Mr. Darren Christle
Board Secretary and Executive Director
The Public Utilities Board
400 – 330 Portage Avenue
Winnipeg MB R3C 0C4

Dear Mr. Christle:

RE: Manitoba Public Insurance – 2019 General Rate Application (GRA)

In accordance with provisions of *The Crown Corporations Governance and Accountability Act* and *The Public Utilities Board Act,* Manitoba Public Insurance (MPI) is applying to the Manitoba Public Utilities Board (PUB) seeking approval of the rates and premiums for compulsory driver and vehicle insurance effective of March 1, 2019.

The GRA is available on the MPI website at:
https://apps.mpi.mb.ca/Rate-Application/2019/index.aspx

The Public Utilities Board may use the above URL on its website to direct the public to the GRA. Please note that the web posted version is password secured for editing. The password will be shared, by separate email, with the PUB and intervenors to allow editing of a locally saved version of the GRA.

In addition, USB flash drives loaded with an unsecured copy of the GRA, and Excel workbooks replicating each of the tables contained within the GRA will be provided directly to parties on Monday June 18th. Further, MPI has established a secure FTP site to host the Excel workbooks for the duration of the proceeding, and will make login credentials available to the PUB and intervenors.

Finally, certain materials in the GRA are commercially sensitive and will be the subject of a motion seeking confidential treatment pursuant to Rule 13 of the PUB Rules of Practice. MPI will file this motion upon completion of the prehearing conference.

Yours truly,

Michael Triggs
General Counsel and Corporate Secretary

MT/st

LEGAL APPLICATION

2019 GENERAL RATE APPLICATION

June 15, 2018

Manitoba Public Insurance

LEGAL APPLICATION

Manitoba Public Insurance (the Corporation, or MPI) hereby applies to the Public Utilities Board (the PUB, or Board) for approval of the Corporation's premiums charged with respect to compulsory driver and vehicle insurance (rates for service), in accordance with the provisions of *The Crown Corporations Public Review and Accountability Act* and *The Public Utilities Board Act.*

In the 2019 General Rate Application (GRA) for Basic Autopac the Corporation is requesting that the PUB approve the premiums charged with respect to compulsory driver and vehicle insurance (rates for service) effective March 1, 2019, including:

1. A 2.2% overall increase in Basic vehicle premium revenue (including Vehicles for Hire rates for service) comprised of:

    i. 0.1% increase to the break-even cost of policies
    ii. 2.1% increase for a Net Capital Maintenance Provision to maintain MPI's capital position through the rating year, as measured by the Minimum Capital Test. The Capital Maintenance Provision accounts for the positive impact of investment income on Basic's Rate Stabilization Reserve, and collects only the residual amount required to maintain Basic's capital position

2. A minimum (lower) RSR target of 34% Minimum Capital Test (MCT), (total equity equivalent of $143 million as at February 28, 2019), based on a 1-in-40 probability Dynamic Capital Adequacy Test (DCAT) scenario.

3. A maximum (upper) range RSR target of 85% Minimum Capital Test (MCT), (total equity equivalent of $305 million as at February 28, 2019), based on a 2 year, 1-in-40 DCAT scenario with no management action.

4. No changes to Miscellaneous Permits and Certificates

5. No changes to driver premiums through the Driver Safety Rating (DSR) system, and no change to Vehicle Premium Discounts

6. No changes to Basic Autopac Service and Transaction Fees

7. No Changes to Fleet Rebates and Surcharges

8. Consistent with the 2018 Vehicles for Hire (VFH) Interim Application, the continued:

    a) Eligibility of vehicles for hire for vehicle premium discounts
    b) Waiving of service fees for change of insurance for vehicles for hire

Tables detailing the requested rates and fees are presented in *Part VIII – ART Application Rate Tables*. Experience-based rate adjustments ranging from -15% to +15%, as shown in *Part V(ii) RM Ratemaking Appendix 3* based on adjustment rules shown in *Part V(ii) RM Ratemaking RM.5*. Combined classification offsets for all vehicles except off-road vehicles, to achieve revenue neutrality in implementing rate group, rate line and classification changes for 2019/20, as shown in *Part V(ii) RM Ratemaking Appendix 2.*

Discussion and analysis of the applied for Rate Stabilization Reserve (RSR) capital targets, and the Net Capital Maintenance Provision is provided in *Part VI RSR Rate Stabilization Reserve*.

In the 2019 GRA the Corporation is also requesting final approval of VFH rates for service, approved on an interim basis by PUB Order 11/18.

Bill 30, establishing *The Local Vehicles for Hire Act* ("the VFH Act"), received Royal Assent on November 10th, 2017. The VFH Act eliminates regulation of the taxi industry in Winnipeg through the Taxicab Board and transfers regulatory responsibilities for all vehicles for hire to each municipality in the Province of Manitoba. The VFH Act came into force on February 28, 2018 and allows for a new class of vehicles for hire in addition to the existing taxicab/livery service.

To offer compulsory insurance for vehicles for hire, MPI sought and obtained the Board's interim approval of premium rates both for this new class of vehicles for hire, and for new premium rates for the existing classes of vehicles for hire (taxicabs, limos and wheelchair accessible vehicles).

The Corporation is requesting final approval of the premiums charged with respect to compulsory vehicles for hire insurance (rates for service), effective March 1, 2018 including:

iii. Vehicles for hire rates for service for both the 2017/18 and 2018/19 insurance year in this application, based on rates approved in PUB Orders 162/16 and 130/17 respectively
iv. Changes to eligibility for vehicle premium discounts for vehicles for hire
v. Waiving of service fees for change of insurance for vehicles for hire
vi. A mechanism for refunding/collecting any variance between interim and final approved vehicles for hire Rates for Service

Rate tables for interim vehicles for hire rates for service are provided as Appendix 1 and Appendix 2 to the Interim Vehicles for Hire Application, included in this 2019 GRA as *Part V(ii) VFH Vehicles for Hire Appendix 1*.

COMPLIANCE WITH PUB ORDERS

2019 GENERAL RATE APPLICATION

June 15, 2018

Manitoba Public Insurance

COMPLIANCE WITH PUB ORDERS

The following table of concordance identifies MPI's compliance with directives from Order 130/17 approving the 2018 General Rate Application, and Order 11/18 approving the Interim Vehicles for Hire application. Links to the response to each directive are provided below.

PUB Order 130/17 – 2018 General Rate Application

Order Number	Order	Location in 2019 GRA
11.1	There shall be an overall 2.6% rate increase in compulsory Motor Vehicle Premiums for 2017/18 insurance year, effective March 1, 2018 for all major classes combined, which rate increase BE AND HEREBY IS APPROVED. This rate increase is as derived by the Corporation in accordance with accepted actuarial practice, based on a 50/50 interest rate forecast taking into account interest rates as at September 30, 2017, and using an estimated new money rate for cash flow discounting purposes.	Order 130-17 Compliance Filling
11.2	The Corporation shall file for approval by the Board, within five business days from the date of this Order, a table of indicated rate changes and approved rate changes (i.e., after capping and rebalancing) by Major Class (and overall) reflecting the approved overall 2.6% rate increase.	Order 130-17 Compliance Filling
11.3	There shall be an overall rate increase of 1.8% in driver premiums through the demerit side of the Driver Safety Rating program, which rate increase BE AND HEREBY IS APPROVED.	Order 130-17 Compliance Filling

Order Number	Order	Location in 2019 GRA
11.3 Varied	The requested changes to the driver premiums through the demerit side of the Driver Safety Rating program, which will produce a forecasted revenue increase of $17.5 million in fiscal year 2018/19 (an amount equivalent to an overall 1.8% increase in compulsory Motor Vehicle Premiums) BE AND HEREBY ARE APPROVED.	Order 130-17 Compliance Filling
11.4	MPI's requests that there be no change in Permit and Certificate rates, Vehicle Premium Discounts, Service and Transaction Fees, Fleet Rebates or Surcharges, or the discount on approved after-market and manufacturer/dealer installed anti-theft devices BE AND HEREBY ARE APPROVED.	Order 130-17 Compliance Filling

Order Number	Order	Location in 2019 GRA
11.5	There shall be a Technical Conference, facilitated by the Board at a mutually convenient time and in sufficient time to allow any findings from the Technical Conference to be fully reflected in the 2019 GRA, which shall seek a consensus approach to estimating a Capital Maintenance Provision, as well as seeking consensus on the following matters relating to the interpretation of rate setting in accordance with Accepted Actuarial Practice in Canada: • Basing the cash flow discount rate assumption on the expected new money rate averaged over the full proposed rating year rather than as at the start of that rating year; • Segregating the pension liabilities and the related supporting investment assets from the determination of the cash flow discount rate and the expected return on investment assets supporting Basic Total Equity; and • Improving recognition of investment fees in the determination of the cash flow discount rate and the expected return on investment assets supporting Basic Total Equity.	Technical Conference held at PUB Hearing Room on Friday March 2, 2018.
11.6	The Corporation shall file the results of its Service Fees review in the 2019 GRA.	*Part V(i) EXP. Appendix 2*

Order Number	Order	Location in 2019 GRA
11.7	There shall be a Technical Conference, facilitated by the Board, on the availability and practicality of other analytical tools and ratemaking methodologies to better determine DSR rates and vehicle premium discounts based on principal driver rating rather than simply registered driver rating. The date of the Technical Conference is to be mutually agreed upon as between the Board and MPI, but shall be sufficiently early such that the information shared in the Technical Conference will be included in the 2019 GRA.	Technical Conference held at PUB Hearing Room on Friday March 2, 2018.
11.8	In the 2019 GRA, the Corporation shall file proposed driver premium rates that are more statistically consistent with the estimated average claims cost per driver for each level on the demerit side of the DSR scale.	Held in Abeyance by Order 29/18. Please refer to Part V(ii) DSR.3
11.9	In the 2021 GRA, the Corporation shall file proposed vehicle premium discounts that are actuarially indicated based on principal driver performance evaluation.	Held in Abeyance by Order 29/18. Please refer to Part V(ii) DSR.3
11.10	In the 2019 GRA, MPI shall report back on its efforts to seek insight on longer tail experience from other jurisdictions, and in particular from the Société de l'assurance automobile du Québec.	*Part VIII EAR Appendix 1*
11.11	The Corporation shall file its new IT Strategic Plan with the Board forthwith following its approval by the MPI Board of Directors.	*Part IV(ii) IT Appendix 2*

Order Number	Order	Location in 2019 GRA
11.12	In the 2019 GRA, the Corporation shall file a detailed breakdown of its analysis on the costs to operate and maintain the PDR program.	*Part IV(ii) VM.3*
11.13	In the 2019 GRA, the Corporation shall file an update, prepared by Gartner, to its 2017 PDR Program Evaluation.	*Part IV(ii) VM Appendix 6*
11.14	In the 2019 GRA, the Corporation shall file a cost/benefit analysis of the five remaining projects to be completed as part of the PDR program, should no such cost/benefit analyses form part of the new IT Strategic Plan. The discount rate used in the cost/benefit analysis shall be higher than the 3% previously used in the PDR project cost benefit evaluation. The Corporation shall select and justify the use of an appropriate discount rate commensurate with the risks inherent in the project.	*Part IV(ii) VM.3*
11.15	In the 2019 GRA, the Corporation shall file a business case and a cost/benefit analysis for the IT Modernization project, specific to the AOL and CARS redevelopment or replacement.	*Part IV(ii) VM.2*
11.15	Directive 11.15 should be varied such that MPI will be required to file the business case and cost/benefit analysis in the 2020 GRA. The Board will also require that in the 2019 GRA MPI provide an update on the progress made towards completing the review and business case for the AOL and CARS redevelopment and replacement.	Varied by Order 29/18 *Part IV(ii) VM.2*

Order Number	Order	Location in 2019 GRA
11.16	The Corporation shall file the Mercer Canada Asset Liability Management study with the Board concurrently with its delivery to the MPI Board of Directors.	The three phases of the ALM study were delivered to the PUB as they were made available to MPI's Board of Directors. The last one was delivered on Feb 8, 2018.
11.17	The Corporation shall require Mercer Canada to update the Asset Liability Management Study as necessary in order to take into account the directives issued in this Order, to add an analysis of the bucket matching approach similar to that used by Saskatchewan Auto Fund, and to take into account each of the 18 recommendations made by Mr. Viola in the 2017 GRA, which are set out in Appendix E to Order 162/16.	Part VI INV: *Appendix12* *Appendix 13* *Appendix 14* *Appendix 15* *Appendix 16*
11.18	A Technical Conference shall be held on the Mercer Canada Asset Liability Management study, at a date to be mutually agreed upon as between the Board and MPI, but shall be sufficiently early such that the information shared in the Technical Conference will be included in the 2019 GRA.	Technical Conference held at PUB Hearing Room on Friday March 2, 2018.

