May 26 of 2017. I guess we'll have to make it an exhibit, sir.
THE CHAIRPERSON: Yes, we will.
DR. BYRON WILLIAMS: And my apologies for the -- the confusion.
THE CHAIRPERSON: Kristen, can you bring it up?
MS. KATHLEEN MCCANDLESS: I believe it's PDR A from the 2018 GRA.

(BRIEF PAUSE)

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: Attachment A? Thank you. And -- and just before we get there, Mr. Bunko, just in terms of clarifying some terminology, then we'll come back to you, Mr. Henry.
When I was speaking to you about FNOL,

1139

you sometimes responded CCRS. And am I correct in suggesting that, in essence, that the program was re-branded to -- to -- to -- from FNOL to customer claims reporting service?
MR. JOHN REMILLARD: That is correct. If you want to go all the way back to the original charter, Mr. Williams, you could refer to it as optimized adjusting, because ultimately everything under that falls under that umbrella.
DR. BYRON WILLIAMS: Okay. And I thank you very much for that clarification.
So if we use the words "optimized adjusting," "FNOL," the acronym or the acronym "CCRS," we are, in essence, referring to the same concept?
MR. BRAD BUNKO: Maybe a little more refinement on CCRS specifically as to what its purpose was. A little more refined than the overall optimized adjusting term.
DR. BYRON WILLIAMS: Thank you. Mr. Henry, and I apologize to the Panel for the confusion, and this would be CAC Exhibit 25.

--- EXHIBIT NO. CAC-25: Gartner report from May 26 of 2017

1140

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: In terms of PD -- PDR program costs, the third paragraph, second line, at this point in time, being 2017, Gartner is expressing a high level of confidence in the projected spending of the program, sir?
MR. CHARLES HENRY: In the spending, correct.
DR. BYRON WILLIAMS: It's also suggesting prior concerns about deferred benefits realization or much reduced, sir?
MR. CHARLES HENRY: Correct.
DR. BYRON WILLIAMS: Going to PD -- to page 14, PDF page 16, under Overall Progress.
You'll see, Mr. -- Mr. Henry, that Gartner is still suggesting that MPI will need to monitor closely the CCRS product, and in particular the ability of Mitchell to develop and deploy this complex and innovative requirement. Agreed?
MR. CHARLES HENRY: Agreed.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: If we can go back to, Mr. Bunko, CAC Exhibit 24, tab 5, page 55 and 56.

1141

Mr. Bunko, I'm just going to give you a couple of seconds to look through that page. And when you're done let me know and then we'll flip -- flip to page 56.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Do you have that, sir? And then to page 20 -- 56. Just the first paragraph, sir.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Sir, you'll agree with me that by this time the Public Utilities Board is expressing a fair bit of concern with the PDR program?
MR. BRAD BUNKO: Yes, I would agree.
DR. BYRON WILLIAMS: And by this time, sir, did you share these concerns?
MR. BRAD BUNKO: I believe the -- part of what the Board's concerns were included the Gartner independent assessment.
DR. BYRON WILLIAMS: So you did not share these concerns, sir?

1142

MR. BRAD BUNKO: With whom?
DR. BYRON WILLIAMS: With the -- the business case for the PDR program? You did -- what I'm asking, sir, my question was imprecisely worded, so I apologize for that.
What was the level of your concern with the feasibility of the PDR business case at this point in time, sir?
MR. BRAD BUNKO: So the business case, as I'd previously mentioned, did not contain all of the operating costs. The business case was more on a value benefits case and that value benefits case continued to be positive, showing a return of $13 million per year.
The other indications as to why projects were being stomped was part of the re-evaluating of what would be beneficial to the project and what would not be beneficial to the project.
So, internally, it was determined that the project needs to continue on to realize the benefits stream that was identified.
DR. BYRON WILLIAMS: Mr. Wennberg, just a couple of questions for you, sir.
In terms of the eighty-one dollar ($81) premium related to the 2017 light vehicle

1143

accreditation agreement, you recall the discussion you had with My Learned Friend yesterday, sir?
MR. CURTIS WENNBERG: Yes.
DR. BYRON WILLIAMS: And without intending to repeat that conversation, sir, it would be fair to say that this type of premium payment is not undertaken by other Crown or private jurisdictions; would that be fair, sir?
MR. CURTIS WENNBERG: That's fair.
DR. BYRON WILLIAMS: And would it also be fair to say, sir, that prior to the March 2017 agreement, MPI did not pay estimating fees to repair shops when the repair shops were, indeed, conducting the repairs?
MR. CURTIS WENNBERG: No, and you could argue that that was also a part of them doing the pilot at that stage.
So we had a -- a number, seventeen (17) shops that were helping us by establishing this program and they were in pilot mode, so we weren't going to pay for them while they were in pilot mode.
And just to clarify that there was a two-year agreement for the eighty-one dollars ($81), the first year nobody got paid the eighty-one dollars ($81) at all, it would only be the second year that

1144

they get paid. And in that way we allow others to establish themselves to get into the program.
DR. BYRON WILLIAMS: Now, going to the value management Appendix 6, slide 15, Mr. Henry, which is a -- I'll suggest to you is a Gartner document.
You're familiar with that document, sir, I'm sure?
MR. CHARLES HENRY: Yes.
DR. BYRON WILLIAMS: And in terms of the reference to the eighty-one dollar ($81) premium, Gartner indicates that the cost was not reported to Gartner until after the 2017 reports, sir?
MR. CHARLES HENRY: That's correct.
DR. BYRON WILLIAMS: Do you know when it was reported, sir?
MR. CHARLES HENRY: I do not.
DR. BYRON WILLIAMS: Mr. Remillard, PUB MPI 1-69(c), on the second page, if we go there, Manitoba Public Insurance indicates that it did not share the repair shop agreement, but that it did share relevant aspects of the agreement, including the direct repair eighty-one dollar ($81) premium, agreed?
MR. JOHN REMILLARD: Agreed.
DR. BYRON WILLIAMS: Sir, do you know

1145

when Manitoba Public Insurance shared the eighty-one dollar ($81 premium information with Gartner Group?
MR. JOHN REMILLARD: My recollection it was part of this year's assessment.
DR. BYRON WILLIAMS: And if you're not able to answer this, Mr. Remillard, I understand, but is there some reason why this information would not have been shared with Gartner earlier?
MR. STEVE SCARFONE: I think the -- the answer is provided in (c), in the document that's on the screen, Mr. Williams.
DR. BYRON WILLIAMS: Well, I'm not sure it is, so Mr. Scarfone let me try this a different way.
MR. STEVE SCARFONE: Okay.

CONTINUED BY DR. BYRON WILLIAMS:
DR. BYRON WILLIAMS: Mr. Remillard, in terms of the assessment of the business case that Gartner Group was undertaking, was it the view of Manitoba Public Insurance that the direct repair eighty-one dollar ($81) premium was not relevant?
MR. CURTIS WENNBERG: I can take that. In some management discussions at that time, the culture and the review of the eighty-one dollar ($81)

1146

premium was that it was a tooling expense, it would be more of an operational expense for repair shops that -- that would be in the direct repair program.

And therefore, it wasn't necessarily related to direct repair. It was going to be just a source of funds that would be used to help those shops that are just going to have to increase their expense on tooling to get prepared for the new cars to come.

Obviously, you see by this point in time, our internal view of this is that it's far too directly tied to direct repair and, therefore, if we are going to be holistic and do these business cases in a way that any multinational would do it, we must assign this to PDR and -- and it must take place.

DR. BYRON WILLIAMS: Thank you for that answer. At benchmark attachment A, slide 17, and Mr. Lazarko, I have sadly neglected you today, sir.

Sir, this slide provides some insight into the -- the new Gartner benchmarking analysis that is going to be under -- undertaken for Manitoba Public Insurance, agreed?

MR. LAWRENCE LAZARKO: Correct.

DR. BYRON WILLIAMS: And one (1) of the elements of this analysis will be an executive view; agreed, sir?

1147

MR. LAWRENCE LAZARKO: That's correct.

DR. BYRON WILLIAMS: And, sir, would it be correct to suggest that the executive view does not provide benchmarks?

And let me -- if that question is imprecise let me try that a little more elegantly.

Would it be correct to suggest that the executive view does not -- not provide a peer comparison or benchmark similar to what we might see for other elements of the new Gartner analysis?

MR. LAWRENCE LAZARKO: That's my understanding, yes.

DR. BYRON WILLIAMS: And, Mr. Lazarko, you recall a conversation with My Learned Friend, PUB counsel, yesterday in terms of the business process management assessment under the previous Gartner assessment tool?

MR. LAWRENCE LAZARKO: Yes, that's correct.

DR. BYRON WILLIAMS: And sir, under the new Gartner tool would it be accurate to say that the business process management will, essentially, be rolled up into the executive view?

It won't be reported separately anywhere, sir?

1148

MR. LAWRENCE LAZARKO: Can you advance to slide 18?

DR. BYRON WILLIAMS: Yes, slide 18.

(BRIEF PAUSE)

MR. LAWRENCE LAZARKO: Based on the statements from Gartner in the first paragraph, I would say it's rolled up into multiple criteria and not specifically the executive view.

DR. BYRON WILLIAMS: Okay, thank you for that, sir, that helps with my understanding.

Mr. Chair, I want to assure you that yesterday at about this time I had about four and a half (4 1/2) hours of cross. We spent a lot of time trying to eliminate duplication with My Learned Friend, and that concludes our questions of this panel, sir.

THE CHAIRPERSON: Thank you.

Does the Board have any questions? No? Okay. I have some questions.

Mr. Graham, when you came on board to MPI and you took a look at the IT system in place, what were your initial thoughts?

MR. BEN GRAHAM: As mentioned on the

1149

first day, I felt that a number of things were a little initiative, a little bit too in-house, hence, my point around the fact that if we were to replace our legacy systems that it should be more off-the-shelf and tested in other jurisdictions before we decide to spend money on it.

THE CHAIRPERSON: We just heard that the business case didn't include operating costs. From your experience was that something you saw as normal, or did you find that surprising?

MR. BEN GRAHAM: I would find that surprising.

THE CHAIRPERSON: Were you surprised that in many instances there were no business cases done on these major projects?

MR. BEN GRAHAM: I -- yes.

THE CHAIRPERSON: Mr. Bunko, I believe in your testimony you talked about how the starting point for IT now is the business objective from the business plan, is that correct?

MR. BRAD BUNKO: That's correct.

THE CHAIRPERSON: What was it before? If the starting point is now, what was your starting point before?

MR. BRAD BUNKO: We lacked a starting

1150

point. That's where the difference came in, I would say, as to where the new technology ideas were being initiated from.

THE CHAIRPERSON: Well, I'm having problems with that.

I can understand where the starting point may not be a document, but there has to be a starting point. Is the starting point a -- a meeting of people, a directive from above? I mean, what's the starting point?

MR. BRAD BUNKO: Okay, the starting point previously then would have been the strategy department.

THE CHAIRPERSON: And at that point who was running the strategy department?

MR. BRAD BUNKO: I'm not sure, I don't recall the individual's name. But he reported to the CIO and eventually became the CEO.

THE CHAIRPERSON: And did you have any input into the IT strategy?

MR. BRAD BUNKO: It was a broader business strategy that they dealt with. When it translated into the IT strategy, I did have input.

THE CHAIRPERSON: You mentioned as well that the IT strategy is updated annually now.

1151

When did it start being updated annually?

MR. BRAD BUNKO: This will be the first -- first year we'll be updating it annually.

THE CHAIRPERSON: Thank you. And I can't remember if this was Mr. Bunko or Mr. Remillard, on the discussion of value management the testimony is there is rigourous review now.

Mr. Remillard, was that you?

MR. JOHN REMILLARD: That's correct, sir.

THE CHAIRPERSON: Since when is there rigorous review? When did this start?

MR. JOHN REMILLARD: This -- this year, sir.

THE CHAIRPERSON: So there were -- you would not view any previous review as a rigourous review prior to this year?

MR. JOHN REMILLARD: Not as thorough or involved, no.

THE CHAIRPERSON: Can we -- Kristen, I don't have the number, but it's the presentation, the MPI presentation from yesterday. Yes. Could you go to page 13?

There was some discussion on this. I'm

1152

interested -- I guess it was Mr. Remillard, corporate culture and tone from top is essential for the integrity of project budgets and post implementation reviews.

I don't know, was it Mr. Bunko or Mr. Remill -- oh.

MR. CURTIS WENNBERG: These are my slides.

THE CHAIRPERSON: Oh. Okay. What did you mean by that, "corporate culture and tone"?

MR. CURTIS WENNBERG: Well, I think what you've heard through some of the testimony here is that the culture was not one where we were looking either internally or externally at transparency in terms of what was happening with these larger projects.

And -- and sometimes we might've changed what was in scope, did things that you would say per Mr. Graham's testimony and mine, you wouldn't see in other multinationals. And the culture is critical to do this.

THE CHAIRPERSON: In your testimony as well you -- you stated that the new structure and governance is better now.

Is that the reason, because you're

1153

starting to look at these items now?

MR. CURTIS WENNBERG: Yes, I think -- I think there would've been an omission if we didn't realize that, at my level, or at Brad's level, back in, let's say, December of 2016, January 2017 one (1) of the late -- biggest issues we had to spend money on was CCRS. And we did take a look. We tried to understand what would be the business case of CCRS before we signed a Mitchell contract.

In -- in doing that, though, as an example, there was no appetite to review that and proceed further in an NPV, and I -- the culture at the time was, we have approval to proceed with PDR as it is and what's an unwritten assumption on top of PDR is that there's roughly a $30 million per year labour rate differential with what MPI pays our repair centre -- or shops here, versus to Saskatchewan.

It was not something that was expected to be on the public record, because we wouldn't want to highlight that difference so that we would be exposed to that in any negotiations.

But I can tell you that -- in this forum is that when we review our pay rates for repair shops across all of Canada, we are near the top, we're third or second in all of Canada, and therefore,

1154

that's probably not a valid assumption that I would put into a business case, and therefore, it's not protection for the overall PD as a project on a whole.

However, from a cultural standpoint that was something that would push down or -- or make people avoid doing any more NPV or specific NPV analysis on things, and that's just the way it was.

THE CHAIRPERSON: I believe that at the outset during your direct testimony there was a comment made that the mistakes were made in the past. I'm not sure if it was Mr. Graham or someone else's.

Is that one of the mistakes?

MR. CURTIS WENNBERG: We both said it.

And was that -- was what a mistake?

THE CHAIRPERSON: The -- on the NPV.

MR. CURTIS WENNBERG: Oh, absolutely.

THE CHAIRPERSON: Mr. Henry, Gartner, in your testimony, Gartner said -- Gartner -- sorry.

In your testimony, you indicated Gartner didn't receive requested details.

MR. CHARLES HENRY: Correct.

THE CHAIRPERSON: You also said that Gartner was not aware of some of the ongoing costs, is that correct?

MR. CHARLES HENRY: That's correct.

1155

THE CHAIRPERSON: Further, you weren't aware of the eighty-one dollar ($81) premium.

MR. CHARLES HENRY: In 2017, that's correct.

THE CHAIRPERSON: And you weren't aware of the pending CCRS decision?

MR. CHARLES HENRY: Not in 2017, no.

THE CHAIRPERSON: If Gartner had been aware of those matters, would it have changed your report?

MR. CHARLES HENRY: The report would have been firmer that more analysis needed to be done on the data to make sure that the project continued to make sense.

As I said in my presentation, IT projects are hard. The vast majority of IT projects don't deliver their expected benefits. So managing to benefits is one of our key best practices. So it's great to see value management in place and continued investments made in it because, you know, the fundamental success of IT projects means managing to benefits, which MPI is beginning to do.

THE CHAIRPERSON: If I could ask MPI, and I don't know -- I don't know if it's Mr. Bunko or Mr. Remillard, why was Gartner not provided that

1156

information? The requested details, ongoing costs, included eighty-one dollar ($81) premium impending CCRS decision. Those are pretty big items.

MR. JOHN REMILLARD: Mr. Chair, as Mr. Bunko and Mr. Wennberg have elaborated, but I'll go into greater detail and -- and reaffirm all -- all aspects of this.

Ultimately, when we looked at our -- our business case for PDR at that time, we were very benefit stream oriented. Right or wrong, that was how we were measuring success.

We did have some of the costs in the background available to us. Ultimately, there was some contractual aspects of the licensing agreements that at that time didn't allow us to -- to share it. We were trying to -- to work on that. Could that have been expedited? Potentially, sir.

But, ultimately, we were working through that. Nonetheless, to provide it from an aspect of performing a financial analysis versus public record are two (2) different things.

With respect to some of the ongoing costs, when I -- when we look at things from a value management perspective, we were not properly forecasting the said expenses or impact to operations.

1157

We were very focused on delivering the project, the benefits that we were trying to deliver, and we were working out the operating expenses as we work -- work through the project versus in advance.

In looking at it from an NPV analysis perspective and what a mature organization would do, that is not properly evaluating an opportunity, and I think that that was, as we've stated, one (1) of the mistakes in assessing the viability of PDR as a whole.

THE CHAIRPERSON: Thank you, Mr. Remillard.

Mr. Bunko, in a different area, you have -- MPI has a few major suppliers, is that correct? IBM and I guess the successor of Hewlett Packard and that, is that correct?

MR. BRAD BUNKO: That's correct.

THE CHAIRPERSON: How do you avoid being hostage to your major suppliers?

MR. BRAD BUNKO: Good prod -- prod -- vendor management, primarily.

THE CHAIRPERSON: In terms of the project management, you've got the split between employees and independent contractors.

Are most of the -- your project managers MPI employees or are most of them independent

1158

-- members of your suppliers?
MR. BRAD BUNKO: Most of our project managers are consultants.
THE CHAIRPERSON: And are you attempting to shift that?
MR. BRAD BUNKO: Yes, we are.
THE CHAIRPERSON: Okay. Do your contracts contain non-solicitation clauses? Can you try and retain people from your contractors?
MR. BRAD BUNKO: Then they do contain non-solicitation clauses.
THE CHAIRPERSON: And that's one (1) of your problems, I take it, in bringing people over to the Company?
MR. BRAD BUNKO: Correct.
THE CHAIRPERSON: The people who actually know the information and know your system, you can't hire?
MR. BRAD BUNKO: Correct. We cannot approach them.
THE CHAIRPERSON: Right. Right, okay. Thank you. Those are my questions. I appreciate -- sorry, is there any redirect?
MR. STEVE SCARFONE: I was just considering that. I don't believe we have any

1159

redirect for the panel members or Mr. Henry, Mr. Chair.
THE CHAIRPERSON: Mr. Henry, thank you very much for coming to Winnipeg.
We're going to adjourn until I believe Friday morning at 9:00 a.m.?
MS. KATHLEEN MCCANDLESS: Yes, Mr. Chair, I was just doing an inventory of outstanding undertakings, so there are a number, it's roughly a dozen or so.
I'm just wondering if MPI has a status update on answering undertakings?
MR. STEVE SCARFONE: I can confirm that the undertakings are in progress. So the -- the undertakings go to a particular business unit and then they are what the Corporation called workflow, so they get -- they go through an approval process by some members of the Corporation.
If I had to commit to a time by the end of tomorrow, Ms. McCandless, I think we can expect to have the majority, if not all of the undertakings circulated and provided to -- to both yourself and Mr. Williams.
THE CHAIRPERSON: So we're not going to be able to close MPI's case until you get the

1160

undertakings. And we're still waiting for the completion of the PreAsk.
MS. KATHLEEN MCCANDLESS: Yes.
THE CHAIRPERSON: Are we doing that on Friday?
MS. KATHLEEN MCCANDLESS: Yes, we had discussions, myself, Mr. Williams and Mr. Scarfone yesterday, and the suggestion is that we do the cleanup cross, cross arising from answers to undertakings, on Friday prior to Dr. Simpson and Ms. Sherry testifying.
THE CHAIRPERSON: Mr. Williams, do you have any idea how long Dr. Simpson and Ms. Sherry will take on Friday in direct?
DR. BYRON WILLIAMS: Their direct will be short. I would anticipate definitely less than an hour, or in the range of an hour at the most.
THE CHAIRPERSON: Okay, well, that's fine then.
Thank you, everyone, we'll adjourn until 9:00 a.m. Friday. Thank you.
MS. KATHLEEN MCCANDLESS: Thank you.

--- Upon adjourning at 10:22 a.m.

MANITOBA PUBLIC UTILITIES BOARD

Re: MANITOBA PUBLIC INSURANCE CORPORATION (MPI)

2019/2020 GENERAL RATE APPLICATION

HEARING

Before Board Panel:

Robert Gabor, Q.C. - Board Chairperson

Irene Hamilton - Board Member

Carol Hainsworth - Board Member

Robert Vandewater - Board Member

HELD AT:

Public Utilities Board

400, 330 Portage Avenue

Winnipeg, Manitoba

October 26, 2018

Pages 1162 to 1333

--- Upon commencing at 10:03 a.m.

THE CHAIRPERSON: Good morning everyone, sorry for the delay. I was trying to ensure that the drilling would not start and we'll see how successful we are. Ms. McCandless...?

MS. KATHLEEN MCCANDLESS: Good morning, Mr. Chair and members of the panel. Just an update on the order of proceedings today.

We will hear from Dr. Wayne Simpson, Andrea Sherry, on behalf of CAC. We had some off-line communications with the parties yesterday late in the day as we were waiting for a number of undertakings to be answered by MPI. Those were answered I believe around 6:00 p.m. last night, but as a consequence, we have moved the panel number 2 of MPI which was the investments, DCAT, RSR, CMP panel to come back first thing on Monday to answer any questions arising from answers to undertakings; following that on Monday we'll hear from Mr. Viola. So, we are proceeding today with Dr. Simpson and Ms. Sherry and that will complete the day.

THE CHAIRPERSON: Thank you. Mr. Scarfone...?

MR. STEVE SCARFONE: Yes, good

morning, Mr. Chair, panel members. Yes, before My Learned Friend begins with the examination-in-chief of his expert witnesses, MPIC has, as Ms. McCandless's indicated, filed a number of undertaking, some of which were sent on Wednesday, a number of which were sent yesterday but we're happy to report that all of the undertakings have now been provided, as I understand it, with the exception of some schedules and supporting documentation for PreAsk 1.

PreAsk 1, Mr. Chair, you will recall, was the update that was requested of MPIC for the various forecasting based on different interest rate forecast methodologies, CEMP, that stuff. I can tell the -- the Board and My Learned Friends that we expect that documentation and those schedules to be provided in -- probably after lunch. So all of that -- all of that work has now been performed. I'm told it's in excess of six hundred (600) pages so that has to be compiled and formatted while we're here and we hope to circulate that after the lunch hour, if that -- if that leaves My Learned Friend enough time to look at it.

And then, lastly, before -- before I turn -- turn it over to My Learned Friend, there are a number of exhibits that we'd like to read into the

record, mainly, the undertakings that have been filed in the past couple of days.

Ms. Schubert tells me we're at Exhibit 31, which was Undertaking Number 1.

--- EXHIBIT NO. MPI-31: Response to Undertaking Number 1

MR. STEVE SCARFONE: Exhibit Number 32, is Undertaking Number 2.

--- EXHIBIT NO. MPI-32: Response to Undertaking Number 2

MR. STEVE SCARFONE: Exhibit 33 was Undertaking Number 15.

--- EXHIBIT NO. MPI-33: Response to Undertaking Number 15

MR. STEVE SCARFONE: Exhibit 34 was a response to Undertaking Number 5.

--- EXHIBIT NO. MPI-34: Response to Undertaking Number 5

MR. STEVE SCARFONE: Exhibit 35 was response to Undertaking Number 7.

--- EXHIBIT NO. MPI-35: Response to Undertaking Number 7

MR. STEVE SCARFONE: Exhibit 36 was response to Undertaking Number 9.

--- EXHIBIT NO. MPI-36: Response to Undertaking Number 9.

MR. STEVE SCARFONE: Exhibit 37 was the response to Undertaking Number 10.

--- EXHIBIT NO. MPI-37: Response to Undertaking Number 10.

MR. STEVE SCARFONE: Exhibit 38 the response to Undertaking Number 11.

--- EXHIBIT NO. MPI-38: Response to Undertaking Number 11.

MR. STEVE SCARFONE: Exhibit 39 was

the response to Undertaking Number 13.

--- EXHIBIT NO. MPI-39: Response to Undertaking Number 13.

MR. STEVE SCARFONE: MPI Exhibit Number 40 was the response to Undertaking Number 18.

--- EXHIBIT NO. MPI-40: Response to Undertaking Number 18.

MR. STEVE SCARFONE: Exhibit MPI-41 was response to Undertaking Number 14.

--- EXHIBIT NO. MPI-41: Response to Undertaking Number 14.

MR. STEVE SCARFONE: Exhibit MPI-42, the response to Undertaking Number 6.

--- EXHIBIT NO. MPI-42: Response to Undertaking Number 6.

MR. STEVE SCARFONE: MPI Exhibit 43, was the response to Undertaking Number 8.

--- EXHIBIT NO. MPI-43: Response to Undertaking Number 8.

MR. STEVE SCARFONE: Exhibit MPI Number 44 was the response to Undertaking Number 12.

--- EXHIBIT NO. MPI-44: Response to Undertaking Number 12.

MR. STEVE SCARFONE: MPI Exhibit 45, the response to Undertaking Number 16.

--- EXHIBIT NO. MPI-45: Response to Undertaking Number 16.

MR. STEVE SCARFONE: And Exhibit MPI-46, was the response to Undertaking Number 17.

--- EXHIBIT NO. MPI-46: Response to Undertaking Number 17.

MR. STEVE SCARFONE: And then, lastly, MPIC would like to mark as Exhibit 47 an excerpt from the Board Order 130/'17 from last year -- last year's GRA, page 29 of that particular Order will be filed as

Exhibit 47.

--- EXHIBIT NO. MPI-47: Excerpt from Board Order 130/'17 from last year's GRA, page 29.

MR. STEVE SCARFONE: And those -- that's all MPIC has at this moment.

THE CHAIRPERSON: If I could ask, Mr. Scarfone, I don't have a problem with almost all your exhibits. Explain Exhibit 47 to me. Is this -- was this referred to in -- in testimony?

MR. STEVE SCARFONE: I do. And I may, perhaps -- so Mr. Guerra will be asking questions of the CAC expert witnesses once they're done their examination-in-chief. I understand it --

THE CHAIRPERSON: So this is in relation to these -- that's why.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: That's fine. I just -- I was trying to figure out the -- the context.

MR. STEVE SCARFONE: The relevance, yes.

THE CHAIRPERSON: Yes, that's fine. Okay, thank you, Mr. Scarfone.

Mr. Williams...?

DR. BYRON WILLIAMS: Yes and I'll just indicate our client has no objection to Exhibit 47. It's certainly well within the Rules.

THE CHAIRPERSON: Certainly.

DR. BYRON WILLIAMS: Just perhaps if I might ask clarification. There was also one (1) response -- a confidential response filed by letter, which we received this morning and we thank Manitoba Public Insurance for it.

Is that marked as an exhibit or how -- how do we treat those documents?

THE CHAIRPERSON: I suspect it's marked as an exhibit in the CSI hearing. We're in public hearing now so it wouldn't be marked as an exhibit here.

We could -- once -- once we're finished here we could go back into the CSI or Monday morning or whatever, but it should be marked properly I would assume as an exhibit in that -- in that proceeding.

DR. BYRON WILLIAMS: And I'll just -- we may be referring to it so I just want to make sure I have the proper reference for it, Mr. Chair.

THE CHAIRPERSON: Sorry, you may be referring --

DR. BYRON WILLIAMS: Not today, not till Monday.

THE CHAIRPERSON: But if it's a confidential exhibit, are you proposing to refer to it in public hearing?

DR. BYRON WILLIAMS: Of course not, sir.

THE CHAIRPERSON: Okay, so we would go back to CSI, okay.

DR. BYRON WILLIAMS: I'll just note for the Board, they won't be surprised to see Dr. Wayne Simpson here and Ms. Andrea Sherry. Our client Ms. Gloria DeSorcy has -- is -- is here as well.

And I'd ask that the witnesses be sworn, please.

CAC WITNESS PANEL 1:

WAYNE SIMPSON, Sworn

ANDREA SHERRY, Sworn

DR. BYRON WILLIAMS: Mr. Chair, there are two (2) PowerPoints that -- in support of the direct evidence of the witnesses, one (1) is titled the Role of the DCAT and Interest Rate Forecasting. Dr. Simpson is always known for his snappy titles and

that we'd suggest be marked as CAC Exhibit 26.

--- EXHIBIT NO. CAC-26: PowerPoints titled the Role of the DCAT and Interest Rate Forecasting.

DR. BYRON WILLIAMS: And the other one is the Capital Maintenance Provision and we would ask that that be marked as CAC Exhibit-27.

THE CHAIRPERSON: Thank you.

--- EXHIBIT NO. CAC-27: Powerpoint titled Capital Maintenance Provision.

EXAMINATION-IN-CHIEF BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Dr. Simpson, and Ms. Sherry, the next couple of questions I'm going to ask you as a team, but I'd ask you to answer sequentially for the record.

Dr. Simpson, and Ms. Sherry, you were jointly responsible for the preparation of the report, the role of the DCAT and interest rate forecasting in the 2019 GRA, as well as for the report, the Capital Maintenance Provision Proposed by Manitoba Public Insurance?

MS. ANDREA SHERRY: Yes.

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: And, Ms. Sherry, and, Dr. Simpson, you were jointly responsible for the preparation of information responses to the Public Utilities Board 1-1, 1-2, 1-8, 1-9, as well as to Manitoba Public Insurance 1-1 through 1-7?

MS. ANDREA SHERRY: Yes.

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: And the information provided in those reports and Information Responses is accurate to the best of your knowledge and ability?

MS. ANDREA SHERRY: Yes.

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: Before turning to your presentations, I wonder if I could ask Ms. Schubert to go to Exhibit 10, Appendix B, B9, which is the evidence of the -- of rel -- regarding the Capital Maintenance Provision, and recognizing that you already have been prequalified, Ms. Sherry, you are a Fellow of the Casualty Actuarial Society and Fellow of the Canadian Institute of Actuaries?

MS. ANDREA SHERRY: I am.

DR. BYRON WILLIAMS: You also hold the

designation of Chartered Professional Accountant Certified Management Accountant?

MS. ANDREA SHERRY: Yeah.

DR. BYRON WILLIAMS: Currently you serve as Vice-President Insurance Solutions at the Wawanesa Mutual Insurance Company where you are responsible for actuarial pricing, product development and maintenance?

MS. ANDREA SHERRY: Yes.

DR. BYRON WILLIAMS: Your prior roles involved work insolvency and capital enterprise risk management and investments?

MS. ANDREA SHERRY: Yes.

DR. BYRON WILLIAMS: And while you currently work in the private sector you served with Manitoba Public Insurance as an Associate Actuary from 1991 to 1997?

MS. ANDREA SHERRY: Yes.

DR. BYRON WILLIAMS: You also served for four (4) years with Saskatchewan Government Insurance as Assistant Vice-President and Corporate Actuary?

MS. ANDREA SHERRY: Yes.

DR. BYRON WILLIAMS: And perhaps if we can just turn to page 10 of this same document. Ms.

Sherry, you were -- understand as a term of your retainer you're obliged to provide evidence that is fair, objective, and non-partisan; agreed?

MS. ANDREA SHERRY: Yes.

DR. BYRON WILLIAMS: Perhaps if we could go to Exhibit 9, page 9, "the Role of the DCAT and Interest Rate Forecasting".

Dr. Simpson, you are a full professor in the Department of Economics at the University of Manitoba and currently Acting Chair?

DR. WAYNE SIMPSON: Acting Head, yes.

DR. BYRON WILLIAMS: And you serve on the Editorial Board of Canadian Public Policy, which is Canada's foremost peer-reviewed academic journal for economic and social policy, sir?

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: And you were a 2014 recipient of the McCracken Award for the Development and Analysis of Economic Statistics from the Canadian Economics Association?

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: And whether on issues related to the Manitoba Public Insurance rate stabilization reserve or investment strategy, you have provided expert evidence to this Board in 2007, 2010,

2013, 2014, 2016, and 2017?

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: And prior to joining the U of M, you worked both for the Bank of Canada and the Economic Council of Canada, sir?

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: And finally, you understand your duty to provide evidence that is fair, objective, and non-partisan?

DR. WAYNE SIMPSON: Yes.

DR. BYRON WILLIAMS: With that we'll turn it over to Dr. Simpson and CAC Exhibit 26.

And just for the panel's information, Dr. Simpson is going to go through the first ten (10) or so slides of this PowerPoint and then we'll turn things over to Ms. Sherry and then we'll go back to Exhibit 26, just to fin -- finish up the oral presentation.

Please proceed when you're ready, Dr. Simpson.

DR. WAYNE SIMPSON: Okay. Thank you. I hadn't thought of a snappy title, but I guess if I had, it would be something like looking back and looking forward, the role of the DCAT and Interest Rate Forecasting in the 2019 GRA. And I want to break

this up into the two (2) parts.

Looking back, in terms of the role of the DCAT, where I'm going to look at a chronology or a brief history of where this has been and where we're at and in specific reference to a question that was posed by the -- by the Board.

And then looking forward, thinking about the role of interest rate forecasting and the 2019 GRA. Next slide, please.

So, these are the -- to my mind two (2) of the significant features in the -- in the 2019 GRA. What appears to be a renewed emphasis on attaching the Minimum Capital Test to the determination of the RSR, and as I said, I'm going to look back on that from the beginning, which isn't that far back.

And then, secondly, look at the continued application of the naive forecast to interest rates to do the breakeven rate indication and the Dynamic Capital Adequacy Test, the DCAT, to inform the RSR range and what has happened to substantiate or invalidate the naive forecast in -- in terms of recent events. Next slide, please.

So, as I said, we don't have to look back very far, simply going back to the 1988 Autopac Review Commission, the Kopstein report. When I was

doing this, I was thinking that there are a number of historians who've been quoted as saying that you need to study history, because you don't want to repeat its errors. I went back and looked at the source of that which is not a historian at all, but a philosopher, George Santayana, an Italian, who said:

"Those who cannot remember the past are condemned to repeat it."

And so going through this I was trying to provide a brief background for, essentially, the -- the question that the Board had posed that Mr. Sherry and I tried to answer in -- in a brief form and now this is -- is in a sense a more elaborate response to that.

So the 1988 report, which lay the foundation I think for the modern proceedings on the -- on the GRA established, among other things, a retained surplus targetable 15 percent for premiums around breakeven income as the basis for what has come to be called the Rate Stabilization Reserve or RSR.

And it also established a range which would put this at plus or five (5) -- plus or minus 5 percent of that 15 percent target, if you will. That was a midpoint target and said, in fact, that MPI should -- should and would be expected to take

remedial action if these -- this range was -- if -- if the actual income breakeven net income fell outside this range.

And so this provided the foundation for the RSR in a range of 10 to 20 percent of annual premiums which would now be in a range as I -- I'm going to say from a hundred and eight to 215 million with a midpoint the 15 percent of 162 million.

And this was to protect motorists as we've often heard since from rate increase associated with unexpected events and losses arising from non-recurring events or factors.

This, of course, was during a period in the 1980s when inflation was a great deal higher and when rates were probably considerably more volatile than they've been recently as inflation has been relatively stable.

But it provided what I would characterize as a simple and transparent and, to use the term that's been used recently, objective mechanism index to the size of the operation of MPI, but one (1) which was not linked to the actual risks faced by MPI which was the problematic feature of it.

And these risks, of course, could be increasing or decreasing through time. The only thing

that the -- the percentage of premiums or Kopstein approach did was index it, essentially, to the growth in the operations of MPI itself.

DR. BYRON WILLIAMS: Dr. Simpson, before you leave this slide, you may have misspoke. You talked about taking remedial action if net income fell outside the range of 10 to 20 percent of premiums.

Did you mean to say "net income" or did you mean to say "surplus"?

DR. WAYNE SIMPSON: I'm sorry, I meant to say that if the surplus fell. Yes, I'm sorry.

DR. BYRON WILLIAMS: Thank you.

DR. WAYNE SIMPSON: And -- and I presume from those remedial actions that the action would be that if the -- the -- it fell outside of 10 percent of the surplus, in a sense below 10 percent of the surplus, that remedial action -- what we would now call an RSR build -- rebuild, and if it were above 20 percent surplus in terms of 20 percent of premiums, then there would be some form of rebate to ratepayers. Although that's not explicitly stated in the recommendation.

And those numbers, I should add, I actually took out the Kopstein report from the

Manitoba -- University of Manitoba library. I looked through it. There isn't a great deal of analysis to inform us of how those numbers came about but, as I suggest, they have been relatively consistent with what we -- we observe as an appropriate premium for -- for the -- for the RSR.

Okay. So then the second part of the chronology, which is when I became involved in 2007, is the risk analysis approach or the subsequently called the Operational and Risk -- Investment Risk Analysis, RA/VaR.

And this, essentially, tried to take the evidence that was available on underwriting income from year to year, so, it was only the annual income available with -- because we're annual proceedings and to try and analyse that to see the extent of its volatility and there to try to identify what is referred to in statistical terms as the 95 percent or the 97.5 percent confidence intervals around that. So, it wouldn't exclude all outcomes, but only those that are within a range of the -- of the trendline for underwriting income.

The value of this I think, as I say, is redirected the risk analysis to a more statistical or scientific approach specifying a particular risk

tolerance level, which corresponding to the confidence level used in the RA/VaR was the 97.5 percent confidence interval, which indeed would correspond to a 2.5 percent annual chance of occurring these adverse events or 1:40 year event.

So, essentially, all that it was excluding from the analysis of movements in underwriting income were events which were outside this range which would occur less frequently than once in every forty (40) years.

And this was endorsed by the Board in 2007, saying that the RSR should be large enough to withstand an unforeseen loss of a magnitude not anticipated to occur more than once in forty (40) years, and that has endured through the -- through this -- since 2007.

The problem here was that we didn't really have very much data. As I remember, when we first looked at this in the -- in 2007, there were only about eighteen (18) annual observations and that really isn't sufficient to give you much statistical reliability on -- on measuring the 97.5 percent confidence interval, and indeed on trying to see if the risks facing the Corporation were changing over time.

In principle, you can do that statistically, look at how the -- how the variation in underwriting income is changing through time; that's a fairly straightforward statistical procedure, but it wouldn't be very reliable when you've only got eighteen (18) annual observations. And so that wasn't entirely satisfactory, and this approach was never adopted as far as I can see by -- by the Board.

So, the third step then was in 2005 MPI introduced the Minimum Capital Adequacy Test, the MCT, and recommended an RSR range of 50 to 100 percent MCT in the 2007 GRA. It was pointed out then, and it's still pointed out, that it -- the MCT is recognized by OSFI to assess capital required for a private company in a competitive industry to forestall insolvency.

At that time, concerns were expressed and still are expressed that it's not clear how something that applies to private insurers in competitive markets has much to say about the risk profile faced MPI which is a Crown corporate monopoly.

In addition to that, the MCT does not address the specific risk faced by MPIC. It certainly doesn't itemize them and evaluate them.

And the Board Order in 2008 indicated a desire for some sort of consensus on an RSR range,

which can be accepted by all parties, and that led to the final step, if you will, which was the -- in 2010, the Dynamic Capital Adequacy Test. This had been already commissioned to assess future financial condition of Basic but was now beginning to be used in 2010 to substantiate the RSR target.

At that time the scenarios that were used, I've characterized as improbable catastrophe scenarios which weren't grounded in historical evidence and this was one (1) of the major objections. And there was attempts and subsequent disc -- technical conferences and proceedings to move towards plausible scenarios based on evidence and establish risk tolerance levels.

2010, there was a commitment by MPI to do the DCAT in-house and to closely integrate it with the risk identification process, which I think facilitated this kind of transformation towards these plausible scenarios.

The consensus was then built on this methodology that would be something that was transparent and consistent with established risk tolerance practices, again, centered around this 1:40 year standard. And the DCAT -- its strength, I think, is it provides a direct connection of specific and

justifiable risks posed as these adverse events that are based on the historical evidence to future financial condition. And I think we've had some very productive both technical conferences and exchanges in proceedings that have helped to clarify what evidence is useful and what evidence is not and where the best scenario constructions are -- are more compelling than in others.

Okay. But that didn't set the RSR range. It simply set what was referred to as an RSR target based on the 1:40 year standard. I've argued that the RSR range could be produced by setting low and high risk tolerance levels. For example, a 1:10 and a 1:200 year standard or a 1:20 and 1:100 year standard to establish the lower and upper RSR thresholds.

MPI suggested instead a hybrid approach, which would use the 1:40 year standard to -- in the DCAT to produce the lower RSR threshold and an MCT of 100 percent to set the upper threshold. Although the hundred percent MCT was subject to the same criticisms from before.

And the Board in 2016, said that it continued to favour the use of the scenario testing approach in the Basic DCAT for the purposes of setting

Basic target capital level -- levels expressed in terms of Basic total equity and for purposes of setting the upper threshold, the Board withdraws its support for the use of the MCT and the MCT threshold ratio of 100 percent. And that seems to be where we're at in terms of using the DCAT to set the R -- DC -- of the RSR, rather than the MCT.

So then why are we back using the MCT in terms of expressing the DCAT range. Again, the MCT is about the capital required for private companies in a competitive industry and not a monopoly Crown insurer to forestall insolvency. And it's difficult using MCT levels whether they be 50 and 100 percent or 35 percent and 85 percent to attach any meaning in terms of specific risks and associated risk tolerance levels that are consistent with some sort of a statistical or scientific approach to risk assessment.

The -- the DCAT, on the other hand, captures the specific financial risks, as they evolve according to the evidence and established risk assessment pract -- practices; something the MCT approach cannot do.

And the -- the DCAT has been built up using this collaborative process. It's involved a considerable amount of time. I think the process is

now reasonably transparent, and it seems to me that there is no compelling argument at all for abandoning the DCAT at this point in time.

So, that brings me to the -- the -- the PUB question to us. We said, Ms. Sherry and I, that the POP and DCAT methodology should continue to inform the setting of the RSR range.

Question posed by the Board was:

> "Please explain why Dr. Simpson and Ms. Sherry believe the POP methodology is currently informing the RSR range..."

And the POP doesn't come up a great deal anymore, I guess.

> "...and the rationale to understand the assertion that POP is currently used for setting the RSR range."

Our response was:

> "We are not aware of any PUB decision that explicitly asserts that the POP would no longer be used to set the RSR range. It certainly was used in the early days century, I guess] with and without the use of other information.

Although we would -- we would acknowledge that recent emphasis and discussion has concentrated on the use of the DCAT to inform, if not set the RSR range, and the DCAT has been valuable in identifying the risk facing the Corporation and indicating how those risks change over time."

For example, what we've seen in the proceedings using the DCAT is that the risk scenarios in terms of the most prominent individual risk scenarios have moved from the equity decline scenario to the interest rate decline scenario and now to the high loss ratio or claim scenario. And this is, I think, important information not only to the operations of MPI and to the Board, but also in terms of setting the Rate Stabilization Reserve as a protection against these kinds of risks.

DR. BYRON WILLIAMS: Dr. Simpson, before you leave this slide, can you just remind the Board what POP stands for, sir?

DR. WAYNE SIMPSON: POP is the Percentage Of Premiums approach established by the Kopstein report which was a RSR target of 15 percent with a range of 10 to 20 percent of net underwriting income.

So my final slide at this point is my first recommendation, which is that the current POP and DCAT methodology should -- and not the MCT level should continue to inform the setting of the RSR range. The lower RSR threshold is 120 million, according to the DCAT, the current DCAT report, and indicates a declining risk which the MCT can neither detect nor evaluate.

The lower POP threshold on the other hand, is 108 million based on net premiums written of 1.08 billion a little bit below the RSR threshold from the DCAT report, but not a lot.

The upper threshold using the PUB approved methodology, again based on the DCAT and established risk tolerance meth -- methods -- levels and statistical methods, risk assessment methods, is 251 million, and the upper POP threshold is 250 million. Again, a bit lower, but certainly the gap between the upper POP threshold and the approved methodology is less than, for example, the difference

between the approved methodology the 251 million, and the 85 percent MCT figure quoted in the GRA of 305 million.

DR. BYRON WILLIAMS: Ms. Sherry, over to you --

DR. WAYNE SIMPSON: Thank you.

MS. ANDREA SHERRY: Good morning, everyone. We can go to the next slide.

Just as an overview of our arguments in this paper. To start, I'm sure as everyone here is very well aware based on the naive forecast of interest rates, MPI has applied for a 2.2 percent overall increase, which is made up of a 1.9 percent decrease based on accepted actuarial practice in Canada and that includes the 1.2 percent decrease based on the investment income on the RSR and a 3.3 percent increase for the newly introduced Capital Maintenance Provision.

So the Capital Maintenance Provision suggested by MPI is calculated using the Minimum Capital Test. So what they did is set the Minimum Capital Test for the 9 -- 2019/'20 projection equal to the 2018/'19 projection to come up with the amount of capital they felt they needed to hold to keep their capital at a steady level, according to the MCT.

What we would argue is that every year MPI does a DCAT analysis, a very thorough DCAT analysis which comes to the PUB, it looks at the true capital need of the Corporation based on adverse scenario analysis and it determines -- it could determine the RSR range based on those adverse scenario results and MPI could hold capital within the RSR range determined that way, which we believe is actually prudent fiscal management and, therefore, the CMP is not necessary.

Through this yearly process, MPI comes to the PUB and presents the results of all of these analysis. If MPI needs capital through that yearly process, they can ask the PUB for a rate increase to bring their capital to the level it should be. Next slide.

So, from here I'm just -- I'm going to go through, basically, the arguments of the paper of why we don't believe that the CMP is necessary.

And one (1) thing that struck me when I first read the rate application this year was the suggestion that CMP was agreed to at the technical conference. And that again was repeated in Response to CAC(MPI)-172 where the Corporation states that the -- the Corporation agreed that it was appropriate to

include a Capital Maintenance Provision in the 2019 GRA.

I went through that transcript very carefully and nowhere in that transcript does it suggest that consensus was reached by all the stakeholders.

The next spot on the CMP was that it had not been vetted by the public. It is a very significant change to add the CMP to the requested rate change calculations and it's a theoretical change and approach from what we've discussed at prior GRA hearings. I believe -- we believe -- that the public deserves to have its voice heard on this significant change.

And it's not an overly complex suggestion or idea, and I'm -- I'm sure that the public could understand what's being suggested by the CMP if given the opportunity to hear it.

DR. BYRON WILLIAMS: I wonder if we could just stand down for a couple seconds til the noise ceases.

MS. ANDREA SHERRY: It could come on and off.

THE CHAIRPERSON: Let's wait five (5) minutes. I apologize.

(BRIEF PAUSE)

--- Upon recessing at 10:40 a.m.
--- Upon resuming at 10:49 a.m.

THE CHAIRPERSON: My apologies. We're trying to track this down, and I have met with the landlord. By the way, in the moment we were away, if anyone's interested, the FBI have arrested somebody in relation to the bombs in -- in the United States. They arrested somebody in Florida, so.

Anyways, sorry for the interruption, Ms. Sherry, if you could -- if you could continue.

MS. ANDREA SHERRY: Of course. So I think I have covered this slide, basically the CMP has not been vetted by the public. So I'm moving on to the next one.

The CMP does not align with accepted actuarial practice in Canada. The Actuarial Standards of Practice are silent on any addition of capital load into a rate indication. And we would argue that the Actuarial Standards of Practice are silent on this issue, because a capital load should not be part of a rate indication.

In response to CAC(MPI)-178, the Corporation made it clear that they were not aware of any literature in regards to a CMP. On to the next slide.

As Dr. Simpson alluded to as well, we feel that the use of an MCT target to set a Capital Maintenance Provision level is arbitrary, and it is Board approved. MPI is not regulated by OSFI so there is no set MCT level that MPI is required to be above and there's no way to determine one.

The Board has shown support for the determination of the RSR range based on the DCAT analysis. The MCT is formulaic with risk margins that are set to ensure private companies do not go insolvent and this is to protect the Canadian economy.

The risk margins within the MCT were not set for a monopoly Crown Corporation. Again, they were set for private companies to ensure they don't go insolvent.

The CMP does not align with the Board approved methodology for calculating the amount of capital the Corporation requires and is not consistent with work we have done to date.

We have done a lot of work on the DCAT analysis and the use of the DCAT to set the RSR range.

There's a yearly process where MPI comes before the Public Utilities Board with all of their analysis and looks at where their capital is, and whether it's within the RSR range. And at that time they can ask for rate changes if the capital is below the RSR range. The Board has shown support for this approach in the past.

The introduction and basis for a CMP in the 2019 GRA is incomplete and when we say this, we mean that they -- in the application and throughout the hearing process, there has been a lot of discussion about a capital plan which the Corporation does not have ready. If a CMP is something that the Public Utility Board feels should be within a rate application, it should come tied to a capital management plan.

On the next slide. We also feel that the introduction of a CMP increases the risk of intergenerational inequity and what we mean by that is that we're asking for more capital now because -- because the projections show that the capital of the Corporation could go down in future years. But again, due to the yearly process in Manitoba if that does occur, then they can ask -- MPI could ask for a rate increase at that time to increase their capital

instead of asking for it now which separates the capital need from the people -- the policies that would be in place in the year that the capital need is actually required.

And moving on to the recommendations. We ask or we suggest that the Public Utility Board order that the CMP be removed from the 2019 GRA and that the DCAT methodology be used to set the RSR range.

We also ask that the PUB approve a decrease in rates based on the 50-50 interest rate forecast and accepted actuarial practice in Canada which would include the investment income on the RSR.

That concludes mine.

(BRIEF PAUSE)

DR. WAYNE SIMPSON: So the last part of mine, the looking forward, is the interest rate forecasting and the 2019 DCAT report. Interest rate forecasting is important both in terms of the establishing the base scenario and in working through the adverse scenarios and their implications for the establishment of the RSR on the basis of satisfactory financial conditions.

The recent DCATs, of course, have been conducted under an unusual period of low interest rates, an unusual period that emanates from the 2008 recession. It wasn't as deep in Canada as it was in other parts of the world, our neighbours to the south, but it certainly was significant. The growth out of that was relatively slow and interest rates have been kept low by the Bank of Canada to stimulate the economy.

That has had two (2) consequences. One (1) was the -- that one (1) of the scenarios, the adverse scenarios that had been identified, interest rate declined scenario, necessarily lacked historical evidence and continues to be based on ad hoc assumptions, as discussed in previous GRAs; that has been less of an issue in this DCAT, essentially, because the interest rate declines scenario is no longer the most prominent individual adverse scenario. It's now the high loss ratio or claim scenario.

It's also been a challenging period for interest rate forecasting to establish the DCAT base scenario and set the dr -- the breakeven rate indication. It -- quick -- I would acknowledge hindsight is 20/20. It's not hard to acknowledge that the SIRF has been too optimistic about economic

recovery and rising interest rates since the 2008 great recession.

And MPI has advocated instead, the use of a naive interest rate forecast, which essentially says that interest rates will remain constant at some point; in this case initially February of 2018, the end of February and now I see updated now interest rate held constant at its September 30th level in the -- in the PreAsk 1 from the PUB.

And that goes up until the 2022 fourth quarter. The forecasting here is a four-year exercise. The Board Order in 2017 said that the 50/50 forecast should be used for rate setting in capital -- and target capital. The 50/50 forecast weights the SIRF at 50 percent and the naive fore -- interest rate forecast at 50 percent. So they get equal weighting to kind of moderate the interest the -- forecasts of the SIRF to reflect the fact that the SIRF has, in the past, consistently overestimated economic and interest rate recovery.

So the question then is: Why is the naive interest rate forecast being used in the -- in the current DCAT and GRA? Well, the standard forecast error is slightly lower for the naive forecast based on a historical period starting in 2005, which mostly

includes the period since 2008 and the period of low interest rates. Slightly lower than the 50/50 and the SIRF.

But if we look, for example, as I put it in here at the last two (2) years, the 2017/2018 GRAs, the SIRF has clearly outperformed the naive forecast which you would expect because this is the period when interest rates have begun to recover in the fashion that's been predicted for a long period of time by the SIRF and the result of that is going to be that naive forecast is going to be an understatement of interest rates.

And you can see that if you look at the difference. Under the SIRF in 2017, it was .12 percent, that is to say, it overestimated interest rates by .12 percent. In 2018 it underestimated interest rate -- interest rates by .14 percent.

Now, compare that to the naive, this is the figures from INV-11. The naive forecast consistently and significantly underestimated interest rate growth by .45 percent in the 2017 GRA and by .6 percent in the 2018 GRA.

So not only has the naive forecast being considerably -- the errors have been considerably larger, the forecast errors, but they've

also been consistently in the direction of underestimating interest rate growth as the economy recovers.

In addition to that, the naive forecast is deficient in the sense that it doesn't pay attention to other signs of economic recovery in the domestic policy response by the Bank of Canada in a fashion that forecasters would, and in particular, that's reflected in the standard interest rate forecast from the -- the five (5) banks and the -- and global insight.

So, what do we mean by monetary policy response? Well, if you read the Bank of Canada monetary policy reports, they always start with the following statement:

> "The bank carries out monetary policy through changes in the target for the overnight rate of interest. These changes are transmitted to the economy through their influence on the market interest rates and that overnight rate of interest for that reason is often referred to as the policy rate."

The bank has already raised the

overnight rate three (3) times now, this year, January, July and as recently as Wednesday following two (2) increases last year in July and September and this policy rate as of Wednesday stands at 1.75 percent as of July the 12th of -- July the 11th of 2017 it was at .5 percent.

And the recent statement from the September 5 release:

> "Recent data reinforced governing Council's assessment that higher interest rates would be warranted, not one (1) increase, higher interest rates will be warranted to achieve the inflation target."

And certainly much of the discussion subsequent to this rate increase on Wednesday is that future interest rate increases -- increases in the policy rate are forthcoming.

What is MPI's response to this? CAC(MPI)1-6, the Bank of Canada's policy rate is not material. However, the Government of Canada 10 year benchmark rate is tracking upward movement of -- very closely to the Bank of Canada policy rate.

And I would argue that the policy rate is, in fact, material and the naive forecast will

continue to be significantly biased downward if it -- if it is used for the DCAT and the breakeven rate indication.

THE CHAIRPERSON: Sorry, Dr. Simpson, I just want to make sure that the record is clear.

You said it would be "significantly biased downward," your presentation says "biased downward," which one is it? There's a difference --

DR. WAYNE SIMPSON: The nai --

THE CHAIRPERSON: -- between biased down and --

DR. WAYNE SIMPSON: The -- the -- what did I say --

THE CHAIRPERSON: Significantly biased downward. Sorry, in your oral testimony you said "would be significantly biased downward."

I just want to know if we are relying on the oral testimony or we're relying on the words in your presentation?

DR. WAYNE SIMPSON: Well, there's no statistical test here. So I'm not -- I'm not claiming statistical significance. I am simply saying that the -- the differences will be large.

THE CHAIRPERSON: Okay. The --

DR. WAYNE SIMPSON: And -- and -- and

the direction will be downward.

THE CHAIRPERSON: Okay. So we'll go on it will be biased downward then?

DR. WAYNE SIMPSON: Biased downward, that's right, yes.

THE CHAIRPERSON: Okay. I just want to -- I just want to make sure, because -- okay. Thank you.

DR. WAYNE SIMPSON: So here is the request to pro -- to track the policy rate changes, which is the red step function and the Government of Canada 10 year bond rate, which is the blue squiggly line and you can see from this the fairly strong evidence. This is the kind of evidence that you would use when, you know, simple visual evidence you'd start with if you were doing a -- a more complete analysis of the relationship between the policy rate and the -- and other interest rates, like the 10 year bond rate of the sort that the Bank of Canada and monetary policy people do on a regular basis.

And what you can see there is that the two (2) have moved pretty much in lockstep, that is to say, as the policy rate has gone up the Government of Canada 10 year bond rate has gone up. You can draw -- visually draw a line -- I haven't done that -- but you

can draw a line through that squiggly movement of the Government of Canada 10 year bond rate to upward level.

And, of course, what is missing from there is the most recent increase and prospective future increases that are anticipated but not yet realized which we think will also move that Government of Canada 10-year rate higher, and that's reflected in the standard interest rate forecast, but not in the naive forecast. In fact, the naive forecast, I suppose would take the Government of Canada 10-year rate as of September, which is the -- the bottom of that last increase and -- and move it across and say, this is going to remain stable from the current moment until the fourth quarter of 2022.

Okay then, finally, does the interest rate forecast matter? Yes and no? Yes. Looking at figure INV-12, the breakeven rate indication and the GRA is set at .1 percent under the naive forecast, but is only minus .5 percent under the 50/50 forecast, and minus 1 percent under the SIRF.

In the PreAsk, the figures now are that the naive forecast will provide a rate -- breakeven rate indication of minus .26 percent and the 50/50 forecast would provide a breakeven rate indication of

minus .6 percent.

But no in the sense that the -- the evidence to suggest that the -- provided by MPI suggests that total equity is higher under the 50/50 than under the naive forecast so that sat -- satisfactory financial condition for Basic in the DCAT report would not be adversely affect -- affected by the adoption of the 50/50 or indeed, the SIRF.

So, the first recommendation I had then -- and I'll repeat -- was that the current POP and DCAT methodologies not MCT level should continue to inform the setting of the RSR range and I would add to that that the 50/50 interest rate forecast should be used for the breakeven rate indication in the DCAT analysis.

The naive forecast is inferior to the 50/50 and SIRF forecasts recently, that is to say the last few years, and the naive forecast ignores recent monetary policy and economic events that indicate rising interest rates as forecast by the SIRF.

And I was thinking about the 50/50 forecast, which was simply said, let's take -- let's split the differences. Let's take the naive forecast and let's take the SIRF forecast to suggesting that, in fact, those are equally valid at this point in

time, and I suspect if I had to -- if I were questioned on this, I would say if you give me a choice between the SIRF and the naive forecast and don't allow for the 50/50, I would say, well, I'll take the SIRF. I think it's going to a better forecasting job, and I've indicated why based on the last couple of years, which suggest to me that maybe those weightings of 50/50 are wrong, that probably the weighting towards the SIRF should be higher than -- than 50 percent.

But, the Board Order that exists on 50/50 is what it is and -- and I think that is a reasonable compromise at this time while we assess the ongoing evidence not only on the forecasting ability of the 50/50, the SIRF and the naive, but also on the, you know, the actual performance of the economy and where interest rates have gone.

CONTINUED BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Just before we close, Dr. Simpson, you were referring to a PreAsk and would it be correct to suggest that that is MPI Exhibit 32, sir, or you'll accept that subject to check?

DR. WAYNE SIMPSON: I'll accept that

subject to check, yes.

DR. BYRON WILLIAMS: That concludes the direct presentation of Dr. Simpson and Ms. Sherry. There are available for cross-examination.

MS. KATHLEEN MCCANDLESS: Just to pop in and clarify something, I believe it's MPI Exhibit Number 26.

DR. BYRON WILLIAMS: Okay. So it's the first version, sorry, my apologies.

DR. WAYNE SIMPSON: Yeah, that -- that -- that was my recollection as well, but I didn't want to question Mr. Williams' fine memory and adequate -- more than adequate support.

THE CHAIRPERSON: Mr. Williams, you're done, then?

DR. BYRON WILLIAMS: That concludes our direct, sir.

THE CHAIRPERSON: Okay, thank you.

Mr. Scarfone...?

MR. STEVE SCARFONE: Yes, Mr. Guerra is going to conduct the cross-examination, Mr. Chair.

MR. ANTHONY GUERRA: Thank you, Mr. Chair.

THE CHAIRPERSON: Mr. Guerra...?

CROSS-EXAMINATION BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: And that good morning and thank you very much to you, Dr. Simpson and Ms. Sherry for presenting yourselves today and for your presentations. They're very helpful and I appreciate that you've taken some time out of your -- your day to spend with us this morning.

I do have some questions and I realize that you're presenting this morning as a panel. So I will do my best to try to direct the questions to who I think is the appropriate person, however, if -- if I have misdirected the question, if you could please let me know and jump in as appropriate, that would be greatly appreciated.

Mr. -- sorry, Dr. Simpson, just to confirm your background as it -- is as an economist and a professor; is that correct?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: You're not an actuary, is that correct?

DR. WAYNE SIMPSON: No.

MR. ANTHONY GUERRA: And for the purposes of this application, you've been retained by the CAC to provide critical review of -- in this case, the issue of interest rates; is that fair to say?

DR. WAYNE SIMPSON: Interest rate forecasting.

MR. ANTHONY GUERRA: Interest rate forecasting.

DR. WAYNE SIMPSON: And -- and in -- in the context of the DCAT, as well as -- most particularly the DCAT.

MR. ANTHONY GUERRA: But also the breakeven rate indication?

DR. WAYNE SIMPSON: Yeah, the GRA.

MR. ANTHONY GUERRA: And my understanding is that you are present today in your capacity as a -- an expert and professional, correct?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And you've expressed opinions and I expect that you will continue to express opinions as I question you and just to confirm, if you do express opinions, they will be your professional opinions, correct?

DR. WAYNE SIMPSON: Correct.

MR. ANTHONY GUERRA: And you will advise me if that's not the case. If you're expressing a, let's say for example, a personal opinion, correct?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: Thank you. And, Ms. Sherry, my understanding is that you are an actuary, correct?

MS. ANDREA SHERRY: I am and an accountant.

MR. ANTHONY GUERRA: And an accountant and I understand you're also a Fellow of the Chartered Insurance Professionals, correct?

MS. ANDREA SHERRY: Correct.

MR. ANTHONY GUERRA: And you're not an economist, though, correct?

MS. ANDREA SHERRY: No, I'm not.

MR. ANTHONY GUERRA: And my understanding is that you were retained by the CAC to provide a critical review of the issues regarding the Capital Maintenance Provision, correct?

MS. ANDREA SHERRY: Among other things, yes.

MR. ANTHONY GUERRA: What other things were you retained by the CAC to comment on?

MS. ANDREA SHERRY: I can't remember the exact words in my retainer letter, but I did do a critical review of the entire GRA from my perspective as an industry professional since -- for a long time and as an accountant and as an actuary and -- an

insurance experts, all of those things.

MR. ANTHONY GUERRA: Is -- I'm sorry, I don't mean to interrupt.

Is it fair to say that your -- your opinions, though, don't necessarily extend to issues like the interest rate forecasting, that's more Dr. Simpson's opinion in this case?

MS. ANDREA SHERRY: We corroborated on that. I do have experience with interest rates, and investments from my prior experience. I am not an economist and do not profess to be, however, I do have experience with that.

MR. ANTHONY GUERRA: And again, the opinions that you've expressed in your report and the opinions that you've expressed in your testimony before the -- the Board this morning, those are your professional opinions?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And when I go through some questions with you, if you are professing or expressing an opinion that is not your professional opinion, you'll advise me?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: Thank you. Is it fair to say that the report titled The Role of the

DCAT and Interest Rate Forecasting in the 2019 GRA that, Dr. Simpson, you were the lead author of that report?

DR. WAYNE SIMPSON: It was a joint effort of the two (2), of myself and Ms. Sherry, yes.

MR. ANTHONY GUERRA: Okay, so to confirm then that you're not saying -- there -- there wasn't a lead author for -- for -- for the purposes of either of those two (2) reports?

DR. WAYNE SIMPSON: You didn't use the term "lead author" before. If you say "lead author," yes, I was the lead author, but we -- we collaborated, just as Ms. Sherry was the lead author on the other report but we collaborated.

MR. ANTHONY GUERRA: Okay, well, now I guess my question, which is: Ms. Sherry, you were, in fact, lead author of the -- the report titled The Capital Maintenance Provision proposal by MPI; that's correct?

MS. ANDREA SHERRY: If you mean by "lead author" I did the first draft and then worked with Dr. Simpson to complete the paper then yes.

MR. ANTHONY GUERRA: Okay. And -- and just for ease of reference throughout the --throughout the questioning, I'm going to refer to the -- the Role

of the DCAT and Interest Rate Forecasting in the 2019 GRA report as the DCAT report, are you okay with that?

DR. WAYNE SIMPSON: Sure.

MR. ANTHONY GUERRA: Thank you. And I'm also going to refer to the -- the second report, the Capital Maintenance Provision Proposal by MPI as the CMP report.

You're okay with that as well?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: Thank you. So turning to the CMP report, there are a number of arguments made against the use of a CMP in the 2019 General Rate Application, you'd agree with me on that?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And, Ms. Sherry, you reviewed the General Rate Application for 2019 that was filed by MPI; correct?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And you understand in terms of the Capital Maintenance Provision what MPI is proposing; correct?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: You'd agree with me, Ms. Sherry, that the purpose of MPI's Capital Maintenance Provision in this case is to ensure that

it has the same ratio of capital available to the capital required in its rate stabilization reserve as at February 28th, 2020, as it had in February 28th, 2019?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And you'll agree with me that the CMP looks at the RSR balance at the end of a fiscal year?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And then when it looks at that balance, it estimates what it would -- the amount that it would need to keep that balance and the same capital position at the end of the next fiscal year; correct?

MS. ANDREA SHERRY: To keep the same MCT ratio.

MR. ANTHONY GUERRA: Yes. Thank you and I appreciate that because we -- we use the MCT ratio or the Minimal Capital Test to measure the relative strength of that capital; correct?

MS. ANDREA SHERRY: I'm not sure if you're asking if I agree with the premise or if I agree that MPI is suggesting that.

MR. ANTHONY GUERRA: What I'm suggesting is that the MCT ratio is used to measure

the relative strength of the capital between one fiscal year and the other?

MS. ANDREA SHERRY: By a private companies?

MR. ANTHONY GUERRA: By MPI in this case.

MS. ANDREA SHERRY: I'm not sure that I agree with the premise of the question. You're suggesting that MCT could be used to determine the strength of the capital position of MPI and I am actually arguing against that, that it shouldn't be used.

MR. ANTHONY GUERRA: I argue --

MS. ANDREA SHERRY: So I can't answer that question.

MR. ANTHONY GUERRA: Well, I appreciate that -- that you're arguing that it should not be used, but the question was, again, directed to what is being used and MPI's proposing that it measure the relative strength of its capital from one (1) fiscal year to another you with this MCT ratio.

You would agree with that?

MS. ANDREA SHERRY: I would agree that MPI is proposing that, yes.

MR. ANTHONY GUERRA: Okay. And you'd

agree that MCT is one (1) way of looking at the relative strength of that capital from one (1) year to another, correct?

MS. ANDREA SHERRY: Not for a Crown corp -- Crown monopoly Corporation, I would disagree with that.

MR. ANTHONY GUERRA: Okay, so but --

MS. ANDREA SHERRY: That's the whole premise.

MR. ANTHONY GUERRA: No, I appreciate that. But you're -- but what I would agree -- what you would agree with me on is that it is one (1) way to -- to look at the relative strength of capital from one (1) year to another?

MS. ANDREA SHERRY: For private companies that are regulated by OSFI.

MR. ANTHONY GUERRA: You would also agree with me, though, that a -- without a Capital Maintenance Provision MPI's Basic -- sorry MPI would expect that it's MCT ratio for Basic would decline over the next five (5) years.

MS. ANDREA SHERRY: That is what MPI's projections are showing.

MR. ANTHONY GUERRA: And you would agree that the Board, and in this case the Public

Utilities Board, has appreciated MPI's need to protect Basic's capital position from depletion?

MS. ANDREA SHERRY: Yes, but did not necessarily say how that would be done or how the capital would be determined. To my knowledge, and correct -- please correct me if I'm wrong, the Public Utility Board has never stated that the MCT should be the basis on which the capital of Manitoba Public Insurance should be judged, whether it's the right level.

MR. ANTHONY GUERRA: Is -- is it fair to say, Ms. Sherry, that a decline in the MCT ratio -- if -- if we're using that ratio, I appreciate that yo -- that your position is that it shouldn't be, but if it -- if it is used that the decline in the ratio or a depletion in the capital position of Basic isn't a bad thing necessarily?

MS. ANDREA SHERRY: Sorry, repeat the question.

MR. ANTHONY GUERRA: Is it fair to say that your position is that a decline in the MCT ratio -- if -- if that's the ratio that's used or a depletion in capital, if you consider the appreciation of the -- the Board in terms of the need to protect Basic's capital position is not necessarily a bad

thing from your perspective?

MS. ANDREA SHERRY: What I'm suggesting is that if you look at the risks of the Corporation through -- and I'm suggesting through a thorough DCAT analysis, you would be able to see how much capital the Corporation needs to hold in order to ensure it is covered for those risks.

So, certain moves by the Corporation, certain changes in the risk profile of the Corporation could change what the RSR range would be based on that DCAT analysis. So, if the -- the capital of the Corporation is within the RSR range that is determined through that thorough analysis, then I would say that they are adequately capitalized.

MR. ANTHONY GUERRA: Right. But you'd also say that, let's say, for example, the -- the -- the balance of the RSR translated into an MCT ratio of 35 percent, falls in the next year to 30 percent, but that doesn't necessarily translate or necessarily result in a -- in a -- in an unsatisfactory situation for MPI, correct?

MS. ANDREA SHERRY: Because the MCT just -- is not really applicable to MPI, I would agree with that.

MR. ANTHONY GUERRA: An -- and you'd

also agree --

MS. ANDREA SHERRY: It's not the relevant factor to be looked at.

MR. ANTHONY GUERRA: And you'd also agree, though, that -- that the capital depletion of Basic, if -- if it were to deplete from one (1) year to another, that -- that's not necessarily a bad thing either.

MS. ANDREA SHERRY: I think it depends on the risk profile of the Company at the time.

MR. ANTHONY GUERRA: Right. It -- it depends on where the RSR targets are, correct?

MS. ANDREA SHERRY: Correct.

MR. ANTHONY GUERRA: And that's really all that matters is whether or not the balance of the RSR is within the range established by the Dynamic Capital Adequacy Test, correct?

MS. ANDREA SHERRY: In terms of whether the Corporation is adequately capitalized, correct.

MR. ANTHONY GUERRA: If it's in -- within that range it's adequately capitalized and we don't need to worry about a rebate or rebuilding fee, correct?

MS. ANDREA SHERRY: Because the

process is yearly I believe it can be analysed every year and action taken if required based on the results.

MR. ANTHONY GUERRA: So if the RSR balance is within this target range, the upper and lower thresholds, MPI's holding sufficient capital and that's really the end of the story, correct?

MS. ANDREA SHERRY: Just one moment.

(BRIEF PAUSE)

MS. ANDREA SHERRY: Sorry. Sorry about that. I'm -- and again I'm sorry, could you please repeat the question?

MR. ANTHONY GUERRA: If the RSR balance is within the range, the upper and lower threshold targets for the RSR, as established by the Dynamic Capital Adequacy Test or DCAT, your position would be that MPI is holding sufficient capital and there's no need to talk about anything else in terms of a rebuilding fee or a rebate, end of story.

MS. ANDREA SHERRY: So, one (1) caveat to that would be that as long as the DCAT is performed thoroughly, properly, the adverse scenarios are accurate, adequate -- as long as the DCAT analysis is

-- is ver -- very robust and the RSR range determined from it, then I would agree with one (1) caveat and that is that the rates still may need to be changed depending on the rates determined based on accepted actuarial practice.

MR. ANTHONY GUERRA: If the RSR -- sorry --

DR. WAYNE SIMPSON: Could I just add something here?

MR. ANTHONY GUERRA: Absolutely.

DR. WAYNE SIMPSON: The -- one -- the initial pretext of the question revolved around a declining MCT and I think in the GRA that is projected based upon the interest rate forecast, a naive interest rate forecast.

In my view, I think, our view, that would -- that builds in a degree of pessimism about interest rates. It essentially builds in a portion of the interest rate decline scenario that properly belongs in the DCAT to set the RSR range because, as I think I've -- we've -- I've tried to point out in my presentation, the naive forecast is pretty pessimistic on interest rates, and that'll have some adverse effects on -- on MPI's capital position that would -- that I don't think will be realized.

MR. ANTHONY GUERRA: Right. But, Dr. Simpson, are you saying then that using the naive interest rate forecast if it were to result in a decrease in the MCT ratio from one (1) year to a next, that that would be an area that MP -- MPI should be concerned about?

DR. WAYNE SIMPSON: I think that a -- a better forecast of interest rates such as the 50/50 or SIRF would be the thing I would be more interested in in dealing with their projections when I'm -- I wouldn't want to build in the kind of adverse scenario that's implied by the naive forecast.

And I would reserve the pessimism about interest rates for the specific scenarios of the DCAT where the ad hoc interest rate decline forecast essentially mimics the -- the naive forecast.

MR. ANTHONY GUERRA: But getting back to my question about the MCT ratio -- declined in the MCT ratio from year to year is not necessarily concern for -- for you, Dr. Simpson?

DR. WAYNE SIMPSON: That's correct. I'm only questioning the pretext that it will decline under more realistic -- under better interest rate forecasts.

MR. ANTHONY GUERRA: I appreciate

that. Thank you.

And so just if I -- I have your position correctly, Ms. Sherry, if the RSR balance were to go below the DCAT and I appreciate that we're talking but a robust and detailed DCAT, but nonetheless a DCAT established RSR target, at that point in time, it might be appropriate for MPI to come to the Board and seek a rebuilding fee as part of its rate indication, correct?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: Is -- is it fair to say then, Ms. Sherry, that you -- you don't have a scenario in mind where it makes sense for -- for MPI to -- to be utilizing Capital Maintenance Provision?

MS. ANDREA SHERRY: No, I don't.

MR. ANTHONY GUERRA: And is it fair to say that a discussion about the inclusion of a build or release provision on a Capital Maintenance provision wouldn't change your opinion, which is CMP is not appropriate for MPI?

MS. ANDREA SHERRY: It would not change my opinion. I do you think that a proper capital management plan would be a good thing for MPI, but I do not think that the Capital Maintenance Provision as it's -- is now is part of that.

MR. ANTHONY GUERRA: Thank you. We heard you testify earlier today about the technical conference directed by the Board on the issue of CMP. Do you remember that?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And my understanding is that you have -- you went through the transcript of that technical conference very carefully, is that correct?

MS. ANDREA SHERRY: I did.

MR. ANTHONY GUERRA: I was there. I don't think you were there though.

MS. ANDREA SHERRY: I was not. I couldn't be, unfortunately.

MR. ANTHONY GUERRA: Not a problem. But you're confident that you were aware of the issues that were discussed at the technical conference, correct.

MS. ANDREA SHERRY: Yes. It has been a few months since I read it, but I did read it very carefully.

MR. ANTHONY GUERRA: And you're aware that there was a representative of SGI present at the technical conference?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: And that that representative was there to talk about the use of a Capital Maintenance Provision by SGI?

MS. ANDREA SHERRY: M-hm, I read that with great interest.

MR. ANTHONY GUERRA: Is it fair to say then, that despite the discussion that -- that -- that took place at that conference that you have made aware -- were made aware of by the transcript that there was nothing that was discussed at the -- at the conference that changed your opinion about the appropriateness of a CMP for MPI?

MS. ANDREA SHERRY: No.

THE CHAIRPERSON: Sorry, can we, instead of using the letters, can we indicate what's meant by CMP because we've got --

MR. ANTHONY GUERRA: Apologies --

THE CHAIRPERSON: Two (2) different CMPs in -- in reference in the hearing.

MR. ANTHONY GUERRA: Yes, I'm --

MS. ANDREA SHERRY: Sorry --

MR. ANTHONY GUERRA: I'll refer to CMP's as Capital Maintenance Provision from now on. Thank you, and I apologize for that.

CONTINUED BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: Sorry -- just to ans -- just to get back to the question, I believe your answer was yes, but do you want me to ask the question again?

MS. ANDREA SHERRY: Yes, please.

MR. ANTHONY GUERRA: Okay. So is it fair to say then that notwithstanding what you've read in the transcript of that technical conference and the discussion from the representative of SGI, that nothing in that transcript changed your opinion about the appropriateness of a CMP for MPI?

MS. ANDREA SHERRY: No.

THE CHAIRPERSON: All right. Once again --

MR. ANTHONY GUERRA: Oh, my apologies. I'm sorry --

THE CHAIRPERSON: Capital Maintenance Provision?

MR. ANTHONY GUERRA: Capital Maintenance Provision.

THE CHAIRPERSON: Or Capital Management Plan?

MS. ANDREA SHERRY: Okay.

THE CHAIRPERSON: Capital Maintenance

Provision. Okay. I just want to make sure for the transcript because --

MR. ANTHONY GUERRA: Hard knocks.

THE CHAIRPERSON: Okay.

CONTINUED BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: Now, I would like to take you to the report that was prepared -- the CMP report that I referred to earlier. I -- I define that as a term so I'm going to stick with that.

And, in particular, can I turn your attention to page 6? I believe that's CAC Exhibit Number 9, Ms. Schubert.

Now, I'm looking at -- looking under heading number 7, The Introduction of a CMP in the 2019 GRA.

MS. ANDREA SHERRY: M-hm.

MR. ANTHONY GUERRA: Now, the -- the first paragraph there says:

> "With a CMP in place, the Corporation is building capital by collecting extra premium from those policyholders in place during the rating year in question. The capital collected is built up until

a rebate is required."

Ms. Sherry, can you explain to -- to me and to -- to the Board how a CMP builds up capital until a rebate is required?

MS. ANDREA SHERRY: My understanding of the CMP was that it would be collected now and the RSR would be larger because the CMP was there and that it could be applied for up to a point where the RSR would actually be above the range calculated.

MR. ANTHONY GUERRA: Okay, but you'd agree with me that -- that scenario that you've talked about doesn't happen unless there's a change in the risk profile that lowers -- the -- the higher end -- the upper threshold RSR target, correct?

MS. ANDREA SHERRY: That could be unless a CMP was asked for in future rate applications as well.

MR. ANTHONY GUERRA: To -- to build up the RSR above the upper threshold?

MS. ANDREA SHERRY: Or just to get it close enough that it could potentially go above the thresholds.

MR. ANTHONY GUERRA: I want to draw your attention to CAC Exhibit Number 27, that's the presentation that you provided or -- or presented on

the -- on the Capital Maintenance Provision, and in particular slide number 8, Ms. Schubert?

(BRIEF PAUSE)

MR. ANTHONY GUERRA: Sorry. I may have given you the wrong indication here.

(BRIEF PAUSE)

MR. ANTHONY GUERRA: It's the Capital Maintenance Provision presentation. It's the heading that is -- I have it as slide 8, but perhaps I'm wrong. And the CMP does not align with -- yes, that's right. Thank you.

So the heading says The CMP Does Not Align With the Board Approved Methodology for Calculating the Amount of Capital the Corporation Requires, nor is it consistent with the work to date.

And in point 1 you -- you go on to state:

> "A great deal of work has been done on the use of the DCAT to set the RSR range."

Ms. Sherry, you -- you're not saying

that MPI is seeking to replace the DCAT established targets with the CMP, are you?

MS. ANDREA SHERRY: What I'm saying is that a great deal of work has been done to use the DCAT so set the RSR range, which is the determination of whether the Corporation holds adequate capital.

MR. ANTHONY GUERRA: You're aware, however, though, that MPI does plan to continue using the DCAT analysis to confirm the most appropriate RSR targets, correct?

MS. ANDREA SHERRY: Correct. What I'm saying here is that the CMP or the Capital Maintenance Provision does not align with that. Does not align with all of the work that we've done to determine where the capital of the Corporation needs to be.

MR. ANTHONY GUERRA: Okay, I want to shift your attention now to the discussion about the Minimum Capital Test, or MCT, to determine the RSR, Rate Stabilization Reserve targets.

Ms. Sherry, you would agree with me -- or sorry, Dr. Simpson, this may also pertain to your evidence as well, you would agree with me, though, that absent significant changes in the risk profile of the Corporation, the Minimum Capital Test accurately estimates the RSR targets in future years based on

growth on the balance sheet.

MS. ANDREA SHERRY: I actually would not agree with that. I would say that the MCT, as I stated earlier, is an Office of the Superintendent of the Financial Institute to determine the capital adequacy of private companies and whether they are at risk of insolvency.

The risk margins set out in the MCT are set with that in mind, based on data from private companies. I cannot say that it applies to a monopoly Crown Corporation.

MR. ANTHONY GUERRA: I am going to draw your attention to the -- sorry, I'm sorry.

MR. WAYNE SIMPSON: I just thought I'd add that I think what the DCAT is showing in recent years is precisely that that's not correct.

In other words, you said other things held the same ceteris paribus assumption, but other things are not the same. The risk challenges facing MPI are changing and the claims scenario, the high loss ratio scenario has now become the most important scenario in place of the interest rate decline scenario, which in turn replaced the equity decline scenario.

And what we've seen, perhaps a pat on

the back to MPI's own operations in terms of asset liability management, is that they've reduced some of the risks in that area, so that the equities and interest rates are not as serious risks, with the result that overall the risks facing the Corporation appear to be declining and appear to be emphasizing more of the claims risk.

So the idea that the MCT could pick up any of this seems to me to be -- shown to be incorrect.

DR. BYRON WILLIAMS: Mr. Guerra, I apologize for interrupting.

Dr. Simpson did use a Latin term and just for the court reporter, I wonder if you could spell it, and then I do apologize for interrupting, sir.

MR. ANTHONY GUERRA: Not at all.

MR. WAYNE SIMPSON: Economists use the term ceteris paribus C-E-T-E-R-I-S space P-A-R-I-B-U-S or at least older economists like me, to simply mean that other things held constant, and that the statement essentially said, well, if nothing changes from year to year, you might use the MCT levels that you've established from the DCAT for the lower and upper threshold at one point in time to project

forward what the -- what the threshold should be at some future point in time.

Just as in exact parallel you could use the POP, the Percentage Of Premiums approach to do that. The -- the 10 percent, 20 percent of underwriting income of the POP approach again, could be projected forward and would give you some measure of, as the Company grows, how this presumed need for protection against risk would grow.

But it bears no relationship to the actual risks facing the Corporation that have been dented -- identified by the DCAT, and in fact those MCT levels associated with the upper and lower thresholds will be changing over time and have been changing, based on changes in the risk profile letter identified by the DCAT.

MR. ANTHONY GUERRA: Thank you, I appreciate your answer and certainly won't quarrel with you in any accolades to -- to MPI in terms of its asset management.

But I do want to bring your attention to the DCAT chapter of the application, and in particular figure number 10. Ms. Schubert, if you can pull that up and I apologize for not giving you that in advance.

(BRIEF PAUSE)

MR. ANTHONY GUERRA: It should be on page 14 at the bottom of the -- yeah. There we go, thank you.

So, Dr. Simpson, my understanding is that this figure shows a comparison of the upper and lower DCAT targets for the 2018 and 2019 General Rate Application years. Do you see that?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And what I think you'll agree with me on is that the total equity position from those years does change quite dramatically between 2018 and 2019, but when comparing the lower RSR targets, both the MPI and the PUB proposed targets, there is a very minute shift in the MCT ratio, correct?

DR. WAYNE SIMPSON: In minute you mean 3 or 4 percent?

MR. ANTHONY GUERRA: Yes.

DR. WAYNE SIMPSON: Sure. Can I add something? Are you going further with this figure or is that the end of the question?

MR. ANTHONY GUERRA: That -- that was

the end of my question, Dr. Simpson.

DR. WAYNE SIMPSON: Could I point something else out?

MR. ANTHONY GUERRA: Yes.

DR. WAYNE SIMPSON: The -- the lower RSR target for both MPI and PUB is based on the DCAT methodology and is identifying declining risk.

The upper RSR target PUB is also identifying declining risk from 325 to 251, the MCT falls accordingly.

The upper RSR target from MPI also shows supposedly declining risk, but this -- the only reason it's doing that is because the MCT ratio has been arbitrarily adjusted from 100 percent to 85 percent.

I'm curious to know why that was done, but my obvious presumption is that as the DCAT identifies declining risk profile of the Corporation, they felt that the 100 percent MCT ratio didn't adequately reflect that. But that's -- that's a pretty arbitrary assumption, and it's only informed by the DCAT.

MR. ANTHONY GUERRA: I appreciate that. Thank you.

Ms. -- Ms. Sherry, if I can direct your

attention to the presentation that was provided on the DCAT, and in particular slide number 5, please.

So we -- we heard testimony this morning from -- from you that MCT is a test for -- for private insurance companies in a competitive industry, correct?

MS. ANDREA SHERRY: Correct.

MR. ANTHONY GUERRA: And my understanding is that your -- your position is that the MCT is not appropriate for -- for MPI because MPI has a different set of risk profiles or different risk profile than those private insurers?

MS. ANDREA SHERRY: To be clear...

MR. ANTHONY GUERRA: Yes.

MS. ANDREA SHERRY: ...I believe that MPI faces all of the risks of any other property and casualty insurer.

However, the calculation of the margins to determine how much capital should be held for those risks are not necessarily in line with the Minimum Capital Test calculation of the margins for those risks because the MCT was -- was set up or created to ensure that private companies do not go insolvent.

So the risk margin calculations are based on private company data and expectations that

are not necessarily applicable to a Crown monopoly.

MR. ANTHONY GUERRA: And fair enough. I'd like to draw your attention, Ms. Sherry, to MPI Exhibit Number 18, which was an Information Request that was made by MPI, it's MPI-CAC-1-1, and in particular I'm looking at page 3 of that Information Request.

So Ms. Sherry, you were asked to identify the specific risks facing MPI that are not captured in the MCT, and my understanding, your response is really the last sentence of that paragraph A, which is to say, the point is that the MCT is a solvency test and that is not applicable to monopoly Crown insurers. That's consistent with what I just heard you say, correct?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: So your concern is not necessarily that the MCT fails to capture the risks faced by MPI, but that it's a solvency test and MPI never really can be insolvent?

MS. ANDREA SHERRY: There's two (2) pieces to that.

The first is that the risks outlined in the MCT are those faced by property and casualty insurers in Canada. And those risks, MPI would have

those risks as well.

However, the calculation of the MCT and what it is -- the way it is calculated, the way the risk margins are determined and the purpose of that test is not for a monopoly Crown company such as MPI.

If MPI wants to use the MCT they would have to look at how all of the risk margins were calculated, what data they were based on, everything else. There are differences from a private to a public company.

MR. ANTHONY GUERRA: I would submit to you, though, that the risk margins are actually calculated in exactly the same way. So you -- you wouldn't agree with that, correct?

MS. ANDREA SHERRY: I think that the risk margins would have to be reviewed very carefully to be used for a Crown.

MR. ANTHONY GUERRA: And you agree with me that the private insurers who use the MCT test typically have ratios in excess of 150 percent?

MS. ANDREA SHERRY: Yes.

MR. ANTHONY GUERRA: You would also agree with me, though, that the Dynamic Capital Adequacy Test, or the DCAT, is -- is also in itself a test to assess the risk of insolvency for a

Corporation like MPI, correct?

MS. ANDREA SHERRY: Sorry. Can you repeat the question? I want to make sure I heard it properly.

MR. ANTHONY GUERRA: You'd agree with me that the DCAT or Dynamic Capital Adequacy Test is in it -- itself a test to assess the risk of insolvency for a Corporation like MPI?

MS. ANDREA SHERRY: I don't necessarily think of the DCAT as an insolvency test, I think of it as a way for a company to ensure that it knows where its risks are most prominent and that the company can take action to reduce their risk in a private environment.

MR. ANTHONY GUERRA: The DCAT, though, in this case, was commissioned to assess the future financial condition of Basic, was it not?

MS. ANDREA SHERRY: MPI built a DCAT model to look at where the RSR should be to ensure that the Company had enough capital to cover those risks.

MR. ANTHONY GUERRA: I.e., forestall insolvency.

MS. ANDREA SHERRY: Again, I don't think of MPI as going insolvent. That's not what I

would say.

MR. ANTHONY GUERRA: And that's because if MPI were to become insolvent or were to have insufficient capital to pay its debt as it arose, your position is that the Government of Manitoba would be able to swoop in and pay those debts, correct?

MS. ANDREA SHERRY: The reason I don't think of MPI going insolvent is because you have a yearly process where you come before the Public Utility Board, and that yearly process allows the review to occur and if there was the threat of insolvency of MPI, I'm sure that the Public Utility Board would allow them to take some rate in that year.

But ultimately, I don't think of MPI as having the ability to go insolvent in the same way as a private company would, because the private company would have such -- more of an economic impact on the Canadian economy, potentially, and again to your -- I agree with what you said in the sense that you are backed by the taxing authority of the Government of Manitoba.

MR. ANTHONY GUERRA: So, I mean really, at the end of the day, the insolvency position of MPI is really only a concern of -- if the solvency position of the Government of Manitoba became a

concern, correct?

MS. ANDREA SHERRY: I would certainly hope it doesn't get to that point.

And again, I would say because you come here every year, the Public Utility Board is not going to let MPI go insolvent. But I suppose if the absolute worst thing were to happen and the Government of Manitoba went insolvent, then yes, MPI would be insolvent.

MR. ANTHONY GUERRA: And I appreciate that, it's unlikely that that would happen, but...

MS. ANDREA SHERRY: Yes.

DR. WAYNE SIMPSON: These are the implausible catastrophe scenarios that I was referring to in my presentation.

MR. ANTHONY GUERRA: Implausible that the Government of Manitoba would come to the rescue of MPI?

DR. WAYNE SIMPSON: Well, you referred to the Government of Manitoba going insolvent. I was referring to that.

MR. ANTHONY GUERRA: I see. Dr. Simpson, do you know what the interest rates are going to be on September 1st, 2019?

DR. WAYNE SIMPSON: No.

MR. ANTHONY GUERRA: And I think I heard you speak earlier about the great recession of 2008. Is that how you characterized the global economic downturn of 2008?

DR. WAYNE SIMPSON: That's how it's often characterized. The actual dating of it varies from country to country, but the only dip in GDP in Canada was, I believe 2008, yes.

MR. ANTHONY GUERRA: So you would equate that with the great recession that I think most people understand from the 1930s?

DR. WAYNE SIMPSON: No, that was called the Great Depression.

MR. ANTHONY GUERRA: My apologies.

DR. WAYNE SIMPSON: But certainly significantly more severe, and as I pointed out in previous proceedings, the -- the difference between the two (2), in fact, demonstrates what we've learned from economics and from the Great Depression in the sense that I think the monetary policy responses, not so much of Canada, but around the world and in particular in the United States, quantitative easing, low interest rates was exactly the prevention of -- of large banks failing, too big to fail.

All were evidence that we weren't going

to repeat the same mistakes which made something like the Great Depression less likely to ever occur.

MR. ANTHONY GUERRA: So, going forward, are you okay then using the term "great recession" to describe the events of 2008?

DR. WAYNE SIMPSON: Yes, that's -- that's been used quite widely.

MR. ANTHONY GUERRA: And -- and you're okay with -- with that description or that title?

DR. WAYNE SIMPSON: Yes, with the -- perhaps the caveat that the -- in Canada the recession, and particularly in Manitoba, the recession was really neither particularly deep nor prolonged, both because of the nature of our banking system and the nature of the Manitoba economy.

MR. ANTHONY GUERRA: You would agree with me though, Doctor, that the great recession from 2008 resulted in a period where it was difficult for the major banks to accurately forecast interest rates, correct?

DR. WAYNE SIMPSON: They overestimated interest rates based on the -- their experience and their forecasting models, yes.

MR. ANTHONY GUERRA: And an overestimate of interest rates is -- is not an

accurate forecast, correct?

DR. WAYNE SIMPSON: No, it's biased -- it wasn't biased upward, it was -- it was inaccurate. Yes, that's correct.

MR. ANTHONY GUERRA: The banks forecast their rates through the standard interest rate forecast, or SIRF?

DR. WAYNE SIMPSON: That's right.

MR. ANTHONY GUERRA: And they look at the Government of Canada 10-year yield rates?

DR. WAYNE SIMPSON: Sorry, let me backtrack. The -- the bank interest rate forecasts are components of SIRF, five (5) of the six (6) components of SIRF.

SIRF is an -- an average of the forecasts of the five (5) banks and global insight. So it's -- it's a SIRF that relies on the bank forecasts. I think you stated it the other way around.

MR. ANTHONY GUERRA: And I appreciate the clarification. And specifically what we're looking at is the Government of Canada 10-year bond yield rates, correct?

DR. WAYNE SIMPSON: The benchmark rate, that's correct.

MR. ANTHONY GUERRA: I want to draw your attention to the investments chapter, figure number 11, if I may, Ms. Schubert. Thank you.

What I understand here is this is a table showing historical analysis of the standard interest rate forecast, the 50/50 interest rate forecast and naive interest rate forecast from 2005 to 2018 GRA years.

Do you see that, Dr. Simpson?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And would you agree with me, having reviewed the numbers here, and you can take a moment if you -- if you need to, that the SIRF forecasts in the 2005 to 2016 GRA years were less accurate than the forecasts of the naive interest rate forecast in those years?

DR. WAYNE SIMPSON: In every year? Is that what you're asking?

MR. ANTHONY GUERRA: Every year, 2005 to 2016.

DR. WAYNE SIMPSON: And you're comparing the SIRF to the naive?

MR. ANTHONY GUERRA: Correct.

DR. WAYNE SIMPSON: Not -- not in 2014.

MR. ANTHONY GUERRA: Right. You're right about that, 2014 it does appear that ---

DR. WAYNE SIMPSON: So my answer is, no, I disagree.

MR. ANTHONY GUERRA: Okay, let's stop there then and go back to 2005.

You would agree with me that the SIRF forecast in 2005 was less accurate than the naive forecast in 2005?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: 2006 it was the same, the SIRF forecast was ---

DR. WAYNE SIMPSON: Yes. I'll stipulate all years to 2013.

MR. ANTHONY GUERRA: And then 2015?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And then 2016?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And looking at the 5050 forecast, the 2005 GRA, 50/50 forecast is less accurate than naive forecast?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: 2006? Less accurate?

DR. WAYNE SIMPSON: I'll stipulate all

years up to 2000 -- probably 2014 again, yes. So 2005 to 2013 they were less accurate.

MR. ANTHONY GUERRA: And then they -- they aren't less accurate in 2014, as you've correctly mentioned, but 2015 and 2016, the 50/50 forecast is less accurate than naive, correct?

DR. WAYNE SIMPSON: Yes. I would also say that especially from 2008 to 2016 this is the period where the overnight rate, and the policy rate was driven down to a very low level, .5 percent, I'm not sure if it went lower than that, to stimulate recovery from the -- the great recession.

And it's only in 2017 that that into -- overnight rate or policy rate begins to rise. It rose twice in 2017, and three (3) times in 2018.

MR. ANTHONY GUERRA: You would agree with me though, Dr. Simpson, that in the years that we referenced where the -- the SIRF and the 50/50 forecasts were less accurate than the naive forecast, that those forecasts were biased forecasts in those years, correct?

DR. WAYNE SIMPSON: Well, bias -- to establish bias you would need more than one (1) year, you can't compare things year by year and establish bias.

To establish bias you would have to show that over an extended period of time a -- a forecast produced more positives than negatives or vice versa.

MR. ANTHONY GUERRA: So when we look at the SIRF forecast, for example, in the 2005 to 2013 GRA years, and we're seeing that in every one of those instances the SIRF is off, are you saying that that's not evidence of bias?

DR. WAYNE SIMPSON: Well, there's one negative in there. You're saying that they're all positive? No, there's one (1) negative. 2010.

MR. ANTHONY GUERRA: I wasn't asking questions about positive or negative. I was asking about the bias, but you're ---

DR. WAYNE SIMPSON: Bias is about positives and negatives, right? Bias is about -- about whether the forecast errors are consistently one (1) way or the other, positives being biased upward and negatives being biased downward.

MR. ANTHONY GUERRA: That's how you define a biased interest rate forecast?

DR. WAYNE SIMPSON: That's how -- a bias would be defined by a pattern, yes.

MR. ANTHONY GUERRA: And so your

evidence is that you don't see a pattern of bias in the SIRF forecast between the 2005 and 2013 GRA years?

DR. WAYNE SIMPSON: Oh, I didn't say that. I'm saying -- you said that -- that -- you were going year-by-year. I said well, there's a negative in 2010. But there are more positives than negatives in there, yes. I can stipulate to that.

MR. ANTHONY GUERRA: Is that evidence of a bias then, sir -- doctor -- Dr. Simpson?

DR. WAYNE SIMPSON: It's evidence of the bias that generated out of the -- out of the great recession, that's correct.

MR. ANTHONY GUERRA: And the same then would apply with the 50/50 forecast in those years as well? There is evidence of a bias in that forecast, correct?

DR. WAYNE SIMPSON: Right. Although, and interestingly, the naive forecast is also biased because if, on that basis, the pattern is almost all positives as well.

MR. ANTHONY GUERRA: So my understanding is ---

DR. WAYNE SIMPSON: So they're all biased, by that standard, although that's a pretty primitive both analysis of bias and a pretty small

sample in a very specific period out of which we have recovered.

DR. WAYNE SIMPSON: Okay. My understanding, Dr. Simpson, correct me if I'm wrong, is that your -- your evidence today, your position today is that the 2017 and 2018 GRA years, now the forecasts of the SIRF in those years, are -- are superior to the forecast the naive in those years?

DR. WAYNE SIMPSON: Yes. The difference -- the forecast error, if you will, is lower in both 2017 and 2018 and one (1) is positive and one (1)is negative. Whereas the naive forecasts are both negative.

MR. ANTHONY GUERRA: And if I can just draw your attention to the presentation you gave on the DCAT, which is CAC Exhibit Number 26, slide 12.

So the -- the last paragraph of your slide there says that:

> "SIRF also pays attention to other economic signs of recovery in domestic monetary policy response by the Bank of Canada."

Do you see that, sir?

DR. WAYNE SIMPSON: Right.

MR. ANTHONY GUERRA: And you'll agree

with me that your position is that the fact that the SIRF pays attention to those economic signs of recovery in domestic monetary policy are -- are what make it more superior to the naive forecast, for example, in the 2017 and 2018 GRA years?

DR. WAYNE SIMPSON: Yes, I mean, looking ahead is one (1) of the aspects of forecasting as opposed to being blind.

MR. ANTHONY GUERRA: You would agree with me, Dr. Simpson, that the SIRF has always paid attention to economic signs of recovery in domestic monetary policy though, correct?

DR. WAYNE SIMPSON: Yes, it -- I would presume so, yes.

MR. ANTHONY GUERRA: So it would've done so in the 2005 GRA -- GRA year, for example?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And it would have done so in the 2006 GRA year, for example?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And it would have done the same thing up until the 2013 GRA year, for example?

DR. WAYNE SIMPSON: Sure. I'm assuming they take all of the information, you know,

the banks have a large stake in getting interest rates right and I suspect they devote considerable resources and hired reasonably talented people to -- to do these things, and -- and, therefore, they would take into account all of the information available to them, including any signs from the Bank of Canada that they were changing their stance or position, which probably there weren't many signs during the period from 2008 through to 2016, although you'd have to go back through the -- the Bank of Canada's reports to substantiate that.

MR. ANTHONY GUERRA: Ms. Schubert, can you put back investment figure number 11, please? Yes, thank you.

The period before the 2008 recession, which is shown on this -- in this table, is the 2005 GRA to the 2007 GRA, 2008 GRA.

Would you agree with that, Dr. Simpson?

DR. WAYNE SIMPSON: Right.

MR. ANTHONY GUERRA: And you would agree with me at that point in time the SIRF forecast and the 50/50 forecasts are still less accurate than the naive forecast, correct?

DR. WAYNE SIMPSON: Yes, they are.

DR. BYRON WILLIAMS: I just -- I just

want to make sure that the premise isn't that Manitoba Public Insurance was using the SIRF premise, the SIRF forecast for the GRA's in 2005 through 2008, because I believe the evidence of Mr. Johnston would've been different then that.

So that's just the -- in -- I just want to make sure that that premise isn't being advanced.

MR. ANTHONY GUERRA: I have not advanced that premise, but thank you, I appreciate the -- the comment, Mr. Williams.

CONTINUED BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: My understanding, Dr. Simpson, is that you're not here today to advance or advocate MPI's use of the SIRF in the 2019 GRA, correct?

DR. WAYNE SIMPSON: I'm advocating that the SIRF -- I guess I'm advocating two (2) things. I'm advocating that the -- the SIRF is better than the naive forecast, and that it should be part of the interest rate forecast and that existing Board order for 50/50 is certainly better than the naive for that reason.

MR. ANTHONY GUERRA: But you're not -- your presentation does not say that you recommend that

the Board should apply the SIRF forecast in this rate application year, correct?

DR. WAYNE SIMPSON: That is correct.

MR. ANTHONY GUERRA: In fact, it advocates for the use of the 50/50 forecast, correct?

DR. WAYNE SIMPSON: I wasn't thinking of other alternatives, then, sir, 50/50 or naive, no.

MR. ANTHONY GUERRA: But it advocates for use of the 50/50 forecast, correct?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And that's because your opinion is still that the banks remain too optimistic about the growth of interest rates, correct?

DR. WAYNE SIMPSON: I think that's part responding to the existing conditions, which is, is the Board Order for 50/50.

And perhaps a little bit of caution, as I said in my presentation, if I were allowed to pick weights, that they probably wouldn't be 50/50. But I would give more weight to the SIRF than the naive because I think it -- I think it's a better forecast for the reasons I've indicated.

MR. ANTHONY GUERRA: Sorry, is it your evidence that the reason why 50/50 is recommended is

that that was contained in the Board Order from the last rate application year?

DR. WAYNE SIMPSON: Yes, I've taken that as one of the three (3) options.

MR. ANTHONY GUERRA: And is it your evidence then today, sir, that -- that despite the -- the Board Order, the better approach is actually the SIRF forecast?

DR. WAYNE SIMPSON: If I were given a choice between the SIRF and the naive that would -- that would definitely be the case, yes. I would -- I would say the SIRF is a better forecast than the naive under the current circumstances.

MR. ANTHONY GUERRA: Is the SIRF forecast, though, better than the 50/50 forecast for this rate application year?

DR. WAYNE SIMPSON: I have not made that claim.

MR. ANTHONY GUERRA: But you recommend it, sir?

DR. WAYNE SIMPSON: I'm sorry, I recommend?

MR. ANTHONY GUERRA: 50/50?

DR. WAYNE SIMPSON: I recommended 50/50, yes.

MR. ANTHONY GUERRA: Are you not then saying with your recommendation that you believe that that's the best interest rate forecast?

DR. WAYNE SIMPSON: Well, I -- I have -- I have stated that I recommend the 50/50 in part, simply because I don't think the naive forecast is a reasonable forecast to use under these circumstances.

I think I'll just leave it at that.

MR. ANTHONY GUERRA: So figure 11, which is on the -- on the screen right now, does reference the -- the last two (2) GRA years, so, 2017 and 2018.

And -- and when I look at the -- the comparison between the SIRF forecast and the 50/50 forecast, what I understand is that in the last two (2) GRA years the 50/50 forecast has, in fact, been less accurate than the SIRF forecast.

Is that not correct?

DR. WAYNE SIMPSON: You're correct.

MR. ANTHONY GUERRA: Is it my understanding, Dr. Simpson, that your position is that there was a correlation between the overnight interest rate from the Government of Canada, or the Bank of Canada, I should say, and increases in the Government of Canada's 10-year bond yields?

DR. WAYNE SIMPSON: Based on my reading of the bank's policy and -- and the evidence that they have before them, yes.

MR. ANTHONY GUERRA: Okay. And I would like to draw your attention to CAC Exhibit number 26, which is that the DCAT presentation, and in particular, slide number 14, Ms. Schubert. Thank you.

So what we see from your presentation is that there's a table showing the correlation between the overnight rates and the Government of Canada 10-year bond yields for the -- the last two (2) years.

Do you see that, Dr. Simpson?

DR. WAYNE SIMPSON: Yes. Since -- since the bank -- well, you can see where the bank started increasing the policy rate where the first step occurs.

MR. ANTHONY GUERRA: You would agree with me, though, that when establishing the break-even rate indication, MPI forecast interest rates for the twelve (12) to eighteen (18) month period in advance -- or sorry, that follows because of the new money yield that is used for setting rates that are calculated, in this case, September 1st, 2019.

DR. WAYNE SIMPSON: Right. And for

the DCAT they forecast out four (4) years, right?

MR. ANTHONY GUERRA: Right. So for the break-even rate indication the -- the important period to look at is the twelve (12) to eighteen (18) month period, correct?

DR. WAYNE SIMPSON: Okay.

MR. ANTHONY GUERRA: You would agree with that?

DR. WAYNE SIMPSON: Yes.

MR. ANTHONY GUERRA: And you would also agree, though, that it's possible for the overnight rate to increase and the Government of Canada 10-year bond yield to decrease within that twelve (12) to eighteen (18) month period, correct?

DR. WAYNE SIMPSON: I -- I don't see where you see that.

MR. ANTHONY GUERRA: Well, I'm going to draw your attention to CAC Exhibit Number 5, which is an Information Request response to CAC-MPI-2-1.

DR. WAYNE SIMPSON: I'm just eyeballing this -- this graph. What -- what period are you referring to?

The first step increase occurs, and if you look out twelve (12) or eighteen (18) months, the -- the blue line, squiggly line, is higher than it was

at that point.

I mean, where in that -- where in those two (2) lines are you -- are you -- even if you're cherry picking the numbers, which I suspect is what's happening, I don't see where that is happening, but you're going to tell me.

MR. ANTHONY GUERRA: Well, yeah, I'm going to tell you to look at CAC Exhibit Number 5.

DR. WAYNE SIMPSON: Okay.

MR. ANTHONY GUERRA: Which is the Information Request response to CAC-MPI-2-1, and in particular, figure number 2.

My understanding, Dr. Simpson, is those are the instances where the overnight rate increase resulted in a decrease in the Government of Canada 10-year bond yields in a twelve-month period.

Do you see that?

DR. WAYNE SIMPSON: So what -- what are we looking at? We're looking at specific instances where -- because the -- the 10-year bond rate moves around a great deal, and these are what; they're daily rates?

They're picking a specific date? Yes, it looks like they're specific daily rates. That's a lot of volatility in the 10-year bond yield, which I

wouldn't think would be the basis for a forecast.

As I said before, when you look at the data the blue line moves around a lot because it's -- it's very short -- high frequency data, and the -- the red line doesn't move very much, because it's policy data. It's the Bank of Canada settings, which are only a set number of times a year.

And there's a clear pattern to both of those, which is upward in -- recently, but because the -- the squiggly line, the blue, -- the blue line moves around a lot, you probably can find specific times and it looks like you're suggesting October 29 -- 2009 to October 2010, which is not in that graph, of course, where -- where that -- that may have occurred.

But I don't see anything there between -- well, whatever the start of that graph was, 2016/2017 and -- and the current date.

So I -- this is -- sure, this -- this can happen. It won't happen if you -- if you look longer term, lower frequency data, if you use monthly or annual averages, that will not happen. And, of course, we're looking forward in forecasting, you know, reasonably -- reasonably low frequency data, I would say.

In other words, monthly or annual. But

there's no -- there's no data there that refers to the -- the graph you were showing before.

MR. ANTHONY GUERRA: So your -- your position, though, is that in the case of interest rate forecast it's important to look forward, correct?

DR. WAYNE SIMPSON: Interest rate forecasts look forward, yes.

MR. ANTHONY GUERRA: We shouldn't consider the history, and in this case the history before the 2017 GRA, correct?

DR. WAYNE SIMPSON: Oh, forecasts are based -- are based on -- on more than just one (1) or two (2) years. They're based on experience.

Actually, the Bank of Canada's forecasts -- not Bank of Canada's. The Canadian Banks' forecasts and the Bank of Canada's forecasts would be based not only on historical record, but they'd be based on their modelling of the Canadian economy. And the modelling of the Canadian economy would include, among other things, the monetary policy and the Bank of Canada's responses to changes in economic conditions.

That would probably be more important than -- than data going back to 1994, but the structure of the economy would be estimated using a

large volume of past data, and then the models would generate what they think is the future progress of interest rates.

So it wouldn't be the kind of simplistic forecasting that is done by looking at -- at simply the pattern of rates that have occurred over some specified period, it's based on -- on modeling the Canadian economy.

MR. ANTHONY GUERRA: Thank you, Dr. Simpson.

Ms. Sherry, are you aware of any instances -- sorry, before I -- before I say that, do you recall how many times you've -- you've appeared before the Board to provide advice as an expert?

MS. ANDREA SHERRY: I believe this is my third (3rd) year at the hearing. I'm looking at Byron because -- is it three (3) years or four (4) years?

MR. ANTHONY GUERRA: So it's been a few years now, correct?

MS. ANDREA SHERRY: It's been a few years, yes.

MR. ANTHONY GUERRA: Ms. Sherry, are you aware of any instances where you have not challenged an assumption or made a recommendation and

a GRA, or Generate Rate Application, that would have supported a higher rate indication?

MS. ANDREA SHERRY: I know that there have been instances where I've found things in the GRA that could potent -- that I felt should be changed that might increase the indication, but not materially. And it certainly wasn't what I felt was the most important component of my review.

MR. ANTHONY GUERRA: Thank you. Just one moment, please.

(BRIEF PAUSE)

MR. ANTHONY GUERRA: Thank you, Dr. Simpson, Ms. Sherry, those are my questions.

MS. ANDREA SHERRY: Thank you.

THE CHAIRPERSON: Thank you.

We'll adjourn for lunch for an hour. Thank you.

--- Upon recessing at 12:15 p.m.

--- Upon resuming at 1:16 p.m.

THE CHAIRPERSON: If everyone's ready, Mr. Watchman...?

CROSS-EXAMINATION BY MR. ROBERT WATCHMAN:

MR. ROBERT WATCHMAN: Thank you, Mr. Chair. Good afternoon, Ms. Sherry, Dr. Simpson. I have a few questions for you about the two (2) reports that were filed, and please either feel free to respond to the question as you think appropriate.

And I would like to start with your report on the Capital Maintenance Provision. So if we could have that -- for the record, it's CAC Exhibit 10.

And just turning to the second page, we see the first -- halfway down the page, the first issue that's listed there:

> "The CMP was never approved by the PUB nor was consensus reached on it by the stakeholders."

You see that there?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: And I'm just going to focus on the -- the first part of that title, the CMP or Capital Maintenance Provision was never approved by the PUB.

And why do you say that this is an issue with the introduction of a Capital Maintenance Provision in the 2019 GRA?

MS. ANDREA SHERRY: For me the issue was that I felt it was implied in the GRA that the Capital Maintenance Provision was approved and consensus was reached. And, I wanted to make it very clear that that was not the case. That was my right thought there.

MR. ROBERT WATCHMAN: All right. So approved as a result of the technical conference that was held?

MS. ANDREA SHERRY: No, I was thinking more of the Board Order where the Board says that it supports the Corporation's needs to keep its capital level where it should be and that that was not, in my mind, an approval.

MR. ROBERT WATCHMAN: So you're not aware of anything that would preclude to the Corporation from presenting a Capital Maintenance Provision in a GRA application?

MS. ANDREA SHERRY: No.

MR. ROBERT WATCHMAN: Now, at -- towards the bottom of the page, just about five (5) or six (6) lines down, there's a sentence that reads:

> "On review of the transcript of this technical conference and the notes distributed, it is clear that no

consensus was reached and the exchanges did not indicate that MPI would introduce a CMP in the 2019 GRA."

Can you tell us then what were your expectations with respect to a Capital Maintenance Provision in the 2019 GRA?

MS. ANDREA SHERRY: My impression from reading the transcript and Wayne can comment on that as well, was that it was still an idea, just an idea, potentially for discussion in relation to the RSR as part of this year's application.

But I did not expect there to be a Capital Maintenance Provision built into the application this year. That was my impression.

MR. ROBERT WATCHMAN: Yes, understood. Can you indicate what you anticipated would be the next steps in the process?

MS. ANDREA SHERRY: Potentially discussion at this year's hearing, and -- and perhaps another technical conference because I didn't feel -- I didn't interpret the transcript to show that it reached a point of clarity.

MR. ROBERT WATCHMAN: Now just skipping a few lines ahead. There's a sentence that

reads:

"The technical conference did not conclude that a CMP, or Capital Maintenance Provision, was required in addition to the RSR, Rate Stabilization Reserve."

Can you tell us in what respect the proposed Capital -- and Capital Maintenance Provision is in addition to or additive to the Rate Stabilization Reserve.

MS. ANDREA SHERRY: Sure. So the RSR range which we're not actually at a place of certainty with how that would be set, but the RSR if in the proper range would be enough to cover its purpose, what the purpose of the Rate Stabilization Reserve is. And that would stand on its own and then the Capital Maintenance Provision would be on top of that to maintain the minimum capital test ratio for the Corporation over the projected two (2) year period.

MR. ROBERT WATCHMAN: Okay. Now, and just for the sake of the record, when we referred to RSR range, more accurately, what we're talking about is the Basic total equity target capital range, correct?

MS. ANDREA SHERRY: Correct.

MR. ROBERT WATCHMAN: And just continuing over to the top of the next page, the second issue listed there is:

"The CMP has not been vetted by the public."

And I take it that you are advocating for public consultation before the Corporation came forward with the cap -- Capital Maintenance Provision -- provision -- proposal.

MS. ANDREA SHERRY: I am, yes.