Order Number	Order	Location in 2019 GRA
11.19	The 50/50 interest rate forecast shall be used for rate-setting and target capital purposes.	Order 130-17 Compliance Filling
11.20	For fiscal year 2017/18, the lower threshold for the Basic Total Equity will be $180 million, based on the iterative modelling approach over a two-year time horizon at a 1-in-40-year (97.5th percentile) outcome level after routine management / regulatory actions BE AND IS HEREBY APPROVED.	Order 130-17 Compliance Filling
11.21	For fiscal year 2017/18, the upper threshold for Basic Total Equity will be $325 million, based on the iterative modeling of a 1-in-40-year scenario over a two-year time horizon after routine management / regulatory actions BE AND IS HEREBY APPROVED.	Order 130-17 Compliance Filling
11.22	MPI shall enter into discussions with CMMG regarding a proposal for a pilot program for wildlife collision prevention initiatives and shall advise the Board of the discussions as they develop.	*Part VII LP Appendix 1*

Order Number	Order	Location in 2019 GRA
11.23	A Technical Conference shall be held on road safety and loss prevention in early 2019, which shall be initiated by the Board but on such dates as are mutually agreed as between the Board and MPI. Included within the Technical Conference shall be the following: Progress on the implementation of the Loss Prevention Strategy and Framework; Reports on the activities of the External Stakeholder Committee on Loss Prevention and the Provincial Road Safety Committee; Progress on the 2017-2020 Road Safety Operational Plan; Progress on the Provincial Road Safety Plan - Road to Zero; Reports on MPI's priorities for road safety and loss prevention;	MPI expects to begin preparations for this Technical Conference in Q3 of 2018

Order Number	Order	Location in 2019 GRA
	Reports on the success of the Drug Impaired Driving Communication Strategy and any other efforts undertaken by MPI to address drug-impaired driving; Reports on MPI's efforts to address speed and distracted driving; Progress on the High School Driver Education Program Redevelopment; An update on MPI's rural road strategy; A discussion / review of the incorporation of the social costs of collisions in MPI's road safety efforts; An effort to obtain feedback from members of the External Stakeholder Committee on Loss Prevention on the effectiveness of that committee; and A jurisdictional scan conducted by the Corporation of road safety measures, including wildlife collision prevention initiatives.	
11.24	On or before April 1, 2018 the Corporation shall file with the Board an update on the status of its compliance with all directives in this Order.	Letter filed on April 1 updating on the status of compliance.

PUB Order 11/18 – Interim Vehicles for Hire Application

Order Number	Order	Location in 2019 GRA
6.1	The Rates for Service for vehicles for hire for the 2017/18 and 2018/19 insurance years, as set out in Appendix 1 and Appendix 2 to the Vehicles for Hire 2018 Interim Application filed by Manitoba Public Insurance on December 15, 2017, BE AND HEREBY ARE APPROVED on an interim basis, effective March 1, 2018.	*Part V(ii) VFH.3*
6.2	The Corporation shall apply for final Rates for Service for vehicles for hire for the 2017/18 and 2018/19 insurance years in the 2019 General Rate Application.	*Part V(ii) VFH.3*
6.3	The Corporation shall refund or collect any variance between interim Rates for Service hereby approved and the Rates for Service finally approved through the 2019 General Rate Application (GRA).	*Part V(ii) VFH.3.1*
6.4	Vehicles for hire in all categories of the vehicles for hire pool shall be eligible for Driver Safety Rating vehicle premium discounts if registered by individual customer.	*Part V(ii) VFH.1*
6.5	The waiving of service fees for changes of insurance coverage for vehicles for hire BE AND HEREBY IS APPROVED.	*Part V(ii) VFH.1*
6.6	The Corporation shall inform vehicles for hire customers, in advance of placement of coverage, of the possibility of a refund or the collection of additional premiums due to a re-rating resulting from the final approval of Rates for Service for vehicles for hire through the 2019 GRA.	*Part V(ii) VFH.8*

Order Number	Order	Location in 2019 GRA
6.7	The Corporation shall develop and report on a plan for the collection of data specific to the vehicles for hire pool and shall file the report in the 2019 GRA. The plan the Corporation is to develop will include collection of information as to:	See below
6.7.1	A new vehicles for hire insurance use pool so that experience suitable for ratemaking can be tracked separately from other Basic vehicle classes;	*Part V(ii) VFH.6*
6.7.2	Tracking of ratemaking experience (e.g., exposures, premiums, and claim counts and amounts) within the vehicles for hire pool, separated by each sub-category within the vehicles for hire pool (e.g., use category, number of time bands, territory), as well as separated by each time band;	*Part V(ii) VFH.6*
6.7.3	Forecasting of claims incurred for the vehicles for hire pool; and A means of allocating to the appropriate time band those claims occurring during any overlap of time bands in which the customer has selected both of the overlapping time bands.	*Part V(ii) VFH.6*
6.7.4	The Corporation shall gather data on the number and frequency of changes made to insurance policies for vehicles for hire and provide a report in that regard in the 2019 GRA.	*Part V(ii) VFH.7*
6.8	In the 2019 GRA, the Corporation shall provide information as to the total cost resulting from the vehicles for hire rating model. The total cost information shall include, but will be not be limited to:	See Below

Order Number	Order	Location in 2019 GRA
6.8.1	The financial impact of changes on the Corporation's pro forma financial forecast;	*Part V(i) EXP Appendix 20*
6.8.2	Driver safety rating premium discounts;	*Part V(i) EXP Appendix 20*
6.8.3	Reduced deductible from $600.00 to $500.00 for taxicabs, limousines and accessible vehicles for hire;	*Part V(i) EXP Appendix 20*
6.8.4	One-time and ongoing information technology costs related to upgrading or modifying the AOL and CARS programs to accommodate vehicles for hire; and	*Part V(i) EXP Appendix 20*
6.8.5	Broker commission and service fees relating to transactions associated with vehicle for hire registration and time band selection.	*Part V(i) EXP Appendix 20*
6.9	In the 2019 GRA, the issue of Passenger VFH insurance rates as compared to the Taxicab VFH insurance rates be reviewed.	*Part V(ii) VFH.6*
6.10	In the 2019 GRA, the Corporation shall examine the issue of whether, for insurance purposes, the Taxicab vehicles for hire category should be eliminated such that Taxicabs would fall within another vehicles for hire use category.	*Part V(ii) VFH.6*
6.11	The Corporation shall monitor best practices and standards of the TNC industry and present the results of its monitoring in the 2019 GRA.	*Part V(ii) VFH.9*

Order Number	Order	Location in 2019 GRA
6.12	In the 2019 GRA, the Corporation shall file a report on engagement that it has conducted relating to vehicles for hire with any stakeholders such as the City of Winnipeg, other municipalities, TNCs, consumer groups, representatives of the taxicab industry and disability groups.	*Part V(ii) VFH.10*
6.13	Included among the issues to be examined in the 2019 Road Safety Technical Conference directed in Order 130/17 shall be:	MPI expects to begin preparations for this Technical Conference in Q3 of 2018
6.13.1	Safety for drivers and clients of VFH;	See 6.13 above
6.13.2	Safety and training standards for all VFH drivers; and	See 6.13 above
6.13.3	Safety issues relating to persons with disabilities and VFH.	See 6.13 above
6.14	The road safety information filed by the Corporation in the 2019 GRA include information regarding emerging road safety issues as a result of the introduction of TNCs in Manitoba.	*Part VII Loss Prevention*
6.1	The Rates for Service for vehicles for hire for the 2017/18 and 2018/19 insurance years, as set out in Appendix 1 and Appendix 2 to the Vehicles for Hire 2018 Interim Application filed by Manitoba Public Insurance on December 15, 2017, BE AND HEREBY ARE APPROVED on an interim basis, effective March 1, 2018.	*Part V(ii) VFH.3*

MINIMUM FILING REQUIREMENTS

The following table of concordance identifies the Minimum Filing Requirements (MFR) established by Public Utilities Board Order 61/18. Links to the response to each MFR are provided below.

MFR	Topic	Requested Information	Location in 2019 GRA
General			
A.1	Value Proposition	Please advise of any enhanced value or benefits flowing to Manitobans from MPI aligned with the Corporate Strategic Plan (this information can be contained with the Costs Containment section of the GRA)	*Part IV(i) Benchmarking BMK.1*
A.2	Cross Canada Rate Comparison	To the extent that the Corporation asserts that Manitoba has among the lowest vehicle and/or motorcycle rates in Canada, please provide a schedule reflecting the maximum, 75th percentile, median, 25th percentile and minimum rates underlying each representative rate cited in each jurisdiction relied upon.	*Part IV(i) Benchmarking BMK.4.3.1*
A.3	Pro-Formas	Please provide all Pro-Forma statements separating the vehicle premiums from any RSR Rebuilding Fees, and separating out amounts	*Part V(i) Pro Formas*

MFR	Topic	Requested Information	Location in 2019 GRA
		relating to any premium deficiency reserves. Where necessary, expand the pro-forma statements to show the requested itemizations, showing $0 as needed.	
A.4	Financial Statement	Please file a link to the Audited Corporate Financial Statements.	*Part VIII Annual Reports*
A.5	Risk Assessment and Management	Risk Management Evaluation table in a similar format as that filed in response to Information Request (CAC) 2-38 in the 2017 GRA.	*Part VI Risk Management Framework*
Net Income			
B.1	Quarterly Reports	Please file the Corporation's quarterly reports as available.	*Part VIII Annual Reports Appendix 2*
B.2	Financial Overview	Please file updated financial forecast comparisons for the most recently completed fiscal year and the current fiscal year with what was forecast at the last GRA, including detailed explanations of variances.	*Part V(i) Pro Formas*
B.3	Pro-Formas	Please provide a complete set of restated Pro-Forma statements reflecting each of the following:	

MFR	Topic	Requested Information	Location in 2019 GRA
		a) As proposed but excluding any proposed rate level change; b) As proposed but excluding any proposed RSR Rebuilding Fee; c) As proposed but excluding both any proposed rate level change and any proposed RSR Rebuilding Fee.	a) *Part V(i) Pro Formas* b) No RSR rebuilding fee proposed c) No RSR rebuilding fee proposed
B.4	Service Fees & Other Revenue	Please provide support for any proposed changes or for proposing no change.	*Part V(i)Revenues* *Appendix 2*
Investments			
C.1	Investment Management	Please provide a description of all aspects of the investment functions of MPI's portfolio highlighting any recent changes.	*Part VI INV:* *Appendix 1* *Appendix 2* *Appendix 3* *Appendix 4* *Appendix 5* *Appendix 8*
C.2	Equity Holdings & Impaired Investments	Please provide a schedule of the Corporation's equity investment holdings and impaired investments, both written off and currently held and including original book value,	*Part VI Investments* *Appendix 6,*

MFR	Topic	Requested Information	Location in 2019 GRA
		revised book value and current book value.	*Part VI Investments Appendix 7*
C.3	Investment Income Allocation	Please update the table of investment income allocation weightings including any changes in the basis of allocation among the lines of business, RSR and Pension.	*Part VI Investments INV.10.5*
C.4	Actual v. Benchmark Returns	Please provide a comparison by asset class of actual returns with the annual expected return benchmarks set out in the Investment Policy Statement for the last five years.	*Part VI Investments Appendix 10* Not required by Order 61/18
C.5	Investment Returns	Please provide a 5-year comparison of the Corporation's total annual investment return rates with the corresponding annual return rates of: a) the Workers' Compensation Board, b) the Teachers' Retirement Allowances Fund, c) the Civil Service Superannuation Board of Manitoba	*Part VI Investments INV.18*

MFR	Topic	Requested Information	Location in 2019 GRA
		d) Insurance Corporation of British Columbia, and e) Saskatchewan Auto Fund, and please provide commentary on any significant differences.	
Basic Expenses			
D.1	Benchmarking	Please file a complete trend analysis for Basic & the Corporation as a whole for the last five historical years through the outlook period, including all expenditures, showing compound annual growth rates separately for the historical period and for the outlook period.	*Part V(i) Expenses Appendix 1*
D.2	Benchmarking	Please provide a trend analysis since the inception of PIPP for the last five historical years through the outlook period, including growth in Claims Expenses, Operating Expenses, Claims Expenses per Claim and Operating Expenses per Policy relative to CPI.	*Part V(i) Expenses Appendix 1*
D.3	Benchmarking	Please provide an update of the performance indicators for the last five fiscal years through the outlook period. Please indicate all BI3	*Part V(i) Expenses Appendix 1*

MFR	Topic	Requested Information	Location in 2019 GRA
		Benchmarks and any other new indicators developed.	
D.4	Cost Allocation Methodology	Please advise of any changes in allocators, groupings of accounting units or purification adjustments used within MPI's Cost Allocation Methodology including any changes in the basis of allocation among the lines of business, RSR and Pension.	*Part V(i) Expenses EXP.5*
Claims Costs			
E.1	Claims Incurred	Please provide a breakdown of the number of individual claims and their severity by Major Class over dollar thresholds of $100,000, $250,000, $500,000, $1,000,000 and $2,000,000 for each of the last ten years.	*Part V(i) Claims Incurred Appendix 10*
E.2	PIPP Costs	Please provide a breakdown of PIPP costs by component coverage since the inception of PIPP, in both dollars and percentages.	*Part V(i) Claims Incurred Appendix 11*
E.3	PIPP Claims	Please provide a table of frequencies and severities by type of claim, since the inception of PIPP through to the forecast for the current fiscal year.	*Part V(i) Claims Incurred Appendix 12*

MFR	Topic	Requested Information	Location in 2019 GRA
E.4	Claims Forecasting	Please file a table for the last ten years showing original projected, revised forecast, and final actual frequencies/ severities/ claims incurred, broken down by coverage and for all coverages combined.	*Part V(i) Claims Incurred Appendix 9*
Operating & Administrative Expenses			
F.1	Operating Expenses	Please include the detail of the MPI operating expenses by category for the last five fiscal years through the outlook period, showing compound annual growth rates separately for the historical period and for the outlook period.	*Part V(i) - Expenses Figure EXP 31* *Part V(i) EXP Appendix 4*
F.2	Operating Expenses	Please provide schedule(s) by expense category for the last five fiscal years through the outlook period for Basic total operations, and Basic normal operations, showing compound annual growth rates separately for the historical period and for the outlook period.	*Part V(i) - Expenses Figure EXP 39* *Part V(i) EXP Appendix 5* *Part V(i) EXP Appendix 6*
F.3	Operating Expenses	Please provide a summary of Basic expenses by category for the last two fiscal years and through the outlook period, broken down between Claims Expenses, Operating Expenses, Road Safety Expenses, Regulatory/Appeal Expenses and in total, and shown separately for Normal Operations,	*Part V(i) EXP Appendix 2*

MFR	Topic	Requested Information	Location in 2019 GRA
		Improvement Initiatives and in total.	
F.4	Expense Details	Please provide a detailed breakdown by cost category of actual Basic Claims, Operating and Road Safety expenses for the last five fiscal years.	*Part V(i) EXP Appendix 3*
F.5	Capital Expenditures	Please provide a comparison between actual capital expenditures in the last fiscal year and that forecast at the last GRA and explain all material differences, including a breakdown of deferred development costs by project.	*Part V(i) EXP Appendix 16* *Part V(i) EXP Appendix 17*
F.6	Deferred Development Costs	Please provide a continuity schedule of deferred development costs and amortization costs by project for the last ten fiscal years through the outlook period.	*Part V(i) EXP Appendix 18*
F.7	IT Expenses	Please provide a schedule detailing IT costs by major capital project for the last ten fiscal years through the outlook period, and identify internal v. external costs for the historical period and for the outlook period.	*Part V(i) EXP Appendix 19*
F.8	IT Expenses	Please provide Information Technology Costs broken down between Normal Operations, Initiative Implementation and Initiative Ongoing expenses, for	*Part V(i) EXP Appendix 19*

OVERVIEW

OV.1 CONTEXT FOR THE APPLICATION

Significant change has occurred at Manitoba Public Insurance (MPI) in the past year. The legislation that lays out the governance framework of crown corporations and authorizes the Public Utilities Board (PUB) to review proposed changes to the MPI's rates for services was substantially overhauled with the enactment of *The Crown Corporations Governance and Accountability Act* (CGAA).

The new provisions of the CGAA clearly set out roles, responsibilities and accountabilities of MPI, its Board of Directors and the Minister of Crown Services. Of key importance is the requirement for an Annual Business Plan, approved by the Minister of Crown Services and the Board of Directors. The Annual Business Plan articulates the direction MPI will take in the coming year.

The Board of Directors approved a new mission statement focusing on and guiding the core business of MPI:

Exceptional coverage and service, affordable rates and safer roads through public auto insurance.

Benjamin Graham was hired by the Board of Directors as the new President and CEO to lead MPI in achieving this mission. Upon Mr. Graham's appointment, the Minister of Crown Services stated:

> *"Mr. Graham's international experience will bring new perspectives to the organization and ensure the Crown Corporation is delivering industry best-practice solutions within the public insurance context that we are so proud to offer to Manitobans."*

The Board of Directors believes transparency is a best-practice solution. Greater effort will be made in this application to improve the public's understanding of MPI's operations and the requirements for the rates sought.

Another important industry best practice is recognizing the fundamental role of actuarial practices to the Corporation in attaining its mission. To this end, Mr. Luke Johnston, was appointed to the Executive Management team as the Chief Actuary & Vice President, Product and Risk Management.

The 2019 General Rate Application is the first application prepared under the new legislative framework, a new Corporate Mission Statement, and a new President and Chief Executive Officer, Mr. Ben Graham.

One factor that has not changed from last year's application is the requirement for prudent fiscal management based upon the following three pillars:

1. Appropriate premiums based upon Actuarial Accepted Practice (AAP)

2. Effective and efficient operations

3. Adequate capital reserves

MPI is seeking an overall 2.2% increase to the average rate for universal compulsory automobile insurance comprised of 0.1% break-even rate change and a 2.1% net capital maintenance provision. This is the first time MPI has sought a capital maintenance provision. This step is being taken as a direct result of PUB order 130/17 and the March 2, 2018 Technical Conference to seek consensus on estimating a capital maintenance provision.

Premium Revenue Required	=	Cost of Coverage	+	Cost of Service Delivery	+	Net Capital Maintenance Provision

OV.2 EXCEPTIONAL COVERAGE

Every year a General Rate Application is made to set rates for the delivery of universal compulsory automobile insurance coverage. However, previously, very little emphasis was placed on the coverage Manitobans were purchasing for these rates. The discussions focused on numbers, analytics and the percentage changes in rates. It could be said prior applications lost sight of the importance of coverage because coverage is not within the jurisdiction of the PUB to review. Coverage is established in legislation and the PUB's responsibility is to ensure that premiums charged are appropriate for that level of coverage.

The new mission statement brings to the forefront the reason that MPI exists: to provide exceptional automobile coverage to Manitobans. Universal compulsory automobile insurance coverage is set in law. MPI must provide this coverage. The revenue generated from the rates approved by the PUB allow for this coverage to be provided.

Insurance at its core is the undertaking to indemnify someone against a loss or liability from a certain risk or peril and to pay a sum of money upon the happening of a certain event. Those losses, liabilities, risk, perils, events and the amount of money to be paid is what makes up the coverage.

In previous applications, MPI emphasized that rates charged to Manitobans were among the lowest in Canada when compared to the purchase of similar coverage in other jurisdictions. This is in some sense a futile exercise because what is minimum coverage in Manitoba is generally **not** compulsory coverage in other jurisdictions. Consumers must search to find equivalent coverage to supplement the limited mandatory insurance in their jurisdictions. Simply put, Manitobans have greater protection from potential losses and liabilities than the majority of other Canadians. The coverage provided by universal compulsory automobile insurance is not only exceptional, we believe it is amongst the best products available in Canada.

Part III Exceptional Coverage through Public Auto Insurance provides greater detail of the exceptional coverage Manitobans receive for their universal compulsory automobile insurance.

MPI's coverage has recently expanded to a new class of vehicles for hire. *The Local Vehicles for Hire Act* came into effect on February 28, 2018 having a significant impact on the vehicles for hire industry. The Winnipeg Taxicab Board was abolished and regulatory responsibility was transferred to municipalities. The Act also recognized that not just taxis and limousines could be vehicles for hire but that passenger vehicles could be hired by way of a mobile app through a Transportation Network Company.

Vehicles for hire (whether they are taxis, limousines or passenger vehicles hired by way of a digital network) are vehicles operating in Manitoba and as such require universal compulsory automobile insurance. As of April 30, 2018, there were 872 vehicles insured for use as vehicles for hire. Of these, 497 vehicles were in the Taxicab Vehicle for Hire uses and 304 vehicles were insured in the Passenger Vehicle for Hire uses (the remainder were in other sub-category uses).

As of May 23, 2018, the City of Winnipeg had approved 16 Transportation Network Companies (the City refers to them as Personal Transportation Providers) to operate as dispatchers for Passenger Vehicles for Hire operators. Thus far, Canadian Transportation Network Companies have publicly embraced the universal compulsory automobile insurance as providing complete coverage for their drivers; whereas, large worldwide multinational Transportation Network Companies have publicly stated, thus far, they cannot operate in Manitoba because the insurance model is too onerous for their business model. This business model remains a major challenge for public insurers across Canada.