MR. ROBERT WATCHMAN: And if we look down on that page, the third paragraph under Issue 2, and there is reference there to the Capital Maintenance Provision we understand is in use by Saskatchewan Government Insurance?

MS. ANDREA SHERRY: M'hm.

MR. ROBERT WATCHMAN: And in the second sentence there you say:

"This is not valid because SGI does not put through rate changes every year and their methodology has only been reviewed in one (1) rate program 2014."

Can you tell us why that's an issue with the introduction -- why you believe that that

would be an issue for the introduction of a Capital Maintenance Program in respect of the Manitoba...?

MS. ANDREA SHERRY: So really speaks to my main point is that MPI comes to the Public Utilities Board every year with the full analysis of their results, a full analysis of their capital position and can every year ask the Public Utility Board for a rate increase if they need more capital, or -- really, if they need more capital. So -- or their rates are inadequate at that time.

My point is that the SGI, the Saskatchewan Government Insurance, they do not go every year to any sort of Public Utility Board for a rate increase or to do a full analysis of their program. They don't have an application anywhere near of the -- anywhere near the thoroughness of MPI's and, again, they don't -- they don't produce any application every year.

So I can't speak to Saskatchewan Government Insurance's particular situation but they don't get that opportunity every year to ask for a rate increase. So, potentially, they need some sort of Capital Maintenance Provision because there are years between rate applications. It's -- it's two (2) very different situations.

MR. ROBERT WATCHMAN: Thank you. And you go on in that paragraph to state:

"It has -- it has not been put through Saskatchewan Capital -- Capital Maintenance Provision] -- it has not been put through any sort of public review in Saskatchewan."

But it -- was it -- is it not reviewed by the Saskatchewan Rate Review Panel.

MS. ANDREA SHERRY: It was in 2014, from what I understand, that was the only year and --

MR. ROBERT WATCHMAN: And --

MS. ANDREA SHERRY: -- and it was the first year that the idea was put forth.

MR. ROBERT WATCHMAN: And is that not a form of public review?

MS. ANDREA SHERRY: Yes, the Public Utility Board, this is a forum for public review hear and every attempt is made to make sure that the public knows about these hearings and can attend, can read the transcripts on line, et cetera.

What I was more alluding to was potentially focus groups; finding out what the public actually thinks prior to going forward with something

like this.

MR. ROBERT WATCHMAN: And, Kristen, if we could just scroll down to the bottom of that page under the third issue.

> "The CMP does not align with accepted actuarial practice in Canada."

And in the last sentence on that page you indicate that:

> "This response makes it clear that the use of a CMP, Capital Maintenance Provision, is not normal actuarial practice and is not supported by any type of analysis or research in the industry."

See that?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: And I take it you based that conclusion on the response that was received from MPI to CAC(MPI)-178?

MS. ANDREA SHERRY: Partly, yes.

MR. ROBERT WATCHMAN: Partly. And were there other reasons for you to make that conclusion?

MS. ANDREA SHERRY: Well, it really

came out through the Information Requests received that when I gave it more thought in terms of the actuarial standards of practice and that's why I say it does not align because the standards of practice do not talk about any sort of capital load and no actuary doing actuarial rate indications based on the standards of practice would include a capital load, when they do that rate indication.

So, the fact that there is no -- nothing in the standards to say Add a capital load to your rate indication, to me, implies that adding one does not follow the actuarial standards of practice and I've never -- the comment here makes it very clear, I would never see that done.

MR. ROBERT WATCHMAN: Now, does the concept of a Capital Maintenance Provision arise or commonly arise in the competitive automobile indus -- insurance industry?

MS. ANDREA SHERRY: No.

MR. ROBERT WATCHMAN: And are you aware of any private sector automobile insurance company in Canada using a Capital Maintenance Provision.

MS. ANDREA SHERRY: No.

MR. ROBERT WATCHMAN: So then should

private sector practices, in this regard, necessarily dictate what would be an appropriate practice for MPI Basic?

MS. ANDREA SHERRY: We've done a lot of work moving towards rate making on accepted actuarial practice. It's only been one (1) or two (2) years where we've actually had that.

I think that that move was very important to help bring stability in terms of the projection period that you had to do to get to an indication. So, I think that to see -- adding a Capital Maintenance Provision just takes away from the progress that we've made in terms of moving to accepted actuarial practice.

MR. ROBERT WATCHMAN: Okay. Let me approach it from a different perspective.

Would normal actuarial practice in Canada with respect to a Capital Maintenance Provision more properly evolve from practices of public sector automobile insurers in Canada. So, namely, the four (4) that we know of: Insurance Corporation of British Columbia, Saskatchewan Autofund --

MS. ANDREA SHERRY: I think that the public companies, you just mentioned are -- are very different from MPI and that has to be taken into

consideration. I don't think just because one (1) of them does it MPI should do it.

I just talked about a difference with SGI in terms of their filing processes and that they don't have a rate application every year; that's a huge difference because they don't have that opportunity to come back.

ICBC is a very different product, completely different product than what MPI has and I'm not sure of their filing procedures to be honest with you, but I think that it -- your -- just because they're public companies doesn't mean that their processes should be the same, and I would say that MPI's processes are the most advanced if you look at the public companies so.

MR. ROBERT WATCHMAN: Okay but --

DR. WAYNE SIMPSON: Could I add something here?

MR. ROBERT WATCHMAN: Certainly.

DR. WAYNE SIMPSON: I think what we've tried to say elsewhere is that we don't think that the process is like -- well, the MCT, for example, should be applied to a Crown monopoly when it's appropriate for a -- a private insurer in a competitive setting. And I don't see anything in that distinction that

suggests that, you know, a Capital Maintenance Provision would more naturally come out of a -- a public setting than a private one.

The -- in the private setting, they can't make their own rates because they've got to be competitive and in a private setting they can go under if they are undercapitalized, but neither of those things really apply in a public setting and -- and those arguments, therefore, wouldn't be valid for the establishment of a CMP.

MR. STEVE SCARFONE: Sorry to interject to, Mr. Watchmen. Mr. Chairman, I just want to caution the Board in having the comments of Dr. Simpson tempered somewhat with -- remembering what he's been qualified to give expert evidence on.

I don't think the Board should entertain his comments as it concerns the proper capitalization of an insurance company.

THE CHAIRPERSON: That's fine, Mr. Scarfone, and, you know, quite frankly, if you want to bring that to our attention as well in final argument --

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: -- I think that would be appropriate.

MR. STEVE SCARFONE: Thank you.

DR. BYRON WILLIAMS: I just -- Mr. Chair, if I might, I'll just say that Dr. Simpson's expertise in applied econom -- econometrix speaks to risk and as they apply to firms in the marketplace and I think that's exactly the type of conversation that he's making.

THE CHAIRPERSON: Well --

DR. BYRON WILLIAMS: But we'll both speak to it at clos --

THE CHAIRPERSON: Well, there's two (2) ways of doing it, I can make a ruling on it now where we can move forward with the -- with the evidence and at the time of final submission, we can -- you can have the position of both parties because this may not be the final -- final argument on -- on the scope of testimony.

DR. WAYNE SIMPSON: Yeah, I'm sorry, if I was overstepping my bounds. I -- I intended it to be more comment about industrial organization and the difference between competitive firms and a private industry and -- and public monopolies which is a -- something economists talk about quite a bit.

CONTINUED BY MR. ROBERT WATCHMAN:

MR. ROBERT WATCHMAN: Thank you. Ms. Sherry, now you understand that the individual who provided information about the Saskatchewan Autofund Capital Maint -- Maintenance Provision was Mr. Chris McCullough.

MS. ANDREA SHERRY: M'hm.

MR. ROBERT WATCHMAN: And that he is an actuary?

MS. ANDREA SHERRY: Yes, I know Chris quite well.

MR. ROBERT WATCHMAN: Okay. And is it your position then that his work is not compliant with accepted actuarial practice in Canada because of -- because it includes a -- a Capital Maintenance Provision?

MS. ANDREA SHERRY: I don't want to say that it's not compliant because the standards of practice do not say anything about a capital load. I would say that it does not align. And I'm not sure how Saskatchewan Government Insurance, if they do their -- how they build that -- the CMP into that. I would have to look at that.

I certainly would never say Chris is not compliant.

MR. ROBERT WATCHMAN: Now -- but do

you accept that a normal practice could develop amongst the public automobile insurers in Canada as contrasted with the private sector automobile insurers in Canada?

MS. ANDREA SHERRY: It would definitely be possible to work on something that would apply to a Crown monopoly. It's difficult because, as I said, the product's difference in BC. Unless you had a process that was more similar, it would be very difficult to do that.

MR. ROBERT WATCHMAN: Thank you. If we could just scroll down then, Kristen, to the top of the next page, and the issue there:

> "The use of an MCT target to set a CMP level is arbitrary and not Board approved."

That was -- your -- the issue as you described it?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: Now, given that the MCT or minimal -- Minimum Capital Test is an established metric of a Canadian property-casualty insurance company's relative strength, why do you say its use in relation to a Capital Maintenance Provision is arbitrary?

MS. ANDREA SHERRY: Well, there's a few reasons. One is the setting of 100 percent is arbitrary because what the proper level should be if you were to use the MCT for a public auto insurer how do you know what that should be.

The second reason is because the MCT and -- and I've talked a lot about this today, so apologies if I'm being repetitive, but the MCT was created for private insurance companies to -- to prevent insolvency that would hurt the Canadian economy. So it's -- it's to set an MCT level that would be right for a public auto insurer, I -- I don't think that's relevant.

MR. ROBERT WATCHMAN: And if I could just go -- take a step back, your comment concerning alignment with actuarial practice.

Are you saying that work can be in compliance with accepted actuarial practice, but not aligned with accepted actuarial practice?

MS. ANDREA SHERRY: Well, I'm using the word "aligned" to mean -- or saying that something is not aligned to mean that it is not mentioned.

MR. ROBERT WATCHMAN: Thank you.

MS. ANDREA SHERRY: Noncompliance would be if it is actually laid out and you do

something directly against what the directions are.

MR. ROBERT WATCHMAN: In the second paragraph under Issue Number 4, you state:

"The application

second sentence] the application does not put forth a clear explanation for the use of an MCT ratio that would be appropriate to determine a rate increase."

Do you see that?

MR. ROBERT WATCHMAN: What additional explanation do you believe would be helpful in this regard?

MS. ANDREA SHERRY: I don't know if there is a clear explanation that could be given, to be quite honest with you. But how -- to just say that we need the MCT to be at the same level one (1) year after the other and say that that's any sort of clear explanation of why that would be required, I -- I don't think it is. And that's what I was referring to in that sentence.

MR. ROBERT WATCHMAN: If I could just then refer you down to the last paragraph under Issue Number 4.

"The determination of a required

rate increase to ensure a constant MCT is contrary to the PUB's preference that the DCAT analysis be used to determine rate need based on the Corporation's risk profile."

Can you expla -- can you explain for us why you make that observation?

MS. ANDREA SHERRY: I don't have the Board Orders in front of me but there was one (1) Board order that -- actually it was -- disallowed using the 100 percent MCT as the upper. Look at Board --

"The Board withdraws its support for the use of the MCT in an MCT threshold ratio."

And that was Order 162/'16. Thank you. I knew I saw it some where. So that would be one (1) area where I was drawing from that the Board has not endorsed the MCT as -- as -- the use of the MCT at least in setting the RSR range and has endorsed this adverse scenario analysis that the DCAT provides.

MR. ROBERT WATCHMAN: Okay. And yes, and perhaps I should have focused. It's the reference there to "rate need."

Would it be more fair to say that the

PUB's stated preference was for the establishment of the Basic target capital thresholds through the adaptation of the Dynamic Capital Adequate Test?

MS. ANDREA SHERRY: Yep, potentially I wasn't as clear as I should have been there. What I was alluding to was that if the RSR range is set, and the capital of MPI is below the lower -- the minimum, then would need rate; that's what I was basing that on.

MR. ROBERT WATCHMAN: Thank you. If we could then move to the next Issue Number 5, and it reads that:

> "The CMP does not align with the Board approved methodology for calculating the amount of capital the corporation requires, nor is it consistent with work to date."

Do you see that statement?

MS. ANDREA SHERRY: I do.

MR. ROBERT WATCHMAN: And...

THE CHAIRPERSON: Sorry, Mr. Watchman, could I interrupt for a second. I just want to look at the last sentence. This is I -- I had a little confusion and I'll go into it later.

But, the heading of your -- of your

previous page. Sorry, in -- in your presentation was:

"The CMP does not align with accepted actuarial practice."

And your comment was it's -- what you meant was, it does -- it wasn't mentioned. Can you go back, Kristen, to this screen where we were.

MS. ANDREA SHERRY: So to be clear, the actuarial standards of practice lay out very clearly what an actuarial rate indication includes. It doesn't specifically say, don't include these things, but it is very clear on what should be included.

THE CHAIRPERSON: Right, okay. But -- and this isn't the page, Kristen. I think it was number 5. And here, sorry, when you say:

"The proposed CMP does not align with this directive."

What are you saying? The directive does not include the words that would capture a CMP?

MS. ANDREA SHERRY: Good point.

THE CHAIRPERSON: Yes, I mean, I'm having trouble because use the word "align" --

MS. ANDREA SHERRY: Yeah.

THE CHAIRPERSON: -- and in my mind you're using it in two (2) completely different ways

and I -- I just want to -- you know, and that's why I interrupted. I want to understand how you're using "align" here versus how you use "align" previously.

MS. ANDREA SHERRY: So at some point during this process I was asked for the definition I used "align." I can't remember where it is. That would be very handy right now.

(BRIEF PAUSE)

THE CHAIRPERSON: Yes, sorry, I also notice it's in the title of Number 5:

"The CMP does not align with the Board approved methodology."

MS. ANDREA SHERRY: Right. So that's what you're talking about, though, is it not? The -- that --

THE CHAIRPERSON: Well, --

DR. BYRON WILLIAMS: Mr. Chair --

THE CHAIRPERSON: -- but what --

DR. BYRON WILLIAMS: -- just for Ms. Sherry's reference.

THE CHAIRPERSON: Yes.

DR. BYRON WILLIAMS: It's the response to PUB/CAC-1-8.

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: They provide the response that I think you were referring to. I -- I apologize for interrupting your conversation.

THE CHAIRPERSON: No, I appreciate it.

(BRIEF PAUSE)

THE CHAIRPERSON: And in my mind, if -- if what you're looking at is B -- Kristen, can you go down. Is there more to B or is that it? Sorry, can you go down to -- to page 28.

MR. ROBERT WATCHMAN: That -- that's the end of the --

THE CHAIRPERSON: That's the end of B. Sorry, well then go back to -- if -- if we're looking at B, does not contain section...

So that -- that would go into your arg -- your -- your question of it doesn't include it but later on when you say it doesn't align with the directive, is it that --

MS. ANDREA SHERRY: Well, the definition of "align" can mean a lot of things. So definition I --

THE CHAIRPERSON: Yes.

MS. ANDREA SHERRY: -- used or got off the internet was:

"To bring into agreement close cooperation."

So if something's not -- does not contain it that would not align. If something is not in agreement or close cooperation, it does not align. I think it's relevant in both.

THE CHAIRPERSON: Okay.

MS. ANDREA SHERRY: I could have chosen different words and said that it was not supported by or was not included in.

THE CHAIRPERSON: Okay. Okay, thank you. Sorry, to interrupt, Mr. Watchman.

CONTINUED BY MR. ROBERT WATCHMAN:

MR. ROBERT WATCHMAN: Kristen, if we could just return to -- right there.

So under Issue Number 5 in the first paragraph you reviewed the methodology that was approved by the Board and then you make that statement:

"The proposed CM -- CMP does not align with this directive."

Do you see that?

MS. ANDREA SHERRY: M-hm.

MR. ROBERT WATCHMAN: Now -- but the methodology that's referred to, again, is methodology for establishing lower and upper Basic target capital thresholds; correct?

MS. ANDREA SHERRY: Right.

MR. ROBERT WATCHMAN: So can you tell us what it -- what specifically about a proposed Capital Maintenance Provision in the 2019 GRA is not aligned with the Board's prior approved methodology for establishing Basic target -- target capital range?

MS. ANDREA SHERRY: My understanding of the Rate Stabilization Reserve and the path we've taken, to this point, is that we were working towards a methodology that could be used every year to determine what -- whether the Corporation's capital was sufficient. That's my understanding of what the Rate Stabilization Reserve and all of the work we've done on the DCAT was for; that was the goal.

Adding a Capital Maintenance Provision that would be in addition to the capital that is determined -- how the capital is determined to be sufficient or not and then we have this other piece on top, that, to me, does not align with the direction we were going, with the Rate Stabilization Reserve and

the DCAT and the determination of whether the Corporation's capital was sufficient.

MR. ROBERT WATCHMAN: All right but the -- the purpose of a cap -- Capital Maintenance Provision, as you've indicated, is to keep the available capital at a steady level relative to required capital based upon an MCT ratio?

MS. ANDREA SHERRY: Right.

MR. ROBERT WATCHMAN: So that's its purpose. The setting of Basic target capital range is something different; correct?

MS. ANDREA SHERRY: Yeah.

MR. ROBERT WATCHMAN: So -- so they're both related to the Rate Stabilization Reserve but they are two (2) different things; correct?

MS. ANDREA SHERRY: I'm not sure that the Capital Maintenance Provision relates to the Rate Stabilization Reserve. I think it's separate and on top.

MR. ROBERT WATCHMAN: Okay. Well, it maintain --

DR. WAYNE SIMPSON: I agree.

MR. ROBERT WATCHMAN: Okay, well --

MS. ANDREA SHERRY: It is -- the RSR is determined or the Rate Stabilization Reserve is one

(1) piece and it's where the Corporation's capital is right now. And whether it's sufficient is determined by a range.

The Capital Maintenance Provision that is suggesting is using an MCT ratio and keeping it consistent year-over-year and it is separate. From what I understand if -- well, I know this to be true, that the CMP is not even included in the DCAT. So they are separate.

DR. WAYNE SIMPSON: I -- I think the only overlap and this is what I objected to in the slides I presented was that this desire to express the upper and lower thresholds in terms of the MCT and, in fact, to use the MCT to establish the upper threshold in MPI's mind, in their methodology, and that kind of conflates the two (2) issues, but if you take that out and say that the DCAT establishes the RSR lower and upper thresholds in dollar terms or percent of premiums, or whatever you want to think of it, because that would be another way of doing it, then it -- it -- then there's no necessary -- there's no implied like, I think then between the RSR determination and the CMP.

(BRIEF PAUSE)

MR. ROBERT WATCHMAN: Now, turning the page still under the Issue Number 5 in the middle paragraph there, you review the forecasted levels of Basic total equity in the GRA and then towards the end of that paragraph state:

"This indicates that there is no urgency to implement any sort of capital build provision."

Do you see that?

MS. ANDREA SHERRY: M-hm.

MR. ROBERT WATCHMAN: And by "capital build provision," I take it you're referring to the Capital Maintenance Provision?

MS. ANDREA SHERRY: I am.

MR. ROBERT WATCHMAN: And are you advocate -- advocating more time to develop a broader consensus of stakeholders for a Capital Maintenance Provision or you think it should simply be deferred without any further action being taken?

MS. ANDREA SHERRY: I think from my commentary today, I would -- I feel that there is no place for the Capital Maintenance Provision and that I am hopeful that the Public Utility Board will agree with that and make it a nonissue going forward.

My point here is that -- sorry, actually it's my next point where -- where I was commenting that it's -- it's just a piece of a very big puzzle if they actually want to go forward with anything, it should be part of a complete robust capital management plan.

DR. WAYNE SIMPSON: I'd just add again, that where it says "capital build provision" there, in the past when -- when the surplus, as I called it elsewhere, lies below the lower threshold then we talk about a RSR rebuild provision; in other words, not relating it specifically to capital in any way -- to capital maintenance.

MR. ROBERT WATCHMAN: Now, in the -- continuing on in the next paragraph you refer to the Corporation's Capital Maintenance Provision request and about four (4) lines from the bottom a sentence that reads:

> "It is difficult to reconcile these assertions with the reality that the DCAT analysis has shown that the risk profile of the Corporation requires a decrease in the RSR range."

Do you see that?

MS. ANDREA SHERRY: M-hm.

MR. ROBERT WATCHMAN: And -- but is it fair to say that that decre -- decrease resulted from the implementation of the asset liability management study?

MS. ANDREA SHERRY: That would definitely be a part of it, yes.

MR. ROBERT WATCHMAN: Okay. So these -- that is not one -- one would consider a normal evolutionary type of change. It was a change that was specifically made by the -- by the Corporation consciously?

MS. ANDREA SHERRY: Yes. And it reduced the risk profile of the Company so that the RSR range could go down.

MR. ROBERT WATCHMAN: Now, you continue on saying that:

> "The RSR range will go up in dollar terms as the size of the Corporation increases. This negates the need for a CMP."

Do you see that?

MS. ANDREA SHERRY: I do.

MR. ROBERT WATCHMAN: And why do you say that the need for a Basic Capital Maintenance

Provision for a given fiscal year is negated by the fact that the approved total equity target range will adjust to respond to changes in risk profile in future fiscal years?

MS. ANDREA SHERRY: One (1) of the arguments that I've seen for a Capital Maintenance Provision is that the Corporation will grow, and therefore, they need more capital to ensure their stability.

But if the Corporation is growing and, for example, the high loss ratio adverse scenario in dollar terms that we'll go up because you have more people, more -- the loss ratio creates more losses, the adverse scenario dollar amount will go up. So, the RSR range will go up with that.

MR. ROBERT WATCHMAN: Now, in the absence of a CMP if the Basic capital -- capital level declines to the point where a Rate Stabilization Reserve rebuilding fee is triggered --

MS. ANDREA SHERRY: M-hm.

MR. ROBERT WATCHMAN: -- which would occur then in the next GR -- GRA --

MS. ANDREA SHERRY: Right.

MR. ROBERT WATCHMAN: -- does that not raise concerns with respect to intergenerational

equity?

MS. ANDREA SHERRY: When a rate -- an actuarial rate indication is done, you project everything to the rating year in question. So you're protecting what those people will cost the system, whoever is in that book, whoever's in that policyholder group in that year, that's what you're projecting for. So you're projecting losses, premium, expenses, everything in that year.

It doesn't matter what happened in prior years, it matters what happens in that year for the actuarial rate indication. So if the capital need, let's say, a horrible hail storm hits and the capital need of the Company changes significantly due to that one (1) event in the one (1) year, then their rating for that in the next year as part -- would have to be treated as a catastrophe load, et cetera, et cetera. But then they would be adding -- asking for an RSR rebuild at that point.

So that's pretty tightly connected, isn't it? Like from one (1) year to the next. What we're talking about is building up capital now for some -- for something that they might need in five (5) years, ten (10) years, or maybe never.

If -- if we treat every single year we

look at the RSR and we say, are you in a good place? We have our actuarial rate indication for the year in question, is your capital in a good place? Is it in with the RS -- is it the RSR range and we do that every year, that's pretty tightly connected to the group of policies as we move through time.

MR. ROBERT WATCHMAN: Now, my understanding in terms of the rationale that the Corporation has with respect to the request for a Capital Maintenance Provision is that, all things being equal, the capital levels will decrease over time, sort of naturally or by evolution.

Do you accept that rationale?

MS. ANDREA SHERRY: Capital is hard to predict. You don't know for sure what the investments are going to be, what your book of business is going to be, what your losses are going to be. You can't -- I mean, I can't predict that.

MR. ROBERT WATCHMAN: Okay. But is -- isn't that the very thing that a Capital Maintenance Provision is intending to address?

MS. ANDREA SHERRY: That would be my whole point is that they don't need that. If they have the RSR, and we watch from year to year if the capital does, in fact, really decrease and gets to

that minimum then they would need some capital at that time.

MR. ROBERT WATCHMAN: Now, if we just scroll down to the next heading, Introduction and Basis for CMP in the 2019 GRA is incomplete.

You see that?

MS. ANDREA SHERRY: I do, yeah.

MR. ROBERT WATCHMAN: And you observe at the bottom of the page, the last sentence:

> "Neither a capital release provision nor a capital management plan have been reviewed and analysed."

Correct?

MS. ANDREA SHERRY: Correct.

MR. ROBERT WATCHMAN: Now, is it your opinion that it's inappropriate to consider the introduction of the Capital Maintenance Provision outside of that overall Capital Management Plan?

MS. ANDREA SHERRY: I -- I don't want to implement a Capital Maintenance Provision at all, and therefore, I wouldn't think a capital release for -- I think that a Capital Management Plan would be a good thing to have.

It would lay out what would happen if the RSR drops below the minimum, what would the

response be, do we look at -- what kind of forecasts we would rely on to make those decisions or the public -- I think it would be good to have a plan.

I just -- I don't think that the Capital Maintenance Provision should be part of that time. And the fact -- my point here is the fact that it was thrown out with the -- without a full picture of what that means.

MR. ROBERT WATCHMAN: So I take it that it's your position that an overall plan that would have provisions for triggering rebuilding fees or rebates is sufficient to maintain Basic's capital position at the appropriate levels over time?

MS. ANDREA SHERRY: I do.

MR. ROBERT WATCHMAN: Scrolling down to the next section, Issue Number 7, the introduction of a CMP in the 2019 GRA would introduce intergenerational inequity.

And in the first paragraph, the second sentence reads:

> "The capital collected is built up until a rebate is required."

Do you see that? And I think in questioning by My -- My Friend Mr. Guerra, you indicated that such a provision or such a buildup

could trigger a rebate and our question, or my question more specifically, is whether you believe that the regular inclusion of a Capital Maintenance Provision in the approved rate will necessarily lead to an accumulation of Basic total equity and eventually Rate Stabilization Reserve rebate.

MS. ANDREA SHERRY: It won't necessarily. It's a possibility.

(BRIEF PAUSE)

MR. ROBERT WATCHMAN: Okay. So just -- if I could just review before leaving this area.

Do you accept that Basic actuarial liabilities still tend to naturally grow over time?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: And they are accompanied by a comparable growth in investment assets?

MS. ANDREA SHERRY: M-hm. Yes.

MR. ROBERT WATCHMAN: Based on that, do you agree that Basic's capital position, as measured by the Minimum Capital Test, will therefore tend to naturally decline over time in the absence of a Capital Maintenance Provision, all other things

being equal?

MS. ANDREA SHERRY: If we're just looking at the MCT?

MR. ROBERT WATCHMAN: Yes.

MS. ANDREA SHERRY: I'm trying to think of all the risks and what could happen to them. But, I think that would be true.

DR. WAYNE SIMPSON: Can I just add on this point, because I interjected before on this.

I just wonder how much of that scenario is predicated on the use of the naive interest rate forecast? Which, as I said, seems to be quite a pessimistic forecast in the context, like -- like the interest rate declined scenario. Seems to be a similarly -- an adverse event.

In other words, on the context of this adverse event, the MCT might decline. Would the MCT decline under the 50/50 and SIRF forecasts? I don't know but I -- I would like to -- I would like to know.

(BRIEF PAUSE)

MR. ROBERT WATCHMAN: Now, just in that paragraph just before conclusion, the final part of that sentence reads that:

"Holding capital on top of what is held within the RSR range is improper use of ratepayer's money."

Correct?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: And it seems that that would perhaps advocate more for a rebate mechanism than being a position contrary -- to contradict the request for the Capital Maintenance Provision.

MS. ANDREA SHERRY: I'm not sure I understand your question, sorry.

MR. ROBERT WATCHMAN: So that statement, isn't it more directed to the requirement or the need for a rebate mechanism, as opposed to the Capital Maintenance Provision?

MS. ANDREA SHERRY: No. What I meant by that statement was that you have, basically, what I was referring to earlier in the sense that you determine the RSR range, you know what capital -- what the total equity is of the Corporation, if it's within that range, then the Corporation is adequately capitalized.

My comment there is that if you take more from the tax -- from the ratepayers now, that MPI

does not actually need now, I feel that that is improper use of the ratepayers' money and potentially not good for the Manitoba economy.

MR. ROBERT WATCHMAN: Okay, I'm going to now change to the report on the role of DCAT and interest rate forecasting, for the record that's CAC Exhibit Number 9.

And again, just the first -- sorry, the second issue stated there is: How should the RSR be set and a chronology of proposals.

Do you see that?

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN: And just in terms of where we are now, is it true that in the General Rate Application, the -- the Corporation first determines the Basic total equity target capital range expressed in dollar terms?

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN: And then converts their proposed lower and upper threshold from the dollar equivalent into a Minimum Capital Test ratio?

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN: And just looking, if we could skip a few pages ahead to page 4,

starting in the third block there you -- you referred to the MCT methodology, and is that what you mean by the MCT methodology that the Corporation uses?

DR. WAYNE SIMPSON: Yes, at the level of the DCAT, that's right.

MR. ROBERT WATCHMAN: Right, sorry, and I should've pointed out, I'm talking about the last sentence in that block.

> "Indeed, there is little to recommend the MCT methodology over the long-standing percentage of premiums approach, since both approaches are indexed to the size of MPI's operations, but both lack any apparent link."

DR. WAYNE SIMPSON: Sorry, let me revise my answer then.

No, it's in -- the previous sentence talks about the MCT levels of 34 percent and 85 percent, which might be projected forward as the lower and upper RSR targets and that I -- that's what I'm referring to as using the MCT to set the lower and upper thresholds, that methodology.

And I'm -- I'm saying that that is in the respects that I'm talking about here, very much

similar to the percentage of premiums approach. I mean, you could -- you could express the targets in terms of percentage of premiums too and project that forward. And instead of using the 10 and 20 percent figures from Kopstein, you could use whatever that comes out of the DCAT.

That would be, in terms of objectivity, transparency and simplicity, pretty much the same thing.

MR. ROBERT WATCHMAN: Okay. So, but just in terms of how the target capital threshold might be set, you would agree that simply selecting an arbitrary MCT ratio level is less desirable than the approach that the Corporation has used in terms of first determining a dollar and then translating it into a percentage.

DR. WAYNE SIMPSON: Using -- using the DCAT and especially -- in particular for the lower threshold with 1:40 tolerance level, yes.

MR. ROBERT WATCHMAN: So you would agree that that's preferable?

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN: Thank you. Now, at the bottom of the page you -- the last sentence, you state:

"The absence of such events, the current POP, Percentage Of Premiums, and DCAT methodologies should continue to inform the setting of the RSR range."

And as you've indicated, one (1) of the shortcomings of the POP is it's not linked to risk, whereas DCAT is.

So can you just perhaps explain for the Board what role you recommend for the POP methodology in setting the target capital levels.

DR. WAYNE SIMPSON: What -- well, this is much like the -- the recommendation of the 50/50 interest rate forecast in the sense that -- that I take what is currently -- I incur -- interpret is current board operation, which is the consideration of the POP because it has never said it isn't using the POP and it's been discussed over and over again in -- in previous GRA's just as I opted for the 50/50, because it is part of an existing Board Order.

I think in that context until there is a, you know, a clear indication that the DCAT is the sole methodology to inform the setting of the RSR range, I would say that -- that the POP continues to be used.

That said, given all the effort that has been put into the DCAT and its apparent strength in identifying the actual risks of the Corporation and -- and how they should be incorporated into setting the RSR, I would favour using the DCAT to set the RSR, both the lower and the upper thresholds in the fashion that we seem to be moving towards.

MR. ROBERT WATCHMAN: Now, Ms. Sherry, would you say that the determination of target capital or capital targets or ranges is a requirement of the Dynamic Capital Adequacy Test generally?

MS. ANDREA SHERRY: No, it's not.

MR. ROBERT WATCHMAN: And would it be fair to say that the main objective of a Dynamic Capital Adequacy Test investigation is to test satisfactory financial condition of the insurer?

MS. ANDREA SHERRY: Yes, it is. It's definitely to find out where the company is at risk and then to respond to that risk.

MR. ROBERT WATCHMAN: Now, -- and it's fair to say that the target capital analysis that is done to estimate the Basic tar -- target capital range either as done in the GRA or by MPI using the iterative method as previously approved by the pope -- by the PUB is a -- is an adaptation of Dynamic Capital

Adequacy Testing?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: Now, in your work is a -- an actuary, you have occasion, though, to prepare an analysis or analyses supporting a benchmark Minimum Capital Test solvency ratio for private sector and automobile insurance, or private-sector insurance companies?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: And that's for approval by the Office of the Superintendent of Financial Institutions?

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: And in broad terms, can you describe how the approach you will follow in that work compares with the Board's previously approved iterative methodology for estimating the Basic target capital threshold levels?

MS. ANDREA SHERRY: The Minimum Capital Test in a private company is a regulatory requirement. It doesn't actually feed the risk management of a company though.

The regulator is -- is moving to using a DCAT-like process where the company would create a DCAT.

I can get all into where ORSA and OFSI is going, but the DCAT itself is what actually would drive the risk management of a company more than the MCT. The MCT is a regulatory number we have to report to OSFI.

And yes, we care. A private company cares very much if their MCT drops, because it could have implications if it's a stockholder company on price of a stock, for example, or implications of wh

d
or AAA or A and what your outlook is.

But the MCT in itself is just the one (1) number, right? And if it's a good number, then the company is happy. If it's not a good number then you have to go back to your risk management and find out what the issues are.

But in a company where the MCT is running well, that's where the DCAT comes in and you use that to actually analyze where are our biggest risks, what are they?

And we want to reduce that risk. So if it's BC earthquake or Alberta PPA or whatever it is we have to manage that so that our DCAT process -- that's what we use it for.

MR. ROBERT WATCHMAN: Thank you.

DR. BYRON WILLIAMS: Just for the record, and I do apologize. The acronym PPA?

MS. ANDREA SHERRY: I'm sorry, private passenger auto.

CONTINUED BY MR. ROBERT WATCHMAN:

MR. ROBERT WATCHMAN: But would it be fair to say that your work in this regard does adapt the Dynamic Capital Adequacy Testing to ensure a proper target capital analysis?

MS. ANDREA SHERRY: Sorry?

MR. ROBERT WATCHMAN: Does the -- in your work, do you also adapt -- are you not also adapting the Dynamic Capital Adequacy Test for the purposes of target capital determination?

MS. ANDREA SHERRY: Do we use the DCAT?

MR. ROBERT WATCHMAN: Yes.

MS. ANDREA SHERRY: Yes.

MR. ROBERT WATCHMAN: I'm going to now switch to the topic of interest rate forecasting, and that's Issue Number 3 in this report.

And I'm just going to go down to the -- scroll down to the fourth -- the fourth paragraph there, beginning almost -- approximately in the

middle, and this is in the context of discussion about the standard interest rate forecasts.

And the statements are made that since the 2008 recession, do you see that?

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN: The SIRF, or Standard Interest Rate Forecast, has predicted that interest rates will rise going forward as the economy recovers.

In hindsight, the SIRF has been too optimistic about economic recovery and has overestimated interest rates as now familiar in figure INV-10, or figure INV-10 illustrates.

"The foundation for rising interests remains solid."

And I'm just going to pause there. Did you intend to say "the foundation for rising interest rates remains solid"? Is that...

DR. WAYNE SIMPSON: Yes, thank you for correcting my typo. Sorry, I must've missed that in ten (10) readings. Sorry about that.

MR. ROBERT WATCHMAN: It happens.

DR. WAYNE SIMPSON: Interest rates.

MR. ROBERT WATCHMAN: So:

"The foundation for rising interest

rates remains solid as there are limitations on the extent to which interest rates can fall without severe monetary disruption and economic recovery has historically been associated with rising interest rates to prevent an excessively rapid economic expansion and undo inflationary pressure.

Those foundations remain and the SIRF continues to predict rising interest rates, albeit at a slower pace than earlier forecasts."

Can you, Dr. Simpson, elaborate on what the fundamentals of economic theory suggests is a best estimate interest rate forecast at the present time?

DR. WAYNE SIMPSON: Well, as I've said, these are not normal times. We think that -- economists think and Bank of Canada thinks, I think interest rate forecasters think that we're approaching something closer, more closely resembling normal times.

But we're coming out of a -- both a reasonably sharp recession, not a long-lasting reception, (sic) but reasonably sharp, which had a

fairly slow recovery by historical standards, and a period of low interest rates that probably is -- has not been observed, at least since the 1950s.

So, I think there has to be some caution in interest rate forecasting and to some extent I think the SIRF reflects this. I think the SIRF forecasts have become a little bit more cautious, I think that's evident in -- in the -- in the figure, in 10. But -- and I guess that's essentially what this statement says.

MR. ROBERT WATCHMAN: Now, if we could just scroll to the top of the next page, and that -- that following paragraph spoke about the Corporation's analysis of the standard error of competing interest rate forecasts.

And your comment at the end was that over the la -- latest two (2) GRAs you state that:

> "The SIRF has actually been quite close to the actual rate both years, while the naive forecast has consistently under estimated it."

Do you believe then that this latest pattern is a meaningful departure from that of the earlier periods?

DR. WAYNE SIMPSON: Yes, I think

there's no question in the sense that the long period of a low policy rate and low interest rates has ended and the last two (2) years the period where the -- the overnight rate or policy rate has begun to rise.

The economy has moved -- moved towards capacity and listening to the latest comments by the Bank of Canada Governor, Stephen Poloz, is pretty much considered to be at capacity now and inflationary pressures are beginning to drive concerns that interest rates need to be higher.

MR. ROBERT WATCHMAN: Now, the Corporation, in its rebuttal to your report, and for the record, we don't have to go there, but for the record, it's MPI Exhibit 19, the Corporation raises the concern of recency bias when giving consideration to this latest pattern.

What can you tell us about "recency bias" and can you share with the Board any limitations you believe might place on what considerations should be given to the most recent data?

DR. WAYNE SIMPSON: Well, I think there's always some degree of recency bias in the sense that we tend to rely on the recent past, as opposed to the distant past.

We don't go back very much to the great

depression anymore because it happened a long time ago. So there is some recency bias.

I think we've gotten embedded in some notion that, you know, forecasting interest rates is simply a simple timeseries extrapolation process, whereas what it actually is, is a sophisticated process of modelling economies to see what's happening.

And while that modelling is based upon the historical data, not only of interest rates, but of all the other things that they can measure in the economy, I think the outcomes they try to project are those which reflect the -- the more recent economic conditions.

And in this case, very much the -- the movement of the economy towards a full capacity and, for want of a better term, the natural unemployment rate -- or the non-accelerating inflation rate of unemployment, I think is the term that's often used nowadays.

MR. ROBERT WATCHMAN: Now, if we could turn to the next page, the second paragraph there, and this is a -- a discussion about forecast bias, and about halfway down that paragraph it reads, "but recent naive forecast." Do you see that?

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN:

"But recent naive forecasts which have under-predicted interest rates by 0.45 percent and 0.60 percent and recent economic events, all of which point towards higher interest rates as the economy approaches full capacity imply a much higher probability that the naive forgot -- forecast will under-predict then over-predict interest rates."

DR. WAYNE SIMPSON: Yes.

MR. ROBERT WATCHMAN: And can you tell us what the foundation is for the statement that it is a much higher probability, that the naive forecast will be bias relative to the ---

DR. WAYNE SIMPSON: Well, simply -- simply it's more likely to be -- to have -- to produce a low interest rate forecast than one that is equal to what is actually going to be observed. It's going to under-predict it. Higher probability, in other words, if you had to put odds on under-predict versus over-predict they would not be 50/50. They would be something much higher for under-prediction.

MR. ROBERT WATCHMAN: And just so we're clear, that -- that your view in that regard is based on economic theory or statistical analysis?

DR. WAYNE SIMPSON: It's based on an understanding of how monetary policy operates, how that transmits to other interest rates like the Government of Canada benchmark rate and how the economy is performing and how that informs the Bank of Canada and causes them to react.

MR. ROBERT WATCHMAN: And sorry, Kristen, if we just scroll up there to the bottom of the first paragraph on that page.

And the last sentence in that paragraph reads:

> "The naive interest rate forecast used by MPI explicitly ignores this important information from our central banking authority and other sources."

And with respect to the information, the central banking authority information, you're talking about the monetary policy reports, correct?

DR. WAYNE SIMPSON: From the Bank of Canada, that's right.

MR. ROBERT WATCHMAN: And ---

DR. WAYNE SIMPSON: And the -- and the increases in the policy rate. The actual decisions to increase the policy rate, which they justify.

MR. ROBERT WATCHMAN: And My Friend had asked you some questions about the correlation between the overnight lending rate and long-term bond yields.

And could you tell us then how closely you feel they are related and how does this inform the Board for purposes of interest rate forecasting for this GRA?

DR. WAYNE SIMPSON: Well, it would depend on the frequency which -- which measure the two (2) rates, because the -- the 10-year bond rate is going to move a lot. It's a market rate, and as a result it's quite volatile.

And if you look at the correlation between a volatile rate and a fair -- a very stable rate, which is the policy rate, then you're going to find fairly low correlation.

That correlation is going to go up as you measure the long-term bond rate less frequently. For example, as you go to monthly rates, quarterly rates, annual rates. Then you'll get a much higher correlation between the two (2) series, because the

policy rate can only change when the Bank of Canada meets to consider that, and that only happens once -- what is it, every second month, or I think maybe eight (8) times a year.

So it's infrequent and it's not going to -- it's only changed five (5) times in two (2) years, the bank -- the 10-year bond rate changes daily.

MR. ROBERT WATCHMAN: Now, Kristen if we go to the last page, under recommendations, and recommendation 2, you recommend the use of the 50/50 interest rate forecast. And that the -- the last sentence there reads:

> "The naive interest rate forecast ignores recent monetary policy and economic events that indicates rising interest rates that are more consistent with the standard interest rate forecast."

Can you tell us why that observation doesn't lead you then to advocate the use of the standard interest rate forecast as opposed to the 50/50.

DR. WAYNE SIMPSON: When I wrote this it was slightly less apparent to me that events were

moving towards a higher -- immediate higher interest rates.

Since then, we've had an actual rate increase. We've had some very good economic news in terms of growth and unemployment. We've also had some news that inflation is beginning to push the 3 percent boundary, at least the consumer price index.

And so that information wasn't available to me at the time, I suspect -- I can say that if I wrote this today I would -- I would argue for the standard interest rate forecast rather than the 50/50.

MR. ROBERT WATCHMAN: Okay, so in -- perhaps just ignoring for the moment or setting aside the Board's prior position on interest rate forecasting, what would your best estimate be for the interest rate forecast?

DR. WAYNE SIMPSON: The SIRF. I don't think I can do better than the banks. They spent a lot of money on this and they employ experienced and credible people.

MR. ROBERT WATCHMAN: Thank you, Dr. Simpson. Thank you, Ms. Sherry.

Mr. Chair, those are all my questions.

THE CHAIRPERSON: Okay, I would ask

the Board if they have any questions.

Ms. Sherry, maybe I can start with you. I take it from your testimony that we really can't compare MPI to anybody else?

MS. ANDREA SHERRY: Thank you. No, I don't think you can.

THE CHAIRPERSON: We can't compare them -- well, they can't use MCT because they're not a private sector company.

MS. ANDREA SHERRY: Agreed.

THE CHAIRPERSON: We can't compare them to BC because it's a different operation?

MS. ANDREA SHERRY: Product's different.

THE CHAIRPERSON: Product's different. We can't compare them to SGI because the process is different. SGI doesn't have annual -- annual hearings.

MS. ANDREA SHERRY: There is certain things that you can compare and look at, but one (1) of the differences between SGI and MPI is that they don't have rate hearings every year.

So their capital rate requirements, the process is completely different, but if you want to look at potentially loss development factors for

certain coverages, I think that would be relevant for SGI and MPI.

THE CHAIRPERSON: But in terms of MTC or -- I'm doing it myself, I apologize.

Or -- or the Capital Maintenance Provision circumstances are different, so we shouldn't be doing the comparisons.

MS. ANDREA SHERRY: I don't think -- yeah, I don't think -- my answer is yes.

THE CHAIRPERSON: For the -- for the Capital Maintenance Provision, you said that you thought from coming after the technical conference there would be a discussion raised that -- a discussion raised at this hearing, rather than having it part of the application, is that correct?

MS. ANDREA SHERRY: Unfortunately I wasn't able to attend the conference, so just reading the transcript, I came away from that feeling nothing had been decided or that further discussions would occur. When I read it, it was not to me -- there was nothing conclusive.

So I was surprised to see the Capital Maintenance Provision in the filing.

THE CHAIRPERSON: How would there be a discussion at this hearing other than if it was in the

application?

MS. ANDREA SHERRY: Honestly, I don't know. I was potentially thinking there would be another technical conference to further the discussion but...

THE CHAIRPERSON: In terms of the Capital Maintenance Provision, as I understand it, one (1) of the strong reasons you think it -- it would be inappropriate is because they appear before this Board every year.

The fact is, if there's a problem from year to year, they can always approach the Board as part of their General Rate Application and ask for a higher rate, is that correct?

MS. ANDREA SHERRY: They already have the RSR, so if the RSR is within the range set by the Public Utility Board, then yes, year to year you check where it is, you know what the capital position of the Company is and if they need a capital build.

THE CHAIRPERSON: In terms of -- of the RSR and a -- the use or need of a rebuilding fee, do you see a rebuilding fee as a last resort?

MS. ANDREA SHERRY: I see it as something that may be necessary if the capital is not within the range.

THE CHAIRPERSON: And how often would you see it being used? Is it something from year to year if they need it and they run out, you have a rebuilding fee and potentially a few years later you have a rebuilding fee, it would be better to have that then perhaps have a higher rate and money taken from consumers that -- that wasn't required?

MS. ANDREA SHERRY: My feeling is that if you look at it every single year, the requirement would be quite small, if you needed a capital rebuild.

And I don't think you would need it every year. I think it -- like I spoke to you a bit earlier, is that capital position is dependent on so many things. MPI could have a great year and their capital all of a sudden is better and that holds them for a few years.

It's -- there's so many things that could occur. It can drop suddenly because of a severe event or series of events, really bad winter, whatever. But the point is that every year you look at it and you analyze it and -- and you decide where your capital is and if it's sufficient. And if it's not, then you take a point or two (2).

THE CHAIRPERSON: Should we be -- should the Board be focusing on having the lowest fee

possible to keep money in the economy and with consumers recognizing the risk that we may need a rebuilding fee every -- once every four (4) or five (5) years?

MS. ANDREA SHERRY: To me, that would make more sense to keep the rebuilding fee closer to the year, yes.

THE CHAIRPERSON: Okay. Can we go, Kristen, can we go to Figure 1 of -- yes, it's CAC-26. It's the overnight and 10-year bond rate. Figure 1. Unfortunately, there is no page number. Sorry, is it page 14? Yes, that's the one. Thank you.

Dr. Simpson, I'm looking at the -- at the overnight rate, sorry, for 2016. Would I be correct -- the red line.

Would I be correct -- this isn't the right chart but if I -- would I be correct that if I went back about eight (8) years that line sitting, it's about that flat.

DR. WAYNE SIMPSON: Yes, subject to check, I would think that's pretty accurately describes. In other words, they didn't go below .5 --

THE CHAIRPERSON: Five, right.

DR. WAYNE SIMPSON: I think that is pretty -- as low as they felt they could go based --

because of monetary con -- considerations.

THE CHAIRPERSON: If we were looking at interest rates at that time, was the naive forecast the right rate?

DR. WAYNE SIMPSON: In hindsight, it was a -- it was a better forecast than the -- than the SIRF, just because of the -- of those circumstances described by that flat line, sure.

THE CHAIRPERSON: One (1) of the problems I'll admit I have is that in my first hearing here, which was in 2016, there was a lot of testimony that SIRF was the right rate because interest rates have to go up because they've been flat for so long.

And I believe my comment at the time was, that's fine, but I've gone through the transcript for the last five (5) years and I've heard the same statements made. They have to go up at some point and my question for you, like, I think my question to you at that time was, why?

I mean, they could be flat for another two (2) years. Why was -- SIRF -- why was everybody pushing SIRF at that time? Was this just hope?

DR. WAYNE SIMPSON: Well, it's more than hope, because as I said before, that -- there's -- there's money on the line with the banks and other

financial institutions in getting good forecasts to base their decisions on, and interest rate forecasts are one (1) of those.

So it isn't that they do this, you know, just based on hope. I mean, the -- the projections were that the economy would recover and as soon as the economy recovered to the -- certainly to the point we're at, but even the point we were at last year, then there would be -- the Bank of Canada would start to increase interest rates.

That didn't happen as quickly as people expected this, you know, this -- this was not a -- something that had a historical precedent.

THE CHAIRPERSON: I made note of your last comments, "banks spend a lot of money on this." They spend a lot of money on that and they got it wrong for eight years, is that right?

DR. WAYNE SIMPSON: That's right. That's right.

THE CHAIRPERSON: So, when -- when -- in the -- in the 2016 hearing, which I guess is a little early for the increase and MPI brought forward Dr. Cleary who said 50/50, the comment on some was well, no, but it's -- it's still SIRF.

That's when interest rates were flat.

Interest rates have now gone up and 50/50 is the -- until your comment today, 50/50 was the way to proceed, is that right?

DR. WAYNE SIMPSON: Yes. One (1) thing I'd say is that most of my comments are made in the context of the DCAT, which has the four-year horizon as opposed to the breakeven rate indication which has the twelve (12) to eighteen (18) month horizon.

I think there was more confidence, certainly in 2016, that interest rates would rise over the next four (4) years and that they'd rise in the next year.

THE CHAIRPERSON: Sir, what is the importance of having the four-year ri -- horizon versus the twelve (12) to eighteen (18) month horizon, considering that we are here every twelve (12) months?

DR. WAYNE SIMPSON: Well, the four-year horizon on the DCAT, and perhaps Ms. Sherry could speak to this as well, I take the one that says that -- that it's going to take time for management action and it's going to take time for these adverse scenarios to play out, and they want to capture them in a meaningful way that -- that can't necessarily be captured over twelve (12) months, even though the

initial signs of that could be there in twelve (12) months in the sense of the -- of the signs that point towards what's going to come.

For example, if you're talking about a claims forecast which will play out over a longer period of time, the next year you'll have the information on that claims foreca -- that claims outcome, that high-loss ratio adverse event, you'll have some of that information in twelve (12) months, even if it hasn't entirely played out.

And similarly with, say, the equity decline. You could have a drop, a sharp drop in equities, and we've had some kind of technical corrections of that, that sort of warn us that that could happen.

You can see evidence of that even though it's the final impacts of that haven't played themselves out in a twelve-month period.

So I think that's why the four-year period is there. Although most of the RSR is based on a two-year -- now on the two-year outcomes.

THE CHAIRPERSON: Ms. Sherry, did you want to add something? I see you --

MS. ANDREA SHERRY: I think he did a great job of it. Basically that's the answer, is that

you want to see how the scenario plays out and you want -- so if something happens now, how does that play out, how does the market respond, how does the Company respond. It takes time to see that.

THE CHAIRPERSON: In terms of the change in the way MPI has changed their asset liability management, and the fact that they're trying to relate liabilities to specific investments, does that lead to a change from four (4) years to a shorter period of time?

Does it have any -- sorry, I guess I should ask: Does it have any impact?

MS. ANDREA SHERRY: I don't believe it would, no.

THE CHAIRPERSON: But your long-term liabilities have been matched now.

MS. ANDREA SHERRY: Right.

THE CHAIRPERSON: So, does the interest rate factor play as big a role as it did before when you had equities and the liabilities all co-mingled?

DR. WAYNE SIMPSON: My general sense, and I profess no great expertise on the financial model, but as you run these scenarios through the financial model, these adverse scenarios, it will make

a difference. Yes.

They won't be as -- as severe as they would have been before, that's -- that's my sense of of the -- of the -- of some of the declining risk that's associated with the lower RSR thresholds.

MS. ANDREA SHERRY: If that -- if the asset liability management is within the model that is used to perform the DCAT, then yes, it would lower the risk and therefore have an impact.

THE CHAIRPERSON: Okay. What is the upside or downside if instead of going -- we're going to go naive or 50/50 or SIRF, that we just pick an interest rate of a specific point now and say that's the rate we're going to put into our projections, we'll be back here a year from now and we'll see whether we need to raise rates or lower rates to take into account the rate we selected.

MS. ANDREA SHERRY: That's essentially what you do when you do the rate indication, is you have to -- you project for the rate and year in question what the return would be.

But I think what you're suggesting wouldn't be necessarily possible for the DCAT and honestly, Luke would be able to answer this question much better than I can, in terms of how the projected

-- you have to pick which one you're going with so that you can project it for the four-year time horizon.

DR. WAYNE SIMPSON: That is the naive forecast.

THE CHAIRPERSON: That's the naive. Okay.

MS. ANDREA SHERRY: And that's why I guess it has a bigger impact on DCAT, yes.

THE CHAIRPERSON: Those are my questions.

Mr. Williams, did you have any redirect?

DR. BYRON WILLIAMS: No re-examination, Mr. Chair.

THE CHAIRPERSON: Thank you, everyone, I believe that we're adjourned until 9:00 a.m. on Monday morning. Thank you all, have a good weekend.

--- Upon adjourning at 2:46 p.m.

LIST OF EXHIBITS

EXHIBIT NO.	DESCRIPTION	PAGE NO.
MPI-49	Errors and omissions filing re correction to MPI Exhibit Number 41, which was Undertaking Number 14. The correction is to figure 2 of Undertaking Number 14	1339
CAC-28	Mr. Viola's PowerPoint presentation	1389

--- Upon Commencing at 9:05 a.m.

THE CHAIRPERSON: Good morning, everyone. Ms. McCandless, do you want to take us through today.

MS. KATHLEEN MCCANDLESS: Sure, thank you. Good morning, Mr. Chair and members of the panel.

First thing this morning we have the MPI Investments/DCAT/RSR/CM Capital Maintenance Provision panel back for answering questions arising from answers to undertakings. We expect that will be relatively brief. I do have some questions. Mr. Oakes indicated he has some as well, and he's going to proceed before Mr. Williams, who also has some questions.

Once we conclude with that, panel, we will proceed into CAC's evidence of Mr. Viola and that should take us to the end of the day.

THE CHAIRPERSON: Thank you.

MR. ANTHONY GUERRA: And before we get there, MPI has a errors and omissions filing they'd like to present this morning, which is Exhibit Number 49, which will be a correction to MPI Exhibit Number 41, which was Undertaking Number 14. The correction

is to figure 2 of Undertaking Number 14, and that is now going to be reflected in Exhibit Number 49.

--- EXHIBIT NO. MPI-49: Errors and omissions filing re correction to MPI Exhibit Number 41, which was Undertaking Number 14. The correction is to figure 2 of Undertaking Number 14.

THE CHAIRPERSON: Thank you, Ms. McCandless...?

CONTINUED CROSS-EXAMINATION BY MS. KATHLEEN MCCANDLESS:

MS. KATHLEEN MCCANDLESS: Kristen, could you please pull up MPI Exhibit 45. This is the response to Undertaking 16, and this undertaking deals with the recognition of the expected investment expenses in determining the cash flow discount rate used for ratesetting purposes.

Mr. -- maybe Mr. Johnston or Mr. Bunston, from the undertaking response you indicated that expected investment expenses were not recognized

for this purpose in the GRA. Yes?

MR. GLENN BUNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: And does the Corporation believes that expected investment expenses should properly be recognized in determining the cash flow discount rate for ratesetting purposes?

MR. LUKE JOHNSTON: Yes, we do. I was actually surprised, I -- I thought we did this. So we would recommend making that change in future applications.

MS. KATHLEEN MCCANDLESS: And recognition of investment expenses in this context does reduce the cash flow discount rate and increases the rate indication; is that right?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: In the last paragraph of this response, the Corporation indicates that:

"Had investment expenses been recognized in determining the cash flow discount rate, the breakeven rate indication from the GRA would increase by .12 percentage points from .13 up to .25 percent. Is that right?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: Would you expect a change in the same order of magnitude if this adjustment was applied to the updated scenarios provided in the response to PreAsk Number 1?

MR. LUKE JOHNSTON: Yes, we would. Very loose rule of thumb, if -- at least right now, if the discount rate changes by X basis points, the impact on the rate indication is about double that. So this isn't quite that back seven (7) basis points converted to twelve (12) basis point increase, so roughly, that -- that proportion.

MS. KATHLEEN MCCANDLESS: Thank you. Next, could we please go to MPI Exhibit Number 46 and that's the response to Undertaking Number 17.

And this undertaking arose from the earlier cross-examination on the .1 percentage point reduction in the required rate change arising from the assumed $1 million reduction in premiums due to the extension of DSR discounts to certain vehicles not previously eligible following the enactment of the Local Vehicles For Hire Act, yes?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: Now, Mr. Johnson, could you explain why it is that a reduction of premium due to this change in DSR eligibility leads

to a reduction rather than an increase in the required rate change?

MR. LUKE JOHNSTON: Yes. So if there is nothing happening in the industry right now, so, let's say there is no vehicle for hire coming into the market and we had decided to start giving discounts to taxis, in -- in that scenario, we wouldn't expect -- we might -- actually I shouldn't say we wouldn't effect any but we probably wouldn't expect much change -- change in their claims experience. So, we would just be lowering the premium and, in theory, we would have to bring it right back up to cover the claims.

In this case, however, we were expecting that the market share would -- for taxis would decline with -- with vehicle for hire entering the -- the Manitoba market. So we made a judgmental assumption that the -- their claims experience of taxis would also fall, but that was very -- very subjective. We didn't have evidence about what that would look like when we made that assumption.

MS. KATHLEEN MCCANDLESS: Thank you. From the undertaking response in the first paragraph you indicate that to date, the actual DSR related reduction in prem -- on premiums is slightly larger than anticipated by MPI averaging 20.6 percent for

taxi vehicles for hire compared to an expected 17.5 percent. Is that right?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: So this suggests that the reduction in the required rate change of .1 percentage points, as done in the GRA, is slightly understated; is that right?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: In the undertaking response you go on to state that claims costs for taxi vehicles for hire have tracked closely with the premium reductions.

What is the importance of this observation in this context?

MR. LUKE JOHNSTON: So if you -- if you don't mind just scrolling down to the table. So, all the adjustments we're talking about are -- have been made with the intent of charging fair breakeven rates to -- to this use, but obviously, that was very difficult to do under the circumstances.

So, recognizing that this table is only partial year's experience, if you look at the taxicab vehicle for hire line their current -- their reported to date loss ratio is about 72 percent. So, we're not see any evidence that the -- at least the initial

rates were way off. So if the -- if we had reduced the premium by a million and the loss ratio was 150 percent, we would know that that probably was, you know, maybe not the right decision, but at least right now it's tracking relatively close to breakeven.

MS. KATHLEEN MCCANDLESS: Thank you. Now, could we please go to MPI Exhibit 26, and that's the response to PreAsk Number 1. And to start I'm going to focus on figure 3 from part B, which is on the screen before you.

Now, the table in this figure shows the updated overall rate indications which reflect updated naive and 50/50 interest rate forecasts, including actual Government of Canada 10-year bond yields -- yields as of the end of September 2018. Yes?

MR. LUKE JOHNSTON: Yes. September 28th I believe, yes.

MS. KATHLEEN MCCANDLESS: 28th would have been the last trading day in September?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: And the table in -- includes the breakeven indication -- the indication after recognizing the expected return on investment assets supporting Basic total equity and the indication reflecting inclusion of the net Capital

Maintenance Provision, yes?

MR. LUKE JOHNSTON: Yes, it does.

MS. KATHLEEN MCCANDLESS: So we see that the breakin -- the breakeven indication declines from the .1 percent proposed in the GRA using a naive forecast down to, at line 2, we see .26 percent reduction using a naive interest rate forecast or .6 percent reduction, using a 50/50 forecast. Yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And similarly, the indication included in net Capital Maintenance Provision declines from the 2.2 percent, which was proposed in the GRA using a naive forecast down to 1.8 percent using a naive forecast or 1 percent using a 50/50 forecast that's shown on line 5, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And that assumes MPI's approach to estimating the Capital Maintenance Provision, yes?

MR. LUKE JOHNSTON: Correct.

MS. KATHLEEN MCCANDLESS: And again, the indication including a net Capital Maintenance Provision declines from the 2.2 percent proposed in the GRA using a naive forecast down to 1.54 percent

using a naive forecast or 1.2 percent using a 50/50 forecast and that's shown on line 7, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And that assumes Saskatchewan Autofund's approach to estimating the Capital Maintenance Provision, yes?

MR. LUKE JOHNSTON: Correct.

MS. KATHLEEN MCCANDLESS: Thank you. The approach to estimating the Capital Maintenance Provision following either MPI's approach, or Saskatchewan Autofund's approach works from a forecasted MCT ratio as at the end of the current fiscal year. So, for example, as at February 28, 2019, yes?

MS. KATHLEEN MCCANDLESS: Does this mean that the estimate of the Capital Maintenance Provision, and therefore, the rate indication, including the net Capital Maintenance Provision is sensitive to the forecasted level of the MCT ratio as at February 28, 2019?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: The reason I'm -- I'm hesitating so -- as everyone knows we're -- we're

using forecasted MCTs to figure out the -- the Capital Maintenance Provision. The reason for my hesitation is that we're looking at the amount needed to maintain MCT at the current level. So, while the forecast is dependent on -- sorry, the MCT scores are obviously changed based on whatever forecast we have. I would not expect the amount required to maintain whatever MCT ratio we end up at to be much different.

So, for example, if -- if -- we're forecasting a 70 percent MCT ratio and we needed a 2 percent capital maintenance to stay there, if it turned out that the MCT was only 60 percent, I would still expect it would be about a 2 percent Capital Maintenance Provision to stay at 60 percent.

So, sensitive yes, but the -- the magnitude of the Capital Maintenance Provision likely wouldn't change much if we -- actually even in the -- the scenarios we've run where some of the -- the forecast changed, the Capital Maintenance Provision seems to be relatively consistent.

MS. KATHLEEN MCCANDLESS: So then the sensitivity, is that a potential source of instability in the estimated net Capital Maintenance Provision going from one (1) GRA to the next?

MR. LUKE JOHNSTON: I don't believe

so. We talked a little bit a couple weeks ago about the importance of adjusting for any significant changes in our risk profile. So, if we implemented a new investment portfolio, we'd have to be cautious about -- about using it in that sense, but assuming we have a stable risk pro -- profile over whatever period we're using, I wouldn't expect a highly volatile CMP.

One (1) of things we did mention about the SGR method, although averaging over a five (5) year period has some benefits for stability, it becomes harder to make long-term assumptions like that about that, you know, nothing's going to change at MPI or five (5) years versus the -- the MPI method is jus -- just looking at the one (1) rating year and saying, are we going to stay, you know, consistent over that year?

So to answer your question, I -- I don't think either method would create significant volatility.

MS. KATHLEEN MCCANDLESS: Nevertheless, could stability be improved by estimating the net CMP at a target level of MCT ratio instead of the MCT ratio from the financial forecast?

MR. LUKE JOHNSTON: I don't -- I don't know. We might -- maybe we've done that but maybe.

So, I don't think the current method is highly volatile, but it's possible that doing it that way could -- could maybe improve volatility, but I -- I don't know the answer right now.

MS. KATHLEEN MCCANDLESS: Thank you. I'm now going to focus on Figure 7 from Part G, it's on page 8.

And the Table in this Figure shows the upper or lower Basic total equity thresholds expressed in dollars and MCT ratios for a number of different scenarios, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And all of the scenarios reflect updated interest rate forecasts using actual Government of Canada ten-year bond yields as of the end of September, 2018?

MR. LUKE JOHNSTON: Correct.

MS. KATHLEEN MCCANDLESS: I see here that the first block of scenarios deal with the PUB lower target and in the next two (2) blocks deal with the PUB upper target, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And the target capital analyses done for each of the PUB target scenarios in these first three (3) blocks, they

all apply to the Board's previously approved iterative me -- methodology, is that right?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: The PUB lower target scenario results are all after assumed routine management and regulatory actions including RSR rebuilding fees and rate changes, as appropriate?

MR. LUKE JOHNSTON: Correct.

MS. KATHLEEN MCCANDLESS: And the PUB upper target scenario results are -- are also after all assumed routine management and regulatory actions, but, here, including only rate changes, as appropriate. Is that right?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And are you supportive of the distinction of assuming no RSR rebuilding fees as routine management regulatory actions in the context of the PUB upper target analysis?

MR. LUKE JOHNSTON: Yes, we are.

MS. KATHLEEN MCCANDLESS: Can you explain, please, what is the modelling distinction between -- that's being made between the PUB upper dollar value target and the upp -- PUB upper percentage target analyses?

MR. LUKE JOHNSTON: Yes, I can. So, when we model the upper RSR target we're doing it -- a somewhat similar exercise as a lower, except we're determining what amount is needed at -- as an upper until we fall to the lower target.

So in one -- in one (1) approach we are using the irit -- iterative methodology to model a dollar, a lower dollar threshold and in the percentage approach, we're using the MCT target as the basis for that iterative kind of goal-seek type of adjustment that -- that -- that we're doing.

So, we -- our original approach that we've provided for the PUB target was assuming that the MCT target was the appropriate measure because that was seen as a dynamic target that moved regardless of the scenario, but we provided both here for -- for the Board to understand.

MS. KATHLEEN MCCANDLESS: Thank you. Now for the PUB target capital analyses, it appears that the 50/50 forecast results are consistently a little higher than those of the corresponding naive forecast, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And is this because there is increased risk of interest rate

decline under the 50/50 forecast, or is it due to other considerations?

MR. LUKE JOHNSTON: Yeah. So, looking at this chart it seems like the -- you know, that the scenarios when they're -- so the first set of examples, naive, and 50/50, the -- the targets and the MCT scores all seem about the -- the same, like it's almost no impact.

One (1) of the reasons for that is the -- the new bank forecasts actually don't increase nearly as much as they did in previous years. So there -- three (3), four (4) years ago we were coming here and talking about the bank's assuming two hundred (200), three hundred (300) basis point increases in interest rates. I believe now we're talking more about forty (40) fifty (50) basis point increases in interest rates.

So, what you said is true. If we assume aggressive rising interest rate forecast, there's obviously more risk that it could fall especially when we're at levels that are considered some of the lowest of all time. We would -- we wouldn't have assumed that interest rates could fall a hundred basis points from today's levels if they're already at the lowest levels ever.

So, I believe that's the reason, and as we get to higher interest rates that risk will likely increase.

MS. KATHLEEN MCCANDLESS: Thank you. Now, from the PUB -- or looking at the PUB target capital analyses, it appears that there's not much significance in -- or not much of a difference whether the Capital Maintenance Provision is included or excluded, yes?

MR. LUKE JOHNSTON: That's true, yes.

MS. KATHLEEN MCCANDLESS: It also appears that the PUB percentage target results are a little higher than the corresponding PUB dollar value target results, yes?

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: Can you explain why that's the case?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Sorry. Can you re -- repeat that, so that the -- sorry, the PUB percentage target is a little -- if you could just repeat that please? Sorry, the whole string?

MS. KATHLEEN MCCANDLESS: Sure. When

we -- first of all when we looked at total equity the PUB upper dollar value targets appear to be slightly -- - or -- or lower than the percentage value targets, yes? And perhaps you could just explain why that -- that's the case?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: I may have to come back to you on that one. I'm trying to think of my -- why that is. Maybe I can answer later on this morning, yeah.

MS. KATHLEEN MCCANDLESS: With respect to the -- the inclusion of the Capital Maintenance Provision, again, there doesn't appear to be a significant difference whether or not it's included.

Are you able to explain why that would be the case?

MR. LUKE JOHNSTON: Yeah, that -- so that -- the -- the fact that it doesn't change with or without the CMP was a little bit of a surprise to us, but it appears the iterative methodology that we're using, by its -- by its nature of, essentially, goal seeking to discern target capital level, that -- that appears to be neutralized, or not -- not -- doesn't

affect the outcome, which is good, because that's the same logic that -- that MPI is using, that we don't want Capital Maintenance Provisions, or rebuilding fees, or things like that a the particular year's GRA to dramatically change the target. So the stability being produced by the method is a -- is definitely seen as a good thing from MPI.

MS. KATHLEEN MCCANDLESS: Thank you. Now, the Corporation's also provided MPI lower and upper target levels following the same Basic methodology from the GRA, but with updated naive and 50/50 interest rate forecasts, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And from the updated MPI lower target using the naive forecast, the total equity target has risen to $146 million from the 143 million in the GRA, and the corresponding MCT ratio has risen from -- or to 35 percent from 34 percent in the GRA, yes?

MR. LUKE JOHNSTON: Correct.

MS. KATHLEEN MCCANDLESS: And from the updated MPI upper target using the naive forecast, the total equity target has risen to $315 million from the $305 million in the GRA, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: And the corresponding MCT ratio target has risen to 88 percent from the 85 percent in the GRA, yes?

MR. LUKE JOHNSTON: That's correct.

MS. KATHLEEN MCCANDLESS: Now, in response to these updates, does the Corporation intend to change its proposal to the PUB with respect to the Basic target capital range?

MR. LUKE JOHNSTON: One (1) -- one (1) of the reasons that we propose MCT percentage based targets is specifically for -- for this reason. I know you've noted that they've changed slightly in our answer, but to the extent that the -- the MCT ratio dynamically changes to reflect the current state of the Corporation's finances, we would stand -- stand by the percentages proposed in the application. Again, that's one (1) of the reasons why we propose using the MCT percentage rather than dollar amounts.

MS. KATHLEEN MCCANDLESS: Thank you. Now, it appears that the MPI lower target results under the 50/50 forecast are lower than under the naive forecast, contrary to all of -- all the other scenario results, including the MPI upper target results. Why is that the case?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Just to make sure I understand the question, MPI lower target, why does the 50/50 scenario have a lower total equity target than the naive?

MS. KATHLEEN MCCANDLESS: Yes.

MR. LUKE JOHNSTON: I'd have to look into that. Intuitively, that doesn't make sense to me, so I'll -- I'll investigate that.

MS. KATHLEEN MCCANDLESS: So I believe there are couple of takeaways, then, from my questions. Perhaps they could be provided later this morning.

MR. LUKE JOHNSTON: Yes, we're looking at it right now. Yeah.

MS. KATHLEEN MCCANDLESS: Thank you. Kristen, if we could please go to MPI Exhibit 31. And in this undertaking response, the Corporation provided the Government of Canada ten-year bond rate at the end of September, yes?

MR. LUKE JOHNSTON: Yes.

MS. KATHLEEN MCCANDLESS: And we see from the response that the rate of two point four-three (2.43) would be -- that would be as of the last

trading day in the month, so Friday, September 28th, is --

MR. LUKE JOHNSTON: Correct.

MS. KATHLEEN MCCANDLESS: -- is that. And the nine -- there's a nineteen (19) basis point increase from February 28, 2018, to September 30, 2018, yes?

MR. LUKE JOHNSTON: Correct. Correct.

MS. KATHLEEN MCCANDLESS: And the nineteen (19) basis point increase resulted in the claims discount rate changing from 3.21 percent to 3.4 percent, yes?

MR. LUKE JOHNSTON: That's right.

MS. KATHLEEN MCCANDLESS: Now I appreciate that the -- your answer is probably only directional, not detailed in this regard.

But what would the implications of this change be on claims liabilities?

MR. LUKE JOHNSTON: So -- implications. So what happens with our Asset Liability Management Program, I guess there's today, and then when we move to the new ALM. Once we have the liabilities on the books, they would be matched to fixed income assets, and the intent there would be -- from that point going forward, there would be no

impact from interest rate changes on the net -- on the net income of the Corporation. So wherever interest rates move, the two (2) are supposed to offset and -- and have the -- not creating volatility for us.

Looked at in isolation, a ten (10) basis point increase in the discount rate for claims liabilities would equate to a 15 to $20 million favourable adjustment to liabilities. As mentioned, we would expect the -- the opposite effect on the fixed income portfolio to offset that favourable change.

MS. KATHLEEN MCCANDLESS: Thank you. Kristen, could we please go to MPI Exhibit 37, which is the response to Undertaking Number 10.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: And in this undertaking response. The Corporation provided the volatility assumption for the real liability benchmark, yes?

MR. GLENN BUNSTON: Yes, that's correct.

MS. KATHLEEN MCCANDLESS: And the response shows that Mercer's inflation volatility, in

its analysis, was 5 percent, yes?

MR. GLENN BUNSTON: No, that's not the inflation volatility assumption. That's the volatility of the real liability benchmark.

MS. KATHLEEN MCCANDLESS: Thank you. Just bear with me for one (1) second.

(BRIEF PAUSE)

MS. KATHLEEN MCCANDLESS: Thank you. I -- I have no further questions. Yes.

THE CHAIRPERSON: Thank you. Mr. Oakes...?

CROSS-EXAMINATION BY MR. RAYMOND OAKES:

MR. RAYMOND OAKES: Thank you, Mr. Chairman. I'd like to look first at Pre-ask 1 at page 6, and this is figure number 6, as well.

And, Mr. Johnston or other witnesses, if you could just confirm this table, figure 6, shows the effect of the updated interest rate forecast, reflecting information as of September 28th, 2018.

Is that correct?

MR. LUKE JOHNSTON: That's correct.

MR. RAYMOND OAKES: I would expect

that the Corporation hasn't done any other calculations based on last week's increases by the Bank of Canada.

There's no further update available at this time?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: This response doesn't have that, but obviously, that information is available. I can't remember what -- what the specific numbers are, but MPI has said several times that, you know, we're -- we're most interested in making the most accurate forecast possible. So if the -- if it would help the Board to have more -- more current numbers, we could do that.

MR. RAYMOND OAKES: If I could ask for that as an undertaking, then.

MR. LUKE JOHNSTON: Just to be clear, I think the undertaking is just what's the latest Government of Canada ten (10) year bond rate? If -- if that's -- if that's the appropriate.

MR. RAYMOND OAKES: If there has been a change, could we also have figure 6 recalculated and provided, please.

MR. LUKE JOHNSTON: Just for my -- there's not much of a back row today, but if -- it would be helpful for MPI if -- if we could do that on a somewhat approximate basis. Obviously, if the Board wants a full, updated rate change scenario, we could talk about that.

But we talked earlier about approximately what a -- a ten (10) basis point change is for the rate indication. We could approximate that and then leave it up to the Board if they'd like anything further, that is, if that's okay with you.

MR. RAYMOND OAKES: The -- the approximation would work for my purposes.

MR. STEVE SCARFONE: So it -- I think we'd need to be clear, Mr. Chair, on exactly what the undertaking will be, in part because Pre-ask 1, as the Board will appreciate, was a -- a large undertaking comprising six hundred and thirty-one (631) pages of updates, modelling. I -- I don't -- I don't hear Mr. Oakes asking for that, but we just want to be clear what the takeaway is for our actuarial people.

THE CHAIRPERSON: Well, as I understand it, the ask is for a new figure 6, amended by the Bank of Canada rate change last week.

Is that right, Mr. Oakes?

MR. LUKE JOHNSTON: And may -- maybe we can settle this, like, today if -- if -- so we're just looking at the screen -- or the latest Government of Canada ten-year bond rate is 2.41 percent, and our Pre-ask 1 is assuming two point four-three (2.43).

So if we can accept that as being relatively immaterial, so what we're saying is we're not seeing any dramatic change in the numbers that we've provided in the pre-ask.

MR. STEVE SCARFONE: So -- and so I think what the -- last week's interest rate hike hasn't had much of an impact on the ten-year Government of Canada ten-year bond yield is what -- at -- not to this point, at least.

THE CHAIRPERSON: It's -- it's Mr. Oakes's request, not -- not the Board's. I mean, it -- I don't know if couns -- other counsel want to get involved or not.

MS. KATHLEEN MCCANDLESS: Well, procedurally, I'm -- I just wonder if we are approaching the close of MPI's case. If this produces new evidence, then there would need to be an opportunity for further questioning on it, so my suggestion would be: Is there a way to have the information provided that would not necessitate

bringing everyone back?

MR. LUKE JOHNSTON: And what --

DR. BYRON WILLIAMS: What -- what I've heard, Mr. Chair, with your permission, is that currently the number is -- is relati -- is almost exactly the same. So I might question the materiality of this.

THE CHAIRPERSON: Well, I -- I guess the question is, if we're talking the difference of two-four-one (241) versus two-four-three (243), Mr. Johnston, do you want to talk --

MR. LUKE JOHNSTON: MPI is, again, if -- we've said we're committed to using the latest rate. If that -- if that rate had increased by twenty (20) basis points or something, it'd be hard for me to say that's nonmaterial. But as of today. It's very similar to September 28th, so I -- I wouldn't suggest changing it.

THE CHAIRPERSON: Okay. We'll go ahead. There's -- Mr. Oakes?

CONTINUED BY MR. RAYMOND OAKES:

MR. RAYMOND OAKES: Thank you, Mr. Chair. And when you say not materially different, are we talking about .1 or .2, roughly, percent?

MR. LUKE JOHNSTON: Yeah, pro -- about .3, point -- .4 percent. And while that's maybe meaningful to a ratepayer, there is going to be constant movement to this, and it's hard for us to adjust every day for -- for movements like that.

MR. RAYMOND OAKES: Is the Corporation --

MS. KATHLEEN MCCANDLESS: Sorry -- sorry to interrupt. I believe that the court reporter would just like to know whether or not there is an undertaking, or whether now the information is satisfactory to Mr. Oakes.

MR. RAYMOND OAKES: I think given the comments about materiality, I won't insist on the undertaking, but I would like -- I will be asking some other questions relative to this area, certainly.

CONTINUED BY MR. RAYMOND OAKES:

MR. RAYMOND OAKES: And -- and we'll come back to that. In terms of what happens going forward to the date that a decision is reached by this Board, does the Corporation intend to do further calculations and updates between now and the time of the Board Order?

(BRIEF PAUSE)

MR. STEVE SCARFONE: Just discussing with the -- with the panel, Mr. Chair. I think the more appropriate thing would be if, in the Board's Order, they were interested in having such an update provided, the Corporation would, of course, comply with that directive.

THE CHAIRPERSON: I appreciate that. You have to understand the position we're in. We make decisions based on evidence.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: We have to have evidence to make the Order.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: Now what's being proposed is that we come up -- that we look at a number that isn't into evidence and hasn't been subject to cross-examination by the parties.

MR. STEVE SCARFONE: And -- and this was the exact situation that we dealt with last year and -- and the difficulties that the Board had with the suggestion that the compliance filing be made an updated --

THE CHAIRPERSON: Yeah, but the --

MR. STEVE SCARFONE: -- forecast.

THE CHAIRPERSON: -- but the problem is, Mr. Scarfone, the suggestion for compliance filing after a hearing is over --

MR. STEVE SCARFONE: Is a procedural --

THE CHAIRPERSON: -- puts forward a number that has not been tested in the hearing, that is not based on evidence prior to the Board -- prior to the hearing closing.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: It's a real, you know, and I know it -- it was suggested before, and certainly, you can put it forward and file submission, but we make decisions based on evidence before us prior to the closing of the hearing.

So I'll -- I'll just leave it at that. You know, Mr. Oakes, if you want to ask more questions you can ask more questions. It appears that we're not going to have, you know, further undertakings on this point. Please feel free to -- to ask your questions.

MR. RAYMOND OAKES: Thank you, Mr. Chairman.

CONTINUED BY MR. RAYMOND OAKES:

MR. RAYMOND OAKES: Now I'm going to

be even more of a devil's advocate this morning and ask what happens with interest rate increases and Government of Canada ten-year bond rate increases that happen, say, in the early part of next year?

Would you agree with me that the result is that MPI receives more premium revenue than their break-even rate indication would be?

MR. LUKE JOHNSTON: So similar to prior years, the -- as we've discussed here, a discounting assumption is needed to set rates, and something other than that assumption will likely happen. So the last stretch of time -- we've had some unfavourable results. They could go unfavourable or favourable, and -- but were always probably going to be wrong.

But if they go up, like you said, and we use the lower discount rate in our pricing assumption, then yes, all else equal, we would have charged more than we would have if we used the higher rate.

MR. RAYMOND OAKES: And, sir, I think you can confirm for me, that the motorcycle consumers of insurance are more affected by changes in interest rates than other consumers because of the fact that they have large case reserves. Is that correct?

MR. LUKE JOHNSTON: They'd be more affected because about 85 percent of their claims are personal injury, and about -- about half of those are -- are longer-term injury. So the effect of -- of discounting is greater for them, yes.

MR. RAYMOND OAKES: Do you have any idea of the magnitude of the difference?

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Fig -- well, figure 6 is on the screen right now, so you can see under the latest interest rate assumptions that the naive forecast is two -- a .2 percent rate increase, and a 50/50 -- sorry, on the break-even rate indication, and the 50/50 breakeven rate indication for motorcycles is zero point six (0.6). So in this example, it -- it's a .8 percent difference.

If you move over to the private passenger class, you see there's a .3 percent change. So just on this example, it looks like motorcycles are about twice as sensitive, maybe a little more than -- than passenger vehicles.

MR. RAYMOND OAKES: Right. Thank you for that. I'm going to direct your attention, first,

to the naive calculations and just with respect to the motorcycle experience, showing a bright -- breakeven rate indication of .2 percent, is that correct, sir?

MR. LUKE JOHNSTON: That's right.

MR. RAYMOND OAKES: And given your testimony a few minutes ago about what the change would be as at the last week, would you expect this then to be a zero percent rate indication as of the changes last week?

MR. LUKE JOHNSTON: Sorry. What -- what changes are you referring to with interest rates?

MR. RAYMOND OAKES: The Government of Canada interest rate yields which you indicated the effect likely is somewhere around .2 percent.

MR. LUKE JOHNSTON: Oh, my apologies. So the -- the 10-year bond yield has declined by a couple of basis points, so that would -- that would increase the motorcycle indication on the naive but slightly, maybe .4 or .5 percent.

MR. RAYMOND OAKES: I'm sorry, I -- I didn't understand that.

How would it change the .2 percent breakeven rate indication?

MR. LUKE JOHNSTON: So the -- the latest government bond field that we have is slightly

lower than assumed in this PreAsk. So, the lower discount rate on the naive basis would -- would mean a higher rate indication for motorcycles has effect on the other way then would be lower.

MR. RAYMOND OAKES: I see. So it wasn't in lockstep with the interest rate increase then?

MR. LUKE JOHNSTON: No.

MR. RAYMOND OAKES: Now, when we come down to the rate indication, including net CMP for motorcyclists, it shows the sum of 2.2 percent increase. Is that correct, sir?

MR. LUKE JOHNSTON: That's correct.

MR. RAYMOND OAKES: And the Corporation wishes to have this Board adopt the naive methodology.

So, is the Corporation's application for increase for motorcycles decreased from 3.1 percent, down to this 2.2 percent for this application?

MR. LUKE JOHNSTON: These would be the indications that, yes, the Corporation would calculate based on the latest interest rates using the -- the naive interest rate forecasting model, correct.

MR. RAYMOND OAKES: So, the

Corporation is asking for 2.2 percent increase for motorcyclists this year?

MR. LUKE JOHNSTON: The -- the Corporation, yes, is committed to using the latest interest rates for improving the accuracy of pricing and these are the latest and the new indication for motorcycles is now 2 -- sorry, pardon me, 2.2 based on the MPI's CMP methodology.

MR. RAYMOND OAKES: Thank you. And when we look at the 50/50 methodology, then it shows that there is a reduction in premiums attributable to the breakeven rate indication for motorcycles, being a reduction of .6 percent. Is that correct, sir?

MR. LUKE JOHNSTON: That's right.

MR. RAYMOND OAKES: And that rate indication, including the net CMP, would rise to the Corporation seeking only 1 percent increase for motorcycles. Is that correct, sir?

MR. LUKE JOHNSTON: Correct.

MR. RAYMOND OAKES: Thank you. Moving from the area of the interest rate forecast to Undertaking Number 8, and this was a question I had asked on cross-examination, seems like a very long time ago, but it related to the reserves that MPI has and the purpose and the amount.

I see some discussion of the types of reserves, I don't see any amounts indicated there.

Would you agree with that, sir?

MR. LUKE JOHNSTON: Yes, Mr. Oakes. So, it was -- well, as shown here it was me who took this undertaking and when returning to the office I was told that listing every provision on any -- every project or outstanding debt or anything like that would be quite the exercise.

So to -- what I believe your point was in this particular discussion is that MPI holds large provisions as part of -- particularly on the claim side. So if it's helpful to put on the record in the February actuarial report, which is a EAR attachment A, maybe we could just go there brief -- briefly, just -- sorry for...

So that would be page 20 of the -- I think just scroll down. So, if you look at -- under section 2, the third line, so there is a -- you see $210 million of claims provisions and another 23.7 million related to expenses.

So approximately 234 million of actuarial provisions, which -- which are required under standards of practice, I'm hoping that that's sufficient for -- for your question, just to recognize

that -- that there are large provisions on -- on -- on unpaid claims.

This would be the vast majority of those types of provisions that we hold.

MR. RAYMOND OAKES: Thank you for that. So the 230 million, that's for claims liabilities, or what we call case reserves, is that correct?

MR. LUKE JOHNSTON: It would be really for unpaid claims liabilities, so the actuary makes a best estimate, and then per actuarial standards of practice risk margins have to be applied on those reserves, based on how risky they are seen to be.

So income replacement reserves, for example, that are -- could be for a lifetime would have a higher provision than collision claims, which are paid within two (2) to three (3) months.

MR. RAYMOND OAKES: Thank you for that. And then the second part of your answer talks about the other provisions, margins and contingencies used for such things as recut -- as accounts receivable.

In truth, there's a number of other Pfads and margins in other areas, not just Accounts Receivable, isn't that correct, sir?

MR. LUKE JOHNSTON: There are other -- so this was the difficulty in answering the question the way I accepted it, and my apologies for that.

You know, anything from a project might have some sort of contingency on it. Receivables, you know, there's different things required under accounting practices.

What I'm hoping to get with -- with the numbers we've just discussed is that those other provisions are -- are very immaterial relative to the provisions held on the claims side, which are in the hundreds of millions of dollars. But yes, there are others. Yes.

MR. RAYMOND OAKES: I wonder, Kristen, if you could bring up the reference found there, page 19, universal compulsory automobile insurance annual financial statements.

And just wondering if, at a high level, Mr. Palmer, (sic) you can put something on the record that just flushes out your answer a little better.

MR. LUKE JOHNSTON: You still remember Mr. Palmer.

MR. RAYMOND OAKES: Oh, I'm sorry, Mr. Johnston, sorry. I'm showing my twenty-six (26) years here, unfortunately.

MR. LUKE JOHNSTON: I hope I'm not starting to look like Mr. Palmer, it -- maybe that's the effect of doing this for...

Okay, so, I think this -- the -- the section you're seeing here is consistent with what I've -- what I've just said. There are other types of provisions, but the actuarial provisions are definitely the most significant and -- and the -- the key part of our answer there is that we don't -- although we have allowances and provisions required by -- by accounting or actuarial practice, these aren't amounts that we can use to stabilize rates or things. I can't release the provisions, you know, when we have a stock market crash or something like that.

So, we do recognize that we hold provisions like this, but they're not used for the purposes of -- in the way the RSR reserves are used.

MR. RAYMOND OAKES: And I wonder if, when you talk about they're not as material as the claims liability provisions, what are we talking about in terms of numbers?

MR. MARK GIESBRECHT: In terms of allowance for doubtful accounts, if we look at amounts that relate to customers, just ballpark terms, you're probably in around a million dollars.

We do hold larger allowances for our subrogation and so this would be for other insurance carriers or people outside the province of Manitoba, typically. That would be around 30 million, again that's just a -- a ballpark figure.

But in terms of specific customers, about a $1 million of allowance for doubtful accounts.

MR. RAYMOND OAKES: And similarly, how about the other items, deferred development costs.

MR. MARK GIESBRECHT: I don't have those numbers at my fingertips.

In terms of deferred development costs, I would not expect a material amount of any kind allowances set against those.

MR. RAYMOND OAKES: Are you aware, sir, of other Pfads or other margins, contingencies that aren't indicated here?

MR. MARK GIESBRECHT: I am not typically a Pfad is -- more relates to the actuarial reserving, so it would not apply typically to other balance sheet items.

MR. RAYMOND OAKES: Mr. Johnston, going back to a historical issue, and this related to an exchange at page 583 of the transcript and it looks like I neglected to get an undertaking, because you

indicated you're going to advise of the money impact of the IRFR in a few minutes, and you've come back and given me some information that I'd like to put on the record as to the amount of the IRFR that the Corporation sought in the 2017 GRA.

MR. LUKE JOHNSTON: Just one (1) moment, I -- we did ask for that, I've just got to find the number.

MR. RAYMOND OAKES: If it assists, I have what you provided by way of email.

MR. LUKE JOHNSTON: I didn't realize that, but yes, please, if -- I can confirm that if you like.

MR. RAYMOND OAKES: The response I received from the Corporation by e-mail is:

> "The IRFR is explained in the overview in the 2017 GRA, and also in the 2017 PUB Order.
>
> The Corporation's alternate proposal was for a 2.3 percent IRFR in that application."

Do you adopt that, sir?

MR. LUKE JOHNSTON: I do.

MR. RAYMOND OAKES: And so going back to my question: How much money was the Corporation

seeking from its consumers?

MR. LUKE JOHNSTON: Approximate basis, 2.3 percent would be in the $20 to $23 million range. And I'd have to look at that particular year, but as you know, for that, several rate applications the -- the actual discount rate we used or assumed didn't materialize.

So, I don't know exactly what happened in that particular case, but it's possible that -- that month those funds were needed. So we talk about the $160 million of deficiencies, the Corporation was trying to set a -- a different forecast to protect itself from those types of changes.

MR. RAYMOND OAKES: So, just to confirm then, in the 2017 GRA the Corporation was looking for a factor to add another $20-$23 million to the premium revenue, is that correct?

MR. LUKE JOHNSTON: Yeah, it was called interest rate forecasting risk factor, but really the effect of it was to, essentially, not assume as aggressive of interest rate forecast, which would increase the premium required in that GRA. But those -- the dollar numbers you quoted are -- are correct.

MR. RAYMOND OAKES: All right. So you

would agree that the 2017 GRA Corporation comes with -- up with something called IRFR, not previously used or known before that application.

Is that correct, sir?

MR. LUKE JOHNSTON: In -- in those particular -- in that naming convention, no.

But we can go back to probably the 2014 or so rate application where a Corporation has proposed a lot of different objectives -- or proposals related to interest rates, including things like the low growth forecasts, 50/50, interest rate forecasting risk -- risk factor.

These are all similar ideas where we're trying to use caution in the aggressiveness of the interest rate forecast at the time.

MR. RAYMOND OAKES: In 2017 that was the first time the Corporation asked for this type of surcharge on top of the rates?

MR. LUKE JOHNSTON: That's correct.

MR. RAYMOND OAKES: And in the 29 -- 2019 application, the Corporation has now created a new type of surcharge called the Capital Maintenance Provision. Is that correct, sir?

MR. STEVE SCARFONE: I'm just going to interject at this point. That evidence was fully

canvassed during his -- during this panel's original testimony. And canvassing the capital maintenance provision is not the subject of an undertaking that was provided by the investments panel.

THE CHAIRPERSON: That's fine, I'll allow the question.

MR. RAYMOND OAKES: Thank you.

CONTINUED BY MR. RAYMOND OAKES:

MR. RAYMOND OAKES: Is that correct, sir. Do you want me to restate the question?

MR. LUKE JOHNSTON: I believe the question was: Is the Corporation proposing a capital maintenance provision in this application? We are, yes.

MR. RAYMOND OAKES: And you've told this Board that the amount to be raised from this new surcharge called the Capital Maintenance Provision is roughly 18 to $20 million. Is that correct, sir?

MR. LUKE JOHNSTON: That's right.

MR. RAYMOND OAKES: Is that a coincidence that the 18 to $20 million new surcharge is very similar to the range of -- sought by the Corporation in 2017 of 20 to $23 million?

MR. LUKE JOHNSTON: This -- that would

be coincidental. The interest rate forecasting issue is -- is -- is a different topic.

The capital maintenance provision is a -- is a different calculation, basically calculating the amount needed to -- to maintain our capitalization rate the same.

MR. RAYMOND OAKES: But the effect, you would agree, is the same that the Corporation is seeking another roughly $20 million from its consumers?

MR. LUKE JOHNSTON: The same effect but the -- that is a coincidence, that's not -- the two (2) aren't related.

MR. RAYMOND OAKES: Mr. Chairman, those are my questions. I thank you for your indulgence.

THE CHAIRPERSON: Thank you.

Mr. Williams...?

CROSS-EXAMINATION BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Just a few questions for Mr. Bunston. If we -- we can go to MPI Exhibit 39, please?

Mr. Bunston, in response to where the analysis was in terms of the use of Mercers standard

interest rate forecast, Manitoba Public Insurance directed my clients to Appendix 17, Attachment E, in terms of the work done by Mercers.

Is that right, sir?

MR. GLENN BUNSTON: Yes, that's correct.

DR. BYRON WILLIAMS: And sir, I just want to -- to take you, if I might, to Appendix 17, Attachment E, and direct your attention to the nominal liability portfolio, which is the third column over.

Do you see that, sir?

MR. GLENN BUNSTON: Yes, I do.

DR. BYRON WILLIAMS: And there you see the -- the benchmark portfolio comprised of short-term bonds, mid-term bonds and long-term bonds, sir?

MR. GLENN BUNSTON: Yes, I see that.

DR. BYRON WILLIAMS: And if we go down under the risk return metrics to the expected ten-year return for the benchmark nominal liability portfolio, it's 2.1 percent, sir?

MR. GLENN BUNSTON: Yes, that's correct.

DR. BYRON WILLIAMS: Okay. And just if we could now turn to Appendix A, investments -- sorry. Investments, Appendix 17, Attachment A, Slide

13. So Kristen, it's Slide 13, please. Go down to slide 14. Thank you.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Mr. Bunston, when I direct your attention to investments, Appendix 17, Attachment A, PDF Slide 14, Slide 13 on the right-hand side.

Again, if we go over to the nominal benchmark, the third column over, you'll see it's comprised of the same bond composition, sir?

MR. GLENN BUNSTON: Yes, it is.

DR. BYRON WILLIAMS: And if we go down to the risk return metrics and expected ten-year return, we see a 2.8 percent return, sir?

MR. GLENN BUNSTON: Yes, that's correct.

DR. BYRON WILLIAMS: And in essence, if we were to compare the two (2) slides, being Attachment E, Slide 13 versus Attachment A, Slide 13, the sole difference in terms of the nominal liability benchmark is whether the Mercers standard forecast is used or the forward yield. Is that correct, sir?

MR. GLENN BUNSTON: Yes, that's right.

DR. BYRON WILLIAMS: Thank you. No further questions, Mr. Chair.

THE CHAIRPERSON: Thank you.

Mr. Scarfone, any re-examination?

MR. STEVE SCARFONE: Just one (1) question, Mr. Chair, for Mr. Johnston. Thank you.

RE-DIRECT EXAMINATION BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Mr. Johnston, My Friend Mr. Oakes asked you about the interest rate forecasting risk that was advanced by the Corporation in the 2017 General Rate Application.

MR. LUKE JOHNSTON: Yes.

MR. STEVE SCARFONE: Can you explain, if you can, sir, the impact of the asset liability matching study on whether the interest rate forecasting risk that was sought two (2) years ago would be impacted by that in any way?

MR. LUKE JOHNSTON: Yes. So we, as the Board is aware, we used to use a net income methodology for -- for setting the rates. So basically just set rates to -- so the net income equals zero.

We also had a ALM program that was not optimal. It was done on a corporate basis, so there

was unfavourable impacts to Basic.

So we had, as an example, a -- we had one (1) application. I believe it was the -- I can't remember if it was the 2017 or 2018, but a naive forecast was a 7 percent rate increase and a standard interest rate forecast was a 2 percent rate increase. So that's a pretty dramatic difference. So at that time we had proposed the -- the interest rate forecasting risk factor to -- as a precaution there.

So -- now under with the asset liability program being proposed and the segregated portfolios, the risk for all prior years essentially neutralized, and we're talking about much smaller differences from interest rates as -- as we've shown in PreAsk 1 with the impacts of the two (2) forecasts.

MR. STEVE SCARFONE: Thank you. That was my only question Mr. Chair.

THE CHAIRPERSON: Thank you. That concludes this panel. I believe we're proceeding with Mr. Viola next. I'm just wondering if we should -- let's take a fifteen (15) minute break now and we'll set up for that.

MR. STEVE SCARFONE: Mr. Chair, just -- sorry, I was remiss in reminding the Board that there are a couple follow-up questions that Mr.

Johnston would like to respond to -- to Ms. McCandless's questions about that table that she went through.

THE CHAIRPERSON: Certainly.

MR. STEVE SCARFONE: So perhaps we should do that after the break, as I under ---

THE CHAIRPERSON: Do you have the answers now?

MR. LUKE JOHNSTON: My back row actually fell down the stairs and broke his leg, so that's why he's not here today.

So -- that's not funny. But yes -- so we'll -- he's -- I'm messaging him at home and these are some detailed questions from the model, I'll -- I'll get answers as soon as I can and let you know.

THE CHAIRPERSON: No, that's fine. Then we'll get the answers at that point.

Mr. Williams...?

DR. BYRON WILLIAMS: Mr. Chair, I'll just indicate, as I indicated to Board counsel off -- offline, in terms of Mr. Viola's presentation, most of it's for the public record.

What we're proposing, because the public record information and the confidential is closely linked, that he do the public record

information, we stand down for a couple minutes and then he -- to allow the court reporter to change her materials, and then proceed with the -- the confidential material because it -- analytically it's closely linked.

THE CHAIRPERSON: Yes, that's fine. I just want to put to the parties, unfortunately, I have a commitment at lunch that I can't miss.

So we're going to break from 12:00 to 1:30 today, I've been called away for a meeting. But we'll -- we'll break now for fifteen (15) minutes and then proceed with Mr. Viola.

--- Upon recessing at 10:10 a.m.

--- Upon resuming at 10:31 a.m.

THE CHAIRPERSON: If we could resume. Ms. Dilay...?

MR. KATRINE DILAY: Thank you very much, Mr. Chair.

So as -- as mentioned, we will be hearing the evidence from Mr. Valter Viola and it's our understanding that Mr. Viola has already been prequalified as an expert witness in this proceeding, but if it's okay with the Board we would like to take

a few minutes to confirm the exhibits that form his evidence, as well as briefly go through his qualifications.

In terms of exhibits, we would ask that Mr. Viola's PowerPoint presentation for today be marked as Exhibit CAC-28. And that is the public version of his PowerPoint presentation. It has been distributed electronically to the distribution list.

We do note that Mr. Viola also has a portion of his presentation that contains confidential information. We would propose that those slides only be introduced as exhibits once we go into the incamera portion of the hearing today.

We will now ask Board secretary to swear or affirm Mr. Viola.

--- EXHIBIT NO. CAC-28: Mr. Viola's PowerPoint presentation.

CAC WITNESS PANEL 2

VALTER VIOLA, Affirm

EXAMINATION-IN-CHIEF BY MS. KATRINE DILAY:

MR. KATRINE DILAY: Thank you. And so I just like to go through the exhibits that form Mr.

Viola's evidence today.

Mr. Viola, do you confirm that you were responsible for preparing the report entitled MPI's Investment Portfolio, Asset Liability Analysis and Previous Recommendations --

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: Sorry, which is filed as Exhibit CAC-11 on the record of this proceeding?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And you confirm that two (2) revisions to the report were filed subsequently and are marked as Exhibits CAC-11-1 and CAC-11-2?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: You were also responsible for responding to certain Information Requests from MPI, namely, MPI-CAC-1-8, 1-9, 1-10 and 1-11 which are marked as Exhibit MPI-18?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And you were also responsible for responding to certain Information Requests from the Public Utilities Board, namely, PUB-CAC-1-3, 1-4, 1-5, 1-6, and 1-7 which are marked as Exhibit PUB-16?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And you also prepared a revised answer to PUB-CAC-1-5 which is filed as Exhibit CAC-12. Correct?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: Can you confirm that the information provided in those reports and information responses is accurate to the best of your knowledge and ability?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: Now, in terms of your qualifications, Kristen, I'd like to move to Exhibit CAC-11 which is the report by Valter Viola, Appendix 1, page 27 of the PDF.

Now, Mr. Viola, in terms of your education, you received a chartered accountant designation in 1989, correct?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: You also received your Masters of Business Administration in 1990?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And you became a chartered financial analyst in 1995?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: Now, if we go a

bit higher on page 27, in terms of your experience, Mr. Viola, you have twenty-five (25) years of experience in the institutional fund management sector?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And more specifically, you have twelve (12) years of combined executive senior management and other professional investment experience at two (2) of Canada's largest institutional investors?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And that would include the Ontario Teachers Pension Plan from 1993 to 2000?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And that is a fund that has $176 billion today?

MR. VALTER VIOLA: Yeah. Probably a little higher today but big.

MR. KATRINE DILAY: Now, if we go to page 26, towards the bottom of that page.

Your experience also includes the CPP Investment Board from 2000 to 2005?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And that's a fund

that has approximately $367 billion today?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And a bit higher on page 26, Kristen. Thank you.

More recently, you have more than a decade of consulting experience as an advisor to some of North America's largest institutional investors on various aspects of investment and risk management -- risk measurement and governance?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: And some examples of clients have included Canadian Pension funds with assets under management that are about the same as those managed by MPI?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: To confirm your specific areas of expertise, they include investment research, economics and risk -- risk management, portfolio management and quantitative asset liability modelling?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: Kristen, could we go to page 2 of this same document.

And, Mr. Viola, when you were retained as an independent expert you were advised of your duty

to provide evidence that is fair, objective, and nonpartisan, is related only to matters that are within your area of expertise and provide such additional assistance as the Public Utilities Board may reasonably require to determine an issue?

MR. VALTER VIOLA: Yes.

MR. KATRINE DILAY: Thank you, Mr. Viola. Mr. Viola will now proceed with his PowerPoint presentation.

If agreeable to the Board, we would request that any questions of clarification during his presentation could be asked either by myself or by Mr. William. Thank you.

MR. VALTER VIOLA: Good morning and I'm happy to be back. I understand that you got into some Latin discussions the other day and I was warned not to get into the -- too much of the Greek math, so, I've kept the formulas to a minimum but there are, I think, two (2) Greek letters that are -- I'm going to have to refer to.

The plan, from my perspective, is just to have -- really go through two (2) parts of this deck. There's twenty-two (22) pages. The first half really sets the stage and provides a rationale for the recommendations which are on the last slide summarized

on page 22.

And a lot of the material in the first part is really similar to or identical in some cases to the material I presented two (2) years ago. So, the foundational concepts, some of the terminology with some additional comments given the focus of this year's review -- my review this year. I thought it would be better to start with those rather than get into the recommendations right at the onset. So if I jump to slide 3 really quickly.

This is the slide that I presented two (2) years ago and going down the middle column, I broke out the issues into two (2) parts. The bottom was really my sort of diagnosis of the problem which I framed in a very general sense. I, basically, identified focus and process as two (2) common problems for all institutional investors whether it's a pension fund or another large institutional investor that manages insurance risk, such as MPI, but they're common problems and they'll always be there, focusing on both sides of the balance sheet, assets and liability as the Mercer study and the work that MPI did this past year is clear that there is a big emphasis on that. So that's the good news.

That's not the case with many funds so

it frames the issues and differentiated between the symptoms that I saw two (2) years ago, and the problems that underlie it.

So, going down the middle column, two (2) years ago we identified the fact that there were no real return bonds in the portfolio, which I found surprising given the nature of the obligations of the -- of MPI which consist primarily of the basic insurance obligations and then a pension plan that roughly represents around 20 percent, plus or minus of the financial value of the liabilities for example.

And I raise the issue that the duration management was not as effective as it could be because the nature of the assets that were backing them were nominal in nature and I'll go into the distinction between nominal and real instruments and interest rates and risks in a moment.

We noted that Canadian equities, there's natural home bias for all institutions, whether you're Canadian or not, but in this particular case, we noted that the bias -- the concentration in Canada was particularly large and that was particularly concerning from my perspective simply because Canada has a highly concentrated sector. Certain sectors like energy, et cetera and the banks.

The other one (1) was there were no stocks exposure beyond Canada and the US and so there were missed opportunities to further diversify the portfolio and get better risk-adjusted returns. So those are the observations back then.

In terms of the focus -- and, again, this is sort of a broad general statement about all institutional investors but, in particular, as it related to MPI we noted that there seemed to be a focus more on the short-term, as opposed to the long-term, and -- and particular concern about rate stability at the expense of a longer-term horizon that perhaps had a focus of the full portfolio designed to mitigate longer horizon risks and get higher returns by taking different kinds of risks in a prudent fashion.

Back then we noted that AON had done a study that the GRA was based on that study, to a large extent, and when I looked at the risk and return metrics in that paradigm from the AON study, it was clear to me that it was -- it was less reliable as a means for optimizing the portfolio, making sure risk -- return risks, trade-offs were appropriate because the metrics on the risk basis, for example, were based more on accounting metrics.

And I'm an accountant by background, but I don't practice, but I knew enough that one (1) of the first principles accountants should ask themselves is what's the purpose for which these accounting numbers are being used?

And sometimes the accounting should reflect better or differently the purposes. So there's not one set of numbers, even though the actuaries, the accountants and the risk managers all call certain things assets and liabilities, the basis for evaluation and risk management are very different.

And so the notion of sleuthing accounting numbers, having very different accounting treatments for MUSH bonds versus nominal bonds versus real estate equities, et cetera and what triggered the recognition of gains and losses, whether it was to other comprehensive income or net income, those things made differences -- they -- they resulted in different metrics and therefore different behaviours and measures and assessments of risk.

So that was of a concern of mine, but ultimately, from my perspective, I sort of identified two (2) broad categories that would help remedy the underlying problems, the first one being a framework on the right.

And the framework to my way of thinking is simply just a paradigm that an -- answers key questions like, what is your goal as distinct from an objective? Are we trying to manage assets and liabilities in a way that minimizes the surplus volatility or the excess return volatility as Mercer had indi -- described it in the recent asset liability study or is it to be benchmarks and look better than our peers?

Because those are all possible goals and objectives and the framework, if articulated well, makes it clear what are the primary goals as distinct from secondary goals, and therefore, the opposite side of that coin, what is the risk inherent in meeting these multiple objectives or goals. We can go to the next slide.

So fast forward to what happened over the past two (2) years. Mercer was engaged to do a study and I've -- I've cr -- crossed out the items that were addressed based on the eighteen (18) recommendations that were put forth two (2) years ago.

I indicated back then that -- I -- I - I'd like to think of portfolio management as a hockey game and if you think there's six (6) players on the ice, if there's one (1) goalie, two (2) defence and

three (3) forwards typically and a whole bench that backs it up.

So wh -- sometimes when I think about the 60/40 typical asset mix between risky assets and less risky assets, two (2) buckets that I'll talk about soon, that's really a hockey game.

You've got usually a goalie and a backup on the bench so there's two (2). You've got three (3) lines of defencemen, so that's six (6). There's four (4) forwards -- sorry three (3) forwards but four (4) lines. You add it all up and there's twenty-six (26) on the ice, the rest on the bench. Two (2) goalies out of twenty (20) players is about 10 percent.

And the goalie, to my way of thinking, the better goalie is one that is in the net stopping the puck and the puck that we're trying to stop is being shot at us by the opposing team who I think of as the liability.

So if our team of portfolio assets consists of six (6) players on the ice, some on the bench designed to achieve our objectives, the way the Mercer study's done and MPI's framed the question, they're really in the business of designing a portfolio of assets, players on the ice and on the

bench, on a roster, that are trying to outperform the liabilities.

And those liabilities have certain characteristics that really have nothing to do with what the assets look like, us. They are what they are and at any point in time, we could look at those liabilities and say, they're long-term in nature, they're inflation sensitive or not, they may not be perfectly re -- correlated with CPI, but they've got some inflation-like characteristics.

And so when I look at what's changed, they're still, I would say, a shaky goalie in the net. So we've got nominal bonds in the portfolio or being proposed whether that's implemented or not. We don't have real return bonds in the portfolio, so there's a -- there's a worry that inflation will turn out to be different than expected.

If inflation were not volatile it wouldn't be -- it wouldn't be much of a sig -- there wouldn't be any significance between owning real return bonds and nominal bonds, but that's not the case; even though we're in a low inflation environment we're thinking decades out and we're not very good generally, people investors, about forecasting interest rates.

And while inflation on the horizon might be reasonably stable at a certain level, say 2 percent, with a little plus or minus a little bit, when you go beyond three (3) five, (5), ten (10) years, it becomes harder and harder to predict whether the Bank of Canada and other factors will continue to be benign. So, I continue to worry about the shaky goalie.

And in terms of the accounting at the bottom, I'm less worried about that now because the Mercer study made it clear that MPI has decided that the basis for the optimization is based on market value. So we mark to market the value of the liabilities, they have a long duration and they're sensitive. And so, the matching assets of that have similar properties in accounting book value cost. Those are less important or worrisome to me, but they may still be of concern for other purposes.

But again, what's still on the -- on the -- of concern, I would suggest, is this focus on more shorter horizon as opposed to long-term and the stability of rates in the short term and if we go to the next slide, this brings us to today.

And again, the carryover on the left is the shaky goalie and the focus at the bottom as a

problem in terms of the short -- shorter horizon as opposed to longer horizon focus. The additional ones and the symptoms, again thinking hockey wise, we've got fewer strong defencemen, at least proposed. We are -- what I've heard is that we're going to have fewer real assets in the portfolio, real estate and infrastructure which gives less inflation protection where currently there is not a lot 'cause there are no real return bonds in the net playing goal and we've got a crowded net.

And so when we say -- I say that, I think of different types of fixed income bonds in the portfolio; some have credit risk, they're not just federal or they're not pr -- federal, they're provincial and corporate. For example, they've got inflation risk; they've got credit risk; they've got some illiquidity, not overly concerning, except for the fact that all of the risk that is being taken for presumably higher return is really concentrated in the basic portfolio which represents 80 percent of the total, pension being about 20, being concentrated in that area and I -- and to my way of thinking, it seems like, you know, a more balanced portfolio regardless of where you are in the risk spectrum, going across the bottom -- we'll look at a graph in a minute -- the

composition of the portfolio in the risky bucket and a less risky bucket, which I'll describe in a minute, there's some concerns about where things are concentrated or not.

And I think, again, I think we're underestimating the opponent, again the liabilities. When we look out decades, it's pretty hard to predict interest rates and the components that make up a nominal interest rate, i.e., inflation and while in -- interest -- inflation, rather, is benign in the short term reasonably, who knows what's going to happen longer horizon.

And the more important points are at the bottom and we jump to the -- the very bottom, which is this liability benchmark portfolio, which is a proxy for what the liabilities look like from a financial risk perspective.

And the key point there is that, I'll say it again, I think I said it once, that the liabilities are what they are. They either have inflation protection. They're either long time -- or they either have a long ti -- time horizon or they don't and those are the facts.

Quite separate from that, is our view on what's going to make that hurt us from a portfolio

performance point of view, net of the liabilities. So managing assets and liabilities, we only can control the assets. The liabilities are what they are and, of course, we have to look at capital market expectations about inflation, interest rates, market corrections, and equities, all -- all those things, liquidity, credit risk.

But, the decision to accept risk in the portfolio moving along that bottom axis to either the low end where there's very little risk, but we can never get rid of it completely to higher risk where we might have mo -- more equities in certain portfolios than others, or at certain times, that decision is quite separate from the reference point from which you measure risk and return. The liability benchmark portfolio, in my estimation, has a long duration and has some inflation sensitivity to it.

If we could jump to the -- sorry, there's one (1) point I missed there on the focus. The new item there in terms of a problem is, given the explicit recognition which is a -- a great one, not all funds explicitly recognize a liability benchmark portfolio, but MPI has and I commend them for that.

It's the composition of that portfolio that's of concern to me. And the way it's structured

now, defined, all nominal bonds, no real return bonds, there is a risk to longer term instability to premiums, what consumers would pay to fully fund the plan -- or appropriately fund the plan. Go to the next slide 6, please.

So, I'll go -- the next two (2) slides have some terminology. I won't go through all of them. We all know that risk is a forward-looking concept. We all are familiar with the concept of duration. The duration concept has two (2) elements or two (2) -- well, there's -- it -- it applies to both assets and liabilities, fixed income products.

And in the case of Basic pent -- Basic liabilities, for example, we've seen through the GRA that the duration of the Basic liabilities is about ten (10) and the pension is even longer at about sixteen (16), which is to say, for the Basic pension when interest rates change by 1 percent, the liability will change by ten (10) times that, roughly speaking.

So this duration is just a rough estimate of the sensitivity to interest rates as it relates to the liability. The assets again they -- they are -- they are sensitive or not and there's a policy to match the assets and liability duration within, I think, a quarter point. So a very tight

discretion -- low discretion for being different from what's deemed to be the duration of the liability.

The other important concept about duration mathematically is that it actually represents this notion of time and so, if you think of the cash flows related to the liabilities as being long -- long horizon, think of a distribution around ten (10) in the case of the Basic liability.

So the duration of the Basic liability is ten (10), which is to say, if you took all the cash flows out that you have to pay out, as best as we can figure out, and you discounted them back to today and you came up with a "X" billion dollars worth of a liability, duration represents the weighted average using the time value of money -- of the timing of those cash flows.