Part V(ii) VFH Vehicles for Hire will explain this in greater detail.

OV.3 EXCEPTIONAL SERVICE

The service that delivers the exceptional coverage must also be exceptional; for what good is an exceptional product if it is not properly delivered. Universal compulsory automobile insurance is for all Manitobans and it has to be delivered to all Manitobans throughout the province.

Service to Manitobans is provided by people. The appropriate number of properly trained people with the proper tools applying proper procedures will result in exceptional service. There are costs associated with staff and brokers, to train them and to provide the tools to do their job. These costs need to be reasonable and they need to be affordable.

How service is delivered changes to meet changing customer expectations. Long gone are the days when Manitobans lined up together on February 28th to purchase their insurance. Manitobans expect MPI to be current with modern practice in providing both in-person customer service as well as online tools to make transactions with MPI easier and more efficient. MPI does not need its service delivery to be based upon leading edge technology innovation to meet customers' expectations of exceptional service. The expectation is to be reasonably current with modern practice and to be responsive in foreseeing and addressing customer needs.

MPI is changing practices to enhance the service delivery experience for customers. MPI has significantly reduced the time it takes to process customers' physical damage claims, it has adapted new triage methodologies for administering PIPP claims, it is enhancing services in rural, northern and remote communities, as well as considering ways to leverage on-line access.

These changing practices are not isolated initiatives. Changes flow from a new Customer Experience Framework that will follow a core strategy that is customer-centric, ensuring that business activities revolve around the customer. It will also implement an ideal vision of what the customer should experience with the Corporation, maintaining a focus on delivering exceptional customer service. The Customer Experience framework will align the Corporation's mission and values with

the overall customer expectations at key customer experience touchpoints. A customer-centric focus, based on the ideal Customer Experience, will lead to a more comprehensive understanding of customer needs, desires, and expectations; and will contribute to better MPI products and services, promote greater customer satisfaction, increase staff engagement; and, heighten the Corporation's credibility as a customer-driven company.

The relationship between MPI and their customer begins with the purchase of universal compulsory automobile insurance. The customer can purchase this insurance directly from MPI at one of its Service Centres or from an insurance broker. These two options provide all Manitobans with reasonable access to in-person interactions to purchase their insurance. Brokers are paid for their services by way of commissions and flat fees. The broker network is a cost effective means to deliver the convenient in-person access to Basic Insurance service throughout Manitoba.

However, customer expectations are changing. There is the expectation for certain services to be available on-line, as well as having access to the expertise of insurance brokers. As such, exceptional service will require service delivery to be both in-person and on-line.

Information Technology has an important role in the delivery of exceptional customer service. That role is supporting business operations. It has been said that MPI "has become primarily a technology company that sells insurance and provides a myriad of services to its customers"[1]. MPI does not, and should not, consider itself as "primarily a technology company". As is evident from the new Corporate Mission, the Annual Business Plan and the IT Strategic Plan, MPI is an insurance company and DVL administrator. The role of IT is limited to enabling exceptional service.

There are costs associated with IT assisting in the delivery of exceptional services. To use a car analogy (at MPI we love car analogies) – there are costs associated with owning a vehicle: the purchase, buying the gas, performing regular maintenance, and of course purchasing insurance. The big cost will be the purchase but without the

[1] 2018 GRA Transcripts page 1779-80

maintenance and operating costs being incurred the vehicle will not operate. Similar to a person deciding whether to incur various vehicle costs, MPI has to make decisions on whether to incur various IT costs (purchase, maintenance and operation).

MPI has learned the importance of making informed decisions on whether to incur various IT costs. To assist in making these informed decisions, MPI has implemented a more robust Value Management Process. Frequently, IT costs when viewed in isolation do not have a positive return on investment, they are often simply the cost of carrying on business. Some examples are the costs associated with maintaining functionality of software, licencing fees, and security. By the car analogy these would be the gas, regular maintenance, and insurance costs. The Value Management Process identifies these expenditures as such.

The Value Management Process is also used to assist in determining whether the "vehicle" should be purchased. When Value Management identifies no positive return on investment, Management is faced with the question - should MPI continue with this spend? As is outlined in *Part IV(ii) VM Value Management*, MPI applied Value Management to the in-flight Customer Claims Reporting System (CCRS) and decided to cancel the project. The positive lesson learned is that business operations are the driver of IT support and if a project does not have a positive return on investment there needs to be a strong justification to proceed.

MPI has filed 8 business cases prepared pursuant to the Value Management Process. These business cases include all current IT projects with a cost in excess of $500,000. These business cases are filed to demonstrate that the Value Management Process is being applied, and that all relevant issues are being considered in order to make informed decisions.

OV.4 AFFORDABLE RATES

Although the coverage and service are to be exceptional, the costs for doing so must be within the confines of being affordable. This is attained through the application of the three pillars of prudent fiscal management:

1. Appropriate premiums based upon Actuarial Accepted Practice (AAP)
2. Effective and efficient operations
3. Adequate capital reserves

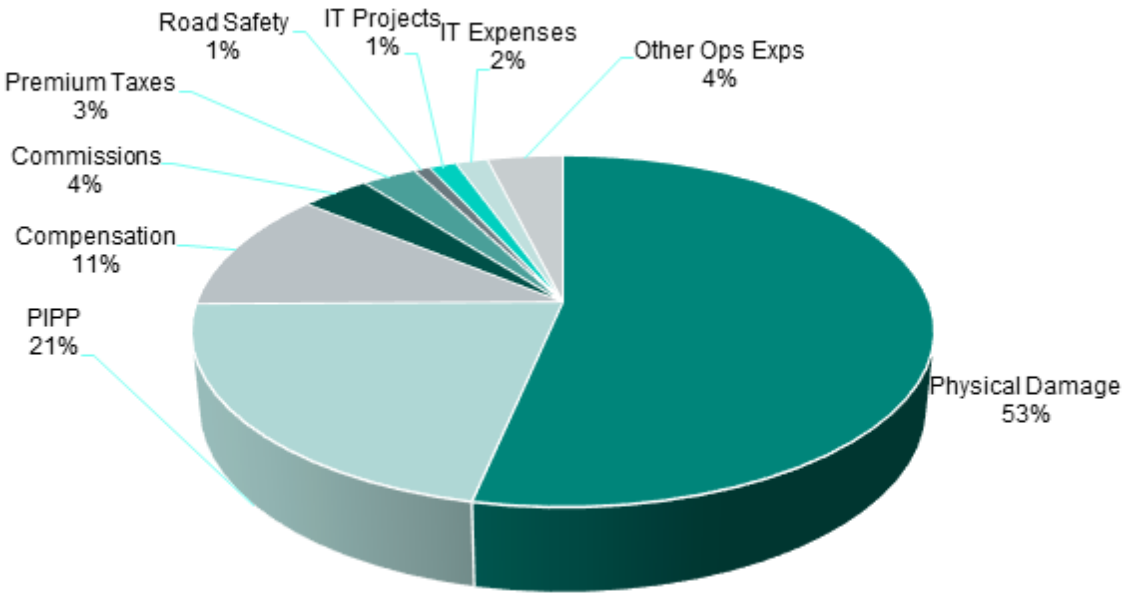
OV.4.1 Appropriate Premiums based upon Actuarial Accepted Practice (AAP)

Appropriate premiums should be based upon AAP. In the context of Basic's not for profit business model of breakeven rate making this means that the premiums must be sufficient to cover the costs of delivering the coverage. It is a foundational principle that Basic Insurance is self-sustaining; the costs of coverage and service delivery of the Basic Insurance program must be paid for by the premiums charged to customers to purchase the coverage.

Revenue from premiums must equal costs.

Based upon AAP calculations the best estimate of cost of delivering coverage is approximately $1.2 billion. The following pie chart shows, at a high level, where these costs are incurred.

Figure OV- 1: 2019/20 Basic Expense Composition



The costs of delivering the coverage can fall into two broad categories.

- The cost of exceptional coverage, and
- The cost of exceptional service.

The costs of exceptional coverage are the benefits and fees paid to customers and service providers (such as repair trades and health care providers) for damages arising from events covered by universal compulsory insurance (in the above chart – Physical Damage and PIPP). Most of these cost will be paid in the first couple of years following the motor vehicle accident; however, some cost will not be paid for many decades after the claim.

The cost of exceptional service delivery includes the costs of staff, service centres, brokers, consultants and IT expenditures that are necessary to enable its delivery.

OV.4.2 Effective and Efficient Operations

The role of the PUB is to determine if MPI's estimates of the costs are fair and reasonable. If MPI's operations are effective and efficient, the costs of coverage and service delivery will be reasonable.

For the second year in a row, MPI is forecasting decreases in expenses in excess of $5 million over the previous year's forecast. This pattern substantiates MPI's continued focus on commitment to managing and controlling operating costs.

It is also important for Manitobans to understand that the Corporation is successfully surpassing the vast majority of benchmarks that measure the efficiency of operations. Specific attention should be paid to *Part IV(i) BMK Benchmarking*. While there is always room for improvement and not every benchmark is surpassed, the overall message from the independent reporting is that MPI is an efficiently run organization.

The PUB, in Order 130/17, expressed concerns regarding IT expenditures. MPI understands the concerns are related to knowing whether proper controls and oversight of IT projects exist to avoid unnecessary cost overruns.

The MPI Board of Directors, which is given legislative responsibility for the administration of the Corporation, appreciate the assistance and perspective that the PUB can provide in identifying areas of concern. Both publicly appointed bodies have the common goal of ensuring that Manitobans receive appropriate value for the premiums paid.

The PUB stated in Order 130/17:

> The Board looks forward to receiving the IT Strategic Plan and anticipates that this will be an important issue, which will be subject to a thorough review, or "deep dive", in the 2019 GRA.

MPI understands the importance of this issue is in part because of the above mentioned observation that MPI "is primarily a technology company". If MPI was a

technology company then it would be critical to understand the IT strategic direction the company was planning on taking.

MPI, however, is an automobile insurance company and administrator of *The Drivers and Vehicles Act*. The "IT Strategic Plan" is to support the business carry out the corporation's mission - *Exceptional coverage and service, affordable rates and safer roads through public auto insurance*. IT expenses are incurred to meet business needs. Business needs are not determined by an IT Strategic Plan.

As previously mentioned, MPI uses a Value Management Process to ensure that IT expenditures will only be incurred when it is appropriate to do so. As the PUB noted in Order 130/17 this process is applied on all new initiatives with a budget in excess of $500,000. The MPI Board of Directors recognized in the same Order, the PUB expressed concerns about IT projects that were currently "in-flight". The Board of Directors directed the Value Management Process be applied to a number of these projects. Based upon the results, Management cancelled the Customer Claims Reporting System (CCRS) initiative.

MPI identified in the 2018 GRA that there are concerns regarding IT legacy systems that are 20 to 30 years old. Replacing these systems could potentially have significant costs. On direction from its Board, Management retained two industry consultants to complete independent assessments of the MPI legacy system risks and to confirm the need for future action to mitigate the associated technical and business risks. The assessment also entails recommendations, business case and financials, and a roadmap for execution. Two separate consultants have been retained in order to ensure that more than one perspective is considered. The Board of Directors wants options on how to address a potentially significant IT expenditure. With the information gained from these reports the Board of Directors will exercise its discretion to determine what, if any, resources should be expended to address the IT legacy system issues.