So if interest rates were zero, there is no discounting. Ten (10) would represent the average time -- the average maturity profile of the cash flows. The actual duration is shorter than the term to maturity because of that discounting process, but think of ten (10) as an average. So ten (10) is a long number. It's a high number. It's not one (1) year.

So the liabilities are an inherently

risky proposition to put out there. By setting up a pension plan with a sixteen (16) year duration, you make a promise that you'll pay those cash flows and you have assets to back them, same with the insurance for basic insurance, except that it's a ten (10) year, but the important thing to remember is that the -- the ten (10) is the average.

So, roughly, other things equal, unless it's -- it's not symmetric around that average, half of the portfolio or cash flows, at least, on the ten (10) year basic duration are well beyond ten (10) years or fifteen (15), twenty (20), longer years and there is a weight to that.

And so when we develop duration policies and think of matching, matching to ten (10) is the average and that's, you know -- but there's a recognition that I can at least notionally think of what the two (2) halves represent and what's my forecasting ability in the next ten (10) years versus the ten (10) years that follow that, for example.

And I certainly have more confidence about my forecast as about inflation and interest rates for tomorrow or the next year rather than those that go out twenty (20) years.

I'll move a lot faster on the

definitions, or that's an important one 'cause -- 'cause my recommendations really stem from that basic principle or understanding.

So inflation, we all know what that is. Nominal and real interest rates, the difference represents inflation expectations after the fact that's a realization and there's this thing called the Fisher equation, a famous economist who basically said, you know, roughly speaking, if inflation is 2 percent and I really want to maintain my purchasing power, my real value of what I buy at the grocery store, if inflation is 2 percent, I'd better earn all my assets at least 2 percent nominally, to at least stay flat. I can still buy that apple, bananas, my whole basket of goods out the door, if I earn enough to cover the 2 percent inflation.

If I actually want to do better by investing in more risky assets, or not even risky assets, let's just say cover inflation, I'll want a real rate of return, so that my purchasing power actually I can buy some dessert next time, not just have meat and potatoes, say.

So that's a simple difference. Again, the two (2) Greeks, I apologize, volatility and correlation, standard deviation, they're two (2)

statistical concepts. We won't go into the details, of course, but they're, you know, volatility is simply the dispersion around an average. The distinction between an average and a -- and a volatility around that average is important, especially as it relates to inflation, in this case.

And the other important one is correlation. And this is what makes investing a team sport, because what kind of a goalie you put in the net, or whether I have a goalie or pull him out of the net, really depends on what's going on in the game and who's on the ice. If I've got a really strong goalie, he'll stop inflation risk, or what other kind of risks are -- are hitting me, or potentially hitting me. It allows me to actually take more risks with forwards, and the defenceman can cheat. They can pinch at the blue line.

If I don't have a great goalie, I can't afford to take those other risks. And so the question is really about shifting assets completely. I'm -- I'm taking risk off the table, and I have to do it in a silo mentality, and assign different tasks and say, you do this; you do that.

We all have -- they're all correlated. The defencemen generally are defensive, but they do

score goals. Bobby Orr was a great scorer, right? And the goalies rarely score, right? We don't expect them to score.

So when we look at the return on low-risk assets, it's kind of unfair to say, they give us a lousy return. The question is, did they give us a lousy return to the next best alternative, and do they allow us to take more risks with our defenceman and equities that, in aggregate, allow us to outscore the liabilities of the opponent?

So those are the questions that come to mind. The equation at the bottom is very important. And in the simplistic form, you can just think of this vol -- and these are yields. This is the volatility of nominal interest rates.

So a nominal interest rate, let's call it 3 percent, consists of, let's say, a 2 percent inflation rate and a 1 percent real return. Those are the averages. What really -- what we really -- really worry about is the volatility of inflation, and that's that -- the term that says standard deviation or sigma, and there's the letter pi, for inflation. Pi stands for inflation.

If that term is zero, there's no inflation volatility, those second and third terms

drop out, which means that the volatility of real rates is the same as the volatility of nominal. And so will the returns. The returns will be identical.

So we're only talking about this equation, because inflation is not -- inflation volatility is not zero. Inflation level -- the mean can be 2 percent, 10 percent. If investors expect that it will be maintained at that level, we don't really have to worry about inflation risk, because they'll price that into the instruments that they buy for their purposes. But when inflation is -- volatility is not zero percent, we have to worry about whether the assets that we're buying are managing the risks in a way that's most efficient.

And again, from my perspective -- we'll see the data later -- it's easier to forecast the volatility of inflation over the next one (1), two (2), three (3), four (4) years, but if you look at the history and what's happened, we're certainly in a very low -- a -- a stable inflation environment. It's low and stable, which is great, but if it ever becomes higher and unstable, having nominal assets rather than real ones could result in some pain.

You can go the next slide, 7. So I've already talked about the distinction between the

nominal bond and a real bond. A real bond simply protects the principal by inflation. So if you buy a real bond for hundred dollars ($100), inflation is 2 percent, your hundred dollars ($100) actually gets indexed -- it's as if you put in a hundred and two (102), but they don't ask you for the extra two (2) to cover inflation. And so the hundred and two (102) principal amount is inflation hedged, and the coupon will apply to that higher amount.

So basically, real return bonds are the best hedge, regardless of your time horizon, because they fully index the cash flows, whether the cash flow was due in a year or thirty (30) years. And the longest real return bonds are outstanding. They've got another thirty (30) years to go.

Now the liability benchmark portfolio can be confusing, but the liability benchmark portfolio is the proxy for the liabilities. And in the past, prior to Mercer doing their asset liability study, my recommendations from two (2) years ago referred to this thing called a minimum risk portfolio. I -- I refrained from using the term 'risk-free portfolio', which you typically see in the literature, because there's nothing really risk free. The Government of Canada -- the Government of

Manitoba, they can default on a -- on a bond. So I prefer the use of minimum risk portfolio rather than risk-free. I'll talk about risky buckets and non-risky buckets later, but we'll -- I'll generally refer to the liability benchmark portfolio as a proxy for liabilities.

And as we'll see in the next slide, and maybe we could jump to it, those are the buckets I'm referring to. So up at the top right quadrant --

DR. BYRON WILLIAMS: Mr. Viola, just--

MR. VALTER VIOLA: Yeah.

DR. BYRON WILLIAMS: -- and I apologize for this.

MR. VALTER VIOLA: Of course.

DR. BYRON WILLIAMS: I know you're anxious to move on, but just to go back to slide 7 --

MR. VALTER VIOLA: Sure.

DR. BYRON WILLIAMS: -- one (1) definition --

MR. VALTER VIOLA: Yeah.

DR. BYRON WILLIAMS: -- tracking error?

MR. VALTER VIOLA: Yeah. I was going to come back to it in a minute, Byron, so when --

DR. BYRON WILLIAMS: And then -- go

ahead.

MR. VALTER VIOLA: -- go -- go -- let me -- so go to the slide, and then I'll come back to those definitions. So that I was referring to the risky bucket and non-risky bucket. These are the -- these are the concepts I wanted to introduce. And if we can think of it as an efficient frontier in, I call it surplus place -- sur -- surplus space, or assets minus liabilities.

So the bottom axis, if you look, my upper quadrant with the bucket says risk without defining the metric. The bottom axis is the one actually used in the Mercer study, and Mercer defines risk as the excess return volatility -- excess return of the asset portfolio in question could be, you know, 30 percent this, 60 percent that, and 10 percent something else in relation to this liability benchmark portfolio.

So that's kind of, in -- in investment terms, they call that the tracking error. It's the volatility of the performance difference expected, measured as standard deviation, between an actual aggregate portfolio -- total portfolio and this minimum risk portfolio, or the liability benchmark.

So it's -- it's -- so this basically

says 3.8 percent is the number -- if you look at the vertical number, this is assuming a real liability benchmark, and it basically says that two thirds (2/3s) of the time, you should expect the current assets -- in this case, the dot -- could have a performance that is different from the expectation -- in this case, growing surplus, having assets grow faster than the liabilities by -- it looks like mean is about -- eyeballing it, about one point eight (1.8), but it could vary from that two thirds (2/3s) of the time by as much is 3.8 percent.

So that's the risk, and it's because you've got a long-term promise, and you -- you haven't got assets that fully immunize that risk, because it would cost more to do so. So the fund needs to take risk, and the question is really, is that the most efficient way to do it? And we'll -- then we'll talk about the different curves.

So let's go back to the previous slide, and I'll talk about the two (2) last definitions. I mentioned tracking error against the standard deviation or the risk of two (2) things. And if you want, typically it's talked about as the tracking error against the S&P 500. So somebody who's trying to beat the S&P, they take tracking error, because

they don't buy all the five hundred (500) stocks in the S&P 500.

They buy -- only buy a hundred, and depending on how the hundred do versus the five hundred (500) that they're benchmarked against, they could underperform, but they're picking only a hundred instead of five hundred (500), because they think that those are the better hundred, and they'll do better. So the goal is to outperform that benchmark, and in the surplus context that we're managing assets and liabilities, it's the same concept, and that's the metric across the bottom.

Basis risk is really related to tracking error in the context of the two (2) liability benchmark portfolios that Mercer put forth as possible alternatives on how one would characterize the liabilities for MPI -- for both the Basic and the pension portfolio, and -- and the other portfolios, is my belief. I'll focus on just the Basic and the pension.

And so there's no basis risk if the portfolios look identical. Just -- they're -- they're mirror images of them. The Basis risk for tracking error exists to the extent that they look different. And in the case of the liability benchmark portfolios

that were put forth by Mercer, one (1) consisted a lot of nominal bonds, and the other one consisted of a lot of real return bonds, with some nominal ones as well.

And so the question is, how big is that basis risk? We'll show later Mercer's number, but it's a big number. It's about 4.6 percent, as I recall. So we can -- we can move on. I'll -- I'll move a little bit faster, but I thought those concepts were important, because I'll be referring to them again.

So those are the big picture items. This happens to be a graph of the Basic pension return and risk profile from Mercer from the two (2) questions that were posed by us and subsequently and answered by MPI and Mercer.

If we could go to the next slide, 9, please. I'll fly through these. The -- this is a slide that I put up two (2) years ago, and I've just noted a few updates. And -- and the sad and inconvenient truth, there's three (3) of them, and -- that are important to take into account. I'll only focus on the first one on the left. We don't know very much. And the last one, correlations are not perfect. The one in the middle is really about governance, which is not really what's in scope for

me.

But the truth is the truth. I mean, there's no -- there's no -- there's an alternative truth. We've heard about that terminology south of the border. We also call those myths or lies. But in -- in between is beliefs, right? We kind of believe they're truthful, but we only have empirical evidence or common economic sense that would suggest that's more true than an alternative fact.

And those are important in investments, because in the first column, we say we don't know very much. This is -- this is not the -- a world of Newton and the apple falling from the tree at 9.8 metres per second squared. This is the world of thinking about inflation expectations in the future, and we don't have a crystal ball, or at least, I haven't found one yet.

And the reality is, though, we have to make important decisions about how much risk to take, where to take it, what levels to set for rates, et cetera. So we don't know very much, but we have to inform our judgement based on some stuff.

So I've articulated beliefs that I thought were relevant two (2) years ago. I relied upon them again this year to make some

recommendations, and I borrowed them from the beliefs that we developed when I was at CPP Investment Board, which is, as Katrine said, is, you know, roughly, it's going to be about 400 billion, if it's not already there.

But I was there for (5) five years, head of research and risk, working with the gentleman, Don Raymond, who is -- who led the -- this formulation of beliefs. And I didn't really fully appreciate the importance of beliefs until you come across people with divergent views about how to define risk and strategy.

So you can't have a really coherent, cogent strategy and consensus on it unless the beliefs are shared. And so it's very important to focus on those, because otherwise, you -- you could run into trouble, and it makes for difficult management oversight. So the beliefs are important, and I articulated some.

Forget about the middle column for now, other than to note that the frameworks are important, and -- and as I understand it when I read the GRA, one (1) of the recommendations I recall was related to the framework, and having -- having one. And I think the response we heard back from MPI was, I believe, and

I'm just saying it in general terms, I -- I think one (1) of their advisors -- and I can't remember -- I do believe it was Mercer who indicated -- was Mercer -- that it is very important, time-consuming, should be done, and as I understand it, I thought it was a corporate priority to be done, so that's great to hear.

The last column, correlations are not per -- perfect. This is what makes investment management a team sport. So it's -- I believe it's not appropriate to look at any asset, whether it's real return bonds, stocks, or anything in isolation. The question isn't, you know, rate volt (sic) or real return bonds. There's a graph that I show later. They used to earn almost 5 percent real, net of inflation. Great. We had Terry Sawchuk in the net, right? Terry's from Winnipeg; anybody remembers Terry Sawchuk. Great goalie.

We don't have Terry Sawchuk today. We don't have 5 percent real interest rates. We have 1 percent, if we're lucky. So we have lousier goalies today. I shouldn't say that. We had goalies who could actually score back then. That's what -- that's the difference. They still -- they're as good today at stopping the puck as they were back then. It's

just that they used to actually score goals and have higher returns. That's the story.

But the point here is that you can never look at an asset in isolation without having -- without looking at the other assets that are in the portfolio or could be in the portfolio. And so this notion of beta or correlation is very important. It's not in marginal concepts, and we'll -- we'll talk about it in a -- in a minute, but that's very important.

So we can't look at RRBs, or nominal bonds in isolation. It's what contribution do they have, given that you've already got some other assets in the plan? So if you've already got a great goalie, you don't need another one. You might need a forward. So that's kind of the story.

If we can go to the next slide, please. I'll jump through these next slides again. This was a common barrier to excellence. Whenever I have an engagement with clients, the symptoms are always different. The -- the problems are always the same, and it's simply because of the fact that the people who manage the money aren't the owners of the money, so there's governance issues, there's measurement issues. But the punchline is -- this first one is the

focus.

And the good news is Manitoba Public Insurance explicitly acknowledges that the liabilities are important, they want to hedge them to the extent that it makes sense. That's great. A lot of people spend their life trying to beat benchmarks, and they actually have really wrong benchmarks, because some -- in some cases, they're easier to beat, and they're the wrong policy portfolio. They spend their life in active management. That's not the case here, and so that's good.

I won't go into the other issues, but they're always the same across the funds. Processes can always be improved, communication can be improved. People may think they have great ideas, but there have to be institutional capabilities to actually execute on them, and resources beyond my scope, but obviously, you need systems people, all that kind of stuff.

If we could jump to eleven (11). So briefly, again, these were -- this is a summary -- a Reader's Digest version of beliefs that were developed. There's five (5) of them here at CPP Investment, where we developed lucky thirteen (13). We had thirteen (13) of them, but these were the important ones. They weren't designed to be risk

related at all, but risk is embedded in everything we do in investments, so risk pops up everywhere, even though they were investment beliefs, not risk beliefs, per se.

So this is the brief version. I'll expand on a few of them that are relevant for this year. The first one is really saying, you know, we're in it for the long term, and sustainability is important. The second one is this notion of the minimum risk portfolio is really defining the rules of the game. It's saying: Are we trying to score goals? Are we trying to win the period? Are -- you know, are we trying to beat benchmarks?

The guy in Saskatchewan, or the fund in Saskatchewan, or are we trying to look at the liabilities as the main opponent and have few goals on us, but to score on them, have higher returns and less risk of funding deterior -- deterioration? So this notion of a liability benchmark portfolio is pretty fundamental, because it really dictates how you play the rest of the game, where you put your assets to win the game.

The additional risk, obviously, if you decide you wanted -- and again, risk tolerance is a function of a lot of things. Moving along the bottom

axis on that risk/return axis, obviously we would take more risk if we thought the return was high enough. So that's a discussion that needs to be done. We probably don't need it as a belief.

The fourth one is really important. It's this notion of a marginal concept. Again, it's a team sport. Correlations matter. So depending on who the opponent is, and the correlation between my players and their ability to track them, and shadow them, or do whatever, play the game, that's important. In correlations, unfortunately, the math gets a little hairy, and models are better at figuring out the implications of these nonzero correlations than -- than I certainly am, and then most people are.

And then the last one, really, isn't a -- isn't a belief, but we think it's still important, because a lot of funds don't appreciate the cost of constraints. So when we think about the efficient frontier being curved like this and not a straight line, it's curved because correlations aren't perfect, and it's a line because it has certain assumptions embedded in it, the capital market assumptions about the returns on equity stocks, bonds, and correlations among them, and the liabilities, and the volatilities of all these things.

Constraints serve to shift the curve up or down. So when you relax the constraint that was constraining, it shifts the curve up. For any given level of risk, you can get a higher return. If it's not binding, the curve doesn't shift.

In some of the Mercer analysis, where they go through the step process, both for the nominal liability assumption in the real one, you can see the cost of those constraints, and that first graph that I showed really shows the impact of imposing a constraint that says, I'm not going to buy real return bonds in my portfolio when my liabilities are inflation sensitive. And I quantified that number at the current level of risk, and I said that cost is .8 percent per year, using Mercer's assumptions.

So that's a -- that's a big number. And we did another number for the pension, but was it was -- it was smaller. And I think my first estimate -- I grabbed the wrong curves, where I revised the statement that we put forth initially, and I think it was twenty (20) basis points at a cost of that constraint, for example.

So if -- jump to -- qui -- slide 12. This is where I start to drill into a couple of the beliefs only to support the recommendations. And by

the time I get to the recommendations, I said, there's only eight (8). A couple of them I'll skip over quickly, so we'll probably address a lot of them as we talk about the beliefs that support them.

So the minimum risk portfolio is the liability benchmark portfolio. It's saying, what is -- how do we measure risk for this fund? And I think rightfully, Mercer and MPI concurred that the liability benchmark portfolio has a long duration. The question really is about what's the nature of that duration? Does it arise from changes and risk to interest rates changing that are real or nominal? And that's the issue.

And just to be clear, this definition of how we characterize the liabilities is not dependent on our current view about inflation, volatility, or level in the next year, five (5) years, or ten (10) years. The liabilities are what they are. They're either long, which they are, ten (10) years, in the case of Basic, sixteen (16) for pensions, and they're inflation sensitive or not.

And -- and my understanding is they may not be perfectly correlated with CPI, can't -- can -- the Consumer Price Index, but they're highly correlated, and there's nothing better than real

return bonds to hedge that risk.

T-bills can do it over the short horizon, but not as well as real return bonds, actually, because with T-bills, you buy them at a discount, and they mature, and then you reinvest them. The RRBs, you lock it in from the day you get it. Our -- with real return bonds, they have some real interest rate exposure, but you do have that with T-bills as well. The question is one of duration. So T-bills are short. RRBs are long. Both inflation protect.

Nominal bonds don't. Nominal bonds expose you to unexpected inflation, and the pricing of nominal bonds, a regular bond without inflation protection, we embed in that some notion of risk that says inflation could be higher. So there might be this premium risk that I should impose on them, and therefore earn a higher return on nominal bonds than infla -- than real return bonds.

Real return bonds shouldn't give you -- you shouldn't expect the goalie to score goals. They're there to stop the puck. That's -- that's as simple as I can put it.

Now, this is a big simplification that both MPI and Mercer have made. And in the case of

MPI, they said that there -- they based in defining the minimum risk portfolio, the liability benchmark portfolio, MPI said they based in -- in the CAC/MPI-2.2 -- 2-2, they said that they based their low risk assessment of inflation primarily on the expected level.

I underlined the word "level." So that has to do with the average. The Bank of Canada has a target average of 2 percent inflation, but there's volatility around it. They can't control it perfectly. They may have some control over inflation, but there's some volatility around it, and it -- and in the current environment, that volatility is very low, and we can show that in some of the Canadian Institute of Actuaries data that I -- that I included in some of the IRs.

Mercer's language, and I believe this bullet is a direct quote from CAC/MPI-2-4, is that they supported hedging the nominal risk before the real, and that that was driven by their views of the expected level of future level and inflation, as distinct from the volatility. And that's important.

And again, if inflation is 2 percent or ten (10), if they're both nonvolatile, they're stable, people will price that in when they price fixed income

bonds, nominal bonds. If -- the question really is about volatility inflation, not the level.

And it's the -- and again, when -- when asked through a question of ours what the tracking error of picking one (1) liability benchmark over the other, the number was 4 1/2 percent. I did not check it, but I knew it would be big, because if you look at one of the slides -- and let me see if it's on the next one.

Later on, we'll show the composition, but the two (2) different liability proxies for the true liabilities are very different. They have the same duration, ten (10) for Basic, but their exposure is different. One (1) is exposed to inflation risk and drops or changes in real interest rates. The other one's exposed just to nominal interest rate risk.

And the difference is -- is not only large, four and a half (4 1/2), in absolute terms, but when you measure it in relation to the risk level that you're operating at, which, in the real liability benchmark paradigm, is 3.8 percent, that's the graph number at the bottom -- at least that was the current number, it may be lower based on the plan -- I think it would be, because there's less equities in it --

then the -- this tracking error, the term is called, that error is -- is a big proportion of the underlying base that we're trying to manage, 118 percent. So that's not trivial.

Let me go to slide 13.

EXAMINATION-IN-CHIEF BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Mr. Viola --

MR. VALTER VIOLA: Yeah.

DR. BYRON WILLIAMS: -- just before you leave this slide, when you talk about a 4.5 percent tracking error --

MR. VALTER VIOLA: Sure.

DR. BYRON WILLIAMS: -- that is between what and what?

MR. VALTER VIOLA: Yes. So that's -- that's the -- that's the difference in -- that's the -- that's -- that's -- let's say that that's the mismeasurement, I would say, between the -- by picking the wrong reference point. I -- I believe that the liabilities have inflation sensitivity, and Mercer pushed the numbers, and they defined the least risky portfolio that proxies the liabilities. But that four and a half (4 1/2) says, that's the performance difference between what I think is a better

characterization of the behaviour of the liabilities than what's being modelled. And so it's kind of a -- it's a measurement issue.

DR. BYRON WILLIAMS: Okay. So -- so just to -- to finish so that's a 4.5 percent between the nominal liability --

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: -- portfolio and --

MR. VALTER VIOLA: And the --

DR. BYRON WILLIAMS: -- the real liability portfolio?

MR. VALTER VIOLA: Yes. Yes.

So jumping to 13, we're coming to the end of the -- the beliefs, and then we'll jump into quickly the -- the meat of the matter, although we'll have covered a lot of it through this exercise. Beliefs 3 and 4, related to the marginal concept of risk and taking a total portfolio or team approach.

And -- and again, this comes back to the inconvenient truth earlier that says, you know, risk math is messy. Correlations matter. The curve is curved. It's not a straight line, otherwise we would just simply say you take more risk, you get a linear increase in return. It's -- it's bent.

Unfortunately, correlations are harder to interpret, we'll see what some of the numbers say, but they're critical, so better to be approximately right than ignore them altogether. And it's particularly important given the number I just talked about, 4 1/2 percent, in the context of defining the liability benchmark portfolio.

And it's especially true when you think even though the duration is ten (10) years for the liability, we really have cash flows, half of which follow beyond ten (10). And -- you know, I had a quote from the actuary who says none of us are any good at forecasting interest rates and the longer horizon we get out there, the more difficult it becomes. So, those are the concerns I have.

Go to slide 14, please. Thank you. And in terms of market efficiency, this is a legacy one. You'll recall that two (2) years ago when I -- my focus was really on the risky bucket -- I've got the buckets at the bottom here on the -- on the left. And, again, that's an efficient frontier in your space, which is assets versus liabilities, and it's basically saying, you know, if you think of a capital asset pricing model, I talked about this two (2) years ago, the insights of capital market theory, when they

-- when you're just talking about assets and not polluting it with liabilities, the conclusion is this thing called the separation theorem.

It basically says, in that case where its assets only, it's not a curved line, it's straight and it basically says beta is the measure of risk, marginal contribution to risk. And it basically says investors, if we all have the same expectations, if we have -- we will only differ in our portfolio choices by deciding to allocate different amounts of water in each of the risk year or risk-free bucket.

What we won't do is when you look down into those portfolios, in terms of the risky bucket, the equities, you should see roughly the same mix between Canadian equity, US equity, foreign equity -- international equity. You might have a smaller amount of liquid in that bucket, because you don't like risky assets, you want to take less risks, so you put more water into your risk-free assets. But the characterization, the mix of it, the composition of those buckets should be the same.

So two (2) years ago I focused on the risky bucket, the white one. This year we're focusing on the other one, which is the composition of the liability benchmark portfolio. And when you look at

that bucket, across investors you should see a different composition because this is an insurance company that operates a pension plan, or has a pension plan as well and has to manage the assets in it.

That's very different from a Worker's Comp. fund or a pension plan that just does the pension assets, or you're in my RRSP and my RESP for my children. Those are all very different. We have different objectives and therefore a different risk-free bucket.

So if my time horizon is tomorrow, I'm not going to invest in the stock market, my least risky portfolio is T-bills, probably. But my least risky portfolio for this plan, for the two (2) portfolios that are the big ones, the Basic and the pension, that portfolio has certain characterizations. So the question really boils down to: Is there inflation risk in that or not? It's as simple as that. And we know the duration is long, and that's -- that's the issue that's on the table this year.

And again, for my perspective, I mentioned it earlier, but I think it's questionable, very questionable, to link your forecast about inflation, either the level or the volatility, with how you define what that risky bucket is. That's an

important point.

The liabilities are what they are. The opponent shows up and they're -- and you're playing them. And they are who they are. They either have skill or they don't. They're strong or they're weak. And you do your best to figure out how to outscore them. That's the strategy. That's who you put on the ice and who you keep on your roster, whether you trade at the deadline or not.

But that's a decision that depend -- that -- that's a decision about where you are along that spectrum and where you're pouring the water in and out of the bucket. But the actual composition of the bucket is -- should be -- should be the same for any bucket. Hopefully that's clear.

Fifteen (15), again, this is -- Katrine mentioned that I was at two (2) funds for a dozen years. CPP was -- I was there for 2000 to 2005, just for context, again, this is unchanged from two (2) years ago and it's just meant to be kept in here for completeness.

And again, as I said, my understanding is that MPI has an -- an undertaking to develop a framework and address some issues that were outstanding from two (2) years ago, and that it's not

a trivial exercise to be more explicit about these important issues about how one defines risk, how much tolerance of risk they have, et cetera.

The second slide, 16. It was -- just elaborates on what the Canada Pension Plan Investment Board did while I was there. And -- and again, as I said earlier, I think MPI has -- should be commended on explicitly defining with Mercer what constitutes their liabilities, and it's really a question of measurement that concerns me, not the fact that they're doing it. I think it's commendable that they're doing that.

So, if we go to page 17 and 18, this is really just, again, prior to joining CPP, I was at Ontario Teachers and I extracted this two (2) years ago and it stands the test of time today and it'll -- I think it'll always stand the test of time, only the numbers will change.

But what they've said is basically that they're in the business of managing surplus. Mercer and MPI call it the excess return volatility assets versus liability. And the -- these are their words, so they're focused on real interest rates, they're focused on inflation. You don't see them talking about nominal interest rate risk, because that falls

out of those two (2) components.

And the one (1) thing to recognize, I don't show it here, I'll show it later. But they have a really good goalie and they have really good forwards. And so, even though they have a higher tolerance for risk than MPI, they still have a goalie that's really good in the net, and that's the key point from that.

If you look at slide 18, again, this was roughly the period that I was, yes, roughly I was -- I was at Ontario Teachers. So this was the annual report at 2000, just before I went to CPP, and these were the good old days. Real interest rates. This is a real return bond shown here, unchanged from two (2) years ago.

It was not -- it reached almost 5 percent real. Those were great. If you could lock in 5 percent real and be inflation protected, you could shut a lot of -- a lot of plans are shutting them down. Defined benefit plans are shooting them down -- shutting them down.

They would've liked -- they would have loved to see these rates. And that was just the point that, despite the fact that today real interest rates are a lot lower, when you fast-forward maybe you could

jump to slide 21 right now. Please. Thank you.

This is a time series, which hasn't been updated. It's from two (2) years ago, but this is the timeline of the asset mix of the Ontario Teachers plan, when we were focused primarily back then about the concentration in Canadian equity.

But the point -- thing to note here, the green box, is that they have 19 percent real rate products. So, I believe that excludes real estate and infrastructure. So that's really real return bonds. Some of them are US, some of them are private, they're not federal issues or provincial, but they've got $1 dollar in 5 at the end of 2015 in real return bonds.

And they have a lot more equities. They've got forty-four (44) in non-Canadian. This is back then, 2 percent in Canada, very small weight reflected in the global market cap.

But the point there is that they have a strong goalie, despite the fact that they're trying to score a lot of goals with a high equity content portfolio.

I looked at the annual report. The most recent one. They've reclassified some stuff. They've reduced -- and you can see as the -- as the -- as the time series goes from left to right from 2005

for the -- over the next decade, they rebalance and they find more opportunities.

The reason it -- it's blown out a lot is because they created opportunities. When I was there and I was actually the manager of this portfolio, the Bank of Canada restricted us from buying more than a quarter of the issue. We're a big fund and they wouldn't allow us to bid at the auction because they wanted RRBs to be distributed more widely.

So we went out and we backed up the truck and bought them in the US and then we created private opportunities, so we funded the 407 toll road in Toronto, for example, which is a real return bond.

So they basically said -- they went out of their way, not just to find the instruments that were on the table, because they were restricted from buying more, they actually went out and created more product. And despite that fact, they still take a lot of equity risk.

So you can have, again, from a total portfolio perspective, low-risk assets and really risky assets together usually give -- not usually, they do give better risk return trade-offs than being concentrated in either one (1) bucket -- within a

bucket, a risky bucket.

Let's go back one slide, and this is the CPP investment Board, and again, this -- I was there in 2000 and this was probably the first annual report that we published, 2001, March, so I just joined. And I put a red box around here noting again for fixed income assets, we've got real return bonds, they're on the vertical axis, i.e., low risk. They give a slightly higher expected return back then, versus treasury bills. They were longer duration. In other words, the yield curve was upward sloping.

But the government bonds, corporate bonds, because they don't offer real inflation protection, they should command a higher rate of return, because they are riskier in the context of our fund. This is the risk for our fund, which was our fund, literally our -- our Canada Pension Plan, which is we promised pensions to you, once you turned a certain age, and -- and there's some indexation of the inflation risk.

So -- so that's just for perspective that the things I'm talking about are not made up. These are the two (2) big funds that define risk a certain way, the liability benchmark portfolio, and it's -- it's clearly got inflation-sensitive risks.

So if we can jump to slide 22, we're finally to the recommendations.

MS. KATRINE DELAY: And, Mr. Viola, maybe I'll just interrupt, but I don't believe you talked about slide 19 and I'm just wondering if you wanted to do that one.

MR. VALTER VIOLA: Slide 19. I apologize, I skipped one.

Yes, so this one is identical to, I believe, the slide I presented two (2) years ago. I coloured it just to focus on the issues related to today. So this was in the context of real return bonds being an asset class you could invest in and the liability benchmark that your -- is your opponent.

And -- and what we said two (2) years ago was that some liabilities resemble real return bonds in terms of the nature of the flows. They're inflation sensitive in their long horizon, which real return bonds are. If you buy the TMX index, it has a duration of fifteen (15), that assumes you take no tracking error against that index. There's fourteen (14) issues. It assumes you're fully indexed, so you're not taking tracking error against that. But that's a long duration vehicle you could invest in.

So the real return bonds close -- I say

close, could closely match. There is some question is -- you know, isn't it how close are they, we can always beat them up. They're better than the alternative. You're not going to stick a forward in net and play goal. So they're better than the -- any next alternative, hands -- hands down.

And the insurance cost of buying real return bonds to hedge long-term inflation risk and real rate risk varies through time. All interest rates do and so does the cost of insurance, what you give up compared to taking more risk.

And nominal bonds are only a good fit if inflation is stable. Again, not the level 2 percent, it's 2 percent plus or minus X. And again, long-term, over ten (10) years it's hard to predict. So nominal bonds are much riskier in the long horizon because inflation volatility is more uncertain the longer horizon -- the longer the horizon we take into account.

And again, this is a carryforward. There's a tendency to ignore portfolio risk interdependence, again, not a silo approach, it's a team approach, correlations matter.

And again, assets that look risky in isolation or those that look low volatile, like T-

bills, for example, have low volatility. They mature in ninety (90) days and they're backed by the Government of Canada. Government of Canada is going to cut you a cheque and -- well, they're going to make good on the promise when that T-bill matures.

However, you have reinvestment rate risk. If interest rates stay low, you reinvest at maturity every ninety (90) days at a very low rate. With T-bills, rising interest rates really good, because when you get the money in ninety (90) days you get to reinvest not a 2, but a 3, then a 4, then a 5. Nominal bonds it's the opposite. If interest rates go up, you're taking a haircut because the capital gain -- the capital loss.

Anyways, that was -- that was the point of slide 19. I apologize for skipping over it.

So now we're into the recommendations and I'll go through again. I won't -- I won't talk about -- there's a couple that I'll just go through quickly. We talked a lot about the reliability benchmark, and I'll finish with number 8, the -- the use of quantitative models.

So if we jump to 23, for example, high level we already talked about the duration difference between Basic and pensions. Pensions has a longer

duration, i.e., the inherent risk and the liability is more volatile. It's harder to hedge that risk than something that matures on average at ten (10) years. So the pension plan is inherently higher risk.

If you look at the assets that make up the liability benchmark portfolio, I've included only the ones that were in the response to the two (2) questions we posed. So this is the real liability benchmark. So this says that in the case of Basic, if you said I want to take risk off the table because my infla -- because my liabilities are inflation sensitive and I'm exposed to real interest rate risk, this is the least risky portfolio according to Mercer's. Two-thirds of the portfolio would be in real return bonds, a quarter of the portfolio would be in T-bills that mature in ninety (90) days. The balance of eight (8) would be in short-term nominal provincial bonds, and that sums to 100 percent.

And again, the thing to note here is that it's heavily weighted to real return bonds and T-bills. And again, T-bills has a low duration, less than one (1) year, say ninety (90) days. RRBs average duration of fifteen (15) years and you net all those things out, the duration is ten (10) years. So that's the matching asset, according to Mercer.

In the case of the pension one, the next box below, it's got a longer duration and not surprising -- not surprisingly, the RRB allocation goes from sixty-six (66) to eighty-one (81). The -- the T-bills actually go short, you actually synthetically, if you could borrow money at 90-day T-bill rates, you would do so so that you could buy more real return bonds and you would have some provincial bonds as well.

Again, these are Mercer's number -- numbers, and I'm not sure if the short position is really a self-imposed constraint that they have to be indexed to the FTSE TMX Canada RB index, which is the last item. But as I think I will say shortly, there's fourteen (14) bonds in the real return bond index. And so there's a profile when you add all those fourteen (14) up with the weights that they are in the marketplace. The duration of the RB index. They're exchange traded funds that you could buy that basically you get all fourteen (14) real return bonds or whatever makes them up, maybe it's not all fourteen (14), in the weights that they exist.

There's no constraint that says if you decide to buy them or you decide to model the liability, that you have to use all fourteen (14) to

invest in or to designate them as the proxy for the liability.

You could weight them differently. And I don't know to what extent that negative 11 percent in the short is a function of the constraint to use the index with no tracking error, versus the fact that, no, that is the true economic profile.

But the punch-line is there's a lot of real return bonds in this portfolio, this least risky liability benchmark portfolio. If you look at the GRA and the one (1) that was proposed by MPI to use, its nominal bonds. So the issue is: What's the most appropriate reference point for measuring risk?

I talked about the fact that RRBs, regardless of the time horizon, measure -- sorry. They hedge the risk over the term to maturity that you worry about perfectly, in terms of inflation risk. And if you match then a duration basis, then you've got the price risk by changing real interest rates hedged as well.

There is a convexity effect, which is secondary, won't get into it, but it's the rate of change of the rate of change and -- but that convexity effect, as opposed to duration, is smaller and tends to work its way out.

Punch-line is RRBs are a good goalie, T-bills had shorter horizon inflation risk. But again, they have reinvestment rate risk because their duration is so low, less than one year, not ten (10) or sixteen (16). We can go to the next slide, please.

This is the tracking error I talked about, it's the difference. So if you look at the box in the bottom, this is -- this was in a lot of the preambles, or at least one (1) preamble of one of the questions we posed.

We've got two (2) portfolio -- liability benchmark portfolios. These are not actual portfolios, these are the liabilities, and there's two (2) types of liabilities. The basic one's on the left and the pension one's on the right.

And the columns within the basic one, say, is if you thought or characterized the liability as having characteristics that were real with inflation sensitivity, the bolded thing, you would say -- and again, these are the same numbers as the slide before, real return bonds at the very bottom says you would have 66 percent.

If you wanted to take risk off the table, what would you invest in? You would hedge most of the risk, recognizing you can't completely hedge

all risk, financial risk, you would put two-thirds (2/3)of your assets in real return bonds. And again, the duration of all of these things is either ten (10) or sixteen (16) depending on which portfolio you're talking about.

The difference the first set of colours, blue and red, shows how different those liability proxies are. The one (1) that MPI has proposed to use as a reference point for measuring their risk consists all of -- entirely of fixed income assets with nominal interest rate risk.

So they are exposed to differences in the yield curve between real and nominal shifts and inflation that turns out to be higher than perhaps expected.

So that's the difference in terms of the portfolio that least -- takes the least amount of risk in relation to the liability, and as I said, the tracking error, Mercer's number's 4 1/2.

And -- and we didn't get a number, we didn't ask what it would be for pensions, it's probably higher, but that's a guess. But it's material, given the differences in the colours on the right. There is more differences on the right they're on -- they're on the left, and they seem to be in one

(1) or two (2) rather than four (4) buckets. So other things equal that more concentrated nature and bigger gap would suggest that maybe that 4 1/2 might be a little higher in the case of pension, but pension is only 20 percent of the total.

So net/net the bigger the risk is probably in the Basic, the mismatch risk, if you will. The definition.

If we go to 25, we had raised this, I think in the evidence I've written that the focus on inflation horizon over the short horizon. Sorry, inflation risk over the short horizon as opposed to worrying about the inflation risk over the longer horizon, beyond ten (10) years in the case of Basic, and the real interest rate risks over that longer than ten (10) year horizon was -- was kind of equivalent to, in a dividend discount model looking at the equation of how a stock return gets its return from two (2) components. One (1) is the dividend yield, which is pretty stable, 1 or 2 or 3 percent, plus or minus a few basis points, versus the capital gain, which goes up and down a lot.

So again, this goes to our point of, you know, focusing more on shorter horizon, more predictable risks at the expense of thinking about the

instruments that we should think about buying even though they're not as good as they used to be, to hedge those longer horizon risks that we are not as well-equipped, because we don't have a crystal ball to forecast.

Page 26, there's a question from MPI that we answered, and I just wanted to summarize it because it wasn't in the GRA, it was subsequent to the filing.

The question was: Can you provide some documentation that supports the -- the notion that real yields are really risky on the heels of the prior slide? And so, if you jump to the next slide, for example, we blow that up, it's even hard to read here.

But if you look at -- I've highlighted in yellow, and this is from the Canadian Institute of Actuaries. I've highlighted in yellow -- yes, just leave it there, please. Thank you. So we can see the headers at the top.

I've highlighted the CPI, the inflation, these are annual -- these are annualized numbers over different periods. Five (5) years, ten (10) years, going down the left column, fifteen (15) years, twenty-five (25), fifty (50) years, seventy-five (75), all years.

You have to be careful because some of the series don't go back that far. If you look across to the real return bond column, the yellow on the right that's highlighted, if you look at the very bottom in the twenty-five (25) year matrix, they've only been issued since 1991 or '92. So they've only got a 26-year history.

So there's only a one 25-year line item and what it says is that the -- and these are standard deviations, so this is volatility. This is the measure of dispersion, how volatile are these things. And the three (3) things of interest are: inflation, long bonds from -- issued by the Government of Canada, and real return bonds, mostly Canada bonds, some provincials.

Not strictly comparable because the duration might be a little different between the long bonds and the real return bonds, but order in magnitude you get the story.

So if you look at the bottom right yellow, you'll see in the real return bond over the last twenty-five (25) years, from 1993 to 2017, real return bonds has a volatility of 10 percent, that's what it was.

If you look left you say, okay, what

was the volatility of long bonds, and it was nine -- actually it's bad, 9.5. So not hugely different, and part of it could be that the RRBs have a longer duration. If they have a longer duration they should have a higher volatility. I don't know exactly what the Canada long bond duration is, but it's a long bond.

And so that makes sense when you look further left and you say: Well, how stable is the inflation environment? That's the first column, bottom left, and it's .8 percent.

So, if you look above the .8 it shows you over the prior twenty-five (25) year periods how it -- how volatile was inflation over that quarter century period ending in 2017, 1992, and I believe when my wife was born, in 1967.

And what you'll see is that inflation volatility has certainly come down, it's come down from 3 3/4 to 3 percent to .8. So we're living in unique times, inflation is not volatile. It hasn't been historically, but the question then is if you had to -- do you have a crystal ball to say it's going to stay like that in the future.

And the one (1) thing we know is that we're not very good at forecasting interest rates and

components, even though the Bank of Canada says we're going to stay in this ban, their ability to stay there is questionable.

But to the more important point, the question is: Is it worth taking the extra risk when the cost of insuring to hedge it seems like it's fair, even though it's more costly than it used to be? That's the relevant question.

So those are the key points from that. Let me just make sure that I've covered the points on slide 26.

I guess we'll just focus at the bottom of page 26, those points, I guess in the last five (5) year period, we will note again, this is the data so what from the table I just went through for the -- from the Canadian Institute of Actuaries on volatility, I didn't mention it, we can go back to it in a minute.

But the bond volatility has gone down from 14 1/2 to 8.8. So that's a dramatic drop, not quite half. Inflation volatility I said went down to .8 from close to 3 and 4 percent per year. And there's no trend in our -- our real return bond volatility, which -- which to me makes sense.

Real yields have come down, but they're

still volatile.

And again, the top two (2) points falling volatility in bonds and falling inflation volatility go hand-in-hand. And again, the only reason we care about all of this is that if inflation volatility is not zero, nominal bonds and real return bonds behave differently, and your liabilities depend really on -- there's a tracking year based on which one you believe to be more accurate.

28 is -- this was when we may just sort of need to break after this slide, if we want to go into something more confidential. The -- this shows correlations. This was in -- this is the preamble to one of the questions and this is -- this is Mercers data.

Column 5 represents the correlation of real return bond returns with other assets. Here I've shown only the debt instruments, fixed income, no equities in here. And what you'll see, the important thing to note is the difference in the column, the box in column 5, which is saying how do real return bonds returns correlate or vary with other bonds.

And so if you look at column 5 and you go up from the bottom, the .7 at the bottom right says that real return bonds have a .7 correlation with

provincial long-term bonds. And the -- and the -- and the correlation will fall as you go to midterm and short-term bonds, because the duration gap between the real return bonds, which have a fifteen (15) year duration and these other provincial bonds which have long been mid and short bonds, it's not surprising that the correlation will be different.

So it's falling. When you go from right to left, starting at .7 at the bottom right, what you're saying is, let's look at the column 4, where column 4 is federal bonds and long-term, so they're comparable to the real return bonds because they're long-term, similar credit risk because the real return bonds, although they have about 10 percent provincials, they don't have a lot of them. So it's a little bit of apples and bananas, but not much, still fruit.

If you compare that and you look down -- if you go starting at the bottom of the fourth column at .89, row 8, you will see that those numbers are all higher than the right column. So when you're talking about federal bonds, it has a high correlation with long-term provincial because they both don't have inflation protection, and they're both long. And when you go to mid term, it's still high and it's still

pretty high with short term.

But when you look to the right, those two (2) columns are quite different. The left column is always higher than the -- the right. In other words, the punch-line of this is to say if your liability benchmark portfolio has a significant component of RRBs, this is where the basis risk or tracking error arises in part, because that liability portfolio has a good chunk of the column 5 characteristics.

But if you have assets -- well basically, if you pick a liability benchmark that thinks it's more like the 4 column, it's going to be very different. So this is the source of the tracking error, if you will.

So that's -- the next -- the next -- so that was issue number 1, which is the most important issue, I believe, recommendation 1. So I've covered that.

The next one is a leverage constraint. I don't think it's a particularly big issue that -- and we can skip it --

THE CHAIRPERSON: You know, Mr. Viola, I'm sorry to interrupt, but you can decide if you want to skip it or not, but I think maybe we'll break for

lunch now until 1:30 and then we'll resume your -- your direct evidence.

And we will be doing the CSI, as I understand it, after the completion of Mr. Viola's evidence in cross-examination.

DR. BYRON WILLIAMS: That's our plan unless Mr. Viola advises me otherwise. But that's what I'm going to recommend to him.

THE CHAIRPERSON: Thank you. We'll adjourn till 1:30. Thank you.

--- Upon recessing at 11:51 a.m.

--- Upon resuming at 1:31 p.m.

THE CHAIRPERSON: Good afternoon. If we could resume.

CONTINUED BY DR. BYRON WILLIAMS:

MR. VALTER VIOLA: All set, thank you. Good afternoon. I just want to go back to slide 28, because I think I was not as focused on the one (1) column that I perhaps should have focused on.

If we look back at 28. These are forward -- these are Mercer's estimates of correlations and, as I said earlier today,

correlations are important, but they're hard to take into account.

And in the fifth column that relates the correlation of real return bond returns to other fixed income assets. Those other fixed income assets don't have a protection against inflation risk. So other things equal, if inflation turns out to be higher, those nominal bonds whether they're provincial, federal or corporate, short, mid or long they'll do worse because of expected -- inflation turning out to be higher than otherwise.

Real return bonds, of course, hedge that risk. And the thing to note in column 5 is that those numbers are not one (1). In other words, if you look at the bottom right number of .7, that's the correlation between real return bonds and provincial long-term bonds. And while .7 is not zero uncorrelated it's not 100 percent either, which means that's where the bulk of the tracking error between the liability benchmark portfolios arises. The selection of a nominal liability benchmark by MPI as distinct from one that I think is more appropriate, which is one that consists primarily of real return bonds.

So that 4 1/2 percent tracking error

that -- that I described arises because the correlation between RRBs in column 5 and the other assets in say, row 8, at .7 is 100 percent. So that's where that comes from.

And then a related or unrelated thing is the fact that, given that the real -- the liability I believe truly has inflation risk in it by not investing in assets that protect against inflation risk, the measured risk using the adopted liability benchmark portfolio by not capturing this inflation risk properly we're not properly measuring the true risk of having nominal bonds support real liabilities.

So that mismeasurement is I believe important to correct by re-specifying or thinking about the liability benchmark portfolio differently. Hopefully that makes the key points I wanted to make with less confusion potentially.

We're going to skip over the leverage constraint slide 30, because it wasn't a major point. On slide 30, this is the third recommendation of 8 and relates to the duration policy. And the issue there is the suggestion that perhaps the duration policy which uses nominal bonds to hedge what I believe to be a real liability benchmark portfolio should be revisited to take into a fact -- into account the fact

that inflation volatility while it has been lower the last five (5) years may not over the time horizon that we are contemplating making asset mix decisions, policy decision should take into account very long horizons, decades, that assuming that inflation will remain non-volatile over a very long period of time is -- is a potentially risky thing to do or assume.

The view that MPI took two (2) years ago, they agreed that duration matching, as their policy is written, and implemented, is not as effective if inflation, in fact, differs from what we expect it to be. And they said that they accepted the short-term inflation risk and accounted for that risk through margins and reserves, and this excess portfolio was designed to provide some protection if, in fact, inflation were to become a problem.

The next box refers to the rate risk, interest rate risk, and again, this is the formula that I indicated in the terminology at the front and the important point to note here is that unless that third term, where it says Sigma, the last -- the very last term with the subscript pi, that's the inflation volatility. Unless that thing is zero and if that is -- that second term is also zero, other than that, if -- unless those two (2) things are zero inflation

volatility impacts the volatility of nominal interest rates.

And so, in other words, nominal rates and real rates will not go up and down together. It may be highly correlated but they're not perfectly correlated, and in the next slide we'll talk about -- which we won't go to yet -- we'll talk about the scenarios, three (3) of them that could give rise to significantly different performances for three (3) kinds of assets: T-bills, nominal bonds and real return bonds.

We talked about the 4 1/2 percent tracking error and that arises again because of that lack of perfect correlation between real return bonds and other nominal bonds of different varying durations or maturities.

Again, just throwing out on the table. Simplicity is great, but sometimes we put some constraints in the policies that we develop and those constraints I've argued in the past have some real cost potentially.

One (1) thought if this does get revisited is thinking about the duration risks that are inherent in the liabilities and, again, recognizing that when we say that Basic liability

duration has a mean or average of ten (10) years, and that's the policy that you're setting bounds around that, the duration of the fixed income portfolio has to be plus or minus one-quarter year or .25 within that ten (10) or 10.3 -- I forget the exact number -- one might think about, again, thinking differently about, well, what duration are we talking about; nominal interest rate risk or real; shorter horizon where I have more predictability about the stability and level of inflation the next five (5) years as distinct from ten (10), fifteen (15) and twenty (20) years, and maybe you use different instruments in a two-tiered sort of policy.

But those are the things that come to mind to suggest that, you know, simplicity is great but a little bit of complication while still not being overly complicated may sort of enable you to better manage the true risks that are underlying the portfolio in relation to the liabilities without a lot of effort.

And again, I had mentioned this earlier, the FTSE TMX Canada real return bond index is an index that consists of I believe fourteen -- there are fourteen (14) issues that are out there. I believe they're all in there, but I'm not sure. They're

mostly federal bond issues, and whether the fund decides to invest in real return bonds at some point or at least use them as a proxy for what the least risky portfolio is representing the liabilities. There's no requirement per se to presume that you have to hold them or model them as liabilities in proportion that they exist.

In other words, if there's fourteen (14) bonds, you don't have to hold them all in this liability benchmark portfolio and you could, again, in a blended fashion where you rethink the duration policy consisting of both nominal and real rate risks that you are managing in an integrated fashion, it could be that you sort of view RRBs as the core holding or the core instrument that takes most of the risk off the table and the nominal bonds may be the substitute that's the backup goalie that serves as a supplement, but not the primary means to mitigate that kind of risk. So those are my thoughts on duration policy.

If we go to slide 31. A related point is what's going on in the actual portfolio at fixed income resulting from the asset liability study. And to my way of thinking, I'll only talk about the top panel, in particular, for now.

But, we can go through a couple of scenarios. I've done three (3) across the top. Green is good; red is bad in terms of actual performance of instruments or liabilities. And so the issue here is to really rethink the decision to lengthen nominal bond duration to this 10 percent in Basic -- or 10, recognizing that there were various reasons that had caused the measurement of the liability duration to go longer.

But again, if you're using nominal bonds to manage duration against a real liability lengthening duration creates more inflation risk in the nominal bond portfolio. So even though the view might be that in the next few years, you don't have a lot of concerns about inflation, we're really talking about a ten (10) year matching which contemplates the average. So you're really hedging things beyond ten (10) years with nominal products that are exposed to inflation risk.

If you go through this -- some scenario analysis, and say, well, what if inflation turns out to be higher than expected, recognizing that people factor that in to the pricing of the bonds that they buy, nominal bonds. Well, if inflation goes higher than expected, real return bonds they're hedge.

That's -- by definition they're -- they're okay. So if inflation turns out to be higher than expected, that is a good thing in a relative sense compared to the alternative of buying bonds, nominal bonds.

Not only do you get the inflation protection and don't suffer the losses that you would otherwise get because nominal bonds would go down in value, the real yields may actually fall because there might be a flight to those real return protecting assets. People won't want to buy that insurance and with real yields going down, the cost of buying it will go down -- will go up. There's an inverse relationship and if you happen to hold those, you get the POP.

In staying in that single column, again, inflation greater than expected, T-bills will actually do well because, again, T-bills will mature within the next year. Let's say you have ninety (90) day T-bills, as they mature and if inflation turns out to be higher and people go, oh, this is here to stay or it's more volatile and I need to put a margin of safety in, then when you reinvest your T-bill when it matures in three (3) months or six (6) months, you're going to reinvest it at a higher and higher and higher rate.

And because you're turning the portfolio over twelve (12) times a year, say, or six (6) times a year or quarterly, four (4) times a year, you're going to capture that increasing rate and actually earn that return because of the short duration of T-bills.

That's not true when you go to the bottom where it says "bonds." How do bonds do when inflation turns out to be higher than expected because of the long duration if inflation expectations -- if inflation becomes higher than it was expected, and people believe that, oh, all in the future it's going to stay at that high level or be more volatile, bonds will do poorly because people need to be compensated for the extra risks they're taking for bearing inflation risk. And so bonds will go down in price. And they'll do worse the longer the duration.

And so that begs the question: Well, what's our view over the next little while? Do we think nominal interest rates are going to continue to start creeping up, in which case, bonds will not do very well and the more interest rates go up nominal, the worst those bonds will do and the worse they'll do the longer the term they are. So if you're going to ten (10) years lengthening it's not going to do as

well.

And then again in the other -- the far two (2) right quadrants I do the scenario, of course, and this is just the relationship between bond prices and yields. If -- if yields fall in the first category with -- are real yields falling, how do -- will real return bonds do they -- they do better. (sic) And that's -- that's what we mentioned earlier and the opposite should be true with the nominal bonds.

We won't talk about the middle box in the public forum because there's confidential information there, but the conclusion again, as I said, just to reiterate, is that the lengthening of the nominal duration in the fixed income portfolio creates greater risk of long-term instability in rates funding because the liabilities happen to be inflation sensitive.

So we can continue on and skip Slides 32 and 33 and 34. And so then we're back to now where we're not talking about the liability benchmark portfolio but the instruments that could be buying -- that you could be buying there. And again, we talked about the risk-free bucket versus the market or risky bucket. Here we're talking about potentially thinking

about the decision to exclude real return bonds from a portfolio, given the fact that the liabilities truly really have inflation risk.

And again, this is not something that surprising when you look at the analysis that Mercer did and it's on the following pages and we could flip to those right away. There's a cost to imposing a constraint, in this case, not having a dollar in real return bonds and the actual portfolios.

So if you slip -- skip to slide 36. This one is for Basic and the next slide which we'll jump to in a minute if for the pension portfolios. So back to Basic on slide 36. This is Mercer's data and my eyesight's going to fail me. And in this case, they didn't -- they normally put the box up there with the actual statistics. So this is why we've put in here this is -- the 80 basis points cost here is my estimate based on a visual of the graph.

And so I had to pick one (1) point, but that -- that's -- I guess it's a brown coloured bar, is it? Let's call it brown at the bottom that crosses the dot at the current, at that point, that was the current portfolio, whatever it was when the GRA was filed. And what that says is that at that current portfolio, there was a certain amount of risk, 3.8

percent.

And at -- and at that point, there are no real return bonds in there and -- and it's -- it's actually -- the dot seems to be a little bit below that brown line. But there's no real return bonds in that portfolio.

You will recall that the request for the analysis that we made to MPI was related to the analysis using a real liability benchmark portfolio. I thought Mercer and MPI did a great job of describing the impact of different constraints and additions of new asset classes for the nominal liability benchmark portfolio through the GRA.

And our question simply said, What if you did that same analysis, added real return bonds, and took them out, put more into private equity, what have you, what would that look like?

This graph shows the impact of doing -- I think doing all those steps and -- and the last one was: What if you took real return bonds out?

So that upper efficient frontier, that upper graph, actually includes real return bonds across the spectrum and that's the key point.

And remember what we are trying to do, we're trying to go northwest to Alaska from Winnipeg,

which is where we are currently. We would like to go up higher return for any given level of risk and left, less risk for any given level return.

We'd like to get way up to the top left quadrant, but given our capital market assumptions and the fact that -- well, just reality is we can't get all the way where we'd like to do, returns don't just get us there.

So the best we can do is get along in efficient frontier and we can choose to be somewhere along that efficient frontier, but we generally don't go -- not generally, we'd never want to be below the efficient frontier.

And so the vertical distance between the top line measured at the current level of risk, and -- not the dot current, but that brown curve which is close to the dot, that represents the opportunity cost, the ha -- the lower return for the same level of risk by not allowing MPI -- or choosing not to put real return bonds in your portfolio.

And again, I don't have the actual number that corresponds with how many RRBs would be in that portfolio 'cause Mercer didn't put the table down, but that's okay, but we can go into what the -- some of the numbers might be along the curve ranging

from low to high.

And as you'll see the top curve, if you follow it along, the difference between the brown curve lower one and the top one narrows because as you go along from left to right, you're taking more risks so you're putting more into equities; real estate; infrastructure, away from fixed income.

Along the top curve you're taking money away from real return bonds.

Along the bottom curve you're taking money away from nominal bonds.

And as you'll see, the difference between the curve will get narrower and narrower. In other words, when you are prepared to take a lot of risk, not being able to invest in a better hedge doesn't cost you as much 'cause you're prepared to take the risk.

But when you move to the left and you say, I have a lower tolerance for risk, that cost becomes higher and you can measure the cost two (2) ways: Foregone return vertically or for a given level of return that you required, what's the extra volatility I'm going to expect in my funding?

And what you should look at is perhaps this vertical distance -- sorry -- this distance

moving from right to left of the dot, and you'll see that -- that's kind of a big rectangle and -- and if you flip to the next slide, you compare it to the next slide, the numbers change a fair bit.

In this case, this is the pension fund and recall that the pension fund has a duration for the liability of sixteen (16) years, not ten (10). So the pension obligation is inherently riskier to fund and -- but at the current level, as I understand it, it has riskier assets in it compared to Basic, for example.

And so given that your farther along the right, it's not strictly comparable 'cause they're different basis for measurement, but you're actually farther along the risk spectrum moving from left to right in the pension fund space.

So the cost is a little smaller. Originally I -- I -- I had a -- a mental break. I ya -- I did the dist -- I -- I calculated the distance wrong. I grabbed the wrong curve. It should have been the top two (2) curves, and I think I grabbed one of the bottom ones by accident.

So my initial filing said that the cost of not being able to invest in RRBs was 1.8 percent, and that's not -- that wasn't correct, so that the

cost is only twenty (20) basis points, again, eye-balling it because I don't have the numbers in front of me.

DR. BYRON WILLIAMS: Mr. Viola, just from this point, when you say twenty (20) basis points ---

MR. VALTER VIOLA: Yeah.

DR. BYRON WILLIAMS: You're referring to the pension portfolio, sir?

MR. VALTER VIOLA: Correct.

DR. BYRON WILLIAMS: And the -- the eighty (80) basis points relates to the classic portfolio.

MR. VALTER VIOLA: Correct. Yeah, and again by roughly in size, as I, again I didn't look at the numbers this year, but when I did it two (2) years ago, roughly the Basic portfolio the size of the liability was about 80 percent of the total liability with the pensions being about 20 percent. So it's kind of an 80/20 split in terms of the obligations, the cop -- the present value of the liabilities on the balance sheet.

So that's -- so that slide -- going back to slide 36, please. That is -- again, these are Mercer's numbers. They're forward-looking and the

point that they make, they're observations, I'll repeat, it says that, assuming a real liability benchmark, which was the question we posed saying, no, we believe the liabilities are real. They have inflation risk. So what would the risk return trade-offs look like in that environment?

And their conclusion or observation was that, assuming a reliability benchmark removing real return bonds significantly reduces an opportunity for improvement at lower risk levels, and that you'll see that again.

The distance, moving from right to left if you said, I really don't have a lot of tolerance for risk and I'm moving from the current portfolio and I want to go left, if you're not allowed to get to that upper curve, you're really forcing -- you're forced to take some, I would say, undue risk, more risk than you could otherwise, if you were allowed to invest in this real return bond.

And, again, when you -- when you're moving the portfolio and removing a constraint, not allowing one (1) asset to be in, it -- it should cause you to re-balance based on all the other assets.

So, for example, if we constrain real a -- real return bonds not to be in here, it matters if

you have real estate or not in the portfolio in terms of what the model will tell you is the next optimal decision.

So it's not a pair wise comparison if I take RRBs out and substitute nominal bonds, you kinda have to hit the reset button and go, what does that due to the whole portfolio that's left when you put these constraints on 'cause there's shifts between risky assets, as well.

So that's -- so now if we could jump to question, slide 38. These are, again, I'm -- I've addressed these here because they weren't in the original GRA filing. They were questions from the Utilities Board.

This question was posed to us regarding the availability of real return bonds for the MPI portfolio now or in the future. And so my response to that was factual as I understood it. So the current market size of the real return bonds is roughly fourteen (14) in the index, there's about $84 billion based on just the review of, I think, sometime in October of what the issue of market value was.

The average term to maturity of these fourteen (14) bonds is about twenty-five (25) years, and again, the term to maturity and the duration are

related, but the duration is always lower than the average term because of the discounting process.

So it's roughly a fifteen (15) year duration, so if you were to buy the index you would get a blended average real duration sensitivity of fifteen (15) on your now -- on your real return bonds. It's certainly not a big market compared to the more liquid publicly-traded -- the nominal bonds, government bonds, prov -- provincials, corporate, et cetera.

The turnover on real return bonds will be low. These are just kind of like, you know, it's like, you know, it's like you -- you buy house insurance and you hold it for ten (10) years. You buy term life insurance and -- and/or home insurance.

It's -- it's -- it's an insurance policy and so you buy and hold it. You don't flip it every day and buy -- substitute and change providers. And so if you said, well, yeah, there might be a, you know, a premium cost to get in because there's not a lot of them, the good news is, even if you had to pay a little bit of extra, and this is the argument I -- I used to manage a portfolio at Ontario Teachers and the traders hated me because they knew I was going one (1) way.

We were buying them and he actually -- one (1) of the traders actually said, can I -- can I sell 300 million today? I mean, they had a big book, and I'm like -- we -- we need them and it's because he was getting hosed on the price.

So he's -- he -- they're making a market and the traders want to beat the benchmark. They're not interested in necessarily acquiring them. That's why we took over the -- the -- the portfolio and said we're going to take the haircut. We're going to pay a little bit more, but we want to back up the truck and get more.

If we're going to hold them for twenty (20) years paying -- paying a few basis points today amortized over twenty (20) years is peanuts. It's a rounding error.

If you have a mental trading model in mind or trading -- trading mentality, then, yes, it's a -- it's a -- it's a cost, but if you're just going -- if you're using it to properly better manage the risk in the portfolio, it's a cost worth paying.

And the cost doesn't seem to me to be huge given the breakeven inflation rates that I've seen quoted by Mercer in the -- in the -- in the GRA, as well as the fact that, again, we're not doing a

pairs trade between real return bonds and nominal bonds.

We're saying if they make sense from a -- for the portfolio and they free up a lot of risk, it allows you to take other kinds of risk not just inflation risk cause you've tied that up. You could take credit risk, you could take equity risk and let the Optimizer tell you what that does and those efficient frontiers that I showed you, that's what Mercer's analysis is designed to do.

So -- so buying these products releases a risk. It frees it up to take it where it can be more attractively deployed from a return perspective. Right now, the -- the -- the deployment of risk is concentrated on fixed income for credit, a little bit more illiquidity through private debt, potentially at some point, I don't -- they're not implemented yet, but I think there's plans to do so.

I was also asked about the future size of the real return mark -- market. Again, I don't follow the market so I don't know -- I don't talk to provinces or the government in terms of their funding programs, so I can't comment on whether there will be an appetite to issue more.

I will say, however, that future demand

for it once you get into your first -- if you decide that you -- that's what you want to do, all you have to do after that is to top it up to re-balance to portfolio weights. If real return bonds, say, underperform equities and other assets you have in your asset class -- in your asset mix, you have to re-balance target unless you have a view that they're under valued or overvalued which means you have to invest a little bit more each year just to keep them at the target weight whatever that happens to be.

The other thing, of course, is if you get new cash flows coming in that need to be deployed in the asset classes, that is a small -- usually the -- the new capital coming into the fund is a small percentage of the assets under management. Again, not a huge concern.

Slide 39. The question was, do I have any concerns about including RRBs in either of the portfolios? And the quick answer is no. And again, Mercer's -- I'm not saying anything that Mercer didn't show in the analysis.

Constraining the RRBs made the curve shift down, and we said there was a one (1) point -- one (1) point -- sorry, what was the -- sorry, eighty (80) basis points cost in the case of the Basic and

twenty (20) basis points cost of not allowing real return bonds in the portfolio, recognizing that it's not a pairs trade.

We're not just substituting nominal bonds and taking real return bonds and buying them, if you were to buy them. I think you'd revisit the whole portfolio and in -- in that context, I don't have concerns because that -- the model shifts for those allocations and those -- those quantitative metrics that Mercer pushed, I have no reason to believe that they're not accurate.

So across the risk spectrum ri -- risk-adjusted returns should improve by including real return bonds. That's -- that's the end of that slide.

Slide 40 we're -- we're in the home stretch here. The other real ass -- the other real assets I think the Utilities Board asked about -- well, first of all, let's talk about the issue.

The issue is the proposal by MPI is to reduce the exposure to real a -- estate and infrastructure, and those are really the only assets that are providing any inflation protection. They don't have real return bonds in the portfolio, so that's doing two (2) things. One, it's creating more unhedged risk of a longer time horizon nature and --

and it's less diversified as well. So you've got more concentration of assets in one (1) bucket called fixed income.

I think I was asked by the Utilities Board in a question about the size of real estate and infrastructure. I don't comment on -- on it here. But again, if you let the model optimize it'll -- it'll look at that risky bucket and say real estate is not risk-free. It's got some risk, so does infra -- infrastructure and what you say, you know, theory would suggest that if you look in that risky bucket and you look and say, what does it consists of, you should see the mix staying roughly the same regardless of the tolerance for risk.

So it's -- you really have -- somebody one said it and I'll repeat and I'm sure I said it two (2) years ago. There was a colleague of mine, he said an optimizer has never seen an asset class it hasn't loved. If -- if there's a new asset class being introduced and you push it into the model, the -- the op -- optimizer will always say, unless there's some -- unless there's a perfect correlation, I'm going to like that for a little bit.

So by not having these assets, real return bonds in the portfolio, you really have to have

strong views about them. You either constrain them for a reason that may not be appropriate, or you really must be -- you really must think they're terrible assets. And real return bonds are not terrible assets, and other assets like real estate and infrastructure have desirable properties. I have some concern that lightening up on those results is, again, less diversification and more inflation risk.

Jumping to slide 41, I've talked about the fixed-income conc -- concentration. There's nothing wrong with taking credit risk. There's nothing talk -- nothing wrong with taking liquidity risk, even in the private debt. Absolutely nothing. It's just that, given the low tolerance for risk, all of the risk is now being more concentrated in these things. And of course, nominal bonds create the biggest risk of inflation risk long term.

And the -- that slide 41 -- 42, rather, just compares different current portfolio C, using the terminology that Mercer used in their asset liability study -- studies. This shows just for -- well, it breaks out all the asset classes. The top asset classes in the top half of the panel show a fixed-income. It says that the current portfolio in column C has 70 percent fixed income. And you go from left

to right.

If you -- if -- using Mercer's data, if you said, well, what if -- what is -- what does the portfolio look like, like, if I want to take the same amount of risk? It says portfolio B has about the same, so there's not a lot, and the proposal is to -- obviously, to move and -- and put a hundred percent in fixed income, and have no equities, no real estate, no infrastructure.

So if you look at the far right column, the difference between the proposed one by MPI, and the one with the same risk, B, the red shows you the big changes negatively of what they're being proposed. So they're -- they're basically, relative to the -- to the portfolio, that would be optimal had they just said, let the optimizer tell me what I want.

So there's a few moving parts in the sense that 'P' minus 'B' does not have the same level of risk. That's why the bottom right quadrant, I didn't put the numbers in, because they weren't provided, so I can't tell you whether the -- the -- what the difference in the return and volatility is between the proposed portfolio and the one that would have the same risk. The only thing I would note is that, again, it's -- it's cont -- the proposed one has

a hundred percent of the risk concentrated in bonds that have inflation risk, and that may not be efficient. Well, we know that Mercer's numbers show that it's not efficient.

And then the last penultimate slide is 43, quantitative models. In the evidence, I just -- I'd like the observation by the actuary. I think Mr. Cheng -- Cheng is right, that over a very long horizon -- well, I don't know, but nobody -- somebody might, but they might be lucky -- can forecast interest rates. And interest rates, the two (2) important components are the real and the inflation.

And so when we have a long time horizon beyond ten (10) years, the question is, do you really want to build your portfolio with so much confidence about these things that are less predictable, or do you want to take a bit of risk off the table and maybe move it into another bucket? And maybe -- and then you definitely have higher risk-adjusted return, same level of risk, a bit more return. That's the vertical shift of the cont -- of the efficient frontiers that we talked about earlier.

The -- the lower box is just a lift out of the evidence that I provided two (2) years ago, and it just -- and again, this notion that models, by

definition, are not reality, they're representations of reality, but there's errors in models, and there's a lot of assumptions that go into this. And one (1) of the points I made two (2) years ago that I wanted to reiterate this year is that the models really tell you what you tell them to tell you.

And so if you put in capital market assumptions that favour certain asset classes, the model's going to like them. If you make assumptions about the liabilities that don't truly reflect the nature of the liabilities, it's gonna like assets that look like the thing that you propose looks like the liability.

So it's very important to define the liability components accurately, because the model is very sensitive to that, and you see that in the different liability benchmark portfolios. Under the nominal one that was adopted, it came up with a certain set of outcomes. Mercer told us what those liability benchmark constituents were, all nominal instruments, all duration ten (10) years for Basic.

When asked about the real return assumption for the liability, they said it's 66 percent real return bonds for Basic, and 81 percent for pensions. That's very different. So that's

important.

And the final slide is really just a recap. We could have started with this first and just left it at that, but we -- we thought we'd go through all the rationale first, which is the right way to do it, but the punchline is this: there's eight (8) recommendations. The first one is really important.

So I suggest that we revisit the -- the -- MPI revisit the nominal liability benchmark, describe it more accurately. And I think it understates the true long-term risk of inflation and changes in real interest rates. And again, that -- that's just not me. Although I worked at two (2) funds for a dozen years, and who knows what they say today, but when I was there, the leaders of the fund, the executives, the staff, the Board, they all had the long horizon surplus management, and real interest rates matter, inflation matters.

And they still had long nominal bonds in the portfolio. But if you look back at the teachers time series, they've got one dollar ($1) in five (5) in real return bonds at the end of -- that was two (2) years ago, but it's not changed materially. They've gone down a little bit lately. They don't have 0 percent. They have strong --

believe very strongly -- you have to have very strong views to -- to not have those things in your portfolio.

The leverage constraint's not a big thing. The duration policy I talked about, and the lengthening, number 3 and 4, those are related. So the fact that we've got nominal bonds in the portfolio, not real ones, but the liabilities are real, and you lengthen nominal bonds to a longer duration, you run the risk, given their high -- greater sensitivity, that if inflation turns out to be more volatile than expected, or at a -- operating at a higher level, not 2 percent, but three (3), or -- or worse, your nominal bonds are going to do very poorly. Your real return bonds will do very well, will maintain purchasing power. And then they actually go up in value, because there might be a flight to quality, real return bonds and hedge risk, and you'll get a POP.

It would be nice to look back at the early '90s, when these real return bonds were issued. They were yielding almost 5 percent real. The reality is, we -- we can, and we can complain all we want about the low levels of real rates, but that's -- that's a -- that's not really very productive. The

question is, how much worse could it be, not how bad is it. It could be a lot worse by not having these things in the portfolio.

And so the cost of insuring against this risk has gone up, because the returns have gone down, because now we're reinvesting at lower yields, but that's just the -- that's just -- things get more expensive over time.

Real return bonds, number 5, and we think they're a great asset class, from a hedging point of view. And given the short term interest rate outlook that I see in the GRA, I think a case can be made that real return bonds will actually score some goals, despite being a goalie, better than nominal bonds. So they may actually outperform nominal bonds and cash, and so I think the worst asset class, if you believe the forecasts, whether they're naive or otherwise, RRBs don't look as bad as -- as perhaps some might suggest.

The other assets -- we talked about real estate and infrastructure. Again, some concern about lightening up on them when you don't have inflation protection to begin with. Concentration of fixed income -- there's always going to be concentration somewhere, and because you don't have

equities, it's going to be there.

And the only point there I was saying was that, you know, when you put -- when you take risk -- if you do a pairs trade between real return bonds and nominal, and you trade one off for whenever, and you -- and you only count the goals, but not the risk reduction, you're crowding out real return bonds. In a total portfolio context, when you look at it that way, it's hard not to have real return bonds in the portfolio. And then commensurate changes around in the other portfolios that, basically, with the freed-up risk capital, allow you to take more risk and have higher returns.

Those cons -- those cons -- those efficient frontiers that Mercer put together tell the whole story. When you put constraints on or take them off, for any given level of risk, you can do better.

That -- that's my story, our story.

DR. BYRON WILLIAMS: Mr. Chair, thank you. Mr. Viola, there are some confidential slides that we suggest we move to now.

THE CHAIRPERSON: I'm wondering how are we going to do this? So we're going to have to go off tape, and we're going to have to come back for cross-examination. I -- I'm just wondering if we

shouldn't just conclude -- do the cross-examination, finish that, then go CSI, and you can go direct with Mr. Viola, and -- and we'll conclude that way.

DR. BYRON WILLIAMS: We could -- we could do that. It depends on Mr. -- My Learned Friend's cross-examination order in terms of -- but if the -- well, certainly, we -- we can work with that as well, Mr. Chair.

MR. STEVE SCARFONE: Whatever the Board prefers, Mr. Chair, I'm happy to do. I can do my cross now. I can defer it until after CSI. But I was just reminded by my co-counsel that we also have to squeeze in Mr. Johnston, who has some answers to Ms. McCandless's questions.

(BRIEF PAUSE)

THE CHAIRPERSON: Mr. Johnston, do you have the answers to the questions?

MR. LUKE JOHNSTON: That's as far as that goes? I do. They're -- I would just read them quickly if --

THE CHAIRPERSON: Yeah, if you could. Well, let's -- let's just deal with it right now, and --

MR. LUKE JOHNSTON: Okay.

(BRIEF PAUSE)

MR. LUKE JOHNSTON: If we -- if you could bring up Pre-ask 1, just so I can see the data.

(BRIEF PAUSE)

MR. LUKE JOHNSTON: And I believe it's the table with all the targets, towards the end of the question.

MS. KATHLEEN MCCANDLESS: I believe it's figure 7.

MR. LUKE JOHNSTON: Thanks.

(BRIEF PAUSE)

MR. LUKE JOHNSTON: Okay. So the first question was, Why are the PUB upper targets as a percentage basis higher than the dollar targets? The reason being is because we're performing the iterative methodology on MCT percentage targets, and those targets grow with the size of the business, whereas the dollar targets stay fixed, and we -- we don't need

as much to stay at a fixed 120 million, for example, if that's sufficient.

MS. KATHLEEN MCCANDLESS: Yes. Thank you.

MR. LUKE JOHNSTON: The second one -- question was in regards to the MPI lower target. Why is the naive number higher than the 50/50 number. And unfortunately, I'm told that -- that the naive, there appears to be a mistake in the -- in the calculation. Unfortunately, running that again takes some time, but an -- an estimate of what the correction would entail would be a target of approximately 140 million, and the MCT ratio of probably rounding up to 34 percent.

So yes, that's unfortunate that that number is not correct. But that said, I believe MPI's application is for 34 percent MCT, so our recommendation would be that MPI continues to support that -- that proposal. But that number would have to be corrected.

And again, we estimate it -- we estimate it at about 140 million, and approximately 34 percent.

MS. KATHLEEN MCCANDLESS: Thank you.

DR. BYRON WILLIAMS: And, Mr. Chair, we're happy to do either way, whi -- whichever the

Board decides. So either we can stay on the public record and complete our cross --

THE CHAIRPERSON: I think -- I think I'd rather stay on the public record and complete that. I -- I'm really concerned about the CSI, and I don't want to see us drifting in. If he's -- if Mr. Viola is dealing with CSI now, I -- I don't want to see an accident whereby we end up with CSI on the record.

So what I -- what I propose is, Mr. Scarfone, if you could start with the cross-exam, we'll finish the cross-examine in -- on the public record. Then we will shut it down, cut the livestream, and then we'll go separate -- with the separate record for -- to protect the CSI.

The other thing is, if we are going off and on, the livestream goes off and on, and we have to check it out and make sure we're off. So, Mr. Scarfone, if you could -- could start, please.

CROSS-EXAMINATION BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Thank you, Mr. Chair. Kristen, could you pull up -- and I apologize. I didn't give you this one. It's CAC Exhibit number 5, which is Mr. Viola's CV.

(BRIEF PAUSE)

MR. STEVE SCARFONE: Mr. Viola, thank you for attending here today. Some preliminary questions about your qualifications and your work experience, beginning firstly, sir, with Cortex Applied Research.

That's your consulting company, I gather?

MR. VALTER VIOLA: It's not mine. I am an employee there, but I work closely with the principal there. I'm a managing director there.

MR. STEVE SCARFONE: Yes. I didn't mean yours in terms of ownership, but that's where you're --

MR. VALTER VIOLA: Yes. Yes. Yes.

MR. STEVE SCARFONE: And we see there, sir, that part of that your duties would be advising clients, including institutional investors on governance matters. Do you see that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And what does governance in this context mean?

MR. VALTER VIOLA: Governance is board governance, roles and responsibilities of boards of

directors, trustees, investment committees, staff external advisors such as general consultants, risk consultants. We do fidu -- fiduciary education around that. Sometimes it creeps into things of this nature. So we've got an engagement right now that is addressing many of the same issues rela -- related to the liability benchmark portfolio, and how one defines risk, and how one prioritizes goals, for example.

MR. STEVE SCARFONE: I see.

MR. VALTER VIOLA: Broadly governance, but it's focused primarily -- our -- our business has evolved. I've been there two (2) years, but the business has been in operation for about twenty-five (25) years. It's probably the -- the single most recognized governance consulting practice in the US. A lot of our clients are US defined benefit pension plans, mostly on the West Coast.

We -- our roots are in Canada. We're based in Toronto, but we find the -- the Americans really appreciate the knowledge that Canadians bring to pension governance.

MR. STEVE SCARFONE: All right. Thank you. And so I see there as well that your investment advice and duties also include educating your clients on fiduciary matters, correct?

MR. VALTER VIOLA: The quick answer is yes, but my partner is more -- doing more of that work. I tend to do different aspects of that work.

MR. STEVE SCARFONE: Okay. But I expect you would understand the basic concept of the fiduciary duty that's owed to an investor --

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: -- by someone that is managing that investor's money?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And the fiduciary being the person to whom the money is entrusted, correct?

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: And sir, are you aware -- and for the lawyers in the room, they would be, that that fiduciary relationship is a -- is a special relationship that recognizes that one (1) of the parties in that relationship is in a vulnerable position, to the extent that they have entrusted their money to another?

MR. VALTER VIOLA: Right. Yes.

MR. STEVE SCARFONE: And so that -- that duty -- that fiduciary duty that's owed to that vulnerable person is -- is greater than the normal

duty of care. Is that your understanding?

MR. VALTER VIOLA: I can't disagree with that. I have no reason to arg -- yeah.

MR. STEVE SCARFONE: But at least you'd agree that part of that duty, if you would, sir, is -- is to always act on the advice and the instructions of the person that has entrusted the fiduciary with their money?

MR. VALTER VIOLA: Sorry, can you say that again, please?

MR. STEVE SCARFONE: Yes. The -- the -- part of that duty --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- would always include acting on the advice and the instructions of the person that has entrusted the fiduciary with his or her money?

MR. VALTER VIOLA: Well, I -- when you're saying "acting," that's not -- that's not compelling them to act. It's taking their advice into account?

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Yes. I -- I would agree with that.

MR. STEVE SCARFONE: And not acting

without their instructions?

MR. VALTER VIOLA: That would seem prudent to take that into account, yes.

MR. STEVE SCARFONE: And -- and so following up on that, the -- the investment firm -- the investment advis -- advisor, if you will, is not allowed to make investment decisions that are contrary to the advice received from the investor?

MR. VALTER VIOLA: Sorry, can we be more specific in terms of relating it -- I'm getting -- this is not my -- I'm not focused on fiduciary duties. That's my partner's --

MR. STEVE SCARFONE: No, and I'm -- I'm -- I've kind of moved away from that now. Just in a general sense, for -- for financial advisors, investment firms --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- it -- it's important --

MR. VALTER VIOLA: Correct.

MR. STEVE SCARFONE: -- that they don't act contrary to the advice received from the investor?

MR. VALTER VIOLA: As a -- as an advis -- as the client, you mean?

MR. STEVE SCARFONE: No, as -- as the person given the advice --

MR. VALTER VIOLA: Right, okay. The institutions?

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: It's important that they act -- they don't act contrary to the advice that they received from the investor?

MR. VALTER VIOLA: Of course. Of course. Yes, listen to your -- listen to your -- your client, yes.

MR. STEVE SCARFONE: Yes, or know your client --

MR. VALTER VIOLA: Know your client.

MR. STEVE SCARFONE: -- different vernacular.

MR. VALTER VIOLA: Sorry. Yeah.

MR. STEVE SCARFONE: The KYC form?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Yes. Yes. And so that, of course, sir, knowing your client would include purchasing securities outside of the investor-stated risk tolerance, correct?

MR. VALTER VIOLA: Correct.

MR. STEVE SCARFONE: And these important directions, sir --

MR. VALTER VIOLA: Well, can I qualify that?

MR. STEVE SCARFONE: Absolutely.

MR. VALTER VIOLA: So you say -- you -- you specifically said "specific securities and risk tolerance." And for me, specific securities and risk tolerance, again, just to clarify, risk, for me, tolerance is measured at the total fund level. Some people may not measure it that way. When we talk about individual securities, they have to be in the context of a total portfolio.

But it's hard to judge an individual's securities risk and appropriateness without knowing more about the rest of the portfolio. And I think I made the point in my slides that an individual security may look risky in isolation, but in the context of playing a team sport, it may not look as risky.

MR. STEVE SCARFONE: I understand.

MR. VALTER VIOLA: But I don't disagree that that factor would be taken into account as you -- if you want to repeat it, I'm happy to --

MR. STEVE SCARFONE: No. And it was

simply having you confirm that the investor stated risk tolerance --

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: -- is an important factor --

MR. VALTER VIOLA: For sure.

MR. STEVE SCARFONE: -- in deciding which investments to purchase --

MR. VALTER VIOLA: Correct.

MR. STEVE SCARFONE: -- for that investor?

MR. VALTER VIOLA: Correct.

MR. STEVE SCARFONE: Okay. And -- and we've canvassed this. Some investments -- investment firms call it the KYC, or the know your client --

MR. VALTER VIOLA: Yes. Sure.

MR. STEVE SCARFONE: -- form, and it helps set the roadmap, if you will, for that investor. Is that fair?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And then so moving down, I'm not going to go as far back to your Ontario teacher days, but while working with the CPP Investment Board, sir, that's the Canadian Pension Plan, correct?

MR. VALTER VIOLA: Canada Pension Plan.

MR. STEVE SCARFONE: Canada Pension Plan.

MR. VALTER VIOLA: Yes. Yes.

MR. STEVE SCARFONE: Part of your duties, I see, included investment portfolio design?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And this, I expect, would necessarily include advice to the CPP Investment Board on what the portfolio should contain?

MR. VALTER VIOLA: Absolutely. Asset allocation, and risk tolerance, risk appetite, all that kind of stuff. Yes.

MR. STEVE SCARFONE: And your duties also included, sir, managing investment risk for the CPP Investment Board, correct?

MR. VALTER VIOLA: Yes. I was the chief risk officer as vice -- executive vice president reporting directly to the CEO.

MR. STEVE SCARFONE: And this, I expect, sir, would necessarily include advice as it concerned the identified risk profile of the CPP Investment Board?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And am I right to say, sir, that this risk profile would include as its major component the risk tolerance of the CPP Investment Board?

MR. VALTER VIOLA: Yes, it would take that into account, yes.

MR. STEVE SCARFONE: And in fact, that would be its major component, would it not, of the risk profile?

MR. VALTER VIOLA: Sorry, component of what? Just --

MR. STEVE SCARFONE: Of the risk profile?

MR. VALTER VIOLA: The risk profile, that's a vague term. So I would define the risk profile as net exposure, assets and liabilities, yes. And so that profile has a profile. There is a characterization of it. It can be measured, and it's either high or low, and it has to be said in a way that takes into account the risk tolerance of the -- the stakeholders --

MR. STEVE SCARFONE: Of -- of the investors?

MR. VALTER VIOLA: -- being represented by the Board, yes.

MR. STEVE SCARFONE: Yes. And just scrolling up, after the CPP Investment Board, you were at Holland Park in Toronto, sir?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And again, advice to various institutional advisors?

MR. VALTER VIOLA: Advice to institutions, like smaller --

MR. STEVE SCARFONE: Or sorry, institutional investors, I'm sorry.

MR. VALTER VIOLA: Investors, correct.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Yes. So my clients were funds about this size. I was providing an outsourced risk measurement/management advisory function, so I would actually measure risks on their behalf and report them to some clients for mega funds.

Larger funds, they would engage me to give them advice on investment policies, risk policies, and the like, but they'd have their own staff and do their own measurement. They were engaging me just on advice in Canada and the US.

MR. STEVE SCARFONE: And so the advice to these various institutional investors, sir, that would again include managing their investment risk,

correct?

MR. VALTER VIOLA: Advising on their investment policies related to investment risk management, yes. And in some cases, we actually were outsourced to actually measure risks on their behalf.

MR. STEVE SCARFONE: Yes, and I see that, sir.

MR. VALTER VIOLA: I --

MR. STEVE SCARFONE: I use -- I use the language managing investment risk, but in the CV, it's -- it's described as investment risk governance?

MR. VALTER VIOLA: Which aspect -- governance as it relates to that Cortex? Yes.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Yes. Okay, gov -- in Cortex, we're just advising. I didn't provide an outsourced solution to actually measure it -- measure risks. I don't measure risks right now.

MR. STEVE SCARFONE: And again, developing investment/risk frameworks would include advice to your clients about what a portfolio might look like, given the client's risk tolerance. Is that fair?

MR. VALTER VIOLA: I would say that the framework was more literally defining, answering -

- I always defined a framework as answering five (5) key questions, the first being how you define risk? Is it assets versus liabilities or surplus? Is it beating benchmarks, or not being able to? So it's more conceptual.

And to be -- I would recommend those frameworks are institutionalized through adoption of investment policies. And the five (5) questions they answer are: How do you define risk, how do you limit it, how do you control it, that kind of stuff. How do you define the liability benchmark portfolio? That was the second one. So it's what we're talking about today.

MR. STEVE SCARFONE: Okay. So is -- I think that's a yes, that the --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- that the advice would include what the portfolio might look like, given the client's risk tolerance?

MR. VALTER VIOLA: Correct me if I'm wrong, are you talking about my scope of work at Holland Park, or just generally with --

MR. STEVE SCARFONE: No, we're still on Holland Park.

MR. VALTER VIOLA: At Holland Park, I

would -- I would not advise on asset allocation.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: It was on policy on the framework or process to follow to ensure you had good governance and good measurement tools. But those funds typically had their own advisors. I was supplementing the general consultant with more specialized risk management background that I had.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: So I wasn't telling them that they should have 60 percent in equities, or 40 percent. I was just giving them transparency on what the real risks were on the portfolio, and making sure they answered -- that I asked the right questions for them to answer, and coached them on better answers. So it was more advisory work.

MR. STEVE SCARFONE: And -- but in that advisory work, and I think you had indicated --

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: -- yes, that there would be a -- a consideration to the risk tolerance of the investor?

MR. VALTER VIOLA: Yes. That would be consideration.

MR. STEVE SCARFONE: And earlier in

this proceeding, Mr. Viola, we did hear from Mr. Makarchuk, of -- as you know, from Mercer, and his firm also provides institutional investment advice. At the outset of his evidence, he stated that not all investors are the same. Not every investor believes the same thing, invests the same way, or ends up with the same result. Would you agree with those -- those words?

MR. VALTER VIOLA: Yeah. Yes.

MR. STEVE SCARFONE: But he did say, and I -- I believe he might characterize this as his framework, that decisions are made for four (4) main reasons, in his view, one (1) of which is returns. Would you agree with that, that that's a -- that's a factor in each investment decision?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And more is better, I would expect?

MR. VALTER VIOLA: Absolutely.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Going north.

MR. STEVE SCARFONE: And a second -- a second reason he said that decisions are made is for risk? You'd agree with that?

MR. VALTER VIOLA: Yes. Yes.

MR. STEVE SCARFONE: And I would expect you to agree that low is better than high?

MR. VALTER VIOLA: That is correct.

MR. STEVE SCARFONE: The third factor he described is one of cost. He said cost is a factor in making investment decisions. Would you agree with that?

MR. VALTER VIOLA: Absolutely.

MR. STEVE SCARFONE: And again, cheaper is preferred over expensive?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And lastly, he said a factor that his clients always turn to is time, and the --

MR. VALTER VIOLA: I'm sorry?

MR. STEVE SCARFONE: -- time, or duration --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- how long an investment is going to be held?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And I think you described a scenario earlier today about T-bills, for example.

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: And so these four (4) factors -- could this, in your view, be a framework for an investor?

MR. VALTER VIOLA: Could they be a framework? Potentially yes. Those are the considerations, I would agree, that are factors, yes.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: The other one that you didn't mention there might be -- when you say "risk," I'm assuming that's market risk? And --

MR. STEVE SCARFONE: He didn't specify, and if you're asking me, I can't comment.

MR. VALTER VIOLA: No, that's fine.

MR. STEVE SCARFONE: Yeah.

MR. VALTER VIOLA: I'm just -- there's different levels, different types of risk, but --

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: -- I'm trying to think -- we always go by FRICTO. That's the -- that's in the books. So flexibility, risk, income, control, timing, and other. So you've got the core ones, here. I can't -- I can't argue with any of them. They're all important.

MR. STEVE SCARFONE: Okay. Thank you. And so as it concerns the MPIC investment fund, having

reviewed the application, you'll be aware, sir, that a number of investment decisions have been made?

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: One (1) of which is a decision to segregate the co-mingled portfolio into what is described as buckets? You'll agree that that was an investment decision?

MR. VALTER VIOLA: Yes. Yes.

MR. STEVE SCARFONE: And there was also a decision made to de-risk the Basic claims liability portfolio? That, too, would be an investment decision?

MR. VALTER VIOLA: Correct, yes.

MR. STEVE SCARFONE: A decision was made, as we've heard, to lengthen the fixed income portfolio. That too, sir, would be an investment decision?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And a decision to diversify MPI's equity portfolio. That, too, would be an investment decision?

MR. VALTER VIOLA: Yes. And can I just ask a question? Sorry. When you say those are all investment decisions, as opposed to -- what's my other 'B', 'C', and 'D' choice? I don't -- like,

they're all investment decisions, sure.

MR. STEVE SCARFONE: That -- that's why I'm putting them to you.

MR. VALTER VIOLA: That's all good.

MR. STEVE SCARFONE: Yeah. And lastly, sir, there was a decision to reduce the Corporation's allocation to real estate.

That, I think you'll confirm, was an investment decision?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And these, sir, I would suggest to you, are the decisions made by an investor on the advice of firms like Holland Park and Mercer, correct?

MR. VALTER VIOLA: Taking those things into account, yes, among -- among other things, yes.

MR. STEVE SCARFONE: And I'm going to suggest to you as well, sir, that this advice that you provide to your clients in helping make these decisions, these aren't made in a vacuum, are they, sir?

MR. VALTER VIOLA: I would agree with that.

MR. STEVE SCARFONE: There is ongoing dialogue with the investor, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And there is in-person meetings?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And there's data sharing?

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: So for example, data to calculate the duration for matching purposes?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Data for interest rate sensitivity?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: In addition to the ongoing dialogue and the in-person meetings, sir, there is educational presentations, perhaps, by investment firms like Mercer and Holland?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And perhaps presentations on, for example, different asset classes and the merits of each asset class?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And a discussion is had on the investor's objectives.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Those are very important?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: A discussion is also had on certain assumptions that are made going forward, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: A discussion is had on risk measures?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Discussion is had on risk philosophies?

MR. VALTER VIOLA: Yes. It can me. Usu-- usually not, but yes.

MR. STEVE SCARFONE: And then following up on that, further decisions are made following the dialogue between the investor and the investment firm and advisor, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Decisions concerning investment return objectives?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Decisions concerning investment risk objectives?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And you're aware, sir, that these decisions that we've just described as it concerns MPIC, were not made once, but for each bucket under the newly segregated portfolio?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And one (1) of the decisions, as we've heard, that had to be made before selecting asset classes for the Basic claim liability portfolio, was whether to model the liabilities using a real liability benchmark versus using a nominal liability benchmark.

That too was an investment decision.

MR. VALTER VIOLA: I disagree.

MR. STEVE SCARFONE: Okay. You won't go with me on that one?

MR. VALTER VIOLA: That goes back to the framework, I would suggest. It's -- it's -- in my words, the liabilities are what they are, regardless of how you decide to take risk in relation to them.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: So I think that's partially, I would argue, a governance question or a regulatory question or...

MR. STEVE SCARFONE: Well, let me put it this way to you then. Before the asset classes for

purchase can be decided upon --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- we need a liability benchmark selected. Is that true?

MR. VALTER VIOLA: Yes, if you're managing surplus, which MPI is doing, yes.

MR. STEVE SCARFONE: And again, that decision, which liability benchmark you want to go with, is made in cult -- consultation with the investor, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: It's not done unilaterally by the advisor?

MR. VALTER VIOLA: No. I think all decisions are not -- correct.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: Agreed.

MR. STEVE SCARFONE: And -- and would you agree with me, sir, that many of the decisions that we've just canvassed here come down to one (1) basic element and that is of investor's risk tolerance.

DR. BYRON WILLIAMS: Just for precision...

MR. VALTER VIOLA: Yeah.

DR. BYRON WILLIAMS: ...you've put a number of propositions to him. He's expressly disagreed with one (1), so you've use the word "many."

MR. STEVE SCARFONE: Yes.

DR. BYRON WILLIAMS: Are you asking him many or all --

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Yes, the majority -- the majority of the -- of the -- of the decisions that we've just canvassed with you, Mr. Viola --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- I would suggest to you come down to what is the investor's risk tolerance in making those decisions.

MR. VALTER VIOLA: Well, as -- as I go back through your list, you -- well, you started off with four (4) things. I said FRICTO, flexibility, risk, income control, timing and other. You mentioned return, risk, cost, time and I said those are all criteria to inform the decisions to invest one (1) way or another.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: But you're now asking me a specific question about risk.

MR. STEVE SCARFONE: Risk tolerance, correct.

MR. VALTER VIOLA: So reframe your question, if you will, because I think you're sort of -- you're asking me a question I can't answer because I'm not clear on what you're asking.

MR. STEVE SCARFONE: Okay, so --

MR. VALTER VIOLA: Risk is an important consideration.

MR. STEVE SCARFONE: It is.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Yes. And I would suggest to you perhaps that it's the single most important consideration when giving investment advice.

MR. VALTER VIOLA: Well, it's a very important one, but it's not the only one. We're not just trying to take risk off the table, we're trying to move northwest, so we want higher returns as well. We want to deploy our capital in a risk-adjusted efficient way.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: So return and risk both need to be -- you can't talk about one (1) in isolation. So it's ---

MR. STEVE SCARFONE: Absolutely not.

And -- and the returns that you're forecasting will depend a lot on your risk tolerance, correct?

MR. VALTER VIOLA: Well, the returns I forecast don't depend on my risk tolerance, they depend on my forecast and the ways -- so, if you're talking about equities, for example, I may have a lower high tolerance for taking equity risk, but I'll have a forecast whether I think the S&P 500 is going to go up or down. And that doesn't really depend on whether I can tolerate being in it.

MR. STEVE SCARFONE: I see.

MR. VALTER VIOLA: So the -- I differentiate between an expectation for the market, the return expectation, the risk I might expect and the tolerance to pursue a strategy that takes returns and risks in those areas.

MR. STEVE SCARFONE: And I appreciate those comments. So the -- the risk tolerance that -- that you said is a -- is an important factor --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- is a decision that rests solely with the investor.

MR. VALTER VIOLA: Yes, it's their decision, absolutely.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Can I clarify one (1) thing?

MR. STEVE SCARFONE: Sure.

MR. VALTER VIOLA: If that's all right. When we talk about risk tolerance, the only thing I mentioned during the -- my presentation was the movement from right to left along that curve.

If you wanted to draw a graph of what risk tolerance looks like, those are indifference curves which weren't drawn. It would be -- being somewhere along the efficient frontier asking yourself is the slope of that line -- do I want to be here or there. And the risk tolerance really is how steep is that curve.

And when it's really steep I need a huge return for just a little bit more risk that says I'm really risk intolerant, and that's why you tend to be more to the left side of the risk spectrum.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: Whereas if it's flat, it says I could take this much risk as long as I get .3 percent more. That's why you end up being at the far right of that spectrum.

So the -- so the notion of indifference curves being indifferent, return risk, those curves

weren't included in any of my presentation, just for simplicity but...

MR. STEVE SCARFONE: Oh, so you're not speaking of the efficient frontier curves?

MR. VALTER VIOLA: The efficient -- the efficient frontier is what the opportunities you can get, the tolerance can't be answered.

Like, I can't -- you can't -- I can't say if somebody were to ask me where should we be along the efficient frontier, because it depends on the slope of the indifference curve, which I did not draw.

If the indifference curve is steep, you're going to be more to the left, because you need a huge return for a little bit more risk.

If you -- if they're flat, the tangent along the efficient frontier is to the far right and you'll take equity risk because you need -- you could take this much risk just if you get that extra 1 percent.

And it sounds like if -- if I had to describe it, MPI would have very steep indifference curves based on what they've indicated. They're steeper for the Basic and they're flatter for pension.

MR. STEVE SCARFONE: Pension.

MR. VALTER VIOLA: That's why they have more, that's how I would characterize it.

MR. STEVE SCARFONE: I think you just indicated earlier that you have, in fact, provided investment advice to institutional investors like MPIC, with the same number of assets under management.

MR. VALTER VIOLA: I have given them -- and again, it's -- it's more policy-driven on processes because I wasn't engaged to do asset liability studies for them through Holland Park nor -- nor today through Cortex.

The work -- sorry, ask your ques -- the work that I've done on this stuff is -- it was working with the pension funds act -- sorry, I'll ask -- I'll ask you to rephrase the question.

MR. STEVE SCARFONE: Sure. No, and the question wasn't a complicated one. It's really just to confirm that you provided investment advice, either in a governance role or otherwise to institutional investors like MPI.

MR. VALTER VIOLA: Investment advice -- when you say "investment advice," the decision-making process as distinct from what mixed to have 60/40. I would say that as a -- working at CPP Investment Board and Teachers, my job was to advise my

bosses, the Board, on asset classes, whether to be 60/40 or not.

But as an advisor, consultant, it was not specifically to -- like, I didn't undertake economic research to suggest equities were undervalued, for example.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: It was more on the process. The structures around that and the frameworks to use how one measured risk.

MR. STEVE SCARFONE: And you know what, you've kind of answered my next question, because the decision-makers for these institutions, I'm going to suggest, is either the Board of Directors --

MR. VALTER VIOLA: Correct.

MR. STEVE SCARFONE: -- or management, for example, the executive that are running the company, correct?

MR. VALTER VIOLA: Yes. Yes.

MR. STEVE SCARFONE: So to borrow from your hockey analogy, sir, one (1) important part of that that I think was missing would be the coach. The coach certainly has a role to play in a hockey game, correct?

MR. VALTER VIOLA: Absolutely, the coach plays a role.

MR. STEVE SCARFONE: And while employed with the CPP Investment Board you would've taken your instructions on portfolio design and investment risk management from a Board of Directors, correct?

MR. VALTER VIOLA: Ask the question again, sorry, taken my...?

MR. STEVE SCARFONE: Instructions.

MR. VALTER VIOLA: Instructions? They would set the parameters, but I was an advisor to the Board on -- you know, for example, discussions about risk tolerance. We had to define -- develop a framework, which I described briefly, on how we defined risk and how we measured risk and had discussions and dialogue, as I said, education with the Board.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: But ultimately they said yes, after hearing feedback from staff, including me as their chief risk officer, on asset classes that would bring them efficient frontiers that would say, if you have a high stomach for risk, having this mix of assets with this roast -- risk profile and return

expectation seems like what we would, as a management team, recommend. And the Board of course, through investment policy, would approve it just like an MPI.

MR. STEVE SCARFONE: Yes. And -- and don't get me wrong, I understand that there's this on -- back-and-forth dialogue.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: But ultimately, when I say instructions from the -- from the Board of Directors --

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: -- it goes back to the Board of Directors having the ultimate say --

MR. VALTER VIOLA: Yes, absolutely.

MR. STEVE SCARFONE: -- in what ultimately is selected for.

MR. VALTER VIOLA: Yes, correct.

MR. STEVE SCARFONE: And -- and again, I don't want to bog us down in the risk tolerance question again, but that would have included advice or instructions on the risk tolerance for investing the CPP monies.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And we heard evidence from Mr. Macarchuk earlier in this proceeding

that he had to get to know management and their perspective and what risks the Board of Directors would accept and -- and what they wouldn't.

That is similar to, I think, what you've described with your work with the CPP?

MR. VALTER VIOLA: Yes. But I want to clarify one (1) thing, if that's all right.

Just when we talk about risk, it's a -- we're generally talking about market risk. The risk of bad outcomes.

But one (1) of the things we haven't talked about is the attribution of risk, where it comes from. And so when we have these discussions about risk, there's an aggregate risk number, but it comes because you take inflation risk, credit risk, equity risk, et cetera.

If you ask -- so there is a dialogue that goes on with the types of risk that you're prepared to take that aggregate to a whole, and in this case, in the MPI file -- file for example, for example leverage was an issue that I didn't address, but clearly the Board was not comfortable with leverage, which is essentially borrowing money --

MR. STEVE SCARFONE: Money to invest, yes.

MR. VALTER VIOLA: So there's a more levered, more volatile outcome. And so they're not on for that source of risk that aggregates to the whole risk.

MR. STEVE SCARFONE: Yes. And I would suggest to you that, you know, having decided against leveraging --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- the Board of Directors would be in line with its selection of a low risk profile.

Would you agree with that? That's consistent with a -- with a low-risk tolerance.

MR. VALTER VIOLA: On the surface it would seem consistent, but I would argue that in the context of the material that I presented, any constraint shifts the curve.

And so this is why I said -- and Mercer even shows that, that leverage causes the curve to shift a little bit.

So while the intention is to -- the intention is to not take that type of risk because it seems inconsistent with risk tolerance, the model will suggest otherwise, that by having that constraint in place, you're worse off in a risk-adjusted.

So -- so that's why, you know, you rely on models you don't put 100 percent. But they're smarter than we are in terms of we tend to manage things as silos because it's easier to manage pieces.

The correlations that it -- between them is hard to manage. And so that's why when you talk about total fund risk, risks don't add. You know, this might be volatile in isolation, and this one is too, but it's the relationship, the correlation.

If this one, for example, leverage. What if I borrowed IBM to buy IBM. This one -- I shorted here in portfolio A and I go long portfolio B and C is the sum of the two (2). There's no exposure. Whatever I lose here, I make here.

So I'm just cautious about the ---

MR. STEVE SCARFONE: And I expect that it frustrates you to no end, and other advisors, that perhaps the modeling that you're speaking of doesn't fit with the perception of the investor, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And -- but ultimately, if an investor is -- is of the view that they just don't want to borrow money to invest in securities --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- that's their decision.

MR. VALTER VIOLA: Right. And as an advisor you just say that's fine. And here are the pros and cons of doing that. Yes, you can sleep at night because of that, but here's what the efficient frontiers suggest X.

MR. STEVE SCARFONE: Yes, you lay out the options --

MR. VALTER VIOLA: Absolutely.

MR. STEVE SCARFONE: -- let them make an informed decision, and then they decide, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And -- and I don't expect, sir, that you're in a position here today to challenge the Board of Directors for MPIC and the risk tolerance.

MR. VALTER VIOLA: No.

MR. STEVE SCARFONE: And -- and I'm going to suggest to you, sir, that that's in part because you didn't meet with the MPIC Board of Directors.

MR. VALTER VIOLA: In part, but there's other reasons too.

MR. STEVE SCARFONE: Yes. You didn't get to know their perspective, correct?

MR. VALTER VIOLA: No, I don't know their perspective.

MR. STEVE SCARFONE: You didn't have that important dialogue with them that's essential before providing investment advice, correct?

MR. VALTER VIOLA: Did not have the dialogue.

MR. STEVE SCARFONE: And -- but more importantly, as we've just canvassed, you're not in a position to challenge their risk tolerance because, again, that decision lies solely with the investors group -- or sorry, with the MPIC Board of Directors.

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: Are you aware, sir, that the -- the MPIC Board of Directors has an investment committee?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And you're aware, sir, that it's comprised of three (3) individuals from the investment industry, much like yourself?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And you're also not here to challenge the credentials of those three

(3) individuals, are you?

MR. VALTER VIOLA: No.

MR. STEVE SCARFONE: Kristen, could you find for me, please, investment Appendix 8. It's the investment committee terms of reference. Thank you. You can just stop there at the mandate.

I'll just give you an opportunity to -- to look at that, Mr. Viola.

(BRIEF PAUSE)

MR. STEVE SCARFONE: I'm going to paraphrase what we see before us in the mandate. The mandate has the strategies and policies of the Corporation's investment fund addressing the needs and objectives of both Manitoba Public Insurance and the Government of Manitoba.

Do you see that there, sir?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And scrolling down. Keep going, please. The role of the committee. Thank you.

You'll see there, sir, that the investment committee must recommend investment policies and strategies to the Board of Directors for

subsequent consideration by the Minister of Finance.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And that once these investment policies and strategies are approved by the Board of Directors and the Minister of Finance, the investment committee must ensure they're implemented.

Do you see that?

MR. VALTER VIOLA: If you could refer to the number. It don't -- it seems reasonable, but I ---

MR. STEVE SCARFONE: 4.14, I believe, and scroll down to the role of the department. So it -- that doesn't -- that accords with your understanding of how the governance structure would work?

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: And so I'm suggesting to you, sir, that this dynamic when government is -- is involved, and I expect that you experienced some of this with the Canadian Pension Plan and the Board, it complicates things somewhat to the extent that MPIC is a Crown corporation, meaning the Government also has some input in these decision-making processes.

MR. VALTER VIOLA: Well, the CPP was unique in their Crown corp. structure with the independence of the Board. I would argue that my experience with Canada Pension Plan was ve -- if you look at how they're set up, their -- the board members are independent of government and at arm's length is a big deal for them.

So this is -- this is not consistent with my experience with Canada Pension Plan investment, for example.

MR. STEVE SCARFONE: Okay, sir.

MR. VALTER VIOLA: But I'm not disagreeing that that -- this is not --

MR. STEVE SCARFONE: In place here?

MR. VALTER VIOLA: Yes, this is --

MR. STEVE SCARFONE: At least with the CPP then, this federal government had no real oversight over ---

MR. VALTER VIOLA: No, they were set up at arm's length and that's a -- and that model has been copied around the world in some places, as really good governance as an example, they -- they put that up as a -- anyways.

MR. STEVE SCARFONE: Yes. No, absolutely.

And having not had any dialogue with the -- with the Corporation and its Board, you're not in a position, Mr. Viola, to know the reasons why MPIC has a low risk tolerance.

MR. VALTER VIOLA: Well, I've read some stuff, I have some -- I've heard some rationale for it and I understand --

MR. STEVE SCARFONE: I'm reading the rate application.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Yes, yes, yes. So assuming that you read certain parts of it, you'll be aware, sir, that the Corporation suffered net income losses of $250 million between 2013 and 2017.

MR. VALTER VIOLA: I don't recall it, but I don't dispute it.

MR. STEVE SCARFONE: No reason to dispute that.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And of that $250 million, sir, 160 million was due to inaccurate interest rate forecasting. Any reason to dispute that?

DR. BYRON WILLIAMS: On the -- I'm not sure -- on this issue, I'm not sure this witness

should be accepting that as a factual -- as factually established.

We'll accept the first premise --

MR. STEVE SCARFONE: Yes.

DR. BYRON WILLIAMS: -- but I'm not sure the re -- record is conclusive on that.

MR. STEVE SCARFONE: Okay. It's in the rate stabilization reserve at chapter 4.2 if we need to turn to it.

DR. BYRON WILLIAMS: I know where the assertion is.

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Okay. And then we've also heard some evidence at this proceeding, sir, that the Basic program had transferred into it over the past four (4) years $214 million from the Corporation's other lines of business.

Do you recall reading that?

MR. VALTER VIOLA: I don't recall, no. And again, my area of focus is the portfolio design and its efficiency --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- rather than related activities, like reserves and the like.

MR. STEVE SCARFONE: No, no. And this is more towards the risk tolerance and the selection of a low risk tolerance --

MR. VALTER VIOLA: Sure, sure.

MR. STEVE SCARFONE: -- that the Corporation has made.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: So with that background information, sir, I'm going to suggest to you that selecting a low risk tolerance is not at all unreasonable in those circumstances.

Would you agree with that?

MR. VALTER VIOLA: Well, let me caveat my answer. You're asking me if it was unreasonable to base the low tolerance of risk based on what happened, and I would suggest that the tolerance for risk, because risk is a forward-looking thing, should be based on what one expects, not what happened yesterday.

That's what I would suggest. So I would argue that while some outcomes sound, on the surface, that they were adverse and informed perhaps tolerance for risk in the future because someone just suffered some pain, it's the expected future pain that is the most relevant thing for assessing risk

tolerance going forward.

We can learn from experience, but whether it was a good or bad experience is --

MR. STEVE SCARFONE: Irrelevant in your view?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Yes, but -- but notwithstanding those comments, and I appreciate that, the looking forward, it -- it's still the investors decision --

MR. VALTER VIOLA: Absolutely.

MR. STEVE SCARFONE: -- to decide on a risk tolerance.

MR. VALTER VIOLA: Absolutely.

MR. STEVE SCARFONE: And I'm going to suggest to you, sir, as well, you're aware that the -- the Basic claims liability portfolio has a head ratio of 100 percent against interest rate risk?

MR. VALTER VIOLA: That's the policy, yes.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: And -- sorry, yes. Against nominal interest rate risk, yes.

MR. STEVE SCARFONE: It's nominal, not real?

MR. VALTER VIOLA: Well, yes it's -- you -- just to be clear it's the way it's being managed in the way -- yes, implicit is the -- you're managing the nominal interest rate risk, yes.

MR. STEVE SCARFONE: And that -- that protection from interest rate risk moved from 85 percent to 100 percent under the new investment strategy?

MR. VALTER VIOLA: I don't disagree with that, yes. I know it's 100 percent, that's the new policy, yes, sir.

MR. STEVE SCARFONE: And -- and you're aware, Mr. Viola, that MPIC ---

MR. VALTER VIOLA: Certainly, yes.

MR. STEVE SCARFONE: You're aware, Mr. Viola, that MPI selected a portfolio that, as we've heard, was derived from a nominal liability benchmark?

MR. VALTER VIOLA: Yes, that's my understanding.

MR. STEVE SCARFONE: And that benchmark, I understand is one (1) that assumes inflation to be at 2 percent going forward?

MR. VALTER VIOLA: I'll have to be careful on how to answer that, because I think even in the Mercer submissions one (1) of the recent responses

is that they didn't -- while they have an assumption going forward that inflation is 2 percent -- sorry, your question is about the level of inflation.

I believe that embedded in all their capital market assumptions.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: So even in the return inequities, for example, there is an embedded inflation assumption and I believe it's 2 percent as a level on all asset classes, yes.

MR. STEVE SCARFONE: Per annum?

MR. VALTER VIOLA: Yes. That's my understanding.

MR. STEVE SCARFONE: And if I understood your presentation, I think you indicated this a couple times, you would've had MPI's liabilities assuming variable levels of inflation as part of their modeling, correct?

MR. VALTER VIOLA: Could you rephrase that, please?

MR. STEVE SCARFONE: Sure. Well I can't rephrase it, I can repeat it.

MR. VALTER VIOLA: Okay, sure. Please repeat it.

MR. STEVE SCARFONE: You would have

had MPI's liabilities assuming variable levels of inflation as part of the liability modeling.

MR. VALTER VIOLA: Yes, for the -- yes. And to be clear, I would suggest using the terms we had, the liability benchmark portfolio would consist of assets that reflected the inflation and real interest rate sensitivity of the liabilities, rather than the nominal interest rate sensitivity and liabilities.

MR. STEVE SCARFONE: And that, as I understand your evidence, is use of a real liability benchmark as a proxy.

MR. VALTER VIOLA: Well, that's one (1) component. It's -- if you look at the actual composition of the real liability benchmark in the case of Basic, it was 66 -- two-thirds (2/3s) of the asset, 66 percent were real, and then there were some T-bills, treasury bills, and some provincial long-term bonds, I believe, with a lower weight.

And then for the ba -- for the pension it had up to 81 percent, so it wasn't fully a hundred percent real return bonds.