Throughout this General Rate Application process, MPI will, as requested, provide updates on the progress made towards completing the review and business case for the AOL and CARS redevelopment or replacement (legacy system review). As of the

date of the filing the Application, one of the consultants is in the process of conducting their initial investigation.

Another factor that impacts the prudent fiscal management of MPI are the issues related to Basic's $2.3 billion investment portfolio.

MPI is in the process of a significant change in the way it manages the investment portfolio. The past practice was to view the Fund as a single purpose consolidated investment fund in which investment risks and benefits were allocated based upon a consolidated perspective. The fund was to be invested in Fixed Income (70%), Public Equities (15%) and Alternative Investments (15%) with the gains and losses allocated to the various lines of business based upon an Audit Committee approved investment income allocation methodology prepared by Deloitte Canada (based upon the net equity position of each line of business). Further details related to the basis of this methodology can be found in *Part VI – INV Appendix 9*.

The Board of Directors, have considerable expertise in the investment field, and after considering advice from Management and Mercer (Canada) Limited, have decided the portfolio should be segmented based upon the purpose for which the investment funds are needed. The purpose of each particular portfolio will determine the appropriate risk and investment vehicles to be used to attain the investment goals of that portfolio. The gains and losses for that particular portfolio will belong to that portfolio and will not be allocated to other portfolios. This approach has been endorsed by the Department of Finance.

The Board of Directors has made a fundamental change in the way it views the purpose of the investments and the risks to be taken. No longer will it be the sole purpose of these various portfolios to generate wealth to reduce the average premiums paid by ratepayers to cover the costs of delivering coverage.

The Basic Insurance investments will be three segregated portfolios with three distinct purposes.

- Basic Claims
- Rate Stabilization Reserve (RSR)
- Employee Future Benefits

Basic Claims

Customers purchase insurance to pay for future damages they will incur. The accidents have now occurred and through actuarial analysis, the amount of money necessary to pay for those future damages has been estimated. The only purpose of this portfolio is to pay for known future claims costs. Very little investing risk will be taken to jeopardize having the sufficient funds necessary to pay for these known future claims expenses. Past customers have purchased policies to pay for these claims. MPI's Board of Directors will not put at risk the funds necessary to pay existing claimants' future known damages for the potential benefit of reducing the premiums next year's customers pay to buy their coverage.

Rate Stabilization Reserve (RSR)

The RSR is Basic's capital reserve. It is there to protect motorists from rate increases that would otherwise have been necessary due to unexpected variances from forecasted results and losses arising from non-recurring events.

When calculating rates MPI uses its best estimates to forecast, amongst other items, future interest rates, the number of claims that will be filed in a rating year, the severity of the damages incurred, and the costs of benefits to be paid decades into the future. These best estimate forecasts are what is expected to occur. Even though these best estimates are tested by the PUB, these forecasts will have unexpected variances.

The reason that unexpected variances arise is because MPI does not know the future. MPI does not know the number of hail storms that will occur in Manitoba in 2019 or where the hail will fall. Will the hail fall in a farmer's field or over Winnipeg during rush hour? The photo below shows the results of a hailstorm at 4:00 pm on May 25,

2018 in the RM of McCreary. The impact on MPI's forecasts would have been significantly impacted if this storm occurred at that time over Winnipeg.

MPI does not know what the 2019/20 winter weather will be like; MPI does not know if one of the tens of thousands of motor vehicle accidents that will happen in 2019 will result in multiple fatalities and multiple catastrophic injuries similar to the tragic bus accident that occurred in Saskatchewan on April 6, 2018.

Staff Photo: RM of McCreary
25/5/18

MPI will use its best estimates to calculate the outcomes of a myriad of possibilities but there will most likely be unexpected variances from those forecasted results. If MPI has underestimated the amount of money necessary to pay the claims associated with the policies purchased in 2019/20 money will have to come from somewhere to pay those claims. The choice is simple – either the next year's customers will have to make up the shortfall and pay more than what their otherwise AAP indicated rates would require or the shortfall will be paid out of the RSR. The purpose of the RSR is to pay for these losses so that next year's ratepayers do not. It is the Board of Director's view that it is imperative to have adequate capital to avoid charging rate payers increase caused by these unforeseen variances – whether that charge is directly as higher rates the following year or in the form of a rebuilding fee.

It is important to note that limiting the size of the RSR to $1 above the lower target defeats the purpose of the reserve because as soon as that a loss occurs the Corporation is in unsatisfactory financial status and motorists may be facing a rebuilding fee.

Given the purpose of the RSR, the investment risk tolerance can vary. There will be minimal investment risk tolerance when the RSR balance is below the DCAT minimum;

however, there will be moderate investment risk tolerance when the RSR is within the approved range.

Employee Future Benefits

The purpose of this fund is to ensure that pension and other obligations are paid as they become due, while earning investment returns that keep contribution rates at reasonable levels. This fund represents combined pension liabilities for all lines of business (approximately 85% allocated to Basic and 15% to the other lines of business). Because of this purpose the investment risk tolerance is moderate.

OV.4.3 Adequate Capital Reserves

The Board of Directors, once again, transferred a significant amount of capital ($37.3 million) from the excess retained earnings of the Corporation's Extension line of business to the Basic RSR in order to permit the Chief Actuary to certify that the Basic line of business is in satisfactory financial status. Between 2013/14 and 2016/17 the Basic line of business suffered net income losses totaling $250 million. In 2017/18 the Basic line of business saw a positive net income of $34 million but the transfer was nevertheless necessary because of the pre-existing inadequacy of the capital reserves.

While the Board of Director's respects the PUB opinion in Orders 130/17 and 29/18 that the minimum lower target of the RSR should be $180 million, the Board of Directors does not believe that this number is calculated using best estimates. As such, the Board of Directors and the Corporation's Chief Actuary cannot sign off that the Basic line of business is in satisfactory financial condition if the Basic RSR is less than $201 million as of February 28, 2018. It is the Corporation's legislative responsibility to establish and maintain reserves in such amounts that, at all times, it has sufficient funds to meet all the payments as may become payable under *The Manitoba Public Insurance Corporation Act*.

The Board of Directors has determined that the minimum amount of the RSR is $201 million, as of February 28, 2018 for the 2018/19 fiscal year. In order to provide a

greater buffer to the capital reserve so that it is not sitting at $1 above unsatisfactory financial status, the Board of Directors transferred funds to raise the RSR to $211 million.

Determination of the range for the RSR is based upon risks facing MPI. The recent changes to how the Corporation manages investments has significantly reduced the risks its faces. Accordingly, MPI is seeking for the 2019/20 fiscal year approval of an RSR range of 34% to 85% MCT (forecast equivalent to $143 million to $305 million as at February 28, 2019). MPI is forecasting that as of February 28, 2020 it will have an RSR of 70% ($280 million).

Capital Maintenance Provisions

Having adequate capital reserves is a pillar of prudent fiscal management. The PUB stated in Order 130/17:

> *"…the Board appreciates the need to protect Basic's capital position against depletion due to the natural growth in Basic's risk profile, i.e., the expectation for Basic claim liabilities (and investment portfolio) to grow over time since the addition of new claims is expected to outpace the settlement and closing of old claims. The Board believes a properly constituted Capital Maintenance Provision, loosely based on that developed by Saskatchewan Auto Fund, can legitimately be considered as a necessary Basic expense cash flow for rate-setting purposes while remaining consistent with the break-even objective."*

A PUB ordered technical conference was held, and from MPI's perspective, there was consensus on the requirement for a Capital Maintenance Provision to be incorporated into the rate making process. This is an extremely important development towards ensuring long term rate stability for customers and satisfactory financial status for the shareholder. Although, in this year's rate application the Capital Maintenance Provision accounts for 2.1% of the 2.2% sought for rate increase, it must be noted that MPI forecasts, if there are no expected variances in the coming 5 years, that there will not be an on-going requirement for Capital Maintenance Provision increases, capital build requirements or transfers from the Extension line of business to maintain adequate capital reserves.

OV.5 SAFER ROADS

As its Mission Statement makes clear, MPI has a role in making the roads in Manitoba safer. Road safety is a complex, multi-faceted area which requires the participation of multiple stakeholders to bring about meaningful positive change. The best way for MPI to achieve this mission is by collaborating with other road safety stakeholders.

MPI will continue working with many different stakeholders in many different ways to take positive steps towards improving road safety. MPI regularly meets with stakeholders through the Manitoba Association of Chiefs of Police/MPI Traffic Committee, and the External Stakeholder Committee on Loss Prevention to seek input, share direction and validate the road safety priorities that are important to all stakeholders. The External Stakeholder Committee includes active representations from all recent Intervenors in the GRA process, which allows these organizations to bring forward concerns and discuss areas of common interest in a forum exclusively dedicated to loss prevention and road safety issues.

A key role MPI performs in coordinating the efforts of improving road safety in Manitoba is being a co-chair of the Provincial Road Safety Committee. As a co-chair, MPI is committed to the cultural and systems vision for safe roads, safe vehicles, safe speeds, and safe road users within the *Road to Zero: Provincial Road Safety Plan 2017-2020* and its priorities for action to achieve a gradual downward trend toward zero injuries and death on our roadways.

In past rate applications, MPI has provided extensive detail regarding road safety. The PUB directed in Order 130/17 that this information be considered at a technical conference in 2019. Accordingly, this application has less information than previous applications. Nevertheless, MPI feels it is important to provide in Part VII 01 LP Loss Prevention an update on the following new initiatives that will occur in this year:

- Improving driver testing;
- Launching a new traffic safety culture campaign;
- Launching a new consumer awareness campaign regarding driver assistive technology;

- Forward collision warning pilot for taxis;
- Continuing its comprehensive public awareness and education campaign related to drug impaired driving;
- Launching a campaign to address emerging trends in auto theft with keys;

MPI maintains its commitment and progressive effort to ensure that loss prevention programming and activities are grounded in evidence and demonstrate value to Manitoba rate payers. It believes in leveraging data and analytics to find new opportunities and maximize benefits that can be realized through new interventions. MPI will also continue to invest in proven or promising initiatives that can contribute to a reduction in collisions or claims costs.

Most importantly, MPI recognizes that it cannot achieve safer roads on its own, and that there is no simple answer to making roads in Manitoba safer for all. This goal can only be achieved through active engagement and collaboration with others in different forums. Each forum addresses different components and responsibilities of the overall road safety solution. This forum's role is at a higher level review of the costs incurred and the rates charged to cover those costs.

OV.6 CONCLUSION

In this Application, MPI is looking forward to the 2019/20 fiscal year. Through the transparency of the documents submitted, Manitobans can seeing the benefits of MPI focusing on its core business and applying rigor to the three pillars of prudent fiscal management. Costs are being contained, service is being improved and the financial stability of MPI appears promising.

It is an unfortunate reality that the business of automobile insurance is often related to tragic consequences. These tragic consequences became personally evident to all those who have participated in the Corporation's rate application process over the past years when, on May 24, 2018, Robyn Gray was killed in a motor vehicle accident. Mr. Gray was a founding member of the Coalition of Manitoba Motorcycle Groups and has participated in these hearings as a member of their executive or in his personal capacity. MPI acknowledges Mr. Gray's contribution to the GRA process.