MR. STEVE SCARFONE: But ultimately, MPIC, as you know, made use of a nominal liability benchmark --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- in deriving their portfolio.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And again, that's one (1) of those -- well, you disagreed with me on this point, but I -- I called that an investment decision. You'd quarrel with me on that.

MR. VALTER VIOLA: I didn't quarrel, I disagreed, yes. I suggested that -- yes, we -- we disagreed. I said that the cap -- I forget exactly how, but I -- yes.

MR. STEVE SCARFONE: Okay. But that -- that particular decision, whether it's an investment decision or a framework decision --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- that's one that's ultimately made by the investor after education.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: After in-person meetings.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: After consultation.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Dialogue with the investment firm advisor.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And you won't disagree that MPIC, based on what you've seen, had a clear investment objective that they wanted to hedge nominal risk rather than real risk.

MR. VALTER VIOLA: I see that.

MR. STEVE SCARFONE: Yes. And that, sir, I think you'd agree is a decision that belongs to MPIC, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: They, in other words, chose to accept inflation risk as a trade-off for the better asset classes available to them on the nominal risk side.

DR. BYRON WILLIAMS: Can I just, in terms of the question, sir --

MR. STEVE SCARFONE: Yes.

DR. BYRON WILLIAMS: -- are you referring to the liabilities benchmark or are you now moving from the liabilities benchmark to the optimization of the portfolio?

MR. STEVE SCARFONE: You mean the

selection of the asset classes?

DR. BYRON WILLIAMS: In term -- for the purposes of your question, yes.

MR. STEVE SCARFONE: Yes. No, I'm still on the -- on the benchmark.

MR. VALTER VIOLA: Yes. Sorry, if you could repeat your question, please.

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Yes. So we heard evidence from Mr. Macarchuk that before you can select -- and I think you agreed with this -- before you can select the asset classes --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- you've got to select the benchmark.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: All right. And so I'm suggesting to you that -- that the objective that the Corporation had was, firstly, wanting to hedge nominal risk rather than real risk, and thereby selecting the nominal liability benchmark.

Is that fair?

MR. VALTER VIOLA: That's what -- I -- my understanding is what they did, yes, and decided.

MR. STEVE SCARFONE: And in doing so, because I understand you could still purchase inflation protection under the nominal liability benchmark, is that -- is that true, sir?

MR. VALTER VIOLA: You could purchase inflation protection -- yes, you could.

MR. STEVE SCARFONE: You could have real return bonds under the nominal.

MR. VALTER VIOLA: You could, but if you put it in the model, it probably wouldn't like them very much.

MR. STEVE SCARFONE: It would fall off rather quickly, correct.

MR. VALTER VIOLA: It probably would put zero because it's got a lower return.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: And it's hedging a different risk.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: So I would be surprised if the model would like it at all.

MR. STEVE SCARFONE: So, in choosing to go with a nominal liability benchmark, the Corporation, I'm going to suggest to you, chose to accept some inflation risk as a trade-off for the

better asset classes that were available under the nominal pathway.

MR. VALTER VIOLA: Okay, so I want to be clear on the question.

Is your -- are you -- are you asking me whether the Corporation was prepared to take true inflation risk in the portfolio, or in the measurement of the risk?

MR. STEVE SCARFONE: In the portfolio itself.

MR. VALTER VIOLA: So the Board -- right, regardless of how they made their decision, they decided not to buy real return bonds and, therefore, they are taking inflation risk, yes.

MR. STEVE SCARFONE: Correct.

MR. VALTER VIOLA: That was a decision.

MR. STEVE SCARFONE: Yes. And just, you know, I don't -- I'm not going to engage you, sir, in a discussion on the merits of the different asset classes under the benchmarks, because I'll lose that every day.

But I do want to try and understand some very basic concepts.

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: The normal returns, as I understand it, are the total return an investor receives from an investment.

MR. VALTER VIOLA: Normal or nominal? Sorry.

MR. STEVE SCARFONE: Sorry, nominal returns, yes.

MR. VALTER VIOLA: So the nominal return. The nominal return on a bond, say?

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Is -- it's not adjust -- it's the return that we normally think of in -- in today's dollars. It's not -- you're not adjusting for the fact that inflation was X.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: So it's -- it's the return we normally think of.

MR. STEVE SCARFONE: So can I call it the "total return", or is that inaccurate?

MR. VALTER VIOLA: It could be potentially misleading, because -- I'm trying to think, you're talking about a particular asset?

I just don't want it to be confused with -- you can call it what you want.

MR. STEVE SCARFONE: Okay. No, I want

to get this correct, so.

MR. VALTER VIOLA: Yes, absolutely. A total return on that asset class is the nominal return, you could say the same, sure.

MR. STEVE SCARFONE: Okay, and the real returns then I think it follows, are the after inflation returns?

MR. VALTER VIOLA: Correct. And you're talking about returns as opposed to yields, yes, but -- yes.

MR. STEVE SCARFONE: And -- and so the Board, in deciding which way to go decided to hedge only nominal interest rate risk.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And by doing so, they chose to accept the lesser threat, in their view, of inflation volatility risk.

MR. VALTER VIOLA: I don't know how to answer that. That's what they said. I don't disagree with it.

MR. STEVE SCARFONE: Well, that's -- and that's why I prefaced it "in their view", you may not agree with that, but in their view at least they -- - they -- by doing so they chose to accept some inflation risk.

MR. VALTER VIOLA: They accept -- I don't disagree with that first part, I have a hard time understanding the second part.

So if you could say the whole thing again, I will suggest some language that maybe makes it clear.

MR. STEVE SCARFONE: My suggestion to you was that they decided to hedge only nominal interest rate risk.

MR. VALTER VIOLA: Right. Then I've read and you've said the lesser. I don't know what "the lesser" refers to. What is the other --

MR. STEVE SCARFONE: The lesser -- so they chose to accept the lesser threat of inflation volatility risk, meaning there were other factors or other benefits that they decided in favour of, rather than protect against rising inflation.

DR. BYRON WILLIAMS: Can I -- can I, just in terms of the question, sir?

MR. STEVE SCARFONE: Yes.

DR. BYRON WILLIAMS: Are you suggesting the question that inflation volatility is a lesser threat? I think that's the -- the cause of the confusion.

MR. STEVE SCARFONE: And I have

described it as such. The threat of inflation volatility.

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Because you indicated in your direct examination, right, it's not the level of inflation.

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: But it's the volatility that concerns you.

MR. VALTER VIOLA: I don't disagree -- right. But I've read both and I put it in the -- we can pull it up on the screen if you'd like, if that's okay.

MR. STEVE SCARFONE: Sure.

MR. VALTER VIOLA: Just to clarify the point. Both Mercer and MPI, if you could pull up my presentation, please.

I underlined it to -- to clarify this exact point. Let's see here. It's under the liability benchmark, so it will be slide -- it's the--

(BRIEF PAUSE)

MR. VALTER VIOLA: I apologize for the

delay.

DR. BYRON WILLIAMS: It's slide --

MR. VALTER VIOLA: It's slide 23. Please.

So slide 23 where it says -- sorry, I'm on the wrong one. Where it says Mercer and ---

DR. BYRON WILLIAMS: Slide 12.

MR. VALTER VIOLA: Thank you. It was early. Slide 12.

So the big simplification here and now I'm going to use the terms of "volatility" and "averages,: because I want it to be clear.

So MPI said -- and this is in the context of selecting the liability benchmark portfolio that you mentioned. They based their decision on a low risk assessment of inflation, primarily based upon the expected level.

So they didn't refer to the volatility, which is my point. And Mercer, in supporting the hed -- the decision to hedge nominal rather than real, in their words, was driven more by their views on the level rather than volatility.

I don't know if there's a so what behind that, because Mercer didn't elaborate, but I would suspect that if I were a consultant, I would be

telling my client to say the level is important, but the volatility is what factors into that equation about risk. The level doesn't factor into the equation, so it's the volatility that is really important.

And Mercer here is saying, our views are supportive of what MPI is doing, but it's driven based on their expectation, and ours too, that future inflation level won't be 9 percent inflation rather than volatility.

And again, from -- I could make another point, but...

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: No, no. And so I -- I don't know if -- if the question as I put it to you, or if that changes the question as I put it to you, because as I understand it, your concern with the portfolio as selected is -- is about volatility.

MR. VALTER VIOLA: The liability benchmark portfolio is about the fact that inflation volatility is not exactly 0 percent.

MR. STEVE SCARFONE: Yes. And so my question to you was -- and perhaps the use of the word "threat" threw everyone, but MPIC chose --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- to accept some volatility risk.

MR. VALTER VIOLA: In inflation, yes, they did.

MR. STEVE SCARFONE: Yes. And in your view --

MR. VALTER VIOLA: Well, two (2) things, sorry. They accepted the fact that there is a mismeasurement, and they -- they decided in their portfolio design to accept the risk that the nominal bonds do have inflation risk in relation to liability, they do have some inflation exposure.

MR. STEVE SCARFONE: Yes. And -- and so long as -- I think you'll agree with me -- so long as they did so after sufficient education and made an informed decision, Mr. Viola, that is ultimately a decision, again, that lies with the investor, correct?

MR. VALTER VIOLA: And just to be clear, yes, the decision to do what, adopt the liability benchmark portfolio to hold only nominal bonds?

MR. STEVE SCARFONE: Correct.

MR. VALTER VIOLA: That is their decision. Yes.

MR. STEVE SCARFONE: Yes. And the decision not to protect the -- the Basic portfolio against rising inflation above 2 percent.

Again that's ---

MR. VALTER VIOLA: Right. That's -- that's their decision as well.

MR. STEVE SCARFONE: Yes. You might not agree with it, but that's their decision, correct?

MR. VALTER VIOLA: Correct.

THE CHAIRPERSON: Mr. Scarfone, I'm sorry to interrupt, but are you near a place where we could take a break for -- for a few minutes?

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: If you are, we'll continue to that point. I don't want to disrupt it, but we should have a break at some point this afternoon.

MR. STEVE SCARFONE: I agree with you, Mr. Chair, and I think maybe, you know, this is as good a time as any.

THE CHAIRPERSON: Okay, so we'll -- we'll break for fifteen (15) minutes right now. Thank you.

--- Upon recessing at 3:05 p.m.

--- Upon resuming at 3:26 p.m.

THE CHAIRPERSON: Mr. Scarfone, sorry.

MR. STEVE SCARFONE: Sorry, Mr. Chair. I didn't see you sit down there. Thank you.

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: So before the break, Mr. Viola was awkwardly trying to understand the concepts of -- of real return versus nominal returns, but I think if I understood your testimony from earlier today, the issue comes down to -- to this, and that is should MPIC -- should MPIC's liabilities have assumed variable levels of inflation as part of the liability modelling, that, I think, is the issue, you would say yes. Is that fair?

MR. VALTER VIOLA: Yes. The composition of the least -- that liability benchmark portfolio --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- which is how they modelled it, yes.

MR. STEVE SCARFONE: And -- and that protection, if -- if I can call it that, would come in the form of real return bonds, in -- in your --

MR. VALTER VIOLA: The bulk -- the bulk of the composition of the liability benchmark portfolio, under the real modelling, would consist 66 percent for the Basic of real return bonds, and 81 percent for pensions.

MR. STEVE SCARFONE: And -- and that, in your view, would adequately -- perhaps even more than adequately hedge MPIC against the -- the variation that might occur in the future on the inflation front?

MR. VALTER VIOLA: Well, that's Mercer's -- those are Mercer's numbers, not mine, but --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- I believe that their -- I have no reason to doubt that their development of that mix, I think, better reflects the true risks inherent in the liabilities compared to the one that was actually adopted.

MR. STEVE SCARFONE: Okay. Would you agree with me, though, Mr. Viola, that most investors accept inflation risk, and those that -- that do hedge inflation only hedge a portion of it?

MR. VALTER VIOLA: I -- I wouldn't disagree with that. You're talking about the -- on

the asset side, deciding -- you're talking about the actual investment activity as opposed to how they characterize the liabilities?

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Okay. Yes. A lot of people take inflation risk. I don't know what the mix is, but --

MR. STEVE SCARFONE: Okay. And -- and in your presentation, I don't know if I need to take you there, because --

MR. VALTER VIOLA: Well, sorry, but some funds, like Ontario Teachers, for example --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- they really do -- all they talk about is real interest rate risk and long-term inflation risk. So they are a leading -- they were the number 1 pension fund in the world globally. They're recognized as the thought leader. I happened to be there at a time, learning from very smart people.

Who knows what they do today, but back then, I think that's probably still manifested in a -- in a portfolio that includes a lot of these long-term real inflation-sensitive assets to hedge their risk that are real and long-term inflation sensitive. So

there is a very sophisticated investor that I think sets a standard.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: What other investors do --

MR. STEVE SCARFONE: You don't -- you can't speak to it.

MR. VALTER VIOLA: Well, the -- I know the average investor -- institutional investor probably worries a lot more about what the next -- the peer is doing than the nature of the liabilities, for example.

MR. STEVE SCARFONE: Now, but what -- but when you speak to the Teachers' Group --

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: -- those, as I understood from your presentation, that'S back in the day when the RRBs were offering 4 and 5 percent.

MR. VALTER VIOLA: Correct. But even today, when real interest rates are very low, they continue to have a significant -- like, one dollar ($1) in five (5), roughly --

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: -- I looked the other day at the annual report, and it's dated. It's

a year old. But they haven't gone to zero. They've got maybe 15, 16 percent still in real rate products, plus other inflation-sensitive. So it's not zero, and they have a lot of equity. So they have a high tolerance for risk, and yet they buy real return bonds as well.

MR. STEVE SCARFONE: And so it stands to reason with that equity and -- and they have more assets under management than MPIC does, obviously, they would be exposed to greater loss, relatively speaking, than MPIC would if inflation was to rise as you've suggested?

MR. VALTER VIOLA: Well, they have more assets, so they have more assets at risk. But proportionally, I would say that they have less inflation risk in managing their surplus than MPI does, because they have inflation backing assets, like, real estate and infrastructure.

MR. STEVE SCARFONE: Yes, like real -- they have real assets in their portfolio.

MR. VALTER VIOLA: Yeah, but they're proportionally much bigger, so they're going to have bigger absolute -- bigger absolute adverse outcomes when those adverse outcomes happen.

But from an inflation perspective,

there'll be less. They won't be as hurt as badly.

MR. STEVE SCARFONE: Yeah, well, be -- because of the real assets that they have in the portfolio?

MR. VALTER VIOLA: Yeah. Yeah. Including real return bonds, yeah.

MR. STEVE SCARFONE: Okay. Slide 21 of Mr. Viola's presentation. So here's the -- the Teachers, showing 19 percent in real rate products.

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: Does that, I expect, sir, include real estate and infrastructure?

MR. VALTER VIOLA: No. No.

MR. STEVE SCARFONE: No.

MR. VALTER VIOLA: So the green -- on the slide, it shows up. The -- you'll see the green on the top right in the legend at the bottom.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: That's real rate products. So that's 90 percent. The yellow is real estate, and eyeballing it, looks like it's smaller than the real rates.

MR. STEVE SCARFONE: Oh, I see your key down there, sorry.

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: That -- my apologies.

MR. VALTER VIOLA: That's okay. That's okay. And infrastructure's above that.

MR. STEVE SCARFONE: I see. So the 19 percent real rate products, that -- that's all real return bonds? Is that correct?

MR. VALTER VIOLA: I believe so. And it's probably got some US treasury inflation linked product as well, not just Canada.

MR. STEVE SCARFONE: And that -- that, as I see, sir, was from 2015. Do we know if that allocation still exists today?

MR. VALTER VIOLA: It's not materially different. They're not at zero. They've gone down a little bit, but I looked the other day, and they've reclassified things. So they've got -- they've actually got an explicit line item now called -- do you have the paper? They actually have a new line item called inflation hedge. So they've got 9 billion, and in prior years, they didn't have that.

What that consists of, I don't know, but they break out real rate products and include it under real estate, real assets, and fixed income. So they're -- the punchline is they've still got a lot of

real rate products, but they may classify it little differently.

MR. STEVE SCARFONE: Okay. I -- I see. So real rate products could include something other than real return bonds, then. Is that fair?

MR. VALTER VIOLA: For this number, I'm pretty sure it's most -- it wouldn't be materially different from -- I can check it, but it's basically Canadian provincial private sector, like the four seven (47), which I -- was in my portfolio back then, and they probably still have that, plus some US Treasury inflation and products. So I'm -- I am pretty sure they're all bonds.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: If -- if not -- not materially different from that.

MR. STEVE SCARFONE: So my understanding is that -- that the Teachers Group has approximately $185 billion to manage? Does that sounds about right?

MR. VALTER VIOLA: Yeah, about two hundred (200), yes.

MR. STEVE SCARFONE: Two hundred (200)?

MR. VALTER VIOLA: Something like

that.

MR. STEVE SCARFONE: Would it -- would it surprise you to learn that today, they have just $1.5 billion in real return bonds?

MR. VALTER VIOLA: Would it surprise me if that's what they have today?

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: It probably would.

MR. STEVE SCARFONE: But we don't know what they have today?

MR. VALTER VIOLA: Well, as I said, they only publish an annual report once a year. They do have a semiannual. I haven't looked at it, but it would -- I'd be surprised if they were anywhere close to that. But again, when you look at any asset class, it depends on their outlook, right?

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: So -- and without all the other things that are going on there.

MR. STEVE SCARFONE: So when you indicated earlier in your recommendation, sir, at the last page of your presentation, that the -- number 1 on your list would be the understatement of long -- of long-term risk of inflation and real interest rates.

Do you see that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: But you'd agree with me, sir, that inflation is, in fact, covered up to 2 percent in the MPIC Basic claims liability portfolio?

MR. VALTER VIOLA: I'm not sure how to interpret that. When you say it's covered --

MR. STEVE SCARFONE: It's -- it -- there's protection up to 2 percent. So it -- to the extent that inflation doesn't --

MR. VALTER VIOLA: Right. Right.

MR. STEVE SCARFONE: -- and -- and the nominal interest rate risk is -- is covered as well. I know you don't like that word, but --

MR. VALTER VIOLA: No, no. That's fine. No. So it's -- the -- quick -- the -- you're -- you're suggesting that the liabilities aren't perfectly sensitive to a hundred percent of the change in the CPI?

MR. STEVE SCARFONE: Correct.

MR. VALTER VIOLA: Yeah. I'm not disagreeing with that.

MR. STEVE SCARFONE: Okay. Would you agree, Mr. Viola, that in general, real return bonds are relatively expensive compared to the best estimate

expectations of inflation?

MR. VALTER VIOLA: I -- I would not make that conclusion.

MR. STEVE SCARFONE: Okay. Would you agree that most investors --

MR. VALTER VIOLA: In fact, I would -- in fact, I would -- I would argue that they represent fair value relative to the relevant alternative. Mercer and MPI, one (1) or both, talked about a break-even inflation rate, not a term I use, but when -- when I see break-even inflation of something south of two (2), that means that if you actually get inflation of two (2), which is what the Bank of Canada assumes, you're actually doing better by buying the real return bonds, as I understand their definition of break-even.

So while it's not turning 4 percent or 5 percent real, it's the spread between nominal that matters, and the break-even tells you that issue. And it -- to me it looks like it's not a huge cost for taking risk off the table and taking it elsewhere, and getting better returns.

MR. STEVE SCARFONE: And would you agree with me that matching duration with real return bonds is -- is challenging?

MR. VALTER VIOLA: Relative to the

liabilities, it's harder than nominal bonds, but yes. But that's not the only part of --

MR. STEVE SCARFONE: The --

MR. VALTER VIOLA: -- interest rate risk. Yeah.

MR. STEVE SCARFONE: Real ret -- return bonds, sir, I'm going to suggest to you, haven't increased in price, even with the higher inflation over this past summer.

Would you agree with that?

MR. VALTER VIOLA: I wouldn't dispute it.

MR. STEVE SCARFONE: Okay. And so we see that inflation rose to a high of, I think, 3 percent this past year in the summertime?

MR. VALTER VIOLA: Yeah.

MR. STEVE SCARFONE: And it's now decreased again to two point two (2.2), I believe, after September, correct?

MR. VALTER VIOLA: I don't dispute that.

MR. STEVE SCARFONE: How about the market for real return bonds? Are they generally available out there for investors to purchase?

MR. VALTER VIOLA: As I said in -- in

the response to the Utility Board's -- Public Utility Board's questions, it's about an $85 billion market. So it's -- it's big, but it's not massive. It's not -- it's much smaller than the nominal bond.

But I'm not a fixed-income expert. All I know is that a fund like Teachers, you know, they managed to acquire the product, and they're a big fund, so for a smaller fund, it's more. A couple billion dollars is not small, but it's not 200 billion. It's -- it's not a -- it's not a -- an insurmountable task.

MR. STEVE SCARFONE: We heard evidence from Mr. Makarchuk that had MPIC wanted to completely hedge inflation risk beyond the -- the nominal part that they did, the expected returns on the portfolio -- the Basic portfolio would have been materially lower. Do you agree with that?

MR. VALTER VIOLA: I -- I don't know what he said, but I would -- the Mercer studies would suggest that investing in real return bonds would improve for all levels of risk, the expected return. So not sure what he said, but the analysis would suggest otherwise. By putting a constraint on real return bonds, it -- it costs you money in the context of a total portfolio and rebalancing everything.

MR. STEVE SCARFONE: Yes, and -- and that was the key point, I think, the rebalancing everything. Because if we pull up slide 36 to your deck, it shows here a slide that was, in fact, taken from the Mercer presentation, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And this shows, as I understand it, the difference between a portfolio that contains real return bonds and one that does not. Is that fair?

MR. VALTER VIOLA: There's several lines, but my understanding, again, the -- it's very -- it's hard to read, but the bottom one, I believe, is the -- call it a brown.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: That one is the constrained portfolio, so it does not include real return bonds.

MR. STEVE SCARFONE: Correct. And the one above it --

MR. VALTER VIOLA: And the one at the highest --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- I believe has whatever -- remember -- sorry, not remember -- Mercer

went through an exercise --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: I don't have access the model, so I only worked with the reports that were given --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- so I'm sort of reverse engineering and making conclusions based on what was given -- provided. That top graph, I can't remember what is in it exactly other than the next step going from the top to the bottom is this constraint of the real return bonds.

So that difference is -- is taking out real return bonds, so making the return go lower because of the constraint --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: -- and I don't know what the compositions are of those two (2) portfolios, but to me -- and again, you have to make a ref -- a judgment. If you were to go left -- I -- I picked the ones that were easy to read, and I said, If you maintained the current level of risk -- and this is forward-looking.

So this is -- this is Mercer's projected stuff, saying if -- taking your current

level of risk, if you took their advice, i.e., the upper efficient frontier as based on their analysis, whatever's in that bucket, and then you set whatever's in that mix, and you said, you can't have any real return bonds, the cost of taking real return bonds out at that level is .8 percent return deterioration per year as a result of that.

And again, along all these curves, and when you shift up the curve, you've got lots of changes in the portfolio. There might be -- you know, when you take real return bonds out, maybe it'll try to put some real estate in, because it wants an inflation protection.

MR. STEVE SCARFONE: Well, and -- and that, I think, was leading to my next question, because during the course of your presentation and while explaining this particular slide, you said that the key point here is that it includes real return bonds.

And so we see that -- that basis point move in favour of the portfolio that contains real return bonds, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: But it would be important, I think another key point for sure, to know

what other asset classes might be contained within that efficient frontier, would you agree with that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And -- and to the extent that that efficient frontier that we're looking at that has the real return bond frontier outperforming the current one, that is the one (1) with no real return bonds --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- if it had in it private debt, private equity and some diversified growth funds, that might impact upon performance as well, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And so having real return bonds alone, in that particular portfolio, may not fully account for the 80 basis point increase.

MR. VALTER VIOLA: Well, again, this is the correlation effect. So, this is why you have to do it in aggregate. It's why -- again, try to think of the hockey analogy, but the punch-line is, you know, Mercer does this for a living, and this is the way I would do it as well is, you have to sort of say with and without what is the effect on the total portfolio.

We can't look at things in isolation, and the fact of the matter is, and Mercer would repeat it in a different way, but it's the same conclusion.

By taking return -- RRBs out along any point along this makes you worse off. In fact, when you go further to the left, you will note that the curve really drops off a cliff, and that's maybe the more important point.

At lower levels of risk tolerance, as you move to the left, the difference between the top efficient one and the constrained one below actually becomes much bigger.

So this is why I'm particularly concerned with the absence of real return bonds because I believe they very well protect against the risk of long-term inflation and real interest rates, and given the lower tolerance for risk, as I defined by the decision to be to the left part of the risk spectrum, if you look at that vertical distance, it becomes a bigger opportunity cost by not investing in real return bonds the further left you go.

And so that's -- that's really the nature of the biggest concern I have with this. It wouldn't be such a big difference if you look out far -- far out and said, This fund can take a lot of risk

and -- invested, and it can tolerate the risk of equities.

There the cost of not having real return bonds is very small, because you wouldn't invest in them because you're not worried about those risks. But at the lower level of risk that you're wanting to accept, that movement along there, that cliff drops off on that brown curve.

MR. STEVE SCARFONE: But to the extent, Mr. Viola, that that -- that purple frontier line --

MR. VALTER VIOLA: The top one?

MR. STEVE SCARFONE: Yes, contains assets that were excluded, then --

MR. VALTER VIOLA: That were excluded ultimately, yes.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: So you could do the same analysis and say it's not .8 percent, it's something else. But those other curves, it's still -- it's still a cost relative to some other less constrained one that would have real return bonds. So absolutely.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: And in fact, you

could put this -- and I can't remember if the -- the hedge -- the leverage constraint was in or not in this.

So we can argue about whether it's 80 basis points or 20 or 40. The point is, it's always lower.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: By putting a constraint of not having RRBs in it.

MR. STEVE SCARFONE: Yes. And that exactly was my point, because if you go to Exhibit 15, MPI Exhibit 15, we see there that that proposition on -- it would be page 5, that proposition that -- that purple frontier line included --

MR. VALTER VIOLA: Sorry, is this the right exhibit we're supposed to be looking at?

MR. STEVE SCARFONE: Yes, yes.

MR. VALTER VIOLA: Where am I looking?

MR. STEVE SCARFONE: There's the proposal by Mercer, you see in the red?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Yes, and so the purple line that they -- that they indicated there which was the -- the efficient frontier, the one that you said outperformed the current asset mix, included

some excluded assets.

MR. VALTER VIOLA: Okay.

MR. STEVE SCARFONE: So it -- you'll see there that listed there are private equity. Do you see that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: That was not an asset class that MPIC was prepared to -- to purchase.

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: Growth fixed income, that -- that as well was included.

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: And in addition to that, a private debt, as we've heard.

MR. VALTER VIOLA: Right. And I could have drawn the cost relative to one of the other curves, I just picked the one that was the easiest one to -- again, less constrained.

MR. STEVE SCARFONE: So that 80 basis point out performance, if I can, might be lower.

MR. VALTER VIOLA: Right. Some of it will come from the other constr -- I shouldn't say it.

Well, sorry, the 80 basis points would be lower for a more constrained portfolio that was illustrated by Mercer.

MR. STEVE SCARFONE: Yes. And -- and again, as we canvassed before the break, these investment decisions whether to include private debt, to growth fix, these are decisions ultimately --

MR. VALTER VIOLA: Sure.

MR. STEVE SCARFONE: -- that lie with the investor, correct?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And that's based again on the risk tolerance.

MR. VALTER VIOLA: In part, yes.

MR. STEVE SCARFONE: Rightly or wrongly, the investor can decide that.

And so we -- we heard some evidence earlier anecdotically private debt just wasn't something the Board of Directors was comfortable with, that may frustrate the advisor --

MR. VALTER VIOLA: No, no, that's all great. I can't disagree with that.

I will note that .8 percent is a big number, but when we're compounding over decades, even .2 percent is a big number.

So we can question that magnitude, whether it's 80 basis points, 20 or 30, it's kind of like a free lunch, being inefficient below the

frontier is -- it costs you something. We -- we can debate how big it is. But...

MR. STEVE SCARFONE: So the purchase of real return bonds in the -- in the Basic claims liability portfolio is one -- is -- is something that you've suggested or recommended occur.

But, as I understand it, that would only properly be included to hedge against rising inflation, is that fair?

MR. VALTER VIOLA: Sorry, can you repeat that, is it relating to the actual portfolio or the bench portfolio?

MR. STEVE SCARFONE: The actual portfolio.

MR. VALTER VIOLA: Can you rephrase the question, sorry?

DR. BYRON WILLIAMS: Yeah, because the question was actually -- was speaking about purchasing real return bonds for the liability portfolio. And that's not -- I -- so are you talking about the liabilities portfolio?

MR. STEVE SCARFONE: The Basic claims liability portfolio.

MR. VALTER VIOLA: So can you rephrase the question, sorry.

CONTINUED BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: So one (1) of the recommendations, or I think you'd agree with me that you would have the Basic claims liabilities portfolio includes some allocation to real return bonds?

MR. VALTER VIOLA: Yes, yes. It -- well, 66 percent. This is what Mercer says. They said 66 and 81 percent would be in the pension, yes.

MR. STEVE SCARFONE: Yes. And the -- the return on that investment is -- is more beneficial to the investor if inflation rises.

MR. VALTER VIOLA: Sorry, now we're talking about investing as opposed to the liability benchmark.

MR. STEVE SCARFONE: Yes, and I may be confusing the two (2) concepts but --

MR. VALTER VIOLA: No, that's okay.

Now we're talking about the portfolio, not the liability benchmark.

MR. STEVE SCARFONE: No, we're not.

MR. VALTER VIOLA: We're talking about the liability benchmark.

MR. STEVE SCARFONE: We're talking about the Basic claims liability portfolio.

So, the portfolio that has investments

to match against MPIC's obligations under Basic.

MR. VALTER VIOLA: Okay.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: You would have that part -- portfolio include real return bonds.

MR. VALTER VIOLA: Mercer has suggested that that best characterizes the liabilities, and I don't know the portfolio -- the liability char -- characteristics under -- a hundred percent. But Mercer has said that --

MR. STEVE SCARFONE: I see.

MR. VALTER VIOLA: 66 percent --

MR. STEVE SCARFONE: You want to stay on the benchmarking, on the -- the liability, the real liability port -- benchmark portfolio, is that where I'm losing you?

MR. VALTER VIOLA: No, I'm trying to figure out -- I -- I apologize. It's -- I thought your question was -- is your question that the liability benchmark portfolio for Basic should include 66 percent real return bonds?

MR. STEVE SCARFONE: No, I haven't indicated a percentage, just that right now --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- the -- the asset classes don't include real return bonds.

MR. VALTER VIOLA: In the liability benchmark portfolio?

MR. STEVE SCARFONE: No, in the Basic claim -- in the actual portfolio.

MR. VALTER VIOLA: You're talking about the portfolio. Sorry. In the Basic bucket for --

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Sorry. They don't include a nominal fixed-income. I apologize. Yes. Sorry.

MR. STEVE SCARFONE: No, it's probably my question.

MR. VALTER VIOLA: No, because we haven't -- you're correct in defining individual portfolios, there's five (5) of them to manage.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: Now we're talking about portfolios.

MR. STEVE SCARFONE: Yes, and I'm talking about the Basic claims liability por -- the one that -- that -- that is designed to meet the obligations of the --

MR. VALTER VIOLA: Of the Basic liability.

MR. STEVE SCARFONE: The Basic program.

MR. VALTER VIOLA: We're talking about the assets now, not the liability.

MR. STEVE SCARFONE: Yes. The assets. Yes. Thank you.

MR. VALTER VIOLA: Does not have real return bonds in it.

MR. STEVE SCARFONE: Correct.

So, if the portfolio, the Basic claims liability portfolio contained real return bonds --

MR. VALTER VIOLA: Let's call it the Basic portfolio, because as soon as you say liability portfolio I'm talking -- you're talking about the right side of the balance sheet.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: And we're talking about the left side. The assets.

MR. STEVE SCARFONE: Yes, yes, yes.

MR. VALTER VIOLA: Okay, left side of the balance sheet we're talking about.

MR. STEVE SCARFONE: Okay, and we are, we're talking about the assets --

MR. VALTER VIOLA: I just want to be clear.

MR. STEVE SCARFONE: -- in the Basic portfolio.

MR. VALTER VIOLA: Got it.

MR. STEVE SCARFONE: Yes. So those assets, sir, if they included real return bonds --

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: -- they would offer some protection against long-term rising inflation.

MR. VALTER VIOLA: And decline -- yes, unexpected inflation and declining real interest rates. Yes.

MR. STEVE SCARFONE: Yes. And if we look to investments 14.2.1, Kristen.

This, as part of the rate application, Mr. Viola, that sets out the interest or the inflation forecasts over the next few years.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And you'll see that -- that the forecast for Canadian CPI is at 2.2 percent. Do you see that in the far right column?

MR. VALTER VIOLA: For 2018. Yes.

MR. STEVE SCARFONE: 2018. Yes.

And for 2019, 2.1 percent?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And for the next year, 2 percent and thereafter, do you see that?

MR. VALTER VIOLA: Yes. These are, just to be clear, these are averages, not volatilities.

MR. STEVE SCARFONE: Correct. And if we go to DCAT, figure 66, please. And these levels, again, not volatility, are historical inflation numbers that we see a significant difference in the two (2) time periods there.

One between 1915 and 1991, do you see that, sir?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And again between 1992 and 2015, the mean at 1.8 percent. Do you see that?

MR. VALTER VIOLA: Yes. And those are consistent with materials I presented, line 2 with the time horizon since real return bonds had been issued.

MR. STEVE SCARFONE: Yes. And so I think you'll agree with me that from 1992 forward the -- the mean level has been below 2 percent.

MR. VALTER VIOLA: I can't disagree

with that.

MR. STEVE SCARFONE: And would you also agree that in order to accurately forecast inflation, either tomorrow or in the long-term, it -- it might be important to look at the historical data?

MR. VALTER VIOLA: I'm not disagreeing, but there's other things I would look at as well.

MR. STEVE SCARFONE: Okay.

MR. VALTER VIOLA: Forward-looking, not backward-looking.

MR. STEVE SCARFONE: But backward-looking would be one (1) consideration that a prudent investor should -- should turn to, correct?

MR. VALTER VIOLA: Yes, but taking into account the circumstances back then. Yes. And how they might be different.

Can I elaborate, for example? No?

MR. STEVE SCARFONE: Sure. No, no --

MR. VALTER VIOLA: I'm just saying as an example, equity returns in the future may be lower because there's better ability to diversify equity risk today than back in the '0s.

MR. STEVE SCARFONE: Yes.

MR. VALTER VIOLA: You can buy a

basket of stocks at 500 with the click of a button. Before you had to buy them piecemeal and there were only thirty (30) of them you could buy. Industrials and banks, for examples.

MR. STEVE SCARFONE: So history doesn't help --

MR. VALTER VIOLA: The world changes.

MR. STEVE SCARFONE: Yes, the world has changed.

MR. VALTER VIOLA: Absolutely.

MR. STEVE SCARFONE: So -- but in addition to the historical data, you might also look to what the Bank of Canada is forecasting into the future.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: That might be another factor that one would consider.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And if we look to MPI Exhibit Number 18, please, Kristen. And it would be all the way to the bottom at page 25.

And this, sir, was a question that was put to you by Manitoba Public Insurance asking that you elaborate or -- or provide your thoughts on inflation expectations. Do you recall this question?

MR. VALTER VIOLA: There were a lot of questions. I don't dispute it. Yes, I remember it.

MR. STEVE SCARFONE: Okay, and if you could scroll down to Mr. Viola's response, please.

And you'll see there, sir, that you don't have what you've described as a view --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- unexpected inflation or even inflation volatility per se --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- but you're just making a general observation that investors should have less confidence about their inflation forecast the further out we go.

Is that fair?

MR. VALTER VIOLA: Yep. Yes.

MR. STEVE SCARFONE: Okay. And you don't have any evidence or you haven't presented anything that would refute the Bank of Canada forecasts that inflation over the next few years will be contained to within 2 percent?

MR. VALTER VIOLA: I don't have any challenge to their view or ability to do that over a short horizon, no.

MR. STEVE SCARFONE: And you'll also

agree with me, sir, that the Bank of Canada uses interest rate hikes as a -- as an effective tool at keeping inflation low.

MR. VALTER VIOLA: That's one (1) of the tools -- one (1) of the few tools, I guess, they have. But there's a lot of things that impact inflation. I'm not an economist, so.

MR. STEVE SCARFONE: No.

MR. VALTER VIOLA: I'm just...

MR. STEVE SCARFONE: But you're able -- you're able to agree, I think, that the Bank of Canada is able to effectively manage inflation.

MR. VALTER VIOLA: Well, historically they've done -- and again, I don't know how, I'm not a monetarist, policy guy, I'm not an economist, but the reality is to the extent that they've influenced it, they can get a pat on the back for saying they stuck to the 2 percent target plus or minus a little bit, so.

MR. STEVE SCARFONE: And in that comment that you make there, Mr. Viola, that you would suggest that investors should have less confidence about their inflation forecast the father out they go.

That, I expect, is advice that is sometimes heeded by investors, correct?

MR. VALTER VIOLA: I would hope so.

MR. STEVE SCARFONE: Like the Teacher's group, for example.

MR. VALTER VIOLA: Yes, that's why they buy real return bonds.

MR. STEVE SCARFONE: And again, that's advice that sometimes isn't heeded by the investor, correct?

MR. VALTER VIOLA: I'm not disagreeing.

MR. STEVE SCARFONE: And ultimately, again, I know we've gone over this, that final decision rests with the investor, correct?

MR. VALTER VIOLA: Correct.

MR. STEVE SCARFONE: And so long as the investors made an educated and informed decision not to hedge long-term inflation, that really nothing more need be said on that issue?

MR. VALTER VIOLA: The investment decision, as long as it's informed, and the risks are transparent and the outcomes are described and reasonable, then it's their money, they can do what they want.

And -- but the issue is are they taking into account fully all the risks that need to be taken

into account, yes.

MR. STEVE SCARFONE: Kristen, could you, please, pull up investments Appendix 12, please.

(BRIEF PAUSE)

MR. STEVE SCARFONE: This, Mr. Viola, is -- is the ALM study that Mercer prepared.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: If we can turn to page 16, please. And scroll down. I'm looking for the projected cash flow chart to -- keep going, it might be the other 16. I see two 16s there, or two (2) numbers. Yes, that's the one. Thank you.

So, Mr. Viola, as I understand the matching that occurs in a study like this, there -- the Mercer group is trying to match MPIC's obligations to the assets that it purchases in its portfolio.

Is that too simple an explanation?

MR. VALTER VIOLA: No, that's --

MR. STEVE SCARFONE: That's fair? And so we see here that MPIC, and again, this is it's -- you'll see in the preamble above the -- above the chart that it's for claim payment. So this is the Basic claims portfolio.

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: That -- the liabilities are heavily front end -- or heavy in the front end. Do you see that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Three hundred million. And they decrease quite dramatically after the first bar, before increasing again at the very end outside about forty (40) years from now.

Do you see that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And are you familiar, Mr. Viola, with the obligations that the Basic claims liability portfolio has?

MR. VALTER VIOLA: I have a basic understanding of the Basic liabilities, yes.

MR. STEVE SCARFONE: Okay. You're aware that at the front end at least some of the liabilities would include, you know, replacing cars, fixing cars that are in accidents?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: And also repairing the occupants of the people in those cars when they're in an accident on the injury side, correct?

MR. VALTER VIOLA: Sure. High level. I'm not -- again, my background isn't in insurance, but I understand the nature of the liabilities.

MR. STEVE SCARFONE: Yes. And so would you have any reason to disagree with me that the long-term liabilities out there in 2057 are only injury benefits.

MR. VALTER VIOLA: I can't -- I can't, I'm not an expert in the liability side, I just rely on what has been -- but I understand what the nature of those is, yes. It's not fixing cars.

MR. STEVE SCARFONE: Okay, no. Not fixing a car in 2057 for an accident in 2010.

MR. VALTER VIOLA: Now, it's unfortunate, it's another incident.

MR. STEVE SCARFONE: And so when -- when the matching exercise is undertaken, that particular obligation out there in 2057, could only be met, as I understand it, with the purchase of a bond that is in excess of thirty (30) years. Is that fair?

MR. VALTER VIOLA: Yes, ideally that's the perfect hedge, but you never get that, right. Tough to do.

MR. STEVE SCARFONE: And -- and so as we move along back towards today, you would need mid-

term bonds and short-term bonds to cover those other obligations. Is that fair?

MR. VALTER VIOLA: You need a portfolio of bonds and whether it's the principal amount or the coupon to match whatever you're trying to match in the case of the liabilities.

So it's a portfolio of bonds, they get cash flows from two (2) sources, the redemption of the principal, plus the coupons, yes.

MR. STEVE SCARFONE: Plus the coupons. And so a real return bond, if held to maturity, wouldn't necessarily address the liabilities in the first ten (10) years, is that -- is that true?

MR. VALTER VIOLA: Well, you're just -- you're differentiating between a real and a nominal bond. Could you not make the same argument about nominal bonds?

MR. STEVE SCARFONE: You could, but -- but the real return bond --

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: -- if held to maturity, because as I understand --

MR. VALTER VIOLA: Fourteen (14) of them so.

MR. STEVE SCARFONE: Right.

MR. VALTER VIOLA: Some of them mature sooner, the furthest one out matures in thirty (30) years.

MR. STEVE SCARFONE: Thirty (30) years and --

MR. VALTER VIOLA: The average is twenty-five (25) years.

MR. STEVE SCARFONE: Twenty-five (25) years.

MR. VALTER VIOLA: And the duration is fifteen (15).

MR. STEVE SCARFONE: And the shortest duration, as I understand it, is ten (10). Is that correct?

MR. VALTER VIOLA: You may -- I have it on file, I could check, but I don't dispute it.

MR. STEVE SCARFONE: So to the extent that some event occurred that would require MPIC to have available cash flow for something under ten (10) years, the real return bond is of no value to the Corporation, is that --

MR. VALTER VIOLA: I wouldn't say that. Well, first of all, you're assuming 100 percent -- you're assuming the real return bond would hedge 100 percent of the risk, which it wouldn't.

Rephrase your question, sorry, I want to answer it properly.

MR. STEVE SCARFONE: Well, I'm -- I'm looking at the cash flows here.

MR. VALTER VIOLA: Right.

MR. STEVE SCARFONE: And we see that they're heavily weighted to the -- to the present, you agree with that?

MR. VALTER VIOLA: Yes.

MR. STEVE SCARFONE: Yes. And so the purchase of a bond that doesn't mature for thirty-five (35) years of -- is of no real assistance in dealing with most of the liabilities.

MR. VALTER VIOLA: Well, that's not true. You can always sell a bond.

MR. STEVE SCARFONE: And strip it down?

MR. VALTER VIOLA: Well, no, not strip it. Sell it. You could have a hundred -- hundred dollars and if you need twenty (20) to pay some bills, you sell it.

So it doesn't mean you have to buy and hold it forever, you can hedge your risk by having a pool of capital, bonds in this case. And if you need the cash flow you simply turn the portfolio over and

the transaction costs are what they are.

MR. STEVE SCARFONE: It could be a capital loss though, in that situation -- it could be a capital loss of interest --

MR. VALTER VIOLA: It could be a capital gain as well, but it's a transaction costs. Transaction costs today are -- are insignificant. I mean, they're not insignificant, but you don't want to turn it over every day.

And this is not to say that you -- I'll --

MR. STEVE SCARFONE: Leave it at that.

MR. VALTER VIOLA: I'm trying to avoid the extreme of going from no hedging to 100 percent hedging. There's always something in-between. So I'm being careful about how -- any conclusions that are drawn from extreme scenarios of fully hedging or not hedging with different kinds of instruments and sometimes there's a balance.

I think I alluded to that in the duration policy issue, I said that, you know, the duration policy issue is that you're matching nominal -- using nominal assets to hedge real liabilities and there may be a simple approach that is duration-based, not cash flow matched, that uses real return bonds on

the asset side to hedge those really bad outcomes unfortunate that aren't fixing cars in 20-whatever, and that probably have inflation risk and maybe using the other nominal bonds that aren't as good a goalie to manage some of the shorter horizon ones that have maturities of one (1) year where the predictability is low, volatility is low and inflation and nominal bonds are fine. You don't need real return bonds for next year, you need them for beyond ten (10).

MR. STEVE SCARFONE: Just give me one (1) moment, Mr. Chair, and Mr. Viola, thank you for your patience.

(BRIEF PAUSE)

MR. STEVE SCARFONE: Mr. Viola, thank you. Those are my questions for cross-examination.

MR. VALTER VIOLA: Thank you. You're welcome.

THE CHAIRPERSON: Thank you. I've just spoken to counsel for the Board and their cross-examination's going to take longer than a half an hour.

So we're going to adjourn until 9:00 a.m. tomorrow morning, where we will conclude their --

we will conclude cross-examination, if CAC has further questions and re-examination, then we're going to move into the CSI, and then we'll move into closing argument tomorrow.

So we'll adjourn until nine o'clock tomorrow morning. Thank you.

--- Upon adjourning at 4:07 p.m.

Certified Correct,

--- Upon Commencing at 9:06 a.m.

THE CHAIRPERSON: Good morning, everyone. Ms. McCandless, would you like to take us through today.

MS. KATHLEEN MCCANDLESS: Yes, good morning. Thank you, Mr. Chair and members of the panel.

This morning we're going to complete the cross-examination of Mr. Viola and Mr. Watchmen will be conducting the cross-examination on behalf of the Board.

We will then move into a CSI portion of Mr. Viola's evidence followed by closing submissions. So, I will proceed with my closing submission before lunch. We will break for lunch and then at around one o'clock MPI will return to give their closing submission. Thank you.

THE CHAIRPERSON: Thank you. Mr. Watchmen...?

MR. ROBERT WATCHMAN: Thank you, Mr. Chair.

RESUMED:

CAC WITNESS PANEL 2

VALTER VIOLA, Affirm

CROSS-EXAMINATION BY MR. ROBERT WATCHMAN:

MR. ROBERT WATCHMAN: Good morning, Mr. Viola.

MR. VALTER VIOLA: Good morning.

MR. ROBERT WATCHMAN: Now, I just am going to go through a number of the exhibits and I'm going to refer primarily to the written materials that were filed earlier, namely, your report that was -- is entered as exhibits -- I'm going to refer to revert -- revis -- revision number 2, which is CAC Exhibit 11-2, and some of the Information Requests that you responded to.

But if there's any difference between those references, and anything that was provided in your presentation yesterday, feel free to refer to that as well.

I'm going to start Exhibit CAC-11-2 on page 6, where you set out an executive summary of your recommend -- of your eight (8) recommendations. And I want to start with the first recommendation concerning the real liability benchmark.

MR. VALTER VIOLA: Okay.

MR. ROBERT WATCHMAN: And your

recommendation is for re -- to re-examine the reliance on the nominal liability benchmark rather than a real liability benchmark, given the understatement of the long-term risk of inflation and changing real interest rates that are inherent in the Basic and pension liabilities.

Correct?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And I want to focus on the issue of inflation, long-term inflation, and in particular, the distinction that has been made in these proceedings concerning the expected level of inflation over the outlook period and inflation volatility.

MR. VALTER VIOLA: Okay.

MR. ROBERT WATCHMAN: And it's my understanding that if we look at -- actually Slide 12 of your presentation yesterday, Exhibit 28 -- sorry, CAC-28, and this is where you noted the distinction between the expected level of inflation and volatility of inflation, correct?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And I take it your view is that MPI is exposed to inflation vol -- volatility risk, is that correct?

MR. VALTER VIOLA: Correct.

MR. ROBERT WATCHMAN: And that the proposed Basic and pension portfolios provide little or no protection from inflation volatility?

MR. VALTER VIOLA: That's correct.

MR. ROBERT WATCHMAN: And effectively what MPI has assumed, and Mercer used in its modelling, is effectively 0 percent inflation volatility over the outlook period?

MR. VALTER VIOLA: If I could just clarify that. It's -- I found it a little confusing the way they wrote it because when you look at the Mercer capital market assumptions -- I'm not sure if it's easy to pull that up anywhere -- but they specifically put inflation assumptions in a box up in the right -- in the middle panel and what they say is inflation is assumed to be 2 percent.

MR. ROBERT WATCHMAN: Yes.

MR. VALTER VIOLA: And in both the nominal liability benchmark portfolio and the real liability benchmark portfolio, when they actually do the modelling, I think the inflation assumption is that they have -- I'm assuming this is the case -- that they have a 2 percent inflation assumption embedded in all of the returns, including equities, et

cetera.

So under both situations where they're measuring -- you're quantifying the efficient frontiers, it is my understanding that both scenarios have a 2 percent level in that, and that the capital market assumptions underlying them reflect it all. The difference in the analysis or the outcomes is reflected in the fact that the definition of the liability benchmark portfolios, that characterize the liabilities, are significantly different.

So that -- so the frontiers that get printed off under the real versus the nominal are very different because they're measuring risk relative to something in the one (1) case that assumes that nominal bonds rep -- describe the liabilities accurate accurately, whereas the other one includes real return bonds that capture this inflation sensitivity that's embedded in the return profile of all assets.

So just to clarify, so.

MR. ROBERT WATCHMAN: Okay and -- and without getting too far ahead of myself is -- is that what's referred to as basis risk?

MR. VALTER VIOLA: Yes. So the -- so, yes. So the 4.5 percent that Mercer quantified as the basis risk represents, in my opinion, the

mismeasurement of the total risk that is being managed by the fund as measured under the scenario that they do versus the scenario that I believe is a more appropriate one in that Mercer offered as one (1) alternative to them as a suggestion of how to measure risk. That's my understanding, yes.

MR. ROBERT WATCHMAN: Okay. Again, I'm going to come back to that in just a minute, because in their rebuttal evidence and this is now MPI Exhibit 19 -- sorry, apparently that -- that is actually Exhibit 20. Thank you.

Starting at page 20. And if we scroll down to the bottom of the page, under the section -- right to the bottom, under the section 4.1, the difference between a nominal liability benchmark and a real liability benchmark.

And you will see the submissions that the MPI provided, and at line 16 to 18, it's stated:

> "A nominal liability benchmark assumes a 2 percent inflation rate that is static throughout the modelling exercise, that is, it assumes no variability in inflation over time."

And is "inflation variability" the same

thing as in -- in inflation volatility?

MR. VALTER VIOLA: Yes. But when I read that I -- I believe that's not a correct -- that's MPI's language. And I -- let me read it again. But that's where I was confused, because that's the first time I interpreted the analysis differently. So I believe -- I believe this is MPI's written interpretation which I don't believe is accurate compared to what Mercer actually did. So let me read it again.

And that's what I just -- those -- the language that I just described in my prior response that was addressing specifically this.

It's my understanding that if I were to rewrite that, I would suggest that the nominal liability benchmark -- I would say instead of describing the inflation behaviour that's in it, I would say the liability benchmark has no real assets in it.

And that the real liability benchmark has some -- a significant component of real asset, 66 percent in the Basic liability benchmark portfolio and 81 percent for pension. So I don't believe those three (3) statements are accurate. But again, I think you should get MPI and Mercer to clarify.

MR. ROBERT WATCHMAN: Thank you.

MR. VALTER VIOLA: Because there is a statement by Mercer that contradicts that -- that statement about the zero -- no variability inflation rate because I think somewhere they do state -- they clarify that. I found it confusing when I read it. I wasn't sure which one was right.

MR. ROBERT WATCHMAN: Okay, thank you for that explanation. If we can turn the page and at lines 3 and 4 it provides:

> "The degree to which inflation is expected to vary, matters in the selection of a liability benchmark and is the core issue from MPI's perspective."

I take it you would agree with that?

MR. VALTER VIOLA: I would agree with that.

MR. ROBERT WATCHMAN: And then it carries on:

"Based on MPI's review of inflation forecasts from the chart -- Canadian chartered banks, Mercer, the Bank of Canada and breakeven inflation rates currently implied by real return bonds,

all data indicates that inflation will be approximately 2 percent over the outlook period."

MR. VALTER VIOLA: Yeah, and just to be clear that 2 percent refers to the level, not the volatility.

MR. ROBERT WATCHMAN: Correct.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Mr. -- Mr. Chair, and excuse me, Mr. Watchman. I -- Mr. Viola may be looking for a -- a response from Mercers that I just want to stand down for second to see if that's the proper response if...

THE CHAIRPERSON: Certainly.

DR. BYRON WILLIAMS: I'm sorry, Mr. Watchman.

(BRIEF PAUSE)

MR. VALTER VIOLA: If I could have a look at MPI Exhibit 38, please? Thank you.

(BRIEF PAUSE)

MR. VALTER VIOLA: Yeah, so it's the very bottom of the page, please.

So, I'll read -- I'll read the sentence. It says:

> "The inflation volatility assumption of 2.6 percent is implicitly related to the capital market volatility assumptions outlined in Appendix 17, Attachment C, page 18 for each asset class. The inflation volatility assumption was not explicitly used in our modeling."

And just, if I so -- that last sentence contradicts the -- the statement that we referred to earlier. I would make a point -- anyways, we'll leave it at that. Thank you.

CONTINUED BY MR. ROBERT WATCHMAN:

MR. ROBERT WATCHMAN: If we just scroll down the page a bit wh -- a little bit, too -- too much on page 21, see that Section 4.2 is titled MPI Chose to Accept the Threat of Inflation Volatility with good reason.

And from there on continuing for -- over the next couple of pages you will see that they

provide the rationale for what is described as the inflation volatility threat.

And I want to go to page 23, lines 7 and 8 and again, they say:

> "All evidence points to the view that inflation will return to approximately 2 percent whether one looks at the markets, the Bank of Canada or the Canadian chartered banks."

And so again, I take it your position is th -- that's the level but not the volatility.

MR. VALTER VIOLA: Correct.

(BRIEF PAUSE)

MR. ROBERT WATCHMAN: And if we scroll down a little bit to lines 13 to 19 and the last portion of that -- that paragraph reads...

(BRIEF PAUSE)

MR. VALTER VIOLA: Sorry, the las -- line 20.

MR. ROBERT WATCHMAN: Correct, yes.

I'm going down to line 20. I'm just -- I was going to paraphrase, and -- and their position is that their assumption with respect to the nominal liability benchmark is very reason -- is a very reasonable approach, particularly given the fact that the breakeven inflation rate implied by real return bond prices as of August 2018 was approximately 1.75 percent.

Do you agree with that statement?

MR. VALTER VIOLA: Well, I don't agree with -- I agree with perhaps -- well, I don't disagree with it except for the conclusion. Sorry, it's a -- let me just read it. It -- it indicates that the modeling approach is based on the nominal liability benchmark is a very reasonable approach, particularly given the fact that the breakeven inflation rate...

Well, again, I think it's inconsistent as far as my understanding of the way they calculate the breakeven inflation rate.

If 2 percent is the average expected level of inflation and the breakeven inflation rate was -- is below that, it means that if the bank hits its target and inflation turns out to be 10 -- 2 percent, real return bonds look like a good deal because they're beating the 1.75 that makes them

breakeven. Anything north of 1.75, according to this, would suggest real return bonds look cheap.

MR. ROBERT WATCHMAN: And --

MR. VALTER VIOLA: Relative to nominal bonds.

MR. ROBERT WATCHMAN: And is that difference the -- between the 2 percent level expected and the 1.75 being the breakeven inflation rate, does that represent volatility?

MR. VALTER VIOLA: The -- any difference between a -- a mean and average is volatility, yes. The true measure of volatility is a little more complicated, but it's referring to the variance of the outcomes, yes.

MR. ROBERT WATCHMAN: And -- and while --

MR. VALTER VIOLA: If I could just make a point. This is a quarter percentage difference. The Bank of Canada saying at 2 percent average.

MR. ROBERT WATCHMAN: Yes.

MR. VALTER VIOLA: Within a range of 1 to 3, that range of 2 percent -- around 2 percent may seem like not a lot and I think I've minimized how small it might be in passing, but it's a big number

because of the implications of the change of real rates, given the duration formula.

Because we're talking about long horizon liabilities in the case of Basic pension portfolios with an average duration of ten (10), meaning half the cash was roughly -- are beyond a decade.

A 1 percent change of inflation be -- on average from 2 percent level to up to three (3) would otherwi -- other things equal cause nominal interest rates, bonds, to do poorly because nominal interest rates would go up, other things equal by 1 percent and have a 10 percent decline impact on the bond portfolio which is matched to the ten-year duration.

In the case of the pension, it's worse. It's a 16 percent adverse outcome, but it doesn't have 100 percent dedicated to bonds. So it's less -- it's a bigger impact percentage-wise, but it's got less of a portfolio and fixed income.

So I didn't want to minimize the fact that, you know, it sounds like these are small numbers, but over a long horizon they are big numbers.

One (1) of the other things I noted in -- in the writing here was over the horizon. The

horizon, as I understand it, is fairly short given the ten (10) year and sixteen (16) year duration time horizons that we're talking about on the liability side, these numbers have a bigger impact.

So again, getting to the point of predictability of interest rates, these are estimates and they are -- they have a leverage effect because the liabilities are leveraged.

MR. ROBERT WATCHMAN: And would it be correct to say that the volatility that we're concerned about is only volatility in which the actual rate of inflation is greater than 2 percent?

MR. VALTER VIOLA: It -- it's greater than what's expected -- is -- as priced in fixed income markets, but I think to the extent that the breakeven inflation is 1.75 or the Bank of Canada is 2, yeah, it's anything higher than those things realized.

MR. ROBERT WATCHMAN: Yes and then the -- sorry, the distinction I was trying to make was that so if -- if the volatility is that inflation is less than 2 percent that actually --

MR. VALTER VIOLA: Level or volatility?

MR. ROBERT WATCHMAN: Sorry, yes, so

that -- that the -- well, the volatility that's created --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: -- is in -- actual inter -- inflation being less than 2 percent.

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: Does that not benefit the proposed portfolios for Basic and pension?

MR. VALTER VIOLA: Yes. If inflation turns out to be lower than what's expected, let's say it's 1.5 percent, then, and that's a good scenario because we're expecting it to be worse. It turns out to be better and so bonds will do better than -- than expected, nominal bonds, yeah.

MR. ROBERT WATCHMAN: And just so I'm clear, so -- so volatility that's, if I can describe it as negative --

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: -- is -- is not a concern?

MR. VALTER VIOLA: Correct, yeah.

MR. ROBERT WATCHMAN: It's only volatility that's a positive --

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: -- in terms of

inflation.

MR. VALTER VIOLA: Right. Inflation higher than the average is -- yes.

MR. ROBERT WATCHMAN: Now, you were asked some questions IRs so I'm going to turn to MPI Exhibit 18, which were the MPI Information Requests and responses and I'm going to turn to page 25. This is MPI-CAC-1-11.

And you were asked some questions with respect to part (a) and I just have a couple of questions with respect to your response to part (b). It was on page 26.

And your response was that:

> "My comment about the understatement of the long-term interest risk of inflation and changing real interest rates that are inherent in the Basic and Pension liabilities, related specifically to MPI's determination of the constituents of the Basic and Pension liability benchmark portfolios. As such, there is no industry or academic article that I am aware of that addresses my claim about basis risk."

And so I wanted to come back to that concept of "basis risk". And in particular basis risk from the perspective of inflation. And so if we could just turn back in that same exhibit to CAC -- sorry, MPI-CAC-1-8. It's on page 17.

Now, this relates to lengthening the nominal duration but I want to just put that on the back burner for now and I wanted to focus on the question of inflation.

And if we could turn to the next page and your response to re-examining lengthening nominal bond duration. You indicate what basis risk is. It say:

> "Unless the basis, normal versus real, are the same for assets and liabilities there is a basis risk from using one (1) type of nominal asset to hedge real interest rate risk and inflation risk in the liabilities."

And you provide an example and can you just flesh that out for us and -- and again, with respect to the concern about inflation risk.

MR. VALTER VIOLA: Sure. Could we just scroll up a little bit so I can see it. So the

four (4) examples of the top. Thank you. Let me just take a minute to read it, please.

(BRIEF PAUSE)

MR. VALTER VIOLA: Yeah and, in fact, this is the scenario that we'll talk about later. So essentially -- so the basis risk arises -- if you look at the -- in various parts of my presentation I've described the difference between the composition of the liability benchmark portfolios.

So the one (1) that was used in the GRA and the AL, asset liability study, assumed a nominal liability benchmark that consisted 100 percent of nominal fixed income assets with a duration of ten (10) years in the case of the Basic, sixteen (16) years in the case of the pension liability.

On the other hand, on the heels of the two (2) questions that we asked, Mercer developed an analysis that reflected a different liability benchmark folio that was based on -- that included a significant component of real return bonds.

In the case of the Basic pension liability the real return bond component as a proxy for the liabilities represented 66 percent or two

thirds (2/3s) of -- of the liability characteristic.

In the case of pension, given the longer duration of sixteen (16) versus ten (10) in the case of Basic, the composition of the liability benchmark portfolio had 81 percent real return bonds.

So those are very two (2) different benchmark portfolios. If you a -- if you said, okay, Mercer go out and draw us a similar curve, assets and liabilities -- not asset and liability, but relative to those two (2) benchmark portfolios and say, what would the return on risk look like? The quick answer is, there is a basis risk or a measurement risk called tracking error in the industry that is 4.5 percent, which says that -- that's a volatility number. So statistically, it means that two thirds (2/3s) of the time -- well, I won't get into the statistics. It's a big number. It's a big mismeasurement number.

And given -- given the long horizon we're talking about, even small differ -- differences and this is not a small one, will have a big long-term impact, given the fact that we're looking out decades, not three (3), four (4), five (5) years.

So, in that case, given certain scenarios, if inflation turns out to be higher than average, what will happen -- we'll talk about what

happens to T-bills, treasury bills, which have a short duration, real return bonds and nominal bonds.

So if inflation turns out to be not 2 percent but 3 percent, on average. So that's different, it's more volatile -- not more volatile but it's higher than expected. That 1 percent difference would -- other things equal cause nominal interest rates to rise by 1 percent and nominal bonds to fall by 10 percent in the case of Basic because that's what the portfolio looks like.

And -- and 16 percent in the case of -- sorry, I shouldn't say that. I'm assuming the -- the pension portfolio is -- has -- has a duration matching policy as well, but let's just focus on Basic.

So nominal bonds in the Basic portfolio would do poorly in that environment because bonds will -- bonds will go down and there's -- they're a hundred percent of the portfolio.

If, on the other hand, real return bonds were in that portfolio, they would maintain purchasing power. By definition, real return bonds hedge 100 percent of the inflation risk over all time horizons that the bond is outstanding. So, when you buy a real return bond worth a hundred dollars, if inflation turns out to be 3 percent, it's as if you

bought a bond worth 103 and the coupon that you agreed to receive would apply to the hundred and three next year, et cetera. So the principal component gets indexed to inflation.

So, real return -- return bonds will do well for two (2) reasons. One (1), they're protected against inflation risk so they'll get a higher coupon because it's applying to a higher principal index based to inflation.

And, secondly, investors may wake up and say aha, instead of expecting 2 percent now inflation's 3 percent, and therefore, maybe it's time to buy more real return bonds because I think maybe the inflation will be higher. So they would otherwise bid up real return bonds, yields will fall, and that's where the -- that volatility equation of the inflation risk, where inflation -- not inflation risk, but interest rate risk depends on the volatilities between inflation and real rate bonds.

So when inflation volatility's higher than normal, it's gone up to 3 from 2, it is the case probably that real yields will fall. So hopefully that elaborates enough.

MR. ROBERT WATCHMAN: Thank you.

MR. VALTER VIOLA: You're welcome.

MR. ROBERT WATCHMAN: Now, I just -- I just wanted to go back to the MPI rebuttal evidence, which is MPI Exhibit 20 and page 24, the bottom half of that page, at 4.2.3.

And the subject there is the cost of inflation variability is low. And you will see in the second sentence of the first paragraph, it states:

> "Given the Bank of Canada's inflation target range of 1 to 3 percent, it was assumed that a plausible worst-case scenario for inflation was sustained 3 percent inflation over a four (4) year forecast period."

You see that?

MR. VALTER VIOLA: I do.

MR. ROBERT WATCHMAN: I have a couple questions and -- and first of all, I guess the question is whether you would consider that to be a plausible worst-case scenario?

MR. VALTER VIOLA: Worst-case is by definition worst, so, I would not say that's a worst-case. Having said that, they're saying "sustained 3 percent," and it's only looking four (4) years. So it's saying, at worst, it will be 3 percent, 3

percent, 3 percent, 3 percent. I can think of worse. And in fact -- well, we just had an experience in August that was touching on that. So it's not the worst. It's plausible and it could be a lot worse. And the time horizon is really short.

So even if it is the worst one, I'd worry about even a less severe change, but sustained over a longer period than four (4) years.

MR. ROBERT WATCHMAN: And -- but just looking at that example in --

MR. VALTER VIOLA: Yeah.

MR. ROBERT WATCHMAN: -- in terms of the vol -- inflation volatility that we're concerned about --

MR. VALTER VIOLA: Yep.

MR. ROBERT WATCHMAN: -- so that -- that positive volatility from 2 percent to 3 percent, does that effectively represent 100 basis points?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And that's the volatility.

MR. VALTER VIOLA: Well, I just want to be careful. Volatility is a -- a statistical measure.

MR. ROBERT WATCHMAN: Yes, yes.

MR. VALTER VIOLA: But that's the change --

MR. ROBERT WATCHMAN: But that's the change that would be -- form part of the volatility?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And if I could ask you to refer to Slide 27 of your presentation, that's CAC Exhibit 28. Sorry, the next -- the next page 27 -- oh, sorry, Slide 27. The next page. Thank you.

And so if we could just -- so under Consumer Price Index is this where we would look for inflation volatility?

MR. VALTER VIOLA: Yes. If you look at -- yes.

MR. ROBERT WATCHMAN: And so if we compare that 1 percent to the volatility, especially that that's highlighted in yellow under the column Consumer Price Index, we'll see that it's -- 1 percent is greater than the volatility expressed -- or highlighted in yellow under each of the five (5) years, ten (10) years, fifteen (15) years, and twenty-five (25) years, with the one (1) exception being under five (5) year 1998 to 2002.

MR. VALTER VIOLA: And we're going to

have to be careful, here. That's why I was clarifying my understanding of your use of the term "volatility."

So standard deviation -- this table shows standard deviation, which is the same as volatility. So we can use the word "volatility." So that first column, Consumer in -- Price Index, yes, so if we looked at the very bottom yellow, for example, that's highlighted where it says 0.8 percent, for example?

MR. ROBERT WATCHMAN: Yes.

MR. VALTER VIOLA: So that 0.8 percent is a volatility measure, which says if the average were -- let's say the Bank of Canada -- let's say this -- I don't have the average here. This is just volatility. So let's say the -- the Bank of Canada 2 percent level is the average.

If that were the average that was consistent with this .8 percent volatility, what that would say is, think of a bell curve. The average is 2 percent inflation and two-thirds (2/3) of the time, the inflation, if this were to repeat itself, would say that the inflation would be 2 percent plus or minus .8 percent, two thirds (2/3s) of the time.

So it will go from two (2), to two point eight (2.8), to one point two (1.2). So that

point eight (.8) is almost -- is in this period of, in this case, the last twenty-five (25) years is -- is consistent with, say, the Bank of Canada's range in that context. So the 1 percent change is not slight -- is not exactly comparable to this.

MR. ROBERT WATCHMAN: But very close?

MR. VALTER VIOLA: It's bigger than a -- a 1 percent change on 2 percent level is bigger than a -- a point eight (.8) standard deviation. So it's -- sorry. That's -- it's --

MR. ROBERT WATCHMAN: It's very confusing, I know.

MR. VALTER VIOLA: It's confusing for me I have to say, that's why we like math.

MR. ROBERT WATCHMAN: Which is why we have to ask you the questions.

MR. VALTER VIOLA: That's okay.

MR. ROBERT WATCHMAN: If I could turn now to the application itself, the DCAT page 68, and you recall that Mr. Scarfone asked you questions about this page yesterday. Do you recall that?

MR. VALTER VIOLA: I do.

MR. ROBERT WATCHMAN: And -- and so he was referring in DCAT 66 -- sorry, figure DCAT 66, he was referring to the mean for the period set out there

for 1915 through 1991, and then again, 1992 --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: -- and 2017, and pointed out that the mean was 1.8 percent?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: But in terms of volatility, I take it what we should be looking at is that standard deviation column?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And so the standard deviation, or inflation volatility, between 1915 and 1991 --

MR. VALTER VIOLA: Yeah.

MR. ROBERT WATCHMAN: -- was 5.4 percent?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And for 1992 to 19 -- to 2017, .7 percent --

MR. VALTER VIOLA: Right. Yes.

MR. ROBERT WATCHMAN: -- or seventy (70) basis points?

MR. VALTER VIOLA: Yeah.

MR. ROBERT WATCHMAN: All right. Getting away from inflation for the moment, I just wanted to turn back to your recommendations at CAC

Exhibit 11-2, on page 6. And the next recommendation that I was looking at is number 4, lengthening of the nominal duration.

MR. VALTER VIOLA: Yes. Yeah.

MR. ROBERT WATCHMAN: Do you see that? And your recommendation is to re-examine the decision to lengthen the nominal duration in the Basic portfolio, given MPI's defensive lower risk strategy, Mercer's return assumption for bonds and RRBs, and concerns about the effectiveness of the duration policy noted above. And then you put in brackets, "(basis risk)."

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: So we're back to basis risk again.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And I had directed you to MPI -- the Information Request -- MPI/CAC-1-8, which is found at page 17 of that exhibit, and your response on the second page to (b).

And I -- I asked you to go through that basis risk, specifically with reference to inflation. Is there anything to add to what you've explained already flowing from the lengthening of the nominal bond duration?

MR. VALTER VIOLA: Yes. So -- so let me take a step back. I don't want to be repetitive. Can you just rephrase the last part so I'm hitting your question directly again, please?

MR. ROBERT WATCHMAN: Yeah.

MR. VALTER VIOLA: Yeah.

MR. ROBERT WATCHMAN: So I -- because I had asked you to --

MR. VALTER VIOLA: Yeah.

MR. ROBERT WATCHMAN: -- and the last time we re-looked at --

MR. VALTER VIOLA: Yeah.

MR. ROBERT WATCHMAN: -- basis risk, I asked you to focus on the issue of inflation --

MR. VALTER VIOLA: Right. Okay. Got it.

MR. ROBERT WATCHMAN: -- so now I'm asking if there's anything --

MR. VALTER VIOLA: Perfect. Okay. So let's -- I may ask to pull up one (1) of the slides, if you don't mind, from the other day --

MR. ROBERT WATCHMAN: No, of course.

MR. VALTER VIOLA: -- yesterday. It's the one that shows -- slide 25, please.

MR. ROBERT WATCHMAN: And that -- for

the record, that's Exhibit CAC-28.

MR. VALTER VIOLA: So in this slide, it -- it's to the point of the focus of concern. So again, we -- I believe strongly that changes in real interest rates, which we're about to talk about, and chain -- and unexpected inflation, both are very long horizon risks to worry about that are captured in the nominal liability benchmark portfolio.

And I said in this slide here, the -- the failure to focus on those two (2) risks is like focusing in a stock portfolio on concerns about the dividend yield on a stock.

Dividend yield on a stock is 1 or 3 percent, but it's not very volatile. It's always going to be in that range, because dividend policies tend to be predictable, stable, and when you divide dividends by price, it's a -- it's a reasonably stable number.

What you worry about when you buy stocks is the fact that stocks go up and down every day, and that's the volatility component. So that's the left side of the bottom panel here in the dividend discount model.

And -- and what I said was in the context of the Fisher equation, interest rate risk

management, changes in real yields above it are very important because of the long duration that we're talking about, ten (10) years in the case of Basic, sixteen (16) years in the case of pension.

So when we go back to your question, maybe you could flip back to it, the fact that we've got a longer duration fixed income portfolio that's all nominal gives me concerns, because if either inflation turns out to be higher than expected, or -- or real yields don't behave the same way as nominal ones, nominal bonds may do very poorly in that environment. Does that ans -- does that --

MR. ROBERT WATCHMAN: Yes.

MR. VALTER VIOLA: -- address the question, sir?

MR. ROBERT WATCHMAN: Thank you. I'm now going to go to the next recommendation that I want to ask questions about. And again, if we look at Exhibit CAC-11-2, page 6, and going down to Recommendation Number 7, fixed income risk concentration. Do you see that?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And your recommendation in that regard was to re-examine the decision to concentrate risk in fixed income rather

than better diversify the sources of risk across the whole portfolio and avoid crowding out risk-reducing real return bonds, correct?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And now I'll -- PUB provided or asked some -- provided some Information Requests concerning that. And if we could turn to PUB Exhibit 16, PUB/CAC-1-4.

And you were asked to explain how MPI -- you believe MPI should design its portfolio for Basic to diversify the sources of risk across -- across the board -- the whole portfolio.

And if we turn the page, about halfway down and just above that graph, you state:

> "In other words, the attractiveness of any asset class should be assessed not in isolation but in the context of the other assets that are in the portfolio or contemplate -- contemplated to be in the portfolio."

And I take it that's -- that's the sort of crux of your position?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And I won't ask

you to explain the -- the graph, but we understand that that's how the efficient frontier is determined.

And if I turn to the next page, the second paragraph there, MPI has stated that it has low tolerance for risk in the Basic portfolio, and therefore, MPI has decided to allocate 100 percent to fixed income in that portfolio. I would argue that the decision to impose a constraint, 0 percent to other asset classes as a cost, i.e., lower risk-adjusted returns.

And so we -- when we heard you speak yesterday about constraint, this is what you were referring to?

MR. VALTER VIOLA: This is one (1) example of it, yes.

MR. ROBERT WATCHMAN: Now if we could just turn two (2) pages, and there's a table there. Can you just advise us who -- who created this table?

MR. VALTER VIOLA: I created the table based on data from the GRA or one (1) of the Information Requests. It -- and it's from the Mercer study. So either the two (2) responses that came from our request for information, or the GRA.

MR. ROBERT WATCHMAN: And so -- so just to be clear, this --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: -- this -- this doesn't represent your recommendation --

MR. VALTER VIOLA: No, the --

MR. ROBERT WATCHMAN: -- this is what you gleaned from the information --

MR. VALTER VIOLA: Correct. Right.

MR. ROBERT WATCHMAN: -- provided?

MR. VALTER VIOLA: So the current is my -- is the current portfolio as defined by Mercer by the letter 'C'. 'B' is one (1) scenario in the -- in the real analysis, so my -- in response to my two (2) questions, 85, is it, 'G', I think. And the proposed is what actually MPI proposes, not me, in the final columns, the difference between the proposed and the one (1) with the same risk.

MR. ROBERT WATCHMAN: And now -- and to the left of the table, the second paragraph there says:

> "In other words, the sources of risk in the current and MPI proposed portfolios -- portfolios have concentrated risk in inflation and credit."

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: Can you show where that --

MR. VALTER VIOLA: Okay. So that's -- let's look at the -- the proposed. The proposed has -- so that's the (P) column, second to the -- it's the (P) column. It says it has 20 percent allocation to corporate bonds, and 80 percent to provincial. So the whole portfolio is fixed-income, a hundred percent, and the corporate bond portfolio as distinct from, say, a federal bond portfolio, means that there's credit risk.

Corporate bonds are issued by corporations, and they're more likely to default on the -- their ability to pay than a Government of Canada or provincial, and therefore, those -- anyways, that's a fact. And provincial bonds also have a small credit risk relative to less risky federal bonds.

That's in the proposed portfolio. And because they're both nominal bonds, in other words, there's no federal RRBs in there -- in that proposal, there's a zero allocation to real return bonds -- everything else has inflation risk. T-bills don't, but there's no allocation to that, either.

MR. ROBERT WATCHMAN: Now, am I to understand that the asset class breakdown that would

best reduce concentrated risk would be the (B) column?

MR. VALTER VIOLA: Well, yes. So again -- well, sorry, let me make sure I answer your question correctly. Could you rephrase it again, please.

MR. ROBERT WATCHMAN: Yes, the concern expressed there that was that the MPI proposed portfolio, or current portfolio have concentrated risk and inflation and credit.

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: So, relative to those would be reduced that concentrate --

MR. VALTER VIOLA: Yes because you can see it's better diversified.

In other words, if you look at just the fixed income, the upper-half of the panel, it's only got 68 percent in bonds and it's -- it's better diversified.

Now, it takes other kinds of risk in that portfolio because it's got 23 1/2 percent in equities, so the -- the risk is spread out across asset classes, not just fixed income, and -- and this was a -- this was a difficult table to put together because I didn't have the numbers to fully populate it.

But the interesting -- anyways, we'll leave it at that. It's -- there's less concentration of risk in the B portfolio, but to be fair, the P, the proposed in the same risk portfolio are not strictly comparable because of the -- I don't have the numbers, but there's different return and volatility assumptions in those second -- the B and the P column.

MR. ROBERT WATCHMAN: And if --

MR. VALTER VIOLA: Mercer could quantify those effects, but...

MR. ROBERT WATCHMAN: And as it relates to your bucket analogy yesterday --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: -- about a top -- top down view would have --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: -- similar asset mix, different levels of water.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: Again, does B best represent what you were saying in terms of that bucket analogy?

MR. VALTER VIOLA: Yes, so B -- B I would say yes. B is reflective of that. So when Mercer does their asset liability study, they have a

minimum risk portfolio, that risk-free bucket, and it consists of, in the case of Basic, two-thirds (2/3s) real return bonds.

And now what we're questioning is how far along the efficient frontier does this B column go. It's not the least risky. It doesn't look like the minimum -- the liability benchmark portfolio, which is not shown here because it has some equities in it.

But it is basically saying -- and it's -- yes, is the quick answer. You're going along and you're moving the allocations of the size of the pails, but the mix should be roughly the same, yes.

MR. ROBERT WATCHMAN: Thank you.

MR. VALTER VIOLA: That's how models work.

MR. ROBERT WATCHMAN: Okay, thank you. And if we could turn to the next page, and this is in response to part B of that Information Request, and the question was: What level of RRBs and Basic -- or should be in Basic and pension portfolios.

And you defined risk and tolerance for risk. And at the bottom of the page you indicate the allocation to real return bonds based upon risk tolerance for each of the Basic and pension

portfolios.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And again, this is based on Mercer's analysis. This isn't necessarily your recommendation?

MR. VALTER VIOLA: Correct.

MR. ROBERT WATCHMAN: And I just want to clarify something here for the record. In your written responses and in your report, which is now CAC Exhibit 11 -- 11-2, you refer a number of times to MPI Exhibit 12.

And just to clarify, for the record, at the time that MPI Exhibit 12, which was the further analysis conducted by Mercer pursuant to Board Order 124/'18, that was -- it was anticipated that that would be Exhibit 12.

By the time the -- these hearings started, it was determined that the exhibit number had already been used and this exhibit is now Exhibit 15 in these proceedings.

So whenever we see a reference to Exhibit 12, MPI Exhibit 12 in your written materials, we now read that as MPI Exhibit 15, correct?

MR. VALTER VIOLA: That is correct. And so this just goes to the point of how hard it is

to forecast even just a couple of weeks.

MR. ROBERT WATCHMAN: Moving on then, I wanted to refer to again your CAC Exhibit 11-2, at this time, page 23, in which you -- you set out a bit of a scorecard there as to the response to your recommendations from two (2) years ago.

And if we look at the first block there, the last item number 10, minimum risk portfolio.

MR. VALTER VIOLA: Yes. Yes.

MR. ROBERT WATCHMAN: And -- and again, just for the record, minimum risk portfolio equates to liability benchmark portfolio as used in the application and in the Mercer study.

MR. VALTER VIOLA: That's correct.

MR. ROBERT WATCHMAN: And the indication there is that the minimum risk portfolio has only been partially addressed.

And if we turn the page we see there the -- your comment is, well, minimum risk portfolios were clearly defined for each segment, for example, Basic and pensions.

The final definitions used by MPI were based on nominal definitions rather than real ones, as discussed in part one. Accordingly, this issue is

only partially addressed.

And can I ask you: So was this not addressed in MPI Exhibit 15, the further analysis conducted by Mercer?

MR. VALTER VIOLA: It was, from an analytical point of view. But in terms of taking action on it, that's where the outstanding issue is.

MR. ROBERT WATCHMAN: Thank you. Now, again, PUB provided Information Requests with respect to the minimum risk portfolio, and we will find that question at PUB Exhibit 16, starting at page 5. And if we could just scroll down. Actually, to the top of the nest -- next page.

And the point that you made there, in bold, is that the minimum risk portfolio should include at least some long-duration real return bonds given the nature of MPI's liabilities, long-term and with some inflation exposures, correct?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And if we scroll down a little bit further, we see another table, so I'll ask you again where this table comes from.

MR. VALTER VIOLA: This comes from the GRA. So I simply extracted data that was provided by MPI or Mercer. And it was included as a preamble to

some of my questions.

MR. ROBERT WATCHMAN: And -- okay. So this is the table where, when we look at the left-hand part of the table, it's dealing with the Basic portfolio, or the --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: Yes. And this is where the reference to 66 percent real return bonds comes from?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And again, so that's not your recommendation, that's what you ---

MR. VALTER VIOLA: That's what Mercer said was the liability benchmark portfolio if you took inflation and real interest rate risk into account explicitly in their model.

MR. ROBERT WATCHMAN: And we -- when we look at the transition from nominal to real under Basic, we see that what is being given up in order to provide for more real return bonds and more treasury bills, is first the long-term provincial bonds, then the mid-term bonds and some but not all of the short-term bonds, correct?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: So -- and that's

the -- the -- does that correspond with your concern that those bonds don't guard against inflation risk?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And so similarly, when we look at the pension side of the table, that's where we -- we see under the real that's where the 81 percent real return bonds comes from.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And so again, that's not -- that's not your recommendation. That's what you determined from the Mercer analysis.

MR. VALTER VIOLA: Correct. And if I could just make one (1) elaborating point, if that's okay?

MR. ROBERT WATCHMAN: Yes.

MR. VALTER VIOLA: In the -- the first set of colour columns under "Basic", that difference -- that column of difference which sums to zero shows the difference in the market value exposure of the liability benchmark portfolio under the two (2) scenarios, and it is the source of that 4 1/2 percent basis risk.

If those columns summed to zero, they were all zero, there would be no basis risk because the first two (2) columns would be the same. There

would be no difference.

And this is -- perhaps it's probably visual, I think I said it verbally yesterday, but if you look at the far right column there's greater difference between the bottom two (2) panels, 81 and negative 1-17, and that's why I suggested that perhaps in the case of pension the basis risk might be higher than 4.5 percent, although Mercer didn't quantify it.

MR. ROBERT WATCHMAN: Thank you.

MR. VALTER VIOLA: You're welcome.

(BRIEF PAUSE)

MR. ROBERT WATCHMAN: I'm going to turn now to PUB -- PUB-CAC-1-6, beginning at page 17.

And here you were asked, with respect to the level of other inflation hedging assets, such as real estate and infrastructure, you believe should be maintained.

And you begin by -- your response by referring to certain information beliefs, if we go to page 18 and -- and if we go scroll down we see a belief number 3. And I believe these were reviewed yesterday, the additional risk -- taking additional risk beyond the minimum risk portfolio should be done

only if the expected additional returns justify doing so.

And secondly, below -- belief 4, the total portfolio. The additional risk to the to -- total portfolio is relevant to risk if considered beyond the minimum risk portfolio is taken.

And then you say:

> "Together, beliefs 3 and 4 imply that the attractiveness of any asset class should be assessed not in isolation, but in the context of the other assets that are in the portfolio or contemplated to be in the portfolio."

And that was, if I'm correct, was that sort of the definition of the efficient frontier?

MR. VALTER VIOLA: Yes, an efficient frontier always measures it this way. It always takes a total portfolio context and it makes those trade-offs that we will mathematically find difficult to -- to take into account because of the correlation effects.

MR. ROBERT WATCHMAN: And if we turn the page. So there is reference there specifically to real estate and infrastructure.

So is my understanding correct that what you're saying is that in addition to real return bonds, real estate and infrastructure investment can also provide a hedge against inflation risk?

MR. VALTER VIOLA: Yes. And you have to be careful because there are different types of real estate and infrastructure, for example. Some -- depending on the nature of the underlying, they provide more or less inflation protection, yes.

MR. ROBERT WATCHMAN: And if we could turn the page, please. And so now this is a table taken from the Mercer report, correct?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And we -- we refer to that as the asset mix? Yes?

MR. VALTER VIOLA: Yes. Yes.

MR. ROBERT WATCHMAN: And -- and if we scroll down to the bottom of that box, the conclusion underneath, from your analysis, or sorry, I shouldn't say that, your analysis of Mercer's analysis, if I can put it that way --

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: -- was that optimal allocation to real estate infrastructure would be something like 16 percent to 20 percent of the RRB

allocation for Basic.

Is that correct?

MR. VALTER VIOLA: Correct. And again, I can't be precise because if you think about the efficient frontier, that shows return risk trade-offs, it would be nice to have underneath that the table that shows the asset mix and how that allocation shifts. And what you don't see is things falling off a cliff and going randomly. Things are always smooth transitions.

And -- and that's why when I talk about the buckets and looking down, in the riskier bucket, what you're seeing is more allocations typically, basically looking into the bigger pail as you go from left to right in the risky bucket.

MR. ROBERT WATCHMAN: So now if we could turn the page, please, to page 21.

And now, this is the -- the same analysis done in respect of the pension portfolio?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And if we go to the next page, to the conclusion, my understanding is that your understanding of the Mercer analysis is that for the pension portfolio, real estate and -- and infrastructure investment should be about 6 percent to

8 1/2 percent of the real return bonds.

MR. VALTER VIOLA: Yes. And again, I'm sort of using a rough rule of thumb, but based on the numbers that I see in the tables.

MR. ROBERT WATCHMAN: Now, if I could -- I should have asked when we were looking at real return bonds and the analysis there was based upon what Mercer had determined.

Do you have any opinion as to what level of investment should be made for Basic portfolio and the pension portfolio in real return bonds?

MR. VALTER VIOLA: I -- I think we put up one (1) of the earlier IR requests. There was a table at the bottom with a bunch of bullet points, if we could pull that up again, it did provide a range because the answer would depend on tolerance for risk.

MR. ROBERT WATCHMAN: Yes, and I believe it was ---

MR. VALTER VIOLA: It was a question from the utilities -- Public Utilities Board. If you pull up the slide, I could just --

MR. ROBERT WATCHMAN: Yes, and I believe that would be PUB Exhibit 16, page 13.

MR. VALTER VIOLA: At the very bottom. There you go.

So in the case of Basic and -- would you like me to read it, and that might answer the question?

MR. ROBERT WATCHMAN: Yes, I just -- I guess what I want to do is draw the distinction between the Mercer analysis and what you --

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: -- would say would be the optimal --

MR. VALTER VIOLA: Right. And again, and -- and this does sort of answer it because a) I don't have the asset liability model in front of me. I have no reason to doubt that it was -- I mean, I'm sure it was done accurately reflecting all the assumptions.

What I don't know is what level of risk, tolerance for risk, along the bottom axis and the efficient frontier, where you want to go.

So I set a range here. So I'll say number B, for example, in B in the case of pension and E in the case of -- sorry.

The letter B, where it says 60 percent; that's the allocation if MPI, in the Basic portfolio, had zero tolerance for risk. They wanted to minimize it because that's the allocation of the liability

benchmark portfolio, by definition that's the least risky.

So if you want to -- if you have a very low, i.e., zero tolerance for risk in Basic and you used the real analysis that Mercer did, then you would put 60 percent in real return bonds.

And if you were in the pension fund and you said I want to take no risk, recognizing that inflation risk exists in real interest rate risk, you would have 81 percent.

Now, those are extremes, that says taking no risk. No risk being in aggregate, including -- well, minimum risk, let's call it minimum risk. That's why I defined it as minimum risk portfolio rather than zero risk.

If you were to move from left to right along that spectrum of risk from low tolerance to higher, the allocation would fall. So let's talk about Basic.

So instead of 66 percent in answer B, you would say, again, I'm just relying on the graphs that Mercer gave us because I don't have an asset liability model in front of me.

If you chose to keep the same risk as they defined it as (c), I believe, current risk, or B,

I can't recall, but they used the consistent lettering for the current risk level with new capital market assumptions.

Then the allocation would be less than 66, it will fall to 40 percent. And if -- if -- if you have low tolerance for risk, somewhere between where the current portfolio's risk profile was to the least possible, it would be somewhere between 40 and 66 percent.

MR. ROBERT WATCHMAN: Now, in the earlier part of your response there, I think you might have said in respect of Basic, 60 percent, but I think you --

MR. VALTER VIOLA: I meant 66. Sorry, I apologize for that.

MR. ROBERT WATCHMAN: Thank you. Now, I want to turn now to --

MR. VALTER VIOLA: Can I make one (1) additional comment, just for context, because this is -- there's a lot of numbers.

You will recall that yesterday I showed the time series of the allocations of the Ontario Teachers Pension Plan?

MR. ROBERT WATCHMAN: Yes.

MR. VALTER VIOLA: This is a fund that

takes a lot of risk, and yet it has about -- a few years ago, two (2) years ago when I presented it had 19 percent in these kinds of assets.

So almost 20 percent, 1 in 5 dollars, despite the fact that it was -- so it was further along the risk spectrum. It's a different level of risk, it's a pension fund, not an insurance company with a pension plan as well. That -- that just provides context for, you know.

MR. ROBERT WATCHMAN: Thank you. I want to turn now to -- to your slides from yesterday, CAC Exhibit 28. And I want to look at Slides 36 and 37. And starting with slide 36.

Now -- so my understanding is -- is that the Basic graph itself was provided by Mercer in their further analysis?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: What is now exhibit -- MPI Exhibit 15.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And then you just superimposed the dotted lines and commentary in red.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: Which

highlighted what you referred to as opportunity cost?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And you spoke too about the opportunity cost, perhaps in terms of Basic, being only .8 percent, but you have to look at that over a long period of time.

MR. VALTER VIOLA: It's per year. So this is an expectation over the time horizon, yeah, so it's an annualized opportunity cost.

MR. ROBERT WATCHMAN: So is there any way of quantifying that opportunity cost?

MR. VALTER VIOLA: Multiply it -- in dollars, multiply it by the assets under management, and that's the foregone increase in value.

MR. ROBERT WATCHMAN: And when we -- when these slides were introduced yesterday, I think you made the comment that it doesn't -- doesn't contain the usual table that the Mercer graphs provided?

MR. VALTER VIOLA: Yes. The -- as you recall, the Mercer did a step type of approach and this was the last step I think that they took it out, so it was the only basis from which I could draw some conclusions so.

MR. ROBERT WATCHMAN: Okay. And so

perhaps we should turn then to MPI Exhibit 15, starting at what is page 6, slide -- so it ends up being Slide 5.

And so this is the analysis for the real liability benchmark for Basic?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And we see in the -- if we turn the page and in the next five (5) pages we have the graphic representation and then we have the table on the side.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And if we turn to page 12.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: Okay, so this is the slide that you took that didn't have the table.

MR. VALTER VIOLA: Correct.

MR. ROBERT WATCHMAN: And that's what became your slide -- what number was that last one?

MR. VALTER VIOLA: 36.

MR. ROBERT WATCHMAN: 36.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And so if we -- we can look at the same if we go later in the report, starting at page 18 and the pages following, we have

that same analysis in respect of pension?

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And then we get to page 24. And this is the slide that you used for pension, which became your Slide 37 --

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: -- correct? Now, if we could just go back to Slide 36 from CAC Exhibit 28, and you recall yesterday that Mr. Scarfone asked you some questions about the difference between the -- the top line and the current.

MR. VALTER VIOLA: Yes.

MR. ROBERT WATCHMAN: And the point that Mr. Scarfone was making is that -- so with the removal of RRBs we don't know what happens -- how those monies are reinvested.

Do you recall that question?

MR. VALTER VIOLA: Yes. Yes, I do.

MR. ROBERT WATCHMAN: And -- and the point that Mr. Scarfone was was well they could -- they might be invested in private equity or private debt, some more riskier.

MR. VALTER VIOLA: Right.

MR. ROBERT WATCHMAN: And the question that was asked of you was well, but you -- you can't

say how the monies were reinvested in the preparation of this chart.

MR. VALTER VIOLA: Correct.

MR. ROBERT WATCHMAN: And is the reason you can't say is because Mercer didn't provide that information?

MR. VALTER VIOLA: The quick answer is yes. Yeah, what's -- what's nice to have when these are done is underneath it is the asset allocations that correspond to various dots along the efficient frontiers.

If you recall in prior studies, those were -- I think -- I believe those were available, but I'm not sure.

MR. ROBERT WATCHMAN: Thank you, Mr. Viola. Thank you, Mr. Chair, those are all our questions.

THE CHAIRPERSON: Thank you. We're going to take a break for fifteen (15) minutes and then go into CS -- sorry, re-examination. Pardon me, Mr. Williams, sorry.

RE-DIRECT EXAMINATION BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Just a couple of questions.

Mr. Viola, you recall a conversation with My Learned Friend, Mr. Scarfone, from Manitoba Public Insurance in terms of the Ontario Teachers Fund Composition yesterday?

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: Do you have access to the most recent annual report of the Ontario Teachers --

MR. VALTER VIOLA: Yes. We --

DR. BYRON WILLIAMS: Okay. If requested by the Public Utilities Board, would you be able to provide an up-to-date analysis based upon the most recent annual report?

MR. VALTER VIOLA: Certainly, yes.

DR. BYRON WILLIAMS: No further questions.

THE CHAIRPERSON: Thank you.

We'll take a fifteen (15) minute break and then we will go into CSI.

Kristen, if you could cut off the live stream at this point. Thank you.

--- Upon recessing at 10:14 a.m.

(CSI PORTION UNDER SEPARATE COVER)

--- Upon resuming at 11:05 a.m.

THE CHAIRPERSON: Okay, we're back into open session, but I guess we're not ready.

(BRIEF PAUSE)

MR. STEVE SCARFONE: Mr. Chair, could I speak to an exhibit that needs some clarification?

THE CHAIRPERSON: Is this the same exhibit Mr. --

MR. STEVE SCARFONE: No.

THE CHAIRPERSON: Okay. Certainly, Mr. Scarfone.

MR. STEVE SCARFONE: Okay. Thank you. So, I just was asked by the Board Secretary to bring to the Board's attention that MPI Exhibit 48, previously filed, is the same exhibit that MPI filed apparently as CSI-7 -- just as -- it's a little unorthodox to have two (2) exhibit numbers for the same thing, but that's -- that's what occurred, I'm told by Mr. Christle.

THE CHAIRPERSON: Okay. So Exhibit 48 then is -- is -- is a public document?

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: Okay. Thank you.

MR. STEVE SCARFONE: Thank you.

THE CHAIRPERSON: Appreciate that. Mr. -- Mr. Williams, are we ready or...

(BRIEF PAUSE)

DR. BYRON WILLIAMS: So, Ms. -- I just for the record I want to indicate that Ms. Dilay's more efficient than Mr. Viola.

But, Mr. Chair, this is a collaborative exhibit jointly being -- like MP -- based upon collaborative discussions with MPI and CAC Manitoba.

And you'll recall in -- in cross-examination yesterday, MPI asked for commentary regarding the Ontario Teachers' Pension Fund, their composition of real assets, and I just want to indicate, we are going to be providing in -- in a full exhibit, first of all, an excerpt from the Ontario Teachers Pension Plan Annual Report the eleven (11) year financial review just one (1) page, being page 95 and then, as well, from the Ontario Pension Plan's website an excerpt relating to the performance of its Pension Plan, pages 1 and 2 of that.

As I said, this was based upon

conversation with MPI, so I -- I'm -- I'm going to ask --

THE CHAIRPERSON: So -- sorry. Are we giving this an -- an exhibit number?

DR. BYRON WILLIAMS: Yes. We'll give it, I'll suggest CAC-29.

THE CHAIRPERSON: Thank you.

--- EXHIBIT NO. CAC-29: Excerpt from the Ontario Teachers Pension Plan Annual Report the eleven (11) year financial review just one (1) page, being page 95 and then from the Ontario Pension Plan's website an excerpt relating to the performance of its Pension Plan, pages 1 and 2 of that.

CONTINUED RE-DIRECT EXAMINATION BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: And perhaps we'll go to the -- referring to the website page -- the second page of it. Yeah, the second page, please,

Kristen.

Okay, Mr. -- we'll -- Mr. Viola, I'll direct your attention -- this is fine, Kristen, right -- right where -- where it is -- to under real assets, you'll see a line saying "real rate products."

Do you see that, Mr. Viola,

MR. VALTER VIOLA: Yes. Yes.

DR. BYRON WILLIAMS: It's about two-thirds (2/3s) of the way down the page

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: And you recall a question from MPI asking if you'd be surprised if there was -- if you were told that teachers had 1.5 billion in real product, real rate products?

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: Okay, so you see the 1.5 billion there, sir.

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: I wonder if you could go up under "fixed income," on the same page up to "real rate products" and you'll see another figure there, sir, of -- I'll suggest to you 20 billion?

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: And then if we can go down under "inflation sensitive," you'll also

see reference to an inflation hedge, sir, of 8.9 billion?

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: And finally, sir, you'll see reference under real assets to real estate of 25.5 billion, and infrastructure of 18.7 billion?

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: And just to the bottom line of this net investment of the fund, it's in the range of 185 billion, sir?

MR. VALTER VIOLA: Yes.

DR. BYRON WILLIAMS: Is there anything you want to add in terms of explanation?

MR. VALTER VIOLA: Sure. The -- so when you add those inflation sensises -- sensitive and real rate products up, I think the number you come up with is about 16 percent of the portfolio, if I'm not mistaken.

And if we go to one (1) of the exhibits that I showed yesterday, Slide 21, again, that's the exhibit unaltered from two (2) years ago, which was designed to support discussion about the asset mix that a fund like a big fund had, and noting that $1 in five, 19 percent was in what we called, real rate products.

It looks like Teachers in the last year or so has reclassified things, but at the end of the day, they still have a lot of interest rate -- sorry, inflation and real rate protection through but they've just classified things a little differently.

So -- so the 19 percent that you saw at the end of 2015, if we go two (2) years now to the end of 2017 for the website and the finan -- and the annual report, it looks like the number's down a little bit by 3 percent.

DR. BYRON WILLIAMS: Okay. And I thank you and -- and Mr. Chair, we do appreciate the collaborative efforts of MPI just because we were jointly concerned with the record, and we appreciate that My Learned Friends approaching us on this issue.

THE CHAIRPERSON: Thank you. Mr. Scarfone, did you have any questions in relation to this? Certainly.

MR. STEVE SCARFONE: Just one (1) , Mr. Chair, and -- and I too thank My Learned Friend for allowing us to clarify. Perhaps I do have two (2) questions.

RE-CROSS-EXAMINATION BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Is there any

particular reason that you're aware of, Mr. Viola, why the -- why your former employer breaks down their -- the real rate products in the manner they do?

MR. VALTER VIOLA: The quick answer is I don't, but I can have a couple hypotheses, different benchmarks for different components and different accountability for actually managing the underlying assets.

MR. STEVE SCARFONE: I see.

MR. VALTER VIOLA: And it could be that some are just meant to be buy and hold and park them and sit there and -- and basically don't try to beat the benchmark and -- but I don't know. Those -- those are just two (2) theories.

MR. STEVE SCARFONE: Okay. My -- my second question, excuse me. So of those three (3) components, the 20 billion, the 1.5 billion and the 9 billion in the inflation hedge, do we know what percentage of the -- that total would constitute real return bonds?

MR. VALTER VIOLA: The quick answer is no, I don't have it. I mean, I -- I -- I skimmed the annual report briefly. It was hard to figure it out. I suspect that, you know what, you could look at the index. They usually list the big holdings. I haven't

looked at those, but --

DR. BYRON WILLIAMS: Okay.

MR. VALTER VIOLA: -- but we could.

MR. STEVE SCARFONE: But I gather you would expect that a large majority of that would comprise real return bonds?

MR. VALTER VIOLA: I'd be surprised if they sold a big chunk of them, but again, who knows, in the context of the whole portfolio, who knows what they could've done. But we could -- we could look at -- of the long listing and compare years over years or we could -- we could probably do that very -- fairly quickly. I haven't done it though.

MR. STEVE SCARFONE: Okay. Thank you. Those are my questions.

THE CHAIRPERSON: Thank you. Mr. Watchman, any questions?

MR. ROBERT WATCHMAN: No questions, Mr. Chair.

THE CHAIRPERSON: Mr. Williams, any re-exam?

DR. BYRON WILLIAMS: No, re-exam, Mr. Chair, and Members of the Panel. We thank you for your courtesy.

THE CHAIRPERSON: Thank you very much

and thank you very much, Mr. Viola.

MR. VALTER VIOLA: My pleasure. Thank you.

(WITNESS STANDS DOWN)

THE CHAIRPERSON: Okay, that concludes the -- the evidence portion of the hearing. We're now going to proceed to closing submissions and we'll start with Board Counsel.

(BRIEF PAUSE)

THE CHAIRPERSON: Thank you. Ms. McCandless...?

CLOSING COMMENTS BY MS. KATHLEEN MCCANDLESS

MS. KATHLEEN MCCANDLESS: Thank you. We have now completed the evidentiary portion of this public hearing with respect to the 2019 General Rate Application or GRA filed by Manitoba Public Insurance.

The Board will soon deliberate on the application for base rates and premiums charged for compulsory vehicle and driver vehicle insurance to take effect on March 1, 2019.

As counsel to the Board, I do not take any position on the merits of any part of the Application or the positions taken by any of the parties. My role is to summarize the matters that are before the Board and outline issues that it may wish to consider in making its decisions.

In its Application the Corporation has requested a 2.2 percent overall increase in Basic premium revenue comprised of .1 percent increase, reflecting the break-even cost of policies, and a 2.1 percent increase for a net capital maintenance provision to maintain Basic's capital position through the rating year.

This is the first time the Corporation has sought a Capital Maintenance Provision. This step is being taken further to PUB Order 130/'17, which required that a technical conference take place, seeking a consensus approach to estimating a Capital Maintenance Provision, and which technical conference took place on March 2nd, 2018.

MPI seeks no changes to vehicle premium discounts, and does not propose any changes to service or transaction fees, permit and certificate fees, fleet rebates, or surcharges, or the discount for aftermarket, and manufacturer or dealer installed

antitheft devices.

The breakdown by major vehicle class of the overall average rate adjustment of 2.2 percent, as proposed by MPI is as follows:

For private passenger, an overall increase of 2.4 percent.

For the commercial class, an overall increase of 2.4 percent.

For the public class, an overall increase of .6 percent.

For motorcycles, an overall increase of 3.1 percent.

For trailers, an overall decrease of 4.7 percent.

And for off-road vehicles, an overall decrease of 20 percent.

After consideration of insurance use and territory, and capping and balancing for experience rate adjustments, the results were modelled by the Corporation to assess the impact of various rate and classification changes.

In total, the vehicle population for the year of the application is one million one hundred and forty-nine thousand one hundred forty (1,149,140) vehicles, to which the proposed rate would be applied

as follows:

Six hundred and one thousand three hundred and twenty-four (601,324) vehicles, or 52.3 percent of the overall fleet would receive a rate increase, the majority of which would be ninety-nine dollars ($99) or less.

Four hundred and sixty-two thousand one hundred and ninety-six (462,196) vehicles, or 40.2 percent of the overall fleet, would receive a rate decrease.

And eighty-five thousand six hundred and twenty (85,620) vehicles, or 7.5 percent of the overall fleet, would receive no change in rates.

The Corporation's estimate of its overall rate requirement is sensitive to the methods and assumptions used in its derivation. Apart from the introduction by MPI of the net Capital Maintenance Provision with this year's application, the Corporation indicated that no significant methodological changes nor any changes in the basis of selection of assumptions for the determination of the rate indications were otherwise introduced this year. Nevertheless, considerable attention was paid through the interrogatory and hearing process to the matter of interest rate forecasting, along with the new proposed

net Capital Maintenance Provision.

With respect to interest rate forecasting, in this application, the Corporation has, again, adopted a naive interest rate forecast, in effect, assuming no change in market rates from current levels, all linked to a Government of Canada ten-year bond yield of 2.24 perc -- percent.

As the application was prepared in the spring, the Application's original naive interest rate forecast reflected market interest rates from that time. Since the spring market, interest rates have moved upward by 19 basis points, such that a Government of Canada ten-year bond yields 2.43 percent as at the end of September 2018.

Based on this update alone, and continuing with a naive interest rate forecast, the Corporation determined that the indicated rate increase dropped from 2.2 percent to 1.8 percent, including the net Capital Maintenance Provision.

The Corporation also provided an estimate of the impact of instead forecasting interest rates based on an average of the naive forecast and the consensus of bank forecasts, the so-called 50/50 forecast. Based on market rates to the end of September, 2018, the Corporation estimates its overall

rate requirement would fall to 1 percent, based on the 50/50 interest rate forecast.

In defence of its proposal to use the naive interest rate forecast, the Corporation provided a new statistical analysis comparing the bias and efficiency of the naive forecast as compared to the 50/50 forecast, as well as the consensus bank forecast. This analysis concluded that over the recent historical period spanning the 2005 GRA to the 2018 GRA, the naive out -- forecast outperformed the alternatives, showing less bias and less variance compared to actual interest rates.

With respect to the Capital Maintenance Provision, MPI has proposed a net Capital Maintenance Provision, or a net CMP, to recognize the expected return on investment assets supporting Basic total equity, and to maintain Basic's capital position. Specifically, the net CMP is designed such that -- that the minimum capital test ratio forecasted at fiscal year-end 2019/'20 remains the same as the level forecasted at fiscal year-end 2018/'19.

MPI proposes a net Capital Maintenance Provision of 2.1 percent, which represents collecting $22.6 million in 2019/'20, $23.6 million in 2020/'21, and similar amounts in subsequent years, all assuming

continuation of the current proposed net CMP totaling to approximately $96 million over the next four (4) years to maintain Basic's capital position. The Corporation indicated that it will review -- review adjusting the level of the net CMP with each successive GRA.

With respect to financial results, the Corporation has provided to the Board its actual financial results with respect to the 2017/'18 year, as well as for the first six (6) months of the current year, 2018/'19.

For the 2017/'18 fiscal year, Basic incurred net income of $34.4 million, compared with forecasted net income of $57.5 million at last year's GRA, a negative variance of $23.1 million. This negative variance was attributed by the Corporation to an increase of $27.8 million in net claims incurred cost, primarily due to higher write-down and deferred policy acquisition cost, premium defic -- deficiency than forecasted of $16 million, lower physical damage claims of $34.8 million, and lower than forecasted interest rates of $59.8 million.

Overall, there was a negative variance of $37.6 million in underwriting results from that presented last year. Offsetting this, the positive

variances were attributed, in part, to investment income, which was $116.3 million, $14.5 million higher than the $101.8 million forecast last year. The higher level of investment income was attributable primarily due to higher than expected alternative investment income of $13.9 million.

With respect to the current year, 2018/'19, the subject of last year's GRA, MPI forecasts for Basic a net loss of $21.3 million for rating purposes revised to a net income of $135.6 million in this GRA. This positive change was primarily due to higher than expected equity investment income of $106.1 million, higher forecast growth in interest rates of $16.7 million, lower forecast for physical damage claims, $18.5 million, and lower forecasted write-down deferred policy acquisition costs, premium deficiency, $19 million, which resulted in a forecast reduction in net claims incurred of $47.1 million.

MPI filed its second quarter report as MPI Exhibit Number 24. For the first six (6) months of 2018/'19, the Corporation reported a net income of $72.8 million, an improvement of $42.3 million from last year for the same period. Of the $72.8 million in reported net income, MPI reported $39.4 million

related to Basic, compared to a net income of $9.2 million for the same period last year, an improvement of $30.2 million for the six (6) month period.

MPI reports that claims costs increased by $5 million, or .9 percent, compared to last year due to an increase of $11.8 million, or 4.1 percent in physical damage claims incurred, offset by a decrease of $5.6 million, or 3.2 percent in bodily injury claims incurred. This increase in physical damage claims was primarily due to a major hail event which occurred June 14, 2018, which was mitigated by reinsurance in the amount of $14.6 million. The $5.6 million increase in bodily injury claims was due to a $22.5 million favourable interest rate impact on unpaid claims, offset by an increase in direct claims incurred by $25.7 million.

MPI reported that it was currently ahead of its planned forecast for the 2018/'19 year, based on results for the first six (6) months, due to favourable claims experience. MPI forecasts net income of $17.9 million for 2019/'20, and $17.7 million for 2020/'21, based on the proposed 2.2 percent applied for rate increase.

In establishing Basic rates, the Board has stated in -- in the past that it looks to the

overall financial wellness of the Corporation. MPI's Board of Directors directed that $37.3 million be transferred from the Extension line of business to the Basic Rate Stabilization Reserve, as at February 28, 2018, to raise the rate stabilization reserve, or RSR, to $211 million. MPI reported that this transfer was made to ensure that Basic total equity was above the amount required for Basic to be in satisfactory financial condition of $201 million as per the 2017 Dynamic Capital Adequacy Testing, or DCAT report.

This is the fourth -- the fourth consecutive year in which the Board of Directors has directed a transfer to the Basic rate stabilization reserve. Prior transfers include $27.8 million in 2016/'17, $75.7 million in 2015/'16, and $72.7 million in 2014/'15. The Corporation has, as of year-end 2017/'18, $352 million -- .6 million in retained earnings, including 171 million in Basic, 100 and -- 102.5 million in Extension, and $81.7 million in Special Risk Extension, or SRE.

Overall corporate total equity as at February 8, 28 -- February 28, 2018, including accumulated other comprehensive income, was $399 million, of which $210.8 million relates to Basic operations, 102.9 million to Extension, and 85.3

million to SRE.

With respect to the Rate Stabilization Reserve and Dynamic Capital Adequacy Testing, by Order 162/'16, the Board approved the following definition of the purpose of the RSR:

> "To protect motorists from rate increases that would otherwise have been necessary due to unexpected variances from forecasted results, and due to events and losses arising from nonrecurring events or factors."

The Dynamic Capital Adequacy Testing, or DCAT report, was prepared internally by MPI's chief actuary, Mr. Luke Johnston, in accordance with the Canadian Institute of Actuary Standards of Practice and accepted actuarial practice in Canada. The DCAT report reflects that Basic's future financial condition will be satisfactory if, throughout the forecast period, it is able to meet all its future obligations under all plausible adverse scenarios, and under the base scenario that it meets the minimum regulatory capital requirement.

Based on this definition, Mr. Johnston concluded that Basic's future financial condition is

satisfactory based on the proposed regulatory minimum RSR target level of $143 million. The DCAT has been prepared using a base -- base scenario financial forecast consistent with that of the GRA, including the use of a naive interest rate forecast, but specifically excluding the net CMP, which the Corporation believes should not be included.

With respect to the total equity target capital range, in Order 130/'17, the Board stated that it continues to favour scenario-based testing for the setting of both the lower and upper Basic total equity thresholds, including the iterative approach, which has evolved from the collaborative process.

The Board ordered that the lower Basic total equity threshold be set at $180 million, based on the iterative mod -- modelling of a 1:40 year or 97.5th percentile scenario over a two (2) year time horizon after routine management or regulatory actions.

The Board further directed that the upper threshold for Basic total equity be set at $325 million, established on the same basis.

Determination of the target range for Basic total equity is based upon the risks facing MPI's Basic insurance operations. MPI noted that

recent changes in how the Corporation manages investments has significantly reduced the risk -- risks it faces. MPI put forward that applying this methodology in the context of this year's GRA results in a lower threshold of $120 million and an upper threshold of $251 million.

In this GRA, the Corporation is seeking approval for a low -- lower total equity threshold of a 34 percent MCT, equivalent to a forecasted Basic total equity balance of $143 million, based on a 1:40 year probability Dynamic Capital Adequacy Test adverse scenario after routine management and regulatory actions over a two (2) year time horizon.

The Corporation argues that the $143 million represents the lowest amount required for satisfactory financial condition. In this regard, the Corporation has deviated from the Board-approved methodology set out in PUB Order 130/'17.

The Corporation also proposes a Basic total equity target range with an upper threshold based on a minimum capital test ratio of 85 percent, which was determined to equate to a -- a forecasted Basic total equity of $305 million based on a 1:40 DCAT adverse scenario, with no management or regulatory actions over a two (2) year time horizon.

Assuming no management or regulatory actions is a deviation from the Board-approved methodology as set out in Board Order 130/'17. The Corpor -- Corporation has calculated the lower and upper Basic total equity thresholds based on modelling before the inclusion of the proposed net Capital Maintenance Provision. Since the CMP is intended to maintain or adjust capital within the calculated range, the Corporation -- Corporation believes its inclusion in the target capital analysis would distort the calculation of the Basic total equity targets and reduce their consistency and stability.

The Corporation indicated that it will be bringing forward a Capital Management Plan in the 2020 GRA. The Corporation anticipates that this plan will include build-and-release provisions designed to ensure that Basic would operate within the limits of the established Basic total equity range. The Corporation believes the introduction of a net Capital Maintenance Provision in this application can be introduced without a Capital Management Plan.

With respect to investment income in the investment portfolio. The funds available for investment are primarily unearned premium reserves and unpaid claims reserves. The investment portfolio

supports both the payment of accident claims, as well as the pension obligations of the Corporation. The size of the Basic investment portfolio for the year of the application is prese -- projected to be $2.45 billion for 2018/'19, growing to 2.93 billion in 2020/'23 -- pardon me, 2022/'23.

Historically, the Corporation's investment income has been a major component of its income, and has offset its annual underwriting losses. Last year, total Basic investment income was forecasted to be $101.8 million. Actual base -- actual investment income for Basic was $116.3 million against an underwriting loss of $81.9 million, for a net income of $34.4 -- 4 million. The positive variance of $14.5 million in investment income from forecast can be primarily attributed to higher than expected real estate pooled fund returns.

In the current forecast, using a naive interest rate forecast, corporate invested -- investment income is presen -- projected to be $223.5 million for 2018/'19, of which Basic's share is $191.8 million. Based on the September 30, 2018 naive interest rate forecast of 2.43 percent for a Government of Canada ten-year bond, which reflects an increase of 19 basis points from the 2.24 percent used

in the GRA filing, the Corporation is now projecting investment income of $171.4 million for Basic to offset a revised underwriting loss now forecast at $28.3 million. Net income for 2018/'19 is now forecast to be $143 million. Investment income is forecast to be $84.8 million in 2019/'20, offsetting an underwriting loss of $65.9 million, for a net income of $18.9 million for the year.

MPI is part of an Investment Committee Working Group, which is comprised of representatives of the Department of Finance and of the Corporation, which prepares an annual work plan for the investment fund, and annually reviews the investment policy statement. The investment policy statement discusses aspects of the Corporation's investment portfolio, including investment policy, investment income, investment rebalancing, and the retainer and monitoring of extern -- external investment managers.

Mercer was retained by the Corporation to assist with conducting an Asset Liability Management, or ALM study. The ALM study was completed in late 2017, and filed in this GRA.

Resulting from the ALM study will be the separation of the Corporation's co-mingled investment portfolio into five (5) unique portfolios

that back the Corporation's liabilities and surplus. The transition into five (5) unique portfolios is planned to occur at the end of Q4 2018/'19, with the complete transition expected to be by Q4 2019/'20.

The five (5) unique portfolios include: Basic claims, Basic rate stabilization reserve, pension, extension and special risk extension.

The current allocation of 70 percent in bonds and 30 percent in growth assets will be effective until February 28, 2019 and the five (5) new investment port -- portfolios will be effective after February 28, 2019 as a result of the ALM study.

As a result of the implementation of the changes arising from the ALM study, Basic net income is forecasted to increase by $95 million in 2018/'19, primarily as a result of the realization of accumulated other comprehensive income on equity assets due to the separation of assets into unique portfolios.

The new ALM strategy will require the Corporation to liquidate all of its US holdings and Canadian equity holdings in order to make the necessary asset allocation changes required for the five (5) distinct portfolios.

Total equity is forecasted to be lower

because investment asset returns are forecasted to be lower with fewer growth assets.

The MCT, or Minimum Capital Test, ratio will increase by roughly 16 percent at the end of 2018/'19, from 54 percent to 69 percent, due to lower capital requirements on the Basic line of business investment assets. These projections are based on a naive interest rate forecast.

With respect to operating expenses, total corporate expenses were $299.2 million in 2017/'18, and are forecast to grow to $301.7 million in the current fiscal year. MPI forecasts total corporate extended -- expenditures to be $298.8 million in 2019/'20 and $306.7 million in 2020/'21.

MPI's global corporate costs are to be allocated among the insurance and non-insurance categories of business and by automated -- automobile insurance lines of business, so as not to give rise to cross subsidies -- subsidization.

Costs are allocated to Basic through an integrated cost allocation methodology, which was approved by the Board in Order 157/'12. There have been no material changes to the integrated cost allocation methodology in this application.

Upon the completion of the allocation

process, expenses attributable to the Basic program are ex -- are established for normal operations and improvement initiatives. Total Basic expenses were $231.1 million in 2017/'18 or 77.3 percent of corporate expenses and are forecast to be $230.5 million in 2018/'19, 17 -- pardon me, 76.4 percent of corporate.

Thereafter, Basic expenses are forecasted to decrease to $226.6 million in 2019/'20 or 75.8 percent of corporate, and $233.3 million or 76.1 percent of corporate in 2020/'21.

Salaries and benefits are a major component of the operating expenses of Basic, representing over 58 percent of the total operating expenses in the year of the application.

Since 2014/'15, the Corporation has experienced a compound annual growth of salaries and benefits of 2.6 percent with compensation that has grown from $113 million in 2014/'15 to $124.4 million in 2017/'18. Salaries and ben -- benefits are forecast to be $130.5 million in the current year and are forecast to be $133.5 million in 2019/'20.

MPI is now forecasting an increase in compensation expenses, net a vacancy allowance, of 4.52 percent in 2018/'19 and an increase of 3.18

percent in 2019/'20.

Staffing for 2017/'18 was 1,878.1 full-time equivalents overall and the Corporation is projecting a staffing level of 1,902.5 full-time equivalents for 2018/'19. Normal operations were 1,860.9 full-time equivalents in 2017/'18, and were forecast to grow by 13.2 to 1,874.1 full-time equivalents in normal operations. Initiatives staffing levels increased from 14.7 full-time equivalents to 18.5 full-time equivalents.

MPI reported in its Q2 report that its actual staffing level for the first two (2) quarters of this year was 1,762 full-time equivalents. MPI indicated that it expects the level of staffing to increase through the remainder of this year as it fills vacancies. The Corporation builds into its financial forecast a vacancy allowance to account for staff turnover.

MPI's 2018/'19 budget and staff complement includes 368.2 full-time equivalents to support its infa -- IT infrastructure and projects, of which 286.2 full-time equivalents are internal staff and 82 full-time equivalents are external IT contractors.

MPI has indicated that 20 positions

have been converted to date in its external labour strategy, which plan to internalize 27 IT positions over the 2016/'17 to 2019/'20 fiscal years. With this approach, MPI expects to achieve between 2.4 and $3 million in annual savings.

With respect to capital expenditures, MPI projected Basic capital expenditures to be $17.5 million for 2018/'19, $26.2 million for 2019/'20 and $31.7 million for 2020/'21. So over $75 million in the next three (3) years.

The majority of the capital expenditure or $110.9 million, is an ongoing and future IT projects, including the future IT project legacy systems modernization, which relates to the replacement of legacy systems at a budgeted cost of $58.6 million.

The Board has heard at this hearing that the -- that MPI has implemented a value management process to support the need for capital spending decisions.

MPI described this approach as a cultural shift for the organization, where major projects require a business case, including looking internally at all costs and benefits for a project.

The mal -- value management process

identifies IT costs that are required to maintain the functionality of software, licensing fees and insure -- insurance costs as ongoing costs to support operations.

MPI has created business cases for business transformation office manage projects of $500,000 or more in the 2018/'19 capital budget. As part of its overall value management process review, MPI wrote off $20.5 million in deferred development projects, of which $18.5 million related to Basic projects.

MPI reported the customer claims reporting system component of the physical damage re-engineering program was cancelled with a write-off of costs of $15.6 million.

With respect to physical damage re-engineering, Mr. Chuck Henry from Gartner appeared as a witness with the Corporation on its information technology, physical damage, re-engineering and value management panel.

Mr. Henry presented Gartner's update of the cost benefit analysis for the multi-year physical damage re-engineering project. Gartner stated in its report filed in last year's GRA that the initial initiative was made up of five (5) programs and twenty

(20) projects within these programs. Eight (8) were completed, seven (7) were cancelled after determining they were not strategic and did not meet the business case, and five (5) were restructured projects which then comprised the remainder of the PDR program.

The overall budget remained unchanged at $65 million and showed sustained benefits of $13 million and reflected a net present value of the project as a positive $13.7 million.

MPI management undertook a review of the physical damage re-engineering, or PDR project, in early 2018, applying its value management process. The Corporation restated the PDR costs and benefit projections. The total budget of the physical damage re-engineering project has changed to $57 million from the originally projected $65 million, based on the reduction in scope of the project.

The net present value reported by Gartner last year at $13.7 million was revised to a negative $49.9 million, based on the MPI re-evaluation of the project costs and benefits.

With respect to benchmarking, Gartner's evaluation of the Corporation's information technology showed that MPI spends 63 percent of its IT budget on personnel, versus 44 percent for its peers and that

MPI IT staff composition is 34 percent made up by contractors, verses 17 percent for its peers.

MPI improved its overall maturity rating from 3.42 in 2015 and '16 to 3.52 in 2016/'17.

The CIO scorecard, which was -- has been used by Gartner in the past to assess MPI's process maturity, has since been discontinued by Gartner. The current recommendation for IT maturity assessments is Gartner's IT score. In 2016/'17 MPI's overall maturity level was assessed by Gartner at 3.1, using the IT score methodology.

The Corporation presented its information technology strategy for 2018/'19. In it the Corporation indicated that significant changes and practices have been adopted moving forward. In particular, six (6) main streams were discussed that were changed from the prior technology approach:

Move toward proven technologies;

Identify all risks of a project prior to project initiation;

Use of a project sponsor;

Align where possible to industry best practices in vendor provided software;

Have the net value management process become ingrained in MPI culture and the project life

cycle;

And create IT capabilities to support business capabilities to solve a business objective.

With respect to road safety spending, MPI is forecasting to spend $12.7 million in Basic road safety and loss prevention programs in 2019/'20. The largest component is spent on driver education, including the high school driver education program, which is approximately $3.9 million, or 31 percent of the overall budget.

Impaired driving prevention strategies are the second last -- second largest expenditure at $2.3 million, or 18 percent of the overall budget. Auto crime prevention strategies are forecast at $0.7 million, or 5 percent of the overall budget. The balance of the road safety programs are advertising and sponsorships, road safety programming and RoadWatch, which is increased enforcement.

MPI has discontinued the immobilizer program for 2019/'20 as a result of all new vehicles now having built-in electronic immobilizer technology. MPI estimates the savings related to the discontinuation of this program to be $1 million.

MPI also discontinued the entry-level professional truck driving training course, which

reimbursed individuals for taking the professional truck driver training. MPI reported that it cancelled the program with the support of the Manitoba Trucking Association because the framework was well established and funding was available from other sources.

Mr. Chair, members of the panel, I have attempted to comment on the main issues that arose this year. I would like to thank MPI and the Intervenors for their cooperation extended throughout this hearing, and this concludes my submissions. Thank you.

THE CHAIRPERSON: Thank you, Ms. McCandless.

We're going to adjourn until one o'clock, when MPI will present its submission. I would indicate that there will be a -- I will be making a short statement at the beginning in -- in relation to Mr. Ward Keith, who is resigning at the end of this year but we'll adjourn until one o'clock. Thank you.

--- Upon recessing at 11:48 a.m.

--- Upon resuming at 1:27 p.m.

THE CHAIRPERSON: Good afternoon.

Before we start with the submission of MPI, I'd like to say a few words on behalf of the Board to Ward Keith, who is, we understand, retiring from MPI at the end of the year and is appearing on behalf of MPI before the Board for the last time.

Some thirty-four (34) years ago, Ward started in the mail room of MPI. At the end of this year he will retire as vice-president. Ward gained tremendous experience climbing the MPI corporate ladder: Ten (10) years in the bodily injury claims department, staff trainer for the personal injury protection plan, member of the Autopac online implementation team, manager of strategic relationships with insurance brokers, director of customer service, member of the executive team as executive director driver safety and regulatory control, as well as registrar of motor vehicles. Finally, the vice-president Business Development and Communications and Chief Administrative Officer for MPI.

He was the go-to person for the tough assignments, the trusted advisor, the humble colleague and transformative leader. Ward has been recognized for his achievements by other organizations including the Canadian Council of Motor Transport Administrators

and the American Association of Motor -- Motor Vehicle Administrators as Manitoba's chief representative.

MADD Canada presented him with a Citizenship Distinction Award for his dedication to road safety and loss prevention. He was also the president of the Insurance Institute of Manitoba. Ward has been actively involved within the community through a number of voluntary positions at the United Way and as a fundraiser for cancer research.

While I was in private legal practice, which some days feels like a generation ago, I was involved in the introduction of two (2) major projects with Ward: CARFAX and Slingshot, both involved new initiatives. There was no template. So we started from scratch. Throughout both initiatives, Ward was always forthright, he set out realistic targets and found a way for MPI to introduce the initiatives within a reasonable timeframe.

It was a consummate pro and someone I learned could be trusted. Ward's word has always been his bond.

Ward, on behalf of the Public Utilities Board of Manitoba, I would like to thank you for your ongoing dedication to MPI and for your service to the people of Manitoba. We wish you great health and

happiness as you enjoy the fruits of your labour in the many years ahead. Thank you.

If you have -- please, if you got any words.

MR. WARD KEITH: If I can, thank you, Mr. Gabor. First of all, thank you for those very kind words. You know, in the thirty-four (34) years that I've been with MPI I've had the real privilege of being involved in a number of strategic initiatives that have helped to define the organization and the value that the organization brings to Manitobans, and I'm talking about value both in terms of the products and services that we provide, but also in terms of our broader involvement with stakeholders when it comes to road safety and loss prevention and keeping our roads as safe as possible.

And as -- as part of this process for many years, I truly do believe that the value that Manitoba Public Insurance brings under this public insurance framework that we have here has been not only validated but often enhanced as a result of the overview of this Board and the involvement of people like Mr. Oakes on behalf of CMMG and Dr. Williams on behalf of the CAC. So, for that I thank you for your kind words. I thank you and -- for letting me part --

be part of this entire process. I thank you for that as well. It has truly been one (1) of the highlights of my career. Thank you.

THE CHAIRPERSON: Thank you very much, sir. We appreciate it.

Mr. Scarfone, tough act to follow.

FINAL SUBMISSIONS BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Yes. When I signed up for this, I did not realize that this would be the case, but yes.

So, Mr. Chairperson, we are ready to proceed with MPIC's closing submissions for the 2019 General Rate Application. Just before doing so just to formalize things, MPIC Exhibit 50 will be the written closing argument and the slide deck that is up before you on the screen will be marked as MPI Exhibit Number 51.

--- EXHIBIT NO. MPI-50: MPIC'S closing submissions for the 2019 GRA.

--- EXHIBIT NO. MPI-51: PowerPoint Presentation

MR. STEVE SCARFONE: And so before

beginning, Mr. Chair and panel members, I just want to remind the panel that there are, in fact, these two (2) presentations, the slide presentation was -- as you might expect put together in a rather accelerated manner, so, we encourage the Board to turn their attention to the written submission, but the slide deck will, as you might expect, hit the high points, if you will, with some commentary by myself and Mr. Guerra along the way.

But the written closing is the one that we encourage the Board to -- to read and deliberate upon.

So the second slide, please Ms. Hubert (sic). So, we're going to begin by going through a framework -- just past the introduction, Kristen, please. Going through the -- the framework for the 2019 general application. When I say "the framework," it sets out really what Ms. McCandless identified in her closing remarks, and that is, what the Corporation is seeking in this year's General Rate Application. I think we're all familiar with that. the .1 percent rate increase, the 2.1 percent for a net Capital Maintenance Provision, the RSR targets the Corporation is seeking, 85 percent MCT, and lower target of 34 percent MCT.

We're asking that the Board make a finding that the naive interest rate forecast should be the methodology used in -- in forecasting interest rates if -- wherever they might to be forecasted and there's a couple of situations where that applies and, of course, we're asking that the interim vehicle for hire rates, that Order that was issued earlier, be finalized on -- on -- on a final basis.

That the Board knows that there was an updating of the --of the rate indication that was the result of a PreAsk and as of September 30th, 2018, there has been an adjustment to the rate indication whereby there is now a .2 percent -- .26 percent decrease in rates and the net Capital Maintenance Provision has been accordingly adjusted to 1.80 percent.

The targets have adjusted as well as a result of the -- the updated interest rate figure. The upper target is now $315 million, and that's 88 percent MCT. The Corporation would like to emphasize that this particular target makes use of the PUB approved methodology.

The Corporation would also emphasize that, as you've heard, Mr. Chair, the Corporation does not agree with the methodology used, but has made use

of the -- the Board approved methodology as directed.

The Corporation, of course, is ultimately seeking to have in place 100 percent minimal capital target rates, which MPIC believes is the best insurance practice for the industry.

And we maintain that the naive interest rate forecast should apply, but of course, that's based on the Government of Canada ten-year bond yield. And next slide, please.

So the first point there is -- is the just and reasonable rate requirement that MPIC must bring before this Board and, of course, which the Board if -- if it accepts would MPIC has proposed will approve.

The net Capital Maintenance Provision we say will result in greater stability, predictability and less volatility for Manitobans. The Corporation says that the approach is accurate and fair.

The Rate Stabilization Reserve, Mr. Chair, sets the targets using the collaborative DCAT approach, the Dynamic Capital Adequacy Testing approach. And those targets we say are based on best estimates and are important to maintain prudent fiscal management across the Corporation. The Corporation in

short, demands adequate capital for its operations.

The interest rate forecasting issue, Mr. Chair, was a big issue again this year. There was a lot of discussion about the naive interest rate, the 50/50 forecast methodology, the standard interest rate forecasting methodology. MPIC, as Mr. Johnston has indicated, believes that the naive forecast is the best estimate for setting rates, and that's because it allows the Corporation to base its forecasts on unbiased interest rate forecasting.

We say the 50/50, as ordered by the Board last year, is not a compromise. We have shown evidence that it is biased and inaccurate over the past number of years and has cost the Corporation millions of dollars when departing from the naive.

And lastly, the Bank of Canada overnight rate we say is not a proxy for the Government of Canada ten-year bond yield, which is what the Corporation uses in its forecasting.

I'll also speak to the area of investments. We've heard a lot of evidence in the last couple of days about how MPIC has moved away from a co-mingled portfolio and is now using segregated portfolios, five (5) separate buckets of portfolios, including the Basic portfolio. The investment

decisions that were made were done so by a government appointed Board of Directors on which certain experts sit as part of an investment committee, and moreover, it was informed by the results of an independent study that was ordered by this -- by this Board, the Mercer Group.

The next bullet point there, Mr. Chair, is an important one. Basic -- the Basic portfolio, plus the low capitalization that we say exists and is a continuing problem for MPIC, along with the historic losses that we've made the Board aware of time and again has equalled no appetite for risk, where it concerns investments.

Yesterday you -- you would've heard Mr. Viola suggest that the losses, the net income losses the Corporation has experienced in the past number of years should not have been a factor in their investment strategy. He said the Corporation should only look forward in making its investment decisions.

I would suggest to you, Mr. Chair, that an outside observer would disagree with that and would fully understand the Corporation's risk aversion, if you will, given the millions of dollars -- hundreds of millions of dollars the Corporation has lost over the past four (4) or five (5) years. And so that why --

is why we say there that it equals no appetite for risk.

And then lastly, the investment strategy, as we've seen, will result in a change in the risk profile of Basic and the amounts in the RSR have been accordingly reduced by about 30 percent. So the strategy has shown immediate positive results as it concerns the capital that the Corporation requires on an ongoing basis. Next slide, please.

Following my investments, Mr. Guerra will speak to revenues, expenses and ratemaking and he'll also speak to information technology, so I'll just leave those two (2) topics that for my colleague to the speak to. Next slide, please.

And as well as the vehicles for hire and any ongoing topics that Mr. Guerra wants to canvass with the Board in closing. Next slide, please.

Just and reasonable rates. In the closing written submission, there's more comprehensive detail for the Board to consider under what MPIC characterizes as the new statutory framework that's in place. This, MPI says, is the first general application under this new framework and include consideration to two (2) statutes, one (1) of which is

the Manitoba Public Insurance Corporation Act, that's not new, but the Crown Corporations Governance and Accountability Act is and those two (2) statutes, if you will, work in concert, MPIC says, along with the Board of Directors for Manitoba Public Insurance.

So those Acts define the roles for MPI and its Board to establish and maintain reserves; that's an important mandatory provision under MPIC's home statute. Section 18 would say that the Corporation shall establish and maintain adequate capital reserves.

Secondly, those two (2) statutes and the Board make and introduce new rates and changes and that's pursuant to Section 25(1) of the Crown Corporations Governance and Accountability Act.

And lastly, you'll see there that the Crown Corporation Governance and Accountability Act also defines the role of the Public Utilities Board under that same subsection.

The -- the Act defines the role of the Public Utilities Board to review applications for new rates and changes to existing rates and, of course, the Act also sets out that the Public Utilities Board must approve a just and reasonable rates. Next slide, please.

And there, sir, is the provision that the Board I'm sure is well familiar with that sets out the -- the approval process and the mandate that Public Utilities Board has when considering MPIC's rate application. But the second bullet point we say is important because MPIC and the Public Utilities Board, in MPIC's view, have distinct but complementary roles to play to ensure the success of the Basic compulsory insurance program.

What makes rates just and reasonable? The Crown Corporations Act under Section 25(4) provides a list of suggested considerations. We -- that there must be a balance between the impact of rate increases on consumers with the fiscal health of the Utility.

Lowest rates are not always just and reasonable. We must also consider the impact of unstable rates, i.e., rate shock. And there was some evidence canvassed on what exactly that might mean, but I think everybody is -- is in agreement that this Board and MPIC should do what it can to avoid rate shock. And that, we would say, would include having the Corporation properly capitalized.

MPIC makes rates that it considers to be just and reasonable and the General Rate

Application balances the interests of ratepayers with MPI's requirement to cover the cost of the 2019/2020 policies. And this, as the slide, indicates is where, with all due respect, we say that the Intervenors fall short.

The positions advanced by the Intervenors often times do not strike this balance and recommendations are -- are usually made that focus only on reducing rates. And -- and just before we move to that next slide, we did hear evidence in this proceeding, Mr. Chairperson, from Andrea Sherry and she confirmed on cross-examination that she has never before appeared before this Board and made a recommendation for either increased capital or reduction in the rate indication.

And we say that part of the difficulty that the Corporation has with the evidence, in particular of -- of Ms. Sherry, is that although she was qualified to give opinion evidence as an expert before this tribunal, she appeared to be advocating and, that is, she would make reference during her submissions to arguing for this or arguing for that. And I would argue that the Corporation doesn't need capital.

With all due respect to Ms. Sherry, her

role before this Board is not to argue. Her role is to present the facts that this Board needs to determine what's just and reasonable for the Corporation. And so we would suggest that to the extent that the Board is going to rely on her evidence, it do so with some caution and perhaps give it not as much weight as -- as the evidence heard from some of the other witnesses in the proceeding.

The Crown Corporations and Governance Act also requires MPIC to prepare an annual business plan. This is part of the statutory framework that I referred to earlier, Mr. Chair, and it's mandatory. The Corporation has to prepare the annual business plan. The business plan is approved by the Minister responsible for MPIC and it's a roadmap for the achievement of Mission Statement objectives.

As you heard from Mr. Graham a couple weeks ago, MPIC has a new Mission Statement and that is to provide exceptional coverage in service, affordable rates and safer roads through public automobile insurance. The direction for this plan, if you will, or for this direct -- or for this new Mission Statement is set by the MPIC Board of Directors and approved by the Government of Manitoba.

Some key priorities of MPIC, as defined

by the annual business plan. The first and most important of which and -- and you've heard this refrain for the past number of years, is to make the Basic program self-sustaining. And that, of course, in our view, goes directly to the Corporation's reluctance to have continued capital transferred from the other lines of business. That, the Corporation would say, is not in line with having Basic self-sustained.

Some of the other key priorities of MPI as set out in the Annual Business Plan include the establishments of rates in accordance with AAP, Accepted Actuarial Practice, to keep Basic rates stable, predictable and affordable. That is a clear mandate from the Government of Manitoba. Evolve products and services to meet the needs of Manitobans and not to impair the consolidated financial statement of Manitoba.

Other key priorities are capital projects and IT initiatives that support the core business function. You heard evidence from Mr. Graham that there will be a transition of sorts; that the Corporation will go back to its core business functions of providing insurance products and driving services. They will not be engaging in risky

information technology programs to the extent that they don't support the core business functions.

And, lastly, the annual business plan would say that the Corporation has to continue to demonstrate fiscal prudence and you'll hear from Mr. Guerra on this point, but the expenses evidence that was advanced and tested at this hearing, I think, would support the contention that the Corporation has continued to demonstrate fiscal prudence on that front.

The new relief being sought in this year's Application is called the Net Capital Maintenance Provision. There's a lot of evidence heard, a lot of questions asked about what the CMP is. The Capital Main -- Maintenance Provision, Mr. Chair, is an additional amount collected from ratepayers to maintain the capital level of Basic in a particular fiscal year.

And for the purposes of this Application, it's the fiscal year beginning 2019/2020. Treated separately by MPI from the breakeven rate indication, MPIC considers what is needed after factoring in income earned on the Rate Stabilization Reserve, the investments, the investment income specifically from the Rate Stabilization Reserve.

So you'll see there, the -- the -- the CMP proposal and how it result -- results in the -- the initial rate indication that was sought when the Application was filed in June.

There was a 3.3 percent increase needed to maintain the capital in 2019/2020, but from that the interest or the investment income that was earned on the RSR was subtracted to come up with what Mr. Johnston refers to as the net Capital Maintenance Provision.

And this year, Mr. Chair, will appreciate that the ratepayers are, in fact, seeing the benefit of the investment income from the Rate Stabilization Reserve. Last year the Corporation was before this Board asking that -- that income not be offset against rates and that MPIC be allowed to retain the RSR investment income to build the RSR; that is not reflected in the application this year. In fact, you can see before you that but for making use of that investment income, there would be a 3.3 percent ask, if you will, for a Capital Maintenance Provision.

And these numbers you'll see below there is based on the September 30th, 2018 Government of Canada ten-year bond yield and that has

accordingly, as I set out at the beginning, reduced the CMP to 1.8 percent.

This particular paragraph for Order or Directive from last year's Order, Mr. Chair, was -- was repeated throughout the Application and you have it there before you. But MPIC took this to mean that the -- the Board last year recognized that without some type of provision in place to prevent the depletion of capital, that the RSR would continue to decline, all else being equal, with the continued growth of the Corporation.

I spoke of Ms. Sherry's evidence concerning the net Capital Maintenance Provision. Firstly, it's important to remember that Ms. Sherry comes from the private insurance world where her company has profit provisions in place that would help maintain, perhaps even build, capital reserves.

Ms. Sherry testified that in her opinion MPIC does not need a Capital Maintenance Provision. She said that if MPIC holds capital within the Rate Stabilization Range, it is adequately capitalized. She said that if MPIC needs capital, it can come back here year after year and simply seek a rate increase which is precisely what the mandate of the Board of Directors is not, and that is, to have

the Corporation impose upon its customers what might be characterized as rate shock, depending on what events might present themselves to MPIC in the future.

That is not best practices, in our view, and the Corporation says they do, in fact, need capital and that would avoid the rate increases that Ms. Sherry has advanced as a -- as a solution to the problem.

And Ms. Sherry also testified that, and incorrectly claimed, that the Capital Maintenance Provision builds RSL -- RSR capital until it exceeds the upper target; that, we say, is contrary to the evidence that Mr. Johnston provided and ignores the purpose of the Rate Stabilization Reserve which, as I've said, is to prevent rate shock.

And I might add before we move to the next slide again, and I don't mean to take aim at Ms. Sherry, but her evidence seems to display a fundamental misunderstanding of Manitoba Public Insurance's rate application, generally speaking. And -- and I say that for a couple of reasons, but I'll provide one (1) example.

You may remember her testimony or her report wherein she recommended that the end of her report, she made three (3) recommendations. The

second recommendation made by Ms. Sherry was that, and I'm quoting from the report:

> "The DCAT methodology should be used to set the Rate Stabilization Reserve range."

That was the recommendation that she was making to this Board; that the DCAT methodology be used to set the RSR range. That is precisely what the Corporation has done throughout its entire Application.

You heard evidence from Mr. Johnston the DCAT was used, the targets were set, the RSR range was -- was established, and then as -- as you heard from Mr. Johnston, converted to a minimum capital test percentage. But the DCAT was never abandoned through this entire exercise. Mr. Johnston relies on it exclusively in establishing targets.

So for Ms. Simpson (sic) to suggest that we use the DCAT -- or Ms. -- Ms. Sherry. Thank you. From -- for Ms. Sherry to suggest that we use the DCAT to establish the RSR range, in my view, as I've said, it shows a fundamental misunderstanding of -- of the of the application.

The Corporation says that a Capital Maintenance Provision is accurate and fair, accurate

in that it determines the capital required to maintain Basic in the rating year. And you heard Mr. Johnston say it's fair, because the policyholders at the end of the year -- at -- or, sorry, end the year with Basic having the same capitalization as it did at the start of the year. The policyholders in this year are the ones who pay for the capital maintenance requirements of that year, and that to me, and to Mr. Johnston, and to the Corporation, seems eminently fair.

There was some consideration to -- perhaps -- next slide, please, Ms. Schubert. There was some consideration, perhaps, to making use instead of the approach taken by the Saskatchewan Government Insurance on capital; that approach, we say, is -- is more complex. It has a five (5) year forecast versus a one (1) year forecast that's being proposed by Manitoba Public Insurance, and is less fair to the customers, in our view, than the Manitoba model. The ratepayers are not paying the full cost to maintain capital in that year, and the growth in the business is not static.

In short, the outlook in the Saskatchewan model is too long. And so to the extent that Ms. Sherry said, We're back here every year, that is, in fact, how we are different from Saskatchewan

Government Insurance. We're back on a yearly basis, and any adjustments that need be made that can be made on a yearly basis.

On the Rate Stabilization Reserve, as I've just indicated, Mr. Johnston uses the Dynamic Capital Adequacy Test to establish the Rate Stabilization Reserve targets. The targets reflect the results of a collaborative process that was in place -- or that was entered into a couple years ago, as I understand it. And MPIC, to be clear, is not asking the Public Utilities Board to replace the Dynamic Capital Adequacy Test with the minimum capital test.

The DCAT produces a dollar value for each target, which MPIC then expresses as an MCT ratio. Converting the -- the monetary targets from the DCAT to the MCT allows Mr. Johnston and MPIC to forecast more accurately. The MCT, we say, is simple, objective, and it works, and it's industry wide.

The Rate Stabilization Reserve targets must be based on best estimates. The lower target must be minimum for satisfactory financial condition, and it's obviously of more concern than the upper target, because falling below that target, as we've seen, results in the actuary requiring a transfer of

capital from the Extension line of business to maintain the Corporation in satisfactory financial condition.

The Corpor -- the Corporation says the current approach of the Public Utilities Board is not based on the best estimate, and with all due respect, sets the Rate Stabilization Reserve at a lower target, too low, and -- and we saw the result of that last year with a further transfer as directed by the MPIC Board of Directors.

Basic remains the most thinly capitalized insurer in Canada; that proposition was put to Dr. Simpson last year, and he didn't deny it. You may recall, Mr. Chair, his response, I believe was, Well, that's not necessarily such a bad thing. Well, the Corporation vehemently disagrees with that assertion.

The rate stabilization range remains below the level of MPIC's peers, and if MPIC were a private insurer, it would be insolvent. And it's important to remember, Mr. Chair, that but for the $214 million that were transferred from the Extension line of business, there would be no money in the Rate Stabilization Reserve except for the 12 million that this Board saw fit to allow MPIC to keep last year.

MPIC does not seek 100 percent minimum capital target upper RSR target, and does not ask to be treated like a private insurer. MPIC seeks rate stabilization targets to ensure that it is adequately capitalized, and this, the Corporation says, is prudent fiscal management.

Before I -- I move on to rate -- before interest rate forecasting, I just wanted to add about capital, Mr. Chair, that it seems to me, and I've said this, you know, about trials and hearings of this nature, that when you do them, you soon realize what the main issue is. And I said in my opening statement that the story that MPIC would be presenting here in the past three (3) weeks was one of capital. Capital is the story. And there's a number of issues that were canvassed during this hearing that all revolve around capital.

Interest rate forecasting, you know, we can debate again and again whether the naive, or the 50/50, or the SIRF is the appropriate forecasting model. But if the Corporation had sufficient capital in place, it might be willing to concede that interest rates are forecasting to rise, and -- and accept, perhaps, a 50/50 model.

But as it stands, you've heard Mr.

Johnston say, We're not prepared to take that bet, given the net income losses that the Corporation has suffered based on improper and inaccurate interest rate forecasting. So that, we say, capital would -- would deal with that -- with that issue once and for all.

Investments. You've heard a lot of evidence in the last couple days about how the Corporation has adopted a low risk tolerance in its new investment strategy. And the result of that is not lost on the Corporation and the impact that has on its ratepayers.

And you heard evidence from Mr. Bunston that the projected returns under the new investment strategy have lowered, where before, we used to project returns of 4.29 percent, under the new investment strategy, the returns are now forecasted to be 3.12 percent, more than a hundred basis points.

And so with low risk comes low returns. There's no growth assets in the Basic portfolio anymore. And so we see that reflected in the returns that are forecasted under the new investment strategy. I would suggest to you, Mr. Chairperson, that if the Corporation had proper capital in place, it might be willing to have more growth assets in its Basic

portfolio, but as we've heard in the last couple days, that's simply not at the direction from the Board of Directors. And it's enticed -- it's -- it's comprised entirely of fixed income as a result, no equities.

On the DCAT, if the Corporation was properly capitalized, I would suggest that Mr. Luke would no longer have to make use of a modified Dynamic Capital Adequacy Test; that is, he wouldn't have to assume capital transfers from the Extension line of business. So some of the issues that surround the DCAT and its modelling would go away as well.

And lastly, on the Rate Stabilization Reserve, there would be no further capital transfers from the Extension line of business. And again, it bears repeating, $214 million over the past four (4) years have been transferred from the Extension line of business.

And, Mr. Chair, you asked Mr. Graham, well, what -- what would MPIC be doing with that money? Well, perhaps, as described by Mr. Graham, it would result in cheaper Extension products for Manitobans; that would be one (1) result that Mr. Graham envisioned. But again, if -- if the Corporation was properly capitalized, the Rate Stabilization Reserve, we say, wouldn't be an ongoing

issue. The targets would be set, and the MPIC would do what it needs to to stay within that range.

And -- and on that, we'll move to interest rate forecasting.

(BRIEF PAUSE)

MR. STEVE SCARFONE: The Corporation wants to ensure that there's this distinction drawn between the two (2) forecasting benchmarks, if you will. I don't know quite the right terminology to use, but the -- the rates that MPIC presents to this Board and all the forecasting measures that Mr. Johnston takes are based on the Government of Canada ten-year bond yield. It is not a prediction of what the Bank of Canada's overnight lending rate will be, and that refers to the interest rate hike that we heard a lot of evidence about from last week. That is not what MPIC's forecasts are based on, and they are not, in the Corporation's view, interchangeable.

And they can -- you heard a lot of evidence back and forth about whether there's some correlation between the two (2). MPIC would say there isn't, especially over the short term. The Intervenors would say there absolutely is. But in our

view, they're not interchangeable, and it's the Government of Canada ten-year bond yields that matters for this Board, in our view.

Next slide, please. Some of the lessons learned is that forecasting interest rates is hard to do. It's impossible to do it accurately, and we're bound to get it wrong. And you heard Mr. Johnston say that, quite candidly, a couple of times during this proceeding. We're going to be wrong. We are going to be wrong. Nobody gets these things right. None of us are clairvoyants, and there's a quote there from the cross-examination of Dr. Simpson, and he, too, candidly admitted, no idea what interest rates will be on September 1, 2019. They may go up. They may go down.

The difficulty that MPIC has is that future ratepayers will pay if we forecast wrong. And there's that number again, often repeated, the losses that occurred as a result of basing our forecasts on the SIRF, and interest rates didn't rise as the banks predicted. And those losses, as we've heard, depleted the rate stabilization reserve, and the impact of rate stability, predictability, and volatility, and they made the Basic program less self-sufficient.

The three (3) forecasting options are

set out there, and as you well know, MPIC is of the view that the naive interest rate forecast is the best forecast, and offers the less -- the least amount of speculation going forward. You go with what you know, is essentially the message there. It also impacts or has an influence on how much MPIC needs to collect from its ratepayers to break even. That's important. That's why we're all here.

We need to figure out what rate is indicated to allow for break-even ratemaking. And it also influences the targets that are to be set for the Rate Stabilization Reserve. And lastly, as we've seen, and it's not listed there, it impacts upon the forecasting of how much investment income the Corporation can expect to receive.

Standard Interest Rate Forecast, or the SIRF, uses forecast of the five (5) major banks. It uses a mean reversion model, considers economic factors, and you know where I'm going to go, here. It has a history of being biased and being wrong.

And the 50/50 interest rate forecast awaits the results of the SIRF, and the naive, and is a compromise of sorts, but only half as accurate as the naive, the results would show. And recent history, as we've heard, would suggest that it

performs worse than the Standard Interest Rate Forecasting methodology.

And so there's that slide which Mr. Crozier calls the spaghetti graph, but it's important to know what this means. I know that it's been -- it's been up on this screen several times, but it's a compelling graphic, because that black line is the actual interest rate, and all those other lines are the forecasted interest rates by the banks. And you can see how that would result in a big problem for Manitoba Public Insurance.

And so -- and I'm going to suggest you that in an analysis of this particular graphic, beginning about February 2 -- 2017, you will see that the banks are starting to recognize the problem, and that their forecasts are kind of leveling out, where before, from February 2008 to about February 2016, the forecasts are showing a gradual increase. And now they're showing that increase, but then a flattening. It's more in line with where interest rates have been for the past couple years.

And so this -- this particular graphic is one that the Corporation points to again and again to -- to -- as a -- as a -- an argument in favour of going with what you know. And that is picking the

interest rate on a certain date and forecasting everything using that particular rate. Next slide.

It's another graphic; not as compelling, but it's in there nonetheless. And I'll explain what it does. So on the very left is the standard interest rate forecasting methodology, and in the middle is the 50/50, and on the right-hand side is the naive, the -- the methodology being proposed by Manitoba Public Insurance and then you'll see on the left-hand side, where it reads "differential from actual," well, the zero is where you want to be. Zero means you're right on a point. It's as accurate as one can get.

And so when you look at the history of how the SIRF has performed, it's not anywhere near that zero line. And inside that box is the black line that you should look at. So inside the box for SIRF, there's a black line that runs horizontal. That's the line that measures how close we should be to zero for forecasting accuracy.

And you'll see that the SIRF is above a half a percent, and that the 50/50 is just below half a percent, and the naive is as nearest to that zero line when compared to the other two (2). And so that's the best I can explain that graphic, but that's

-- that, we say, is -- there's another representation for support of going with the naive interest rate forecast methodology.

So just to be clear, the naive interest rate forecast takes the current actual interest rate and assumes no change. So it's also called the no-change model. And the forecast period is short versus long term. The short term naive is the least biased and more accurate, and the long term not relevant to rate making or the Dynamic Capital Adequacy Test. So we're only concerned with the short-term forecast period.

So we've quoted there from our Chairperson. At the end of the evidence that was presented by Dr. Simpson, the Chair asked:

> "Okay. What is the upside or downside if, instead of going -- we're going to go naive, or 50/50, or SIRF, that we just pick an interest rate at a specific point now, and say, that's the rate we're going with, and that's what we're going to put into our projections, and we'll be back here a year from now, and we'll see whether we need

to raise rates, or lower rates, to take into account that rate that we selected."

And -- and Dr. Simpson, he responded:

"Well, that's the naive forecast. That's exactly what MPIC is proposing, and has proposed."

MPIC forecasts to September 1, 2019. Shortening the forecast period obviously improves accuracy and limits the risk. So as we've seen, the rate indication has gone down since the Corporation filed its Application in June. And that was a result of updating the Government of Canada ten-year bond yield, as at September 30th, 2018. So that's more accurate, obviously, than -- than what was in the application in June.

So we have some options that are available to the Board. We could stay with the February 28th, 2018 rate, when the application was prepared, and we see the results of that, that it would be a .1 percent rate indication with a 2.1 percent Capital Maintenance Provision, or we could use the updated numbers, which I think the Corporation is inclined to do by using the September 30th, 2018, Government of Canada ten-year bond yield.

And you've heard Mr. Johnston say again and again that he wants to get it right. He is happy to come here and present a lower rate indication if it means his numbers are more accurate, and so he's happy to have his people provide to the Board six hundred and thirty-one (631) pages of modelling last week, so that the Board has before it the most accurate numbers available.

Now there's a third option there, and at the risk of annoying the Chairperson, we could use another rate that's closest to the rating period in the form of a compliance filing. And I understand -- the Corporation understands the concerns -- the procedural concerns the Board has with this, but by virtue of a fall hearing -- we're here in October -- the rate year starts March 1. Just by virtue of the calendar, this the best we can do. The next slide, please.

The Government of Canada ten-year bond yield. As I've said, MPI uses this forecast for the new money yield. It is not the Bank of Canada's overnight rate. The Corporation, and Mr. Bunston, and others that know of these matters would say there's no meaningful link between the Government of Canada ten-year bond yield and the Bank of Canada overnight rate

in the short term, and that's the outlook period that we're concerned with, twelve (12) to eighteen (18) months.

Sometimes the Bank of Canada overnight rate goes up, and the Government of Canada ten-year bond yields goes down in the short-term. And now here's a good example of that. So the Bank of Canada, just last week, increased its overnight rate, and the Government of Canada ten-year bond yield is presently down .2 basis points lower than the forecast. And when I say "the forecast," it's -- it's down from the February date that we used when preparing the application.

And a good -- just one (1) back, Kristen, just -- a good example of that you may recall from earlier this week was when we had the Pre-ask numbers before the Board, and the Intervenors were asking Mr. Johnston questions about it. Mr. Oakes asked Mr. Johnston, Well, the interest rates just went up last week. How does that affect my motorcycle people?

Well, those rates are going up. That was his response. And the -- the reason that the motorcycle rates would -- were -- were going to go up even though interest rates had gone up is because the

Bank of Canada overnight rate -- the Bank of Canada ten-year bond yield -- Government of Canada ten-year bond yield, I apologize -- went down. So interest rates went up last week. The ten-year bond yield went down, which meant for Mr. Oakes's motorcycle people, those rates were forecasted to go up.

As I said at the outset, MPIC has a -- a new investment strategy for 2018/2019 that, in the Corporation's view, materially reduces risk. It's now a -- gone from a co-mingled portfolio to five (5) segregated portfolios. The Basic claims liability reserve, the Rate Stabilization Reserve, and the pension reserve are the three (3) reserves that fall within the jurisdiction of this Board.

The risk tolerance was determined, as you've heard, by the Board of Directors. It's a low risk tolerance. And that was in step with the -- the investment committee, and the experts that are on that committee, along with the Department of Finance. We say, notwithstanding the evidence that you heard from Mr. Viola, that MPIC, having lost what it did in recent years, is it -- is -- had an influence or had a direct impact upon the -- the risk tolerance that was selected by the Board of Directors.

And the investment decisions in the new

investments strategy, as we've heard, were informed by the results of Mercer's ALM study, and you heard from Mr. Makarchuk on that front. The result of the new investment strategy is this: A 30 percent reduction in the equity required for the Corporation.

So, the rate -- the targets have gone down. And more importantly, I would suggest, there's 100 percent protection against interest rate risk with the new fixed-income portfolio. And that's only -- that's only available, according to Mr. Bunston and others, with the removal of some of those growth assets. So by having a hundred percent fixed income, we have protection against interest rate risk. And -- and Ms. Sherry and Dr. Simpson both confirmed this for the Chair, as I recall.

There is a big issue here, at least from the Intervenor perspective, of MPIC not selecting to include in its new portfolio real return bonds. MPIC does not view inflation volatility as a real risk, and the ALM study modelling does not support the selection of real return bonds based on MPIC's objectives and its risk profile.

As -- just before moving onto that, Ms. Schubert, I went through yesterday a number of investment decisions that MPIC would have had to make

in -- in arriving at its new investment strategy. There were a number of investment decisions, you know, the biggest of which, Mr. Makarchuk would say, was moving from a co-mingled to the buckets. That's a big investment decision. Lengthening the -- the portfolio, another one. I won't go through them all, but there were a numb -- we -- we've reduced our -- our holdings in real estate. We're not having any equity in -- in the Basic portfolio. We're diversifying in -- in the RSR.

There's a whole host of investment decisions, as you might expect, that went into the new investment strategy, and the only decision, as far as I can tell, that the Intervenors took aim at, was the failure to include real return bonds; that is the only decision, as far as I can tell.

So you heard evidence yesterday that, you know, well, perhaps we should have modelled the liabilities on the real liability benchmark. We went with the nominal liability benchmark. That, too, I would suggest, is an investment decision, one that's within the bailiwick of the Board of Directors.

Mr. Viola would say, Well, that's not even really a -- that's not even really an investment decision, that's just a frameworking thing. Okay. So

the only investment decision, then, is what asset classes should be in the portfolio. And he would say yes, you need real return bonds, and we said, No, we don't.

And it's not as though it wasn't considered by MPIC. That was modelled by Mercer and rejected by the Corporation. And that was based primarily on inflation projections. The evidence was simply not there to justify the inclusion of real return bonds at the risk of lower yields, lower returns. And that evidence, I think, was clear that if we were to replace some of the provincial bonds and some of the corporate bonds with the federal bonds, we would have even lower returns than we're now getting under the new investment strategy.

And so the goal of the -- of the investment strategy, according to Mr. Bunston, was not -- it was not seeking returns. It was to avoid risk. And so the risk to the Corporation is significantly lowered as a result.

(BRIEF PAUSE)

MR. STEVE SCARFONE: So I don't want to go too long on -- on the -- on the failure and I

don't even know if it's a failure of the -- MPIC's decision not to include some investments that would protect against rising inflation. But as you've heard, it was based on a couple things, one of which was looking at the historical data.

And you heard Mr. Johnston and Mr. Bunston say that this is from his DCAT report, that from 1992 to 2017, the mean inflation rate was 1.80 percent. And I know Mr. Viola will say, well, you know, you have to pay attention to that standard deviation. But -- and I'm not a statistician guy, but the mean, in my view, is what's important, because that's what the actual inflation rate was, 1.8 percent from 1992 to 2017. That was the mean.

And you heard Mr. Viola admit yesterday under cross-examination that MPIC is in fact covered, that was -- those were my words, but there is protection against inflation up to 2 percent. The concern he has is if inflation rises above that 2 percent and the volatility that inflation has. And the volatility is -- would just mean inflation going up and down.

And it's important to note here that if inflation was a real and genuine concern, then the Dynamic Capital Adequacy Test should reflect that.

And what I mean by that is, Mr. Johnston will tell you that when he's running the DCAT he puts in these adverse -- adverse scenarios and he has a top three (3), which is, you know, we've heard that a decline in -- in equities is one (1), that can result in significant losses. Another one is a really bad winter where there's a whole -- a whole host of car accidents and insurance claims.

These are scenarios that Mr. Johnston runs in his DCAT, as what he calls adverse scenarios. High inflation isn't one (1) of them. And the reason it isn't one (1) of them is because it was written off as not being a plausible adverse scenario. And that was done in collaboration with the Public Utilities Board and the Intervenors. They decided that -- that it wasn't a significant concern, not enough at least to -- to attract the attention of the DCAT.

And so accordingly, I would suggest as a result, investment decisions were made on the basis that inflation outlook would be low and stable. So it -- it shouldn't come as a surprise to the Board that the investment strategy doesn't protect the Corporation, Mr. Viola's view, against rising inflation, especially in the long term, when we have collaborative -- collaboratively agreed that it's not

a concern. And -- and it -- and we don't even have to run it through the DCAT.

So in the result, MPIC, I would say that its assumptions, particularly on inflation and the investment decisions that have been made are reasonable.

And this just touches upon the -- the evidence that we've heard from the two (2) experts, both Mr. Viola and Mr. Makarchuk indicated that, as anyone in the room will appreciate, the factors to be considered when making investment decisions are risk and reward and cost and time.

And in Mr. Makarchuk's view the expected returns would have been materially lower had the real return bonds been included in the portfolio, in the Basic claims portfolio. Next slide, please.

So this particular slide we saw yesterday and again today, and this was the result of some further modeling, Mr. Chair, you'll be well aware of the motion that the Consumers Association of Canada brought that compelled MPIC to have the Mercer Group conduct further modeling and specifically with respect to real return bonds.

So, Mercer was asked by Mr. Viola, through the Intervenor, to model the -- an investment

strategy that included a real return bonds and other asset classes. And you heard Mr. Viola say, as a result, you can see that on the modeling that we -- that was done by Mercer, when you remove the real return bonds, you're losing 80 basis points in returns.

But I'm going to suggest to you that it's not a very useful model to the extent that we know there was some cherry picking of sorts, and they were building a -- a portfolio that included asset class -- classes that the Corporation just wasn't prepared to purchase.

So this particular modeling that shows a decrease of .8 percent when you remove real return bonds, also included private debt. The Corporation wasn't interested in private debt. Included private equity. The Corporation wasn't interested in private equity. And growth fixed income.

So it -- it's not, in our view, a fair representation, deliberate or not, to say that this shows that real return bonds would've been of some benefit to MPIC and the ratepayers, because it specifically includes asset classes that Corporation said no to.

And I would suggest to you that those

three (3) categories are -- are largely inconsistent with the low risk tolerance that the Corporation has now in place.

And the last slide on investments is -- is one (1) that just sets out the -- the issues that I think that were canvassed by both Mr. Makarchuk and later by Mr. Viola. So should the liabilities, that is MPIC's obligations under the Basic program, have been modeled with a real benchmark, of course, they weren't. They were modeled with a nominal benchmark, as we know.

And the important thing there, and you heard this yesterday, that's a decision that lies with the investor. That's the decision that the Board of Directors is -- is entitled to make and it would be under their mandate to make these investment decisions.

They've been appointed by the Government of Manitoba, and so they are responsible. The Government of Manitoba has identified these members of the Board of Directors, specifically the Investment Committee, to do what's right and make investment decisions on behalf of the ratepayers of Manitoba Public Insurance. That's their job.

And the second question there, should

the recommended asset mix hedge inflation risk? Well, it does to some extent. It hedges nominal inflation risk, but not real.

And so there is some protection against inflation, but only up to 2 percent. And there was no evidence adduced before this Board that showed inflation is expected to rise above 2 percent. That's the bottom line. There's no evidence.

And I'll leave the remainder of the closing to Mr. Guerra.

FINAL SUBMISSIONS BY MR. ANTHONY GUERRA:

MR. ANTHONY GUERRA: Thank you, Mr. Scarfone.

So now we're going to be moving on to ratemaking expenses and revenues. The -- the next series of topics are -- are going to be discussed not in as much detail, because as I agree with Mr. Scarfone, the -- the focus of this year's GRA is really on -- on capital. Capital touches upon these issues, not nearly as much, though, as the issues that were canvassed by Mr. Scarfone. Nonetheless, they are important to discuss and I will -- I will do so.

On the issue of ratemaking, we know that rates are now established in accordance with AAP.

There are no new changes to the way in which we plan to make rates this year, but it's important to remember that breakeven rates are separate from the capital maintenance provision.

Breakeven rates mean that the revenue and costs associated with the new policies are properly costed. The Capital Maintenance Provision, on the other hand, is to ensure that there's an amount in place to maintain the capital of Basic in that policy year. So in this GRA, MPI only seeks a 0.1 percent increase in breakeven rates.

Now, we've updated that to 2000 -- sorry, to September 28th, 2018, and that results in a decrease of 0.26 percent, if those are the numbers that are ultimately preferred by the -- by the Board. Next slide, please.

This chart we say highlights the success that MPI has achieved in really making expenses a non-issue or non-factor in rate applications. And -- and as we see from the chart, we were projecting in 2017 for a steady increase in expenses.

And up until today's date, what we're seeing now is for the 2018, 2019 and 2021 years, a -- a reduction in expenses. And -- and the -- the

members of the Corporation who were involved in the -- the -- the different aspects of the business that -- that contribute to that should be commended for their efforts. It really does say a lot that over such a small period of time, the expenses position could -- could change so dramatically. Next slide.

We heard about MPI's new position on managing longtail body -- bodily injury claims. And in specific we heard about the two (2) topics of -- of claims intake and triage and centralized reserving.

On the issue of intake and triage, we now have a process to identify what we call complex claims earlier on. What we do is we now -- we now manage those claims in a way that improves the outcome for the customer, and also improves the resolution time for the Corporation which -- which has a tendency to decrease expenses as well.

While there will be an increase -- or there has been an increase in full-time employees which just very recently happened, we are expecting that -- that this will -- will improve the claims cost approach, and we look forward to providing a further update on -- on that process in the next GRA.

With respect to centralized reserving, we now have a centralized reserving unit and -- and we

submit that that solves the problem that we incurred in previous GRAs with respect to, perhaps, optimistic reserving practices. So again, we would expect that in the next GRA, we would be able to provide an update suggesting that the centralized reserving practice has also been beneficial.

Information technology was a -- a focus of this year's Application. I would submit more so in the -- in the phases that -- that preceded the -- the hearing. And I think that's a -- a testament to the -- the job that MPI did in becoming very transparent about its IT projects and how it costed them, or perhaps did not cost them in the way it should have and -- and how it's -- how it structured its practices moving forward to address some of the past issues that it -- it experienced.

So I'd like to approach the topic of information technology in the past, present and future. Past meaning the two (2) projects that MPI considers to be -- to have lacked the -- the -- the business perhaps value that it expected. So we have the customer claims reporting system and the property damage re-engineering project.

The present, where we are right now, which is the development and information -- excuse me,

implementation of a new IT strategy, our development and implementation of a new value management strategy, Gartner's assessment on where MPI's stacks up against its peers on issues relating to information technology, and the ongoing implementation of MPI's staffing strategy.

In the future we've heard some evidence about where MPI is hoping to take its legacy modernization project.

Focusing at this moment on the past, the customer claims reporting system. This was really MPI's failed attempt to be an innovator. It was cancelled in April of 2018 after it was reviewed using the value management process.

But as we've heard, MPI retains the intellectual prop -- property from that project, and it may rely upon that in the future to its benefit. And I -- I say that only because although MPI considers this to be a failed project, even failed projects do have some silver linings and some benefits that may be realized in the future.

The same may be said about the property damage re-engineering project. This failed because MPI failed to adequately cost the project, and was too focused on the benefits. But the program has

standardized and improved the estimating process and has opened up future possibilities for MPI.

The present, where are we now? We have a new IT strategy which ensures that the business needs of the Corporation are met by IT and business capabilities. It's a shift and an approach -- or it's a shift in the approach of MPI to IT. And we say it now aligns better with industry best practice. As you heard from Mr. Bunko, it's a difference now between where we were and where we're heading.

And I would like to turn over to the next slide, please, as this box, perhaps not as -- as clear as I would've liked to have had it, but regardless, it's important I think to restate where we were verses where we were headed -- or where we are headed, rather.

We were leaders in creating innovation, we're no longer that. We are now about adopting proven mainstream technology. We used to execute high-risk projects. We now identify all the risks prior to initiation and incorporate that into the project decision.

We used to have project governance with nonbusiness project sponsors for all projects. We now have the operational business champion, who testified

before the Board this year, Ms. Campbell.

We customized -- we used to customize out-of-the-box software to suit our processes. Now we will align wherever possible with -- our processes with the industry best practice and incorporate vendor software as provided.

We used to candidate projects that were not vetted through the detailed van -- value management process. This year we heard lots about the new value management process and how it has become ingrained in the MPI process, and in fact, its culture.

And we used to have technology drive change within the organization. Now, it's the other way around. IT capabilities are created to support the business capabilities.

Going back to the topic of value management. The process now ensures that projects are -- are properly informed and costed. It was applied, as we mentioned, to both the CCRS and PDR projects, and the results show its potential for success in measuring the adequacy and the costs and benefits of those projects.

It required a culture -- sorry, a change in MPI's culture, but as I mentioned, it is now

something that we consider to be ingrained in that culture.

We're now still implementing the staff strategy. You've heard evidence that twenty (20) of the twenty-seven (27) external IT consultants were successfully transitioned to full-time employee status, and you also heard that MPI continues to make progress towards its goal of -- or transitioning the remaining twenty-seven (27) consultants with an updated savings of approximately $3 million, I believe is what the -- the total was now.

And finally, we heard evidence from Mr. Henry about where MPI stacks up against its peers with Gartner's assessment or IT score. So if I could ask you to change the slide, Ms. Schubert.

And -- and what this really looks at is the new IT score, which measures MPI against the industry average. Oh, that's much better. Thank you.

And as we can see here, in almost every case either MPI aligns completely or exceeds the -- the -- the other established peers and -- and there -- although there are always room for -- there's always room for improvement and MPI will continue to focus on improving and -- and satisfying the recommendations made, it should be noted that there have been

improvements, including with respect to improving its maturity and reducing its costs.

And I think Mr. Bunko testified that it's very difficult for -- for one to improve maturity at the expense of -- of reducing costs and so that should also be noted as well.

The future, where are we going? Well, we heard again a bit of testimony about the legacy modernization project. It's still an ongoing project in its infancy. MPI so determined the approach to take, but has assured and will continue to ensure all the stakeholders that it will apply the new value management process to that project, and will be open and transparent about where its direction is headed.

Vehicles for hire. Vehicles for hire was not a -- a significant issue in this application, but it does form part of the rate ask. And so it needs to be addressed.

So MPI has applied for final approval of the 2017, 2018 and 2018/2019 vehicle for hire -- excuse me, it should be vehicle for hire rates for service, and also applies for the rates for 2019, 2020 using the same methodology.

What you heard in terms of testimony on the issue of vehicles for hire was that it's time band

model or the time band model complies with the existing regulatory process and appears to be working. MPI continues to amass data that it will continue to analyze to determine whether or not future rates should be modified.

The DSR incentives and loss prevention strategies should help close the gap between the taxicab vehicle-for-hire category and the passenger vehicle-for-hire categories as well. MPI will continue to look at those two (2) to determine whether or not there should be additional measures taken in regards to those rates.

And finally, ongoing topics. These are items that were -- will -- will be forming probably a bigger portion of GRAs in future years. Obviously, there were some questions asked about the -- the position of MPI on its driver safety rating. We know that last year the Board approved a 1.8 percent increase in driver premiums through the demerit side of the DR -- excuse me, the DSR scale and that we held a technical conference on the issue on March 20th, 2018.

The issue was whether -- sorry, the issue is not whether a DSR premium should be actuarially sound. I think MPI would agree with the

Board that that's a nonissue. What really appears to be the issue is what is the appropriate model or alternative model to be used, and the evidence is that MPI is consulting with the public on the issue and plans to provide an update of the results of its analysis in the upcoming rate application for 2020.

Service fees. We heard that MPI is not asking for a change in its service fees in this General Rate Application, and nor is it seeking to introduce any new service fees this year as well. As we know, a service fee review was conducted in the 2017/2018 fiscal year and the results were shared with the Board in this year's GRA.

We are waiting, however, a decision from the Government of Manitoba on the service fees under the Driver and Vehicles Act, and at this point in time Manitoba Public Insurance is not prepared to -- - to seek a change in the non-DVA service fees until the results of that decision are -- are made known. We expect that we'll be able to provide an update on this issue as well in the upcoming GRA.

So to -- to close off again, the issue here is whether or not MPI's application is -- presents rates that are just and reasonable. That's the test.

MPI submits that its conducted countless hours trying to balance, coming to a balance between the -- the interests of maintaining the -- the financial adequacy of the Corporation, versus making sure that the -- the rates charged to consumers are no more than what is absolutely necessary.

We feel that we've -- we've struck that right balance. There is a decision to be made, though, by the -- by the Board as to how we structure this. Do we use the rates, the interest rates as -- as at February 28th, 2018, as at September 28th, 2018, or at some date in the future through a compliance filing?

MPI is prepared to -- to cede some discre -- discretion to the Board as to what is the appropriate approach. It should be based, though, on the naive interest rate as that is, at least in the short term, we're talking about twelve (12) to eighteen (18) months, that is the most accurate way of predicting those interest rates.

2018/2019 vehicle-for-hire rates should be approved based on the current methodology, and final approval should be given to 2017/2018 and 2018/2019 vehicle-for-hire rates as well.

Subject to any questions, those are our

submissions. Thank you.

THE CHAIRPERSON: Thank you to both of you. I'll ask the panel if they have any questions.

Any questions...?

Okay, Mr. Scarfone, I've just got a question. Can we go to, Kristen, page 20 -- I can't read my notes, 28.

Mr. Scarfone, can you confirm with me that 50/50 was proposed by MPI two (2) years ago?

MR. STEVE SCARFONE: Yes. It was a proposition put forward by MPI. That was when Dr. Cleary gave some evidence from MPIC.

THE CHAIRPERSON: Correct.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: And at the time, interest rates had been flat for -- for a considerable period of time?

MR. STEVE SCARFONE: For almost five (5) years.

THE CHAIRPERSON: Okay, I just want to confirm that.

That's the only question. Gentlemen, I appreciate the submission, especially given that it occurred so quickly after Mr. Viola finished his testimony.

Mr. Oakes, we have a time constraint, I'm just wondering how long your submission would be.

MR. RAYMOND OAKES: Mr. Chairman, I plan on being very direct and to the point and concluding in less than ten (10) minutes.

THE CHAIRPERSON: Oh well, we love to hear that, Mr. Oakes, thank you. If you'd like to proceed with your submission now. Thank you.

MR. RAYMOND OAKES: Thank you, Mr. Chairman.

FINAL SUBMISSIONS BY MR. RAYMOND OAKES:

MR. RAYMOND OAKES: MPI comes to this public utility rate hearing this year after a year of superlative financial performance and condition. To put it very simply, income is up and both claims costs and administrative costs are down.

Retained earnings for the Corporation grew from 261 million in 2017 to 352 million by February 28th, 2018, and then 425 million as of August 31st, 2018.

Operating expenses decreased $5 million for Basic and overall claims costs decreased by $72.5 million.

Investment income -- income increased

38.2 million, and the 2016/'17 net investment yield increased to two -- 6.08 percent. The superlative results are indicated in my cross-examination from pages 567 through 571, and also demonstrated a very significant trend in the loss ratios where they declined in the period from 2007 to 2015, that nine (9) out of eleven (11) years, as confirmed by Mr. Johnston at page 571 of the transcript at lines 19 to 25 and following.

We saw the Corporation apply for rates for motorcyclists. The actuarially indicated rate was between .9 and 1 percent, that was indicated by Mr. Johnston at page 562 of the transcript, lines 20 and 21.

The best evidence of the Corporation could bring, the most recent, was September 28th and that dropped the required actuarially indicated rate down to some .2 percent for motorcycles, which we would suggest should be rounded down to zero.

This is, of course, based on the naive interest rate forecast and we'll speak more about that in a few minutes.

MPI then, based on that September 28th financial information, was seeking a 2.2 percent overall rate increase for motorcyclists due to their

very creative creation of a new cash cow that they call the Capital Maintenance Provision, or CMP. This additional percentage increase attributable to this new grab is not part of the accepted actuarial practice rate calculation, and that's admitted by Mr. Johnston at page 563, lines 10 to 13.

Mr. Johnston finally concedes at page 564 of the transcript, lines 15 to 24, that the Corporation can use what I had termed its arbitrary management decision to re -- arrive at whatever number they feel is justified for this new CMP.

As we know, this new provision is politically motivated. The president of the Corporation confirmed that his Board of Directors and the government of the day have directed that the Corporation should collect as much money as possible in order to provide smooth sailing for the government and the Corporation, irrespective of their mandate to provide breakeven equitable affordable auto insurance in this province.

And of course, those are my words, but that's what I see and understand the position to be.

The advantage to the Corporation in collecting 18 million to 20 million, that is not actuarially determined to be necessary at this point,

is obvious. In the case of missteps made by this Corporation's executive, such as the race -- recent PDR and other IT initiatives, results in unanticipated waste of money and the Corporation doesn't have to come back to this Board to justify receiving funds for that folly.

Mr. Scarfone said today that there was no more risky IT initiatives, unless they are necessary for core business functions. And that gives me quite a bit of concern as certainly the history of those projects would indicate.

So the -- the CMMG is an example, I would say, of the talent that they have and especially their creative genius. It's a -- calls to mind when I think of how this might work to -- to MPI and the executive, how they came up with this. I think of the Cow Brand Baking Soda company. There, that company makes and sells a baking ingredient, but they're not content with that and they invite -- invent new uses and -- for sales.

Imagine if you will these talented geniuses are sitting in a boardroom, and one (1) executive says, tell you what, here's an idea, we'll tell the people to open it, put the baking soda in the fridge and then throw it out after two (2) or three

(3) weeks. The other executive turns to him and says, I've got a better one. I'm going to get the consumers to buy it, pour it immediately into the garbage to make it smell better. So that type of creativity certainly has some rewards, and this Corporation certainly has some talented geniuses on their side.

Two (2) years ago they came up with a IRFR. This surcharge would generate about $20 million. Create a slush fund in addition to the other revenues, if things don't go the way the Corporation forecasts.

This year it will be the CMP, again, about $20 million. Mr. Johnston says at page 1382, it's a coincidence, but I believe the motivation comes from the same creativity, surcharge using a newly created acronym that the Corporation tries to convince everyone in the room was necessary. Just like putting baking soda into your fridge or the garbage, but it turns into this $20 million cushion for the Corporation.

I'd suggest that if the Corporation uses its best estimates, then there's no need for these slush funds or cushions in the event of negative performance.

The CMMG would submit that the CMP is

not actuarially sound, it's not justified on the basis of the recent financial performance, that it would result in fair and inequitable rates, and it would provide no incentive for the Corporation to continue to tighten its -- its belt and be thrifty with his expenditures.

We would submit that -- respectfully that the Public Utility Board should continue to hold the Corporation's feet to the fire, so to speak, to ensure it does a diligent job of matching assets and liabilities, making good investment selections and managing its claims and administration prudently.

This type of performance will result in additions to the RSR from the bottom line of the Corporation, and not require the Corporation to creatively develop new ways of skimming money off the premiums to be paid by its Manitoba insured.

This all, as well, leads us to the RSR, and at pages 592 of the transcript and following we reviewed the PUB approved ranges of the RSR from 2005 to present. Although the Corporation was able to carry out its mandate as conceded by MPI in years where the RSR approved range was as low as $50 million, the Corporation was somehow able, in 2015/'16 to convince this Board that the appropriate range was

231 million to 366 million.

Even Mr. Johnston of MPI acknowledges that the corporate risk profile was only 4 or 5 percent higher than in years previous, and the reference is page 595 of the transcript, lines 9 to 11.

But somehow that RSR target range is still doubled from the previous year. Mr. Johnston also conceded at page 593 that the provision of insurance was likely unchanged from the previous year. But again, these targets still reach fantastic levels without any need in the view of the CMMG.

At page 596 of the transcript, Mr. Johnston agrees that during the 15 years of the RSR approved range, which we reviewed, there were not significant drawdowns on the RSR as a result of insurance issues.

The Corporation has forecasted that at the end of the year 2019/20 the RSR is going to be some $280 million. It is currently sitting somewhere in excess of 200 million. I would submit that the RSR is already far larger than what is needed, given the history of the Corporation in providing its mandate to Manitobans, and this supports our contention there is no need for CMP at this time.

The Corporation's creativity also plays out in the number of claims reserves and other reserves that it maintains, it -- for example it maintains 234 million in claims reserves as subrogation reserves of some $30 million, doubtful accounts another million dollars. And then there's the provisions for adverse deviations to cover what I would think are every possible eventuality.

In looking at all of these reserves and Pfads, one (1) similarity is evident, despite the fact that deviations and results can be either positive or negative, the Corporation deals with all of these by collecting more money and developing all of these pools of funds to feather the nest going forward.

The Corporation's approach when it comes to the interest rate methodology, again, is directed at selecting the approach which would most likely produce a large financial cushion for the Corporation at the expense of fair and equitable rates for its Manitoba insured.

Mr. Makarchuk at page 604 of the transcript indicates that short interest rates have definitely gone up. His evidence at page 15 of his report, Exhibit 23, says that:

"While we acknowledge the Canadian

inflation rates have increased significantly since the time of the study, 2.8 percent at August 2018 versus 1.4 percent at August 2017 [and confirms at page 603] that there is correlation between where the short-term inflation is and the short-term interest rates."

The interest rate methodology is an extremely important issue for motorcyclists. Mr. Johnston at page 1369 of the transcript, lines 21 to 23, says that it looks like motorcyclists are about twice as sensitive. Perhaps -- maybe a little more than passenger vehicles.

Under the 50/50 methodology, the breakeven rate indication is a .6 reduction in motorcycle premiums. Even if the Board endorses the CMP, then it would only be a 1 percent increase.

The Corporation confirms at page 1368 of the transcript that if interest rates rise in 2019, then, all things being equal, we would have changed more than we would have if we had used the lower rate, which I submit is not equitable, the Corporation would collect those additional premiums. It isn't fair. It isn't in keeping with breakeven rates.

As per CMMG Interrogatory 1-4, we've already had three (3) years since 2010 were the loss ratio was under 56 percent.

When we look to what's happening in the marketplace and the economy, we've already seen the increases in the Government of Canada ten-year bond rates, and more recently in the Bank of Canada interest rates.

At page 586 of the transcript, Mr. Bunston says:

> "While I think both central rates have indicated they expect their administered overnight rates to increase gradually."

As previously indicated, considering all of that, I respectfully submit that it would be naive for this Board to accept a naive interest rate formula at this time.

I do understand and recognize how various of the parties have gone back and forth over the past few years in either selecting the naive or the 50/50 interest rate methodology, but I think to not acknowledge the recent environment of increases in interest rates at this time is kinda like the Board being on guard duty for the night. And sometime

before dawn, they walk away and say this is silly to be on guard anymore, and nothing's happened in the past few hours.

In all, the CMMG is calling on this Board to ensure that the excellent financial climate that the Corporation has enjoined during the past year is reflected in rates that are fair and equitable and actuarially sound. This necessity excludes a collection from CMP.

CMMG is not in favour of a rebate, but that even would be more appropriate than the Corporation's attempts to gird the piggy bank a little more.

Before the Board should look at -- I suggest that the Board should look at the Application directionally, look at the recent financial experience, look at the recent interest rates on the move. The rates should be flat without the insurance consumers of Manitoba paying more than they should have to. A discount based on the 50/50 interest rate methodology is indicated and is justified given the Corporation's financial performance.

I'd like to, at this time, thank the Corporation and its witnesses for their skill and presentation of the Application. They did so with

candor and with great knowledge.

I join the Board in wishing Mr. Ward Keith his -- best wishes on his retirement. The CMMG was very pleased to work with him for several years and was always impressed by his competence and skill.

And lastly to the Board, I thank you for the consideration of our intervention.

THE CHAIRPERSON: Thank you very much, Mr. Oakes.

This concludes today's session. We will adjourn until 9:00 a.m. tomorrow morning, when we will hear from counsel for the Consumers Association of Canada and a reply, if any, of MPI.

Thank you very much.

--- Upon adjourning at 3:10 p.m.

LIST OF EXHIBITS

EXHIBIT NO.	DESCRIPTION	PAGE NO.
CAC-30	CAC PowerPoint Presentation	1768

--- Upon commencing at 9:05 a.m.

THE CHAIRPERSON: Good morning, everyone. Ms. McCandless...?

MS. KATHLEEN MCCANDLESS: Good morning, Mr. Chair, members of the panel.

Today we are going to hear from CAC for their closing submissions and then we will have any reply from MPI and that will conclude our proceedings.

THE CHAIRPERSON: Thank you. Mr. Williams...?

FINAL SUBMISSIONS BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Thank you and good morning -- morning, members of the panel. Just a couple of introductions, our client Ms. DeSorcy, who's been a regular fan of these proceedings is -- is behind us and out in the -- the huge audience to -- to my right is our colleague Ms. Amanda Beaumont who is -- - is responsible largely for the presentation, the PowerPoint that's -- that's before.

THE CHAIRPERSON: Could you point her out, Mr...

I just like the -- all of the people on line to understand the depth of that.

DR. BYRON WILLIAMS: Yeah, it -- it is hard to pick her out.

I also just on -- just by preliminary comments, our clients do want to thank the Public Utilities Board for this opportunity. The Intervenor support program is -- is very important to the dialogue and our client truly appreciates the -- the opportunity that they have.

Just as we go through the documents, I'll indicate we've got a lot of the references from the record, from the transcript. If they're in italicized font, those are direct quotes. If they're not in italicized fonts those are paraphrases and certainly we've put the page reference there so if you don't trust my paraphrases, you can always go back to the record.

And finally, there are two (2) confidential slides that -- that we -- we may get to a bit later. I believe our PowerPoint would be CAC Exhibit 30 and I'm getting the nod from the Board secretary.

--- EXHIBIT NO. CAC-30: CAC PowerPoint Presentation.

CONTINUED BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: So the title is Cushion, Comfort and Accountability, Regulatory Independence and Captive Ratepayers.

And our clients certainly in this hearing is going to focus on the -- the importance of the independent regulatory process as signalling to Manitoba Public Insurance what are efficient choices that -- that best protect both itself and consumers.

And I want to start with just a discussion on irony. And our client certainly considers this to be an ironic application. Irony Element 1, we have a corporation seeking a roughly $20 million rate cushion, the Capital Maintenance Provision. During the same General Rate Application is announcing roughly a $20 million write-off of imprudent information technology expenditures.

Ironically, we have a corporation that claims a commitment to fiscal prudence but calculating that $20 million Capital Maintenance Provision via a minimum capital target that expressly provides an eight (8) figure cushion for, in quotation marks, "inadequate or failed internal processes."

And ironic this application because we have a Crown monopoly entering a new age of

accountability and transparency. But then think back to the IT -- the information technology pane, the it wasn't me information technology panel, where corporate culture was blamed for the -- the decisions -- the imprudent decisions that were made.

The irony does not escape our clients in this hearing. That we have external experts presented by MPI who consumers trust to be independent, but these external experts, in the case of Gartner, for -- did not apply basic elements of a fulsome, in quotation marks, "net present value calculation."

And we also have an expert, Mercer, who allowed their best estimates of future interest rates to be sub -- suborned by their clients' choices, materially suborned.

From our clients' perspective, there is an irony in this hearing where we have a Crown monopoly professing a low risk tolerance for investment risk, yet, assuming away long term inflation and real interest rate risk in the portfolio, generally, and bond specifically and not testing the consequences of its decision, whether by its failure to test for a material tracking error -- basis risk is another phrase for that -- or choosing

not to undertake the stress tests recommended by Mercers. And you'll see that in Exhibit 44, filed by Manitoba Public Insurance late in the hearing, and which has kind of gone under the radar.

Finally, our client finds it ironic when in an era where mandate letters are talking about operational independence and freedom from political interference to have, in this hearing, overt hints to the Public Utilities Board of the will of the government.

Our clients are captive ratepayers. They are highly vulnerable; not only with the legal, the statutory monopoly on Basic but with the factual market dominance of Manitoba Public Insurance in Extension. And there are two (2) key consequences of that monopoly. One (1) is, our clients, that Basic consumer right of choice, has been effectively nullified and, secondly, efficiency signals for a Crown monopoly as compared to publicly traded private sector companies in a competitive marketplace are significantly muted. MPI does not face the risk of ratepayer flight, unlike the entities regulated by the Office of the Superintendent of Financial Institutions.

No efficiency signals are sent to

Manitoba Public Insurance through the price of shares in the marketplace, unlike publicly traded companies. And its sole shareholder is subject to many political pressures.

In this context, our clients rely upon this Board to ensure that monopoly power is not abused through rates that are unjust or unreasonable and to protect future ratepayers by sending efficiency signals that the marketplace cannot, by virtue of the monopoly.

Slide 8 presents the Board's statutory jurisdiction and highlights its independent nature. We all know the Board's mandate is -- is to set just and reasonable rates.

And on slide 9, our clients outline the four (4) elements of the -- the five (5) elements of that just and reasonable test as historically applied by the Board:

Ensuring that forecasts are reasonable and that, of course, is important when we look at the interest rate forecast;

Ensuring that actual and projected costs and behaviours are necessary and prudent and that is a critical element of this hearing;

Assessing the reasonable revenue needs

of the application -- of the applicant in the context of its overall health and that certainly goes to issues such as the reserves and the CMP, Capital Maintenance Provision;

Less prominent in this hearing is the allocation of costs between classes or between ratepayers;

And ultimately, setting just and reasonable rates.

Our client admits to being puzzled by what it understands to be the Manitoba Public Insurance case theory. Our client understands, at least when it relates to infor -- information technology, it is to acknowledge past errors and to plead for forgiveness.

But then, the Corporation goes on to suggest that it be insulated from accountability for future mistakes by the $20 million rate cushion and it asked for a cushion for stable rates because it tells us, as Mr. Graham did later in the hearing on October 23rd, that the provincial government has concerns about net income volatility.

And that's all very fine and good, and that's important. But when we set just and reasonable rates, rate stability is only one (1) consideration.

Prudence, reliability of forecasts, the overall health of the Corporation, fairness between ratepayers, fairness between different generations of ratepayers are critical. And certainly our client sees the Capital Maintenance Provision as inconsistent and we'll get to this after the coffee break with long-term principles of intergenerational equity.

MPI is also asking this Board to take a hands-off approach to its investment portfolio because its Board claims to have low risk tolerance.

And our client acknowledges that Crown corporations are entitled to make imprudent mistakes. They are entitled to rely on the BI3 technology and take a passive approach to complex claims management with long -- long-standing rate cost to consumers.

On the second bullet, they're entitled to have IT staffing -- the word should be inserted "budget levels" -- far higher than the industry average. They are entitled to enter into technology adventures relating to physical damage re-engineering including the customer claims reporting service assistant.

They're entitled to do that without appropriate business cases and they're entitled to do so without disclosing material information to external

third-party advisors, with the Public Utilities Board and consumers are trusting to provide intent -- independent advice.

Manitoba Public Insurance is entitled to assume away real interest rate risk in the design of its minimum risk portfolio, the nominal lia -- liability benchmark. And to do so without testing for tracking error or undertaking stress tests. They're entitled to do that.

And they are entitled to cherry pick an interest rate forecast other than the preferred estimate of its external third-party advisor.

But the Board has its own privileges, its own responsibilities, its own rights and the Board -- this Public Utilities Board is not obliged to pass on these imprudent cost to ratepayers. It is not obliged to build a cushion for imprudence into the rates or to pass on imprudent and unreasonable costs.

In the sections that follow, we're going to talk a little bit about the rate implications for individual consumers and then to seek to apply that just and reasonable analysis that the Board is set out for us in -- in prior Orders, have a little conversation towards the second last bullet on slide 13 in terms of consumer engagement and that's when

you'll be relieved to hear that you no longer hear from me after that second last bullet and I'll turn it over to my colleague Ms. Dilay, and she will take you home with our clients' recommendations.

Our client does want to talk about the implications of the rate application for individuals. And my client Ms. DeSorcy always reminds me that it's about people. It's not about theory. It's about the real live impacts on ratepayers.

Manitoba Public Insurance historical and current opinion polling tells us that the value proposition for ratepayers relates to price. It tells us that the strongest driver is stable and fair rates, but interestingly, and surprisingly, Manitoba Public Insurance has not tested with Manitobans, how they define stable rates and whether the concern for stable rates relates to rates on average, or to the experience of individual ratepayers.

MPI polling both historic and current tells us that another important driver of the value proposition is the cost of vehicle insurance.

Interestingly, given the avowed purpose of the RSR, and one (1) of the stated purposes of the Capital Maintenance Provision, i.e., to avoid rate shock, Manitoba Public Insurance has no formal

definition of rate shock. Mr. Johnston puts the -- a 5 percent assumption into the DCAT but was quite frank that there's no formal corporate definition.

Mr. Johnston was also frank, and our clients share his view, that rate shock is an individual experience. It's not an average. And he tells us at transcript page 838 and 839 most consumers are concerned about their own bills, a 5 percent increase, he can relate to may be tough to swa -- swallow for consumers.

So using that proxy for rate shock, that 5 percent rate increase proxy, we can conclude based upon the record of this hearing that over three hundred thousand (300,000) vehicles will increase their rates by over 5 percent. Twenty-five -- about two hundred and ninety thousand (290,000) will experience a premium increase of between 5 and 10 percent. Another forty thousand (40,000) between 10 and 15.

And whether you look at it in percentage terms or increases over $50, either perspective, that accounts for more than 25 percent of vehicles.

And the Capital Maintenance Provision is making a significant contribution to the rate shock

experienced by those three hundred thousand (300,000) vehicles. And Mr. Johnston -- I didn't even have to ask him, he volunteered, let's say we didn't do the Capital Maintenance Provision which may be what -- which may be what you're interested in, that would shift down premiums by about 2 percent.

So in this section of our submissions, our client recommends two (2) findings to this Board; one (1) that rate shock is an individual experience not an average; and two (2), that over three hundred thousand (300,000) vehicles where -- will experience rate shock level increases if the rate -- rate application is approved with the CMP or Capital Maintenance Provision load being a significant factor.

In part 3 of our submissions, we turn to ensuring that forecasts are reasonably reliable. There's all sorts of forecasts that go into the MPI application, but not surprisingly, our focus will be on the interest rate forecast.

And My Learned Friend, I'm not mentioning whose birthday it is today, but My Learned Friend Ms. McCandless asked the -- the critical question in this hearing on interest rates. Recognizing that the Board last year rejected a fifth -- naive forecasts and approved a 50/50 forecast, she

asked, on or about transcript page 365, What change in circumstances or new evidence is the Corporation aware of that would support its position in the use of the naive interest rate forecast, what has changed since last year?

And there was a brief pause, as reflected in the transcript, and then Mr. Johnston candidly said, I'm struggling with the right answer. And Mr. Giesbrecht suggested that there is not really any significant change, in terms of the environment of the marketplace.

Our client megs to differ. In our clients' view there have been significant changes in the marketplace, which cast additional doubt on the naive interest rate forecast.

First, there's been a maintenance and an enhancement of rapid US growth. Over the last two (2) years, the Bank of Canada also has moved up its overnight rate, its policy rate has moved upwards five (5) times and twice in the last four (4) months.

There is general acknowledgment, thirdly, that the Canadian economy is approaching full capacity. There's also lowered trade tensions with United States and as the Bank of Canada has made palpable and evident both in its conversations in

September and its overnight policy change in October, its concern about inflation has been made more palpable as is its willingness to increase rates.

And take a look at -- if -- if you have the chance and they're both referenced on the record, those Bank of Canada news releases, whether in July or whether in October and see the word "gradually" disappear from July to October. There's a message there for ratepayers and for forecasters.

Dr. Simpson has not tres -- tested for a structural break in the statistical information, but he was asked by PUB counsel whether this latest pattern is a meaningful departure from that of earlier periods. And he said, yes, there's no question the period of low policy rate and low interest rates has ended. The overnight rate or policy rate has begun to rise. The economy is moving towards capacity.

And listen to the comments of Stephen Poloz, P-O-L-0-Z. It's pretty much considered to be at capacity now and underlying tier inflationary pressures are beginning to drive concerns that interest rates need to be higher. And it's bounced around a bit, but we know in July it was 3, 2.8 in August, down to 2.2 in -- in September, but there's been some bouncing around in terms of inflation and

the actual level has been higher as well.

And as Dr. Simpson observes, this material change in circumstances is actually been reflected in the forecasting performance of the -- the different approaches, whether it's standard interest rate forecast, the naive or the 50/50.

Again, not testing statistically for a structural break, but it's palpably apparent that the SIRF, Standard Interest Rate Forecast, has clearly outperformed the naive. And his expectation that the naive going forward is going to be an understatement of interest rates.

And at the bottom of this slide, being slide 35, he underlines two (2) important points about the results of the naive forecast over the last couple of years. One (1) is that its errors have been considerably larger, but also -- he didn't use the word bias -- but they've also been consistently in one (1) direction, in the direction of underestimating interest rate growth.

It's interesting to look in terms of the advice of MPI external officials -- not officials, but external advisors on interest rates. Before this Board, we've actually only had one (1) external expert from M -- presented by MPI who spoken to the issue of

interest rate forecast and that was Dr. Cleary -- Cleary, C-L-E-A-R-Y, in 2016. And his advice was to adopt the 50/50 approach and that's found in a CAC exhibit with Slide 17 and 18 repeating that advice.

Dr. Chang has spoken of the naive forecast, but only in the context of his DCAT or Dynamic Capital Adequacy Testing investigation. And he specifically, in response to Information Requests of the Board, indicated that he was not speaking in terms of the naive on a basic ratesetting context.

Mercers also had an interesting comment about the naive forecast. Again, I want to be clear, this is not in the rate-setting context, it is not in the Dynamic Capital Adequacy Testing comment, it is in the context of the asset liability matching context.

And I asked Mercers perhaps the silliest question on the record of this hearing. When you're doing asset liability matching, why aren't you doing that analysis, assuming that interest rates stay flat? And certainly if the Board was observing the Mercer's witness they could observe his facial reaction to my silly suggestion. But he responded:

> "We would not recommending (sic) doing analysis assuming interest rates stay flat or constant."

And I asked him why not? And he shared with us the expectation, the consensus, of Mercers their standard interest rate forecast which all their investment professionals or actuarial professionals rely upon and which is assuming that there will be a gentle rise in the yield curve over the next few years returning to equilibrium. That's the Mercer's view.

I do want to be clear that this standard forecast of Mercers, their national assumptions, were not what Manitoba Public Insurance used or Mercers performed for Manitoba Public Insurance in the context of its asset liability analysis, but that's the Mercer's consensus. It's definitely not naive.

Both Mr. Guerra and Mr. Watchman pressed Dr. Simpson on his recommendation; that's at Slide 28 of the PowerPoint. And generally, Dr. Simpson concluded that the SIRF, the Standard Interest Rate Forecast, is better than the naive and that it should be -- certainly be part of the interest rate forecast. He also concluded that the existing Board Order for 50/50 is certainly better than the naive,

Dr. Simpson did make -- express some caution in his -- in his recommendation, reflecting a bias to the Board's Order from last year, which was

50/50, not standard interest rate. And as he says in the second bullet on this page:

"If I were allowed to pick weights, they probably wouldn't be 50/50. I'd give more weight to the SIRF."

And, again, on transcript pages 1320 to 1321, he also notes the impact of the most recent Bank of Canada change in the over -- overnight rate and -- and indicated, again, an increasing affection analytically for the Standard Interest Rate Forecast.

During this hearing we've heard a lot from Manitoba Public Insurance about its alertness to interest rates, whether it's duration mismatch risk or -- or pricing risk. And if one were not familiar with the history of this Board with Manitoba Public Insurance on interest rate issues, one might form the impression erroneous, in our clients' submission, that MPI has vigorously been responding to interest rate risk.

The evidence of Mr. Johnston on this point is helpful. One (1) of the things he pointed out at about page 661 of the transcript was when the great recession hit, as we start to struggle with -- with challenges relating to historically low interest rates or certainly historically low outside of the

great depression, that Manitoba Public Insurance was ill-equipped from a financial modelling perspective to confront the unexpected changes to interest rates.

And in fact, up until certainly 2010, '11 or '12 didn't even have the capacity to model interest rate impacts. Our client believes that based on the record of this hearing and prior Board Orders, it is reasonable for this Board to conclude, and appropriate to conclude, that unlike the implicit assertion of a vigorous response to interest rates that it's reasonable to conclude that the PUB has had to push MPI over the years to address the asset liability mismatch;

To cease gambling on that mismatch in the hopes that interest rates would rise;

To improve protection specifically for Basic as opposed to a corporate portfolio;

To provide a new and regular asset liability manage study -- asset liability management study, rather than the compromised Aon study;

And to provide a new asset liability study on a timely basis.

And that history of those efforts by the Board are captured in CAC Exhibit 16.

But if you look at slide 31, you see

the Board expressing the view in 2013 that Hy -- Manitoba Public Insurance's approach to duration mismatching was making it too vulnerable to interest rate risk.

2014, advising MPI to substantially imus -- immunize itself from changing interest rate risk.

Ongoing concerns in 2016 and in 2017 expressing frustration with the failure by Manitoba Public Insurance to produce an updated asset liability matching study as ordered by the Board.

In the area of forecasting, our client recommends two (2) findings to this Board. First, that Manitoba Public Insurance has not discharged its onus to demonstrate that the naive forecast should replace the 50/50 forecast for ratesetting purposes.

Secondly, that there has been a material change in circumstances over the last two (2) years, suggesting that greater reliance should be placed on the Standard Interest Rate Forecast than the naive forecast.

In the discussion of ensuring that actual and projected costs incurred are necessary and prudent, our client is going to address four (4) issues and, certainly, Mr. Chair, just from a timing

perspective, I expect to be done with my colleague Ms. Dilay this morning. What I would recommend is once we get done Section 4(a), we take a look at the clock and 4(b) would take about fifteen (15) minutes, I suspect, but we take a look after 4(a).

From our clients' perspective, there are four (4) critical issues relating to prudence and reasonableness in this hearing.

First, and most importantly, is the proposed Manitoba Public Insurance investment portfolio for Basic and for pensions biased in favour of short-term rate stability at the risk of higher long-term rate instability and at a cost to consumers in terms of foregone opportunities and in -- in -- and in terms of higher rates.

Secondly, are Manitoba ratepayers facing current and ongoing pressures as a consequence of the Corporation's passive approach to long term -- in brackets -- (complex claims management) in the aftermath of the BI3 project.

Three. Are information technology staffing budget levels excessive as compared to relevant peers.

And finally, did MPI imprudently manage large invest -- information technology projects

related to physical da -- damage re-engineering and the customer claims reporting service, which is a subset of that PDR initiative.

Starting with asset liability matching. I want to start out by being agreeable and there are certain things in which there is consensus from our clients' perspective, at least between Mr. Viola and Mercer and, in some cases, even with -- I see I've misspelled Mr. Johnston's name here and I apologize for that, Luke, on slide 36. I've got it right almost every time.

(BRIEF PAUSE)

THE CHAIRPERSON: Sorry, to interrupt, Mr. Williams.

DR. BYRON WILLIAMS: And I want to start with liability risk because good practice, best practice, tells us that modern portfolio management starts not with the assets, but with recognizing the risk inherent in the liabilities and seeking to measure those risks. So what is the liability risk associated with the Basic and pension liabilities?

And one (1) of them highlighted both by Mr. Viola and by Mercer, by Mr. Makarchuk, relates to

the fact of the long duration -- the -- the long cash flow timeframe of many of these liabilities.

And at slide 36 I -- I -- I pulled statements -- quotes, as well as paraphrases, for Mr. Makarchuk. A lot of the cash flows we're worried about are longer than ten (10) years. Roughly half of them are shorter than ten (10) years, and roughly half of them are longer than ten (10). Some claimants are still quite young. Tragically, some of these claims could last as long as fifty (50) years.

Mr. Johnston affirmed Mr. Makarchuk's rough math, pointing out that 48 percent of total ultimates paid for accident benefits weekly indemn -- indemnity and, indexed in some fashion, element of the personal injury protect -- protection plan extend beyond ten (10) years, 48 percent.

And then when we -- if we look at accident benefit Other which is indexed, 39 percent of the total ultimate paid is ten (10) years and beyond. And it's not just the cash flow well out in the future ten (10), twenty (20), thirty (30) years that is concerning, it is the relationship that they're linked to inflation.

And Mr. Makarchuk points out, it's at page 313 of the transcript, many of these obligations

were linked to future inflation and Mr. Johnston confirmed that. A significant portion would be tied to Manitoba CPI. Some are tied to the industrial average weight -- wage, but I would say the vast majority would be income replacement benefits indexation.

Long cash flows well beyond ten (10) years, inflation indexed, a central concern about -- of Mr. Viola in terms of defining the liabilities. His conclusions affirmed here by both Mercer and by Mr. Johnston.

How do we go about appropriately addressing these risks? There is agreement by Mr. Viola, by Mercer, and by the Canada Pension Plan Investment Board that a critical first step is that minimum risk or, for the purposes of this conversation, the liability benchmark port -- portfolio.

The first bullet on this page, we quo - - we quote from Mr. Viola's PowerPoint saying that this is the first step. In the second bullet, we note the approach of the Canada Pension Plan Investment Board. MRP, the Minimum Risk Portfolio, otherwise known in this hearing as liability benchmark and -- and how they do that, interestingly, with the RRB

index.

And then we have Mr. Makarchuk. One (1) element is development of a liability benchmark portfolio as a proxy for liabilities and perhaps the most important five (5) words in this conversation, six (6), "to identify and measure the risks" because that is the purpose of this liability benchmark, expressly said by Mr. Viola and by Mr. Makarchuk.

Identifi -- identify and measure the risks of the liabilities. It is not a trivial exercise, it is not an exercise to be conflated with capital mark -- market exc -- assumptions, it is the exercise to identify and properly measure to the best of our ability the risk, the liabilities.

Mr. Viola says that risk-free assets should reflect risks in the liabilities, duration and inflation. Makarchuk says, and this is the same point but at a -- at a different transcript page, page 624 now:

> "The liability benchmark portfolio is for the purpose of identifying and measuring risk."

This is not an investment decision. This exercise is intended to be a reflection to the best of our abilities of reality. What does Mr.

Makarchuk say? We are trying to find a liability benchmark that best represents the obligation, not a simplified assumption that best represents the obligation.

Mr. Viola and Mr. Makarchuk warn us. Do not conflate the design of the liability benchmark with the ultimate portfolio selected. And that was the source of some confusion in My Learned Friend's cross-examination of Mr. Viola on -- on Monday because the questions -- it was unclear whether they were being directed to the liability benchmark, or the ultimate portfolio. Those are two (2) distinct analytical steps, both critical, but both about different things.

Mr. Viola adamantly confirms that the liability benchmark composition should not depend on capital market expectations. And in my conversation with Mr. Makarchuk he pointed out, set out the liability benchmark portfolio and then realized that the ultimate choice in optimizing the portfolio may not be to invest in the same assets, but you've got to go through that distinct exercise, identify and measure your risk, then optimize.

And I put to him at pages 641 and 642, it's important to maintain analytic distinction and he

confirmed that. The liability and moder -- modelling decision is separate from the asset class investment decisions. It's not an investment decision. I'm putting my words on his statement that -- that last statement, just -- just so I'm clear.

But you can see the careful distinction he draws in this sentence being a quote from pages 641 and 42 of the transcript.

> "The liability and mode -- modeling decision is separate from the asset class investment decision."

Both Mr. Makarchuk for Mercer and Mr. Viola confirm that this benchmark is critical to the outcome of the optimizing exercise. Makarchuk says it's an important foundation. We're paraphrasing Mr. Viola here, but on a number of occasions in his conversation with My Learned Friend on Monday, he noted that the optimal asset allocations that flow from an optimizing process depend materially on whether a nominal or real liability benchmark is selected.

Our clients' view buttressed heavily by the evidence of Mr. Viola which we rely upon, is that risk has been mis-identified and mis-measured in the nominal liability portfolio, and that -- that mis-

measurement of risk is material.

Mr. Viola highlighted in his PowerPoint and oral comments that big simplifications, using his words, of MPI and Mercer. MPI focusing on the expected level of inflation rather than the volatility of inflation and Mercer's carefully hedging its support by saying it was driven by its views of expected level of future inflation than volatility.

But as Mr. Viola points out, and as -- as Mercer implicitly pointed out when they went through the volatility calculation with me, risk depends on volatilities and correlations, not levels and averages.

And, surprisingly, given the importance of this decision, MPI did not ask Mercer to test the basis risk, the tracking error that might in er -- that might flow from this material simplification. When pressed by our client in CAC-MPI-2-3, Second Round Information Response, Mercer confirmed a 4.5 percent tracking error and admitted it was material.

And that materiality, that 4.5 percent, can be juxtaposed at the volatility or risk in -- in MPI's current portfolio of 3.8 percent. A 4.5 percent error is significantly larger, a hun -- 18 percent larger.

One can profess to have a low risk tolerance but suggesting what has a low risk tolerance by assuming away real interest rate risk or long-term inflation risk, does not demonstrate fidelity to the id -- the idea or the value of less risk.

Mr. Viola says at page 1460 of the transcript:

> "By not con -- capturing this inflation risk properly, we're not properly measuring the true risk of having nominal bonds support real liabilities."

He describes the MPI process for defining contents of its risk-free bus -- bucket as very questionable.

And if you look to his PowerPoint Slide 17, you'll see the conclusion of Ontario Teachers again, albeit about a deck -- a decade and a half ago in terms of inflation linked assets of long duration. What is their main source of liability risk; a drop in real interest rate risks -- rates? It was true fifteen (15) years ago. It's true today. And when we have long-lived inflation linked assets, it will be true twenty (20) years from now. So is our clients' submission.

A critical conversation in this hearing was the conversation of Manitoba Public Insurance with Mr. Viola about modelling liabilities. And at page 15/16 of the transcript, a very important quote. You see a suggestion by Mr. Scarfone, My Learned Friend, that the decision to model liabilities using a real liability benchmark versus a nominal was an investment decision. And Mr. Viola vehemently disagreed.

The liabilities are what they are, regardless of how you decide to take risk to them. It's not an investment decision. It's a reflection of reality. Again, I'm paraphrasing or sharing my inference from that -- that statement.

And Mr. Viola -- and this was highlighted in his conversation with Board Counsel, highlights the fact that the focus on nominal interest rate risks misses the greater risk of real interest rate risk and long-term inflation risk. He draws the analogy to an investor in stocks focused on the dividend rather than the really risky issue related to the capital gain.

He highlights the changes in real yields are important because of the longer horizon, and that nominal bonds would do poorly if inflation is more volatile or higher than expected.

I want to go back to the issue of risk basis or tracking error basis risk, excuse me, and highlight the fact that until our client made this inquiry, tracking error was not considered. And tracking error, as I understand the concept, and as confirmed by Mr. Makarchuk, measures the variation in future returns. In this case, Mercer was asked to measure that variation in the future returns between the nominal liability benchmark and the real liability benchmark as via the anticipated volatility.

And when we put to him on behalf of our clients, whether he had conducted that analysis for MPI, Mr. Makarchuk candidly agreed. I don't believe we specifically calculated the difference in the volatility between the two (2). Tracking errors were not analyzed or presented until the response to CAC Information Request 2-3.

As Mr. Viola confirmed, that 4.5 percent is a big number. And in our client's respectful submission, recognizing the long-term risk associated with long-duration inflation linked assets, Manitoba Public Insurance is taking a material gamble in the design of its liability benchmark portfolio by ignoring real interest rate risk and long-term inflation risk. It is misidentifying and mis-

measuring risk associated with its liabilities.

This is an excerpt pulled from MPI Exhibit 44. It's a response of Mercer's. And if you'll recall our conversation with Mercer, we -- we took them to one (1) of the many attachments to Appendix 17. And this is the basis of the November 8 conversation that Mercer had with Manitoba Public Insurance. And you recall the slide, they talked about next steps being stress testing.

And during our cross-examination, we asked Mercer, did you do these stress tests? And they couldn't recall. So they did an undertaking, and what they indicate was that they were planning to first proceed with three (3) of the six (6) scenarios. Unfortunately, we were unable to complete the stress tests in advance of the meeting November 28th, and there were some quality control issues with the first three (3) stress tests. So given that the investment committee meeting had occurred, and given concerns regarding overall modelling cost -- costs, peer reviews of the results were not completed, and the results were not finalized.

Now, for the purpose of the Exhibit 44, some additional analysis was completed a year -- almost a year after the time when it would have been

useful. And certainly, our client would invite the Board to look at the inflation shock scenario. But the important point, from our clients' perspective, is that important due diligence, that important peer review, that important stress test was not enter -- undertaken.

And if you couple the failure to test for tracking error, given the monumental importance of this decision, and the failure to undertake stress test scenarios as recommended by Mercers, in our clients' view, that demonstrates an imprudent, unreasonable approach to the asset liability assessment, and it represents the undue haste in which this study was conducted.

And if the Board directs its mind back to last year's Order, or the year before that, there was considerable tension around the fact that an Asset Liability Management study was not conducted. MPI didn't have time. And then lo and behold, September, October, November of 2017, when it didn't have time previously, it acted in haste and did this analysis. It acted in haste, and it did shortcuts, material shortcuts inconsistent with good practice.

Real return bonds. I'm moving now from the liability benchmark, which is really the -- that

mis-measurement -- that misidentification of risk is fundamental to our concerns, but we've set our liability benchmark. Now we're moving to optimization.

On slide 49, our clients are simply trying to make the point that real return bonds are not a dirty word. We see Teachers, probably the best-regarded pension fund definitely in Canada, but earning worldwide renown. A long-standing commitment between -- to -- between a significant portion of real return bonds, the last two (2) or three (3) years between 60 and 19 percent.

And in Exhibit 29, which was filed collaboratively with MPI yesterday, if you -- if you get a chance to go back to that couple of pages from the Teachers' annual report in their website, take a look at what they have done with that $185 billion portfolio. There's a significant commitment to real return bonds in the range of $20 billion.

We'll look at the other inflation hedges there, as well, the not 8.9 million -- 8.9 billion inflation hedge, the very significant real assets in addition. Do the math. We suggest you'll probably come up in the range of $40 million in terms of inflation hedges, some real rib -- return bonds,

some the inflation hedge, some the real assets.

A sophisticated investor, not wishing away real return risk, but recognizing that it's a fundamental risk to portfolios that are indexed and that have long duration. That doesn't mean that's the right mix for Manitoba Public Insurance, but it raises questions.

We point out as well that the SAAQ, I can't pronounce the acronym, perhaps My Friend, Ms. Dilay, will tell me over the coffee break, but that's the public insurer in Quebec. Their investment portfolio has about 10 percent as of December of 2017, if memory serves me right.

And we have the advice of Mr. Makarchuk. Real return bonds are an excellent way to ensure you get real return, if you're worried about real return. And if you're running a portfolio of a significant duration with significant indexing risk, why wouldn't you want to have at least some protection for real returns?

And when we turn to the Mercer model, when we returned to MPI Exhibit 15, when it modelled upon an appropriate measurement of risk the real liability benchmark, Mercers concludes, assuming a real liability benchmark for modelling, removing real

return bonds significantly reduces an opportunity for improvement at lower risk levels. Opportunity for improvement at lower risk levels.

And Mr. Viola estimates that at the current risk levels, that volatility of plus or minus -- or excuse -- that volatility of 3.8 percent, Mercer's efficient frontiers suggest that the expected excess return above the liability benchmark drops by around .8 percent when RRBs, real return bonds, are removed. Point eight (.8) percent on a portfolio of the size of Manitoba Public Insurance's is a big deal.

And when pressed on the value of a real return bond, Mr. Viola commented:

> "With a break-even inflation of something south of two (2), even if you're getting inflation of two (2), which is what the Bank of Canada assumes, you're actually doing better by buying the real return bonds."

And that break-even inflation rate, you may recall in my cross-examination of Mr. Makarchuk on that point, we looked to the -- how they calculated that break-even inflation rate, and comparing real return bonds to long federal bonds, the thirty (30)

year bonds.

The diligent work of Board advisors in their Information Requests also highlighted another very significant concern with the current MPI approach to asset liability matching, and their expectations for the investment portfolio.

In our clients' view, Manitoba Public Insurance is gambling that its external experts' preferred interest rate forecast is wrong. Mercer's Standard Interest Rate Forecast, which we talked about earlier, the one (1) used by its experts and actuaries across Canada, was not accepted by Manitoba Public Insurance. Instead, a forecast based upon the fore -- forward curve was substituted to be more in line with MPI's business model, in the words of Mercers. I'm not quoting them directly.

And as I suggested in my discussion with Mr. Makarchuk, use of Mercer's Standard Interest Rate Forecast por -- portrayed capital losses for the fixed income holdings. And that information is best indicated at slide 52. Again, at the top of that slide, we're talking about what Mercers prefers, their Standard Interest Rate Forecast.

And Monday, we had a conversation with Mr. Bunston. I think it's Appendix 17, Attachment E,

slide 14 or 13. The expected ten-year return about -- of the nominal liability portfolio, assuming Mercer's best estimate, was 2.1 percent. Take out the external expert's best estimate, substitute the forward yield, and the expected ten-year return of the nominal liability portfolio -- this is in 17, Attachment A -- with MPI's substi -- with MPI's substitute view grows to 2.8 percent. If you look at that difference in expected outcomes, point seven (.7) divided by two point one (2.1), a 33 percent difference, flowing from that rejection of the external experts' preferred view.

That is concerning to our client. Ultimately, Mr. Viola questioned the premise that the so-called risk-free bucket of MPI was risk-free, and concludes that it has material risk over the long term.

There are two (2) key challenges, the first being the minimum risk portfolio, the nominal liability benchmark, is fundamentally compromised by misidentification, and mis-estimate of risk. The portfolio understates the risk of inflation and real interest rate risk.

And secondly, that liability benchmark analysis was compromised by MPI introducing capital

market expectations into the analysis.

As Mr. Viola pointed out, liabilities define themselves. They are what they are. They are not a function of risk tolerance. The decision to accept or hedge risk is a separate decision. That's for part 2, the optimization process. He describes that portfolio, and that approach is questionable, very questionable.

In terms of why our client concerns -- concludes that the MPI bucket is a risky bucket over the long term, remember the simple truism of Mr. Viola that any constraint shifts the curve. What are the elements of higher risk? No real return bonds leads to poor liability protection against unexpected inflation, real -- real rate risk, and less effective duration management.

And in this context, Mr. Viola makes an important point. And this was in his discussion with My Learned Friend, I believe on -- on Monday -- it might have been with Mr. Watchman yesterday. MPI, in its rebuttal, did do some stress testing, pulling from a -- a DCAT analysis, a 3 percent inflation assumption for four (4) years. And our client, in the context of the DCAT, actually thinks that's a good, solid analysis, because the DCAT isn't about whether we

compare our liabilities twenty (20), or thirty (30), or forty (40), or fifty (50) years from now. The DCAT is simply about: Do we have enough reserves to prevent rate shock? And it's only over a short time horizon. We're looking out to 2022 appro -- so that kind of a modelling assumption for the DCAT is quite good.

But Mr. Viola, in conversation with Mr. Watchman, said, It's not -- the risk isn't in 3 percent inflation for four (4) years. The real risk for an inflation-sensitive portfolio with roughly half its liabilities beyond ten (10) years is over a longer duration, even at a lesser amount.

Another element of high risk with the Basic portfolio is the absence of other real assets, such as real estate and infrastructure, and therefore, less diversification. Instead, what we have is real rate risk, inflation risk, credit risk, and some illiquidity risk through the MUSH bonds, concentrated in the fixed income portfolio.

From the big picture, from the total portfolio perspective, Mr. Viola points out that they're -- that instead of concentrating risks in fixed incomes, a combination of low risk assets and other risky assets gives better risk/return trade-offs

than being concentrated in either one (1) of the buckets. Excuse me. Thank you.

(BRIEF PAUSE)

DR. BYRON WILLIAMS: Mr. Viola again flags the concern that MPI's focus on short terms -- rate stability, and that their opportunity cost with the short-term rates focus in terms of better returns over the long run, but also that there are risks of higher long-term rate instability.

Just a couple of last points on investment issues. It is open to this Board to -- to ask itself whether in the course of this hearing, Manitoba Public Insurance has demonstrated a mastery of these complex issues. And Mr. Viola yesterday pointed out the inconsistency between the MPI explanation of its modelling exercise, of Mercer's modelling exercise in its rebuttal, versus the Mercer response found in Exhibit 38.

And at slide 57, we had a conversation with one (1) of the MPI witnesses, again, over the affidavit filed in support of our motion for better disclosure. And again, you see some challenges in terms of grasping some of the issues.

Initially, the real liability benchmark was described as having a much higher risk of three (3) -- three (3) -- it says here "perfect," but it should say 3 percent, and that assessment was amended in a subsequent affidavit to suggest real liability benchmark with the risk of zero percent. And again, you see MPI correcting its conclusion originally that the real liability benchmark was -- was higher, but suggesting in its subsequent analysis that, as compared to the selected nominal portfolio, the real liability benchmark was lower.

Frankly, our client has a bit of a challenge with this whole conversation, because in essence, one was comparing a liability benchmark based upon real interest rate risk versus a optimized portfolio based up -- flowing from the nominal liability benchmark. So that suggests a conflation of the issues that our -- our client is -- is quite uncomfortable with.

Finally, I want to go to expertise. Mr. Viola is a -- a well-known leader in this field. It's instructed that many of the recommendations he made back in 2016 have been accepted, and the idea of segregating between Basic and -- and pension is certainly something that he promoted. He comes out of

great roots, out of Teachers in the 1990s, and then as a young vice-president at the Canada Pension Plan Investment -- Investment Board; very sophisticated investors. And their current firm, Cortex, obviously is a highly regarded North American practice.

Mercer certainly has good qualifications, but their role in this process has been circumscribed. Their best estimate of future interest rate risks were rejected. They did not test for tracking error, or basis risk, and the scenario testing was not undertaken. And if you look at their careful hedging of their words, in terms of the nominal liability portfolio, their analysis was compromised by assuming away long -- long-term inflation risk and real interest rate risk based upon the inflation level rather than inflation volatility.

Our client has no doubt about the -- the capabilities of the MPI Board, but they were cons -- clearly constrained in the inputs, in the haste in which this exercise was conducted, in the challenges that Manitoba Public Insurance demonstrated in coming to grips with the purpose of the liability benchmark portfolio, and with the ultimate mis-measure and misidentification of risk. So certainly, while our clients greatly respect the members of the MPI Board,

they were not here testifying, and they are limited by the quality of information and the quality of the asset liability analysis.

Ultimately, our client concludes that the proposed approach by Manitoba Public Insurance is a significant gamble. Again, the assumption to assume away real interest rate risk, and also substituting MPI's judgment for the best judgment of Mercer in terms of future interest rate forecasts.

Our client recommends the following findings: Ultimately, that -- that the asset liability management analysis was not conducted in a reasonable and prudent manner, first of all, in terms of its assumptions, the assuming away of -- of real interest rate risk and long-term inflation risk;

The failure to test for tracking error between the real and nominal benchmark portfolios;

The insertion of capital market assumptions into the liability benchmark analysis, when that properly belongs in the second stage of the analysis;

The optimization, and the failure to undertake the Mercer-proposed risk scenarios, at least the three (3) prioritized ones.

In terms of the construction of the

analysis, our clients submit that it is not prudent to substitute the opinion of MPI for the best estimates of its experts regarding future interest rate risk, and it is not prudent to concentrate risk, inflation, credit, and illiquidity within the fixed incomes in the Basic portfolio rather than to diversify the sources of risk via real assets as well as equities.

Ultimately, our client observes that there are significant risks of long-term rate instability, as well as the likely prospect of lower returns associated with MPI's preferred approach.

Mr. Chair and members the panel, I think that's a -- a useful break point, but I can -- I could proceed for another twenty (20) minutes, if you would prefer.

THE CHAIRPERSON: No. We'll take fifteen (15) minutes. Yeah. Thank you.

--- Upon recessing at 10:20 a.m.

--- Upon resuming at 10:42 a.m.

MR. STEVE SCARFONE: My apologies, Mr. Williams, I was stuck waiting for an elevator for ten (10) minutes.

THE CHAIRPERSON: Oh, that's -- that's

unimaginable in this building, Mr. Scarfone.

I don't know if I'm supposed be looking at Mr. Williams or Ms. Dilay? Mr. Williams, okay.

(BRIEF PAUSE)

CONTINUED BY DR. BYRON WILLIAMS:

DR. BYRON WILLIAMS: Question 4(b) at Slide 61 of the PowerPoint is whether MPI ratepayers facing current and -- are facing current and ongoing rate pressures as a consequence of the Corporation's passive approach to long terms claim management in the aftermath of BI3.

And before we leave this slide, I'll cut to the chase and the answer is yes. And our -- our client does have concerns with how the Corporation has addressed complex claims, but we also should acknowledge the role of the MPI actuary in candidly flagging this concern to the Board and for those who have been at this Board for years, this certainly has been candidly discussed and -- and raised by the MPI actuary and our client acknowledges his -- his role in -- in identifying this issue so that stakeholders and the Board could better understand it.

On slide 62, these -- these bullets are

from an appendix to CAC Information Request 1-36(a). It's the response to the -- that Information Request and that I can't do justice to the issues as well as this briefing to MPI management in April 2018 does but I want to flag some of the observations that our client has, or that -- that -- that are captured in this briefing note.

We date the BI3 era to about 2010 and the narrative that has played out in hearings over the last few years is that claims -- there's -- as compared to expectations prior to 2010 or so, there's an increase in these complex claims. These claims under the personal injury protection plan lasting more than two (2) years.

There are a number of factors influencing this growth in retain clams -- claims; one (1) is the world outside, which is be -- to some degree beyond the control of MPI. Another is the implementation of the BI3 initiative and the challenges MPI experienced in delivering it. And finally, there was a reduction in staff because BI3 was supposed to relieve the burden of claims management using technology but in -- indeed, the challenges have been twofold since then.

One (1) is that claims managers weren't

-- were struggling to properly reserve claims but, more fundamentally, there was also struggles in managing claims.

One (1) of those external factors, at least to some degree, is also a very significant increase in claims with psychological factors by 10 percent. And we flagged this because this is one (1) of the critical sources of ongoing rate pressure for Manitobans.