CM.3 MISSION STATEMENT IS REFLECTED THROUGHOUT THIS APPLICATION..... 4

CORPORATE MISSION

CM.1 New Corporate Mission Statement

Since 2004 MPI's corporate mission statement "Working with Manitobans to Reduce Risk on the Road" summarized MPI's purpose and defined the brand. As with other aspects of the business that are being reviewed and refreshed, in 2018 the Board of Directors of Manitoba Public Insurance adopted a new Corporate Mission Statement:

> *Exceptional coverage and service, affordable rates and safer roads through public auto insurance.*

The Corporate Mission Statement reflects the purpose of Manitoba Public Insurance, and will guide the actions of the Corporation. It will be the touchstone for everything the Corporation undertakes on a go forward basis.

CM.2 New Corporate Values

The Board of Directors also defined the following corporate values that articulate how MPI will fulfill its mission:

> *As a public auto insurer, we hold ourselves accountable to all Manitobans to deliver value by fostering a culture of excellence. We achieve this through our four core values:*
>
> ***Doing What's Right***
>
> - *We act with integrity and accountability. We strive to be open and transparent.*
>
> ***Investing in People***
>
> - *We empower our employees to provide excellent service. We work together with business, community and road safety partners to fulfil our mission.*

Striving for Excellence

- *We provide exceptional coverage and service. We adapt to meet evolving customer and industry needs, focusing on continuous improvement.*

Providing Value to Manitobans

- *We maintain affordable rates and ensure accessible coverage. As a public auto insurer, fiscal responsibility is at the forefront of everything we do.*

The mission statement and values were updated based on feedback from within MPI, and align with MPI's culture of excellence, and the value that public auto insurance brings to Manitobans.

CM.3 Mission Statement is reflected throughout this Application

The 2019 General Rate Application is based upon carrying out the mission statement, vision and corporate values, as it pertains to universal compulsory automobile insurance. Everything that is proposed in the application flows from the new Corporate Mission Statement.

BASIC AUTOPAC COVERAGE AND BENEFITS

BAC.1 INTRODUCTION

The Manitoba Public Insurance Corporation (MPI) was established as a crown corporation in 1971, to provide and administer basic compulsory, universally available, automobile insurance coverage (referred to as Autopac) to Manitoba motorists. Basic compulsory insurance is the minimum level of coverage that is legally required to operate a vehicle on the roadway in Manitoba. Extended coverage is also provided on an optional basis, through our Autopac Extension and Special Risk Extension (SRE) products, in competition with private insurance companies.

Compulsory public automobile insurance was introduced in Manitoba in response to a number of problems that existed under the previous private auto insurance system which failed to provide Manitobans with adequate, affordable automobile insurance. The problems were as follows:

- Automobile insurance was not compulsory. It was estimated that at least 10 percent of vehicles on the roadway carried no insurance.
- Insurance companies denied some people coverage. These people could pay into a special fund that paid claims for damage they caused, but they were indebted to the fund and were expected to repay the full amount.
- There were gaps in coverage. For example, "voluntary, unpaid" passengers who were injured in an accident caused by their driver received no compensation unless they could prove gross negligence or wilful and wanton misconduct on the part of their driver.
- Rates charged in Manitoba had as much to do with claims costs in the rest of Canada as with claims costs in Manitoba. As well, the rating system was complex and confusing, with many opportunities for manipulation by private insurers.

- Claimant and policy holder satisfaction was determined to be low, and the majority of the public was uninformed of their basic rights, duties and obligations.
- There was evidence that insurers used tactics to reduce their financial exposure, rather than adjusting claims in a manner that compensated people for their actual losses.

As noted in this chapter, compulsory, public insurance provides fair and affordable automobile insurance and addresses the issues that existed under the previous system.

BAC.2 EXCEPTIONAL COVERAGE THROUGH EFFECTIVE PUBLIC AUTO INSURANCE

Manitobans continue to benefit from a public auto insurance system. The value that MPI strives to provide to all Manitobans is reflected in our Corporate Mission Statement:

> *Exceptional coverage and service, affordable rates and safer roads through public auto insurance*

As a public auto insurer, MPI is accountable to all Manitobans to deliver Basic compulsory insurance that provides value through:

- Guaranteed access for all Manitobans to basic automobile insurance
  - Guaranteed, reasonable basic level of protection (See: *BAC.3*)
  - Guaranteed availability; no one can be denied the ability to insure their vehicle, as long as they are eligible to register the vehicle for use on the roadway
  - Guaranteed/non-discriminatory rating;not based on age, gender, or other personal factors but based solely on the vehicle risk (type of vehicle, use, territory), and the driver's record (Driver Safety Rating (DSR))
  - Guaranteed access to injury benefits; all Manitoba residents are entitled to Personal Injury Protection Plan (PIPP) benefits under Part II of the

Manitoba Public Insurance Corporation Act, regardless of whether they drive or register an automobile
    - Guaranteed access by making Autopac services available throughout Manitoba
- Exceptional, comprehensive, coverage
    - Among the most comprehensive insurance coverage in Canada (See: *Part III Comparison of Basic Policies to Other Jurisdictions*)
    - Appropriate compensation in that Basic Autopac includes all-perils physical damage coverage, third party liability coverage, and no-fault automobile accident injury coverage with most economic losses being compensated

In addition to exceptional coverage, with guaranteed access, public insurance offers other fundamental advantages, including:

- Affordable rates (premiums)
    - Motorists are required to purchase compulsory auto insurance; therefore premiums must be affordable
    - MPI provides rates that are consistently among the lowest in Canada for comparable coverage and service (See: *Part IV Benchmarking Figure BMK-3)*
- Fiscal responsibility and accountability
    - Providing cost-effective coverage and service
    - Operating within strict guidelines and legislation, to protect public interests
    - Investing in Manitoba where prudent and using investment income to support maintainence of adequate capital
    - Adhering to best practices in insurance
    - As a non-profit provider, the Basic compulsory program operates on a self-sustaining basis and policy premiums reflect the forecast cost of insurance, with no expectation of profit
    - Funds are held to pay claims, maintain a Basic Insurance Rate Stabilization Reserve and to protect motorists from rate increases due to unexpected adverse events

- Evolving products and services to meet the diverse and evolving needs of Manitobans (See: *BAC.5* and *BAC.6*)

A single public administrator of the public auto insurance plan delivers certain efficiencies that further contribute to the mission of comprehensive coverage with affordable rates, namely:

- Consistent interpretation and application of plan and the coverage provided under it
- Avoidance of of extraneous administrative costs
- The ability to improve the plan and make it more responsive to the needs of the public with greater ease
- A better control of costs by leveraging synergies with repair shops, medical clinics and business partners

BAC.3 BASIC INSURANCE DELIVERS COMPREHENSIVE COVERAGE AND VALUE TO MANITOBANS

- Autopac provides comprehensive coverage at rates that are consistently among the lowest in Canada for comparable coverage and service. (See: *Part IV Benchmarking Figure BMK-3)*

Basic Compulsory insurance is available to every Manitoba resident eligible to register a vehicle in Manitoba. It applies to most private passenger vehicles, and some light commercial use vehicles. The following Basic Compulsory coverage applies to most registered vehicles:[1]

- All-perils coverage for accidental damage (to most registered vehicles) subject to a $500 deductible
- Basic Third Party Liability (TPL) coverage to a maximum of $200,000
- Basic First Party Loss of Use coverage for theft
- Maximum Insured Value (MIV) of $50,000 for the vehicle

1 See: *BAC.7* Section 5 - All Perils Coverage for a list of varied coverage by vehicle type and exclusions

- PIPP benefits for injury or death caused by a motor vehicle to a Manitoba resident, if the accident occurs anywhere in Canada or the United States, and for non-Manitoba residents if the accident occurs within Manitoba

In addition to providing the Basic Compulsory insurance that is required to legally operate a vehicle on the roadway, MPI also offers two types of optional coverage, which it provides in competition with private sector insurers, namely:

- Autopac Extension, which provides optional, supplementary protection to the basic Autopac package and can be acquired to:
  - Increase TPL limits
  - Reduce deductibles
  - Provide Excess Value Coverage
  - Provide coverage for the loss of use of a vehicle
  - Provide Lay-up coverage
  - Provide coverage for use of a rental vehicle
  - Provide protection for a leased or new vehicle
  - Provide coverage for off-road vehicle (ORV) ORV (beyond compulsory TPL)
  - Increase PIPP Income Replacement Indemnity (IRI) coverage to insure income for amounts that are in excess of the Basic plan's Maximum Yearly Insurable Earnings of $96,000 (also applies to the calculation of Death Benefits payments and Retirement Income Benefits)
- Special Risk Extension (SRE), which provides optional coverage for specialized risks, for which Basic Autopac does not provide coverage, and includes coverage for large commercial trucking fleets and garage policies

BAC.4 EVOLVING PIPP COVERAGE MEETS THE NEEDS OF MANITOBANS

Throughout its history, MPI has meaningfully changed its Basic Compulsory insurance plan to continually improve service and value, and to respond to the needs of Manitobans in the face of changing technologies, customer preferences, demographics, and other factors.

The most notable change was the introduction of PIPP: a pure no-fault injury compensation plan introduced on March 1, 1994, and a key component of the Basic Compulsory insurance plan. Modeled after Quebec's no-fault plan, it replaced the tort add-on scheme that existed in Manitoba previously, which included the right to sue an at-fault party but provided limited no-fault accident benefits and tort compensation.

Under PIPP, claimants' rights to sue for compensation were removed, and replaced with guaranteed, scheduled, comprehensive, consistently applied, and timely injury benefits, for real economic loss, regardless of fault. In addition, benefits are indexed annually to ensure that they meet changing economic conditions. PIPP helps ensure that Autopac claims costs are stabilized, and that premiums remain stable, predictable, affordable and among the lowest in Canada.

A dispute resolution process is also available to claimants who feel that they have not been adequately compensated under PIPP. This dispute resolution process consists of:

- A review of a disagreeable decision by the Internal Review Office (IRO)
- A right of appeal to the Automobile Injury Compensation Appeal Commission (AICAC)
- A further limited right of appeal of an AICAC decision to the Manitoba Court of Appeal (with leave)

In addition, since 2012, MPI has piloted an Automobile Injury Mediation (AIM) office, as a mediation option for claimants filing an appeal of their injury claim. In the coming year, MPI plans to formalize the permanent establishment of the mediation option in the dispute resolution process.

Most PIPP benefits provide unlimited coverage, based strictly on medical need and proven disability. MPI has policies and guidelines in place to ensure that claims are managed, while still providing claimants with the care that they require.

There are eight overarching coverage categories that are central to PIPP:

- Medical and Personal Expenses
- Personal Care Assistance Expenses (PCA)
- Rehabilitation Expenses
- Income Replacement Indemnity (IRI)
- Retirement Income Benefit (RIB)
- Caregiver Expenses (CGWI)
- Permanent Impairment (PI) Benefits
- Death Benefits

PIPP's products and services have been continuously monitored and reviewed since its inception in 1994 to ensure that it continues to adhere to the core principles and objectives upon which it was based. This also reinforces achieving PIPP's vision, that

> *"We will support Manitobans in their recovery from automobile accidents by being leaders in providing a personal injury rehabilitation plan..."*[2]

The active monitoring of PIPP includes strategic reviews of coverage, as well as formal cyclical coverage reviews of its many components. These reviews include jurisdictional comparisons with other Canadian plans, to ensure that PIPP provides among the most comprehensive bodily injury coverage in Canada.