The briefing note found at Appendix -- to CAC-1-36, Slide 8, flags challenges in claims management, and reserving flowing from the BI3 initiative. Claim staff were cut and also were not proactive in recoveries.

And as Mr. Johnston confirmed with me in our conversation on -- on October 18th, claims that last longer, all other things being equal, mean more cost to the Corporation. And one (1) of the challenges MPI faced and has faced since 2010 were process char -- changes as outlined in the first paragraph on Slide 65 that created a more passive approach to injury management.

And Mr. Johnston, again, at the bottom this -- this slide talks about less agre -- aggressive claims management being employed.

And as he pointed out in a conversation around page 862 of this transcript, instead of being addressed it inta -- intake complex claims were only being actively managed in the later stages of the claim. And again, highlighting the cost to ratepayers and to the individuals affected of this passive approach.

On slide 67, this is again an excerpt from the briefing of the to -- to MPI leadership, noting that the majority of the current case matters came from a physical damage background and were challenged to manage the complexity of claims.

Now, there have been efforts by Manitoba Public Insurance to respond to these challenges in terms of the reserving challenge. There was the centralized reserving unit and there also have been efforts to more assertively manage claims and at an earlier time.

One (1) of the important elements coming out of our conversation with Mr. Johnston on October 18th was, to date, in terms of those long-term claims, despite the efforts of Manitoba Public Insurance, in terms of the concerns that the actuary is most concerned, with the longer-term, I'm not seeing any substantial improvements at least to date.

From our clients' perspective, this is an important issue to monitor to ensure that MPI continues to try to be proactive and also to acknowledge that a passive approach dating back to 2010, at least to 2017, it -- has imposed injuring costs for Manitoba ratepayers.

One (1) of the important initiatives that Manitoba Public Insurance is undertaking is -- is -- is how to better track and benchmark these claims. And they indicated that -- that benchmarking framework was being created and would -- could be shared for the next General Rate Application.

And so our client on this issue is recommending that the Board find that Manitoba Public Insurance ratepayers are facing current and ongoing rate pressures as a consequence of the Corporation's passive approach to long-term claims management in the aftermath of BI3.

I hasten to add, as we've noted in an earlier slide, that there are other factors in play, including the growth and challenges with psychological issues, but that passive approach, the evidence, on this record, is suggestive of an adverse finding in this regard.

We're going to skip Slide 71, because I

don't want to steal Ms. Dilay's thunder when it comes to making recommendations.

We asked the very simple question at Slide 72 whether information technology staffing budgets are excessive as compared to relevant peers, and certainly rely upon the bar -- Gartner Group benchmarking exercise and as outlined in the cross of Board counsel, at least as we understand it, MPI spends about 62 percent of its IT budget on personnel as compared to 45 percent for peers.

Similarly, there is a disproportionate amount of contractors within the MPI IT staff. So this will be the shortest section I ever comment upon, our recommended finding in this section is that as compared to peers Manitoba Public Insurance information technology staffing budgets appear excessive.

We turn at slide 74 to a larger -- a longer section relating to physical damage re-engineering and a subset of that project, the Customer Claims Reporting Service, CCRS. And our client would acknowledge and was pleased to note that we are starting to see at Slide 75 a modernization in terms of the approach that MPI is attempting to bring to man -- management of complex projects.

But our client cautions about offering too many plaudits for this. Coming to decent good practice in 2018 when that insight should have been available long before that is encouraging but it -- it's not like that the approach that Manitoba Public Insurance is currently seeking to employ is -- is -- is excellent as compared to industry standards.

Indeed, Mr. Wennberg candidly pointed out that they're basically trying to get to an industry standard approach in terms of these big projects; that there's going to be some rigour and that MPI executive management have to be accountable for the net present value integrity in that -- for the integrity of that analysis. Those are all laudable but certainly should have been in place long ago.

Our client observes that failed projects have real impacts on retained earnings, on foregone opportunities and in the waste of ratepayer money. And in our discussion with Ms. Campbell on October 18th, she talked and made the point that when we use words like "impairment" and "write-offs," what that means is a reduction of equity. And we have seen focus in the '17/'18 year an impairment of deferred development costs in the range of $20 million equity, all other things being equal, is 20 million lower.

And this connection may not have been made in Manitoba Public Insurance's mind, but I assure you that our client has noted the -- the figure associated with the Capital Maintenance Provision of $20 million.

And in our clients' mind approving the Capital Maintenance Provision would be holding Manitoba Public Insurance equal for its mismanagement of important information technology projects. And I'll come to that more later.

Are these projects a failure? Well, the CCRS definitely is a failure. It has been written off. And Ms. McCandless noticed in her discussion with Mr. Remillard, on Slide 77, that's a $15.6 million write-off.

And Mr. Wennberg, moving from the CCRS to the broader project, a project that went from an estimated net present value of $18 million positive in 2016 to an estimated negative net present value, certainly, in the range of fif -- negative $50 million in 2018 described the PDR, the Physical Damage Re-engineering, as a very deep negative. In his conversation with My Learned Friend Mr. Scarfone. And that very deep negative quote can be found at transcript slide 9 -- Page 9 -- 19.

Another unreasonable imprudent element of current cost for Manitoba Public Insurance ratepayers in the 2018/'19 year is the eighty-one dollar ($81) premium for direct repair shops.

And as Mr. Wennberg noted, this type of premium payment is not undertaken by the Crown or private jurisdictions, and then when other Crowns and private jurisdictions proceeded MPI in implementing similar programs to direct repair, they did so without these premium payments. This is not the industry standard and -- and it is not a prudent expenditure. That agreement is up for renegotiation with the new agreement scheduled to take place early -- or at the start of the next fiscal year for Manitoba Public Insurance.

And I want to stay with the physical damage re-engineering because I spoke about how that failed project, that deeply negative project, takes money out of ratepayers' pockets, takes money out of retained earnings, but it also is about lost opportunities around. Around page 1119 of the transcript, I have -- I started a conversation with Mr. Remillard, going back to 2014, because back in 2014, the magic -- the big -- the big ticket item within the Physical Damage Re-engineering Project was

going to be this first notification of loss, now known as CCRS, as well as a replacement for the CARS, the CARS legacy system.

And you'll see a -- a quote at the top of this page from Mr. Graham saying we need to update our system. It's in dire need. With the -- initial conception of PDR back in 2014 was it -- it was going to take care of -- of the need to replace CARS. And if you go to the next slide, you'll see back in 2014 there was about 32.6 million in terms of optimize adjusting which included the first notification of loss and the CARS replacement. So about half of the total project cost.

So not only is it the money down the drain but the foregone years where Manitoba Public Insurance could have been addressing its challenges with CARS or legacy where in our clients' submission frittered away in this failed project.

Board counsel did an excellent job of forensically examining some of the roots of the challenges with the Physical Damage Re-engineering Project. And as we try to figure out what happened, which I think is important for today's ratepayers and future ratepayers, it's important to acknowledge that there seems to be a consensus, hardly a radical

consensus, that when you're doing a net present value calculation, it should include operating costs,

And you see, Mr. Kenry (sic) for Gartner saying:

> "To do a fulsome MPV analysis, it should include operating costs."

And Mr. Graham, Chief Executive Officer of MPI, saying:

> "To the extent that business cases didn't include operating costs, he would find that surprising."

And the Chief Information Officer Mr. Bunko saying:

> "A full business case needs to include all the associate initiative, and ongoing cost for the program."

That begs the question. This is not radical. We could had this same conversation ten (10) years ago, frankly, twenty (20) years ago -- we might not have used the words "MPV analysis," but we would have known that operating costs had to be included.

So the question becomes: Were not concerns flagged within Manitoba Public Insurance in looking at these purported business cases and the

absence of operating costs?

Mr. Remillard confirmed that major capital projects, many of them, did not include an evaluation of operating costs as part of the evaluation of the total cost of the operation.

And certainly Mr. Henry, on behalf of Gartner Group, observed that in the 2016 Gartner report, as well as the 2017 Gartner report, the net present value calculation was conducted but did not include operating and ongoing costs.

And our client suggests that this goes to a bit of a deeper question in terms of the relationship of external experts retained by Crown monopolies when they come before the Public Utilities Board. We can answer this question, but we wonder whether Gartner Group should have filed the MPV analysis knowing that a fundamental building block was -- was incomplete.

Gartner did acknowledge in the conversation with Public Utilities Board legal counsel that they should have been stronger in making the point that future analysis was required, and that was especially in the context of the operating costs.

Slide 87, and I'm not going to go through this because I think PUB counsels have done a

very strong job of -- of doing that, but we've inserted it, just to look at the big picture reason to explain the mystery of how what looked like a relatively positive business case has gone so highly negative.

And in that conversation as captured at page 931 of the transcript, the big three (3) reasons are flagged there, and I simply, on behalf of our clients, put it forward for your consideration.

One (1) of the challenges the Gartner Group faced is identified in a conversation with the PUB Chairperson is that Manitoba Public Insurance unreasonably and imprudently failed to identify and disclose relevant information to Gartner Group; information relating to the ongoing costs, information relating to the eighty-one dollar ($81) premium.

And Gartner Group, at least, is -- is clear in its view that the obligation to provide the information given that it is not an audit firm rests with MPI and that's a reasonable conclusion from our -- our client.

The Chairperson explored this again as -- as captured in the conversation at page 90 and we see the efforts by Manitoba Public Insurance to explain the failure to provide this important

information relating to ongoing costs, the eighty-one dollar ($81) premium, et cetera.

Our client wants to go back to the big picture. Witnesses for Manitoba Public Insurance testified that they regularly review Board Orders. The footprints for the significant concerns with this project are palpably evident certainly by Board Order starting in 2015. And here you see at pages 1126 and 1127 of the transcript, on slide 91, conversation with the Chief Information Officer of the Corporation flagging the concerns that were presented even before the first Gartner report by the Public Utilities Board in its decision.

And we put the question to this Chief Information Officer whether given that insight, given that he had read the report whether -- we suggested to him you were not concerned with the status of PDR in terms of the feasibility of its business case in 2015 and he confirmed he was not. And that is difficult for our client to fathom and to understand.

And it becomes more pressing in 2016 and we, again, took the MPI witnesses through the Chief Information Officer through the Board Order and refer them to page 37 with the PUB expressing its concern with the lack of business case and how met --

materially the scope of the PDR had changed.

And at the bottom of this slide being Slide 92, again, you see the Chief Information Officer indicating that those observations of the Board did not question -- cause him to question the viability of the PDR business plan, generally.

And to our clients that is difficult to understand. There were limits in the Gartner Group report, both in 2016 and 2017, but there were also important warnings. And as you see in our conversation with Mr. Henry at Slide 33, there were warnings in the 2016 and 2017 Gartner reports that ongoing support and maintenance costs were not included in the MP ev -- analysis.

And from our clients' perspective, certainly, the Board of Directors of Manitoba Public Insurance and senior executive had the opportunity to become knowledgeable about the PDR. The PUB decisions are publicly available. Certainly by 2015, definitely in 2016, there were significant warnings about PDR.

On slide 94 we've captured some of the warnings that were presented in the Gartner Group 2016 and 2017 reports about PDR. One (1) of the key risks is Mitchell's ability to deliver the expected outcomes of the FNOL project, now known as the failed CCRS

project.

It entails the implementation of innovative and fairly complex accident file -- profiling approach new to the industry. Also, flagging concern are the reality that there was no estimate for ongoing support and maintenance costs.

Our client notes that Mr. Geffen on behalf of Gartner Group made a presentation to the audit, finance and risk committee in 2017 and as Mr. Henry confirmed, or Mr. Bunko I forget which, the status of the PDR project would have been an element of that discussion.

Board of Directors minutes from February of 2017, that's the last bullet on slide 95, also captured that there was a presentation and an endorsement of the agreement related to CCRS or -- the agreement -- or the authority to enter into an agreement with Mitchell rely -- regarding CCRS back in February of 2017.

From our clients' perspective, there were significant warnings in the public domain, as well as in the bo -- in the briefings prior to important significant expenditures related to this project. And I'm speaking in terms of CCRS. There was an additional 3.4 million spent in '16/'17 and 5

million in '17/'18.

Finally, in this subject area, our clients note the observation from the Gartner Group benchmarking report that there is a need to improve business process management, to improve the efficiency and effectiveness both of I -- information technology and of Manitoba Public Insurance generally.

In terms of this error -- error -- area, at slide 98, our client makes the following recommendations in terms of findings.

First, that there was a failure to adhere to standard could business practices in the development and evolution of the PDR business case.

Secondly, and as a consequence, the CCRS was a failed project and PDR is best characterized as a deep negative project, with a significant negative net present value.

Third, that the eighty-one dollar ($81) premium for the 2018/'19 year payable to the repair industry is not consistent with industry standard and you can stroke out the words "and is inconsistent" at the end of the third bullet.

Fourth, that the quality of the NPV analysis presented to the Board by MPI and by the Gartner Group was not consistent with the expectations

of the Board.

And from our clients' perspective, this is something we would recommend when you -- you hear our recommendations for -- for other utilities or Crown monopolies appearing before this Board and relying upon expert evidence, external evidence, it would be useful and helpful to have a notification or indication from these external witnesses whether their analysis is consistent with good practice in all regards.

External experts retained by these corporations, it's a challenging role. They have a business relationship. They want to maintain that business relationship but no doubt they want to assist the Board.

And from our clients' perspectives, heightening the expectations for these external advisors will be well recommended.

It also is important to note that in the last year to year and a half to two (2) years in terms of the value management process that Manitoba Public Insurance has taken a number of steps to introduce standard good business practices. Whether we'll see the application of those practices over the years, and certainly next year when we get to the

legacy investments, but -- those steps should be acknowledged.

The last lengthy section of our analysis relates to the -- issues relating to the Rate Stabilization Reserve and the Capital Maintenance Program, and it's really assessing the reasonable revenue needs of an applicant in the course of its overall general health.

And it won't surprise you to know that our client really admires Mr. Viola, and they think it's his expli -- explanation of his beliefs is often useful. Our clients' analysis as we approach the issues under this topic is informed by client beliefs.

And belief Number 1 is that this Corporation is strong. It's got a legal monopoly on the Basic side, a de facto or -- or practical monopoly on the Extension side. In the event it has concerns about material adverse developments in the marketplace, it has ready access to members of the legislature given its Crown status. This Corporation has significant reserves in Basic and its reserves are significantly over target in Extension and SRE and one needs only to look at the quarterly reports or the annual reports to get a sense of the magnitude of those excess reserves.

And while in the context of this hearing we tend to focus on the Basic program, from a ratepayer perspective Basic and Extension are intimately connected and the health of Basic and Extension is intimately connected. And Mr. Graham the CEO for MPI at the bottom of page 100 makes that point himself when he highlights the market dominance of MPI in terms of Extension and relates it to its connection to the Basic program.

Belief Number 2 of our clients is that another Manitoba Public Insurance advantage is vigourous independent regulation. We have regular evidence-based hearings, which offer annually self-correcting mechanisms for the overall revenue requirement. Unlike Saskatchewan, they're regular and as the Board can take judicial notice of with regard to British Columbia, they are less politicized by government directives as they flow from -- in British Columbia.

This regular evidence-based mechanism is not only self-correcting at the revenue level, it also is self-correcting in terms of the relationship between classes of vehicle owners and between individual drivers and individual vehicles.

There is dislocation annually because

of driver safety rating and the CLEAR, C-L-E-A-R, assessment of vehicle risk, but that also is -- from our client's perspective, evidence-based and gives the Board and this process and MPI a defensible position for consumer volatility concerns to be able to argue that they're based upon risk; either the risk we bring to the system because of our driving behaviour or the risk that our vehicles bring to the system.

Our client believes a third essential element of this vigourous independent regulatory process is the dynamic -- use of the Dynamic Capital Adequacy Testing to set the Basic Rate Stabilization Reserve, based upon Manitoba data, based upon Board directed risk tolerances and responsive to Manitoba risks. And this Board's well-known aversion to rewarding bad management decisions is also an advantage from our client's perspective.

Our client believes strongly that ratesetting stays healthy when government stays out of ratesetting and our client, to be frank, was uncomfortable with the messaging that appeared to be sent by Manitoba Public Insurance on the first day of the hearing about the government's wishes.

They were relieved on October 23rd when the CEO of Manitoba Public Insurance confirmed that

there had never been a discussion in relation to rates and what those rates should be.

But our client is appreciative of the direction from government to respect the independence of as set out in the many layers of these organizations and of these -- and of the PUB itself.

A driving element of our clients' submissions in this subject area is their belief that a well cushioned Crown monopoly is bad for efficiency. And in one (1) more slide, I'm going to talk to you about the erra -- the era of over-collection from ratepayers.

But from our clients' perspective, many of the challenges Manitoba Public Insurance experienced in the early 2010s stem from the fact that it was a very comfortable Corporation and some of those challenges are reflected in the absence of financial models. Can you imagine back in 2010, a modern Crown Corporation unbee -- being unable to model investment -- our interest rate risk?

Some of the symptoms were the profound asset liability duration mismatch in the early 2010s, a two (2) year tolerated mismatch. Some of the Corporation's struggles in terms of responding to the great recession, our client attribute to that comfort

and certainly our client suggests that the ill-managed BI3 and PDR initiatives are byproducts of the over-collection era, as were the absence of standard value management protocols. Imagine not introducing that value management proposition until 2017.

On slide 104, Manitoba Public Insurance has been quite forceful in talking about the challenges it experienced in the years since 2012/'13 certainly between 2012/'13 and 2016/'17, and certainly the -- the Board knows our clients' position that many of those challenges were of its own making.

We certainly see the recovery in '17/'18 but it's notable if you go back to '04/'05 and look at 2010 to 2011, the over-collection era. And in this hearing you heard Mr. Johnston talk about that '15 to '16 year period and when -- in which there was only one (1) rate increase.

And there's a reason for that. It's because Manitoba Public Insurance was over-collecting from Manitoba ratepayers and that over-collection, you look at the net income for '04/'05 fifty-nine (59). The next year eighty-five (85); '07/'08 sixty-nine (69); '09/'10 eighty-seven (87). Then you see the results for 2010/'11, when there was a massive relief of over conservative reserves with -- with -- of

283,000 thousand -- 283 million, I mis-spoke.

While Manitoba Public Insurance may have been very comfortable during this era, and you certainly heard Mr. Johnston yearning for it, the concerns -- the symptoms our clients' flagged at Slide 103, from our clients' perspective, many of those concerns stemmed from this lack of -- from this comfort. The lack of -- of agility, the lack of good business processes were encouraged by the ongoing over-collection from ratepayers.

There's been a lot of talk in this hearing about volatility, but not a lot of definition. Our clients will suggest to you that from a ratepayer perspective, volatility is what they see in their bill from year to year, hence, the three hundred thousand (300,000) vehicles this year experiencing rate shock.

The MPI perspective seems more focused on the optics of an overall average rate increase, and certainly our client submits that's -- that's why they conflate issues of rate increases to rebuild reserves and real issues of rate shock. And at least as Mr. Graham expressed to me, the government concerns a volatility that he talked about so much during the -- the first day of the hearing were the annual results -- the -- the accounting results of the -- of the

Utility.

From our clients' perspective, our client believes that rate stability is important, but in the context of Manitoba Public Insurance, it's inescapable and our client believes that the best response to volatility is good management.

Volatility in terms of individual rates is a natural result of CLEAR and the DSR adjustments. As long as we want consumers to be paying a rate that -- that res -- res -- reflects the relative risk, there's going to be that volatility in the bills that consumers expe -- experience. We look to cap it because that's very dangerous and difficult for many consumers excessive stability, but it is a reality of how we set rates.

Our client strongly believes that an over-collection of rates from present-day consumers to dampen or avoid volatility will be unsuccessful and is not an appropriate response and that good management practice, good forecasting, is the best answer to volatility.

We're going to turn more directly to the Rate Stabilization Reserve. And again, our clients want to -- wish to remind Manitoba Public Insurance that the Rate Stabilization Reserve was

never intended to prevent rate change. Coming out of the Klopstein Commission, coming out of the overt politicization of Manitoba Public Insurance, the 1980s, coming over the real rate shock out of that time, that RSR is there. It was intended to prevent rate shock, not rate volatility.

And in terms of teske -- testing the risks that ratepayers face, not in terms of insolvency, not in terms of volatility, but in terms of preventing rate shock, we have been engaged as Dr. Simpson pointed out in a more than a decade-long conversation about how do we best estimate that risk with the purpose of avoiding rate shock?

And there's been a fabulous collaborative exercise built upon the -- the DCAT addressing issues of our -- what are plausible scenarios? What are our risk tolerances? And the Board has directed our clients and MPI that the appropriate risk tolerance is that 1:40 year standard?

So imagine our clients' puzzlement after the Board, which has expressly rejected the MCT previously, after the collaborative effort to develop the DCAT and to link it to the real risks faced by Manitoba ratepayers in terms of rate shock that the Capital Maintenance Provision in this proceeding is

expressly tied to an MCT, a formulaic MCT calculation, 70 percent MCT.

And Mr. Johnston confirmed that the Capital Maintenance Provision is not linked to the DCAT, it's linked exclusively to the MCT.

And from our clients' perspective that MCT calculation is not appropriate for the purposes of the RSR, and it is not appropriate for any CMP. It addresses a different problem for a different marketplace. It's about insolvency tests. It's about the real reality that in the private sector in a competitive marketplace, if there is a massive call to increase rates for a firm, consumers are going to leave that firm and put its solvency into question and that insolvency, or that insolvency risk, can bring real risk to the entire economy.

So that MCT calculation, given those solvency concerns, addresses issues that our clients' question should be part of the considerations for the Rate Stabilization Reserve. Given the insolvency concern, it -- it ensh -- it shields imprudent behaviour such as operational risks which are cont -- controllable with good management.

Given that solvency concern, it sets a very different risk tolerance. If you think of the

DCAT, the Dynamic Capital Adequacy Testing analysis, it's focused on 1:40 year events over a time horizon, really between two (2)years and four (4) years. Look at what OSFI has elected with re -- regard to the MCT, conditional tale expectation or CT of 99 percent over a one (1) year time horizon, very different risk tolerances.

And the MCT as compared to the Dynamic Capital Adequacy Testing does not dynamically respond to evolving Manitoba risks or provide insight into the evolutions of those risks.

Slide 111 highlights the co -- the comments by Dr. Simpson in terms of why this Board rejected the MCT. Again that linked to insolvency in a competitive industry, and that it does not address the specific risks faced by MPI to this extent, it doesn't itemize and evaluate them in the dyna -- dynamic evolutionary way that the DCAT has done.

Ms. Sherry chimes in describing the MCT as formulaic with risk margins set to ensure private companies don't go insolvent, not tailored, not synchronized to a monopoly Crown corporation.

And as Dr. Simpson goes on to conclude and to ask: What is a 35 or 85 percent MCT mean? What does that tell us about the specific risks, the

associated risk tolerance levels? What does that mean?

On slide 114, we've included an insert from the Office of the Superintendent of Financial Institutions, discussed with Mr. Johnston at page 679 of the -- the transcript.

Part of that MCT calculation is about operational risk and how is that defined?

> "The risk of a loss resulting from inadequate or failed internal processes, people and system or from external events."

And at slide 680, we went through a conversation with them at -- at the magnitude of that operational risk calculation and the MCT calculation.

It's not insignificant. In the years that we looked at, it was between 64.6 million and 77.3 million. Less Mr. Johnston chastise me, I will -- will note that he said you would have to divide that by 1.5 to see how it actually figures out on the bottom calculation, but that's still a big number, a big shield, to shield inadequate or failed internal processes.

And in the context of a solvency calculation that is a perfectly reasonable

calculation. But that's not with the DCAT is about. That's not what the RSR is about. It's about rate shock.

Being a little puzzled by this shield for incompetence found in the -- in the MCT, we put Mr. Johnston at page 682 and 683 of the transcript. As the MCT contemplates it, operational risk is associated with the failed information technology project, would that be contemplated?

No, Mr. Johnston, to my surprise didn't have the entire document at his fingertips, but he said:

> "But my understanding is it would be for things like that or of that nature."

He candidly admitted that. Given this shield in the MCT for bad management, our client cannot reconcile that with the state -- and given the link between the Capital Maintenance Provision and the MCT, our client cannot reconcile that reality with these statements by Manitoba Public Insurance saying that the RSR should not go to funding bad choices.

The intent of the CMP is by no means to take away the accountability or the responsibility of management, Mr. Giesbrecht suggests, yet they select a

calculation, a ratio that puts in a bad management shield. Mr. Johnston goes, If we did something that deteriorated our MCT ratio, it wouldn't be right to us ratepayers to -- to pay for that. Yet, failed information technology projects appear to be shielded by the operational risk calculation.

The PUB also chimed in on this way back -- well, both Mr. Oakes and I were here -- in terms of what the RSR should be intended to protect against. And going back to the old risk analysis that was being promoted by Manitoba Public Insurance in the time, the Board found both in '98 and '99 that operating expenses that were controllable were not properly part of the calculation of the risk analysis. It was inappropriate, as -- as these expenses were at least partially controllable by management, to use their words, and our client agrees.

There's been a lot said about how the MCT is objective. From our clients' perspective, that's lovely, but objectivity with limited relevance is of limited value. And this Board, in Order 59/'18, in the Hydro context, provided some really interesting insight into debt/equity analysis.

You could look at Manitoba Hydro, with its debt/equity ratio at a certain level, and compare

it to a private company, which is at 50/50, or compare it to the well-managed Bonneville Power at a different ratio. And unless you dig deeper, what's the insight?

By themselves, these objective measures offer little insight unless we dig deeper. Telling us that BC has an MCT target of a hundred percent doesn't tell us much about the health of the Corporation, or whether it's ratepayers are vulnerable to rate shocks, i.e., have they been setting rates properly, or setting them politically?

And is there any evidence in this proceeding about the process by which the MCT targets in Saskatchewan, BC, and Quebec were adopted?

Were they evidence-based processes, such as before the PUB, or were there political processes and cabinet directives?

The evidence on this record is unclear. In Information Response CAC-2-20(b), CAC/MPI, our client, noting that one (1) of the described purposes of maintaining a certain capital level was to protect -- protect ratepayers from potential rate shock, thought it would put to the question, MPI, How do you define rate shock? And MPI doesn't have a definition.

And so from our clients' perspective, the credibility of the assertion that the CMP is

intended to address rate shock is -- is curious, given that MPI has not taken the trouble to define it.

What we do know, based upon our conversation with Mr. Johnston, is presented at page 121 -- or Slide 121, is that a 2 percent rate increase, from the Corporation's perspective, does not equate with rate shock, and even a 2 percent RSR rebuilding fee does not equate to rate shock, in his view.

Yet a lot of the conversation about the Capital Maintenance Program was about avoiding volatile rebuilding fees. Our clients have gone through voli -- through rebuilding fees before. They didn't embrace them enthusiastically. But if faced with the choice between having a healthy RSR, and from time to time, having to have rebuilding fees, or from over-collecting, our clients know what that choice would be, and it would not be to over-collect.

Ms. Sherria -- Ms. Sherry argues, and -- and based upon her understanding of intergenerational equity, concludes that pre-collecting for the Capital Maintenance Program is inconsistent with intergenerational equity. And obliging consumers to pay today -- when the RSR is well within target range for some future cost, or

pressures on the RSR that may or may not occur, in her view, is inconsistent with the principle of intergenerational equity, and that it would be better to have a rebuilding fee at a time frame, if necessary, where there is less separation from -- from those in which the event occurred.

The hypotheses of this Capital Maintenance Provision is that the MPI portfolio risk is ever increasing. Dr. Simpson, in our clients' view, successfully rebuffed that hypothesis by noting the many moving parts in terms of the risk profile of Manitoba Public Insurance, and -- and suggesting that that hypothesis has not been demonstrated, and our clients conclude -- concur.

The last point on the CMP our client wishes to make is regard to the Saskatchewan CMP. And our client does not consider that analogous. We have an evidence-based, DCAT-driven RSR selection process in Manitoba, and an annual, evidence-based, independent rate-setting process, where Manitoba Public Insurance, in the event that rates are inadequate, or if they can make the case that they need more capital, can come before this Board, and if they can make the case, this independent Board will meet the need.

The urgency and the necessity of the Saskatchewan CMP, to the extent that it was required, comes out of a very different context, where there aren't annual reviews. And Ms. Sherry makes this point eloquently at slide 124. And my -- our clients' understanding of the record is that Saskatchewan has not been back in for a rate increase, although there may be one (1) pending since that CMP was introduced back in 2014. And from our clients' con -- perspective, that raises a concern of over-collection.

Was that CMP so generous that the -- the Corporation did not need to come back in for four (4) years? We don't know the -- the facts, but that is a red flag for our client, and that brings back uncanny and unhealthy echoes of that era of over-collection that our clients, between 2004 and 2011/'12, that our clients do not wish to revisit.

Finally, I wish to speak about the quality of the CAC (Manitoba) witnesses in this regard. Dr. Simpson and Ms. Sherry brought an interdisciplinary approach, the insight of the actuarial sciences and of Ms. Sherry's practical, lived experience in the insur -- property and casualty world, and then applied micro-economics and econometrics from Dr. Sim -- Simpson, as well as the

experience of Dr. Simpson with risk analysis with other regulated industries.

On point 3, we note Ms. Sherry's extensive and senior experience, both with Crown monopolies, as you saw her role with SGI and MPI, and also with firms that are not shielded from the marketplace, like Wawanesa, firms that actually have to face insolvency and consumer risk, and that is an important insight that our clients believe is valuable to this perspective.

Ms. Sherry also brings actuarial experience, not just in Manitoba, not just in Canada, but with the broader North American marketplace and with private-sector property and casualty firms that are bigger than MPI. And in our clients' submission, significant weight should be given to their findings.

Ultimately, our client recommends with regard to the overall health of the Corporation, a finding that a shield for bad management is not appropriate for the RSR, that given the purposes of the RSR, the MCT analysis should not be linked to any determination of rates associated with the RSR, a finding that the CMP cushion developed for Saskatchewan was developed in a very different context for a very different regulatory process, and that the

goals of efficiency and intergenerational equity are better served by rejecting the CMP cushion.

Just in terms of the allocation of costs between classes, our clients note the headline on slide 80 -- 128 speaks of the DSR review and dramatic disruption. This is not a -- a fear of the DSR review, but just to highlighting the fact that if the resi -- residual risk model and the logic of it is adopted, in the words of Mr. Johnston in the second bullet, that could mean some pretty dramatic changes to the model, and on the third bullet, where he agreed that the need for a vehicle premium percentage discount would likely be dramatically reduced under the hypothesis that the residual risk model was brought forward.

This is not an issue to be fearful of or concerned about. Our clients just note this is a very significant issue on the horizon as we seek to make rates increasingly actuarially indicated. And that highlights the need for engagement, espec -- both with stakeholders and consumers.

Speaking of engagement with consumers, slide 131, in this discussion, our client wants to separate engagement with stakeholders, like our clients, versus stakeholders with folks on the

streets, the good folks of North Kildonan, where I live. While there is room for improvement, as it relates to stakeholders, the rate-setting process and accompanying technical conferences are an important part of accountability and good practice engagement. What is missing, in our clients' submissions, in Manitoba, is ratepayer engagement as well as stakeholder engagement outside of the -- prior to the rate application.

From our clients' perspective, engagement means more than an opinion poll. It means more than a fifteen (15) minute consumer presentation after that poor consumer has tried to make sense of the five thousand (5,000) page rate filing. And our client asked whether evolving good practices in other jurisdictions that we collectively could look to to better involve stakeholders, but -- at -- at least as importantly, to better involve consumers.

And a perfect example of this is what do consumers mean when they respond to MPI polling about stable rates? Is it their bill, which our clients suspect, or is it the overall average rate, or is it the net income? Our clients have our own hypothesis, but our clients observe that in our discussions with MPI, it indicated that while it has

an ambitious examination of the customer experience, engaging with its ratepayers in terms of the rate-setting process and application is not a primary part of that application.

Our clients will cert -- simply point out that if Manitoba Public Insurance wishes advice on how to engage with ratepayers on issues related to rates, that advice is just a phone call away, from our clients or from others, and is certainly an integral element of how our clients prepare for these proceedings.

I'm going to turn it over to my colleague Ms. Dilay. Mr. Chair and members the panel, just one (1) point. We have two (2) confidential slides. We're not obviously going to talk about them online. Our clients -- I -- I think we're proposing -- the slides are well-prepared by my colleague, Ms. Dilay. They're fail -- fairly self-explanatory. Our client was contemplating that rather than kind of go offline, we could just submit those in writing to the Board on -- but that -- I guess there's three (3) slides, but that is up to the Board. I'm happy to speak to them.

THE CHAIRPERSON: I'd like Mr. Scarfone maybe to take a look at them. The problem is

if that they're submitted and he wants to comment on them -- just -- let me just think this through. We -- we have a problem, because we're going to have it in confidence. Mr. Scarfone may want to comment in reply on them.

DR. BYRON WILLIAMS: Yeah.

THE CHAIRPERSON: So maybe what we'll --

DR. BYRON WILLIAMS: Okay.

THE CHAIRPERSON: -- we'll do -- I -- I'm trying to figure out whether we're going to conclude this morning, or if we're going to break, and -- and go this afternoon.

DR. BYRON WILLIAMS: So I can indicate on the public portion, we have about ten (10) minutes left.

THE CHAIRPERSON: No, I -- I appreciate -- I -- I can see that.

DR. BYRON WILLIAMS: And -- and I suspect only about six (6) minutes, if we go through the slides. And so we'll -- we'll just finish the public's portion, and then we'll be at the -- at the -- we'll respond to the will of the Board.

FINAL SUBMISSIONS BY MS. KATRINE DILAY:

MS. KATRINE DILAY: Thank you. So as Mr. Williams mentioned, I will be going through the recommendations of CAC (Manitoba). Mr. Williams has already pointed to a number of recommended finding, and so those will build -- our recommendations will build upon that.

The first recommendation is that the Public Utilities Board adopt a standard interest rate forecast, SIRF, or a 50/50 interest rate forecast. Our clients' submission is that that issue was settled by the Public Utilities Board last year in the 2018 GRA, and was supplemented by expert evidence in the year, the 2019 GRA.

In terms of our clients' recommendation for the recommended range for the rate stabilization reserve -- sorry for the -- the typo, there -- they would recommend a range of 122 million to 250 million, and those numbers can be found in Exhibit MPI-26, figure 7, if we look at the PUB-approved methodology using the 50/50 interest rate forecast.

Our clients' recommendations regarding the ALM study, or the Asset Liability Management study. The MPI Board should be asked to revise the current ALM study in light of Mr. Viola's eight (8) recommendations to this Public Utilities Board. If

MPI chooses not to revise the current ALM study, our clients would propose, on a forward-looking basis, a 0.5 percent annual reduction in rates until such time as MPI can establish a selected investment portfolio in a reasonable and prudent matter (sic). And we note that the 0.5 percent does not reflect the opportunity cost at comparable risk in the evidence presented before this Board.

Thirdly, with regards to the ALM study, our clients recommend that further external experts retained by MPI who are testifying before the Public Utilities Board should be directed to identify whether, in their professional judgment, the methodology used is consistent with professional best practice.

Our clients' recommendation regarding the Capital Maintenance Provision is that it be rejected. In our clients' view, the CMP provides an appropriate cushion for a monopoly Crown corporation, which is inconsistent with prior regulatory direction. The MCT, or the Minimum Capital Test is expressly linked in part to a formulaic allocation that is solvency measure, to hold management accountable, and to protect consumers, in the context of private P&C companies.

The CMP would effectively allow the MCT, the Minimum Capital Test, to replace the DCAT as the primary driver of rates relating to capital reserves, notwithstanding the express direction of the -- sorry, the express rejection of the MCT by the Public Utilities Board.

Our clients note that for the 2019/2020 fiscal year, total equity is forecasted to be above the RSR range, which our client propose to be based on PUB-approved -- approved methodology, and a 50/50 interest rate forecast if we consider a zero percent rate increase, and we would direct your attention to pro forma 10. With a zero percent rate increase, total equity is projected to be $257 million.

Our clients' recommendations regarding complex claims is that MPI provide an update for the gen -- the next General Rate Application on steps to improve the handling, including adjudicating, reserving, and managing the return to health process of complex PIPP claims, and the status of complex PIPP claims, as measured against pre-BI3 benchmarks, or existing benchmarks.

Our clients also recommend that MPI provide the PIPP claim benchmarking framework relating to complex claims discussed at transcript pages 865 to

866 as part of its next GRA filing.

Our clients' recommendation regarding information technology is that, given material challenges with the implementation of major IT programs, including BI3 and PDR, as well as ongoing effects on ratepayers, MPI be directed to report to a technical conference on the business case for legacy IT systems, in other words, AOL, CARS, and including the interfaces to other systems, to the renewal of those legacy IT systems prior to the next GRA filing. The legacy IT systems renewal business case should include examples of net present value analysis demonstrating adherence to good business practice.

On slide 140, our clients recommend that MPI be directed to report back to the PUB on efforts to bring IT staffing budgets in line with peers. So we would recommend adding the words "IT staffing budgets."

Our clients' recommendation regarding the driver safety rating, or DSR, is that given the potential dramatic changes to DSR which could result from the residual risk approach, MPI should be directed to engage with stakeholders, including CAC Manitoba, CMMG, CAA, and Bike Winnipeg regarding best practices for consumer engagement, as well as their

recommendations and views on the DSR.

The recommendation regarding experts, which Mr. Williams alluded to in his presentation. In the future, any external expert retained by MPI and providing evidence to the Public Utilities Board should be directed to expressly identify any aspect of their evidence that does not conform with best practice.

On slide 141, our clients recommend -- certain -- make certain recommendations, pardon me, regarding engagement with consumers. Prior to the next GRA, MPI should be directed to consult with stakeholders, including CAC (Manitoba), and CMMG, who are both active Intervenors in this proceeding, on potential tools to better engage ratepayers outside of the formal hearing process. In other words, such as focus groups on pricing issues such as stable rates.

Our clients note that good practice consumer engagement includes engagement before, such as when an issue arises, during, by that we mean that ideas are put to consumers on how to resolve the issues, as well as after, when feedback is sought on how the solution is performing. Consumer and stakeholder input should be recorded, and where ideas are not or cannot be used, explanations of why not

should be made publicly available for accountability and transparency purposes.

Our clients would also recommend that budget approvals for Intervenors could contemplate costs for public engagement presented to the Public Utilities Board as evidence.

And our clients' last recommendation, on slide 142, relates to the recommended rate in this proceeding. Our clients recommend a rate decrease of 1.75 percent. And for their calculation of this recommendation, we would direct your attention to Exhibit MPI-26, and specifically, figure 3. That figure shows the break-even rate indication using a 50/50 interest rate forecast, and including the RSR investment income, would be negative 1.75 percent.

We note that this recommended rate in -- takes into account the rejection of the Capital Maintenance Provision, the use of the Standard Interest Rate Forecast, or the 50/50 interest rate forecast, as well as the inclusion of the RSR investment income.

Our clients also note that a further rate reduction, on a forward-looking basis, could be ordered based on foregone investment opportunities. And on a forward-looking basis, we mean for -- for

future years, as we noted in our recommendation for -- regarding the Asset Liability Management study.

Now, subject to any questions, that would be the conclusion of CAC (Manitoba)'s closing submissions on the public record. Thank you.

THE CHAIRPERSON: Thank you. In terms of the CSI, I think that we're prepared to take the document, but subject to Mr. Scarfone reviewing it -- and if Mr. Scarfone wishes reply, then we're going to have to go with the CSI, and we'll have the document put in as CSI, Mr. Scarfone's comments in reply at that point. So I'd leave it to him.

I'm going to put him on a tough spot. Mr. Scarfone, I guess the question is, how you want -- I don't know if you've had an opportunity to review it, and can take a position on it right now. I don't know how long your reply will be.

I just want to remind you the reply is intended for any new issues raised in their submission that were not covered in your submission, or were sort of brought forward for the first time. And so that should be the focus of it. So I don't know how long your reply would be.

So I'm going to put you on the spot right now, and -- and ask you. And I guess the

question is whether you're prepared to proceed now, or whether you would want a -- a break.

MR. STEVE SCARFONE: Well, I have a couple comments with respect -- with respect to that, Mr. Chair. So first -- firstly and foremost, looking at the hour, it's -- it's -- we're approaching lunch, so that is a factor to consider.

The second is, I haven't had a full opportunity to review the proposed material on the CSI front.

And -- and lastly, and probably more importantly than the others, is I have some colleagues that are working diligently on some arguments, or some reply points that the Corporation would like to make, and so I would -- I would probably want to confer with Mr. Guerra, my co-counsel, and perhaps Mr. Crozier, my client, to discuss what we'd like to say in reply.

But having noted your comment, I would like to ask if the Corporation could have some latitude when making its reply on the -- in the area of investments. And the reason I say that is because when, as I indicated yesterday -- and we won't take too much liberty, but when preparing our closing, we were doing so well, there was still evidence being given by Mr. Viola. And so there -- there would be, I

expect, some areas that might not be new in our reply, but that's -- that's obviously in the Board's discretion.

THE CHAIRPERSON: But the -- the problem -- the problem is reply is not intended to simply repeat arguments --

MR. STEVE SCARFONE: No --

THE CHAIRPERSON: -- in your submission.

MR. STEVE SCARFONE: -- and -- and that's not what --

THE CHAIRPERSON: If you have additional arguments raised as a result of their submission --

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: -- that's appropriate. But the panel doesn't want to hear the same arguments again simply reinforcing -- reinforcing previous arguments. And that -- I -- and I just put it to you because if that -- if that starts happening, I tend to lend -- let a little leeway, but as -- as you probably have discovered, there's a line, and when you cross the line --

MR. STEVE SCARFONE: I'll hear from you.

THE CHAIRPERSON: Yeah. You will.

MR. STEVE SCARFONE: Yes.

THE CHAIRPERSON: The -- the other thing, as well, is I want to give the panel an opportunity to ask questions in relation to your submission. There may be some questions.

So we're going -- is -- I -- I want to be fair in this. An hour would be sufficient, Mr. Scarfone?

MR. STEVE SCARFONE: Yeah, I think so. Yes.

THE CHAIRPERSON: Okay, so we'll adjourn for an hour.

MR. STEVE SCARFONE: Yeah. Thank you.

THE CHAIRPERSON: Mr. Williams, you have a quizzical look on your face.

DR. BYRON WILLIAMS: Only -- I'm just wondering where I'm going to move to if -- if there are any questions for us. Well, I guess we'll sit here. We'll find out when we come back at 1:00.

THE CHAIRPERSON: Well, quite frankly, in -- give -- given the -- the demand for seats here now, I don't think it really matters. So we'll adjourn until 1:00. Thank you.

DR. BYRON WILLIAMS: I'll move.

--- Upon recessing at 12:02 p.m.
--- Upon resuming at 1:03 p.m.

THE CHAIRPERSON: Before we go to reply, I'll ask the panel if they have any questions.

BOARD MEMBER HAMILTON: Thank you, Mr. Williams. I have one (1) question in relation to the recommendations that were made in the last few pages of your submission. I note that there's nothing specific in relation to the position of CAC related to the asset mix in the Basic portfolio, and I wondered whether the references to the ALM study cover that off in terms of what your recommendations for our findings are?

DR. BYRON WILLIAMS: We didn't make recommendations on that in -- in the sense that at least our understanding of the regulatory process is that the role -- the role of -- of the Board is to determine the rates that flow from the -- the Application.

If we were -- rather than to direct MPI in terms of the actual composition of its -- of its portfolio, if -- if from our clients' perspective, Mr. Viola tried to address that when he was talking about

the -- at a general level, he made the point that while MPI has concentrated its risk in this portfolio, it could diversify the risk by having some composition of real return bonds and with the portfolio diversifying its risks through real equities -- sorry, through equities and other real assets, but we didn't have a specific recommendation.

Our -- our observation was that the MPI application was unreasonable and imprudent and -- and we thought that should, if MPI chose it -- chooses to persist in it, then that should be reflected in rates. So I'm not sure if I'm helping you or not Board member.

BOARD MEMBER HAMILTON: Yeah. Thank you, Mr. Williams.

THE CHAIRPERSON: Kristen, could you pull up page 25 of the CAC presentation?

Mr. Williams, the first paragraph for the last two (2) years SIRF has clearly outperformed the naive forecast. Is that correct? I mean, I know the last year, but for the last two (2) years?

DR. BYRON WILLIAMS: I'd have to look at Dr. Simpson's -- this is his statement. But I think if -- I -- I don't have his PowerPoint right with me, but I -- I think he looked at the results

from two (2) different years. We could look that up, Mr. Chair, while you're...

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: But I -- I believe that was presented in his PowerPoint. Yeah and I'm -- I'm quite confident that was his conclusion.

THE CHAIRPERSON: Okay. We heard evidence that I guess the concern of the -- of -- of CAC is that if interest rates go up, and we have a naive forecast, MPI will receive too much money.

Is that correct?

DR. BYRON WILLIAMS: All other things being equal.

THE CHAIRPERSON: Okay. And what happens in a situation where the -- there's a projection for SIRF but, in fact, interest rates haven't gone up?

DR. BYRON WILLIAMS: And that -- that experience has happened. In -- in that case, the -- the results would be, all other things being equal, lower revenues than MPI -- or lower net income than MPI would expect.

That's why collectively we're trying to come up with a best estimate. The information

suggests that the SIRF is the best performing given the material change in circumstances.

If you note our clients' recommendations, the rates that flow out of them are based on a 50/50. That's that element of caution that Dr. Simpson endorsed last year. And -- and if you look at the rate numbers --

THE CHAIRPERSON: Correct.

DR. BYRON WILLIAMS: -- that's what our client has done.

THE CHAIRPERSON: Because interest rates are going up?

DR. BYRON WILLIAMS: Yes and there's -- interest rates are going up, but it's not just that they're going up, it's that the fundamentals that would tend to drive interest rates are -- are going up as well in terms of the capot -- capacity of the economy.

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: And, sir --

THE CHAIRPERSON: Yes.

DR. BYRON WILLIAMS: CAC-26, Slide 12, shows where Dr. Sim -- Simpson drew those conclusions from.

THE CHAIRPERSON: Okay. Thank you.

Two (2) years ago we were here and we had flat interest rates and I had a series of economists appear before the Board, indicating that we should be moving forward with -- with SIRF. MPI's position was it should be 50/50 and interest rates were flat.

Kristen, can you pull up CAC-27? I believe this is the position of CAC two (2) years ago that 50/50 was -- should be rejected at a time that interest rates were -- had been flat for eight (8) years. I -- I guess the concern I have is we're -- and -- and I'd like your comment.

We're trying to put precision in an area where there seems to be nothing more than imprecision. I just remember somebody being interviewed and asked what it could -- in -- interest rates were going to be a year from now. An economist and he -- he said if I knew what interest rates were going to be a year from now, I wouldn't be doing this, I'd be putting my money in -- into the market and making millions of dollars.

I'm just wondering if we're trying to, you know, fore -- you know, forecast something based on something that changes so quickly.

DR. BYRON WILLIAMS: Everything's a forecast, sir, whether you go naive, 50/50 or the

Standard Interest Rate Forecasts. So if you think of the advice of Mercers, which is definitely not to do -- to do naive or otherwise, it's all a -- we're not -- you have -- you can't abdicate your responsibility there. There has to be a choice made, we would submit.

The position in -- our client amended its position last year and tried to inject some caution into its position and it's maintaining that caution, even though events are suggesting that the Standard Interest Rate Forecast is probably the best going ahead. It's not like we don't have insights, sir, in terms of the market fundamentals and the five (5) changes in the overwrite -- overnight changes or the language of the bank.

So, it would be quite justifiable from our clients' perspective to pick the Standard Interest Rate Forecast, but out of some caution and in recognition of the challenges, that's why the numbers that flowed out of our clients' recommendations are based on 50/50.

And so I don't know -- our client ha -- has been struggling with these issues as well. Two (2) years ago we took the standard. Th -- last year, certainly, Dr. Simpson was the 50/50 and our client

said that was acceptable and this year, even though the evidence tends to suggest that the standard would be the better result, given the material change in circumstances, our client in terms of the rate numbers is picking 50/50. That to us is appropriately cautious. That's trying to balance the risk of under estimation with -- with the real risk that we're -- that we're going to over collect from ratepayers.

THE CHAIRPERSON: Thank you. I believe Ms. Sherry said that one (1) of the reasons we don't need a Capital Maintenance Provision is that because unlike Saskatchewan where -- where they do not have rate hearings, we'll be back here in a year. And if we need a rate rebuilding fee, we can deal with it at that point.

Am I correct in that being her position?

DR. BYRON WILLIAMS: Within -- within a broader context of, we already have a process to set an appropriate range of targets and that the financial dynamics due change. Yes, I -- I think that is one (1) of the points she made.

And she argued that -- that you would be rather than over collecting when you're in --within your target range, it would be better from a temporal

context to be close -- more closely related to the event but, yes.

THE CHAIRPERSON: So -- so if we under collect in a -- if we under collect for a year, we're not in that difficult situation because one (1) year later we'll have a -- we'll have a rate hearing and either introduce a rebuilding fee or introduce higher rates?

DR. BYRON WILLIAMS: Yeah. Although, like, there's natural variants, sir, in the results right? It -- it's an inherently risky business. If you're within your target range for reserves and in this one, toward healthily within your target range, why would one put an extra surcharge on to -- to collect when you're in that state?

We -- we are already pre-collecting from ratepayers through Basic and Extension, to some degree, why would one add a surcharge on -- on a -- on a -- on a reserve? It's what are our clients struggle with.

THE CHAIRPERSON: Believe me, the panel struggles with it -- it every year on the -- we're hearing the same issues every year. And -- and we struggle with it every year.

The problem I have is -- I -- I just

wonder if the same issues cut both ways. You know, if you're reviewing everything every year, do you make the adjustments every year, up and down, or do you -- do you lean one (1) way and then -- and then make the adjustment only in one (1) direction at the hearing? I can see everybody's confused with it.

So, Ms. Sherry's position is, it's better to lean towards having a lower rate and bringing a rebuilding fee. So I put it to her, so if you did it once every three (3) or four (4) years, you would -- would you see it as a normal -- a normal thing and I believe she said yes.

So it -- it would be better to be under and have rebuilding fees than potentially having too much and re-adjusting the following year.

DR. BYRON WILLIAMS: This is how our clients would see it. Just so -- let's -- our clients would say that you should be setting rates based upon actuary -- like future rates based upon expected future costs.

In the context when your reserves are already well within target, there's no need to build into the reserves at a -- a fund to over build the reserves. That's -- that's it is -- is simplest as we can say it.

Like -- if -- if we come back next year and MPI's at 110 million, then -- then your expected future costs would include the rate indication, plus a reserve rebuilding fee.

From our clients; perspective looking at actuarially indicated rates, the appropriate rate is the -- the future rates. There is no need to rebuild the reserves. We're in -- we're within target and healthily within target.

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: That's the perspective, I think.

THE CHAIRPERSON: Thank you. Final question. You raised the issue of inter-generational equity and you raise the issue of Manitoba Hydro. I think you talked about Manitoba Hydro and how there had been an argument of inter-generational equity.

DR. BYRON WILLIAMS: I -- I think in the context of Manitoba Hydro, I was actually make a different point.

THE CHAIRPERSON: Okay.

DR. BYRON WILLIAMS: If I -- what I was trying to say is the insight we had from the Hydro hearing is -- is that there's very little insight at looking at debt/equity targets in isolation unless you

drilled down into the realities of the Corporation. So a company that looks like it's got 80/20 versus 75/25, those fundamentals may be very different. So, that's the point I was trying to make.

THE CHAIRPERSON: I see. Okay. Thank you very much. Thank you, Mr. Williams.

Mr. Scarfone ...?

DR. BYRON WILLIAMS: Mr. -- Mr. Chair...?

THE CHAIRPERSON: Sure, Mr. Williams.

DR. BYRON WILLIAMS: I apologize. I do have to -- I've got a class I've gotta teach so --

THE CHAIRPERSON: Go teach 'em, Mr. Williams. Thank you very much.

REPLY BY MR. STEVE SCARFONE:

MR. STEVE SCARFONE: Thank you, Mr. Williams. Thank you, Mr. Chair.

So the Corporation has some comments in reply. I do believe, Ms. Schubert -- yes, thank you, Kristen. We expect if -- if the panel will oblige the Corporation to be about fifteen (15) minutes in its reply this afternoon, generally speaking, and I'm aware of the Board's concerns about the purpose of reply submissions.

I can say perhaps to shortcut some of these, that we have replied to some direct argument that we heard, but generally speaking, I think it's important that the Board remember to review the evidence in all its context when relying and reviewing the submissions of the Intervenors. And so I say that.

I'll give just one (1) example. I won't deal too much with Mr. Oakes's defence, or his closing argument yesterday. You know well, Mr. Oakes is entertaining, and uses colourful language. We do take us some exception with what he said, and some of it, with respect, is taken out of context.

So for just one (1) example, and I appreciate the Board will review the evidence in this regard, you know, he brought to the Board's attention yesterday the fact that Mr. Johnston, the chief actuary, admitted that the CMP could really just be any number. That, you know, he admitted under cross-examination that that could just be 5 percent, and they could insert any number they wanted for the CMP.

What Mr. Oakes didn't to bring your attention to, or remind the Board of, was that on redirect, Mr. Johnston and said, Would it still be a CMP if it was 5 percent? And the answer to that, of

course, was no, because the only number that can be supported for the CMP was the two point one (2.1).

So if -- yeah, management can say 5 percent, but it's no longer a CMP. It's now a two (2) per -- 2.1 percent CMP, and a -- a 2.9 percent rebuilding fee, or surcharge, or whatever it was that Mr. Johnston said. So just be careful with some of the -- the evidence or the argument that you heard in that regard for Mr. Oakes, and we won't go any further on that.

And -- and the same applies, to some extent, on the -- on the argument you heard this morning. You know, Mr. Williams is more careful in this regard, and we appreciate that. But the stress tests on the ALM, this is an example of -- for -- for this purpose. The stress tests on the ALM were, in fact, done, and three (3) of them were produced by way of undertaking, including the inflation stress test.

And the tests, quite candidly in that response, were said to have been flawed in some respects, and weren't presented initially. But in the spirit of the Corporation's openness and transparency, the tests were produced. The easy answer to that undertaking would have been, The stress tests weren't done, or they weren't done, but no.

Mercer redid them, and we provided them to everyone involved to review, in the -- in the spirit of openness and transparency. So I just want to make those comments, to be careful with -- with the interpretation of some of the evidence, and some of the argument that the Board has heard.

On the first slide, Ms. Schubert, this deals, to a large extent, with some of the recommendations that the Intervenor CAC has been making, including, perhaps, for the Board's consideration, some technical conferences. The Board -- sorry, the Corporation just wants to reiterate that Mr. Williams has already claimed that this process is robust. But now they want to appear -- it appears that they want to expand the process to include additional technical conferences.

I would remind Mr. Chair and the panel members that there was a technical conference on the Capital Maintenance Provision. One (1) of the expert witnesses that were heard from that this hearing didn't show up for that technical conference, and so the Board should be mindful of the costs associated with expanding the process. The Corporation would like to move in the other direction in trying to streamline the process.

And -- and as it concerns the ratepayer engagement, we think that's what this process is for, is this is a public forum. The -- the Consumers' Association participates year after year, and they are granted standing on the grounds that they represent those consumers that Mr. Williams would have the Corporation now engage before the public hearing. And that, to us, again, as -- does not seem economical. That's what this process is for.

And reiterating there at the third bullet, particularly with this rate application, MPIC has opened its books. Under the new regime, there is an increased transparency, and we saw that this year in the form of a number of motions to have information that, in past years, would not have been shared. But we had confidential orders made whereby all the documents in the Corporation's possession on all information technology projects and other matters were shared with everyone involved. And we think that's the -- the correct way to do it, and that's the direction the Corporation is moving.

So again, on that -- on some of the recommendations, more processes is not the solution, in -- in our view. The -- the CAC proposes a tech con -- tech conference on legacy modernization. The

Corporation feels strongly that this is within the domain of management and the Board of Directors. Of course, the Board will be kept informed as it relates to revenue requirements and rate approvals, and that's no different than what's happened in years prior, what's happening this year, and what will happen next year. There will be full disclosure, full transparency, and openness on all spending associated with the proposed legacy modernization.

And on that front, you heard from Mr. Bunko, there's no -- there's been no decision made on that. There's been an assessment, and when that assessment is completed, it will be reviewed. A decision will be made.

And next slide, please, Ms. -- Ms. -- thank you. Mr. Williams implied that the IT department has mismanaged some projects. The only comments that the Corporation would to make in reply to that is at the time, as Mr. Bunko indicated in his evidence, certain assumptions remain relevant. The net present value of that project were current, and decisions were made when the new Gartner report was provided.

You've heard the evidence of the executive that mistakes will be made. The Corporation

is no different than any other private corporations, but -- but the Corporation was here taking responsibility for the mistakes that have been made, and we're doing their best to prevent those mistakes from recurring.

Contradictions on the Asset Liability Management study. The Intervenor Consumer Associations of -- Group of Canada has no apparent objection to de-risking the portfolio and, as you heard yesterday, and I don't want to repeat what I've indicated already, a direct result of that was a reduction in the capital that was required, but they can't have it, in our view, both ways.

The -- Mr. Williams and his client reject the conclusion that the de-risking must be accomplished through lower risk investments, and they recommended, as a result, a -- a reduction -- an ongoing reduction for foregone investment opportunities. This, we say, is clearly at odds with the approval of the prudent costs in the regulatory context.

The Asset Liability Management study, in MPI's view, was eminently reasonable. Mercer did detailed work. They met with the investor. They conducted their due diligence, and they explored a

suite of alternatives.

I might add that Mr. Williams, in his argument this morning, Mr. Chair, took aim at the nominal liability benchmark that MPIC and its Board of Directors preferred over the real liability benchmark. Comment with respect to that, Mr. Chair, is this: Of course, we all live in the real world. We live in a world where there is inflation. We live in a world where there's interest rate risk.

Having said that, why, then, would there exist a nominal liability benchmark? Why wouldn't every investor, given those facts of inflation and interest rate risk, go with the real liability benchmark? And that's a rhetorical question. I don't have the answer to that, but the industry seems to have presented two (2) benchmarks that investors can go with, and MPIC and its Board of Directors chose the nominal route.

And you heard Mr. Makarchuk indicate that that's not uncommon for investors to hedge inflation only partially, or perhaps maybe not -- not at all. That, again, was a decision made by the Board of Directors.

Mr. Viola -- and while we appreciate Mr. Viola's input and recommendations that we heard

from him that this week, ultimately, the decision lies with the Corporation and its Board of Directors. And highlighting that point are some quotes from his testimony this week:

> "My background is not in insurance, but I understand the nature of the liabilities."

But when pressed on that, in cross, he said, "I'm not an expert on the liability side." And so we have here an expert from Toronto that is purporting to give advice on how MPIC and its Board of Directors have decided to invest the money. And I'm going to suggest to you, Mr. Chair, that Mr. Viola is no slouch; eminently qualified. Toronto, and even to some extent, Alberta, where Mr. -- Mr. Makarchuk comes from, two (2) vastly different economies than Manitoba. In fact, those two (2) are the most robust and strongest economies in the country. That's not Manitoba.

And what you have on the investment committee are Manitoba investment -- investment experts that have made decisions in the best interests of the Corporation and the Manitobans that pay the rates. And so we ask again that you give careful thought to that and defer to the expertise of the

Board of Directors.

Mr. Williams would have this Board substitute its opinion for that of the investment committee. There are a number reasonable outcomes that can be had with respect to any investment strategy, and this, we say, MPI's is as reasonable as any other. And lastly, MPIC's Board of -- of Directors has jurisdiction over investments, its clear mandate in the annual business plan.

Lastly on investments, and I -- I don't want to go too deeply into it, because we've canvassed much of this, but remember this. All of the criticism of -- of the investment strategy fall away if the inflation forecasts hold true. If inflation stays at 2 percent, around that level, all of these criticisms fall away.

And with all due respect to Mr. Williams, these issues, real return bonds, nominal versus real benchmark, inflation, interest rate risk, these, with respect -- and these are Mr. Williams's words -- these are not a significant gamble. And I don't want to undermine the importance of these issues, but it's -- it's much ado about nothing.

And the reason I say that is for two (2) reasons, Mr. Chair. Mr. Makarchuk said two (2)

things: 1) that a sophisticated institutional client like MPIC should have an ALM study done every five (5) years, and 2) he said that the portfolio is sufficiently liquid to allow for a re-mixing, if necessary.

So if, for example, inflation started skyrocketing, there's nothing that would prevent the Corporation from engaging another firm to conduct an ALM study re-mixing its portfolio to protect it against rising inflation. We're not locked in to these -- to these matches that have occurred under the ALM.

And I agree with Mr. Williams that the Corporation isn't the master of its investments. Of course we're not a master. But I -- I'm going to speak to Mr. Graham after this and see if next year, we can retain Warren Buffett for some advice, because I would submit that there are no masters in this field.

The investment industry, generally speaking, is based on projections, forecasting, hedging, and predictions. It's far too speculative for anyone to suggest that someone should be a master in the field of investments. And so we go back to the question that I put the Board in my opening statement:

"Is the investment strategy that's adopted by MPIC a reasonable one? And if the answer to that question is yes, then it should be left alone."

On the net Capital Maintenance Provision, there's a couple of small points, here. Firstly, the Capital Maintenance Provision is not, as Mr. Williams suggested, used to prevent rate shock. That's not what it's for. That's the job of the Rate Stabilization Reserve. The Capital Maintenance Provision, as we indicated over and over, is to do one (1) thing. It's to maintain capital at the level it is from the start of the fiscal year to the end. That's it, so we don't have a depletion in capital.

And so that's a little strong, that first bullet, but I do agree that Ms. Sherry misunderstood parts of the application, the -- but the purpose of the CMP is unrelated to operational risk, and the -- the Minimum Capital Test is the appropriate measure for setting -- for setting the Capital Maintenance Provision.

The Minimum Capital Test does not in any way replace the Dynamic Capital Adequacy Test, not in any way. The -- the MCT comes in at the very end

of the analysis, after Mr. Luke has performed his -- his adverse scenarios. Again, the Capital Maintenance Provision is not to prevent rate shock. We want to be clear on that.

The last bullet bears mentioning that MPI's approach is prudent fiscal management, and is consistent with industry best practice. Mr. Williams said, Well, let's look at the other jurisdictions. We have SGI, we have ICBC, we have Quebec, and MPIC repeats over and over again that these jurisdictions, not unlike ours, all have 100 percent MCT. And he says, Well, we don't know how they got there. How did they arrive there?

And we say, It doesn't matter. That is standard industry best practice. It doesn't matter how they got there. It -- it appears to us, at least, that this jurisdiction is the only undercapitalized public insurer in the country.

On rate shock, one (1) of the rec -- recommendations that Mr. Williams makes on rate shock is that if there's going to be any departure from best practices recommended by an expert, that those departures by MPIC should be brought to the attention of the Public Utilities Board in -- in the report. So, for example, Mercer would say, We'd like you to

use our standard interest rate forecast, and MPIC says, No, you know what, we're going to do it on a curve.

And so Mr. Williams would have Mercer bring to your attention in its report MPIC's defiance, if you will, of its recommendation. That, we say, is completely inappropriate. What should happen instead, as happened this year, is the report is subject to a cross-examination, like in any proceeding.

Subject to a cross-examination, Mr. Williams can make his arguments, MPIC can make its arguments, and the Board decides on the weight that it needs to attribute to that particular issue, based on the evidence. So we don't agree that that's a -- a recommendation that has any application in this -- in this proceeding.

On rate shock, at first bullet, this is a General Rate Application, and why I say that is because it's a little unfair for Mr. Williams to cherry pick different passenger vehicle classes, versus motorcycles, versus trailers and say, Some of them are in excess of 5 percent, some of them might be between five (5) and ten (10). Some of them are under -- this is a General Rate Application.

The capping rules from the PUB have

been in place for years, and now they'd like this Board to take a look at what the individual pays, and we think that's entirely inappropriate in a general rate application. The ratepayers need to pay the cost of their insurance, and the premium should match the exposure.

I just want to -- before I read this conclusion slide, I just want to go through my own notes and make sure that I've canvassed everything that is properly put before the Board in reply, Mr. Chair.

(BRIEF PAUSE)

MR. STEVE SCARFONE: One (1) of the questions that Ms. McCandless put to Mr. Johnston was, What's changed from last year that led MPIC to adopt the use of the naive? The short end to that is nothing changed, because last year, MPIC was recommending that this Board make use of the naive forecast. We are again this year. Nothing changed.

We fully appreciate that the Board didn't accept MPIC's recommendation last year, ordered the 50/50. The Corporation felt it was compliant with that Order, but returned to what we feel is the best

estimate, the naive forecast. So nothing has changed.

And so with respect to that, Mr. Williams said, Well, MPIC hasn't discharged its onus that naive should replace the SIRF, or the 50/50? What Mr. Williams conveniently ignores are the net income losses, the -- the money that the Corporation lost in making use of the wrong forecast, in my view, is a full answer to the onus. That should discharge the onus, $165 million in losses would discharge the onus.

Mr. Williams said with the current investment strategy, there are significant indexing risk in the MPIC portfolio. Those were his words, Significant indexing risk. There was no evidence -- no evidence that there's indexing risk. Indexing risk, as I understand it, is -- is attributable to rising inflation, then there would be indexing risk. No evidence that inflation is going up.

(BRIEF PAUSE)

MR. STEVE SCARFONE: And lastly, I -- just for my own selfish reasons, Mr. Williams said that I kept mixing up terminology yesterday. I just want to clarify, when I make use of the term 'the

Basic claims liability portfolio,' that's the name the Corporation gives its Basic claims portfolio.

I think what was throwing Mr. Viola was the word 'liability,' because he's like, You're on the wrong side of the sheet, whatever the accounting sheet was called. But we call it the Basic claims liability portfolio that contains the assets that match against the liabilities. So we've probably confused everybody here, but that's just the name that we give it, and -- and I've been trained in that regard, to call it the Basic claims liability portfolio. But for your purposes, Mr. Chair, it's just the Basic portfolio, the one that, you know, we've canvassed here repeatedly.

So in conclusion, MPIC has presented the facts and -- and evidence. That -- that's obvious, and -- but we do want to reiterate that this particular General Rate Application, Mr. Chair, has been one that's been open and transparent. And I don't think anybody could quarrel with us on that.

We may not have a fancy title to our closing argument about cushioning, and skimming premiums; that's not what this Corporation is about. And we say that this Board cannot ret -- reject the application on these trivial objections.

That concludes the Corporation's reply.

THE CHAIRPERSON: Thank you, Mr. Scarfone. This concludes the 2019 Manitoba Public Insurance Corporation General Rate Application hearing.

On behalf of the Board panel, I would like to thank everyone for their cooperation throughout this hearing. This includes, during the hearing, the MPI front row, including: Mr. Graham, Mr. Scarfone, Mr. Guerra, Mr. Johnston, Mr. Wennberg, Mr. Bunko, Mr. Giesbrecht, Mr. Bunston, Ms. Campbell, Mr. Lazarko, and Mr. Remillard. The MPI back row, including, from time to time: Mr. Triggs, Mr. Keith, and Mr. Crozier, Mr. -- Mr. Sprenger, Ms. Jetana (phonetic), Mr. Mira, Mr. Clearwater, Mr. Dressler (sic), Ms. Hora, Ms. Mitra, Mr. Dunstone, Mr. Krupinski, and Mr. Phoa.

The Intervenors and their respective counsel: for CAC, Mr. Williams and Ms. Dilay, and for CMMG, Mr. Oakes.

The witnesses who testified before the board: Mr. Makarchuk, pardon me, Mr. Henry, Dr. Simpson, Ms. Sherry, and Mr. Viola.

The presenters who made submissions this year, I would also like to thank the Secretary of

the Board Mr. Christle, and our document manager Ms. Schubert.

Our court reporter, Digi-Tran, including Cheryl -- Ms. Cheryl Lavigne and Ms. Wendy Woodworth; our advisors, Mr. Cathcart and Ms. Martyszenko, and Mr. Pelly; and our counsel, Ms. McCandless, and Mr. Watchman.

The Board also appreciates the members of the public who took time to sit during the course of the hearings, and to follow the proceedings via our livestreaming on the PUB website. The panel will be meeting in the very near future to deliberate and make our final determinations on this matter before us.

This concludes our hearing. Thank you.

MR. STEVE SCARFONE: Thank you.

--- Upon concluding at 1:44 p.m.

Certified Correct,

Public Utilities Board

Régie des services publics

Notice of Public Hearing and Pre-Hearing Conference

Applicant: Manitoba Public Insurance Corporation

HEARING:

The Public Utilities Board (Board) anticipates holding a public hearing of an application from Manitoba Public Insurance Corporation (MPI) for approval of rates and premiums for compulsory vehicle and driver insurance as of March 1, 2019. The hearing would take place at the Board's Hearing Room, 4th Floor, 330 Portage Avenue, Winnipeg, MB (commencing at 9:00 a.m.) on October 15, 2018. A Pre-Hearing Conference is to be convened by the Board in its offices at 9:00 a.m. on June 25, 2018.

RATE IMPACT:

The Corporation is requesting approval for Basic Autopac vehicle insurance rates and premiums effective March 1, 2019, which, if approved, will result in 2.2% overall increase in MPI's Basic vehicle premium revenue (in addition to the revenue impact of vehicle upgrades and an increased overall driver and vehicle population).

MPI proposes that this rate increase be comprised of two elements: i) a 0.1% increase to the break-even cost of policies, and ii) a 2.1% increase for a Net Capital Maintenance Provision to maintain Basic's capital position through the rating year, as measured by the Minimum Capital Test. The Capital Maintenance Provision recognizes the impact of investment income on Basic's Rate Stabilization Reserve, and collects only the residual amount required to maintain Basic's capital position.

MPI is also seeking final approval of 2017/18 and 2018/19 Vehicles for Hire rates, approved by the Board on an interim basis by Order 11/18 on January 15, 2018. MPI is not proposing any changes to the Driver Safety Rating system in the 2019 General Rate Application.

Individual vehicle and driver premiums would vary depending on claim and driving experience, insurance use, territory and vehicle rate group. Full particulars, including the rate impact and application, can be found on the Manitoba Public Insurance website www.mpi.mb.ca.

PRE-HEARING CONFERENCE:

Those seeking Intervener status should notify the Board of their intention, by applying to the Board Secretary before the now scheduled Pre-Hearing Conference of June 25, 2018. Interveners may be entitled to financial assistance, and the Board's Rules of Practice and Procedure (Rules) provide the related guidelines, which can be seen at the Board's website: www.pubmanitoba.ca or obtained on request to the Board, by either emailing (publicutilities@gov.mb.ca), writing or calling the Board Secretary (204-945-2638 or 1-866-854-3698, toll free). Parties wishing to submit a brief or to express comments at the hearing should also contact the PUB via the Board's on-line comment tool.

GENERAL INFORMATION:

Interested parties should take note that the Board does not have jurisdiction over the MPI lines of business denoted as Extension or SRE, or as to MPI's Driver and Vehicle Licensing operation.

Persons seeking further information as to MPI's application, or with respect to the Board's process, and/or wishing to address the public hearing in French should notify the Board Secretary by September 1st, 2018. As well, interested parties may examine MPI's application and supporting materials, either at the offices of the Corporation, on its website, or in the Board's office.

The Manitoba Ombudsman has recently issued privacy guidelines for administrative tribunals. The Board is mindful of its obligations under those guidelines. Its decisions in respect of the application being considered will be sensitive to the guidelines. Personal information will not be disclosed unless it is appropriate and necessary to do so. However, the Board advises participants that these proceedings are public and that as a result, personal information protections are reduced.

3. PRELIMINARY ISSUES LIST 4

4. MPI COMMENTS 6

5. CAC COMMENTS 7

6. BOARD FINDINGS 8

7. IT IS THEREFORE ORDERED THAT: 9

1. SUMMARY

By this Order, the Public Utilities Board of Manitoba (Board) establishes, on an interim basis, the Preliminary Issues List for the anticipated General Rate Application (GRA) of Manitoba Public Insurance Corporation (MPI or Corporation) for the review and approval of base rates and premiums for compulsory driver and vehicle insurance to take effect March 1, 2019.

2. PROCEDURAL HISTORY

By letter to MPI dated April 11, 2018, copied to interested parties and prospective interveners, the Board advised that it is seeking to streamline its procedure for the anticipated 2019 GRA. As part of the process, the Board would be advancing the consideration of the scope of issues to be considered at the 2019 GRA hearing to earlier in the GRA hearing process.

Included with the letter of April 11, 2018 was a preliminary Issues List for the 2019 GRA. The Board invited MPI and the interested parties and prospective interveners to provide their comments on the scope of the issues, following which this Interim Order would issue. In addition, the Minimum Filing Requirements (MFRs) for the 2019 GRA would be provided to MPI following the issuance of this Order.

The Board further advised MPI and the interested parties and prospective interveners that following this Interim Order, a final Issues List would be approved by the Board in its Procedural Order, which will follow the Pre-Hearing Conference.

The Board received comments on the Preliminary Issues List from MPI, and from one of the Interveners of record, Consumers' Association of Canada (Manitoba) Inc. (CAC).

3. PRELIMINARY ISSUES LIST

The Preliminary Issues List as determined by the Board and circulated to MPI and the Interveners of record on April 11, 2018, set out the following issues as those to be considered in the 2019 GRA.

First, the following issues would be considered to be in scope of the 2019 GRA in the normal course:

1. Requested vehicle rate and any changes to other fees and discounts;

2. Rate indication based on accepted actuarial practice in Canada;

3. Compliance with Board Orders 130/17, 11/18 and 29/18;

4. Financial forecast:

    a. financial forecast accuracy (2017/18 forecast versus actual results);

    b. changes in projected financial results;

5. Cost allocation methodology changes;

6. Update of DCAT, target capital analysis and the target Basic total equity threshold levels based upon methodology approved in Board Order 130/17;

7. Performance of the investment portfolio and the composition of the portfolio;

8. Cost of operations and cost containment measures;

9. Claims forecasting (including PIPP);

10. Operational benchmarking, including with comparison to other provinces;

11. Run-off of prior year claims during 2017/18;

12. Long tail experience from other jurisdictions;

13. Results of the Service Fees review; and

14. Other issues that may arise (depending upon the nature and scope of the issue) based on a review of the application.

In addition, the Board determined that the following issues would require more detailed consideration in the 2019 GRA:

15. Driver Safety Rating ("DSR") with further assessment on having "*driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale, and vehicle premium discounts that are fully supported by actuarial indications based on principal driver performance evaluation*" [Board Order 29/18].

16. Final rates for service for Vehicles for Hire (VFH) for the 2017/2018 and 2018/2019 insurance years and the directives from Board Order 11/18.

17. Current IT Strategic Plan and IT Expenses and Projects, including the Physical Damage Re-engineering Project, Distributed Estimating Technology Modernization and other initiatives planned for or ongoing in the rating years.

18. Capital Maintenance Provision with further assessment of developing a pricing approach which accounts for the natural growth of Basic's risk profile and protects against the natural depletion of Basic Total Equity.

19. Asset Liability Management Study, including review of all aspects of the Study recommendations and implementation thereof, the evaluation of risk and return, alternative portfolio compositions, proposed portfolio segregation and recommended composition of the investment portfolio(s), forecast investment performance and changes to the Investment Policy Statement.

Lastly, the Board determined that certain issues would be deferred from the 2019 to future applications, or would be the subject of a technical conference or another process:

1. Road Safety;

2. Interest Rate Forecast (any changes and updates based on Board approved methodology not deferred);

3. Target Capital Methodology (any changes and updates based on Board approved methodology not deferred);

4. Integrated Cost Allocation Methodology (other than changes referred to in item 5 above).

4. MPI COMMENTS

MPI advised that it was supportive of the Board's initiative to streamline procedures to improve the focus and efficiency of the hearing process. MPI also agreed that "Core Issues" need to be considered each year.

MPI stated that Core Issues should be the basis for the MFRs which should be consistent from one year to the next. However, MPI was also of the view that there should be "Additional Issues" which should be the basis for "Additional Filing Requirements" (AFRs) which would vary from year to year depending on which issues the Board wishes to examine in greater detail in any given GRA.

MPI provided a revised Preliminary Issues List which largely tracked the issues set out in the Preliminary Issues List distributed by the Board, but which reorganized the listing to identify what it considered to be Core Issues as the basis for MFRs and Additional Issues as the basis for AFRs.

MPI also provided a Proposed Minimum and Additional Filing Requirements table classifying various requirements based upon the identified Core or Additional Issue. The filing requirements set out in the table again largely tracked the MFRs from previous GRAs though reorganized based upon classification as either a Core or an Additional Issue.

5. CAC COMMENTS

CAC also provided a revised version of the Preliminary Issues List distributed by the Board.

CAC suggested the addition of some further items, including a Corporate Strategic Plan, Risk Assessment which had been addressed in previous GRAs, and Accounting practice changes which are expected to be implemented as a result of changing requirements under International Financial Reporting Standards (IFRS). In addition, CAC suggested a more detailed description of some issues, relating primarily to the Asset Liability Management Study which had been filed with the Board by the Corporation pursuant to the Board Order 130/17.

It was also CAC's position that a detailed review of Road Safety and Loss Prevention not be deferred.

As well, CAC suggested changes to the MFRs corresponding to their submissions on the Preliminary Issues List.

6. BOARD FINDINGS

The Board appreciates the submissions made by MPI and CAC and is of the view that identifying and emphasizing those issues which will require more detailed consideration in the upcoming GRA will improve the efficiency of the public hearing and the Information Request process.

The Board accepts CAC's suggested inclusion of a Corporate Strategic Plan and Risk Assessment as issues to be considered in the normal course in the upcoming GRA.

While the Board accepts that some additional detail could be provided to the issues identified as performance and composition of the investment portfolio and the consideration of IT issues, not all of the suggested changes have been adopted.

In addition, the Board appreciates the importance of Road Safety and Loss Prevention to the public and ratepayers. This underlies the Board's direction in Board Order 130/17, that a detailed and comprehensive review by way of a Technical Conference take place in early 2019. As a result, while costs and budgeting of Road Safety programming will be considered in the 2019 GRA, the substantive issues identified in Board Order 130/17 will be deferred to the upcoming Technical Conference.

Lastly, the Board finds that issues relating to the anticipated changes to accounting practices under IFRS would be more effectively reviewed at a Technical Conference prior to the implementation of such changes. Accordingly, the terms of such a Technical Conference will be the subject matter of future Board consideration and Order.

The Board has taken into account the comments of MPI and CAC, and has approved the Preliminary Issues List as set out below.

7. IT IS THEREFORE ORDERED THAT:

1. The following issues will be considered within the scope of the 2019 GRA in the normal course:

1.Requested vehicle rate and any changes to other fees and discounts;

2. Rate indication based on accepted actuarial practice in Canada;

3. Compliance with Board Orders 130/17, 11/18 and 29/18;

4. Financial forecast:

a. financial forecast accuracy (2017/18 forecast versus actual results);

b. changes in projected financial results; and

c. update of the Interest Rate Forecast based upon methodology approved in Board Order 130/17;

5. Corporate Strategic Plan

6. Changes, if any, to integrated cost allocation methodology;

7. Update of DCAT, target capital analysis and the target Basic total equity threshold levels based upon methodology approved in Board Order 130/17;

8. Performance of the investment portfolio and the composition of i) the portfolio, ii) benchmark portfolio(s) on a market value basis (e.g. asset mix);

9. Cost of operations and cost containment measures;

10. Claims forecasting (including PIPP);

11. Operational benchmarking, including with comparison to other provinces;

12. Run-off of prior year claims during 2017/18;

13. Long tail experience from other jurisdictions;

14. Risk Assessment and Risk Management;

15. Results of the Service Fees review and

16. Other issues that may arise (depending upon the nature and scope of the issue) based on a review of the application.

2. The following issues will require more detailed consideration at the 2019 GRA:

17. Driver Safety Rating ("DSR") with further assessment on having "*driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale, and vehicle premium discounts that are fully supported by actuarial indications based on principal driver performance evaluation*" [Board Order 29/18].

18. Final rates for service for Vehicles for Hire (VFH) for the 2017/2018 and 2018/2019 insurance years and the directives from Board Order 11/18.

19. Current IT Strategic Plan and IT Expenses and Projects, including the Physical Damage Re-engineering Project, Distributed Estimating Technology Modernization, the Value Management Process and other initiatives planned for or ongoing in the rating years.

20. Capital Maintenance Provision with further assessment of developing a pricing approach which accounts for the natural growth of Basic's risk profile and protects against the natural depletion of Basic Total Equity.

21. Asset Liability Management Study, including review of all aspects of the Study recommendations and implementation thereof, the basis for and evaluation of risk and return, alternative portfolio compositions, proposed portfolio segregation and recommended composition of the investment portfolio(s), forecast investment performance and changes to the Investment Policy Statement.

3. The following issues will be deferred from the 2019 to future applications, or will be the subject of a technical conference or another process:

22. Road Safety (other than costs and budget of Road Safety programs);

23. Interest Rate Forecast (other than update referred to in item 4c above);

24. Target Capital Methodology (other than update referred to in item 7 above); and

25. Integrated Cost Allocation Methodology (other than changes referred to in item 6 above).

4. A final Issues List will be approved by the Board in the Procedural Order following the Pre-Hearing conference for the 2019 GRA.

Board decisions may be appealed in accordance with the provisions of Section 58 of *The Public Utilities Board Act*, or reviewed in accordance with Section 36 of the Board's Rules of Practice and Procedure. The Board's Rules may be viewed on the Board's website at www.pub.gov.mb.ca.

Summary

By this Order, the Public Utilities Board of Manitoba (Board) accepts Interveners to the Board's public hearing of the General Rate Application (GRA) of Manitoba Public Insurance Corporation (MPI or Corporation), for the review and approval of base rates and premiums for universal compulsory driver and vehicle insurance to take effect March 1, 2019. The Board also provides Interveners with direction, establishes the Final Issues List, approves the pre-qualification of certain expert witnesses, and establishes a timetable pertaining to the proceeding.

1.0 Introduction

The Board held a Pre-Hearing Conference (PHC) at its offices in Winnipeg on Wednesday, June 25, 2018, for the purposes of:

- Considering applications from prospective interveners ("Interveners") and matters related thereto;
- Considering procedural matters and the issues to be decided by the Board in the GRA, and more particularly, any variations to the Preliminary Issues List approved in Board Order 61/18;
- Hearing requests from MPI and prospective Interveners for pre-qualification of expert witnesses; and
- Establishing a timetable for the hearing.

This Order arises from the PHC.

At the PHC, the following exhibits were entered into the record of this proceeding by Board counsel:

1. Notice of Public Hearing and PHC, dated June 15, 2018;
2. The Board's Rules of Practice and Procedure;
3. Proposed hearing timetable, circulated June 18, 2018;
4. Letter issued by the Board Secretary to MPI and prospective Interveners dated June 18, 2018, with attachments;
5. Letter issued by the Board Secretary to MPI and prospective Interveners dated June 22, 2018, in respect of the process for pre-qualification of expert witnesses; and
6. Interim Procedural Order 61/18, which established a Preliminary Issues List for the GRA.

At the PHC, the following exhibits were entered into the record of this proceeding by MPI:

1. GRA (two volumes);
2. MPI Customer Self Service Business Case;
3. Blackline version of IT Appendix 1 of the GRA;
4. *Curriculum vitae* of Charles E. (Chuck) Henry;
5. *Curriculum vitae* of Dave Makarchuk; and
6. Proposed hearing timetable, circulated June 25, 2018.

The parties seeking Intervener status were asked to:

1. Indicate their constituency and interests;

2. Outline the areas of the GRA that they intended to test;

3. Provide their reasons for requesting Intervener status;

4. Specify their plans to call evidence/witnesses; and

5. Indicate their interest with respect to seeking an award of costs, and, if interest was expressed, to provide a draft budget.

The Board advised prospective Interveners that it intends to apply the criteria set out in the Board's Rules in determining the awarding of costs, such decisions being at the sole discretion of the Board. In reviewing applications for costs awards, the Board will consider a number of different factors including, without limitation, whether the Intervener participated in the hearing process in a responsible manner and whether the Intervener made a significant contribution that assisted the Board in achieving a better understanding of the issues before it.

The following parties applied for Intervener status within the GRA proceeding:

(a) Consumers' Association of Canada (Manitoba) Inc. (CAC), represented in person at the PHC by counsel, Mr. Byron Williams and Ms. Katrine Dilay;

(b) Coalition of Manitoba Motorcycle Groups (CMMG), represented in person at the PHC by counsel, Mr. Raymond Oakes, and Articling Student, Ms. Charlotte Meek;

(c) Canadian Automobile Association Manitoba (CAA), represented in person at the PHC by Ms. Erika Miller;

(d) Uber Canada Inc. (Uber), represented at the PHC by teleconference by counsel Ms. Diane Rodgers and Mr. Joe Messina, and by Mr. Chris Schafer; and

(e) The Manitoba Used Car Dealers Association, with no one appearing on its behalf at the PHC.

At the PHC, MPI was represented by Mr. Michael Triggs, General Counsel and Corporate Secretary, Mr. Anthony Lafontaine Guerra, MPI Legal Counsel, Mr. Mark Giesbrecht, Vice-President, Finance and Chief Financial Officer, and Mr. Jeff Crozier, Director of Regulatory Affairs.

Prior to the filing of the GRA, on May 7, 2018, the Board issued Interim Procedural Order 61/18. The purpose of Order 61/18 was to establish a Preliminary Issues List for the GRA. By letter to MPI dated April 11, 2018, copied to interested parties and prospective interveners, the Board advised that it was seeking to streamline its procedure for the 2019 GRA. The Board invited MPI and the interested parties and prospective interveners to provide their comments on the scope of the issues, following which Order 61/18 issued. In addition, the Minimum Filing Requirements (MFRs) for the 2019 GRA were provided to MPI following the issuance of Order 61/18. Of those invited to comment on the scope of the issues, the Board heard from MPI and CAC. The Board held in Order 61/18 that a Final Issues List would be approved by the Board in this Procedural Order.

The Preliminary Issues List approved by the Board in Order 61/18 was as follows:

The following issues will be considered within the scope of the 2019 GRA in the normal course:

1. Requested vehicle rate and any changes to other fees and discounts;

2. Rate indication based on accepted actuarial practice in Canada;

3. Compliance with Board Orders 130/17, 11/18 and 29/18;

4. Financial forecast:

    a. financial forecast accuracy (2017/18 forecast versus actual results);

    b. changes in projected financial results; and

    c. update of the Interest Rate Forecast based upon methodology approved in Board Order 130/17;

5. Corporate Strategic Plan;

6. Changes, if any, to integrated cost allocation methodology;

7. Update of DCAT, target capital analysis and the target Basic total equity threshold levels based upon methodology approved in Board Order 130/17;

8. Performance of the investment portfolio and the composition of i) the portfolio, ii) benchmark portfolio(s) on a market value basis (e.g. asset mix);

9. Cost of operations and cost containment measures;

10. Claims forecasting (including PIPP);

11. Operational benchmarking, including with comparison to other provinces;

12. Run-off of prior year claims during 2017/18;

13. Long tail experience from other jurisdictions;

14. Risk Assessment and Risk Management;

15. Results of the Service Fees review; and

16. Other issues that may arise (depending upon the nature and scope of the issue) based on a review of the application.

The following issues will require more detailed consideration at the 2019 GRA:

17. Driver Safety Rating ("DSR") with further assessment on having "*driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale, and vehicle premium discounts that are fully supported by actuarial indications based on principal driver performance evaluation*" [Board Order 29/18].

18. Final rates for service for Vehicles for Hire (VFH) for the 2017/2018 and 2018/2019 insurance years and the directives from Board Order 11/18.

19. Current IT Strategic Plan and IT Expenses and Projects, including the Physical Damage Re-engineering Project, Distributed Estimating Technology Modernization, the Value Management Process and other initiatives planned for or ongoing in the rating years.

20. Capital Maintenance Provision with further assessment of developing a pricing approach which accounts for the natural growth of Basic's risk profile and protects against the natural depletion of Basic Total Equity.

21. Asset Liability Management Study, including review of all aspects of the Study recommendations and implementation thereof, the basis for and evaluation of risk and return, alternative portfolio compositions, proposed portfolio segregation and recommended composition of the investment portfolio(s), forecast investment performance and changes to the Investment Policy Statement.

The following issues will be deferred from the 2019 to future applications, or will be the subject of a technical conference or another process:

22. Road Safety (other than costs and budget of Road Safety programs);

23. Interest Rate Forecast (other than update referred to in item 4c above);

24. Target Capital Methodology (other than update referred to in item 7 above);

25. Integrated Cost Allocation Methodology (other than changes referred to in item 6 above).

Prior to the PHC, on June 18, 2018, the Board issued a letter with respect to both the GRA and processes implemented by the Board, including Minimum Filing Requirements to be followed by MPI, and the scheduling of an Application Overview Workshop. ("the Workshop"). At the Workshop, any variations from the Preliminary Issues List to the Final Issues List proposed by the parties were to be discussed and identified.

2.0 Applications for Intervener Status

2.1 CAC

CAC is a volunteer, non-profit independent organization, which represents the interests of consumers and aims to protect and reconcile the interests of all MPI consumers with a particular emphasis on the private passenger class. CAC intends to present an evidence-based intervention guided by a principled consideration of the consumer interest.

The areas in which CAC advised it intends to test the evidence of MPI include, among others:

- The appropriateness of the 2.2% requested overall rate increase;

- Ratemaking in accordance with accepted actuarial practice;
- The overall health of MPI, including reserves;
- The various operating, capital, revenue, claims and investment income forecasts;
- Cost control, operating and claims expenses, staffing and cost containment;
- The Information Technology direction to be taken by MPI in 2019 and beyond;
- The methodology and appropriateness of the proposed Rate Stabilization Reserve (RSR);
- Issues related to MPI's investment portfolio;
- The proposed rates for Vehicles for Hire; and
- Issues related to the Driver Safety Rating.

CAC advised that it intends to appear throughout the hearing, to participate in the production of evidence, to participate in the testing of evidence, and to present final argument. CAC advised that it intends to call Valter Viola to present evidence with reference to investment related issues, including the Asset Liability Management Study conducted by Mercer Canada for MPI, changes to MPI's asset mix and MPI's overall investment portfolio.

CAC indicated that it may also call expert witnesses with respect to actuarial issues including the Capital Maintenance Provision proposed by MPI, as well as evidence related to the implications for the reliability of the GRA forecast and Dynamic Capital Adequacy Testing (DCAT) modelling of MPI's reliance on the naïve interest rate forecast.

CAC advised that it will seek a costs award, and provided an intervention budget in the amount of $219,166.75 – $219,666.75, including legal fees, accounting consulting fees, actuarial consulting fees, expert witness consulting fees and disbursements.

2.2 CMMG

CMMG is a volunteer, non-profit organization that was formed in 1992 in response to motorcycle rate increases. It is comprised of several hundred paid members along with a larger social media and other community of approximately 2000.

CMMG stated that it will seek to assist the Board in critically evaluating the GRA, testing the evidence and raising issues of concern and interest to the motorcycling public specifically and Manitoba ratepayers generally. CMMG indicated that it intends to examine the following issues:

- Rate methodology;
- Loss experience;
- Investment returns;
- Road safety; and
- New initiatives for motorcycle insurance.

CMMG advised that it intends to appear throughout the hearing, to participate in the testing of evidence and to present final argument. CMMG will seek a costs award, and provided an intervention budget of $54,314.40 inclusive of tax, fees and disbursements. CMMG will not be producing any witnesses in connection with its intervention.

2.3 CAA

CAA represents over 200,000 Manitobans. CAA advised that it intends to intervene in the GRA as its members expect it to advocate on their behalf with respect to fair insurance rates, as well as on road safety issues.

CAA advised that it does not intend to call any witnesses or present evidence at the GRA, nor will it seek an award of costs.

2.4 Uber Canada Inc.

Uber and its affiliates leverage a proprietary digital platform to connect ride-sharing drivers with individuals requesting transportation services. Uber sought intervention in the GRA to address the insurance product developed by MPI for ride-sharing, or Vehicles for Hire. Uber commented as follows:

- That MPI's Vehicles for Hire insurance product would make it difficult for ride-sharing companies to assess compliance by its drivers with the product; and
- The product will create friction for drivers by requiring them to make changes to their personal insurance.

Uber advised that it intends to appear throughout the hearing and present final argument, and would not be seeking costs. Uber also indicated that it would be prepared to call a witness to speak to a comparison of Vehicles for Hire insurance products available in other jurisdictions.

2.5 Manitoba Used Car Dealers Association

The Manitoba Used Car Dealers Association seeks to protect the interests of automobile dealers in Manitoba by ensuring that forecasts are reasonably reliable, and ensuring that actual and projected costs incurred are necessary and prudent.

The Association indicated that it does not intend to appear throughout the hearing, participate in the production or testing of evidence or present final argument, nor would it be seeking costs.

2.6 MPI

MPI did not take issue with the applications for intervention of CAC, CMMG, or CAA.

MPI opposed the application for intervention of Uber. MPI commented that the issues raised by Uber were with respect to the structure of the Vehicles for Hire insurance product, which is a policy issue, not a rating issue. MPI argued that the structure of its insurance product is not something to be addressed in the GRA.

MPI also opposed the application for intervention of the Manitoba Used Car Dealers' Association, on the basis that the Association was not proposing any participation in the hearing by the calling of evidence or participation in the hearing.

3.0 Preliminary Issues List and Procedural Matters

MPI and the prospective Interveners provided comment on the Preliminary Issues List.

MPI did not suggest any changes to the Preliminary Issues List, but did suggest that a Pre-Hearing Conference take place in September of 2018, with a view to further narrowing the issues to be addressed in the public hearings. MPI's proposal was that a "Hearing Issues List" be developed, to be approved by the Board, which would list those issues that could be spoken to or challenged in the public hearings. MPI commented that

there would be merit in conducting a further review of the issues once Information Request responses and Intervener evidence was filed. In MPI's view, it would be clear to the parties which issues have been adequately addressed by that stage of the proceedings.

CAC's position was that as a result of the Application that has been filed by MPI, certain issues which had been determined by the Board to be deferred to other proceedings are now required to be included within the Final Issues List. In particular, CAC's position was that:

1. Issue 23 on the Preliminary Issues List, the Interest Rate Forecast, should be before the Board in this GRA. In Board Order 130/17, the Board required that MPI use the 50/50 interest rate forecast for target capital and rate setting purposes. In this Application, MPI has applied for rates on the basis of a Naïve interest rate forecast.

2. Issue 24, Target Capital Methodology, would also be before the Board, for three reasons. First, the upper target for the Rate Stabilization Reserve (RSR) based on the Dynamic Capital Adequacy Testing (DCAT) proposed no management action. CAC's position is this is not in keeping with Order 130/17, which required an upper target for the DCAT taking management action into account. Second, with respect to the lower target for the RSR, CAC would seek to understand whether the target, based on a Minimum Capital Test (MCT) of 34%, is consistent with the Board's approved methodology in Order 130/17. Lastly, given MPI's use of the Naïve interest rate forecast, there would be an issue as to the implications of the interest rate forecast on the DCAT.

CAC was in general agreement with the objective of making the public hearings more efficient but was of the view that an additional Pre-Hearing Conference would not be efficient. CAC suggested that a meeting of legal counsel to discuss intended areas of cross-examination would suffice to serve the purpose of making the hearing more efficient.

CMMG did not propose any variations from the Preliminary Issues List to the Final Issues List, although the focus of its intervention would not cover all of the issues. CMMG took the position that there should not be a further narrowing of the issues prior to the public hearings to restrict areas of cross-examination, as the principles of fundamental justice require a full hearing.

CAA did not propose any variations from the Preliminary Issues List to the Final Issues List. Uber proposed that an additional issue be added, namely, the structure of the Vehicles for Hire insurance product and alternate insurance models.

4.0 Pre-Qualification of Expert Witnesses

In the 2018 GRA, the Board instituted a new process for the pre-qualification of expert witnesses at the PHC. This process was employed again at the PHC, which was as follows:

1. MPI or a prospective Intervener intending to call an expert witness in the GRA hearings provided notice to the Board of the intention to have the witness qualified, and provided the *curriculum vitae* of the witness to the Board, along with the proposed area(s) of qualification.

2. At the PHC, the party seeking pre-qualification made submissions to the Board as to the qualifications of the witness and made the request for pre-

qualification. The witness was not called to be examined on his or her qualifications.

3. The other parties were canvassed as to their positions on the request for pre-qualification.

4.1 MPI

MPI requested pre-qualification of two expert witnesses it is prepared to produce to testify at the public hearings:

- Charles E. (Chuck) Henry: Mr. Henry is Vice President, Solutions and Pricing with Gartner Group and has over 40 years of executive and consulting experience with public and private sector organizations. MPI requested that he be pre-qualified as an expert in the area of the use and planning of information technology, and information technology governance.

- Dave Makarchuk: Mr. Makarchuk is a partner with Mercer Investments, and is Sales and Strategic Growth Leader with the Canada's National Wealth Leadership Team. Mr. Makarchuk is a Fellow of the Canadian Institute of Actuaries. MPI requested that he be pre-qualified as an expert in the area of institutional investment planning and asset and liability matching.

4.2 CAC

CAC requested pre-qualification of three expert witnesses:

- Dr. Wayne Simpson: Dr. Simpson is a Professor of Economics at the University of Manitoba. CAC requested that he be pre-qualified as an expert in applied econometrics, applied microeconomics, and quantitative methods.

Dr. Simpson has been qualified as an expert witness in previous hearings before the Board.

- Andrea Sherry: Ms. Sherry is Vice-President, Insurance Solutions with The Wawanesa Mutual Insurance Company. CAC requested that she be pre-qualified as an expert in actuarial analysis with a particular focus on pricing, rate-making, and risk related to automobile insurers generally, including Crown-owned automobile insurers. Ms. Sherry has been qualified as an expert witness in previous GRA hearings.

- Valter Viola: Mr. Viola is a Chartered Financial Analyst and has 25 years of institutional portfolio management, investment research and risk management experience. CAC requested that he be pre-qualified as an expert in in investment portfolio management, investment portfolio research economics and risk management, and quantitative asset liability modelling. Mr. Viola was previously qualified as an expert witness before the Board in the 2017 GRA.

Consensus was reached among MPI and the prospective Interveners with respect to each of the requests for pre-qualification, and no objections were noted.

5.0 Board Comments and Decisions

After considering all of the submissions with respect to Intervener applications, the Board grants Intervener status to each of CAC, CMMG and CAA.

The Board declines to grant intervener status to Uber and the Manitoba Used Car Dealers' Association.

With respect to the application for intervention of Uber, the Board notes that in its submissions Uber acknowledged that it was not intending to test the rate applied for by

MPI or the rationale behind the rates, but rather to discuss the structure of the Vehicles for Hire insurance product more generally. On this basis, the Board finds that the area of intervention proposed by Uber would be of limited assistance to it in its determination of just and reasonable rates. While the Board has a broad jurisdiction to examine policy issues affecting rates, the Board does not view its role as regulator to include directing MPI's business practices. The Board reminds Uber, however, of its ability to appear as a presenter in the public hearings should it wish to make submissions.

With respect to the application of the Manitoba Used Car Dealers Association, the Board point**s** out that it did not request that it appear at the public hearings, nor to present evidence or final argument. Further, no one from the Association appeared at the Pre-Hearing Conference. Accordingly, the Board finds that the Association would more appropriately participate in the GRA as a presenter in the public hearings, should it wish to do so.

As always, the Board expects a high degree of co-operation among all Interveners and with Board counsel to avoid duplication and restrain regulatory costs.

Attached to this Order as **Schedule "A"** is the rate sheet by which Board counsel and counsel for the Interveners shall have their rates set, according to years of seniority at the Bar.

With respect to applications for costs by approved Interveners, the Board will review the detailed budgets and provide preliminary approval. Final approval will only be granted with the Board determination of the cost awards application after the hearing. In reviewing the cost awards application the Board will consider a number of different factors including, without limitation, whether the Intervener participated in the hearing process in a responsible manner and whether the Intervener made a significant contribution that assisted the Board in achieving a better understanding of the issues before it. Interveners

should review Part IV - Awarding Costs of the Board under the Board's Rules of Practice and Procedures that can be found on the Board web site.

Should any approved Intervener seeking an award of costs determine that their approved preliminary budget will be exceeded by 10% or more, that Intervener is to immediately notify the Board before exceeding the preliminary budget, explain the reason for the need to revise the budget and also propose the amount of additional funding being sought. The Board has the discretion to reject all additional costs above the preliminary budget where prior approval is not first obtained.

With respect to the Final Issues List, the Board has taken into consideration the submissions made by MPI and the Interveners. The purpose of the Preliminary Issues List was to streamline the GRA process, with a view to making it more efficient. The Board remains of the view that the parties should work to create efficiencies within the hearing process, but also recognizes that by virtue of the GRA filed by MPI, certain areas which were not to be a focus of this hearing are again in issue. Although MPI did not propose any variations from the Preliminary Issues List to the Final Issues List, the Board accepts the position of CAC, that the issues of the Interest Rate Forecast and the DCAT Methodology be examined in this GRA. The Board orders, however, that the focus of these issues be limited, given the repeated examination these issues have undergone in prior GRAs. Accordingly, the Board orders that (1) the justification for the use of the Naïve interest rate forecast, and (2) the justification for changes to the DCAT methodology from that approved in Order 130/17 be added to the Final Issues List, which is set out in Directive 3 of this Order.

Both CMMG and CAA in their applications for intervention indicated that they would be focusing on the issue of Road Safety; however, the examination of that issue is to be limited to costs and budget of Road Safety programs.

The Board has also considered the proposal put forward by MPI for a second Pre-Hearing Conference to take place, and for the Board to approve a Hearing Issues List. The Board is of the view that a second Pre-Hearing Conference is not warranted. The Board is concerned that reducing the issues to be examined in the public hearings by way of a Pre-Hearing Conference and a Hearing Issues List would require the Board to pre-judge the evidence in the GRA without the benefit of the public hearing. The Board does expect, however, that the Information Request process will be thorough, resulting in efficient cross-examination in the public hearings. The Board will also require that legal counsel for the Board, MPI and the Interveners meet following completion of the Information Request process to discuss areas for cross-examination in the public hearings, thereby ensuring that the hearings are conducted as efficiently as possible.

The Board has reviewed and considered the qualifications of the proposed expert witnesses put forward by MPI and CAC, and accepts that they are qualified as experts on the terms as proposed by MPI and CAC respectively. Therefore, the Board will not require that they be examined on their expertise should they be called to testify in the public hearings.

5.1 Timetable

At the PHC, MPI put forward a proposed timetable which incorporated a second PHC to take place on September 21, 2018, along with other changes to the proposed timetable circulated by the Board on June 18, 2018. Given the Board's findings as above, the Board declines to order that a second PHC take place. Instead, as part of the timetable, the Board will require a meeting of all counsel on September 21, 2018 to discuss areas for cross-examination in the public hearings, in order to ensure that the hearings are conducted as efficiently as possible.

The Board has adopted some of the changes to the proposed timetable, and the timetable approved by the Board is attached hereto as **Schedule "B"**.

Also at the PHC, MPI indicated its intent to file a motion for certain information to be filed confidentially pursuant to Rule 13 of the Rules. The Board will determine the process and timetable for the motion once it is filed, and accordingly, this information is not contained within **Schedule "B"**.

The Board has set as hearing dates with respect to the GRA the following: October 15 - 19, 2018, October 22 - 26, 2018, and October 29 - November 2, 2018 (a total of 15 hearing days). It is the Board's expectation that some of these hearing dates will not be utilized, but all days were reserved to permit flexibility in scheduling.

Attached hereto as **Schedule "C"** are the procedures to be followed over the course of the GRA process, and attached hereto as **Schedule "D"** is the Information Request template to be utilized by all parties to the GRA. As provided for within the template, the party submitting an Information Request must reflect the rationale for the question. Similarly, and as also provided for within the template, should a full or partial answer be refused, the party refusing to answer or fully answer the question must reflect the rationale for the refusal.

IT IS THEREFORE ORDERED THAT:

1. Interveners to the hearing shall be:

    (a) Consumers' Association of Canada (Manitoba) Inc.;

    (b) Coalition of Manitoba Motorcycles Groups Inc.; and

    (c) Canadian Automobile Association (Manitoba).

2. The applications for Intervener Status of Uber Canada Inc. and the Manitoba Used Car Dealers Association are hereby dismissed.

3. The Final Issues List for the GRA shall be as follows:

The following issues will be considered within the scope of the 2019 GRA in the normal course:

1. Requested vehicle rate and any changes to other fees and discounts;
2. Rate indication based on accepted actuarial practice in Canada;
3. Compliance with Board Orders 130/17, 11/18 and 29/18;
4. Financial forecast:
    a. financial forecast accuracy (2017/18 forecast versus actual results);
    b. changes in projected financial results;
    c. update of the Interest Rate Forecast based upon methodology approved in Board Order 130/17; and
    d. justification for the use of the Naïve interest rate forecast for rate-setting and target capital purposes; in particular, any change of circumstances since the issuance of Order 130/17 that would warrant the use of the Naïve interest rate forecast.
5. Corporate Strategic Plan
6. Changes, if any, to integrated cost allocation methodology;

7. Update of DCAT, target capital analysis and the target Basic total equity threshold levels based upon methodology approved in Board Order 130/17;

   7.1 Any change in circumstances since the issuance of Order 130/17 that would justify changes to the DCAT methodology from that approved by the Board in Order 130/17;

8. Performance of the investment portfolio and the composition of i) the portfolio, ii) benchmark portfolio(s) on a market value basis (e.g. asset mix);

9. Cost of operations and cost containment measures;

10. Claims forecasting (including PIPP);

11. Operational benchmarking, including with comparison to other provinces;

12. Run-off of prior year claims during 2017/18;

13. Long tail experience from other jurisdictions;

14. Risk Assessment and Risk Management;

15. Results of the Service Fees review; and

16. Other issues that may arise (depending upon the nature and scope of the issue) based on a review of the application.

The following issues will require more detailed consideration at the 2019 GRA:

17. Driver Safety Rating ("DSR") with further assessment on having "*driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale, and vehicle premium*

discounts that are fully supported by actuarial indications based on principal driver performance evaluation" [Board Order 29/18].

18. Final rates for service for Vehicles for Hire (VFH) for the 2017/2018 and 2018/2019 insurance years and the directives from Board Order 11/18.

19. Current IT Strategic Plan and IT Expenses and Projects, including the Physical Damage Re-engineering Project, Distributed Estimating Technology Modernization, the Value Management Process and other initiatives planned for or ongoing in the rating years.

20. Capital Maintenance Provision with further assessment of developing a pricing approach which accounts for the natural growth of Basic's risk profile and protects against the natural depletion of Basic Total Equity.

21. Asset Liability Management Study, including review of all aspects of the Study recommendations and implementation thereof, the basis for and evaluation of risk and return, alternative portfolio compositions, proposed portfolio segregation and recommended composition of the investment portfolio(s), forecast investment performance and changes to the Investment Policy Statement.

The following issues will be deferred from the 2019 to future applications, or will be the subject of a technical conference or another process:

22. Road Safety (other than costs and budget of Road Safety programs);

23. Interest Rate Forecast (other than areas referred to in items 4c and 4d above);

24. Target Capital Methodology (other than areas referred to in items 7 and 7.1 above);

25. Integrated Cost Allocation Methodology (other than changes referred to in item 6 above).

4. **Schedule "B"**, as attached, shall be the timetable for the orderly exchange of information by the participating parties.

5. **Schedule "C"**, as attached, shall apply with respect to the hearing of the GRA.

PROCEDURES TO BE FOLLOWED AT THE

MANITOBA PUBLIC INSURANCE CORPORATION

2019 RATE APPLICATION

1.	Hearing and Rural Meetings:	(a) Winnipeg hearing will be held at the Board's office, 4th Floor, 330 Portage Avenue, Winnipeg, commencing on October 15, 2018 at 9:00 a.m. and continuing thereafter as necessary. (b) Rural Meetings (if necessary) – time, location and place to be identified.
2.	Hearing Times Each Day:	9:00 a.m. to 12:00 Noon 1:15 p.m. to 4:00 p.m. (amendments may be made by the Board at the hearing)
3.	Assigned Sittings:	Presenters will be heard commencing at 1:15 p.m. on Monday, October 15, 2018 and continuing that day as necessary.

4. Opening Statements by Board Counsel, Counsel for MPI and Counsel or representatives of registered Interveners.

5. (a) MPI to file its application and supporting evidence.

(b) MPI to introduce witnesses. Board counsel and Interveners to cross-examine the Corporation's witnesses (order to be determined).

6. (a) Leading of testimony by witnesses for Interveners, if any, will be in alphabetical order by name of Interveners and updated as necessary.

(b) Witnesses to be available for cross-examination by all parties following each presentation.

7. All information requests are to be filed in the prescribed form (attached hereto as **Schedule "D"**) and responded to using the prefixes as assigned by the Board when Interveners are registered (set out in the body of the Order). The party requesting information is to use firstly their prefix followed by the prefix of the party being asked e.g. PUB/MPI, etc. Interrogatories are to be numbered sequentially through 1st and 2nd rounds, e.g. PUB/MPI 1-3, PUB/MPI 2-7.

8. All pre-filed evidentiary material to be filed at the commencement of the hearing by Board Counsel using assigned prefixes.

9. All witnesses to highlight their evidence.

10. All witnesses to be sworn or affirmed.

11. Daily transcripts will be available. Transcripts can be found at www.pub.gov.mb.ca at no charge.

12. It is the Board's request that all motions be dealt with pursuant to the Board's Timetable.

13. The Board's Rules of Practice and Procedure (available on the Board's website) dealing with the awarding of costs will apply to all matters before the Board.

14. The Board indicates its willingness to be available for any problems that may arise during the exchange of information at any time, such time to be arranged through Board Counsel.

15. Seven (7) paper copies of material are to be submitted to the Board's offices and three (3) copies are to be submitted to Board Counsel at the following address:

    Attention:

    Kathleen McCandless and Robert Watchman, Pitblado LLP, 2500 – 360 Main Street, Winnipeg, MB R3C 4H6.

16. Electronic copies of all material including the evidence of parties, are required to be submitted to the Board's e-mail address: publicutilities@gov.mb.ca. Where schedules or other attachments accompany an electronic file, that filing must be discrete and include only the item and schedules to which each refers. The electronic files shall be named in accordance with their parties prefix as per #7. All electronic filings shall be in Adobe Acrobat format, with protection securities allowing printing, content copying, content copying for accessibility and page extraction.

SCHEDULE "A" 14

SCHEDULE "B" 25

1. SUMMARY

By this Order, the Public Utilities Board ("Board") grants the Motion of Manitoba Public Insurance (MPI or the Corporation) seeking confidential receipt by the Board of certain documents and information to be filed in the 2019/2020 General Rate Application (GRA or the Application). The Board provides direction on the treatment of Information Requests and Responses and any Intervener evidence arising out of the documents. The Board also establishes a timetable pertaining to the Information Requests and Responses arising out of the documents.

1.0 *Overview*

On June 15, 2018, MPI filed the GRA with the Board. Contained within the GRA is reference to certain documents, which MPI has requested the Board receive in confidence. Those documents are:

1) The business case for MPI's Five Year Strategic Plan (Space Plan Business Case);

2) A document identified as Attachment "C" to Appendix 17 of the Investment Chapter under Part IV of the GRA (Mercer Methodology); and

3) The response by Mercer (Canada) Limited (Mercer) to MPI's Request for Proposals (Response to RFP).

(the Documents)

The Documents relate to issues first reviewed in the 2018 GRA. With respect to the Space Plan Business Case, the Board heard from MPI in the 2018 GRA about a new Value Management Process (VMP) employed by MPI. As noted by the Board in Order 130/17

following the 2018 GRA, the VMP requires that business cases be prepared for new initiatives valued at or above $500,000. The 2019 GRA contains information about the VMP, as well as information about a number of projects for which business cases have been prepared. The Space Plan Business Case is referred to in the Application, but the business case itself is not contained therein. The reason for this, according to MPI, is because the details of the Space Plan Business Case are confidential.

Also in Order 130/17, the Board directed that a Technical Conference take place to review the results of an Asset Liability Management (ALM) Study performed by Mercer for MPI. The Technical Conference took place on March 14, 2018, following which requests for additional information were made to MPI on behalf of the Board. The Mercer Methodology and the Response to RFP would serve to fulfill some of the requests for additional information; however, MPI has indicated that they contain third party confidential information and accordingly must be filed in confidence with the Board.

On June 29, 2018, MPI filed a Motion with the Board, in which it sought leave to file the Documents in confidence with the Board, on any terms the Board considers appropriate and in the public interest. MPI electronically served the Notice of Motion and a Motion Brief on the Board and the Interveners in the GRA. MPI also filed an Affidavit with the Board only, containing confidential information, in hard copy format.