As a result of these reviews, numerous enhancements to PIPP have been implemented since its introduction in 1994, to ensure continued high levels of support in the face of challenging and evolving claimant needs, particularly for those most seriously injured.

Significant enhancements include:

- The introduction of RIB (June, 1998)
- Enhanced Death Benefits, including grief counselling (February, 2003)
- Enhanced PIPP benefits for catastrophically injured claimants (October, 2009), including:
  - Enhanced IRI

2 *2012 GRA Part III AI.12 Attachment – Post Implementation Review, page 13*

    - Enhanced PCA
    - Enhanced PI
    - Transitional Expense Coverage (TEC) for special circumstances based on demonstrated need
- Introduction of additional coverage for catastrophically injured claimants (August, 2011) including:
    - Modifications to main or secondary home, due to health or family circumstances
    - Extraordinary travel and accommodation costs, including attendant costs
    - Attendant care to engage in employment
    - Motor vehicle acquisition (up to $50,000) and adaptation
    - Support for participation in leisure and recreational activities
- Extend CGWI for ongoing care of dependents where the deceased's primary occupation was the care of the dependents (June, 2015)

See *BAC.5*, for a complete chronological listing of all legislated PIPP coverage enhancements that have come into force since 1994.

BAC.5 TABLE OF PIPP LEGISLATED ENHANCEMENTS AND AMENDMENTS

Date	Amendment/Enhancement
June 1995	Reimbursement of expenses Regulation 40/94 amended to remove limit for hair pieces and provide reimbursement of tuition fees
June 1998	Income replacement indemnity (IRI) senior step down provisions eliminated and retirement income benefit (RIB) provisions introduced
June 1998	Student lump sum indemnities amended to allow proration based on semesters within a school year for partial school years missed
April 2000	Schedule A of Regulation 41/94, specifying permanent impairments replaced in its entirety
February 2003	Regulation 34/2003 introduced specifying methods for calculating RIB
February 2003	Income determination Regulation 39/94 amended to specify self-employed earners and shareholders of Canadian controlled Private Corporations
February 2003	Reimbursement of expenses Regulation 40/94 amended to provide grief counseling coverage for survivor family members
February 2003	Schedule A of Regulation 41/94, specifying permanent impairments updated
June 2004	PIPP dispute resolution, claimant advisers office introduced
June 2004	Law and order provision expanded to include reduction of IRI, permanent impairment payments and death payments for specified criminal code convictions Flight from police officer Theft where the property stolen is a motor vehicle Taking motor vehicle without consent

Date	Amendment/Enhancement
October 2004	Schedules C & D of Regulation 40/94 revised comprehensive personal care assistance assessment determination tool introduced
October 2004	Reimbursement of expenses Regulation 40/94 critical care attendance coverage introduced
June 2004	PIPP dispute resolution, allows appeals to the Automobile Injury Compensation Appeals Commission to be heard by one commissioner or a panel of three
February 2006	Income determination Regulation 39/94 Schedule C providing a proxy of occupations and incomes updated for current statistics and reference to the National Occupation Classification for Statistics
February 2006	Reimbursement of expenses Regulation 40/94 clothing allowance introduced for repair or replacement of clothing due to excess wear and tear or alteration as result of use of a wheel chair, prosthesis or orthodic device
February 2007	Schedule B of Regulation 41/94 stating calculation of successive remainders amended
June 2009	Law and order provision expanded that reduce specified PIPP payments when claimant is convicted of specified criminal code infractions Criminal negligence causing death while street racing Criminal negligence causing bodily harm while street racing Dangerous operation while street racing Dangerous operation causing bodily harm while street racing Dangerous operation causing death while street racing Operating a motor vehicle while impaired Impaired driving causing bodily harm Blood alcohol over .08 - causing bodily harm Refuse to supply sample - causing bodily harm

Date	Amendment/Enhancement
	Impaired driving causing death Blood alcohol over .08 - causing death Refuse to supply sample – causing death
October 2009	Catastrophic injury coverage introduced including defining catastrophic injures Minimum IRI payable based on industrial average wage versus minimum wage Increased permanent impairment payment Increase personal care assistance monthly maximum Introduction of a legislated coordinating authority and transitional expense coverage to bridge coordination between government programs and for special circumstances Amendment applied to Permanent Impairment Regulation 41/94 in support of determining catastrophic injuries
August 2010	Reimbursement of expenses Regulation 40/94 addition of physician assistants, clinical assistants, nurse practitioners as recognized practitioners permitting reimbursement of expenditures associated with those practitioners
June 2011	Law and order provision to eliminate access to PIPP for certain Criminal Code Convictions and allow recovery of any PIPP benefits paid prior to the conviction Flight from police officer Criminal negligence causing death while street racing Criminal negligence causing bodily harm while street racing Dangerous operation while street racing Dangerous operation causing bodily harm while street racing

Date	Amendment/Enhancement
	Dangerous operation causing death while street racing Motor vehicle theft Theft where the property stolen is a motor vehicle Take motor vehicle without consent Applies if the claimant is convicted in a state or territory of the United States or the District of Columbia in the United States of an offence that is the same or similar
August 2011	Reimbursement of expenses Regulation 40/94amended to better support continued per-accident activities and new life requirements of catastrophically injured Home modifications to secondary home/cottage use Extraordinary travel expenses Attendance expenses More than one motor vehicle adaptable and purchase of a vehicle (catastrophically injured – purchase once every 5 years) Bi annual extraordinary cost reimbursement for recreation and leisure activities based on rating of permanent impairment ranging from $500 to $4,000 (20% to catastrophically injured)
August 2011	Reimbursement of expenses Regulation 40/94 meal allowances increased and indexing provisions added
June 2013	Reimbursement of expenses Regulation 40/94 grief counseling amount increased, grief counseling travel added and indexing provisions added
June 2013	Retirement income benefit Regulation 34/2003 definition of other pension amended regarding pension splitting, and lump sum RRSP withdrawals

Date	Amendment/Enhancement
June 2014	Amendments specifying bodily injury caused by golf carts and other vehicles that don't meet provincial and federal safety standards for motor vehicles and cannot be registered under the Drivers and Vehicles Act cannot have access to PIPP unless a moving motor vehicle is involved in the accident
June 2014	Amendments specifying PIPP does not apply to bodily injury caused while the accident takes place on a track or other location closed to automobile traffic whether or not it is an automobile contest, race or show
June 2014	Amendment specifying recovery (subrogation) from other insurers is intended to be based on PIPP and not tort compensation
June 2014	Student lump sum indemnities extended to age 18 to align with Manitoba Stay in School Act (previously students could leave school at age 16)
June 2014	Catastrophically injured claimant are exempt from having residual capacity determinations applied to offset long term IRI. Also, catastrophically injured claimants who receive a reduced IRI due to post accident work will have their full IRI reinstated in event they lose their employment for any reason whether or not directly related to the accident. MPI recognized that catastrophically injured claimants face considerable barriers to obtain and sustain employment
June 2014	Non dependent death payment increased and indexing added
June 2014	Amendment to specify care giver weekly indemnity may apply to persons regularly incapable of employment or over age 65 without employment but whose main occupation at the time of the accident was the care of dependents without remuneration. For clarity, no entitlement to an IRI or RIB is created because of this amendment
March 2015	Reimbursement of expenses Regulation 40/94 amounts increased and indexing provisions applied for the coverage Critical care attendance

Date	Amendment/Enhancement
	Clothing allowance Reimbursement for medical reports in support of review and appeals
May 2015	Regulation 41/94, specifying permanent impairments medical terminology updated to provide more specific permanent impairment determinations
June 2015	Death payments amended to extend care giver weekly indemnities to survivor caregiver where the deceased's main occupation was the care of dependants without remuneration
November 2015	Clarified that an automobile injury compensation appeals commissioner, other than the chief commissioner, is appointed for not more than three years and continues to hold office until reappointed or replaced.

BAC.6 CORPORATE PRIORITY REVIEWS

The 2018-19 Annual Business Plan sees "an emphasis on building a culture of excellence, customer service and product assessment, with an ogoing focus on core business and building value". To that end, MPI will review of a number of corporate priorities to ensure that it is fulfilling its mission and values, and delivering value to Manitobans. Included in this review are:

- Product Suite Review
  - A comprehensive product review is underway, still in its infancy. This review will look for opportunities within the Basic Compulsory, Autopac Extension and SRE insurance products and will specifically consider:
    - PIPP entitlements and coverage
    - Basic deductible, TPL, First-Party all-perils coverage MIV
- Appeal Process Review (PIPP and Physical Damage)
  - A comprehensive review to simplify and improve the various appeal processes for physical damage claims
  - A review to create efficiencies in the PIPP appeal process.

BAC.7 SUMMARY OF BASIC AUTOPAC COVERAGE AND BENEFITS

The table provided below is a complete listing of available Basic Compulsory coverage, along with coverage details and current coverage limits.

COVERAGE NAME	2018 COVERAGE LIMIT
1. PERSONAL INJURY PROTECTION PLAN	Annual indexing of Benefits to 2017 Consumer Price Index (CPI) wasadded March 1, 2018
Includes:	
Medical Expenses	**Unlimited** – all eligible expenses
Rehabilitation Expenses	**Unlimited** – all eligible expenses Coverage enhancements: • Enhanced coverage for catastrophically injured claimats for: o Extraordinary expenses related to travel and accommodation o Attendant care to engage in employment o Adaptation of primary and secondary residences o Adaptation of more than one motor vehicle o Purchase of adapted motor vehicle for catastrophically injured claimant (every 5 years, up to $50,000 per acquisition) • Enhanced coverage for extraordinary expenses to participate in leisure and recreation activities; subject to bi-annual limits of $500-$4,000 based on permanent impairment rating

COVERAGE NAME	2018 COVERAGE LIMIT
PERSONAL INJURY PROTECTION PLAN *(cont'd)*	
Funeral Expense Reimbursement	To a maximum $8,544 per deceased
Death Payments	Spouse: $62,693 to $480,000 based on victim's age and income Dependants: $29,778 to $54,857 based on dependant's age Non-Dependant Parent or Child: $13,961 each Disabled Dependants: Additional sum of $27,427
Impairment Benefits	Scheduled Lump Sum Payment ranging from a minimum of $782 to a maximum of $156,729 Permanent Impairment Payment for catastrophically injured $247,477 Lump Sum Payment

Note: Permanent Impairment and Death Benefits are **both** payable in the event that the claimant sustains a permanent impairment as a result of the motor vehicle accident, and subsequently succumbs to their motor vehicle accident injuries. The claimant must survive a minimum of 90 days after the motor vehicle accident for the Permanent Impairment to be payable.