On July 5, 2018, the Board received a written response on the Motion from one of the Interveners in the GRA, Consumers' Association of Canada (Manitoba) Inc. (CAC). The parties were invited to provide replies, if any, to CAC's response. No replies were received by the Board.

The other Interveners in the GRA, Coalition of Manitoba Motorcycle Groups (CMMG) and Canadian Automobile Association Manitoba (CAA), did not file any response to the Motion.

The Board did not require an oral hearing on the Motion.

2. PARTIES' POSITIONS AND BOARD FINDINGS

2.0 *MPI*

MPI took the position that the Documents contain personal, financial, commercial, scientific or technical information, have been consistently treated as confidential, and that the interest in maintaining the confidentiality of the Documents outweighs the public interest in their disclosure.

In the Application, MPI described the Space Plan Business Case as a multi-phase, multi-year project focusing on the redevelopment of MPI's physical facilities. In the first phase, a budget of $2.065 million was approved for 2018/19. However, according to MPI, details of the business case are commercially sensitive. MPI argued in its Motion that the Space Plan Business Case contains financial and commercial information which would influence a number of the key assumptions underpinning its analysis. MPI stated that since the preparation of the Space Plan Business Case in January 2018, it has been maintained in confidence. It is not publicly available and it has only shared its details outside MPI with its consultant. MPI further stated that release of the information in the Space Plan Business Case would defeat the purpose of increasing revenue-generating opportunities for MPI, which benefits all ratepayers. Public release of the information in the Space Plan Business Case would cause harm to MPI's competitive position.

With respect to the Mercer Methodology, MPI submitted that it is commercial/technical in nature, and is proprietary to Mercer. Mercer constrains the use of the information by MPI, and its public release could reasonably be expected to result in undue financial loss to Mercer or to harm its competitive position. MPI also stated that it believes it is obligated

to maintain the Mercer Methodology in confidence due to its contractual obligations to Mercer.

Lastly, with respect to the Response to RFP, MPI submitted that it has not been authorized by Mercer to release the information on the public record. The Response to RFP also contains information about the Mercer Methodology and other information which is proprietary to Mercer.

MPI would not oppose the circulation of the Space Plan Business Case, under certain restrictions. MPI also advised that Mercer has authorized MPI to disclose the Mercer Methodology and the Response to RFP, also subject to restrictions. Those restrictions would be as follows:

1) The persons eligible to receive the Space Plan Business Case would be representatives, consultants or professional advisors of the Board, or those Interveners who have been granted standing to intervene on an issue or issues falling within the ambit of the matters raised in the business case;

2) The persons eligible to receive the Mercer Methodology and the Response to RFP would be representatives, consultants or professional advisors of the Board or representatives, legal counsel or consultants to CAC;

3) The Documents would not be provided to an eligible person unless or until they execute Undertakings of Confidentiality and Confidentiality Agreements (forms of which were provided to the Board by MPI); and

4) No use could be made of the Documents, or reference made to their content, at any time where doing so would place the information contained therein on the public record, or make the information available to persons other than those

eligible who have executed an Undertaking of Confidentiality and a Confidentiality Agreement.

2.1 *CAC*

CAC advised that it does not object to the conditions requested by MPI for the distribution of the Documents. CAC acknowledged that treating the Documents as confidential would impair the public interest in disclosure of the information; however, the proposed conditions on access would be a minimal impairment to the public interest.

CAC requested one amendment to the approach requested by MPI, which according to it would clarify the process for the treatment of the Documents and the information arising therefrom. CAC requested that if it, or another Intervener, were to file a report as evidence in the GRA based upon or referring to the information contained in the Documents, that evidence should be filed in confidence with the Board and MPI on the date required (September 24, 2018, per Order 82/18). In consultation with MPI, the Intervener would then determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by September 26, 2018.

2.2 *Board Findings*

Proceedings before the Board are public, and documents filed with the Board by a party to a proceeding are placed on the public record. However, the Board may receive information in confidence on any terms it considers appropriate in the public interest, when the test under Rule 13(2) is met:

(a) If the Board is of the opinion that disclosure of the information could reasonably be expected

i. to result in undue financial loss or gain to a person directly or indirectly affected by the proceeding; or

ii. to harm significantly that person's competitive position

or

(b) if

i. the information is personal, financial, commercial, scientific or technical in nature; or

ii. the information has been consistently treated as confidential by a person directly affected by the proceeding; and

iii. the Board considers that the person's interest in confidentiality outweighs the public interest in the disclosure of the information.

On hearing a motion under Rule 13, the Board may order the information in question be placed on the public record, order the document not be placed on the public record with such conditions on access imposed as the Board considers appropriate, order an abridged version of the document be placed on the public record, or make any other order the Board finds to be in the public interest. Rule 13(5) allows the filing party to request that the document be withdrawn prior to being placed on the public record where the Board has determined to place any part of the document on the public record.

The Board has reviewed and considered all of the information filed by MPI, as well as the submissions of CAC, and is satisfied that the Documents fall within the ambit of Rule 13(2). The restrictions requested on the distribution of the Documents are necessary in order to protect the commercial interests of MPI and Mercer.

With respect to the Space Plan Business Case, the Board accepts that public disclosure of the information contained therein could affect MPI's competitive position and harm a revenue-generating opportunity for MPI, which could in turn have a negative impact on ratepayers. Therefore, the interest in maintaining the confidentiality of the business case outweighs the interest of public disclosure.

The Board also accepts that the Mercer Methodology and the Response to RFP contain confidential and proprietary information of Mercer, and that MPI is not authorized to reproduce or redistribute those documents or the information contained therein. The Board finds that Mercer's interest in confidentiality outweighs the public interest in the release of the information on the public record. Placing the conditions requested on the distribution of the Mercer Methodology and the Response to RFP will serve to uphold the general commercial interest of preserving confidential information.

Accordingly, the Board grants MPI's Motion to receive the Documents in confidence. The Board accepts the conditions imposed on the receipt of the Documents as outlined in MPI's Motion materials, and orders that the Documents be distributed only on the terms as set out in Section 3 below.

The Board notes that MPI has requested that only those Interveners who have been granted standing to intervene on an issue or issues falling within the ambit of the matters raised in the Space Plan Business Case be eligible to receive the Space Plan Business Case. While the Board did not place any restrictions on approved Interveners as to the issues that they may review in the GRA, based on the applications for intervener status filed with the Board, it appears that only CAC intends to address issues related to the Space Plan Business Case. Therefore, the Board will restrict the distribution of the Space Plan Business case to its representatives, consultants and professional advisors, and to those of CAC.

The Board recognizes that further evidence containing confidential information from the Documents may be generated as a result of the distribution of the Documents to Interveners and the Board. Therefore, the Board will require that any Information Requests or other evidence arising out of the information contained in the Documents be subject to the same restrictions as the Documents themselves.

The Board further accepts the amendments proposed by CAC are necessary in order to preserve the confidentiality of the Documents and the information contained therein, and therefore orders that if any Intervener files a report as evidence in the GRA based upon or referring to the information contained in the Documents, that evidence shall be filed in confidence with the Board and MPI on September 24, 2018, per Procedural Order 82/18. The Intervener shall then consult with MPI and determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by September 26, 2018.

Finally, in Order 82/18, the Board fixed a Timetable for the GRA, but stated that it would determine the process and timetable for this Motion once filed. Therefore, the Timetable did not contain information regarding deadlines or dates for the Motion or Information Requests arising out of the Documents. The Board hereby orders that any First Round Information Requests arising out of the Documents shall be served on MPI on **Wednesday, July 25, 2018**. MPI shall provide responses to the First Round Information Requests in accordance with the Timetable attached as **Schedule "B"** to Order 82/18, on August 8, 2018. Second Round Information Requests and Responses arising out of the Documents shall also follow the Timetable attached as **Schedule "B"** to Order 82/18.

3. IT IS THEREFORE ORDERED THAT:

3.1 The Board grants MPI's Motion, and hereby grants leave to MPI to file the following documents in confidence with the Board:

a. The business case for MPI's Five Year Strategic Plan (Space Plan Business Case);

b. A document identified as Attachment "C" to Appendix 17 of the Investment Chapter under Part IV of the GRA (Mercer Methodology); and

c. The response by Mercer (Canada) Limited (Mercer) to MPI's Request for Proposals (Response to RFP).

(the Documents)

3.2 The following persons shall be eligible to receive a copy of the Documents:

a. The Space Plan Business Case: representatives, consultants or professional advisors of the Board, or of Consumers' Association of Canada (Manitoba) Inc. (CAC);

b. The Mercer Methodology and the Response to RFP: representatives, consultants or professional advisors of the Board, or representatives, legal counsel or consultants of CAC.

3.3 Any eligible person as set out in Directive 3.2 intending to receive the Documents shall execute an Undertaking of Confidentiality and a Confidentiality Agreement prior to the receipt of any of the Documents.

3.4 **Schedule "A"**, as attached, shall be the form of Undertaking of Confidentiality and Confidentiality Agreement to be executed by any eligible person for the receipt of the Space Plan Business Case.

3.5 **Schedule "B"**, as attached, shall be the form of Undertaking of Confidentiality and Confidentiality Agreement to be executed by any eligible person for the receipt of the Mercer Methodology and/or the Response to RFP.

3.6 No use shall be made of the Documents, or reference made to their contents, at any time where doing so would place the Documents or the information contained therein on the public record or make them available to persons other than those authorized as set out herein who have executed the required Undertakings of Confidentiality and Confidentiality Agreements.

3.7 The terms and conditions placed on the receipt of the Documents as set out in Directives 3.2 to 3.6 shall apply to the receipt of Information Requests and Information Request Responses arising out of the Documents and the information contained therein.

3.8 First Round Information Requests arising out of the Documents shall be served on MPI on Wednesday, July 25, 2018. MPI shall provide responses to the First Round Information Requests in accordance with the Timetable attached as **Schedule "B"** to Order 82/18, on August 8, 2018.

3.7 Second Round Information Requests and Responses arising out of the Documents shall be filed in accordance with the Timetable attached as **Schedule "B"** to Order 82/18.

3.9 If any Intervener files a report as evidence in the GRA based upon or referring to the information contained in the Documents, that evidence shall be filed in

confidence with the Board and MPI on September 24, 2018. The Intervener shall consult with MPI and determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by September 26, 2018.

3.9 The terms and conditions placed on the receipt of the Documents as set out in Directives 3.2 to 3.6 shall apply to the receipt of any of those portions of Intervener evidence containing information from the Documents.

SCHEDULE "A"

UNDERTAKING OF CONFIDENTIALITY

TO: THE PUBLIC UTILITIES BOARD OF MANITOBA

WHEREAS on July xx, 2018, in Order xxx/18 (the "**Order**"), issued in the course of The Manitoba Public Insurance Corporation's ("**MPI**") 2019/2020 General Rate Application ("**2019 GRA**"), the Public Utilities Board of Manitoba (the "**Board**") ordered that a document described therein as the "Space Plan Business Case" be received in confidence, pursuant to Rule 13 of the Board's Rules of Practice and Procedure (the "**Confidential Document**").

AND WHEREAS the Order directs MPI to provide, non-redacted copies of the Confidential Document to certain select individuals following their execution of this Undertaking and a prescribed confidentiality agreement.

AND WHEREAS the Order permits me, [insert name of individual entitled], in my capacity as [insert role - legal counsel, consultant, etc.] to [insert name of entity - the Board, the Canadian Association of Consumers, etc.], to receive non-redacted copies of the Confidential Document, subject to certain conditions and restrictions.

NOW THEREFORE, in consideration of receiving access to the Confidential Document:

1. I understand and agree:

    (a) that the term 'Confidential Information" means:

        (i) any information contained in the Confidential Document (including the Confidential Document itself);

        (ii) any information that has been filed by MPI with the Board in confidence pursuant to the Order and; and

        (iii) all evidence, transcripts, notes, working papers, calculations, analysis or other materials based on or using the Confidential Document or any information contained therein, that I receive, review or prepare (related materials) during the course of the 2018 GRA or any appeal, review or rehearing of the Board's decision in the proceeding for the purpose of participating in the 2019 GRA or any appeal, review or rehearing from the Board's decision in the proceeding,

    (b) that the execution of this Undertaking is a condition of my being granted access to the Confidential Information;

(c) that this Undertaking will be filed with the Board;

(d) to observe any terms and conditions imposed by MPI as they relate to the access, use and protection of the Confidential Information; and

(e) that, in the event that I breach this Undertaking, there may be consequences which could include, without limitation, the following:

(i) a denial or reduction of costs to, or a cost award against, my client, my principals or me personally; and

(ii) an immediate and absolute revocation of my right to receive and/or retain all or some of the Confidential Information.

2. I hereby undertake:

(a) to use Confidential Information exclusively for and within the scope of my client/principal/employer's Board-approved intervention in the 2019 GRA proceeding;

(b) to maintain all of the Confidential Information in confidence and not to divulge it to any person save and except for panel members of the Board or to any person who has been authorized by the Board to receive such information and who has executed and filed with the Board this undertaking and the Confidentiality Agreement, unless otherwise required by law, in which case, I will promptly give written notice to the Board and MPI that such disclosure has been required;

(c) not to copy, reproduce, in any manner, the Confidential Information except for purposes described in paragraphs (a) and (b) above;

(d) to take prudent, reasonable steps to keep confidential and to protect the Confidential Information from unauthorized disclosure;

(e) to indemnify and save harmless the Board from and against all claims, actions, proceedings, demands, losses, damages, costs, and expenses which may be brought against the Board or which the Board may suffer, sustain, pay or incur, resulting from, or arising in connection with, the unauthorized use or disclosure by me of the Confidential Information or the related materials;

(f) subject to subparagraphs (g) and (h) below, within 30 days of the expiration of any appeal or review period of the Board's decision in respect of the 2019 GRA, unless otherwise directed by the Board, to:

(i) expunge all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession and under my direction and control;

(ii) deliver to MPI or destroy all paper copies of the Confidential Information and related materials in my possession or under my direction and control; and

(iii) provide an executed statutory declaration (**in the form attached as Appendix "A"**), to the Board and MPI,

(g) in the event that any Board decision in respect of the 2019 GRA is the subject of a review application, to:

(i) within 30 days following the release of the Board's final disposition of any review application;

1) expunge all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession and under my direction and control;

2) deliver to MPI or destroy all paper copies of the Confidential Information and related materials in my possession or under my direction and control; and

3) provide an executed statutory declaration (**in the form attached as Appendix "A"**), to the Board and MPI,

(h) In the event that any Board decision in respect of the 2019 GRA is the subject of a leave to appeal application or appeal, to:

(i) unless otherwise directed by a court of competent jurisdiction, within 30 days following the release of a final decision disposing of the appeal (a decision dismissing the application for permission to appeal or a final decision on appeal):

1) expunge all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession and under my direction and control;

2) deliver to MPI or destroy all paper copies of the Confidential Information and related materials in my possession or under my direction and control; and

3) provide an executed statutory declaration (**in the form attached as Appendix "A"**), to the Board and MPI, and

(i) to promptly report any violation of the recipient of this undertaking to the Board and MPI, and shall take all reasonable steps to retract any unauthorized disclosure and report such activities to the Board and to MPI.

3. The obligations created herein shall not preclude my:

(a) using or disclosing the Confidential Information at a time when Confidential Information is generally available to the public, other than as a direct or indirect result of any disclosure by me which is prohibited hereunder; and

(b) disclosing the Confidential Information to the extent such disclosure is required by law, Court order or competent authority of any governmental body or professional discipline body, provided that, other than in respect of a mandated disclosure to the signatory's governing law society or legal professional liability insurer, the Board and MPI are provided with notice promptly upon my becoming aware that such notice is required.

APPENDIX "A"

STATUTORY DECLARATION

I, _____ (recipient) of the _____ (city/town) of _____, in the _____ (province/state) of _____ do solemnly declare as follows:

1) I had in my possession and under my direction and control records, reports, documents or information, or portions thereof, that were granted confidential treatment ("Confidential Information") by the Board pursuant Rule 13 of the Board's Rules of Practice and Procedure, and had in my possession and under my direction and control evidence, transcripts, notes, working papers, calculations, analysis or other materials based on or using the Confidential Information that I received, reviewed or prepared (related materials").

2) I executed an undertaking in accordance with Rule 13 of the Board's Rules of Practice and Procedure to have access to the Confidential Information and related materials (the "Undertaking").

3) I have made no use of the Confidential Information or related materials except as permitted pursuant to the Undertaking.

4) I have not disclosed the Confidential Information or related materials in any manner except as permitted by the Undertaking.

5) I have expunged all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession or under my direction and control.

6) I have delivered to MPI or have destroyed all paper copies of the Confidential Information and related materials in my possession or under my direction and control.

And I make this solemn declaration conscientiously believing it to be true and knowing that it is of the same force and effect as if made under oath.

DECLARED BEFORE ME at the _____ of _____, in the Province of Manitoba, this _____ day of _____, 20__.

My commission expires: _____

THIS CONFIDENTIALITY AGREEMENT made this xxxx day of July, 2018

BETWEEN:

THE MANITOBA PUBLIC INSURANCE CORPORATION,

(called "MPI")

of the first part,

- and -

(Insert name of Individual],

(called the Confidant")

of the second part

WHEREAS on July xx, 2018, in Order xxx/18 (the "**Order**"), the Public Utilities Board of Manitoba (the "**Board**") ordered, within the course of considering MPI's 2019/2020 General Rate Application ("**2019 GRA**"), that a document described as the Space Plan Business Case" be received in confidence, pursuant to Rule 13 of the Board's Rules of Practice and Procedure (the "**Confidential Document**").

AND WHEREAS the Confidential Document contains information that is confidential and commercially sensitive.

AND WHEREAS the Order directs MPI to provide a non-redacted copy of the Confidential Document to the Confidant, following their execution of a prescribed undertaking and this Confidentiality Agreement (the "**Agreement**").

NOW THEREFORE IN CONSIDERATION OF receiving access to the Confidential Document, the sum of one ($1.00) dollar and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

ARTICLE 1 DEFINITIONS

In this Agreement:

"**Authorized Person**" means any person permitted by the Order to receive the Confidential Information, who is in compliance with the conditions on the receipt and use of the Confidential Information, as set out in the Order.

"**Confidential Information**" means any information contained in the Confidential Document (and includes the Confidential Document itself) and any information that has been filed by MPI with the Board in confidence pursuant to the Order.

"**Permitted Uses**" has the meaning set forth in Article 2 below.

"**Person**" shall be broadly interpreted to include, without limitation, any corporation, partnership, other entity, or individual.

"**Proceeding**" means the proceeding before the Board in respect of the 2019 GRA.

"**Reverse Engineer**" means to discover, synthesize or otherwise recreate the Confidential Information following a detailed examination.

"**Unauthorized Person**" means any Person other than MPI, the Confidant or an Authorized Person.

ARTICLE 2 PERMITTED USES

The Confidant may use Confidential Information for the following purposes (called "**Permitted Uses**"):

(a) To give instructions to, carry out critical analysis, form conclusions and/or advise an Authorized Person; and

(b) To prepare a report suitable for filing on the public record of the Proceeding and testify on the public record of the Proceeding. Without the consent of the Board obtained in advance, the Confidant shall not include in the report or testimony any Confidential Information or any information that would enable an Unauthorized Person to Reverse-Engineer Confidential Information. To the extent that the Confidant relies upon Confidential Information to arrive at a conclusion, the Confidant may include in the Report or testimony information at a level of summary and aggregation which will not disclose Confidential Information or enable an Unauthorized Person to reverse-engineer the Confidential Information, subject always to the Confidant providing a redacted Report on the public record and a complete report in confidence to the Board and/or testifying in camera where Confidential Information is discussed.

ARTICLE 3 CONFIDENTIALITY

Except as specifically provided in Article 2 above (Permitted Uses), the Confidant shall:

(a) Keep the Confidential Information in the strictest confidence;

(b) Not disclose Confidential Information to any Unauthorized Person without the prior written consent of MPI;

(c) In the case of a disclosure to an Unauthorized Person with the prior written consent of MPI, obtain from the Unauthorized Person an undertaking or confidentiality agreement satisfactory in form to the Board and MPI, on terms no less restrictive than those in this Agreement;

(d) Take prudent, reasonable steps to protect Confidential Information in its possession from inadvertent disclosure to an Unauthorized Person; and

(e) Destroy or return the Confidential Information (if so permitted) when required and in the manner required by the Board.

If the Confidant so chooses, they may solicit MPI's comments on particular documents that are in the process of being prepared in the interests of avoiding inadvertent disclosures to an Unauthorized Person.

ARTICLE 4 COMPELLED DISCLOSURE

In the event that the Confidant, or an Unauthorized Person referred to in Article 3(c) above, receives notice indicating that they may or shall be legally compelled to disclose any of the Confidential Information, the Confidant shall provide MPI with prompt notice so that MPI may, at its sole discretion, seek a protective order or other appropriate remedy.

The Confidant and any such Unauthorized Person referred to in Article 3(c) above shall cooperate fully with MPI protecting the confidential and proprietary nature of the Confidential Information sought to be compelled to be disclosed, including providing assistance to MPI in the prosecution and defence of any action(s) or proceeding(s) brought or made in respect of such matters.

In the event that such protective order or other remedy is not obtained, or that MPI waives compliance with the provisions of this Agreement, the Confidant or Unauthorized Person referred to in Article 3(c) above shall furnish only that portion of the Confidential Information in respect of which it shall be legally required to disclose.

ARTICLE 5 FURTHER COVENANTS

The Confidant shall:

(a) use the Confidential Information only for the Permitted Uses and for no other purpose whatsoever; and

(b) not use or reverse engineer Confidential Information for personal gain in any fashion, other than for the receipt of compensation for his or her participation in this proceeding.

ARTICLE 6 NO LICENCE

The Confidant agrees that the Confidential Information is the property of MPI, its contractual counterparties and domestic customers, and the Confidant shall not contest or challenge any of their rights in or to any Confidential Information. The Confidant does not receive any right, title or interest of any nature whatsoever in or to any Confidential Information.

ARTICLE 7 CONTINUING OBLIGATION

This Agreement is effective upon execution by both parties, and the obligations of the Confidant under this Agreement shall not terminate but shall continue without limitation of time.

ARTICLE 8 EQUITABLE REMEDIES

In the event of a breach, or threatened breach, of this Agreement by the Confidant, the parties agree that the harm suffered by MPI may not be compensable by monetary damages alone and, accordingly, that MPI shall, in addition to any other available legal or equitable remedies, be entitled to seek an injunction against such breach or threatened breach.

ARTICLE 9 NOTICES

Any notice or other communication required or permitted to be given under this Agreement must be in writing and shall be delivered to:

a) **MPI**

Executive Offices
912-234 Donald Street
Winnipeg, Manitoba R3C 4A4
Attn: General Counsel
and Corporate Secretary

b) **Confidant**:

[Insert Address]
[Insert Address]
[City] [Province] [Postal Code]
Attn: [Insert Name]

or such other addresses as either party may notify the other of in writing. Notices may be given by personal service or fax transmission. Any notice given by personal service shall be deemed to have been effectually given and received at the date and time of actual delivery. Any notice sent

by fax transmission shall be deemed to have been effectually given and received on the next business day following transmission.

ARTICLE 10 INTERPRETATION AND ENFORCEMENT

This Agreement shall be subject to, interpreted, performed and enforced in accordance with the laws of Manitoba and the applicable laws of Canada without regard to Manitoba or federal Canadian law governing conflicts of law, even if one or more of the parties to this Agreement is resident of or domiciled in any other province, state, or country. The parties hereby irrevocably attorn to the exclusive jurisdiction of the Court of Queen's Bench of Manitoba, Winnipeg Centre. The recitals hereof form an integral part of this Agreement. Section headings in this Agreement are for the convenience of the parties only, and shall not affect the interpretation of this Agreement.

ARTICLE 11 SEVERABILITY

If any provision in this Agreement is illegal, invalid or unenforceable at law, it shall be deemed to be severed from this Agreement and the remaining provisions shall continue in full force and effect. The parties agree that they shall endeavor to replace any such severed provision with a new provision which achieves substantially the same practical effect and which is valid and enforceable.

ARTICLE 12 WAIVER

No failure or delay by MPI in exercising any right, power or privilege hereunder shall operate as a waiver thereof, nor shall any single or partial exercise thereof preclude any other or further exercise thereof or the exercise of any right, power or privilege hereunder. No waiver of any provision of this Agreement, or a breach thereof, shall be effective unless it is in writing and signed by the party waiving the provision or the breach thereof.

ARTICLE 13 ASSIGNMENT

The Confidant shall not assign this Agreement without the prior written consent of MPI. No assignment of this Agreement shall operate to relieve the Confidant from any obligation of this Agreement.

ARTICLE 14 FURTHER ACTS AND ASSURANCES

Each of the parties shall, from time to time, do all acts and things and execute from time to time all such further documents and assurances as may be necessary to carry out and give effect to the terms and conditions of this Agreement.

ARTICLE 15 FAX EXECUTION

This Agreement may be executed in any number of counterparts, including counterparts signed by fax, each of which shall be deemed an original and all of which together shall constitute one in the same instrument. A photocopied and/or fax copy of this Agreement bearing the signature of each party, in a single document or counterparts thereof as provided herein, shall be deemed an original execution version of this Agreement.

IN WITNESS WHEREOF the parties hereto have duly executed this Agreement on the date first above written.

SCHEDULE "B"

UNDERTAKING OF CONFIDENTIALITY

TO: THE PUBLIC UTILITIES BOARD OF MANITOBA

WHEREAS on July xx, 2018, in Order xxx/18 (the "**Order**"), issued in the course of The Manitoba Public Insurance Corporation's ("**MPI**") 2019/2020 General Rate Application ("**2019 GRA**"), the Public Utilities Board of Manitoba (the "**Board**") ordered that documents described therein as the Mercer Methodology" and the Mercer Response to RFP," be received in confidence, pursuant to Rule 13 of the Board's Rules of Practice and Procedure (the "**Confidential Documents**").

AND WHEREAS the Order directs MPI to provide, non-redacted copies of the Confidential Documents to certain select individuals following their execution of this Undertaking and a prescribed confidentiality agreement.

AND WHEREAS the Order permits me, [insert name of individual entitled], in my capacity as [insert role - legal counsel, consultant, etc.] to [insert name of entity - the Board, the Canadian Association of Consumers, etc.], to receive non-redacted copies of all or some of the Confidential Documents, subject to certain conditions and restrictions.

NOW THEREFORE, in consideration of receiving access to the Confidential Documents:

1. I understand and agree:

   (a) that the term Confidential Information" means:

      (i) any information contained in the Confidential Documents (including the Confidential Documents themselves);

      (ii) any information that has been filed by MPI with the Board in confidence pursuant to the Order and; and

      (iii) all evidence, transcripts, notes, working papers, calculations, analysis or other materials based on or using the Confidential Documents or any information contained therein, that I receive, review or prepare (related materials) during the course of the 2018 GRA or any appeal, review or rehearing of the Board's decision in the proceeding for the purpose of participating in the 2019 GRA or any appeal, review or rehearing from the Board's decision in the proceeding,

   (b) that the execution of this Undertaking is a condition of my being granted access to the Confidential Information;

   (c) that this Undertaking will be filed with the Board;

(d) to observe any terms and conditions imposed by MPI as they relate to the access, use and protection of the Confidential Information; and

(e) that, in the event that I breach this Undertaking, there may be consequences which could include, without limitation, the following:

(i) a denial or reduction of costs to, or a cost award against, my client, my principals or me personally; and

(ii) an immediate and absolute revocation of my right to receive and/or retain all or some of the Confidential Information.

2. I hereby undertake:

(a) to use Confidential Information exclusively for and within the scope of my client/principal/employer's Board-approved intervention in the 2019 GRA proceeding;

(b) to maintain all of the Confidential Information in confidence and not to divulge it to any person save and except for panel members of the Board or to any person who has been authorized by the Board to receive such information and who has executed and filed with the Board this undertaking and the Confidentiality Agreement, unless otherwise required by law, in which case, I will promptly give written notice to the Board, MPI and Mercer that such disclosure has been required;

(c) not to copy, reproduce, in any manner, the Confidential Information except for purposes described in paragraphs (a) and (b) above;

(d) to take prudent, reasonable steps to keep confidential and to protect the Confidential Information from unauthorized disclosure;

(e) to indemnify and save harmless the Board from and against all claims, actions, proceedings, demands, losses, damages, costs, and expenses which may be brought against the Board or which the Board may suffer, sustain, pay or incur, resulting from, or arising in connection with, the unauthorized use or disclosure by me of the Confidential Information or the related materials;

(f) subject to subparagraphs (g) and (h) below, within 30 days of the expiration of any appeal or review period of the Board's decision in respect of the 2019 GRA, unless otherwise directed by the Board, to:

(i) expunge all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession and under my direction and control;

(ii) deliver to MPI or destroy all paper copies of the Confidential Information and related materials in my possession or under my direction and control; and

(iii) provide an executed statutory declaration (**in the form attached as Appendix "A"**), to the Board, MPI and Mercer,

(g) in the event that any Board decision in respect of the 2019 GRA is the subject of a review application, to:

(i) within 30 days following the release of the Board's final disposition of any review application;

1) expunge all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession and under my direction and control;

2) deliver to MPI or destroy all paper copies of the Confidential Information and related materials in my possession or under my direction and control; and

3) provide an executed statutory declaration (**in the form attached as Appendix "A"**), to the Board, MPI and Mercer,

(h) In the event that any Board decision in respect of the 2019 GRA is the subject of a leave to appeal application or appeal, to:

(i) unless otherwise directed by a court of competent jurisdiction, within 30 days following the release of a final decision disposing of the appeal (a decision dismissing the application for permission to appeal or a final decision on appeal):

1) expunge all electronic copies of the Confidential Information and related materials from all electronic apparatus and data storage media in my possession and under my direction and control;

2) deliver to MPI or destroy all paper copies of the Confidential Information and related materials in my possession or under my direction and control; and

3) provide an executed statutory declaration (**in the form attached as Appendix "A"**), to the Board, MPI and Mercer, and

(i) to promptly report any violation of the recipient of this undertaking to the Board, to MPI and to Mercer, and shall take all reasonable steps to retract any unauthorized disclosure and report such activities to the Board, MPI and Mercer.

3. The obligations created herein shall not preclude my:

(a) using or disclosing the Confidential Information at a time when Confidential Information is generally available to the public, other than as a direct or indirect result of any disclosure by me which is prohibited hereunder; and

(b) disclosing the Confidential Information to the extent such disclosure is required by law, Court order or competent authority of any governmental body or professional discipline body, provided that, other than in respect of a mandated disclosure to the signatory's governing law society or legal professional liability insurer, the Board, MPI and Mercer are provided with notice promptly upon my becoming aware that such notice is required.

THIS CONFIDENTIALITY AGREEMENT made this xxxx day of July, 2018

BETWEEN:

MERCER (CANADA) LIMITED,

(called MERCER")

of the first part,

- and -

[Insert name of Individual],
(called the 'Confidant")

of the second part

WHEREAS on July xx, 2018, in Order xxx/18 (the "**Order**"), the Public Utilities Board of Manitoba (the "**Board**") ordered, within the course of considering Manitoba Public Insurance's ("**MPI**") 2019/2020 General Rate Application ("2019 **GRA**"), that documents described as the 'Mercer Methodology" and the "Mercer Response to RFP" be received in confidence, pursuant to Rule 13 of the Board's Rules of Practice and Procedure (the "**Confidential Documents**").

AND WHEREAS the Confidential Documents contain information that is confidential and proprietary in nature and which is the lawful property of Mercer.

AND WHEREAS the Order directs MPI to provide non-redacted copy of the Confidential Documents to the Confidant, following their execution of a prescribed undertaking and this Confidentiality Agreement (the "**Agreement**").

NOW THEREFORE IN CONSIDERATION OF receiving access to the Confidential Documents, the sum of one ($1.00) dollar and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

ARTICLE 1 DEFINITIONS

In this Agreement:

"**Authorized Person**" means any person permitted by the Order to receive the Confidential Information, who is in compliance with the conditions on the receipt and use of the Confidential Information, as set out in the Order.

"**Confidential Information**" means any information contained in the Confidential Documents (and includes the Confidential Documents themselves) and any information that has been filed by MPI with the Board in confidence pursuant to the Order.

"**Permitted Uses**" has the meaning set forth in Article 2 below.

"**Person**" shall be broadly interpreted to include, without limitation, any corporation, partnership, other entity, or individual.

"**Proceeding**" means the proceeding before the Board in respect of the 2019 GRA.

"**Reverse Engineer**" means to discover, synthesize or otherwise recreate the Confidential Information following a detailed examination.

"**Unauthorized Person**" means any Person other than Mercer, MPI, the Confidant or an Authorized Person.

ARTICLE 2 PERMITTED USES

The Confidant may use Confidential Information for the following purposes (called "**Permitted Uses**"):

(a) To give instructions to, carry out critical analysis, form conclusions and/or advise an Authorized Person; and

(b) To prepare a report suitable for filing on the public record of the Proceeding and testify on the public record of the Proceeding. Without the consent of the Board obtained in advance, the Confidant shall not include in the report or testimony any Confidential Information or any information that would enable an Unauthorized Person to Reverse-Engineer Confidential Information. To the extent that the Confidant relies upon Confidential Information to arrive at a conclusion, the Confidant may include in the Report or testimony information at a level of summary and aggregation which will not disclose Confidential Information or enable an Unauthorized Person to reverse-engineer the Confidential Information, subject always to the Confidant providing a redacted Report on the public record and a complete report in confidence to the Board and/or testifying in camera where Confidential Information is discussed.

ARTICLE 3 CONFIDENTIALITY

Except as specifically provided in Article 2 above (Permitted Uses), the Confidant shall:

(a) Keep the Confidential Information in the strictest confidence,

(b) Not disclose Confidential Information to any Unauthorized Person without the prior written consent of Mercer;

(c) In the case of a disclosure to an Unauthorized Person with the prior written consent of Mercer, obtain from the Unauthorized Person an undertaking or confidentiality agreement satisfactory in form to the Board and Mercer, on terms no less restrictive than those in this Agreement;

(d) Take prudent, reasonable steps to protect Confidential Information in its possession from inadvertent disclosure to an Unauthorized Person; and

(e) Destroy or return the Confidential Information (if so permitted) when required and in the manner required by the Board.

If the Confidant so chooses, they may solicit Mercer's comments on particular documents that are in the process of being prepared in the interests of avoiding inadvertent disclosures to an Unauthorized Person.

ARTICLE 4 COMPELLED DISCLOSURE

In the event that the Confidant, or an Unauthorized Person referred to in Article 3(c) above, receives notice indicating that they may or shall be legally compelled to disclose any of the Confidential Information, the Confidant shall provide Mercer with prompt notice so that Mercer may, at its sole discretion, seek a protective order or other appropriate remedy.

The Confidant and any such Unauthorized Person referred to in Article 3(c) above shall cooperate fully with Mercer protecting the confidential and proprietary nature of the Confidential Information sought to be compelled to be disclosed, including providing assistance to Mercer in the prosecution and defence of any action(s) or proceeding(s) brought or made in respect of such matters.

In the event that such protective order or other remedy is not obtained, or that Mercer waives compliance with the provisions of this Agreement, the Confidant or Unauthorized Person referred to in Article 3(c) above shall furnish only that portion of the Confidential Information in respect of which it shall be legally required to disclose.

ARTICLE 5 FURTHER COVENANTS

The Confidant shall:

(a) use the Confidential Information only for the Permitted Uses and for no other purpose whatsoever; and

(b) not use or reverse engineer Confidential Information for personal gain in any fashion, other than for the receipt of compensation for his or her participation in this proceeding.

ARTICLE 6 NO LICENCE

The Confidant agrees that the Confidential Information is the property of Mercer, its contractual counterparties and domestic customers, and the Confidant shall not contest or challenge any of their rights in or to any Confidential Information. The Confidant does not receive any right, title or interest of any nature whatsoever in or to any Confidential Information.

ARTICLE 7 CONTINUING OBLIGATION

This Agreement is effective upon execution by both parties, and the obligations of the Confidant under this Agreement shall not terminate but shall continue without limitation of time.

ARTICLE 8 EQUITABLE REMEDIES

In the event of a breach, or threatened breach, of this Agreement by the Confidant, the parties agree that the harm suffered by Mercer may not be compensable by monetary damages alone and, accordingly, that Mercer shall, in addition to any other available legal or equitable remedies, be entitled to seek an injunction against such breach or threatened breach.

ARTICLE 9 NOTICES

Any notice or other communication required or permitted to be given under this Agreement must be in writing and shall be delivered to:

a) **Mercer**

or such other addresses as either party may notify the other of in writing. Notices may be given by personal service or fax transmission. Any notice given by personal service shall be deemed to have been effectually given and received at the date and time of actual delivery. Any notice sent by fax transmission shall be deemed to have been effectually given and received on the next business day following transmission.

ARTICLE 10 INTERPRETATION AND ENFORCEMENT

This Agreement shall be subject to, interpreted, performed and enforced in accordance with the laws of Manitoba and the applicable laws of Canada without regard to Manitoba or federal Canadian law governing conflicts of law, even if one or more of the parties to this Agreement is resident of or domiciled in any other province, state, or country. The parties hereby irrevocably attorn to the exclusive jurisdiction of the Court of Queen's Bench of Manitoba, Winnipeg Centre. The recitals hereof form an integral part of this Agreement. Section headings in this Agreement are for the convenience of the parties only, and shall not affect the interpretation of this Agreement.

ARTICLE 11 SEVERABILITY

If any provision in this Agreement is illegal, invalid or unenforceable at law, it shall be deemed to be severed from this Agreement and the remaining provisions shall continue in full force and effect. The parties agree that they shall endeavor to replace any such severed provision with a new provision which achieves substantially the same practical effect and which is valid and enforceable.

ARTICLE 12 WAIVER

No failure or delay by Mercer in exercising any right, power or privilege hereunder shall operate as a waiver thereof, nor shall any single or partial exercise thereof preclude any other or further exercise thereof or the exercise of any right, power or privilege hereunder. No waiver of any provision of this Agreement, or a breach thereof, shall be effective unless it is in writing and signed by the party waiving the provision or the breach thereof.

ARTICLE 13 ASSIGNMENT

The Confidant shall not assign this Agreement without the prior written consent of Mercer. No assignment of this Agreement shall operate to relieve the Confidant from any obligation of this Agreement.

ARTICLE 14 FURTHER ACTS AND ASSURANCES

Each of the parties shall, from time to time, do all acts and things and execute from time to time all such further documents and assurances as may be necessary to carry out and give effect to the terms and conditions of this Agreement.

ARTICLE 15 FAX EXECUTION

This Agreement may be executed in any number of counterparts, including counterparts signed by fax, each of which shall be deemed an original and all of which together shall constitute one in the same instrument. A photocopied and/or fax copy of this Agreement bearing the signature of each party, in a single document or counterparts thereof as provided herein, shall be deemed an original execution version of this Agreement.

IN WITNESS WHEREOF the parties hereto have duly executed this Agreement on the date first above written.

Schedule A 13

1. SUMMARY

By this Order, the Public Utilities Board (Board) grants the Motion of Manitoba Public Insurance (MPI or the Corporation) seeking confidential receipt by the Board of certain responses to Information Requests (the IR Responses), filed in the 2019/2020 General Rate Application (GRA or the Application). The Board provides direction on the treatment of any Intervener evidence and further Information Requests (IRs) arising out of the IR Responses. The Board also issues revisions to the timetable approved in Order 82/18, which are required as a consequence of the Motion.

1.0 *Overview*

MPI filed the GRA on June 15, 2018. On June 29, 2018, following the Pre-Hearing Conference, the Board issued Procedural Order No. 82/18. Order 82/18 permitted two rounds of IRs to be issued to MPI by the Board and approved Interveners.

The First Round of IRs was filed on July 11, 2018, and responses were filed by MPI on August 8, 2018. The Second Round of IRs, which arose out of responses provided by MPI to the First Round IRs, was filed on August 20, 2018.

On August 8, 2018, concurrently with its filing of responses to First Round IRs, MPI filed a Notice of Motion with the Board in which it sought leave to file certain of the First Round IR responses in confidence with the Board, on any terms the Board considered appropriate and in the public interest. On August 19, 2018, MPI electronically served a Motion Brief on the Board and the Interveners in the GRA. MPI also filed supporting Affidavits with the Board only, containing confidential information, in hard copy format.

In its Notice of Motion of August 8, 2018, MPI requested the following IR Responses, or portions thereof, be filed confidentially with the Board:

- PUB (MPI) 1-27
- PUB (MPI) 1-49
- PUB (MPI) 1-55
- PUB (MPI) 1-57
- PUB (MPI) 1-58
- PUB (MPI) 1-59
- PUB (MPI) 1-61
- PUB (MPI) 1-62
- PUB (MPI) 1-67
- PUB (MPI) 1-72
- CAC (MPI) 1-56
- CAC (MPI) 1-60
- CAC (MPI) 1-63
- CAC (MPI) 1-66

In its Motion Brief of August 19, 2018, MPI stated that it had determined, upon further review, that certain of the IR Responses for which it initially requested confidential treatment could be in fact placed on the public record.

Accordingly, on August 20, 2018, MPI filed with the Board revised IR Responses, which placed on the public record certain information it had initially sought to be kept confidential. Following this filing, MPI's request for confidential treatment affected the following IR Responses only:

- PUB (MPI) 1-27 (Attachment C)
- PUB (MPI) 1-49 (Part C)
- PUB (MPI) 1-55
- PUB (MPI) 1-57 (Portion of response)

- PUB (MPI) 1-58 (Attachment A)
- PUB (MPI) 1-61 (Appendices 1-6)
- PUB (MPI) 1-62 (Attachment A, Appendices 1, 2, 5)
- PUB (MPI) 1-67 (Appendix 1)
- PUB (MPI) 1-72 (Portions of Appendix 1)
- CAC (MPI) 1-56 (Portions of Appendix 1)
- CAC (MPI) 1-60 (Attachment 1)
- CAC (MPI) 1-63 (Parts A and C)
- CAC (MPI) 1-66 (Part B)

On August 22, 2018, the Board received a written response to the Motion from one of the Interveners in the GRA, Consumers' Association of Canada (Manitoba) Inc. (CAC).

The other Interveners in the GRA, Coalition of Manitoba Motorcycle Groups (CMMG) and Canadian Automobile Association Manitoba (CAA), did not file any response to the Motion.

The Board did not require an oral hearing on the Motion.

2. PARTIES' POSITIONS AND BOARD FINDINGS

2.0 *MPI*

MPI took the position that the following IR Responses, or portions thereof, for which it sought confidential treatment, contain third-party proprietary, confidential or commercially sensitive information: PUB (MPI) 1-27, PUB (MPI) 1-49, PUB (MPI) 1-58, and CAC (MPI) 1-60.

In addition, certain IR Responses, or portions thereof, contain MPI confidential or commercially sensitive information: PUB (MPI) 1-55, PUB (MPI) 1-57, PUB (MPI) 1-61, PUB (MPI) 1-62, PUB (MPI) 1-67, PUB (MPI) 1-72, CAC (MPI) 1-56, CAC (MPI) 1-63, and CAC (MPI) 1-66.

MPI would not oppose the circulation any of the IR Responses by the Board provided the following conditions were to be imposed:

a) That a person eligible to receive the IR Responses be:

   i. a representative, a consultant or a professional advisor of a registered intervener granted standing to intervene on an issue or issues falling within the ambit of matters raised in each of the respective documents; or

   ii. representative, a consultant or a professional advisor of the Board.

b) That the IR Responses not be provided until or unless the person executed an Undertaking of Confidentiality and a Confidentiality Agreement (forms of which were appended to MPI's Motion Brief); and

c) That no use could be made of the IR Reponses, or reference made to their content, at any time where doing so would place the confidential information on the public record or make it available to persons other than individuals who had complied with the requirement to execute the Undertaking of Confidentiality and a Confidentiality Agreement.

2.1 *CAC*

CAC advised did not object to the conditions requested by MPI for the distribution of the IR Responses. CAC acknowledged that treating the IR Responses as confidential would impair the public interest in disclosure of the information; however, the proposed conditions on access would be a minimal impairment to the public interest.

CAC requested one amendment to the approach requested by MPI: that if it, or another Intervener, were to file a report as evidence in the GRA based upon or referring to the confidential information contained in the IR Responses, that evidence be filed in confidence with the Board and MPI on the date required (September 24, 2018, per Order 82/18). In consultation with MPI, the Intervener would then determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by September 26, 2018.

2.2 *Board Findings*

Proceedings before the Board are public, and documents filed with the Board by a party to a proceeding are placed on the public record. However, the Board may receive information in confidence on any terms it considers appropriate in the public interest, when the test under Rule 13(2) is met:

(a) If the Board is of the opinion that disclosure of the information could reasonably be expected

i. to result in undue financial loss or gain to a person directly or indirectly affected by the proceeding; or

ii. to harm significantly that person's competitive position

or

(b) If

i. the information is personal, financial, commercial, scientific or technical in nature; or

ii. the information has been consistently treated as confidential by a person directly affected by the proceeding; and

iii. the Board considers that the person's interest in confidentiality outweighs the public interest in the disclosure of the information.

On hearing a motion under Rule 13, the Board may order the information in question be placed on the public record, order the document not be placed on the public record with such conditions on access imposed as the Board considers appropriate, order an abridged version of the document be placed on the public record, or make any other order the Board finds to be in the public interest. Rule 13(5) allows the filing party to request that the document be withdrawn prior to being placed on the public record where the Board has determined to place any part of the document on the public record.

The Board has reviewed and considered all of the information filed by MPI, as well as the submissions of CAC. The Board has taken into account the evidence filed confidentially by MPI in support of its Motion, and is satisfied that the IR Responses, or portions thereof, identified as confidential by MPI should be received in confidence, as they meet test under Rule 13(2). The restrictions requested on the distribution of the IR Responses are necessary in order to protect third party proprietary information, confidential, proprietary or commercially sensitive information.

Accordingly, the Board grants MPI's Motion. The Board accepts the conditions imposed on the receipt of the Documents as outlined in MPI's Motion materials, and orders that the IR responses be distributed only on the terms as set out in Section 3.

The Board notes that the documents to be treated in confidence respond to IRs issued on behalf of the Board or of CAC. Therefore, the Board will restrict the distribution of the IR Responses to its representatives, consultants and professional advisors, and to those of CAC.

The Board recognizes that further evidence containing confidential information from the IR Responses may be generated as a result of the distribution of the IR Responses to CAC and the Board. Therefore, the Board will require that any Second Round IRs or other evidence arising out of the information contained in the IR Responses be subject to the same restrictions as the IR Responses themselves.

The Board further accepts the procedure proposed by CAC is necessary in order to preserve the confidentiality of the IR Responses and the information contained therein, and therefore orders that if any Intervener files a report as evidence in the GRA based upon or referring to the information contained in the IR Responses, that evidence shall be filed in confidence with the Board and MPI.

The Timetable approved in Order 82/18 required that second round IRs be filed on August 20, 2018, at which time MPI's Motion was pending. Given MPI's Motion and the need for this Order, however, any Second Round IRs arising out of the IR Responses have yet to be filed. This necessitates that the Board direct a filing date for any Second Round IRs arising out of the IR Responses, as well as for those IR responses for which the request for confidential treatment was ultimately withdrawn by MPI.

The Board therefore orders that any Second Round IRs arising out of the IRs affected by this Order shall be served on MPI by **Thursday, September 20, 2018.** MPI shall provide responses to the Second Round IRs by **Monday, October 1, 2018.** The Board recognizes that in the Timetable approved in Order 82/18, Intervener evidence was to be filed by September 24, 2018, and that in order to file their evidence, Interveners may require MPI's responses to Second Round IRs. Accordingly, the Board has ordered certain revisions to the Timetable which was approved in Order 82/18, to permit

Intervener evidence to be filed following receipt of responses to Second Round IRs which arise out of the IR Responses. The Revised Timetable is attached as **Schedule "A"**, with revisions underlined.

As set out in the Revised Timetable, Intervener evidence is to be filed with the Board on October 3, 2018. As a result, the dates in Directive 3.9 of Order 89/18 are revised such that if any Intervener files a report as evidence in the GRA based upon or referring to the confidential information contained in the IR Responses, that evidence shall be filed in confidence with the Board on October 3, 2018. In consultation with MPI, the Intervener shall then determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by October 9, 2018.

3.0 IT IS THEREFORE ORDERED THAT:

3.1 The Board grants MPI's Motion, and hereby grants leave to MPI to file the following IR Responses, or portions thereof as identified by MPI, in confidence with the Board:

a. PUB (MPI) 1-27 (Attachment C)
b. PUB (MPI) 1-49 (Part C)
c. PUB (MPI) 1-55
d. PUB (MPI) 1-57 (Portion of response)
e. PUB (MPI) 1-58 (Attachment A)
f. PUB (MPI) 1-61 (Appendices 1-6)
g. PUB (MPI) 1-62 (Attachment A, Appendices 1, 2, 5)
h. PUB (MPI) 1-67 (Appendix 1)
i. PUB (MPI) 1-72 (Portions of Appendix 1)
j. CAC (MPI) 1-56 (Portions of Appendix 1)
k. CAC (MPI) 1-60 (Attachment 1)
l. CAC (MPI) 1-63 (Parts A and C)
m. CAC (MPI) 1-66 (Part B) (the IR Responses)

3.2 The following persons shall be eligible to receive a copy of the IR Responses:

a. Representatives, consultants or professional advisors of the Consumers' Association of Canada (Manitoba) Inc. (CAC); or
b. Representatives, consultants or professional advisors of the Board.

3.3 Any eligible person as set out in Directive 3.2 intending to receive the IR Responses shall execute the Undertakings of Confidentiality and a Confidentiality Agreements as set out in Tabs 1-6 of the Motion Brief filed by MPI, prior to the receipt of any of the IR Responses.

3.4 No use shall be made of the IR Responses, or reference made to their contents, at any time where doing so would place the IR Responses or the information contained therein on the public record or make them available to persons other than those authorized as set out herein who have executed the required Undertakings of Confidentiality and Confidentiality Agreements.

3.5 The terms and conditions placed on the receipt of the IR Responses, as set out in Directives 3.2 to 3.4, shall apply to the receipt of Second Round Information Requests and Second Round Information Request Responses arising out of the IR Responses and the information contained therein.

3.7 Second Round Information Requests arising out of the IR Responses shall be served on MPI by Thursday, September 20, 2018.

3.8 MPI shall provide responses to the Second Round Information Requests arising out of the IR Responses by Monday, October 1, 2018.

3.9 Directive 3.9 of Order 89/18 is revised such that if any Intervener files a report as evidence in the GRA based upon or referring to the information contained in the IR Responses or the documents or information designated as confidential in Order 89/18, that evidence shall be filed in confidence with the Board and MPI on

October 3, 2018. The Intervener shall consult with MPI and determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by October 9, 2018.

4.0 The terms and conditions placed on the receipt of the IR Responses, as set out in Directives 3.2 to 3.4, shall apply to the receipt of any of those portions of Intervener evidence containing information from the IR Responses.

4.0 **Schedule "A"** is the Revised Timetable for this GRA, with revisions underlined.

Appendix A 21

1. SUMMARY

By this Order, The Public Utilities Board (Board) grants the Motion of Consumers' Association of Canada (Manitoba) Inc. (CAC) to compel Manitoba Public Insurance (MPI or the Corporation) to provide responses to certain Information Requests (IRs) made by CAC in the 2019/2020 General Rate Application (Application or GRA).

1.0 *Overview*

MPI filed the Application on June 15, 2018. On June 29, 2018, the Board issued Procedural Order 82/18 granting CAC intervener status in the 2019 GRA and establishing a timetable which included two rounds of IRs.

Order 82/18 also established a Final Issues List for the 2019 GRA which included, as an issue requiring more detailed consideration:

> *21. Asset Liability Management Study, including review of all aspects of the [Mercer ALM] Study recommendations and implementation thereof, the basis for evaluation of risk and return, alternative portfolio compositions, proposed portfolio segregation and recommended composition of the investment portfolio(s), forecast investment performance and changes to the Investment Policy Statement.*

The Mercer Asset Liability Management Study referred to in Order 82/18 was the result of a directive issued in Board Order 162/16, following the 2017 GRA.

1.1 *Asset Liability Management*

The Board has reviewed the issue of MPI's asset liability management in recent General Rate Applications. In Order 151/13, issued following the 2014 GRA, the Board directed MPI to have the composition of its investment portfolio reviewed by an external expert consultant, with a view to determining whether the current asset mix should continue, or should be revised. MPI engaged Aon to complete the ALM Study in 2014 (Aon ALM Study), and filed the study in the 2016 GRA.

A significant portion of the 2017 GRA was dedicated to reviewing MPI's Investment Portfolio and the Aon ALM Study. In the 2017 GRA, a witness from Aon provided testimony on the Aon ALM Study. CAC called Mr. Valter Viola as an expert in (1) investment portfolio management; (2) investment portfolio research, economics and risk management; and (3) quantitative asset liability modeling.

In Order 162/16, issued following the 2017 GRA, the Board ordered MPI to obtain an updated asset liability management study, to be filed with the 2018 GRA. That study was to address each of the recommendations made by Mr. Viola in the 2017 GRA hearings.

On June 15, 2017, MPI filed the 2018 GRA but did not file an updated asset liability management study as directed, stating that it was not "logistically possible" to do so within the time frame provided and that, secondly, an updated study could not be usefully and purposefully completed in the absence of Board approved Basic Rate Stabilization Reserve Targets.

Notwithstanding this, during the 2018 GRA hearings, the Corporation advised the Board that it had issued a Request for Proposals for the updated asset liability management study on September 12, 2017 and had engaged Mercer Canada (Mercer) to deliver the study by November 30, 2017, having put in place an accelerated process to have the study produced.

In Board Order 130/17, issued after the 2018 GRA, the Board expressed its dismay that MPI had failed to comply with the Board's directive in Order 162/16 concerning an updated asset management liability study, and that the timing of Mercer Canada's engagement rendered any study of limited utility in the 2018 GRA. The Board directed the Corporation to file the study to be prepared by Mercer Canada (Mercer ALM Study) with the Board concurrently with its delivery to the MPI Board of Directors, and to provide an update of the Mercer ALM study as necessary to: (a) take into account the directives issued in Order 130/17; and (b) address each of the 18 recommendations made by Mr. Viola as set out in Order 162/16.

In Order 130/17 the Board also ordered that a Technical Conference be held to review the Mercer ALM Study, with the information shared at the Technical Conference to be included in the 2019 GRA. The Technical Conference took place on March 2, 2018 with MPI, CAC and Board Advisors participating.

The Mercer ALM Study was prepared in three phases, the last being filed with the Board on February 2, 2018. Additional information concerning the Mercer ALM Study was filed with the Board as part of the current GRA.

The Mercer ALM Study identifies unique investment portfolios for each class of MPI's liability, including Basic Claims, Basic's Rate Stabilization Reserve and Future Employee Benefits (primarily pension), and develops efficient frontiers for each portfolio based on modelling utilizing multiple combinations of asset classes.

MPI filed an ALM Implementation Plan in the GRA, in which it reported on the Technical Conference. MPI reported that Board Advisors and CAC had expressed concern about the level of detail and analysis provided in the Mercer ALM Study. The Board expected to see the details of the assumptions supporting the analysis conducted by Mercer, the frontiers and options considered along the frontiers, and additional justification for duration matching approach in the 2019 GRA. During the Technical Conference, CAC focused on the assumptions adopted by Mercer, particularly the interest rate forecast, inflation correlations, risks associated with heavy emphasis on fixed income and the foregone returns to ratepayers resulting from the selected reduction of risks.

1.2 *Information Requests CAC (MPI) 1-84(f) and 1-85(g)*

On July 11, 2018, CAC filed and served its First Round IRs. On August 8, 2018, MPI filed and served responses to the First Round IRs in which it refused to respond to CAC (MPI) 1-84(f) and 1-85(g) (attached as Appendix A to this Order). In summary, the IRs in question sought further analysis from Mercer. MPI's reasons for the refusal were that:

a) The requested analyses were predicated on inflation forecast assumptions that Mercer and the Corporation rejected in the early stages of the Mercer ALM Study as not probable;

b) CAC had not provided any evidence that the inflation forecast used in the Mercer ALM Study was sufficiently inaccurate, or flawed in some way, so as to call into doubt the results;

c) The requested analyses would not add any meaningful evidence to the record; and

d) The costs of re-running the modeling as requested would be in excess of $30,000.00 and it would not be prudent to incur those costs. MPI later revised this estimate, to be in excess of $46,000.

CAC filed the within Motion on August 8, 2018, seeking an Order compelling MPI to answer CAC (MPI) 1-84(f) and 1-85(g).

On August 15, 2018, CAC filed further submissions in support of its Motion consisting primarily of previously filed evidence and information from Mr. Viola in the 2017 GRA,

asserting the importance of accurately determining estimated risk based upon modelling using real, rather than nominal, interest rate and inflation risk.

On August 20, 2018, MPI filed its Motion Brief, together with the affidavit of Glenn Bunston, Manager of Investments for MPI, in response to the CAC Motion. On August 28, 2018, CAC filed a Reply to MPI's Motion Brief.

On September 7, 2018, MPI filed a supplemental affidavit of Glenn Bunston, to correct errors in the Bunston affidavit filed August 20, 2018.

The Board did not require an oral hearing on the Motion.

2.0 PARTIES' POSITIONS AND BOARD FINDINGS

2.1 CAC

CAC took the position that MPI should be compelled to respond to the IRs in question on the basis that they are relevant to the Board's assessment of the Mercer ALM Study, as the information goes to the overall credibility of the Mercer ALM Study and whether it was biased by choices made by MPI.

CAC pointed out that there has been an ongoing debate over successive GRAs as to whether MPI is assuming an undue level of risk, resulting in an inadequate return, due to its failure to appropriately hedge against real interest and inflation risks in its portfolio. According to CAC, the IRs in question relate to the same or similar issues reviewed in the

2017 GRA in respect of the Aon ALM Study; namely, the sensitivity of optimization models to their base assumptions, including assumptions relating to interest rates.

CAC indicated that CAC (MPI) 1-84(f) relates to Mr. Viola's Recommendation 13, and CAC (MPI) 1-85(g) relates to Mr. Viola's Recommendation 7. It was CAC's position that the responses to these recommendations, as set out in the Mercer ALM Study, are not complete, as directed by Order 130/17.

CAC stated that the IRs in question asked Mercer to re-run the efficient frontier model under different assumptions, arguing that the modelling of efficient frontiers for the purposes of investment decisions can be highly susceptible to key assumptions, including assumptions relating to interest rates. The purpose of the IRs is to test MPI's decisions regarding key assumptions on which the Mercer ALM Study is based, to understand the implications of those assumptions, and to determine whether the assumptions and constraints imposed in the Mercer ALM Study were appropriate. According to CAC, the Mercer ALM study is potentially vulnerable given the simplifying assumption about the nature of the liabilities (Nominal vs. Real), and it is important to understand the implications of that assumption. If different liability assumptions were used, it is possible that alternative portfolio compositions would have been recommended. This is central to the issue being examined by the Board in the GRA.

CAC stated that while its consultants might be able to prepare a comparable analysis, MPI would likely challenge the calculations requiring Mercer to undertake a similar

analysis itself in order to compare results. In addition, CAC stated that its consultants could not replicate multi-period scenarios. CAC therefore argued that it would be more cost efficient to have Mercer re-run its modelling based on the assumptions provided.

2.2 *MPI*

MPI made five points as to why the Board should not issue the Order requested:

a) The IRs are not proper questions;

b) MPI's decision-making and investment strategy are reasonable;

c) The IRs cannot be answered as the information does not exist and cannot be obtained with reasonable efforts;

d) The effort and cost of obtaining the information required to answer the IRs exceeds the anticipated value of that information; and

e) CAC can obtain the information sought without the assistance of MPI.

MPI objected to the imperative nature of the IRs, arguing that they were not proper questions, because they demand new evidence and do not seek to provide a party with a satisfactory understanding of the matters to be considered. While recognizing that rate application proceedings are somewhat different than court proceedings, MPI nevertheless urged the Board to equate IRs to interrogatories in the context of litigation.

MPI submitted that, in the litigation context, it is not proper to demand that a third party create or produce new evidence through an interrogatory.

MPI further argued that the costs and anticipated benefits of creating information in order to respond to an IR ought to be considered, and that one of the costs associated with compelling the production of new evidence is that it would imply that the decisions made by the MPI Board of Directors and its Investment Committee, which has significant expertise in investments, were not reasonable. MPI argued that the Board should measure MPI's decision-making on the basis of a standard of review of reasonableness as used by courts in the administrative law context. MPI argued that it was reasonable for MPI to rely upon the recommendations of Mercer, including Mercer's recommendations as to the modelling used in the Mercer ALM Study. In addition, MPI argued that CAC provided no evidence to either refute the inflation assumptions underpinning the investment strategy adopted, or demonstrate that it was unreasonable for MPI to rely upon Mercer's recommendations.

MPI further pointed out that Rule 16(b) of the Board's Rules of Practice and Procedure provides that a party may refuse to provide a full and adequate response "where the information necessary to provide an answer is not available or cannot be provided with a reasonable effort." At a cost of over $46,000, MPI submitted that it could not provide the information with reasonable effort. MPI further argued that the cost of obtaining the information requested would exceed its expected benefits.

MPI argued that Mercer's inflation forecast is consistent with the mid-point of the Bank of Canada's inflation target band, and that CAC had not established some credible deficiency in the forecast or provided any evidence to refute the inflation assumptions underpinning the investment strategy it adopted.

MPI further stated that the analysis requested by CAC would extend the current analysis in a direction, the results of which are already known, and that such an analysis was abandoned at the early stage of the Mercer ALM Study.

Finally, MPI submitted that CAC could obtain the information sought without the assistance of MPI and that CAC conceded that it has access to the tools and expertise required to perform the analysis.

2.3 *CAC Reply*

In its reply, CAC argued that the record currently before the Board raises the concern that MPI's understanding of the liability risk it faces in unsatisfactory, and that both the decision-making standard and process used by MPI for selecting its asset allocations is unreasonable.

Accordingly, CAC argued that the responses to the IRs in question would clarify the current record, and therefore, the understanding of the effectiveness of MPI's interest rate risk management practices and decision making standard and processes.

2.4 *Board Findings*

Rule 14(1) of the Board's Rules of Practice and Procedure provides that IRs are to be directed to a party for the purpose of a satisfactory understanding of the matters to be considered. IRs must be relevant to the proceeding.

Rule 15(1) provides, among other things, that where an IR has been directed to a party and served on that party in accordance with the Board's directions, the party shall provide a full and adequate response to the IR.

Pursuant to Rule 16, a party who is unable or unwilling to provide a full and adequate response to an IR (referred to as an "interrogatory" in the Rule) shall file and serve a response:

a) Where the party contends that the interrogatory is not relevant, setting out specific reasons in support of that contention;

b) Where the party contends that the information necessary to provide an answer is not available or cannot be provided with reasonable effort, setting out the reasons for the unavailability of such information, as well as any alternative available information in support of the response that the party considers would be of assistance to the party making the information requests;

c) Where the party contends that the information sought is of a confidential nature, setting out the reasons why it is considered confidential and any harm that would be caused by making it public; or

d) Otherwise explaining why such a response cannot be given.

The object of every General Rate Application is to obtain Board approval for rates that are just and reasonable. The onus is on MPI throughout as applicant to demonstrate that the rates requested are just and reasonable. Just and reasonable rates are those which strike the appropriate balance between the interests of ratepayers to pay no more than necessary for the services they receive and ensuring that the applicant, in the case of a public service provider, is financially able to fulfill its statutory mandate.

Essential to a determination as to whether rates requested are just and reasonable is a review of the Corporation's management practices. In particular, this includes a review of management decisions which affect rates, such as operating expenses and investments. Such practices and decisions are reviewed on the basis of a prudence evaluation, which requires the Corporation to demonstrate that it has taken into account the best interests of its ratepayers.

In order for there to be meaningful consultation with and input from Interveners, the Board must maintain a robust pre-hearing inquiry process for the benefit of all concerned. The IR process not only assists the Board and interveners to understand all aspects of the

GRA, but also develops a complete and unbiased record upon which the determination of just and reasonable can be made.

In the circumstances of the present Motion, concern with the performance of MPI's investment portfolio has been the subject of review over successive GRAs, resulting in of the Aon and Mercer ALM studies. From the outset of the present Application, the Mercer ALM Study was identified in the Final Issues List as an issue requiring more detailed consideration.

CAC's challenge to MPI's investment policy has also been consistent through successive GRAs. A central theme of Mr. Viola's review of MPI's investment policy in the 2017 GRA was that it demonstrated poor liability protection against real rate risk and unexpected inflation. Ultimately, the Board decided in Order 162/16, and confirmed in Order 130/17, that a further asset liability study was needed to specifically address each of Mr. Viola's 18 recommendations.

The Board has carefully considered MPI's rationale for refusing to fully respond to the IRs in question but respectfully disagrees that the refusal is justified in the circumstances of the present case.

With respect to the propriety of the IRs, the imperative nature of the IRs in question does not make them invalid. The Board would point out that IRs in applications frequently require MPI to undertake further modelling and the running of scenarios based on alternatives not previously adopted or applied by MPI in preparing the application. While

IRs do bear similarities to interrogatories as utilized in the court process, the Board does not agree with MPI's argument that they serve the same purpose. IRs are far more significant in terms of building a full and unbiased record and must be broader in scope to permit the proper determination of the Application.

In addition, the Board does not accept MPI's submission that the purpose of IRs in Rules 14 to 16 ought to be narrowly interpreted to permit only information requests which may provide a party with a satisfactory understanding of the "material filed". The Rules clearly provide that the purpose of IRs is to permit a satisfactory understanding "of the matters to be considered" in the Application.

With respect to MPI's submissions on the reasonableness of MPI's decision-making and investment strategy, the Board does not accept the approach MPI has advocated. First, the Board does not accept that the Board should adopt and apply a standard of review to MPI's decision-making which mirrors that used by the courts in the review of administrative decisions. The standard of review in the administrative law context presumes a deferential standard of reasonableness or, in limited instances, correctness. However, it has long been established that a prudence evaluation is the appropriate method of review for regulators when assessing whether or not the rates requested are just and reasonable. While reasonableness is certainly a factor in a prudence evaluation, it is a broader concept of reasonableness than that applied in the context judicial review by the courts of administrative decisions.

In essence, MPI argues that there ought to be a presumption of prudence. Such a presumption, however, would amount to an abdication of the Board's duty to assess the prudence of the Corporation's decision-making to the extent those decisions affect rates.

The Board does not agree with MPI's submission that in order for the IRs at issue to be answered, the onus is on CAC to prove or provide evidence that there was some credible deficiency in the inflation forecast used by Mercer in the preparation of the Mercer ALM Study. As stated above, the onus is on MPI throughout to prove that the rate requested is just and reasonable. This is not to say that Interveners bear no onus to justify an IR. The party making the IR bears the onus of satisfying the Board that the IR falls within the scope of the Rules, and is of sufficient probative value to justify a response.

In the circumstances of the present case, the Board has determined that the information requested in the IRs at issue is relevant and material, and would be of probative value. The Board notes as well that the information requested has been a key element of CAC's previous challenges to MPI's investment policy. The information requested is necessary to continue the examination of the issue.

The Board does not accept MPI's contentions that the granting of CAC's Motion implies that decisions of Mercer, MPI's Board of Directors and its Investment Committee were not reasonable, or calls into question the competency of the individuals involved. The Board makes no finding in that regard at this time; the Board is simply providing for a

complete and unbiased record to allow the GRA to be satisfactorily understood and fully examined.

The Board does share MPI's concern as to the additional costs associated with providing responses to the IRs in question. While CAC acknowledges that it may be able to provide some analysis in response, the Board accepts CAC's argument that such evidence would result in further study and analysis by MPI, potentially utilizing further analysis from Mercer at additional cost. Accordingly, on balance, the Board is of the view that although the costs are not insignificant, compelling responses to the IRs will not be cost-inefficient.

The Board also notes that the direction in Order 162/16 and Order 130/17 was to obtain an ALM Study which addressed each of the 18 recommendations made by Mr. Viola during the 2017 GRA. Although MPI initially stated that it was logistically impossible to provide such a study in time for the 2018 GRA, it embarked upon the process in an accelerated fashion during the 2018 GRA without prior consultation or input from the Board or CAC in respect of the scope of that study or any clarification of Mr. Viola's 18 recommendations.

The IRs in question raise issues and request modelling based on some of the same or similar criticisms contained within Mr. Viola's 18 recommendations. As MPI has not obtained or carried out the analysis contemplated by these IRs, CAC's rationale claims that the Mercer ALM Study does not provide a complete response to Mr. Viola's recommendations. The Board notes that such consultation prior to obtaining the Mercer

ALM Study may well have ameliorated the issues and costs associated with now providing responses to the IRs in question.

Accordingly, the Board hereby grants CAC's motion and orders that MPI file and serve responses to IRs CAC (MPI) 1-84(f) and 1-85(g), on or before September 24, 2018. CAC shall file and serve any Second Round IRs arising out of the responses to IRs CAC (MPI) 1-84(f) and 1-85(g) on or before September 26, 2018. MPI shall file and serve the Responses to Second Round IRs arising out of CAC (MPI) 1-84(f) and 1-85(g) on or before October 3, 2018.

3.0 IT IS THEREFORE ORDERED THAT:

3.1 The Motion filed by the Consumers' Association of Canada (Manitoba) Inc. (CAC) for an Order requiring MPI to file responses to Information Requests CAC (MPI) 1-84(f) and CAC (MPI) 1-85(g) is hereby granted.

3.2 MPI shall file and serve responses to CAC (MPI) 1-84(f) and 1-85(g), attached hereto as Appendix A, on or before September 24, 2018.

3.3 CAC shall file and serve any Second Round Information Requests arising out of the responses to IRs CAC (MPI) 1-84(f) and 1-85(g) on or before September 26, 2018.

3.4 MPI shall file and serve responses to Second Round Information Requests arising out of the responses to IRs CAC (MPI) 1-84(f) and 1-85(g) on or before October 3, 2018.

APPENDIX A

CAC (MPI) 1-84(f)

f) **More Detailed Analysis for Real Scenarios:** Was the same "stepped" analysis that was performed using the Nominal Liability Benchmark (e.g. pages 1,749 to 1,753) also performed using the Real Liability Benchmark?

i. If so, provide the analysis and commentary (at least for Basic and Pensions).

ii. If not, could a similar analysis and commentary be provided, showing the effect of including RRBs ("minimally" constrained)? (at least for Basic and Pensions).

CAC (MPI) 1-85(g)

g) Can Mercer show efficient frontiers, similar to the Capital Market Line shown above, except that risk is to be defined to take into account liabilities (surplus, not assets only), and the "risk-free" asset is the Minimum Risk Portfolio (**Real** Liability Benchmark, **not Nominal** Liability Benchmark, and not TBills)?

i. The analysis should show the effects of allowable leverage **for fixed income assets only** (e.g. bond overlays, including RRBs). Other constraints can be added in a "stepped approach", starting from the "minimally constrained" scenario, in the same way such "steps" were shown on pages 1,749 to 1,753 of the GRA to illustrate the effects of adding new asset classes.

ii. The steps should include, at a minimum, the imposition of various constraints that were actually imposed, directly or indirectly, or which would illustrate the return/risk tradeoffs arising from various "steps" taken (or decisions made) as listed below:

1) Set 0% maximum in RRBs
2) Restrict the weight to the "final MPI recommended" weight, rather than the global market cap, in three (3) **individual steps** for:
    (1) Canadian Equity
    (2) Emerging Markets Equity
    (3)Other Equity

iii. The analysis should clearly show a portfolio ("Privates + ACWI") that consists of 0% fixed income, with a private/public split below:

1) Real estate, infrastructure, and private equity using MPI's recommended weights.
2) Public equity in Canada, US, Emerging Markets, and other regions at their global market cap weights (e.g., All Country World Index Equities (ACWI)).

iv. Mercer's "Observations" would facilitate the interpretation of results, as would Mercer's "Asset Mix Options" and "Expected Surplus Growth", similar to the observations and other reporting Mercer provided on pages 1,749 to 1,753 and 1,790 to 1,793 respectively of the GRA.

v. The scope of the above analysis could be limited to Basic and Pension.

3. IT IS THEREFORE ORDERED THAT: 8

1. SUMMARY

By this Order, the Public Utilities Board (Board) grants the Motion of Manitoba Public Insurance (MPI or the Corporation) seeking confidential receipt by the Board of certain responses to Information Requests (IRs) filed in the 2019/2020 General Rate Application (GRA or the Application). The Board provides direction on the treatment of Intervener evidence arising out of the IR responses.

1.0 *Overview*

MPI filed the GRA on June 15, 2018. On June 29, 2018, following the Pre-Hearing Conference, the Board issued Procedural Order No. 82/18. Order 82/18 permitted two rounds of IRs to be issued to MPI by the Board and approved Interveners.

The First Round of IRs was filed on July 11, 2018, and responses were filed by MPI on August 8, 2018. The Second Round of IRs, which arose out of responses provided by MPI to the First Round IRs, was filed on August 20, 2018. The Responses to the Second Round of IRs was filed on September 14, 2018.

On September 14, 2018, concurrently with its filing of responses to Second Round IRs, MPI filed a Notice of Motion with the Board in which it sought leave to file one of the Second Round IR responses in confidence with the Board, on any terms the Board considered appropriate and in the public interest. On September 17, 2018, MPI electronically served a Motion Brief on the Board and the Interveners in the GRA. MPI also filed a supporting Affidavit with the Board only, containing confidential information, in hard copy format.

In its Notice of Motion of September 14, 2018, MPI requested that the Appendices to PUB (MPI) 2-24 be filed confidentially with the Board.

On September 18, 2018, the Board received written responses to the Motion from two of the Interveners in the GRA, Consumers' Association of Canada (Manitoba) Inc. (CAC), and Coalition of Manitoba Motorcycle Groups (CMMG).

The other Intervener in the GRA, Canadian Automobile Association Manitoba (CAA), did not file any response to the Motion.

The Board did not require an oral hearing on the Motion.

2. PARTIES' POSITIONS AND BOARD FINDINGS

2.0 *MPI*

MPI took the position that Appendices 1 to 5 of PUB (MPI) 2-24 (the Documents) contain information that is commercial and proprietary to the third party who created them. MPI is not authorized to make the information contained in the Documents available for public use. MPI stated that the public release of the Documents could reasonably be expected to result in financial loss or significant harm to the competitive position of the third party.

MPI further stated that it is contractually bound to maintain the Documents in confidence, and that maintaining the confidence of the Documents outweighs the public interest in their disclosure.

MPI would not oppose the circulation of any of the Documents by the Board provided the following conditions were to be imposed:

a) That a person eligible to receive the Documents be:

i. a representative, a consultant or a professional advisor of a registered intervener granted standing to intervene on an issue or issues falling within the ambit of matters raised in each of the respective Documents; or

ii. a representative, a consultant or a professional advisor of the Board.

b) That the Documents not be provided until or unless the person executed an Undertaking of Confidentiality and a Confidentiality Agreement (forms of which were appended to MPI's Motion Brief); and

c) That no use could be made of the Documents, or reference made to their content, at any time where doing so would place the confidential information on the public record or make it available to persons other than individuals who had complied with the requirement to execute the Undertaking of Confidentiality and a Confidentiality Agreement.

2.1 ***Intervener Responses***

CAC did not object to the conditions requested by MPI for the distribution of the Documents. CAC acknowledged that treating the Documents as confidential would impair the public interest in disclosure of the information; however, the proposed conditions on access would be a minimal impairment to the public interest.

CAC requested that if it, or another Intervener, were to file a report as evidence in the GRA based upon or referring to the information contained in the Documents, that evidence would be filed in confidence with the Board and MPI on the date required (October 3, 2018, per Order 123/18). In consultation with MPI, the Intervener would then determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by October 9, 2018.

CMMG advised that it was in agreement with CAC's position and did not take issue with the confidential treatment of the Documents.

2.2 *Board Findings*

Proceedings before the Board are public, and documents filed with the Board by a party to a proceeding are placed on the public record. However, the Board may receive information in confidence on any terms it considers appropriate in the public interest, when the test under Rule 13(2) is met:

(a) If the Board is of the opinion that disclosure of the information could reasonably be expected

i. to result in undue financial loss or gain to a person directly or indirectly affected by the proceeding; or

ii. to harm significantly that person's competitive position

or

(b) If

i. the information is personal, financial, commercial, scientific or technical in nature; or

ii. the information has been consistently treated as confidential by a person directly affected by the proceeding; and

iii. the Board considers that the person's interest in confidentiality outweighs the public interest in the disclosure of the information.

On hearing a motion under Rule 13, the Board may order the information in question be placed on the public record, order the document not be placed on the public record with

such conditions on access imposed as the Board considers appropriate, order an abridged version of the document be placed on the public record, or make any other order the Board finds to be in the public interest. Rule 13(5) allows the filing party to request that the document be withdrawn prior to being placed on the public record where the Board has determined to place any part of the document on the public record.

The Board has reviewed and considered all of the information filed by MPI, as well as the submissions of CAC and CMMG. The Board has taken into account the evidence filed confidentially by MPI in support of its Motion, and is satisfied that the Documents should be received in confidence, as they meet the test under Rule 13(2). The restrictions requested on the distribution of the Documents are necessary in order to protect third party proprietary information, confidential, proprietary or commercially sensitive information.

Accordingly, the Board grants MPI's Motion. The Board accepts the conditions imposed on the receipt of the Documents as outlined in MPI's Motion materials, and orders that the Documents be distributed only on the terms as set out in Section 3 below.

The Board notes that the Documents respond to an IR in respect of Issue 19 as set out in Order 82/18, Current IT Strategic Plan and IT Expenses and Projects. Issue 19 has been examined only by the Board and CAC in the course of the IR process in this GRA. Therefore, the Board will restrict the distribution of the Documents to its representatives, consultants and professional advisors, and to those of CAC.

The Board recognizes that further evidence containing confidential information from the Documents may be generated as a result of the distribution of the Documents to CAC and the Board. Therefore, the Board will require that any other evidence arising out of the Documents or the information contained in the Documents be subject to the same restrictions as the Documents themselves.

The Board further accepts the procedure proposed by CAC is necessary in order to preserve the confidentiality of the Documents and the information contained therein, and therefore orders that if any Intervener files a report as evidence in the GRA based upon or referring to the information contained in the Documents, that evidence shall be filed in confidence with the Board and MPI, in accordance with the dates previously set out in Order 123/18.

3.0 IT IS THEREFORE ORDERED THAT:

3.1 The Board grants MPI's Motion and hereby grants leave to MPI to file Appendices 1 to 5 of PUB (MPI) 2-24 (the Documents) in confidence with the Board.

3.2 The following persons shall be eligible to receive a copy of the Documents:

a. Representatives, consultants or professional advisors of the Consumers' Association of Canada (Manitoba) Inc. (CAC); or
b. Representatives, consultants or professional advisors of the Board.

3.3 Any eligible person as set out in Directive 3.2 intending to receive the Documents shall execute the Undertaking of Confidentiality and Confidentiality Agreements as set out in Tabs 1-3 of the Motion Brief filed by MPI on September 17, 2018, prior to the receipt of any of the Documents.

3.4 No use shall be made of the Documents, or reference made to their contents, at any time where doing so would place the Documents or the information contained therein on the public record or make them available to persons other than those authorized as set out herein who have executed the required Undertaking of Confidentiality and Confidentiality Agreements.

3.5 If any Intervener files a report as evidence in the GRA based upon or referring to the information contained in the Documents, that evidence shall be filed in

confidence with the Board and MPI on October 3, 2018. The Intervener shall consult with MPI and determine the need for, and prepare, a redacted version for public disclosure, if applicable, to be filed by October 9, 2018.

3.6 The terms and conditions placed on the receipt of the Documents, as set out in Directives 3.2 to 3.4, shall apply to the receipt of any of those portions of Intervener evidence containing information from the Documents.

EXECUTIVE SUMMARY

The Public Utilities Board (Board or PUB) hereby orders an overall 1.8% rate increase to Basic compulsory motor vehicle premiums (Basic or Basic Insurance) for the 2019/20 insurance year, effective March 1, 2019, for all major classes combined. There will be no change in permit and certificate rates, vehicle premium discounts, service and transaction fees, or fleet rebates or surcharges.

The Board's order for a rate increase of 1.8% results from the Board's approval of rates calculated in accordance with Accepted Actuarial Practice in Canada, based on a Naïve interest rate forecast (as defined below), taking into account actual interest rates as at September 30, 2018, and the inclusion of a Net Capital Maintenance Provision.

The Board's order for an increase of 1.8% does not mean that rates for all motorists within each major vehicle class increase by that amount. Rates paid by individual policyholders within each Major Class will be determined based on their driving record, the kind of vehicle (make and model and year) registered, the purpose for which the vehicle is driven, and the territory in which the policyholder resides. Policyholders' premiums will also be affected by actual claims experience.

The Board’s approval of the use of the Naïve interest rate forecast is for this year only, and applies for rate-setting and target capital purposes. In the 2020 GRA, the Corporation will be required to report back on its tracking of interest rate movements and how this has informed its decision on interest rate forecasting. In reaching its decision on interest rate forecasting, the Board has moved from its position on interest rate forecasting as set out in Order 130/17. However, the Board finds that the Naïve interest rate forecast represents a best estimate for rate-setting purposes, if it reflects the evidence led on the latest available market information at the time of the hearing, as was the case in this GRA. The Board has considered all of the evidence with respect to interest rate forecasting, and bases its decision on the acknowledged and consistently evident uncertainty inherent in

forecasting interest rates. The Board finds that building that uncertainty into the rate indication is not reasonable for ratepayers at this time.

In Order 130/17, the Board recognized MPI's need to protect against the natural depletion of Basic's capital position, and found that a Capital Maintenance Provision (CMP) could be considered a legitimate necessary Basic expense for rate-setting purposes. The Board notes that in each of the last four years, the Corporation has had to transfer funds from the Extension line of business to the Basic Rate Stabilization Reserve. While it was premature in Order 130/17 for the Board to base its decision on the inclusion of a CMP, the Board directed that a Technical Conference be held on the issue, and any findings therefrom be incorporated into this General Rate Application (GRA). A Technical Conference on the CMP was held on March 2, 2018. MPI reported on the Technical Conference in this GRA and incorporated information therefrom into its proposal for a Net Capital Maintenance Provision (Net CMP). In this GRA, the Board heard from MPI that it is considering an overall capital management plan for the Corporation, which would include the Net CMP. The Board will consider this approach when it has further information. While it is prepared to include the Net CMP in the rate in this GRA, the approval of the Net CMP is for this GRA only. In the next GRA, the Corporation must come forward with its capital management plan for the entire Corporation. Further, MPI shall be required to participate in a Technical Conference on a capital management plan, prior to the 2020 GRA, such that the information from the Technical Conference shall be included in the 2020 GRA.

By Order 11/18, issued on January 15, 2018, the Board granted to MPI approval of its rates for Vehicles for Hire (VFH), on an interim basis only, recognizing the urgency of the need for rates to be in place when *The Local Vehicles for Hire Act* was to come into force on February 28, 2018. In Order 11/18, the Board issued a number of directives to MPI, with the expectation that MPI would be in a position to provide further information and experience following the interim approval of the VFH rates. In this Application, the

Corporation applied for final approval of the VFH rates, which were approved in Order 11/18. The Board has approved the VFH rates on a final basis.

In the 2018 GRA, the Corporation applied for an increase to the premiums on the demerit side of the Driver Safety Rating (DSR) system. The Board approved the Corporation's application in that regard but directed the Corporation to undertake further work toward the implementation of more actuarially sound DSR premiums and vehicle premium discounts. In this Application, the Corporation provided an update on its progress in that regard and reported that its work will involve public consultation efforts, along with further investigation and analysis of alternative rating models. It reported that it anticipates that by the 2020 GRA, it will be in a position to report on the results of its public consultation efforts and its preliminary research. The Board has directed that the Corporation provide an update on its progress in that regard in the 2020 GRA.

The Board continues to support the Corporation's cost containment efforts, including the steps taken to reduce operating expenses and optimize staffing levels. The Board finds that the Corporation is continuing to take positive steps towards containing its costs.

In this Application, the Board received the Corporation's 2018/19 Information Technology (IT) Strategy, and heard significant evidence on the issue of IT. IT has been of concern to the Board in recent years' Applications. The Board is encouraged by the Corporation's continued efforts to continue to reduce reliance on IT consultants and reduce the number of IT staff overall.

In Order 130/17, the Board commented that it expected that MPI's new Value Management Process would bring in valuable controls and contribute to better business process management in IT. The Board also expressed concern in Order 130/17 that the Corporation had not disclosed the costs to operate the Physical Damage Re-Engineering (PDR) program, which the Board viewed as a critical component in assessing the costs and benefits associated with the program.

The information filed in this Application made clear that the Board's concerns about IT spending were well-founded, particularly with respect to the PDR program. While in the 2018 GRA, the evaluation of PDR prepared by Gartner concluded that it had a net present value of $13.7 million, Gartner's evaluation in this Application concluded that the program has a net present value of ($49.9) million. This dramatic change was the result of MPI providing Gartner with information that had previously been withheld from Gartner about program costs. Given the history of the PDR program, the Board finds that it is important that the Corporation continue to evaluate and report on the program and therefore the Board has directed that in the 2020 GRA, the Corporation file an update, prepared by Gartner, to its 2018 PDR Program Evaluation.

Notwithstanding the Board's concern about the PDR program, the Board finds that the information filed by MPI in this Application with respect to IT was thorough and comprehensive. The Board acknowledges the openness with which the Corporation provided information on IT in this Application, and is of the view that the Corporation has demonstrated progress in its efforts to rein in spending on IT, and to make strategic IT investments in the future. The Board anticipates receiving information from the Corporation in the 2020 GRA as to the progress it has made in the implementation of the Value Management Process and the IT Strategy. The Board expects the Corporation to show that its new approach to investing in IT is producing results. Given the Board's ongoing interest in IT, the Board has directed that the Corporation provide updates on all Business Transformation Office-managed IT projects in the 2020 GRA. The Board has also directed that an ongoing dialogue take place between it and MPI in advance of the 2020 GRA, with respect to progress on the Legacy Modernization project, any business cases created for the initiative, and the establishment of higher-level key performance indicators. The Board has also directed that in the 2020 GRA, the Corporation provide an update of its progress on the Legacy Modernization initiative, file any business cases created for the Legacy Modernization initiative, and any higher-level key performance indicators.

The Board finds that the Corporation continues to rely much more heavily on consultants than do its peers in the area of IT. The Board appreciates that the Corporation has challenges in reducing the ratio of consultants to staff given the non-solicitation clauses in its contracts with vendors. The Board understands that these contracts provide a valuable service to MPI, but is concerned that MPI could become overly dependent on vendors. The Board has therefore directed the Corporation, in the 2020 GRA, to report on its progress in reducing the ratio of IT consultants to staff, and in managing relationships with IT vendors.

The Board did not receive an updated Asset Liability Management (ALM) study in the 2018 GRA. The Board was able to review the ALM study, prepared by Mercer Canada, in depth this year. The Board also heard about MPI's decision to segregate its investment portfolio into five distinct portfolios, as a result of the Mercer ALM study recommendations.

When it comes to the Corporation's overall investment strategy, the Board recognizes that its oversight role does not extend to directing the Corporation as to the particulars of its portfolio management. The Board finds that the Corporation has selected from a range of reasonable options for its portfolios as a result of the Mercer ALM study.

That said, the Board recognizes that it may be the case that the Corporation has foregone an opportunity to hedge against long-term risks by rejecting Real Return Bonds and reducing real assets in its new portfolio. To that end, the Board has directed that the Corporation run shadow portfolios to be evaluated against the portfolios selected by the Corporation. First, the Board has directed the Corporation to run shadow portfolios for the Basic and Pension portfolios, effective March 1, 2019, with the inclusion of Real Return Bonds as part of an optimal bond portfolio mix. Second, the Board has directed the Corporation to immediately engage Mercer to run shadow portfolios for Basic and Pension effective March 1, 2019, without the constraints imposed by the Corporation. Reports on the results of the shadow portfolios are to be filed in the 2020 GRA. As well, the Board has directed the Corporation to file a post-implementation review of its ALM strategy. The Board will review the shadow portfolios and the post-implementation review

in the 2020 GRA. The Board expects that the shadow portfolios and the post-implementation review will serve to inform it, and the Corporation, as to whether the Corporation's ALM strategy is reasonable. If a review in the 2020 GRA indicates that the Corporation did not employ a reasonable strategy, the Board will comment further at that time.

The Board again deliberated on the appropriate level of and methodology for setting MPI's Rate Stabilization Reserve (RSR) and Total Equity target capital range. The purpose of the RSR is to protect motorists from rate increases that would otherwise have been necessary due to unexpected variances from forecasted results and due to events and losses arising from non-recurring events or factors.

In the 2018 GRA, the Corporation requested a Basic Total Equity target capital range of $201 million to $438 million, and the Board ordered that the range be $180 million to $325 million. In this GRA, the Board has approved a Basic Total Equity target capital range of $140 million to $315 million, based on the results of the Corporation's target capital analysis updated to reflect market interest rates as of the end of September 2018, using the Naïve interest rate forecast. The Board directs, however, that in the 2020 GRA, the Dynamic Capital Adequacy Testing base scenario forecast must fully reflect any expected capital adjustments arising from the thorough capital management plan, which the Board has directed to be presented in the next GRA.

The Board acknowledges the Corporation's view that adequate capital in the RSR is required in order to permit MPI to provide stable and predictable Basic rates, and recognizes the risks associated with Basic being undercapitalized, leaving MPI and ratepayers in a vulnerable position in the event of severe adverse events. The Board recognizes, however, that considerable work has been devoted and progress made over many previous GRAs and through a collaborative process with stakeholders on the issue of the appropriate methodology to be used to establish the Basic Total Equity target capital range. The Board is concerned, however, that it is receiving the same positions from the parties year after year and would like to avoid re-visiting the same

arguments. The Board would prefer to establish a standard so that the issue can be determined for a longer period than one year, and then the results of a standard methodology can be evaluated. To this end, the Board intends to engage the services of an independent consulting actuary with experience in target capital analysis to engage stakeholders in discussion to understand their preferred approaches to Basic target capital analysis and prepare expert evidence for the 2020 GRA, setting out the expert's opinion on best practices in that regard.

The Board's approval of the Corporation's target capital methodology in this Order should not be seen as a specific endorsement or rejection of any particular approach to the Basic target capital analysis going forward, as the Board intends to examine this issue further, following receipt of the independent consulting actuary's expert evidence in the 2020 GRA.

The Board has, in past Orders, expressed the view that the Corporation's non-compulsory Extension line of business should be regulated. One of the reasons for this is the Board's concern that the level of Basic Total Equity could be depleted at a time when the Extension line of business contains significant reserves. However, the Board's concern is alleviated somewhat given that the Corporation intends to bring forward a capital management plan with rules for transfers from other lines of business. The Board will withhold comment in this Order that it be given the jurisdiction to regulate Extension, and will await the review of the capital management plan at the next GRA.

In Order 130/17, in providing its rationale for directing a wide-ranging Technical Conference on road safety to take place in early 2019, the Board commented that road safety and loss prevention is a complex, multi-faceted area involving multiple stakeholders. The Board directed that the issue of road safety would not be reviewed in the same level of detail in this GRA as it had in prior years. Therefore, in the public hearings for this GRA, the Board heard evidence on the Corporation's road safety expenditures, but not on specific initiatives and programs. The Board expects that all aspects of road safety will be thoroughly reviewed in the forthcoming Technical

Conference and looks forward to receipt of the information shared in the Technical Conference in the 2020 GRA.

In this GRA, the Board implemented a process change whereby the issues to be reviewed were identified and approved by the Board on an interim basis prior to the preparation of the GRA, and then finalized after the Pre-Hearing Conference. The Board will seek comments from the parties as to whether this process was beneficial in focusing the areas to be reviewed in detail in this Application.

The Board has made a number of directives in this Order. The Board hereby directs the Corporation to file with the Board, on or before April 1, 2019, a report advising as to the status of its compliance with each of the directives contained herein.

This Order reflects the Board's findings on matters which arose over the course of the proceeding through oral testimony and documentary evidence. Public access to the full transcripts of the public portions of the hearing, including cross-examination, presentations and closing statements, as well as documentary evidence are available on the Board's website (www.pub.gov.mb.ca).

Interested parties may also review MPI's Annual Report and quarterly financial statements on MPI's website (www.mpi.mb.ca).

1. THE RATE APPLICATION

1.1. Procedural History

On June 15, 2018, the Corporation filed with the Board the 2019 General Rate Application (GRA or Application) seeking approval of premiums for Basic, for the fiscal year commencing March 1, 2019 and ending February 29, 2020. The Application was filed in accordance with the provisions of *The Crown Corporations Governance and Accountability Act* and *The Public Utilities Board Act*.

Prior to the filing of the Application, the Board issued Interim Procedural Order 61/18, in which it approved an Issues List for the Application, on a preliminary basis. The Board's intention with this procedure was to streamline the process in this GRA. In doing so, the issues in the Issues List were placed in one of three categories: issues to be considered in the scope of the GRA in the normal course; issues requiring more detailed examination in the 2019 GRA; and issues deferred from the 2019 GRA to future applications, or which would be the subject of a technical conference or another process.

Following the pre-hearing conference which took place on June 25, 2018, by Order 82/18, dated June 29, 2018, the Board approved the Issues List on a final basis, and granted intervener status to the following parties:

- Consumers' Association of Canada (Manitoba) Inc. (CAC);
- Coalition of Manitoba Motorcycle Groups (CMMG); and
- Canadian Automobile Association (CAA).

While CAA was granted Intervener status, it advised the Board prior to the commencement of the public hearings that it would not be appearing, given that the Board did not intend to review the issue of road safety in these proceedings, having deferred it to a Technical Conference to take place in early 2019.

Ten days of public hearings took place, during which the Board heard evidence from witnesses appearing on behalf of MPI and CAC, and submissions from presenters. The public hearings began on October 15, 2018, and concluded on October 31, 2018.

1.2. The Application

The Corporation reported that in 2018, the Board of Directors adopted a new Corporate Mission Statement: *Exceptional coverage and service, affordable rates and safer roads through public auto insurance*. The Corporation advised that the new mission statement would guide its actions going forward.

In addition, MPI defined new corporate values, articulating how it will fulfill its mission:

> *As a public auto insurer, we hold ourselves accountable to all Manitobans to deliver value by fostering a culture of excellence. We achieve this through our four core values:*
>
> - *Doing What's Right: We act with integrity and accountability. We strive to be open and transparent*
> - *Investing in People: We empower our employees to provide excellent service. We work together with business, community and road safety partners to fulfil our mission.*
> - *Striving for Excellence: We provide exceptional coverage and service. We adapt to meet evolving customer and industry needs, focusing on continuous improvement.*
> - *Providing Value to Manitobans: We maintain affordable rates and ensure accessible coverage. As a public auto insurer, fiscal responsibility is at the forefront of everything we do.*

The Corporation explained that everything contained within the Application was based on carrying out the mission statement.

The Board's jurisdiction applies to rate-setting for MPI's Basic insurance line of business, and not to MPI's other optional lines of business, Extension and Special Risk Extension (SRE).

The Corporation requested an overall 2.2% increase in Basic vehicle premium revenue (including Vehicles for Hire rates for service), comprised of a 0.1% increase to the break-even cost of policies in accordance with Accepted Actuarial Practice in Canada, and a

2.1% increase for a Net Capital Maintenance Provision, to maintain the Corporation's capital position through the rating year, as measured by the Minimum Capital Test.

The vehicle premium rates put forward by MPI included experience-based rate adjustments largely ranging from -15% to +15%, based on adjustment rules. In addition, the Corporation combined classification offsets for all vehicles except off-road vehicles, to achieve revenue neutrality and implemented rate group, rate line and classification changes for 2020.

According to the Corporation's rate design, the change to Basic compulsory motor vehicle premiums for each major vehicle class at the rate requested by MPI would have the following average vehicle premium changes:

Major Class	**2.2% Experience Rate Change**
Private Passenger	2.4
Commercial	2.4
Public	0.6
Motorcycle	3.1
Trailers	(4.7)
Off-road vehicles	(20.0)
Total	**2.2**

Rates paid by individual policyholders within each Major Class are determined by their driving record, the kind of vehicle (make and model and year) registered, the purpose for which the vehicle is driven and the territory in which the policyholder resides. Policyholders' premiums are also affected by actual claims experience. As a result, some individuals would experience increases in insurance rates, and others would experience decreases.

The Corporation sought no change to permit and certificate rates, vehicle premium discounts, service and transaction fees, or fleet rebates or surcharges.

The Corporation characterized the rate applied for as stable and the result of the implementation of best practices and prudent fiscal management, leading to stable, affordable rates. The Corporation stated that it is pursuing its mandate by focusing on smaller incremental increases, which support long term stability. The Corporation maintained that it had brought a rate request that is just and reasonable. Although the Corporation did not seek to amend its Application, it advised the Board that it would endorse having the Application varied by the Board, to reflect the actual Government of Canada 10-year bond yield as at September 30, 2018, of 2.43%.

A history of the percentage rate changes applied for by the Corporation and ordered by the Board is as follows:

Year	Applied For	Ordered
2019/20	2.2	1.8
2018/19	2.7	2.6
2017/18	4.3	3.7
2016/17	0.0	0.0
2015/16	3.4	3.4
2014/15	1.8	0.9
2013/14	0.0	0.0
2012/13	-6.8	-8.0
2011/12	-4.0	-4.0
2010/11	0.0	0.0
2009/10	-1.0	-1.0
2008/09	0.0	0.0
2007/08	-2.6	-2.6
2006/07	0.0	0.0
2005/06	0.0	-1.0
2004/05	2.5	3.7
2003/04	0.0	-1.0
2002/03	-1.2	0.0
2001/02	0.0	0.0

There have also been $597 million in premium rebates ordered by the Board over the last 17 years, as follows:

Year	Total ($ millions)	Percent of Premiums
2011	$336	45.0%
2008	$63	10.0%
2007	$60	10.0%
2006	$58	10.0%
2001	$80	16.6%

2. PROGRAM REVENUE

2.1. Basic Revenue Requirement

The Corporation derives revenue from four main sources to fund Basic: vehicle premiums; driver premiums; service and transaction fees; and investment income. The Corporation's projected operating results for 2019/20 and 2020/21, the years affected by the applied for 2.2% rate increase, are as follows:

	2019/20 Applied for Rate Per Application ($ millions)	**2020/21 Projection Per Application ($ millions)**
Motor Vehicle Premiums	**$1,054.6**	**$1,109.2**
Drivers' Licence Premiums	**69.9**	**71.9**
Reinsurance ceded	**(11.4)**	**(11.7)**
Total Net Premiums Earned	**1,113.1**	**1,169.4**
Investment Income	**82.1**	**84.9**
Service Fees & Other Revenues	**25.8**	**27.6**
Total Earned Revenues	**$1,221.0**	**$1,281.9**
Claims Incurred	**$900.2**	**$950.7**
Claims Expenses	**135.4**	**139.2**
Road Safety Expenses	**12.7**	**12.8**
Operating Expenses	**73.6**	**76.3**
Commissions	**42.7**	**44.8**
Premium Taxes	**33.7**	**35.4**
Regulatory/Appeal expenses	**4.8**	**5.0**
Total Claims and Expenses	**$1,203.1**	**$1,264.2**
Net income (loss) – Basic	**$17.9**	**$17.7**

The projected results were based on an assumed Naïve interest rate forecast (assuming no changes in current interest rates) as at the time of the filing of the application, which MPI requested the Board utilize for rate-setting purposes. The Corporation took the position that the 50/50 interest rate forecast (representing the midpoint between the Naïve and the Standard Interest Rate Forecast), which the Board directed the Corporation to use for rate-setting and target capital purposes in the 2018/19 GRA, not be used in this Application.

In the course of the public hearings, at the request of the Board, the Corporation filed an update to its forecast based on interest rates as at September 30, 2018. As a result of this updated forecast, Basic's projected net income in 2019/20 would increase from a net income of $17.9 million, to a net income of $143.0 million, and its net result in 2019/20 would be a net income of $18.8 million.

2.2. Vehicle Premiums

Total written premiums earned are forecast to be $1,019.3 million in 2019/20, and to grow to $1,085.1 million in 2020/21. The revenue earned by Basic in respect of vehicle premiums may change due to four factors: rate changes as ordered by the Board; growth in the number of vehicles in the fleet (Volume Factor); changes in the average premium per vehicle caused by factors other than rate changes, such as the gradual upgrade of the fleet as older vehicles are replaced with newer ones (Upgrade Factor); and the impact on vehicle insurance premiums from changes in the average Driver Safety Rating (DSR) level of registered vehicle owners (DSR Upgrade Factor).

The Volume Factor is based upon the historical growth rate of *The Highway Traffic Act* (HTA) vehicles only (including the private passenger, commercial, public and motorcycle major classes, and excluding trailers and off-road vehicles), which account for 76% of the fleet and over 98% of MPI's total Basic written premiums. MPI is forecasting Volume Factor growth to be 1.50% for each of 2019/20, 2020/21 and beyond. The Corporation is

forecasting Upgrade Factor growth to be 2.54% for 2019/20, 2.58% for 2020/21, and 2.51% for 2021/22.

The combined impact of the forecast premium revenue growth due to Volume Factor, Upgrade Factor and DSR Upgrade Factor is as follows:

Year	Vehicle Upgrade Factor	DSR Upgrade Factor	Total Upgrade Factor	Volume Factor	Total Volume & Upgrade Factor
2017/18 (Actual)	2.32%	0.08%	2.40%	1.44%	3.84%
2018/19	2.45%	(0.06%)	2.39%	1.50%	3.89%
2019/20	2.45%	0.09%	2.54%	1.50%	4.04%
2020/21	2.45%	0.13%	2.58%	1.50%	4.08%
2021/22	2.45%	0.06%	2.51%	1.50%	4.01%
2022/23	2.45%	0.09%	2.54%	1.50%	4.04%

2.3. Driver Premiums

The level of Driver Premiums paid by licensed drivers is based on the DSR scale. Until Order 130/17, issued after the 2018 GRA, the DSR scale ranged from $15 at level 15 to $2,500 at level -20. In the 2018 GRA, the Corporation applied, and the Board approved, an increase to driver premium revenues by $17.5 million, by increasing the driver premiums to the demerit side of the DSR scale only, such that the scale now ranges from $15 at level 15 to $3000 at level -20.

The Corporation reported in this GRA that the estimated annualized impact of the increase in DSR demerit premiums is $16.8 million, with the increase in revenue associated with the higher DSR premiums having been approximately $8.4 million through the second quarter of fiscal year 2018/19.

Driver Premiums are forecast to be $70.9 million in 2019/20, and to increase to $72.9 million in 2020/21. The forecast considers five components: the number of earned driver units by DSR level; the expected movement of drivers on the DSR scale; the average

number of earned driver units by DSR level; the driver premiums by DSR level; and a percentage reduction in drivers' premiums from appeals.

2.4. Investment Income

The Corporation's funds available for investment are primarily the assets supporting the unearned premium reserves and unpaid claims reserves. The funds within the portfolio support both the payment of accident claims and the pension obligations of the Corporation. The Corporation had short and long-term investments, including cash and equities, for the Basic Line of Business totalling $2.4 billion in 2017/18, which is forecast to grow to over $2.5 billion by 2022/23.

Investment income earned from the Corporation's investment portfolio reduces the revenue that it is required to collect through premiums. The Corporation's investment income is allocated to the Basic Insurance line of business based on a monthly averaging of the funds available within each division. MPI realized $134.8 million in investment income in 2017/18, of which 86.28%, or $116.3 million, was allocated to Basic. This was a $33.4 million improvement from the $82.9 million income allocated to Basic in 2016/17.

Based on the September 30, 2018 Naïve interest rate forecast, MPI is forecasting investment income allocated to Basic of $171.4 million in 2018/19, $84.9 million in 2019/20 and $88.3 million in 2020/21. Further discussion on MPI's investment portfolio and returns is found in Section 7 of this Order.

2.5. Service Fees and Other Revenues

The Corporation reported that service fees and other revenues account for approximately 2.0% to 2.5% of annual revenues for the Basic program, and that there are approximately 25 to 30 service fees and revenue types allocated to Basic. These fees and other revenues include revenue from quarterly and monthly pre-authorized payment plans, late payment fees, motor vehicle transaction fees, dishonoured payment fees, pre-authorized

default fees and other fee-related items. Some Basic Service Fees are collected by MPI on behalf of the Government.

Basic projects income from Service Fees and Other Revenues of $23.8 million in 2018/19, $25.8 million in 2019/20, and $27.6 million in 2020/21.

In the 2018 GRA, the Corporation advised that a Basic Service Fees review was under way and close to completion. The Board, in Order 130/17, directed the Corporation to report on the results of the Service Fees Review in this Application. In this Application, the Corporation reported that it had completed the Service Fee Review in 2017/18, which consisted of a jurisdictional scan, comparing its service fees to those of the Insurance Corporation of British Columbia (ICBC), Saskatchewan General Insurance (SGI), as well as with those of Manitoba Hydro. The Corporation determined that no changes were yet required, explaining that it would be premature to seek changes to the Basic service and transaction fees prior to it knowing the outcome of any changes that might be made by the Government of Manitoba to *The Drivers and Vehicle Act* service fees.

3. RATE INDICATIONS

3.1. Accepted Actuarial Practice in Canada

Ratemaking in accordance with Accepted Actuarial Practice in Canada (AAP) involves determining the indicated rate level such that, for a given future rating year, the present value of expected future revenue cash flows (e.g., premiums and fees) is equal to the present value of expected future expense cash flows (e.g., claims, adjusting expenses and non-claims-related costs, including any profit provision).

In Order 162/16, the Board approved the rate indication prepared by the Corporation based on AAP, and directed that the Corporation follow AAP as the basis for its rate indications in future rate applications. The Corporation commenced using AAP as the basis for its rate indications in the 2018 GRA, and continued to do so in this Application.

In Order 130/17, the Board ordered that a Technical Conference be held prior to this GRA, the scope of which included seeking consensus on the following matters relating to rate-setting in accordance with AAP:

- Basing the cash flow discount rate assumption on the expected new money rate averaged over the full proposed rating year rather than as at the start of that rating year;

- Segregating the pension liabilities and the related supporting investment assets from the determination of the cash flow discount rate and the expected return on investment assets supporting Basic Total Equity; and

- Improving recognition of investment fees in the determination of the cash flow discount rate and the expected return on investment assets supporting Basic Total Equity.

The Application addressed all but the last of these three matters either directly or as a consequence of the Corporation's new Asset Liability Management strategy, which is discussed in detail later in this Order. The Corporation noted an oversight, that it did not address the last of these three matters in this Application, which will be properly addressed in future GRAs.

The Corporation's estimate of its overall rate requirement is sensitive to the methods and assumptions used in its derivation. In the Application, the basis for the Corporation's rate proposal is an AAP overall rate indication comprised as follows:

Break even overall rate indication	+0.1%
Impact of expected return on investment assets supporting Basic Total Equity	-1.2%
Impact of Capital Maintenance Provision	+3.3%
Total overall rate indication	**+2.2%**

The underlying analysis for this rate indication used a Naïve interest rate forecast (which assumes no change in market interest rates going forward), based on market interest rates as of the end of February 2018. The assumed AAP new money cash flow discount rate based on this interest rate forecast was 3.21%.

In the course of the public hearings, the Corporation provided an update to its interest rate forecast to the end of September 2018, which increased the assumed AAP new money cash flow discount rate by 19 basis points, up to 3.40%. This, in turn, reduced its estimate of the total overall rate indication to an increase of 1.8%. In its testimony, the Corporation acknowledged the relevance of recognizing this forecast update and the resulting impacts on assumptions and the overall rate indication.

3.2. Vehicle Classification System

The Corporation classifies vehicle risk by considering insurance use, rating territories, and rate groups. Insurance use classifications categorize vehicles by the nature of the vehicle and its intended insurance use, which now includes rates for Vehicles for Hire, further to Order 11/18. There have been no changes in insurance use classifications in this Application.

Vehicles are assigned to one of five territories in Manitoba, including a commuter territory in the areas adjacent to the City of Winnipeg, based on the primary residence of the registered vehicle owner. There have been no changes to the rating territories in this Application.

For passenger vehicles and light trucks, the Corporation uses the Canadian Loss Experience Automobile Rating system (CLEAR) promulgated by the Insurance Bureau of Canada (IBC), which amalgamates data from Canadian insurers and creates rate groups (up to 99) by vehicle make, model and model year, for each of collision, comprehensive and accident benefits coverages. The Corporation combines those rate groups to produce a smaller number of rate groups for the single Basic coverage package. It then adjusts for its own experience by rate group, thereby re-calibrating the CLEAR indications.

The Corporation reported that for 2019/20, the following changes were applied:

- CLEAR rated passenger vehicles and light trucks;
- Rate group changes for heavy trucks and heavy-rated–as-light trucks; and
- Rate line changes for passenger vehicles, light trucks, heavy trucks, motorcycles, mopeds and mobility vehicles, motorhomes, trailers, and buses.

3.3. Interest Rate Forecasting

This Application included considerable discussion of the appropriate basis for interest rate forecasting, as in previous years. The Naïve interest rate forecast, which was proposed by the Corporation, assumes no change in market interest rates going forward from the starting forecast date (in the Application, filed the end of February 2018). The Standard Interest Rate Forecast (SIRF) bases the assumed forecast on a consensus of independent forecasts from the major Canadian banks, plus Global Insight, an economics organization that specializes in economic forecasting and market outlook. The

compromise between these alternatives is the 50/50 interest rate forecast, which adopts the average of the Naïve and SIRF at each point over the forecast period. It was first formally introduced by MPI in the 2017 GRA.

In Order 130/17, the Board directed that the 50/50 interest rate forecast be used for rate-setting and target capital purposes.

In support of its use of the Naïve forecast in the Application, the Corporation noted that it is required to base its rate application on best estimates, and that for this Application, the Corporation's management and Board of Directors continued to maintain that the Naïve interest rate forecast is the best estimate. MPI defended its position with an analysis of the standard error (actual vs. forecast) of the competing forecasts (which speaks to the forecast efficiency), from the 2005 GRA up to the 2018 GRA. This analysis showed that the Naïve forecast had the lowest standard error relative to either the SIRF or the 50/50 forecast.

The Corporation also undertook a paired sample t-test on the sample mean, to test if the 50/50 forecast and the Naïve forecast produced a statistically significant difference in results. This analysis indicated that the Naïve forecast produced a forecast with less bias than, and with a statistically significant difference from, the 50/50 forecast at the 99th percentile.

The Corporation also cited the evidence of its external appointed actuary, that a Naïve forecast is the most common approach in the Dynamic Capital Adequacy Testing (DCAT) base scenario financial forecasts his firm reviews, and that it constitutes a reasonable base forecast because of the uncertainty in forecasting how interest rates may change. The external actuary acknowledged that this evidence was provided in a DCAT context, and not a rate-setting context.

MPI's adoption of the Naïve forecast reflects its reluctance to "betting" on how interest rates will move in the near term.

In MPI Exhibit #26, filed in the course of the public hearings, the Corporation provided an updated alternative overall rate indication based on a 50/50 forecast, reflecting market interest rates as of the end of September 2018. Relative to the 1.8% overall rate indication noted above and based on the Naïve forecast as at the same date, the alternative overall rate indication would fall to 1.0% under the 50/50 forecast.

3.4. Capital Maintenance Provision

3.4.1. Basic Concept

The concept of a Capital Maintenance Provision (CMP) was first reviewed before the Board in the 2018 GRA, as a possible means of recognizing in the rate-setting process the expected growth of Basic's risk profile and depletion of Basic's capital position that naturally arises from the expected growth of Basic's actuarial liabilities and its supporting investment portfolio.

In Order 130/17, the overall rate change approved by the Board was based on permitting the expected return on investment assets supporting Basic Total Equity to be retained by Basic, and not passed through to ratepayers in the form of lower rates. This approval was temporary pending further examination of the CMP concept. Permitting the expected return on investment assets supporting Basic Total Equity to be retained by Basic acts, in effect, as a proxy for the CMP.

In Order 130/17 the Board also directed that a Technical Conference be held to seek a consensus approach to estimating a CMP. The Technical Conference was held on March 2, 2018.

In the Application, the Corporation proposed a Net Capital Maintenance Provision (Net CMP) which is added to the break-even overall rate indication, and consisted of two distinct parts:

- A first component to recognize the expected return on investment assets

supporting Basic Total Equity; and

- A second component representing a CMP.

The Corporation's proposed approach to estimating the CMP consisted of determining what magnitude of overall rate level change to take effect on March 1, 2019 was needed in order to maintain Basic's forecasted Minimum Capital Test (MCT) ratio as at February 28, 2019 unchanged over the ensuing twelve months. The Corporation acknowledged that, in some respects, this would represent a shift back from rate-setting in accordance with AAP to again set rates based on expected Basic financial results from the Basic financial forecast, although the Corporation's approach does quantify the rate level contribution of the component parts.

In the course of the Information Request process in this GRA, MPI provided alternative estimates of a CMP based on its understanding of the approach followed by the Saskatchewan Auto Fund. While the Corporation made its best efforts in providing these alternative estimates, these estimates could not be thoroughly tested as evidence, as the Saskatchewan Auto Fund methodology was not a part of the evidentiary record.

3.5. Interveners' Positions

CAC

CAC called two expert witnesses to give evidence on interest rate forecasting and the CMP. Dr. Wayne Simpson is a professor of economics at the University of Manitoba and was qualified as an expert in applied econometrics, applied microeconomics and quantitative methods. Dr. Simpson has testified as an expert in previous hearings before the Board.

Andrea Sherry is Vice-President, Insurance Solutions with the Wawanesa Mutual Insurance Company and was pre-qualified as an expert in actuarial analysis with a focus of pricing, rate-making and risk related to automobile insurers generally including crown owned automobile insurers. Ms. Sherry has been qualified as an expert witness in previous GRA hearings.

While Dr. Simpson and Ms. Sherry were called by CAC to provide evidence in this Application, their evidence is given independent of the positions advanced by CAC, and is intended to assist the Board in making its decision.

With respect to interest rate forecasting, Dr. Simpson and Ms. Sherry co-authored a report entitled *The Role of the DCAT and Interest Rate Forecasting* (DCAT/IRF Report).

The DCAT/IRF Report indicated the authors had two significant concerns with respect to the 2019 GRA:

- A renewed emphasis on attaching the MCT to the determination of the Rate Stabilization Reserve (RSR); and
- The continued use of the Naïve interest rate forecast to determine the break-even rate indication and in the DCAT to determine the RSR target range.

The DCAT/IRF Report acknowledged that the era of low interest rates in the aftermath of the recession of 2008 has been a challenging period for interest rate forecasting. The SIRF had been too optimistic about economic recovery and, until recently, overestimated forecasted interest rates.

However, in Dr. Simpson and Ms. Sherry's opinion, the Corporation's argument for the adoption of a Naïve forecast based upon the ten-year Government of Canada benchmark bond yield should not be accepted.

The DCAT/IRF Report set out that the foundation for rising interest rates remains solid, and that the historical evidence is no longer as important. According to Dr. Simpson and Ms. Sherry, the Naïve forecast used by the Corporation explicitly ignores recent economic information from the Bank of Canada and other sources. Moreover, the report dismissed the Corporation's claim that the Naïve forecast is unbiased. Recent Naïve forecasts have under-predicted interest rate increases and recent economic events, including inflationary pressure, which all point toward higher interest rates as the economy approaches full capacity. Accordingly, this information would imply that there is a much higher probability that the Naïve forecast will under-predict, rather than over-predict, interest rates. In this sense, in their opinion, the Naïve forecast was likely to be more biased in the current economic environment than forecasts of modestly rising interest rates as provided by the SIRF and 50/50 forecasts.

Although the DCAT/IRF report concluded that the 50/50 interest rate forecast should be used for determination of the rate indication and the DCAT analysis, in his testimony in the public hearings, Dr. Simpson testified that the weighting should actually be more in favour of SIRF rather than Naïve and, ultimately, his best estimate was that the SIRF would prove to be most accurate for the 2019/2020 fiscal year.

Dr. Simpson and Ms. Sherry also co-authored a report entitled *The Capital Maintenance Provision Proposal by Manitoba Public Insurance* (CMP Report). Dr. Simpson and Ms. Sherry were of the opinion that a CMP is not necessary. In their view, the procedure that

has been adopted in previous GRAs determines the true capital need of the Corporation, based on adverse scenario analysis through a modified DCAT. That analysis determines the amount of capital needed to be held by the Corporation for prudent fiscal management of plausible adverse scenarios and, in turn, determines the RSR range. Since that analysis is carried out yearly, any capital deficiency or surplus could be dealt with through rebuilding fees or rebates on a year to year basis.

In the CMP Report, Dr. Simpson and Ms. Sherry expressed concern that a CMP was not agreed to at the Technical Conference, nor had a CMP been approved by the Board. Dr. Simpson and Ms. Sherry also expressed the concern that the introduction of the CMP is a significant change, given its effect on the requested rate change, and therefore the public should have an opportunity to express its views before such a significant change be implemented.

Further, in Ms. Sherry's view, the CMP would constitute an addition of capital load into the rate indication. The Actuarial Standards of Practice are silent on such an approach and, therefore, in Ms. Sherry's opinion, the CMP would not be "aligned" with AAP. Moreover, the authors noted that the Corporation advised that it is not aware of the existence of any industry, gray or peer-reviewed literature regarding the need or the methodology for establishing a CMP for non-profit, monopoly, public auto insurers.

In addition, because the stated purpose of the CMP is to maintain capital at a steady level based upon a projected MCT ratio, the authors believe the use of an MCT ratio to set a CMP level would be arbitrary. Furthermore, the Board had shown support for the determination of the RSR range based on the DCAT analysis, not an MCT ratio.

Dr. Simpson and Ms. Sherry stated that the introduction and basis for the CMP in the 2019 GRA was incomplete. That is, the Corporation had advised that it is currently developing a capital management plan to more comprehensively deal with the calculation of lower and upper RSR targets, as well as rebuilding fees and rebates.

Finally, Dr. Simpson and Ms. Sherry were of the opinion that the introduction of a CMP would cause intergenerational inequity, by introducing an increase in rates for policy holders in the 2019/20 rating year to the benefit of policy holders in future years.

Accordingly, Dr. Simpson and Ms. Sherry recommended that the proposed CMP not be approved by the Board.

When questioned by the Board concerning the risk that maintaining capital too close to the lower target capital threshold could result in frequent (every four or five years) requests for rebuilding fees, Ms. Sherry expressed the opinion that it would make more sense to keep the rebuilding fee closer to the year in which the capital deficiency was determined. She also expressed preference for the use of rebuilding fees rather than a larger lower target capital threshold as the Corporation's capital position is reviewed annually.

CAC argued that MPI had not discharged its onus to demonstrate that the Naïve forecast should replace the 50/50 forecast for rate-setting purposes, and that a material change in circumstances over the last two years suggests that greater reliance should be placed on the SIRF than the Naïve forecast. CAC also reminded the Board of the evidence of the Corporation’s own expert witness, Dr. Sean Cleary, in the 2017 GRA, recommending use of the 50/50 forecast.

CAC took the position that the CMP should not be approved by the Board and argued that the Board is not obliged to build a cushion for imprudence into the rates, or to pass on imprudent and unreasonable costs on to ratepayers. CAC recommended a rate decrease of -1.75%, the rate resulting from the inclusion of the expected return on the investment assets supporting Basic Total Equity in the rate indication, the rejection of the CMP, and the use of the SIRF or the 50/50 interest rate forecast. CAC also took the position that a further rate reduction could be ordered, based on foregone investment opportunities.

CMMG

CMMG expressed the view that it appears that the intent of the Corporation is to collect as much premium as possible in order to provide "smooth sailing" for the Government and the Corporation, irrespective of the Corporation's mandate.

CMMG also commented that interest rate methodology is extremely important to the motorcycle class as their rate indication is more sensitive to the assumed interest rate than is the case for the other Major Use classes. Considering the upward movement in market interest rates already observed, and the acknowledged Bank of Canada expectation for further increases to come in the overnight rate, CMMG recommended rejection of the Naïve interest rate forecast in favour of the 50/50 forecast.

Using the 50/50 interest rate forecast, excluding the CMP, the breakeven rate indication would be a rate reduction of -0.6% in motorcycle premiums, and should the Board approve the CMP, the rate indication would then only be a 1% increase. While CMMG was not endorsing a rebate, it expressed the view that a rebate would be more appropriate than the Corporation's attempts to collect additional premium. CMMG observed that the increases in the Government of Canada ten-year bond rates and in the Bank of Canada interest rates would not justify the use of the Naïve interest rate formula at this time.

3.6. Board Findings

The Board hereby approves an overall rate increase of 1.8%, based on the Naïve interest rate forecast updated to the end of September 2018, and inclusive of the Corporation’s proposed Net Capital Maintenance Provision, as estimated by the Corporation in MPI Exhibit #26.

In Order 82/18, the Board asked that the Corporation justify the use of the Naïve interest rate forecast and in particular, any change of circumstances since the issuance of Order 130/17 that would warrant the use of the Naïve interest rate forecast. Nevertheless, through the evolution of the Information Request process and in the public hearings,

ultimately, significant evidence was devoted to the issue of the interest rate forecast, both from the Corporation and from CAC.

The Board's approval of the use of the Naïve interest rate forecast is for this year only, and applies to rate-setting and the target capital analysis. In the 2020 GRA, the Corporation shall report back on its tracking of interest rate movements and how this informs its decision on interest rate forecasting.

In reaching its decision, the Board recognizes that it has deviated from its position on interest rate forecasting as set out in Order 130/17. However, the Board finds that the Naïve interest rate forecast represents a best estimate for rate-setting purposes, provided that it reflects the evidence led on the latest available market information at the time of the hearing, as was the case in this GRA. The Board has considered all of the evidence with respect to interest rate forecasting in this and previous GRAs, and it bases its decision on the acknowledged and consistently evident uncertainty inherent in forecasting interest rates. The Board acknowledges the comment in the report of Dr. Simpson and Ms. Sherry, that the aftermath of 2008 has been a challenging period for interest rate forecasting. The Board notes that prior to the 2017 GRA, the parties applied the SIRF, notwithstanding eight years of flat interest rates. In the 2017 GRA, when interest rates continued to be flat, MPI's expert witness supported the 50/50 forecast, while CAC's expert supported the SIRF. For this GRA, the parties again changed their positions. The reality is that there is no certainty in predicting interest rates as the correctness of the forecast only becomes obvious in hindsight. The Board finds that building that uncertainty into the rate indication is not reasonable for ratepayers at this time. The Board is prepared to err on the side of caution in determining the best estimate, especially when the Corporation has found it necessary to transfer funds from Extension to fund the Basic RSR in each of the four previous years, which transfers were due, in part, to inaccurate interest rate forecasts.

The Board acknowledges that the Corporation's Asset Liability Management strategy, which is discussed in detail later in this Order, has led to Basic's financial results being

considerably less sensitive to interest rate shifts. As a result, any error made with respect to interest rate forecasting will be of much less financial consequence, whether positive or negative, to Basic's operating results and capital position. The Board also notes that, with the adoption of rate-setting in accordance with AAP, interest rate forecasting risk has been reduced by virtue of the shorter forecast horizon required by AAP, relative to that needed previously when setting rates based on forecasted Basic net income. The Board will revisit this issue in less than one year, in the 2020 GRA.

The Board hereby approves the Corporation's proposed Net Capital Maintenance Provision for one year only at this time, accepting the argument in the interim that it is appropriate to provide protection against forecasted natural depletion of Basic's capital position, as measured by the MCT over the coming rating year.

However, the Board's approval of the Net Capital Maintenance Provision is conditional on the Corporation bringing forward, in the 2020 GRA, a capital management plan. The Board therefore directs that in the 2020 GRA, the Corporation bring forward a thorough capital management plan, encompassing the entire Corporation and including the following:

- Minimum, maximum, and/or target capital level for all lines of business;
- A Capital Maintenance Provision built into ratemaking;
- A capital build and release methodology based on the capital targets;
- Clearly defined policy-based constraints on the speed and magnitude of the combined rate impact of rate changes, capital maintenance, capital build, and capital release provisions;
- Clearly defined rules on the transfer of capital from other lines of business; and

- Evolving the basis of estimating Basic's Net Capital Maintenance Provision in a manner consistent with the objective of promoting stability over time in this estimate.

To this end, the Board also directs that a Technical Conference be held, to be facilitated by the Board at a mutually convenient time and in sufficient time to allow any findings from the Technical Conference to be fully reflected in the 2020 GRA, with the objective of developing a stakeholder consensus around a capital management plan, through discussion of the Corporation's draft proposal.

With respect to Ms. Sherry's opinion that the CMP is not "aligned" with AAP, the Board notes that the Actuarial Standards of Practice are silent on this approach, and silence should not be assumed to be non-alignment. Therefore, Board finds there is no evidence to indicate that the use of the CMP would contradict Actuarial Standards of Practice.

The Board acknowledges Ms. Sherry's testimony that RSR rebuilding fees are available if the Corporation falls below the lower target capital threshold, and fee can be introduced when the range is reviewed at the GRA each year. The Board further understands that the Government of Manitoba is always available as a backstop. Notwithstanding, the Board disagrees with the position that it is preferable to contemplate the use of rebuilding fees on a regular basis in the normal operation of the Corporation. Rebuilding fees should be used as an urgent measure when unexpected results are realized. Government interventions should only be required when extraordinary events, beyond the control of the Corporation, occur. Anything less would reflect a fundamental flaw in the Corporation's business model and/or the regulatory system.

Lastly, the Board acknowledges the Corporation's new mission statement, and looks forward to being updated in the 2020 GRA on its progress in implementation of the corporate values in MPI's business model.

4. VEHICLES FOR HIRE (VFH)

By Order 11/18, issued on January 15, 2018, the Board granted to MPI approval of its rates for Vehicles for Hire (VFH), on an interim basis only, recognizing the urgency of the need for rates to be in place, as *The Local Vehicles for Hire Act* was to come into force on February 28, 2018. In Order 11/18, the Board issued a number of directives to MPI, with the expectation that MPI would be in a position to provide further information and experience following the interim approval of the VFH rates in order for MPI to refine its rating model and rates.

MPI sought final approval of the rates approved on an interim basis in this GRA. In the interim Application, which was included in the Corporation's materials filed in this GRA, the Corporation sought interim approval of the following rates for service effective March 1, 2018:

- The premiums charged with respect to compulsory VFH rates for service, effective March 1, 2018.
- Interim VFH rates for service were requested for both the 2017/18 and 2018/19 insurance year, based on rates approved in Board Orders 162/16 and 130/17.
- Changes to eligibility for vehicle premium discounts for VFH.
- Waiving of service fees for change of insurance for VFH.
- A mechanism for refunding/collecting any variance between interim and final approved VFH rates for service, as determined through the 2019 GRA.

The Corporation proposed no changes to miscellaneous permits and certificates, driver license premiums, or fleet rebates and surcharges.

The Corporation stated that, where possible, pricing of its policies was based on known experience, and that pricing of future policies would incorporate claims experience to

ensure that customers are paying appropriate premiums. VFH policies would be tracked in a separate pool to ensure there is no impact on other Basic customers.

MPI advised that it evaluated several rating models within the context of the compulsory nature of the Basic insurance program. It reviewed rating models and pricing in Ontario, Alberta and Quebec, and performed an initial scan of rating models used in the United States. According to MPI, no industry standard had yet been developed on insurance rating models across jurisdictions for Transportation Network Companies (TNC). The Corporation had determined that the rating models it reviewed, and which are used in other Canadian jurisdictions, were not suitable to MPI given the compulsory nature of the Basic insurance program.

MPI deemed passenger vehicles and light trucks as eligible for VFH uses in Manitoba.

The Corporation also advised that, to streamline the registration process and system, it would discontinue the registration classes used for existing Taxis, Limousines and Liveries. In the previous scheme, the "X-Plate" registration class was comprised of four classes, and issued licence plates beginning with X: Taxicabs, City Liveries, Limousine Liveries, and Country Liveries. The Corporation advised that the X-Plate registration classes would expire and no longer be issued after April 30, 2018. All VFH vehicles would be issued standard plates.

In the interim Application, MPI proposed four categories for the VFH Rating Model:

- Taxicab VFH
- Limousine VFH
- Accessible VFH
- Passenger VFH

The premiums for each category of VFH were established separately. The insurance premiums would be based on four defined time bands, also referred to as "Levels". Each of the four categories of VFH would have the same four time bands available to them, with customers being able to self-select any combination of the four time bands. Customers would have anywhere from Level 1 coverage to Level 4 coverage, depending on the number of time bands purchased.

Premiums would be based on the number of time bands selected. Upon purchasing four time bands, VFH drivers would have the ability to operate during on selected days and times, up to 24 hours a day, seven days a week. The time bands are as follows:

Time Bands	Time of Insured Commercial Operation
A	Monday through Friday 10:00 am to 3:00 pm and Sunday through Thursday from 7:00 pm to 11:00 pm
B	Nightly 11:00 pm to 7:00 am
C	Monday through Friday 7:00 am to 10:00 am and 3:00 pm to 7:00 pm
D	Friday 6:00 pm through Sunday 11:00 pm

When a VFH is operated outside of its insured VFH time band, it would be insured for non-commercial operation. If a VFH fare originated during an insured time band, but the ride extended beyond the time band and was completed during a non-commercial operation time, the insurance coverage for VFH operation would extend to cover the duration of that fare.

The Corporation also proposed that there be no charge when changing the insurance on a passenger vehicle or light truck to a VFH, although it might re-evaluate this approach in future GRAs.

All VFH would have the following Basic insurance coverage, consistent with Basic's all-purpose Passenger Vehicle Coverage:

- $200,000.00 Third Party Liability
- $50,000.00 Minimum Insured Value
- $500.00 deductible

Therefore, Taxicabs, Limousines and Livery Vehicles would have their Basic deductible reduced by $100.00, from their previous deductible level of $600.00.

In this Application, MPI sought final approval of 2017/2018 and 2018/2019 VFH rates for service, and applied for approval of VFH rates for 2019/2020. The Corporation also reported on certain items about which the Board in Order 11/18 had directed the Corporation to report.

The Corporation advised that the primary means of limiting cross subsidization between VFH and the rest of Basic was through the creation of a new pool to track the VFH claims experience. It reported that it is collecting the same information on VFH policy claims as it does for all other policies, and claims experience for VFH classes will be tracked separately, which will form the VFH pool used to set actuarially sound rates for VFH policies. In addition to establishing a separate pool, MPI will continue to employ its processes to ensure that claimants are correctly insured at the time of a claim.

MPI reported that it had conducted an ongoing review of rating models used in other Canadian jurisdictions. Those other models were not considered suitable with Manitoba's public insurance environment given the compulsory nature of Basic. At the time of the Application, neither British Columbia nor Saskatchewan had permitted the operation of TNCs; accordingly, MPI's review of other jurisdictions could not include comparable public insurers.

MPI had assumed that the Taxi class of VFH would experience a $1 million reduction in premiums, relative to a written premium base of $5.7 million, reflecting an approximately 17.5% reduction in premium. To date, the Corporation reported, the average Taxi VFH has received a DSR discount of approximately 20.6%, and the claims costs for Taxi VFH have tracked closely with the premium reductions.

As of April 30, 2018, MPI reported a total of 872 vehicles insured as VFH, with the vast majority being comprised of the Taxi (497 vehicles insured) and Passenger (304 vehicles insured) classes. As of May 22, 2018, there were a total of 191 VFH-related claims.

4.1. Board Findings

The Board hereby grants final approval of the rates applied for by the Corporation in its Vehicles For Hire Rate Application, filed with the Board on December 15, 2017, and approved on an interim basis by the Board in Order 11/18. The Board recognizes that TNCs are a relatively new phenomenon in Manitoba and as such it will take time for claims experience to be gathered and tracked for the VFH pool. The Board directs that in the 2020 GRA, the Corporation file information as to its claims experience to date for the VFH class.

5. DRIVER SAFETY RATING (DSR)

As set out above, in the 2018 GRA, the Corporation applied for an increase to the demerit premiums for the DSR system. The Board approved the Corporation's application in that regard, but required that the Corporation undertake further work such that in the future, DSR rates and vehicle premium discounts would be based on principal driver rating than the registered driver rating. To that end, the Board directed in Order 130/17 that a Technical Conference take place on the availability and practicality of other analytical tools and ratemaking methodologies to better determine DSR rates and vehicle premium discounts based on principal driver rating rather than registered driver rating. The Board also directed the Corporation to file proposed driver premium rates more statistically consistent with the estimated average claims cost per driver for each level on the demerit side of the DSR scale in this Application, and, in the 2021 GRA, file proposed vehicle premium discounts that are actuarially indicated based on principal driver performance evaluation.

The Corporation applied for a review and variance of those aspects of Order 130/17, on the basis that the foundational structure and purpose of the DSR program and the vehicle premium discounts were only given a cursory review in the 2018 GRA, and there was insufficient evidence or consideration given to justify changes to the structure and

implementation of the DSR program. MPI took the position that while it might be appropriate to change the framework for the DSR scale, this should only be done after consideration is given to a complete evidentiary record.

By Order 29/18, the Board granted MPI's application in part. First, with respect to the requirement for a Technical Conference, the Board directed that it be undertaken in order to review the availability and practicality of other analytical tools and ratemaking methodologies to better determine DSR rates and vehicle premium discounts based on principal driver rating rather than simply registered driver rating. The information shared in the Technical Conference was to be included in this Application. Further, in this Application, MPI was required to file information as to how it would proceed to implement driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale, and vehicle premium discounts fully supported by actuarial indications based on principal driver performance evaluation. If MPI's position was that it is not possible to implement driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale and/or vehicle premium discounts that are fully supported by actuarial indications based on principal driver performance evaluation, MPI was to advise the Board in this Application, and file information as to why that is the case.

The Board also varied those aspects of Order 130/17 that required the Corporation to file proposed driver premium rates more statistically consistent with the estimated average claims cost per driver for each level on the demerit side of the DSR scale in this Application, and, in the 2021 GRA, file proposed vehicle premium discounts that are actuarially indicated based on principal driver performance evaluation. In Order 29/18 the Board varied those directives such that they were to be held in abeyance until such time as the issues of driver premiums more statistically consistent with the average claims cost per driver for each level on the demerit side of the DSR scale, and vehicle premium discounts that are fully supported by actuarial indications based on principal driver performance evaluation, were reviewed and considered in the this Application.

The Technical Conference on the DSR took place on March 20, 2018.

In this Application, the Corporation stated that DSR-based driver premiums should be actuarially sound, and that it is considering options for alternative models. This includes engagement with the public, as well as gathering of data. MPI advised that it plans to provide an update on or the results of its analysis in the 2020 GRA. MPI did acknowledge that it needs to improve the actuarial soundness of the DSR-based driver premiums and vehicle premium discount calculations, which are currently set by policy.

The Corporation also stated that it can improve the DSR model, to ensure that risk is better reflected in driver premiums and vehicle premium discounts under the DSR scale. These improvements will result in further disincentives for engaging in high-risk driving behavior and customers at the top and bottom of the DSR scale will pay rates that better align to their driving behavior. MPI has not yet determined that DSR ratemaking methodology should be based on principal driver performance evaluation.

The Corporation reported on certain models for driver premiums and vehicle premium discounts that might be considered in determining what changes should be made to the DSR rating system, and provided its views on each of the models. The models reviewed include: Primary Driver, Declared Driver, Forced Assignment, and Residual Risk.

Primary Driver would require policyholders to identify the primary driver of the each vehicle in the household. The Declared Driver model would require the policyholders to identify the regular drivers of the vehicle, and the Corporation could determine vehicle discounts based on some variable (i.e., average, lowest DSR rating) of the listed drivers of the vehicle. Forced Assignment would require MPI to develop the ability to easily and accurately identify all licensed drivers in a given household, and then determine vehicle discounts on the basis of the DSR data gathered about those drivers, or to assign specific vehicles to certain drivers for rating purposes. The Residual Risk model would ensure that drivers who do not register vehicles pay an actuarially determined driver premium based on their historic risk, and driver premium collected from non-owners would be used

to lower vehicle premiums, and/or improve the actuarial soundness of the vehicle premium discounts.

The Corporation is in the process of researching these models. With respect to the demerit side of the DSR scale, the Corporation noted that is where drivers create risk; accordingly, it needs to collect more premiums from that particular group, but the current model that is used is not actuarially sound.

The Corporation reported that the next steps towards the implementation of more actuarially sound DSR premiums and vehicle premium discounts will involve its public consultation efforts, along with further investigation and analysis of those rating models having limited or no additional IT costs (Primary Driver and Residual Risk). It reported that it anticipates by the 2020 GRA, it will be in a position to report on the results of its public consultation efforts, its preliminary research on the no or low cost options, and whether it intends to proceed with data collection for higher cost options (Declared Driver and Forced Assignment).

5.1. Interveners' Positions

CAC

While CAC did not advocate for a particular rating model, it did express the view that, given the potential dramatic changes to DSR which could result from the Residual Risk approach, MPI should be directed to engage with stakeholders, including CAC, CMMG, CAA and Bike Winnipeg, regarding best practices for consumer engagement and recommendations on DSR.

5.2. Board Findings

The Board recognizes that MPI is continuing to do work necessary in order to assess, and ultimately implement, a DSR system that is more actuarially sound. Accordingly, the Board directs that in the 2020 GRA, the Corporation report on the progress of its public consultation efforts, its preliminary research on the no or low cost options for rating models, as well as on its decision on whether to proceed with data collection for the higher cost options.

As to the recommendation made by CAC, the Board is not prepared to direct the Corporation as to the manner in which the Corporation is to conduct its public consultation on the DSR. The Board anticipates that in the 2020 GRA, the Corporation will provide a full report as to its engagement with the public, which can be fully assessed and considered in the course of the 2020 GRA.

6. PROGRAM COSTS

The costs associated with providing Basic Insurance to Manitoba motorists fall into the following major categories:

	Total Estimated Expense 2019/20 ($ millions)	Percentage of Total Program Costs
Net Claims Incurred	**$900.2**	**74.8%**
Claims Expenses	**135.4**	**11.3**
Road Safety/Loss Prevention	**12.7**	**1.1**
Operating Expenses	**73.6**	**6.1**
Commissions	**42.7**	**3.5**
Premium Taxes	**33.7**	**2.8**
Regulatory/Appeal expenses [1]	**4.8**	**0.4**
Total Program Costs	**$1,203.1**	**100.0%**

6.1. Basic Claims Incurred

Claims Incurred represent the costs that are paid or forecast to be paid to claimants for the various benefits provided under the Basic Insurance program. Net Claims Incurred were $767.2 million in 2017/18, which was $27.8 million or 3.76% over the budget presented at last year's GRA.

[1] Regulatory and appeal expenses relate to: Public Utilities Board, Crown Corporations Council and Automobile Injury Claims Appeal Commission.

The 2019/20 Net Claims Incurred Forecast decreased by $12.6 million from the forecast presented in the 2018 GRA, primarily as a result of the following:

- A decrease of $18.9 million due to a lower forecast for Physical Damage claims;
- A decrease of $7.9 million from a lower forecasted Write Down DPAC/Premium Deficiency; and
- An offsetting increase of $13.2 million from a forecasted decrease in claims discount rate and higher forecasted Unallocated Loss Adjustment Expense.

Claims Incurred for the fiscal years 2014 - 2018 for the major coverages were as follows:

For years ending February 28/29 ($ millions)	2014	2015	2016	2017	2018	5 Year Change	
Physical Damage - All Perils							
Collision	374	315	354	409	426	52	14%
Comprehensive	77	70	123	118	67	(10)	(13%)
Property damage	48	38	41	43	49	1	2%
Sub-total	**499**	**423**	**518**	**570**	**542**	**43**	**9%**
PIPP Accident Benefits	245	317	142	284	220	(25)	(10%)
Public Liability	3	6	6	5	5	2	67%
Total Claims Incurred	**747**	**746**	**666**	**860**	**767**	**20**	**3%**

Overall Total Claims Incurred were $767.2 million in 2017/18, and are forecast to be $817.1 million in 2018/19, $900.2 million in 2019/20, and $950.7 million in 2020/21, for an overall increase of $183.5 million or almost 24% from 2017/18.

A major component of Total Claims Incurred are collision claims costs, which were $426.5 million in 2017/18. The Corporation indicated that, relative to the long-term average, the last four accident years have had below average collision frequency. Some of the reduction in frequency can be attributed to mild winters although there has also been a reduction in summer collision frequency over the last six years.

The Corporation also advised that collision total loss frequency has been increasing over the past decade. As vehicles become increasingly complex and more expensive to repair, there has been an increase in the percentage of collision claims resulting in total losses. The largest component of Total Claims Incurred is Accident Benefits, which are payable to claimants regardless of fault for a collision, including medical expenses, rehabilitation expenses, funeral expense reimbursement, death payments, impairment benefits, income replacement indemnity and personal care assistance. The estimated cost of Accident Benefits under the Personal Injury Protection Plan (PIPP) program are updated based upon actuarial reserving practices taking into account changes in interest rates on long term claims liabilities.

The following table compares actual PIPP Accident Benefit costs with those previously forecast by the Corporation:

Year Ended February 28/29	**Original Forecast**	**Revised Forecast**	**Actual Cost**	**Difference Original/ Actual *Favourable (Unfavourable)***
2009	$242.1	$239.3	$186.1	$56.0
2010	$249.8	$236.2	$175.0	$74.8
2011	$252.9	$244.6	($59.7)	($312.6)
2012	$253.3	$197.3	$222.8	($30.5)
2013	$203.5	$204.2	$224.2	($20.7)
2014	$210.9	$208.5	$243.9	($33.0)
2015	$184.4	$148.9	$314.5	($130.1)
2016	$166.1	$90.6	$143.0	$23.1
2017	$148.7	$117.9	$283.9	($135.2)
2018	$150.4	$242.6	$281.9	($68.5)

Current fiscal period Claims Incurred are affected by the current year's claims activity, as well as prior years' claims activity. When a claim is first incurred, claims adjusters estimate the ultimate cost of that claim. Over time, as more is learned about the nature of the underlying injury and as partial claim payments are made, adjustments are made to the prior estimate of the ultimate cost of the claim. These adjustments, sometimes called

"runoff", flow through Claims Incurred in the fiscal year in which the adjustments are made.

6.2. Basic Expenses Overview

Operating expenses incurred by the Corporation are allocated to Basic pursuant to a cost allocation methodology approved by the Board in Order 157/12. The cost allocation methodology distributes Corporate expenses to four lines of business, and then further segregates them into four expense categories: Claims, Road Safety/Loss Prevention, Operating and Regulatory/Appeal.

The details of Basic Operating expenses are as follows:

	For the Years Ended February 28/29 ($ millions)				
	2018A	**2019B**	**2020P**	**2021P**	**2022P**
Total Corporate Expenses	**$299.2**	**$301.7**	**$298.8**	**$306.7**	**$319.0**
Basic Allocated Corporate Expenses					
Claims Expense	143.3	137.2	135.4	139.2	144.3
Road Safety/Loss Prevention	13.2	13.6	12.7	12.8	13.0
Operating	70.2	75.1	73.6	76.3	80.0
Regulatory/Appeal	4.4	4.7	4.8	5.0	5.1
Total Basic Allocated Corporate Expenses	**$231.1**	**$230.6**	**$226.5**	**$233.3**	**$242.4**
Percentage of Corporate Operating Expenses	77.3%	76.4%	75.8%	76.1%	76.0%
** A = Actual B = Budget P = Projected					

6.3. Claims Expenses

Claims expenses represent the administrative costs associated with processing and settling claims. Claims expenses were $120.9 million in 2016/17, $143.3 million in 2017/18, budgeted to be $137.2 million in 2018/19, and are projected to be $135.2 million in 2019/20.

6.4. Operating Expenses

The Corporation reported that it has been diligent in controlling and reducing expenses, stating that it had taken the following steps to contain costs:

- An expected reduction in Full Time Equivalent (FTE) staffing counts equating to 3.6% from 2020/21 as compared to the 2017/18 budgeted levels;
- An overall reduction in 2017/18 normal operating expenses of approximately 1% as compared to 2016/17;
- Achievement of a 2017/18 management-controlled reduction of more than $2.6 million;
- A 2018/19 budget which includes the achievement of the 15% management reductions from 2016/17, and committed staff reductions through improvement initiative efficiencies;
- A reduction in implementation expenses in the rating years and throughout the forecast, mainly due to an enhanced focus on Value Management related to projects and a zero budget for insertions of work; and
- Continued reduction of building expenses via identification of efficiencies/synergies, which has led to further building closures.

Operating expenses allocated to Basic were $231.1 million in 2017/18, budgeted at $230.5 million in 2018/19, and projected to be $226.6 million in 2019/20 and $233.3 million in 2020/21, equivalent to compounded annual growth of 0.3% over the three-year forecast period.

MPI reported that it continues to prioritize and control day-to-day operational expenses and project expenses. MPI is committed to providing value to Manitobans through cost

containment, which has become firmly embedded into MPI's culture. For the years 2018/19 and outward, forecasted expenses overall are lower, most notably in the 2019 GRA rating years (2019/20 and 2020/21).

Compensation expenses (salary and benefits) represent 58% of MPI's total operating costs. The Corporation incurred $172.6 million in compensation expenses in 2017/18, and budgeted for compensation to grow to $176.4 million in 2018/19, $181.8 million in 2019/20, and $186.5 million in 2020/21. The Corporation adjusts the gross salary budget by a vacancy allowance, on an overall basis, to reflect what it anticipates will be the actual salary expenditures in a given year. The Corporation has stated that, at any given time, there are vacant positions within its staff complement, referred to as a vacancy provision, which reduce salary expenses. The Corporation incurred a vacancy allowance of $7.1 million in 2017/18 and budgeted for a vacancy allowance of $1.5 million for years 2018/19 through to 2020/21.

MPI incurred net compensation costs of $165.6 million in 2017/18, and has forecasted net compensation costs of $174.9 million in 2018/19, $180.0 million in 2019/20, and $183.9 million in 2020/21.

Basic is allocated all operating expenses, including compensation costs, through the Corporation's integrated cost allocation methodology. Basic is allocated approximately 76% of Corporate compensation expenses. In the case of both the allocation of operating expenses and compensation expenses, the Board is unable to consider the appropriateness of the allocations as it lacks the jurisdiction over the Extension line of business. The allocation of compensation expenses to Basic has increased from $116.0 million in 2014/15 to $124.4 million in 2017/18, a compounded annual growth rate of 2.4% over the four-year period. Basic compensation expenses are forecast to be $130.5 million in 2018/19, and projected to be $133.7 million in 2019/20 and $138.0 million in 2020/21. This represents a compound growth rate of 3.2% over the forecast period.

The five-year Collective Agreement between MPI and the Manitoba Government and

General Employees' Union is in effect for the period from September 18, 2016 to September 26, 2020 and includes general economic increases of 1.50% effective September 17, 2017 and 2.00% effective September 16, 2018. The agreement will see a further 2.00% increase in 2019 and a 0.0% increase for the final two years of the agreement.

In addition to the economic increase, the Collective Agreement also specifies a pay plan with six "step" salary ranges for each in-scope position in the Corporation. An employee will be eligible for up to five annual 3.5% increases until the employee reaches the maximum salary (step) for the position. Upon reaching the maximum salary, the employee will only be eligible to receive general economic wage increases. MPI estimates that 50% of its employees are eligible for these annual "step" increases, which is the equivalent of an overall additional 1.75% salary cost increase. MPI is forecasting an annual increase in salary costs of 4.9% for 2018/19.

MPI's total Corporate staff complement has decreased from 1,946.8 FTEs in 2009/10 to 1,878.1 in 2017/18, and is forecast to grow to 1,902.5 FTEs in 2018/19. The composition of MPI's staffing dedicated to operations and improvement initiatives is as follows:

Year	Normal Operations	Special Initiatives	Total Corporate
2009/10	1,752.9	193.9	1,946.8
2010/11	1,822.8	48.6	1,871.4
2011/12	1,862.9	15.4	1,878.3
2012/13	1,894.7	17.1	1,911.8
2013/14	1,890.3	15.0	1,905.3
2014/15	1,874.8	10.7	1,885.4
2015/16	1,866.7	15.7	1,882.4
2016/17	1,898.9	21.2	1,920.1
2017/18 Actual	1,860.9	17.3	1,878.1
2018/19 Budget	1,874.1	28.4	1,902.5

MPI’s Normal Operations staffing levels increased from 1,752.9 FTEs in 2009/10 to 1,860.9 in 2017/18. MPI committed to a permanent staffing reduction associated to improvement initiative efficiencies. Taking into account targeted staff reductions, the Corporation is budgeting for 1,874.1 FTEs in 2018/19 and 1,877.1 FTEs in 2019/20 and 1,859.1 FTEs each subsequent year through 2022/23.

MPI's actual Normal Operations staffing levels have been consistently below budgets as follows:

Fiscal Year	Actual	Budget	Over/(Under) Variance
2008/09	1,732.9	1,796.3	(63.4)
2009/10	1,752.9	1,783.8	(30.9)
2010/11	1,822.8	1,850.1	(27.3)
2011/12	1,862.9	1,926.5	(63.6)
2012/13	1,894.7	1,936.7	(42.0)
2013/14	1,890.3	1,934.7	(44.4)
2014/15	1,874.8	1,927.7	(52.9)
2015/16	1,866.7	1,898.7	(32.0)
2016/17	1,898.9	1,927.5	(28.6)
2017/18	1,860.9	1,910.0	(49.1)
2018/19 Budget		1,874.1	

The consistent under budget variance is a reflection of the Corporation's Vacancy Management Program, which as discussed above, is used as a means to control costs and to ensure proper workforce composition to meet operational demands.

6.5. Information Technology Expenses

The Corporation spent $85.1 million in total Information Technology (IT) expenses in 2017/18, has budgeted to spend $76.2 million in 2018/19, and is forecasting to spend $70.8 million in 2019/20.

The majority of the capital expenditures in IT relate to ongoing and future IT projects, including Legacy Systems Modernization, which relates to the replacement of dated legacy systems, Autopac On-line, Claims Administration and Reporting System, and the Driver Licensing System. These systems support both the Basic competitive lines of business at a budgeted cost of $58.6 million.

Through the Corporation's Value Management Process, it has created business cases for Business Transformation Office-managed projects of $500,000 or more in the 2018/19 Capital Budget. Those budget items are as follows:

- Technology Risk Management: $4.5 million
- Legacy Systems Modernization: $2 million
- High School Driver Education Phase 3: $1.9 million
- Customer Self-Service Phase 1: $1.5 million
- BI^3 / Fineos Upgrade: $1.26 million
- Credit Card Strategy: $ 1 million
- Finance Re-Engineering: $500,000

In the 2018 GRA, the Corporation reported that it was expecting strategic direction from its Board of Directors in December of 2017, after which it would in a position to implement a new IT strategic plan. The Corporation filed the 2018/19 IT Strategy in this GRA, and reported that it focuses less on specific projects and more on bridging strategy and action. The Corporation also reported that the IT Strategy will be updated annually. MPI indicated that significant changes and practices have been adopted through the new IT Strategy. In particular, six main streams were discussed that were changed from the prior technology approach, which are to:

- Move toward proven technologies;
- Identify all risks of a project prior to project initiation;
- Use a Project Sponsor;
- Align when possible to industry best practices in vendor provided software;
- Engrain the Value Management process in MPI culture and the project lifecycle; and

- Create IT capabilities to support business capabilities, in order to solve a business objective.

With respect the Corporation's IT approach in the past, it conceded that certain attempts to be an innovator were not successful, including the Customer Claims Reporting System (CCRS), which was cancelled in April 2018 - although the Corporation retains intellectual property upon which it can rely in the future. As well, the Physical Damage Re-Engineering (PDR) Program, which is discussed in detail below, was a large, multi-year project for which the Corporation acknowledged it failed to adequately project costs, instead focussing on benefits. The Corporation maintained, however, that the PDR program has standardized and improved estimating process and opened up future possibilities for the Corporation.

In addition, with respect to the Corporation's Value Management Process, it also conceded that it was not consistently applied to projects, resulting in projects moving forward without having been evaluated through the Value Management Process.

MPI described the significant changes it has made in how projects are managed and approved, including process changes, and the addition of an Operational Business Champion (OBC), who will now be accountable for the project success, with outcomes stated in the business case for a given project under the purview of the OBC. Each IT project will now contain multiple phases, with identifiable checkpoints, where there is an expected level of completion with respect to certain deliverables and key aspects of the project to be completed.

The Value Management office will validate a business case, and will review it from a quality assurance perspective. The Value Management office will work with the OBC, to determine whether the project is still on track. For any given project, the Executive Steering Committee is responsible for the approval of submissions made to the Board of Directors. Weekly status reports are to be provided to the Executive sponsors of a project

and monthly status reports are to be provided to the Executive Steering Committee, along with quarterly status reports to be provided to the Board of Directors.

Prior to 2018, major IT capital projects did not have complete business cases. The Corporation has implemented a new Value Management Process, pursuant to which, all IT projects of $500,000 will require business cases. The Corporation has reported that, if a project does not have a positive return on investment, there will need to be a strong justification to proceed with the expenditure.

With respect to the Corporation's present IT approach, the Corporation maintained that the use of the IT Strategy and the Value Management Process will ensure best practice is followed and will ensure that new IT projects are properly costed. Applying Value Management to CCRS and PDR resulted in a change of direction with respect to those projects, demonstrating the potential of the Value Management Process. To date, MPI's IT staffing strategy has resulted in 20 of 27 external IT consultants being transitioned to employees and, the Corporation reported, it continues to make progress towards its goal of IT staff internalization.

With respect to the future for MPI's IT, one of the primary focuses will be on Legacy Modernization. The Corporation's Planning and Technology Committee intends to authorize management, following negotiations, to engage a consultant with the purpose of undertaking a Legacy Modernization assessment, in order to determine how best to proceed related to the replacement of the legacy computer systems. The Corporation has established a budget of $2 million to do exploratory work on options to address the replacement of the Legacy Systems, and a preliminary budget of $70 million for the Legacy Modernization project. It is anticipated a detailed business case will be created and provided to the MPI Board. Currently, MPI is forecasting to spend $8.1 million on Legacy Systems Modernization in 2019/20, and $16.3 million in 2020/21. It is anticipated that this will be the Corporation's largest IT initiative.

A significant portion of this Application involved a review of the PDR program. As reported in Order 130/17, the program has been in progress since 2010/11. The Corporation reported in the 2018 GRA that it was scheduled for completion in 2019/20, and, in the 2018 GRA filed an evaluation of the PDR project prepared by Gartner Consulting, the Physical Damage Re-Engineering (PDR) Program Evaluation (2017 Gartner Report). The Corporation had also previously filed an evaluation of the PDR program, prepared by Gartner, in the 2017 GRA.

The 2017 Gartner Report found that in the previous year the program had "made significant strides in completing some projects, and reevaluating and cancelling others that would provide low value." It also found that a number of significant components had been put into place over the previous year. At that time, there were five IT projects required to complete the PDR project, with four scheduled to be completed in 2017/18 and the fifth and final project, CCRS, to be completed in 2019/20. The original PDR program contained 20 projects, seven of which Gartner found had been cancelled. Eight of the IT projects contained within the PDR program were completed.

The 2017 Gartner Report found that the overall program budget had been consistent at $65.5 million, with $43.4 million spent to date and $18.1 million remaining to complete the program. The total projected spending would be $61.5 million, or $4 million less than the approved budget amount. According to that report, the program was expected to generate an internal rate of return of 7%, with a Net Present Value (NPV) of $13.7 million over the period from inception until ten years after full implementation when benefits start to accrue. The Gartner Report found that the PDR program was starting to produce measurable benefits.

As also reported in Order 130/17, in the 2017 GRA, Gartner had assessed that the PDR program had a NPV benefit overall of $18 million, with an internal rate of return of 8%. Gartner prepared the NPV analysis for the 2017 GRA, when MPI was not using NPV as a project management tool. The cost/benefit analysis conducted by Gartner for the 2017 GRA did not include the cost of maintaining the program. The evidence in the 2018 GRA

was that the calculation of the NPV of $13.7 million was conducted by MPI, and provided to Gartner.

In Order 130/17, the Board directed the Corporation to have Gartner prepare an update of the PDR program, along with a breakdown by the Corporation of its analysis on the costs to operate and maintain the program, and a cost/benefit analysis of the five remaining projects to be completed as part of the PDR program, with the discount rate used in the cost/benefit analysis to be higher than the 3% previously used in the PDR project cost benefit evaluation.

In this Application, the Corporation reported that management undertook a review of the PDR program in early 2018, applying the Value Management Process, resulting in a restatement of the PDR costs and benefit projections. The total budget of the PDR program was changed to $57 million, from the originally projected $65 million, based on the reduction in scope of the project.

Further, the updated analysis prepared by Gartner, the *Physical Damage Re-Engineering (PDR) Program Evaluation* (2018 Gartner Report), revised the capital costs to $57 million from the previous estimate and drastically reduced the NPV of the project from $13.7 million previously reported to a NPV of ($49.9) million. The Corporation made the decision to cancel the CCRS project, finding that the benefits of the project would not be supported by the costs to achieve them. There remained some smaller projects within the overall PDR program, all of which were forecast to be completed within fiscal year 2018/19. Gartner, based on its evaluation of the program, was supportive of the decision to complete those remaining projects.

The 2018 Gartner Report provided an explanation for the significant variance in the NPV of the PDR program:

- Some costs that should have been attributed to the program were not included in the analysis (for example, the Mitchell licence fee, and an $81 premium paid to repair shops for each claim processed);

- Some of the benefits related to the program are not achievable without CCRS, which was cancelled; accordingly, the annual benefits were reduced to under $8 million from the previous $13 million; and

- Higher discount rates were used for the cost of capital - 6.5% and 9.5% - as compared to the 3% previously used by Gartner.

In addition to the foregoing, as part of its overall Value Management Process review, MPI wrote off $20.5 million in deferred development projects, of which $18.5 million related to Basic projects. MPI-reported a write-off of $15.6 million in deferred project costs associated with the cancellation of CCRS.

Charles E. (Chuck) Henry, Vice President, Solutions and Pricing with Gartner, testified as an expert witness in the public hearings. He was qualified by the Board in Order 82/18 as an expert in the area of the use and planning of information technology, and information technology governance. Mr. Henry was the author of the 2018 Gartner Report and provided testimony on the report. The 2018 Gartner Report indicated that the decision to cancel the CCRS included the cancellation of Optimized Adjusting, co-development of the Mitchell solution, building out the Claims Administration Reporting Solution, managing the change management for the delivered solutions, and building out the analytics tools to monitor and manage the new service delivery channel. The total write off related to these projects amounted to $16.08 million.

Mr. Henry testified that the significant difference noted in some of the costs and the benefits and the overall net present value between the 2017 Gartner Report and the 2018 Gartner Report was due to both understating the costs and overstating the benefits of the program. Gartner was not aware of some of the ongoing operating costs, as they had not

been provided to Gartner by MPI. Mr. Henry's evidence was that it would have been the responsibility of MPI to provide Gartner with all relevant information. With respect to the cost of capital, MPI was not using NPV as a project management tool. Gartner had selected a discount rate of 3% and, as MPI was not using NPV, Gartner did not have a rate available to it.

Neither the Corporation nor Gartner had included the cost of operating and maintaining the PDR program in the analyses filed with the Board previously. Mr. Henry's evidence was that Gartner had asked multiple times for that information, but MPI did not make it available, so Gartner proceeded with the high-level information available to it. Mr. Henry acknowledged that Gartner's independent analysis last year did not reflect the more rigorous approach utilized by MPI management this year, and represented a more high-level estimate. Mr. Henry conceded that Gartner should have qualified in prior reports that, while the high-level numbers showed a $13.7 million NPV, further analysis was required. If Gartner had been aware of the operating costs, the report would have been firmer that more analysis needed to be done on the data to make sure that the project continued to make sense.

MPI utilizes both internal FTEs and external consultants to maintain MPI's IT systems and deliver on IT capital projects. MPI's IT actual and forecast staffing levels including consultants are as follows:

IT Staff Complement

	Actual					**Forecast**		
Year Ended February 28/29	**2014**	**2015**	**2016**	**2017**	**2018**	**2019**	**2020**	**2021**
Internal FTE	212	210	223	236*	272*	286*	290*	290*
Consultants	120	110	114	107	107	82	80	80
Total	332	320	337	343	379	368	370	370
% IT Consultants	36%	34%	34%	31%	28%	22%	22%	22%

* rounded.

In Board Order 128/15, the Board directed MPI to assess opportunities for savings relative to external IT consultants, including bringing consultants in-house. In response, MPI undertook a comprehensive review and developed an approach to transition up to 27 positions from external to internal over the 2016/17 to 2019/20 fiscal years. MPI provided an update on this strategy, reporting that:

- To date, 20 positions have been successfully converted from external to internal;
- Cost savings are in line with amounts that were previously estimated;
- Potential positions to be converted continue to be assessed, and the Corporation remains committed to converting the remaining seven positions by 2019/20;
- Once the external labour strategy has been fully executed, the annual cost savings are expected to be between $2.4 and $3.0 million;

- MPI continues to explore opportunities to reduce the volume of and costs related to the use of external labour and anticipates additional measures in place in Q4 2018/19; and

- An update on the results of the external labour strategy and the additional measures taken in 2018/19 will be included in the 2020 GRA.

MPI reported that most of its project managers are consultants rather than employees. MPI is attempting to shift the split from being mostly consultants, to more MPI employees. One challenge to this approach is that MPI's contracts contain non-solicitation clauses, so the Corporation cannot approach consultants working under contract with it to attempt to hire them to work internally.

6.6. Benchmarking

The Corporation again filed with the Board its benchmarking framework, reflecting four subject areas: Operational Efficiency, IT Service Delivery, Serving Manitobans and Community Impact. MPI uses the benchmarking results to identify opportunities to reduce costs, measure effective management approaches, and measure efficient resource allocation.

MPI engaged the Ward Group, as it has done previously, to provide an independent perspective on how the Corporation compares to other companies and monitor performance. The Ward benchmarking process involves on-site best practice analyses at MPI, and on-site meetings with MPI management to review customized results developed for MPI. The Corporation advised that after the second year of collecting information, a trend analysis report is prepared annually to assist MPI management in monitoring year-to-year performance improvement. Ward compared MPI to three benchmark groups:

- 10 Canadian insurers for the Canadian Personal Auto Benchmark Group;

- 10 Canadian insurers for the Canadian Benchmark Group; and

- 7 US insurers for the US Personal Auto Benchmark Group.

The Ward Group's 2016/17 comparison showed that the Corporation performs well against the benchmark groups in many of the Operational Efficiency measures. The Corporation's total gross expenses, both as a percentage of gross premiums written and per policy in force, are below the comparators including the three benchmark groups list. MPI's performance on FTEs per $100 million of Gross Premiums Written (GPW) has improved since 2012/13 moving from 153.25 in 2012/13 to 128.30 in 2016/17; however, it remains materially higher than its peers, which range from 102.78 to 107.79. The Corporation explained that this is due to its business model, where customer service is performed end-to-end by MPI employees. MPI therefore provides more comprehensive customer service than its peers, but this results in more staff.

MPI reported that its staff to management ratio increased from 6.83 in 2012/13 to 7.52 in 2013/14, and then decreased to 7.04 in 2014/15 and to 6.64 in 2015/16. It has since increased to 6.95 in 2016/17, due to a decrease in management. Based on the Ward analysis, MPI's staff to management ratios are higher than the Canadian and US benchmark groups, and the Corporation's overall personnel expenses per FTE and Management personnel expense per FTE are lower than those of the benchmark groups.

In prior GRAs, the Corporation has filed the Gartner CIO Scorecard, which provides a comparison of certain of the Corporation's IT benchmarks to those of its peers. In this Application, the Corporation filed information from Gartner which included the CIO Scorecard as well as Gartner's IT Score, the latter of which will be used for future IT benchmarking purposes. The CIO Scorecard has been discontinued and will no longer be used.

The Corporation reported that overall, Gartner benchmarking results indicate that MPI continues to improve its IT Maturity and IT spending relative to operating expenses, which have continued to decrease annually. The Corporation advised that, with its planned reduction in the current project portfolio, it is expected that going forward, personnel

spending will also decrease, particularly with respect to consultants. MPI also reported that its IT Strategy has evolved from an earlier state to reflect improved maturity in key areas of Enterprise Architecture, Information Security and Value Management.

Specifically, Gartner's CIO Scorecard indicated that MPI spends 62% of its IT budget on personnel, compared to its peers, at 45%. Contractors comprise 32% of MPI's IT staff, compared to 24% for its peers. MPI improved its overall IT Maturity rating from 3.42 in 2015/16 to 3.52 in 2016/17.

The IT Score employs a different methodology than the CIO Scorecard, with additional elements and weightings that vary based on the capability being assessed. All capabilities are rated on a five-point scale with higher scores indicating better performance. In 2016/17, MPI's overall IT Maturity level was assessed at 3.1 using the IT Score methodology. Overall, MPI scored above the insurance average in all but two capabilities: MPI was on par with the insurance average in Applications Organization with a score of 2.4; and its Enterprise Architecture score was lower than insurance average at 2.3, compared to 3.0 for its peers.

Historically, the Corporation has filed information as to recommendations made by Gartner for MPI to improve its process maturity, and MPI's progress on those recommendations. With the transition from the CIO Scorecard to the IT Score, Gartner conducted a review of all outstanding recommendations provided using the CIO Dashboard tool and updated the recommendations as applicable. This resulted in some recommendations being withdrawn, and some new recommendations being introduced.

In Order 128/15, the Board directed MPI to seek to gain insight on longer tail experience from outside the Province of Manitoba, and in particular, from the Société de l'assurance automobile du Québec (SAAQ). In the 2017 GRA, the Corporation advised that it did not undertake the review as directed, and indicated that it would conduct a review of mortality assumptions in the next year. As a result, in Order 162/16 the Board again directed the Corporation seek to gain insight on longer tail experience from SAAQ, and report back on

the results of its efforts in the 2018 GRA. The Corporation did not comply with this directive in the 2018 GRA. Accordingly, in Order 130/17, the Board directed the Corporation to report back on its efforts to seek insight on longer tail experience from other jurisdictions, and in particular from the SAAQ.

In this Application, the Corporation provided the information as directed by the Board. MPI reported that it contacted both Saskatchewan Government Insurance (SGI) and SAAQ, and requested their paid loss experience for Income Replacement benefits for the history of their public insurance programs, which they provided. Based on its analysis of the information provided, MPI concluded as follows:

- MPI has a well-established, effective, and transparent methodology for selecting its tail factors for Income Replacement coverage;

- MPI's long-tail experience cannot be directly compared to the long tail experience at SGI or SAAQ in absolute terms because of differences in coverage, reserving practices, and other potential unknown factors, however, MPI's claims experience behaves very similarly to SGI and SAAQ; and

- While a jurisdictional comparison is informative, MPI did not see any value in changing its current long-tail reserving process. In MPI's view, a more beneficial use of the jurisdictional comparison would be to use this information to model policy liability mis-estimation risk as part of the Dynamic Capital Adequacy Testing (DCAT) exercise.

6.7. Interveners' Positions

CAC

CAC commented that, as compared to peers, MPI's IT staffing budgets appear excessive. CAC recommended that MPI be required to report back to the Board on its efforts to bring staffing budgets in line with peers.

CAC also commented on what it characterized as material challenges with the implementation of major IT programs, such as BI^3 and PDR. Given the potential for ongoing effects on ratepayers, CAC recommended that MPI be required to hold a Technical Conference on the business cases for Legacy Modernization prior to the next GRA filing. The Legacy Modernization business case should include examples of net present value analysis, demonstrating adherence to good business practice.

CAC did comment that MPI had taken a number of steps to introduce standard good business practices to its management of IT expenditures, including the application of a more robust net present value analysis to the PDR, including the CCRS. However, given the limitations with Gartner's prior years' PDR evaluations, CAC would recommend that in the future, any external expert retained by MPI and providing evidence to the PUB should be directed to expressly identify any aspects of their evidence that do not conform with best practice.

CAC also expressed that MPI, as a Crown monopoly, might make imprudent mistakes, such as:

- To rely on BI^3 technology and take a passive approach to complex claims management;
- To have IT staffing levels far higher than the industry average;
- To enter into lengthy information technology "adventures" relating to Physical Damage Re-engineering without appropriate business cases and without disclosing material information to Gartner;

CAC argued that the Board is not required to build a cushion in the rates to account for imprudence, or to pass on unreasonable or imprudent mistakes to ratepayers.

CMMG

CMMG argued that the Corporation is in excellent financial condition, with operating and claims expenses both having decreased. Therefore, the Board should hold the Corporation's "feet to the fire," to ensure it manages its claims and administrations costs prudently.

6.8. Board Findings

The Board has in the past characterized one of the key elements of its independent review function and rate-setting role as ensuring that actual and projected costs incurred are necessary and prudent, in the context of setting just and reasonable Basic rates. The Board's jurisdiction to do so is derived from *The Crown Corporations Public Review and Accountability Act*, and in particular, s. 26 thereof. The Board continues to hold a keen interest in the Corporation's efforts to reduce and contain costs.

The Board acknowledges that the Corporation complied with its directive to seek information on longer tail claims experience from SAAQ, after failing to do so for a number of years.

The Board continues to support the Corporation's cost containment efforts, including its steps taken to reduce operating expenses and optimizing staff levels. The Board finds that the Corporation is continuing to move in a positive direction.

The Board is encouraged by the Corporation's continued efforts to continue to reduce reliance on IT consultants and reduce the number of IT staff overall. The Board acknowledges the new IT Strategy, and understands that it will be updated annually going forward. Accordingly, the Board directs the Corporation to file its updated IT Strategy in the 2020 GRA.

More generally, with respect to IT, previous Board Orders make clear that this has been an issue of concern to the Board for some time. In Order 162/16, the Board expressed concern at the lack of business cases in the IT area.

In Order 130/17, the Board commented that it expected that the Value Management Process would bring in valuable controls and contribute to better business process management in IT. With respect to PDR, the Board found that MPI had not clearly established that the program was in fact operating within its original budget and that the Corporation was challenged in controlling the spending on the program. The Board also commented that the NPV and internal rate of return calculations for the PDR program were of limited value as they did not take into account the costs of operating and maintaining the program, and utilized a 3% discount rate.

The Board also expressed concern in Order 130/17 that the Corporation had not disclosed the costs to operate the PDR program, which the Board viewed as a critical component in assessing the costs and benefits associated with the program.

With the information that was filed by the Corporation in this Application, and with the 2018 Gartner Report, it appears that the Board's concerns about the PDR program were well-founded. The Corporation failed to provide Gartner with all the relevant information and also failed to include the cost of operating and maintaining the PDR program, notwithstanding multiple requests from Gartner. If Gartner had been provided with all relevant information regarding the PDR program, in order for it to prepare its evaluations for the 2017 and 2018 GRAs, it is likely that a more realistic appraisal of the PDR program would have been available sooner. Unfortunately, MPI pursued the PDR program over many years with the result that significant funds were spent on a program which has a NPV of ($49.9) million. The Board does not understand why, in previous years, MPI did not provide Gartner with all relevant information such that Gartner would have been able to perform an accurate and realistic appraisal of the program. The Board is also concerned with the fact that, until this year, business cases were not prepared for the PDR program; what was considered by the Corporation was the "benefits stream."

Given the history of the PDR program, the Board finds that it is important that the Corporation continue to evaluate and report on the program. Accordingly, the Board directs that in the 2020 GRA, the Corporation file an update, prepared by Gartner, to its 2018 PDR Program Evaluation. The Corporation shall provide to Gartner all relevant information such that Gartner will be able to fully evaluate the PDR program's benefits and the costs to operate and maintain the PDR program.

The Board finds that the information filed with respect not only to PDR, but to IT overall, was more thorough and comprehensive in this Application than in previous years. The Board appreciates the openness with which the Corporation provided information on IT in this Application, and is of the view that the Corporation has demonstrated progress in its efforts to rein in spending on IT and to make future strategic IT investments. The Board anticipates receiving information from the Corporation in the 2020 GRA as to the progress it has made in the implementation of the Value Management Process and the IT Strategy.

With respect to Legacy Modernization, the Board declines to order, as was recommended by CAC, that a Technical Conference take place to review this initiative. The Board finds that the Corporation has the capability to proceed with this initiative without the need for a Technical Conference; however, the Board directs that in advance of the 2020 GRA, the Corporation engage in discussions on an ongoing basis with the Board, with respect to progress on the Legacy Modernization project, any business cases created for the initiative, and the establishment of higher-level key performance indicators. The Board directs that in the 2020 GRA, the Corporation provide an update of its progress on the Legacy Modernization initiative, file any business cases created for the Legacy Modernization initiative, and any higher-level key performance indicators

Given the Board's ongoing interest in IT, the Board directs that in the 2020 GRA, the Corporation update all Business Transformation Office-managed projects of $500,000 or more in the 2018/19 Capital Budget.

With respect to staffing in IT, the Board notes that the Corporation continues to rely much more heavily on consultants than its peers. The Board appreciates that the Corporation has challenges in reducing the ratio of consultants to staff given the non-solicitation clauses in its contracts with vendors. The Board understands that these contracts provide a valuable service to MPI, but is concerned that MPI could become overly dependent on its vendors. The Board is of the view that the key to success in this area is effective IT vendor management. The Board therefore directs the Corporation, in the 2020 GRA, to report on its progress in reducing the ratio of IT consultants to internal staff, in particular project management roles, and provide an update as to measures taken by the Corporation to improve the management of its relationships with IT vendors.

Lastly, the Board finds that the benchmarking information provided by Gartner on an annual basis is of great assistance in informing the Board as to MPI's progress in its IT maturity. The Board anticipates receiving an update on the Corporation's IT benchmarking and therefore directs that in the 2020 GRA, MPI file an update to the

Gartner Benchmark Findings and Recommendations Executive Report, including an update to its IT Score with the Board.

7. INVESTMENTS

7.1. Investment Portfolio

The funds available for investment by the Corporation are primarily the assets supporting the unearned premium reserves and unpaid claims reserves. The Corporation's overall investment portfolio was over $2.7 billion as at February 28, 2018. MPI's assets must be managed in accordance with the Investment Policy Statement approved by its Board of Directors.

The recent actual and forecast composition of the Basic investment portfolio is summarized below.

Basic Investment Portfolio				
	2017/18 Actual		2018/19 Forecast	
	Ending Asset Values (C$ millions)	Portfolio Composition	Ending Asset Values (C$ millions)	Portfolio Composition
Cash/Short Term Investments	76	3.2%	-	0.0%
Canadian Fixed Income	1,083	45.5%	1,462	67.1%
MUSH Non-Marketable Bonds*	527	22.1%	554	25.4%
Total Long Term Bonds	**$1,686**	**70.8%**	**$2,016**	**92.5%**
Canadian Equities	226	9.5%	40	1.8%
US Equities/Global Equities	124	5.2%	43	2.0%
Global LV Equities	0	0.0%	33	1.5%
Real Estate	259	10.9%	33	1.5%
Infrastructure & Venture Capital	87	3.6%	16	0.8%
Total	**$2,381**	**100.0%**	**$2,181**	**100.0%**

** MUSH bonds are Manitoba rural municipality, school division and healthcare facility bonds and debentures which are not tradable in the fixed income market. MUSH bonds are held at book value and the portfolio's value does not vary with changes in interest rates.*

7.2. Investment Management

Basic premiums are not set to fully recover claims costs; instead MPI typically depends on investment income to break even. MPI's substantial investment portfolio is managed jointly by the Corporation and the Province of Manitoba, through a committee known as the Investment Committee Working Group (ICWG), which is co-chaired by MPI's Vice President of Finance and Chief Financial Officer, and the Assistant Deputy Minister (ADM), Treasury Division, Manitoba Department of Finance.

In the course of this Application, the Corporation filed its Transitional Investment Policy Statement, which was prepared as a result of the changes to be made to the Corporation's Investment Portfolio to be implemented following the completion of the Mercer Asset Liability Management Study.

7.3. Asset Liability Management (ALM)

Issues concerning MPI's asset liability management extend back over several GRAs. In Order 151/13, issued following the 2014 GRA, the Board directed MPI to have the composition of its investment portfolio reviewed by an external expert consultant, with a view to determining whether the current asset mix should continue, or should be revised. MPI engaged Aon to complete the ALM Study in 2014 (Aon ALM Study), and filed the study in the 2016 GRA.

A significant portion of the 2017 GRA was dedicated to reviewing MPI's Investment Portfolio and the Aon ALM Study. In the 2017 GRA, a witness from Aon provided testimony on the Aon ALM Study. CAC called Mr. Valter Viola as an expert in investment portfolio management, investment portfolio research, economics and risk management, and quantitative asset liability modeling. In Order 162/16, issued following the 2017 GRA, the Board ordered MPI to obtain an updated ALM study, to be filed with the 2018 GRA. That study was to address each of the recommendations made by Mr. Viola in the 2017 GRA hearings.

MPI did not file an updated ALM study with the 2018 GRA. Rather, in the course of the 2018 GRA hearings, the Corporation advised the Board that it had issued a Request for Proposals for the updated ALM study and engaged Mercer Canada (Mercer) to deliver the study by November 30, 2017, after the conclusion of the 2018 GRA hearing.

In Board Order 130/17, issued following the 2018 GRA, the Board directed the Corporation to file the Mercer ALM Study with the Board concurrently with its delivery to the MPI Board of Directors, and to provide an update of the Mercer ALM Study as

necessary to: (a) take into account the directives issued in Order 130/17; and (b) address each of the 18 recommendations made by Mr. Viola as set out in Order 162/16.

The Mercer ALM Study was prepared in three phases, the last of which was submitted in February, 2018, and reports in respect of each phase were filed with the Board as part of the 2019 GRA, together with additional information concerning the Mercer ALM Study and plans for its implementation.

At the hearing, MPI called Dave Makarchuk as a witness to provide evidence on the Mercer ALM Study. Mr. Makarchuk is a partner with Mercer Investments and is Sales and Strategic Growth Leader with the Canada's National Wealth Leadership Team. Mr. Makarchuk is also a Fellow of the Canadian Institute of Actuaries. Mr. Makarchuk was qualified as an expert in the area of institutional investment planning and asset and liability matching.

The three phases of the Mercer ALM study were broken down as follows:

- Phase 1 analyzed the merits of adopting unique asset allocations and investment policy statements for segregated investment portfolios for each of the Corporation's classes of liability, namely, Basic claims liabilities (Basic Portfolio), the RSR (RSR Portfolio), employee future benefits - primarily pension (Pension Portfolio) and Extension coverage claims liabilities (Extension or EXT) and Special Risk Extension claims liabilities (SRE);

- Phase 2 included a discussion of new asset classes along with the rationale for inclusion and exclusion, proposed asset allocations for each portfolio, including estimates of risk and return, and implementation considerations; and

- Phase 3 finalized the responses to Mr. Viola's eighteen (18) recommendations.

In his testimony, Mr. Makarchuk outlined the process by which Mercer undertook the study. Mercer focused on four key factors: 1) expectation of return; 2) tolerance for risk;

3) cost; and 4) time. A review of MPI's objectives clarified the purpose of the assets which, in turn, prioritized the relative importance of each of these four factors.

Two of the Corporation's primary investment goals were to mitigate risk resulting from interest rate variations and to minimize short-term premium volatility. In addition, MPI chose to hedge against nominal, as opposed to real, inflation expectations and interest rate risk.

The key strategic recommendations flowing from Mercer's analysis and MPI's objectives were:

- Segregate the assets based upon each class of MPI's liability;
- Significantly de-risk the assets backing MPI's Basic claims liability;
- Diversify and lengthen MPI's fixed income portfolio;
- Diversify MPI's equity portfolio; and
- Reduce MPI's allocation to real estate assets.

The key expectations flowing from these recommendations were an expected decline in returns (estimated at $11 million/annum) but with an expected decline in risk (estimated at $67 million/annum) as well. Further, it was recommended that the changes to assets and allocation be implemented over a 24-month period.

Modelling to optimize asset allocations was developed based upon conclusions and constraints made by the Corporation which, though not necessarily recommended by Mercer, were supported by Mercer, including decisions to accept the risk as to inflation, hedge against nominal rather than real interest rate risk over the outlook period and accept, reduce and reject certain classes of assets.

In order to evaluate financial risks and to find portfolios that minimize interest rate and inflation risks, Mercer developed a fixed income portfolio that reproduced the fluctuations of the liabilities of the portfolio (Liability Benchmark Portfolio or LBP). Accordingly, the LBP portfolio used by Mercer accepted inflation volatility, assuming a 2% inflation rate that was static throughout the modelling exercise, and hedged against nominal interest rate risk. Efficient frontiers for each of the Basic, RSR and Pension Portfolios were developed to identify optimal asset allocations at each respective level of risk.

The implementation of the recommendations from the Mercer ALM Study will result in the separation of the Corporation's commingled investment portfolio into the five unique portfolios indicated above: Basic, RSR, Pension, Extension and Special Risk Extension. The transition into five unique portfolios is planned to commence at the end of the 2018/19 fiscal year, with the transition expected to be completed by 2019/20. The current portfolio allocation of 70% in fixed income assets (bonds) and 30% in growth assets (equities, real estate and infrastructure) will be in place until February 28, 2019, and the five new investment portfolios will be effective March 1, 2019.

The new allocations based upon the Mercer ALM Study will result in the Basic Portfolio becoming 100% fixed income, the RSR Portfolio becoming a balanced portfolio with a 50% allocation in fixed income, 50% allocation in growth assets, and the Pension Portfolio becoming 40% in fixed income and 60% allocation in growth assets. This results, on a consolidated basis, to 84% in fixed income and 16% in growth assets.

Target asset mixes for these portfolios are:

- Basic Portfolio – (100% Fixed Income) 60% Provincial Bonds, 20% Corporate Bonds, 20% Non-Marketable Bonds (MUSH) (Hedge Ratio to increase from 85% to 100%);

- RSR Portfolio - (50/50 split between bonds and growth assets) 50% Fixed Income, 35% Public Equities, 15% Alternative Investments; and

- Pension Portfolio - (40/60 split between bonds and growth assets) 40% Fixed Income, 35% Public Equities, 25% Alternative Investments.

New asset classes accepted for the RSR and Pension Portfolios were:

- Private Debt – investment grade North American debt;
- Global Equities – includes developed market equities and no emerging-markets; and
- Global Equities (Low Volatility) – less volatility than the standard global equity securities to reduce overall risk of equity portfolio.

As indicated above, real estate assets were to be reduced, and the following assets classes were rejected:

- Diversified Growth Funds;
- Private Equity;
- High Yield Bonds;
- Emerging Market Debt;
- Mortgages;
- Leverage; and
- Real Return Bonds (RRBs).

The Corporation's rationale for rejecting investment in RRBs was because: 1) they are very low yield; 2) a 2% inflation rate was assumed and RRBs will only add value if inflation significantly exceeds 2% for sustained period of time; 3) dollar and duration matching is difficult with RRBs because there are so few available to properly duration match; and 4)

RRBs are linked to Canadian Consumer Price Index while Basic claims liabilities are indexed to the Manitoba Consumer Price Index and industrial average wage.

While acknowledging that a real liability benchmark would better reflect inflation volatility and real interest rate risk, MPI submitted that accepting those risks was a choice made by it as an investor. The Corporation argued that the objectives, risk tolerance and accompanying investments selected by it were patently reasonable.

The Corporation's review of inflation forecasts from the Canadian chartered banks, Mercer, the Bank of Canada, and break-even inflation rates currently implied by RRBs all indicated that inflation will be approximately 2.0% over the outlook period. MPI argued that its Board had established the risk appetite for the Corporation and through the ALM process, decided to hedge nominal interest rate risk, choosing to accept the lesser threat of inflation volatility risk. The Corporation submitted that the Board should defer to the investment decisions of the MPI Board of Directors.

MPI further emphasized that, based on the ALM strategy being implemented by the Corporation, the impact of interest rates on Basic will be significantly reduced going forward.

7.4. Investment Returns

The size of the Corporate investment portfolio was projected to be $2.5 billion for 2018/19, increasing to $2.9 billion for 2022/23. For 2017/18, MPI had investment income for Basic of $116.3 million. Based on the Corporation's proposed use of a Naïve interest rate forecast, the Corporation’s investment income is projected to be $223.5 million for 2018/19, of which Basic’s share is $191.8 million or 85.8%.

As noted above, following the Naïve interest rate forecast as at September 30, 2018, of 2.43% (which reflected an increase of 19 basis points from 2.24%, which was used by the Corporation in the GRA filing), the Corporation updated its projected investment

income of $171.4 million for Basic, to offset a revised underwriting income forecast at $28.3 million.

MPI realized a $134.8 million return in investment income in 2017/18, of which Basic's share was 86.28%, totaling $116.3 million in income. The investment returns can be primarily attributed to higher than expected real estate pooled fund returns. MPI's projected allocation to Basic from investment income has not changed materially since last year's application. The actual and projected allocations for Basic are as follows:

Allocation of Investment Income ($ millions) to Basic					
	2017/18	**2018/19**	**2019/20**	**2020/21**	**2021/22**
2019 GRA	$116.3	$191.8	$82.1	$84.9	$87.8
2018 GRA	$101.8	$78.1	$80.0	$85.9	$84.4
Difference	$14.5	$113.7	$2.1	($1.0)	$3.4

The Corporation provided a five-year comparison of its investment returns with those of the Workers' Compensation Boad (WCB), the Teachers' Retirement Allowance Fund (TRAF), and the Civil Service Superannuation Board of Manitoba (CSSB). The comparison indicated that MPI had underperformed the average return for WCB, TRAF and CSSB in 2017 by 2.8%. However, the asset allocations of these funds are very different than the asset allocation of MPI's fund as these funds have much larger allocations to growth assets. In order to make a direct and accurate comparison the asset allocations were adjusted so that they are on the same basis. When the asset allocations of other funds were adjusted to match MPI's, their average return fell to 4.0% in 2016 and 5.9% in 2017, underperforming MPI by 2.5% and .04% respectively.

MPI also provided a comparison of its investment results with those of Saskatchewan Auto Fund (SAF), a comparable public insurer with an investment portfolio of $2.3 billion (versus $2.6 billion for MPI). For the last completed fiscal year March 31, 2018, SAF reported investment income of $162.8 million and $173.8 million for its prior fiscal year, higher returns than those reported by MPI.

As a result of the implementation of the changes arising from the Mercer ALM study, Basic net income is forecasted to increase by $95 million in 2018/19, primarily as a result of the realization of Accumulated Other Comprehensive Income (AOCI) on equity assets due to the sale of assets required to create the unique portfolios. The new ALM strategy will require the Corporation to liquidate all of its US holdings and Canadian equity holdings, in order to make the necessary asset allocation changes required for the five distinct portfolios.

Total equity is forecasted to be lower, as investment asset returns are forecasted to be lower with fewer growth assets. Based on a Naïve interest rate forecast, the Minimum Capital Test ratio will increase by roughly 16% at the end of 2018/19, from 54% to 69%, due to lower capital requirements on the Basic line of business investment assets.

7.5. Interveners' Positions

CAC

Valter Viola appeared again in this GRA as an expert witness on behalf CAC, to provide evidence relating to the Mercer ALM Study. Mr. Viola is a Chartered Financial Analyst and has 25 years of institutional portfolio management, investment research and risk management experience. He was qualified as an expert in investment portfolio management, investment portfolio research economics and risk management, and quantitative asset liability modelling.

In his report entitled *MPI's Investment Portfolio: Asset/Liability Analysis and Previous Recommendations* (Viola Report), Mr. Viola set out his views based upon his review of the Mercer ALM Study and MPI's changes to its investment portfolios based on the study.

The Viola Report sets out eight recommendations, summarized as follows:

- Real Liability Benchmark - Re-examine the reliance on a Nominal Liability Benchmark, rather than a Real Liability Benchmark, given the understatement of the long-term risk of inflation and changing real interest rates that are inherent in the Basic and Pension Liabilities.

- Leverage Constraint - Re-examine the constraint prohibiting the use of “leverage”, given the lower risk adjusted returns that would result.

- Duration Policy “Basis” Risk - Re-examine the effectiveness of the duration policy, which uses (nominal) bonds as the basis for matching the inflation and real interest rate sensitivity of Basic and Pension Liabilities, since inflation volatility is not zero.

- Lengthening Nominal Duration - Re-examine the decision to lengthen the nominal duration in the Basic Portfolio, given: MPI’s “defensive” (lower risk) strategy;

Mercer's return assumptions for bonds and RRBs; and concerns about the effectiveness of the duration policy noted above ("basis" risk).

- Real Return Bonds - Re-examine the decision to exclude RRBs from both the Basic and Pension portfolios, given the better hedging characteristics of RRBs (compared to bonds), recognizing the long-term inflation and real interest rate risks inherent in the liabilities.

- Other Real Assets - Re-examine MPI's recommended reduction in other real assets (real estate and infrastructure), given the low inflation protection that exists in the current portfolio and lower diversification that would result.

- Fixed Income Risk Concentration - Re-examine the decision to concentrate risk in fixed income, rather than better diversify the sources of risk across the whole portfolio, and avoid "crowding out" risk-reducing RRBs. See Duration Policy "Basis" Risk Oversight

- Quantitative Models - Continue to be vigilant about placing too much reliance on quantitative considerations, particularly if risk tolerances are low, given the high sensitivity of optimal asset allocations to capital market assumptions and the large number of inputs involved.

Mr. Viola's primary criticisms of the Mercer ALM Study were the use of a nominal, rather than real, liability benchmark, the rejection of RRBs, and the reduction of real assets as a hedge against inflation and interest rate risk. Mr. Viola expressed his concern as to the constraint MPI had imposed on the Basic Portfolio in particular, i.e. 100% fixed income and no RRBs, came at too high of a cost.

In Mr. Viola's opinion, determining a Minimum Risk Portfolio (MRP) (what Mercer referred to as the LBP) is the first step towards responsible long-term management of the portfolio. The purpose of developing a liability benchmark is to identify and measure the risk of the

liabilities and, therefore, it must reflect the true risks inherent in those liabilities (e.g., duration, inflation).

As well, Mr. Viola emphasized that the liabilities of the portfolios define themselves and are not a function of risk tolerance. That is, modeling liabilities is not an investment choice. In his view, the LBP adopted by Mercer conflated the design of a true liability benchmark with the ultimate portfolio selected, and was compromised by assumed capital market expectations, i.e. expected level, as opposed to volatility, of inflation.

In Mr. Viola's opinion, the LBP adopted by Mercer, based on the Corporation's investment constraints, understated the significance of inflation volatility and real interest rate risk, which makes duration management less effective. As such, risk had been misidentified and mismeasured in the Nominal Liability Benchmark utilized by Mercer.

By not capturing this inflation risk, in Mr. Viola's view, the true risk of having nominal bonds support real liabilities was not properly measured. Mr. Viola described this mismatch as "basis risk" resulting in "tracking error". Based upon Mercer's data, Mr. Viola calculated this tracking error between the Real and Nominal Liability Benchmark Portfolios in the Mercer ALM Study to be 4.5% for the Basic Portfolio, which is material given the Corporation's very low risk tolerance of ~3.8% surplus volatility.

Further, the asset allocations that flow from an optimizing process depend materially on whether a nominal or real liability benchmark is selected. In Mr. Viola's opinion, MPI's "free risk" bucket placed unnecessary constraints on the investments and actually resulted in material risk over the long term. According to Mr. Viola a mix of low-risk and risky assets together provides a better risk versus return trade-off than assets concentrated in either one. MPI's determination of short-term rate stability would come at cost of long-term opportunity and create a risk of higher long-term rate instability. In Mr. Viola's view, the focus should be on a full portfolio designed to mitigate longer horizon risks and achieve higher returns by taking different kinds of risks in a prudent fashion. In

his opinion, RRBs, which were rejected, and real assets, which were reduced by MPI, are the best hedge against long-term risks.

Based upon the further modelling conducted by Mercer pursuant to Order 124/18, at current risk levels (i.e. a surplus volatility of 3.8%), Mercer's efficient frontier analysis suggested that the expected excess return above the liability benchmark drops by ~0.8% when RRBs are excluded from the Basic Portfolio, and ~0.2% when excluded from the Pension Portfolio. Mr. Viola acknowledged that, for modelling purposes, the excluded RRBs would have been reinvested in other asset classes which might affect the performance of the portfolio and, therefore, the exclusion of RRBs might not fully account for the reduction in the expected return. Further, the reinvestment of the excluded RRBs might be in asset classes MPI had rejected as too risky, such as private equity; however, this could not be determined as Mercer had not provided this information.

Mr. Viola referred to the difference in the expected return for portfolios without RRBs as the "opportunity costs" of rejecting RRBs which, when extended over the outlook period, are significant. Accordingly, Mr. Viola did not share the concerns of the Corporation in rejecting RRBs.

Mr. Viola also testified that, based on Mercer's analysis, the real liability benchmark indicates that the optimal allocation to RRBs for the Basic Portfolio would be ~40% at the current risk (3.8%), increasing to 66% for no tolerance for risk; and for the Pension Portfolio, the optimal allocation would be ~45% at the current risk level and 81% for minimum risk. As well, the Mercer analysis indicates that the optimal allocation to real estate and infrastructure would be ~16% to 20% of the RRB allocation for the Basic Portfolio and 6.5% to 8% for the Pension Portfolio.

Based on the foregoing, CAC argued that the Mercer ALM study was not conducted or implemented by MPI in a reasonable or prudent manner. CAC submitted that there are significant risks of long-term rate instability as well as the likely prospect of lower returns associated with MPI's proposed asset allocation.

Accordingly, CAC recommended that:

- MPI should be asked to revise the current ALM study in light of Mr. Viola's eight recommendations;
- If MPI chooses not to revise current ALM study, a 0.5% annual reduction in rates should be ordered until such time as MPI can establish it selected investment portfolios in a reasonable and prudent manner (noting that this does not reflect the opportunity cost at comparable risk); and
- Further external experts retained by MPI who are testifying before PUB should be directed to identify whether in their professional judgment the methodology is consistent with professional best practice.

CMMG

CMMG also argued that the Board should continue to hold the Corporation's "feet to the fire" to ensure it does a diligent job of matching assets and liabilities, making good investment selections, and managing its claims and administration prudently.

7.6. Board Findings

The Board did not receive the Mercer ALM study until after the 2018 GRA had concluded and reviewed it as part of this GRA.

When it comes to the Corporation's overall investment strategy, the Board recognizes that its oversight role does not extend to directing the Corporation as to the particulars of its portfolio management.

In this Application, the Board received considerable and detailed information regarding the steps it is taking to improve its asset liability management. Based on the evidence presented to the Board, the Corporation had a range of options available to it with respect

to its portfolio composition. It appears to the Board that the Corporation has selected from a range of reasonable options for its portfolios as a result of the Mercer ALM study.

The Board received with interest Mr. Viola's critical analysis of the Mercer ALM Study and recognizes the merit in his opinion that the Corporation should have a full portfolio designed to mitigate longer horizon risks and achieve higher returns by taking on different risks in a prudent fashion. It may be the case that the Corporation has foregone an opportunity to hedge against long-term risks by rejecting RRBs and reducing real assets. To that end, to test the reasonableness of the Corporation's portfolio, the Board directs that the Corporation set up and run shadow portfolios for the Basic and Pension portfolios effective March 1, 2019, with the inclusion of Real Return Bonds as part of an optimal bond portfolio mix. Given the numerous variables attributable to such shadow portfolios, the Board directs the Corporation to consult with the Board on the selection and management of the assets chosen for the shadow portfolios. The Board further orders the Corporation to file, in the 2020 GRA, a report comparing the returns of the shadow portfolios with those selected by MPI. The Board expects that the results of that comparison will be of assistance in determining whether the portfolio selected by the Corporation provided optimal returns.

The Board would point out that as set out above, while the Corporation sought Mercer's advice through the Mercer ALM Study, the Corporation then proceeded to put constraints on the Mercer ALM study. The Board is of the view that it would be beneficial for the Corporation to inform itself and the Board as to how the Basic and Pension portfolios would perform had the Corporation not imposed those constraints. Therefore, the Board directs that the Corporation immediately engage Mercer to run shadow portfolios for the Basic and Pension portfolios effective March 1, 2019, without the constraints imposed by the Corporation, and file Mercer's report in that regard in the 2020 GRA.

As is clear from the foregoing, the Board intends to review the results of the Corporation's new Asset Liability Management strategy in the 2020 GRA. Therefore, the Board directs that in the 2020 GRA, the Board file a post-implementation review of the Corporation's

new Asset Liability Management strategy. The review should provide an update on the progress of implementation of the new portfolios, the disposition of the existing portfolio to fund new investment classes, interest rate risk exposure changes, investment income reporting changes including the allocation methodology for balance sheet and investment income and Investment Policy Statement changes.

The Board expects that the shadow portfolios and the post-implementation review will serve to inform it, and the Corporation, as to whether the Corporation's Asset Liability Management strategy is reasonable.

8. RATE STABILIZATION RESERVE AND TARGET CAPITAL RANGE

8.1. Purpose of the RSR

By Order 162/16, the Board approved the following definition of the purpose of the Rate Stabilization Reserve (RSR):

> *To protect motorists from rate increases that would otherwise have been necessary due to unexpected variances from forecasted results and due to events and losses arising from non-recurring events or factors.*

8.2. Basic RSR and Total Equity Balances

In its Application, the Corporation requested a Basic Total Equity target capital range of $143 million to $305 million. The lower threshold of $143 million was found to be equivalent to a 34% Minimum Capital Test (MCT) ratio, and was based on an adaptation of the Dynamic Capital Adequacy Testing (DCAT) analysis based on a 1-in-40-year probability level, with routine management / regulatory action, over a two-year time horizon. The upper threshold of $305 was found to be equivalent to an 85% MCT ratio, based on a two-year, 1-in-40 DCAT scenario with no management action.

A summary of the recent actual and expected future, composition of Basic total equity is provided below:

	Actual		Forecast	Projected	Outlook
Years Ending 28/29 February	**2017**	**2018**	**2019**	**2020**	**2021**
Basic RSR Opening Balance	194	99	171	306	324
Basic Net Income (Loss)	(123)	35	135	18	18
Basic RSR Before Transfers	71	134	306	324	342
Transfer in from Non-Basic Retained Earnings	27.8	37	-	-	-
Basic RSR	**99**	**171**	**306**	**324**	**342**
Basic AOCI	82	40	(52)	(44)	(35)
Basic Total Equity	**181**	**211**	**254**	**280**	**307**

As in the past, the Board also looks to the overall financial strength of the Corporation in establishing rates. On an overall basis, as at February 28, 2017 the Corporation reported retained earnings of $261.5 million (including $162.3 million in Extension and SRE) and total equity of $357.2 million (including $176.2 million in Extension and SRE).

8.3. Dynamic Capital Adequacy Testing (DCAT)

The requirements for an actuary undertaking a DCAT investigation for a Canadian property-casualty insurance company are set out in the Standards of Practice promulgated by the Canadian Institute of Actuaries, along with additional guidance provided in Educational Notes. DCAT was developed by the Canadian Institute of Actuaries to address a private sector regulatory requirement for a financial condition report to be prepared annually by the appointed actuary for those insurers subject to that regulation. DCAT tests the forecasted financial strength of an insurer's capital position under a series of plausible adverse scenarios addressing a number of specified, different risk factors.

The Standards of Practice specify that an insurer's financial condition will be deemed satisfactory "*if throughout the forecast period, under the base scenario and all plausible adverse scenarios, the statement value of the insurer's assets is greater than the statement value of its liabilities, and under the base scenario, the insurer meets the supervisory target capital requirement.*"

The annual Basic DCAT investigation undertaken by the Corporation's Chief Actuary and Vice President, Product and Risk Management is done because it reflects prudent best practices in Canada, as a means to identify plausible threats to the Corporation's satisfactory financial condition, actions which lessen the likelihood of those threats, and actions that would mitigate a threat if it materialized.

In general, the DCAT base scenario financial forecast would reflect the best estimate financial forecast of insurance operations. In a Basic context, this generally means the DCAT base scenario financial forecast matches the financial forecast for the contemporaneous GRA.

In the current GRA, this is true in all respects (including the use of a Naïve interest rate forecast) except that the DCAT base scenario financial forecast excludes the expected revenue arising from the Corporation's proposed Net CMP, which gradually rises from about $22.7 million up to $25.6 million on a written premium basis from 2019/20 to 2022/23.

In defending its decision to exclude the Net CMP from the DCAT, the Corporation argued that:

- If Basic has a satisfactory financial condition without a CMP, it should also have a satisfactory financial condition with a CMP;
- It is appropriate to exclude any assumed capital adjustments in the best estimate base scenario forecast until such time that the Corporation brings forward and gets approval for a capital management plan;

- It is not appropriate to include the CMP in the estimation of the Basic target capital range, which is adapted from the DCAT; and

- Exclusion of any proposed capital adjustments in the estimate of the Basic target capital range will result in more consistent year-to-year assessments of the capital targets.

The DCAT investigation included in the current application was otherwise prepared in a manner consistent with prior years. Because Basic's financial forecast, and the DCAT base scenario, both reflect the expected impact of the Corporation's proposed ALM strategy, sensitivity to shifting interest rates and any decline in the market value of equity investments has been significantly reduced for Basic. Nevertheless, a Combined Scenario, reflecting adverse changes to interest rates, equity investments and loss ratios which are estimated to be plausible in aggregate, continues to be identified as the most significant plausible adverse scenario tested in the DCAT investigation, as in prior years.

The Corporation's Chief Actuary concluded that the future financial condition of Basic is satisfactory as at February 28, 2018. In its evidence, the Corporation also indicated that it is presently working on enhancements to its modelling of the risk associated with the misestimation of Basic's policy liabilities, the benefits of which will be reflected in future Basic DCAT investigations.

8.4. Target Capital Analysis

In recent years, through an extensive collaborative process, an approach to estimating a Basic target capital range was developed as an adaptation of the DCAT investigation. At a very high level, the Basic target capital analysis uses the most significant plausible adverse scenario identified in the DCAT investigation to estimate what level of Basic Total Equity is needed at the start of the forecast period such that:

- For the lower threshold, Basic Total Equity remains above $0; and

- For the upper threshold, Basic Total Equity remains above the lower threshold.

In each instance, the modelling is done at a specified probability level for the adverse scenario over a specified time horizon. Over the course of recent years, a consensus had been reached that a 1-in-40-year (or 97.5th percentile) probability level and a two-year time horizon are appropriate for Basic for both the lower and upper thresholds of the Basic target capital range.

In the 2018 GRA, the Corporation requested a target capital range of $201 million to $438 million. In Order 130/17, the Board set a Basic target capital range of $180 million to $325 million for the 2017/18 fiscal year following the consensus approach described above, using an iterative modelling approach and assuming:

- For the lower threshold, the adverse scenario be considered after routine management / regulatory actions (including rate changes and RSR rebuilding fees); and

- For the upper threshold, the adverse scenario be considered after routine management / regulatory actions (including only rate changes and not including RSR Rebuilding Fees).

The previously Board-approved iterative modelling approach tests a specified target capital level against specified adverse circumstances.

In the current application, the Corporation did not follow the iterative methodology, citing the following reasons:

- The lower threshold must be greater than or equal to the minimum capital required to achieve satisfactory financial condition;

- Any target capital methodology must be based on best estimates;

- The target capital analysis must reflect an appropriate time horizon for which the

Corporation can respond to adverse financial events;

- The lower and upper thresholds are calculated before the inclusion of capital maintenance or capital build/release provisions; and

- For the RSR to be effective and reduce the incidence of RSR rebuilding fees, the Basic Total Equity balance cannot be at or about the lower threshold for a material period of time.

The Corporation's proposed modelling approach tests the current Basic financial forecast (in this instance, excluding the proposed Net CMP), shifted to a specified target capital level at the start of the forecast period, against specified adverse circumstances.

The Corporation also elected to estimate the upper threshold based on modelling of the adverse scenario before routine management / regulatory actions.

In the Application as originally submitted, and based on the foregoing approach, the Corporation proposed a Basic Total Equity target capital range of $143 million to $305 million, which it indicated was equivalent to a range of 34% to 85% when expressed in terms of the MCT.

In MPI Exhibit #26, filed in the course of the public hearings, the Corporation provided an updated estimate of the Basic target capital range reflecting market interest rates as of the end of September 2018. This updated Basic Total Equity target capital range was $140 million to $315 million (or an MCT range of 34% to 88%), after correction of a calculation error with respect to the lower threshold was provided in oral testimony.

MPI Exhibit #26 also provided the estimated Basic target capital range following the previously Board-approved iterative modelling approach using a 50/50 interest rate forecast reflecting market interest rates as of the end of September 2018. This alternative Basic Total Equity target capital range was $122 million to $250 million.

8.5. Interveners' Positions

CAC

Dr. Simpson and Ms. Sherry's report, *The Role of the DCAT and Interest Rate Forecasting* (DCAT/IRF Report), addressed the role of DCAT in determining the Basic Total Equity target capital range.

The DCAT/IRF Report reviewed the chronology of various proposals for setting target capital, which ultimately resulted in the current modified DCAT analysis. Of particular note, was the initial establishment of an RSR Range based on a range of Percentage of Premiums (PoP), and later reliance on the MCT ratio. The major shortcoming of those methodologies, according to Dr. Simpson and Ms. Sherry, was that they are not directly linked to the actual risks facing the Corporation. The benefit of the DCAT methodology is that it has a direct connection between specific and justifiable risks posed as adverse events grounded in historical evidence, and the future financial condition of the Corporation.

Dr. Simpson and Ms. Sherry expressed concern that MPI is using an MCT approach to set the lower and upper threshold. Dr. Simpson's criticism of the approach requested by the Corporation was that it is difficult to attach meaning to any specific MCT level in terms of specific risks and associated tolerance levels. The DCAT methodology, on the other hand, captures specific financial risks as they evolve based on analysis of historical evidence and using established risk assessment practices.

The DCAT/IRF Report recommended that the setting of the RSR continue to be informed by the DCAT methodology and PoP. Although the PoP methodology has not been referred to in any recent Board Orders, Dr. Simpson and Ms. Sherry were of the view that they are not aware of any Board Order that explicitly asserts that PoP would no longer be used to set the RSR Range.

Dr. Simpson and Ms. Sherry recommended that the 50/50 interest rate forecast be used to determine the DCAT analysis to establish the RSR Range, as well as the break-even rate indication.

CAC suggested that a distinction needs to be made between rate volatility and rate shock, and argued that the purpose of the RSR is to prevent rate shock, adding that the Corporation agreed that moderate RSR rebuilding fees do not constitute rate shock. CAC also reminded the Board of its earlier conclusion that the RSR should not provide protection against variances on matters within the control of management, such as certain categories of operating expenses.

CAC ultimately recommended approval of a Basic Total Equity target capital range of $122 million to $250 million, based on the previously Board-approved iterative methodology using a 50/50 interest rate forecast updated to the end of September 2018, as reflected in MPI Exhibit #26.

CMMG

CMMG reminded the Board of the significant growth in Basic's target capital range since 2005, a period over which the Corporation confirmed that there were no significant drawdowns of the RSR as a result of insurance issues. CMMG argued that the RSR is already in excess of $200 million, a level far larger than what is needed, given the history of the Corporation in meeting its mandate to Manitobans.

8.6. Board Findings

The Board hereby approves a Basic Total Equity target capital range for 2018/19 fiscal year of $140 million to $315 million, based on the Corporation's target capital analysis updated to reflect market interest rates as of the end of September 2018 (again using the Naïve interest rate forecast). The Board also directs that, for the next GRA, the DCAT base scenario forecast, also used in the Basic target capital analysis, must

fully reflect any expected capital adjustments arising from the thorough capital management plan which the Board will also direct to be proposed in the next GRA.

With this decision, the Board recognizes that is has departed from Order 130/17 with respect to the Basic target capital modeling approach. In that GRA, MPI requested a lower target capital threshold of $201 million and an upper threshold of $438 million. The Board approved a Basic Total Equity target capital range of $180 million to $325 million based on an iterative modeling approach designed to test specific target capital levels. The Board acknowledges the concerns again raised by the Corporation with respect to this approach, including:

- That the resulting lower threshold to the Basic target capital range is below the level it believes is required for Basic to have a satisfactory financial condition;
- That the upper threshold to the Basic target capital range should be modeled before routine management / regulatory actions;
- That inclusion of the Net Capital Maintenance Provision in the base scenario financial forecast is not appropriate for Basic target capital purposes; and
- That the assumed capital transfers from the Extension line of business are problematic because they represent amounts that the MPI Board of Directors may be unable, or unwilling to transfer, and assume a subsidization of Basic that is inconsistent with the principle that Basic should be self-supporting.

All other things being equal, the lower the Basic Total Equity target capital lower threshold, the more likely that the need for an RSR rebuilding fee will be deferred. This is because Basic Total Equity needs to fall farther before triggering that outcome. In a similar manner, the lower the upper threshold is set for the Basic Total Equity target capital range, the more likely that the need for an RSR rebate will come sooner, as Basic Total Equity does not need to rise as far before triggering that outcome.

Furthermore, in general terms, and all other things being equal, the narrower the width of the Basic Total Equity target capital range, the more likely that a given GRA will need to request either an RSR rebuilding fee or an RSR rebate, as the narrower range permits less volatility in actual versus expected Basic financial results before triggering one of these outcomes.

These general observations speak to the importance of setting the Basic target capital range to reflect modeling of the risks faced by Basic over an appropriate time horizon and considering the Corporation's appetite for risk.

The Board acknowledges the Corporation's view that adequate capital in the RSR is required in order to permit MPI to provide stable and predictable Basic rates, and recognizes the risks associated with Basic being undercapitalized, leaving MPI and ratepayers in a vulnerable position in the event of severe adverse events. The question facing the Board every year is what constitutes "adequate capital" as the Board is also concerned that rates should not be increased simply to provide the Corporation with a financial cushion. What is required are just and reasonable rates. The Board recognizes, however, that considerable work has been devoted and progress made over many previous GRAs and through a collaborative process with stakeholders on the issue of the appropriate methodology to be used to establish the Basic Total Equity target capital range. The Board is concerned that it is receiving the same positions from the parties year after year, that the level of capital is either inadequate or too generous. The Board would like to avoid re-visiting the same arguments and, rather, would prefer to establish a standard so that the issue can be determined for a longer period than one year and then the results of a standard methodology can be evaluated. To this end, the Board intends to engage the services of an independent consulting actuary with experience in target capital analysis to:

- Engage stakeholders in discussion to understand their respective preferred Basic target capital analysis approaches; and

- Prepare expert evidence for the next GRA setting out their opinion on best practices for Basic target capital analysis purposes.

The Board's approval of a Basic Total Equity target capital range of $140 million to $315 million, reduced from that approved in Order 130/17, takes into account the clear evidence that the Corporation's risk profile has been favourably affected by the ALM initiative. The Board's acceptance of the results of the Corporation's methodology in this Order should not be seen as a specific endorsement or rejection of any particular approach to the Basic target capital analysis going forward, as the Board intends to examine this issue further, following receipt of the independent consulting actuary's expert evidence in the 2020 GRA.

The Board has, in past Orders, expressed the view that the Corporation's non-compulsory Extension line of business should be regulated. One of the reasons for this is the Board's concern that the level of Basic Total Equity could be depleted at a time when the Extension line of business contains significant reserves. However, the Board's concern is alleviated somewhat given that the Corporation intends to bring forward a capital management plan with rules for transfers from other lines of business. The Board will withhold comment in this Order that it be given the jurisdiction to regulate Extension, and will await the review of the capital management plan at the next GRA.

9. ROAD SAFETY

In Order 130/17, the Board indicated that the issue of road safety would not form a significant part of this Application, as the Board had ordered that a Technical Conference take place in early 2019, addressing in depth a number of road-safety related issues. The Board commented that, in addition to the Interveners to the 2018 GRA, Technical Conference would benefit from the involvement of the membership of the Provincial Road Safety Committee and the Board intends to invite those members to participate in the conference.

The Board further commented that it expects that addressing road safety and loss prevention matters in this venue will invite productive discussion and collaboration, such that significant progress in that regard will be demonstrated in the 2020 General Rate Application.

Accordingly, apart from an examination of operating expenses, road safety was not reviewed in this GRA. With respect to road safety expenditures, MPI forecasted to spend $12.7 million in Basic Road Safety and Loss Prevention Programs in 2019/20. The largest component is to be spent on Driver Education, including the High School Driver Education program, followed by Impaired Driving prevention strategies, Auto-Crime prevention strategies, followed by Advertising and Sponsorships, Road Safety Programming, and Road Watch.

The Board did hear from the Corporation that it has discontinued its immobilizer program for 2019/20 as a result of all new vehicles now having built-in electronic immobilizer technology, and that it estimates the related savings to be approximately $1 million. MPI also discontinued the Entry-Level Professional Truck Driving training course, because, it reported, the framework was well-established, and funding was available from other sources.

10. PRESENTERS

The Board heard from a series of presenters at the hearing of the Application. The presenters are not sworn witnesses and were not cross-examined. As such, although the content of the presentations is not evidence, the Board, MPI and the interveners received the information presented for consideration only. As always, MPI will respond to each presenter in writing, with respect to the presentation made to the Board and file a copy of the response with the Board

Nick Roberts - Manitoba Used Car Dealers' Association (MUCDA)

The MUCDA was founded in 1992. The majority of the largest used car dealers from across Manitoba, as well as some new car dealers, are members of the MUCDA, which is the largest trade association representing the automobile dealers Manitoba. The MUCDA is involved in the development of consumer protection legislation, working at both the Ministerial and administrative levels to advocate for the interests of used car purchasers.

Mr. Roberts commented on what is taken into account when policyholders make a claim on a used vehicle. His concern was that, after a collision, while MPI provides coverage for the cost of repairing the vehicle, there is no indemnity for the associated decrease in value when a vehicle has an accident history. From his perspective, buyers will not want to pay the same amount for a vehicle with an accident history as for one that is accident-free.

Mr. Roberts took issue with MPI's policy that the reduction in value to a vehicle after an accident is not a loss that it should cover. He acknowledged that section 50(1) of the Automobile Insurance Coverage Regulation limits coverage to direct and accidental loss or damage, but argued that MPI has wrongly interpreted "direct loss" to mean only the physical damage to a vehicle. He argued that it is the expectation of policyholders that they will be indemnified for the loss of market value to the vehicle, because the loss of market value is a foreseeable consequence of a collision.

Mr. Roberts took the position that the Board can test the impact upon MPI's bottom line that would result if MPI began to pay out claims on the basis that vehicle owners likely expect, which includes the loss in market value.

Jonathan Westcott and Shane Saskiw - TappCar

Mr. Westcott and Mr. Saskiw are the founders of TappCar, a Transportation Network Company (TNC) operating in Manitoba. They appeared before the Board to make submissions about MPI's Vehicles for Hire (VFH) insurance model.

TappCar has been in operation for approximately two and a half years and has completed over three million rides. It has been operating in Winnipeg since March of 2018 and has completed over 100,000 rides. It has also run a pilot project in Steinbach, Manitoba.

Mr. Westcott and Mr. Saskiw described the VFH insurance model implemented by MPI as a "leading product." They advised that they have researched insurance products for TNCs in other jurisdictions, and the MPI product is advantageous for the TNCs and their drivers. In particular, drivers appreciate the flexibility of the four time bands available. Many of TappCar's drivers have purchased all four time bands, but those with lower incomes or those with more demanding full-time jobs appreciate the ability to pay the lower premiums associated with purchasing fewer time bands. The average premium paid by a TappCar driver is $200-$300 per year, which is affordable. Further, they were of the view that requiring the driver to place insurance results in the driver taking better care of the vehicle than if the TNC was required to place all of the insurance. As a result, TappCar's loss ratios are substantially higher in Alberta than they are in Manitoba. In summary, they characterized MPI's product as unique, successful, and affordable. Further, that affordability has fostered a competitive TNC marketplace in Winnipeg.

Charles Reesinck

Mr. Reesinck is a current resident of Winnipeg, who advised that he has also lived in New York City and in Paris. He raised concerns about the issue of noise pollution in Winnipeg, describing it as an epidemic. He advised that Paris has taken action against noise pollution and is not as noisy as New York.

Mr. Reesinck recommended that MPI should collect a premium from ratepayers to account for noise pollution caused by vehicles. He also expressed the view that MPI management should engage in discussions with the Government of Manitoba to address the issue of noise pollution and noise awareness.

11. IT IS THEREFORE ORDERED THAT:

11.1 There shall be an overall 1.8% rate increase in compulsory Motor Vehicle Premiums for the 2018/19 insurance year, effective March 1, 2019 for all major classes combined, which rate increase BE AND HEREBY IS APPROVED. This rate increase is as derived by the Corporation in accordance with Accepted Actuarial Practice in Canada, based on a Naïve interest rate forecast taking into account interest rates as at September 30, 2018, and taking into account the Net Capital Maintenance Provision applied for by the Corporation.

11.2 The Corporation shall file for approval by the Board, within five business days from the date of this Order or such other time as may be agreed to by the Corporation and the Board, a table of indicated rate changes and approved rate changes (i.e., after capping and rebalancing) by Major Class (and overall) reflecting the approved overall 1.8% rate increase.

11.3 MPI's requests that there be no change in Permit and Certificate rates, Vehicle Premium Discounts, Service and Transaction Fees, or Fleet Rebates or Surcharges BE AND HEREBY ARE APPROVED.

11.4 In the 2020 GRA, the Corporation shall report back on its tracking of interest rate movements and how this has informed its decision on interest rate forecasting.

11.5 In the 2020 GRA, the Corporation bring forward a thorough capital management plan, encompassing the entire Corporation and including the following:

a. Minimum, maximum, and/or target capital level for all lines of business;

b. A Capital Maintenance Provision built into ratemaking;

c. A capital build and release methodology based on the capital targets;

d. Clearly defined policy-based constraints on the speed and magnitude of the combined rate impact of rate changes, capital maintenance, capital build, and capital release provisions;

e. Clearly defined rules on the transfer of capital from other lines of business; and

f. Evolving the basis of estimating Basic's Net Capital Maintenance Provision in a manner consistent with the objective of promoting stability over time in this estimate.

11.6 There shall be a Technical Conference, to be facilitated by the Board at a mutually convenient time and in sufficient time to allow any findings from the Technical Conference to be fully reflected in the 2020 GRA, with the objective of developing a stakeholder consensus around a capital management plan, through discussion of the Corporation's draft proposal.

11.7 The rates applied for by the Corporation in its Vehicles For Hire Rate Application, filed with the Board on December 15, 2017, and approved on an interim basis by the Board in Order 11/18, are hereby approved on a final basis.

11.8 In the 2020 GRA, the Corporation shall report on its claims experience to date for the Vehicles for Hire class.

11.9 In the 2020 GRA, with respect to the Driver Safety Rating system, the Corporation shall report on the progress of its public consultation efforts, its preliminary research on the no or low cost options for rating models, as well as on its decision on whether to proceed with data collection for the higher cost options.

11.10 In the 2020 GRA, the Corporation shall file its updated IT Strategy.

11.11 In the 2020 GRA, the Corporation shall file an update, prepared by Gartner, to its 2018 PDR Program Evaluation. The Corporation shall provide to Gartner all relevant information such that Gartner will be able to fully evaluate the PDR program's benefits and the costs to operate and maintain the PDR program.

11.12 In advance of the 2020 GRA, the Corporation shall engage in discussions on an ongoing basis with the Board, with respect to progress on the Legacy Modernization project, any business cases created for the initiative, and the establishment of higher-level key performance indicators.

11.13 In the 2020 GRA, the Corporation shall provide an update of its progress on the Legacy Modernization initiative, file any business cases created for the Legacy Modernization initiative, and any higher-level key performance indicators.

11.14 In the 2020 GRA, the Corporation shall provide updates on all Business Transformation Office-managed projects of $500,000 or more in the 2018/19 Capital Budget.

11.15 In the 2020 GRA, the Corporation shall report on its progress in reducing the ratio of IT consultants to internal staff, in particular project management roles, and provide an update as to measures taken by the Corporation to improve the management of its relationships with IT vendors.

11.16 In the 2020 GRA, the Corporation shall file an update to the Gartner Benchmark Findings and Recommendations Executive Report, including an update to its IT Score, with the Board.

11.17 The Corporation shall run shadow portfolios for the Basic and Pension portfolios, effective March 1, 2019, with the inclusion of Real Return Bonds as part of an optimal

bond portfolio mix. The Corporation shall consult with the Board on the selection and management of the assets chosen for the shadow portfolios.

11.18 In the 2020 GRA, the Corporation shall file a report comparing the returns of the shadow portfolios as set out in Directive 11.17, with those implemented by the Corporation.

11.19 The Corporation shall immediately engage Mercer to run shadow portfolios for Basic and Pension effective March 1, 2019, without the constraints imposed by the Corporation, and file Mercer's report in that regard in the 2020 GRA.

11.20 In the 2020 GRA, the Board shall file a post-implementation review of the Corporation's Asset Liability Management strategy. The review shall provide an update on the progress of implementation of the new portfolios, the disposition of the existing portfolio to fund new investment classes, interest rate risk exposure changes, investment income reporting changes including the allocation methodology for balance sheet, investment income and Investment Policy Statement changes.

11.21 The Naïve interest rate forecast shall be used for rate-setting and the target capital analysis purposes.

11.22 For fiscal year 2018/19, the lower threshold for the Basic Total Equity target capital will be $140 million, based on the results of the Corporation's methodology updated to reflect market interest rates at the end of September 2018 BE AND IS HEREBY APPROVED.

11.23 For fiscal year 2018/19, the upper threshold for Basic Total Equity target capital will be $315 million, based on the results of the Corporation's methodology updated to reflect market interest rates at the end of September 2018 BE AND IS HEREBY APPROVED.

11.24 In the 2020 GRA, the Dynamic Capital Adequacy Testing base scenario forecast must fully reflect any expected capital adjustments arising from the Corporation's capital management plan.

11.25 On or before April 1, 2019, the Corporation shall file with the Board an update on the status of its compliance with all directives in this Order.

Board decisions may be appealed in accordance with the provisions of Section 58 of *The Public Utilities Board Act*, or reviewed in accordance with Section 36 of the Board's Rules of Practice and Procedure. The Board's Rules may be viewed on the Board's website at www.pub.gov.mb.ca.

Glossary of Acronyms and Terms

AAP	Accepted Actuarial Practice
Application	2019 General Rate Application
AOCI	Accumulated Other Comprehensive Income
Basic	Compulsory motor vehicle insurance
Board	Public Utilities Board
BW	Bike Winnipeg
CAA	Canadian Automobile Association
CAC	Consumers' Association of Canada (Manitoba) Inc.
CLEAR	Canadian Loss Experience Automobile Rating
CMMG	Coalition of Manitoba Motorcycle Groups
CMP	Capital Maintenance Provision
Corporation	Manitoba Public Insurance Corporation
DART	Driving Ahead in Real Time
DCAT	Dynamic Capital Adequacy Testing
DSR	Driver Safety Rating
Extension	Optional motor vehicle insurance
FTE	Full-Time Equivalent

Government	Government of Manitoba
GRA	General Rate Application
HRMS	Human Resource Management System
HTA	Highway Traffic Act
ICWG	Investment Committee Working Group (MPI)
IT	Information Technology
MGEU	Manitoba Government Employees' Union
Monopoly	Policies that can only be sold by one corporation (MPI)
MPI	Manitoba Public Insurance Corporation
Naïve Forecast	Interest rate forecast reflecting no change in interest rates from current levels
No-fault	Accident benefits not related to the fault of the driver
NPV	Net present value
PDR	Physical Damage Re-engineering
PIPP	Personal Injury Protection Plan
Province	Government of Manitoba
RoadWatch	MPI Initiative to target impaired driving through deterrence and detection including the use of enhanced enforcement
RSR	Rate Stabilization Reserve

SIRF	Standard Interest Rate Forecast
SRE	Optional Special Risk Extension motor vehicle insurance
TNC	Transportation Network Company
VMP	Value Management Process

Order No. 165/18

MANITOBA PUBLIC INSURANCE CORPORATION (MPI OR THE CORPORATION): AN ORDER APPROVING SPECIFIC COMPULSORY DRIVER AND VEHICLE INSURANCE PREMIUMS PURSUANT TO BOARD ORDER 159/18

December 14, 2018

BEFORE: Robert Gabor, Q.C., Chair
Irene Hamilton, Member
Robert Vandewater, Member
Carol Hainsworth, Member

WHEREAS

By Order 159/18 the Public Utilities Board (Board) varied the Application of Manitoba Public Insurance (MPI) for Basic premiums and fees for the Basic Automobile Insurance Program for the year ending February 29, 2020, and provided specific directions;

AND WHEREAS

On December 7, 2018, MPI filed with the Board a Basic Rate table and other documentation with the Board (filing) seeking the review and approval of the Board. On December 11, 2018, MPI filed with the Board certain revisions to the filing, following which the filing was consistent with the direction of the Board;

AND WHEREAS

The Board, on review of the said filing, finds the filing to be in accordance with the Board Directives of Order 159/18;

AND WHEREAS

Board decisions may be appealed in accordance with the provisions of Section 58 of *The Public Utilities Board Act*, or reviewed in accordance with Section 36 of the Board's Rules of Practice and Procedure (Rules). The Board's Rules may be viewed on the Board's website at www.pubmanitoba.ca.

IT IS THEREFORE ORDERED THAT:

The filing of MPI, being in accordance with the directives of Board Order 159/18, and as attached hereto, BE AND IS HEREBY APPROVED for premiums and fees to be charged effective March 1, 2019.

THE PUBLIC UTILITIES BOARD

"Robert Gabor, Q.C."
Chair

"Darren Christle"
Secretary

Certified a true copy of Order 165/18
issued by the Public Utilities Board

Secretary