Income Replacement Indemnity	
a) Earners	90% of net income to a gross maximum of $96,000 for as long as claimant is unable to hold employment
b) Non-Earners	Claimants who are unemployed but able to work prior to the accident receive any Employment Insurance or National Training Act benefit lost, or an Income Replacement Indemnity after 180 days (IRI during first 180 days if promised or seasonal employment is proven) Claimants who are unemployable due to physical or mental infirmity do not receive Income Replacement Indemnity benefits; all other benefits apply

COVERAGE NAME	2018 COVERAGE LIMIT
PERSONAL INJURY PROTECTION PLAN *(cont'd)*	
Note: Temporary and part-time workers, and non-earners (capable of working full-time prior to the accident) receive an Income Replacement Indemnity based on full-time employment after 180 days. For claimants who meet the catastrophic injury definition, the minimum Income Replacement Indemnity is based on the Industrial Average Wage.	
c) Student Indemnity	Paid for delayed entry into the workforce due to missed school due to the MVA. Paid in addition to any Income Replacement Indemnity benefits
For Each School Year Lost	Students entitled to: Kindergarten to Grade 8 $5,328 Grade 9 to Grade 12 $9,873 Post-Secondary $9,873 per term to a maximum of $19,751 per year
Students Remaining Disabled at Scheduled End of Studies	Income Replacement Indemnity payable; no less than Industrial Average Wage
Personal Care Assistance	Up to $4,700 per month, with no lifetime limit (non-catastrophic) The monthly limit increases by up to an additional $920 per month for catastrophic injuries
Dependant Care Expense	Depending on the number of children or infirm persons cared for, a minimum of $117 up to maximum of $236 weekly reimbursement for additional care expenses incurred (part-time caregiver)
Caregiver's Weekly Indemnity	Depending on the number of persons cared for, a minimum of $454 to a maximum of $596 per week for part-time earner or non-earner who cares for other person (full-time caregiver) Caregivers have the option of receiving Income Replacement Indemnity based on full-time employment 180 days after the accident

COVERAGE NAME	2018 COVERAGE LIMIT
PERSONAL INJURY PROTECTION PLAN *(cont'd)*	
Caregiver's Weekly Indemnity *(cont'd)*	If the caregiver dies due to the motor vehicle accident, the amount of the weekly indemnity that would have been payable had they survived, is payable to the deceased's spouse or common-law partner or the legal guardian of the child(ren). If care was provided to an infirm adult, the payment is made to that adult
Substitute Labour Costs for Unpaid Family Owned Business	Up to $782 weekly reimbursement for the cost of hiring someone else to replace the labour of an unpaid family member for the first 180 days following the motor vehicle accident
Special Expenses Reimbursement	Specific expense amounts as governed by Regulations (e.g., telephone, travel, clothing, etc.) Interest on any indemnity not paid within 30 days
Grief Counselling Reimbursement	To a maximum of $3,573 per eligible claimant Travel/accommodation/meals (to obtain grief counselling) to a maximum of $3,573 per eligible claimant
Critical Care Attendance Reimbursement	To a maximum of $4,655 per claim, for up to two persons
Reimbursement Rate for Claimant Travel	$0.40 per kilometer (as of April 1, 2009)
Meal Allowance	To a daily maximum of $45.35
Clothing Allowance-wear and tear	$1,081 maximum per calendar year, for excess wear or alteration of clothing as follows: Where due to the use of a prosthesis/orthosis for a period of six months or more: $361 for clothing worn on the upper body $720 for clothing worn on the lower body Where due to permanent confinement to a wheelchair: $1,081

COVERAGE NAME	2018 COVERAGE LIMIT
PERSONAL INJURY PROTECTION PLAN *(cont'd)*	
Clothing Allowance-wear and tear (*cont'd*)	Where due to the use of an orthosis for a period of less than six months: $120
Retirement Income Benefit	Payable to claimants who remain disabled from working, paid the later of the claimant reaching age 65 or the claimant collecting IRI for 5 years; 70% of net income to a maximum insurable gross annual income of $96,000, less any other pension income (i.e., CPP, OAS)
Transitional Expense Coverage	Payment of certain expenses for catastrophically injured claimants to a lifetime limit of $1,151,061 in order to: • bridge funding while benefits are being coordinated between PIPP and other Government programs; • pay expenses which are in excess or outside of existing coverage which, if paid, will result in an equal or greater reduction in amounts payable under PIPP
Medical Report (review or appeal)	$388 per report; max. 3 reports for review; max. three (3) reports for appeal
2. THIRD PARTY LIABILITY	$200,000 ($500,000 ORV only)
3. UNDERINSURED MOTORIST COVERAGE	$500,000 (ORV only)
4. UNINSURED MOTORIST COVERAGE	$200,000 (for Property Damage only, after March 1, 1994)
5. ALL-PERILS	
Maximum Insured Value:	
• Passenger Cars and Vans	$50,000
• Trucks	$50,000
• Snow Vehicles (HTA)	$50,000

COVERAGE NAME	2018 COVERAGE LIMIT
5. ALL-PERILS (cont'd)	
Declared Value Range:	
• Motor homes	$50,000
• Motorcycles	$50,000
• Buses	$50,000
• Mopeds and Mobility Vehicles	$50,000
• Trailers	$50,000
• Wheelchair Livery Bus	$50,000
Loss of Use for Theft of Entire Vehicle	$34 per day to a maximum of $1,020
Originally Installed Sound and Electronic Communication Equipment (OEM)	No limit
Aftermarket Sound and Electronic Communication Equipment	$1,000
Deductibles:	
• Private Passenger Vehicles, Station Wagons, Vans, and Sport Utility Vehicles	$500
• School Buses, Charter Bus, and Disabled persons/ Private/ Business Bus	$500
• Motorcycles	$500 Collision & Upset Only
• Mopeds and Mobility Vehicles	$150 Collision & Upset Only
• Trailers $2,501 value and over	$500
• Trailers under $2,501	$150
• Taxis and Livery Vehicles (effective March 1, 2019 this registration class will be eliminated)	$600

COVERAGE NAME	2018 COVERAGE LIMIT
5. ALL-PERILS *(cont'd)*	
Deductibles *(cont'd):*	
• Vehicles for Hire (passenger vehicles up to 10 occupants; light trucks GVW under 4,500 kg)	$500
• Funeral Passenger Vehicle	$500
• Truck Tractors, Transit Buses, U-Drive Buses, PSV Vehicles, and Petroleum/Chemical Trucks with Tankers, Sand/Gravel Trucks and Logging Trucks	$800
• Farm Trucks (including Truck Tractor body style)	$500
• Other Trucks	$500

Deductible reduction of 50% (reduced from $500 to $250) where vehicle is stolen and it had an anti-theft device properly in use and was defeated (as of June, 2001)

Exclusions:
Trucks and truck tractors over 16,330 kg, except Farming/Fishing trucks, drive-away units, dealer-plated vehicles, and repairer-plated vehicles. City of Winnipeg Transit buses and buses that are Public Service Vehicles do not carry All-Perils coverage under the Basic program. Repairer-plated vehicles carry Collision & Upset only.

Commercially Registered Trucks (CT Plated) in excess of 5,499 kg. Gross Vehicle Weight and Public Service Vehicles operating beyond 161 km outside the borders of the province of Manitoba (extra provincially). These vehicles do not carry Third Party Liability or All Perils coverage under the Basic program.

Semi-trailers have no coverage through Basic Autopac.

COMPARISON OF BASIC POLICIES TO OTHER JURISDICTIONS

CBP.1 AUTOMOBILE INSURANCE IN CANADA

In Canada, the frameworks of automobile insurance differ significantly from province to province. Automobile insurance systems are comprised of varying combinations of the following design considerations, depending on the objectives of the system:

- Compulsory (mandatory)[1] vs. Optional insurance
- Public (government) Insurance vs. Private Insurance
- Tort vs. No-Fault compensation (the role of liability in compensation)
- Pricing scheme

All provinces in Canada mandate a minimum level of compulsory automobile insurance:

- In provinces with a public insurance provider, compulsory insurance is provided by the public insurer. Optional insurance (to supplement the compulsory insurance) may be offered by the public insurer, in competition with private insurance companies
- In most provinces, $200,000 Third Party Liability is compulsory
    - Except: Quebec $50,000; Nova Scotia $500,000
- In most provinces first-party accident benefits is compulsory
    - Except: Newfoundland and Labrador
- In a couple of provinces first-party property damage coverage is compulsory
    - Saskatchewan, Manitoba
- All provinces mandate uninsured motorist coverage (to protect against injury caused by uninsured at-fault motorists)

[1] Compulsory (mandatory) insurance is the minimum level of automobile coverage that is legally required to operate a motor vehicle in a province. Compulsory insurance coverage typically includes liability coverage, personal injury protection/first-party accident benefits, and underinsured motorist coverage. A few jurisdictions require coverage for first-party property damage to one's own automobile.

In Manitoba, Saskatchewan and British Columbia, compulsory insurance is provided publicly through the provincial government insurers (Manitoba Public Insurance (MPI), Saskatchewan Government Insurance (SGI) and The Insurance Corporation of British Columbia (ICBC)). Optional coverage can be purchased either through the provincial government insurer, or through private insurance providers. In British Columbia, coverage for first party physical damage is optional.

- Manitoba operates a "pure" no-fault compensation system (for bodily injury), which removes the right to sue an at-fault motorist in exchange for a comprehensive package of bodily injury benefits administered by the public insurer.

- Saskatchewan provides a no-fault system (for bodily injury), which removes the right to sue for non-economic loss (pain and suffering). However, it does afford the right to sue for economic loss that is in excess of first party benefits. (Saskatchewan consumers have a choice between a no-fault and a tort plan; however, the vast majority retain the default no-fault insurance).

- British Columbia operates under a tort compensation system (can sue the liable party for non-economic and economic loss)

Quebec has a hybrid auto insurance system. The provincial government insurer provides public compulsory injury coverage (on a "pure" no-fault basis), while private insurers provide compulsory Third Party Liability (for physical damage only), and optional first party physical damage coverage.

All other provinces (Alberta, Ontario, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland and Labrador, Northwest Territories, Nunavut and Yukon) operate under private insurance regimes, all of which provide tort compensation access:

- Except: Ontario, which has a modified No-fault system; the right to sue for non-economic losses (pain and suffering) is subject to a verbal severity threshold and a deductible; tort action for economic losses in excess of first party benefits

- Most tort jurisdictions provide a level of no-fault accident benefits ranging from $10,000 to $50,000 with the exception of Newfoundland and Labrador (where accident benefits are optional).
- Where injuries are deemed "minor," tort awards are usually capped at a maximum amount, and a deductible may apply.

The Comparison of MPI Basic Insurance Coverage to other Provinces (See: *CBP.5*) provides a detailed comparison of the coverage available under that plan to the coverage available in the plans offered in provinces with public, compulsory, automobile insurance as well as in provinces with pure no-fault or an enhanced degree of no-fault accident benefits (injury coverage). The five Canadian jurisdictions are Manitoba, Saskatchewan, British Columbia, Québec and Ontario.

- Like Manitoba, automobile insurance is provided by public insurance in Saskatchewan, British Columbia, and Québec
- Manitoba, Saskatchewan and Quebec provide some measure of "no-fault" injury benefits
- Ontario (a private regime) is included, as it provides enhanced accident benefits coverage

CBP.2 WHY PUBLIC INSURANCE IN MANITOBA?

MPI was created in 1971 to provide basic compulsory automobile insurance to Manitobans. This was in response to problems with the private auto insurance system that existed at the time, including:

- The difficulty consumers faced discerning value for money
  - Insurance packages which differed from insurer to insurer and made cost comparisons difficult
  - Premiums paid were often higher due to operating costs (factors such as advertising and shareholder returns increase operating costs)[2]

[2] See: *Part IV Benchmarking BMK.4.1.6* MPI's loss ratio (a measure of operational efficiency) consistently exceeds those of other benchmark groups. This is expected, given that MPI is a not-for-profit corporation, and has a mandate of returning benefits to Manitobans while keeping insurance rates low.

- Some claimants had to deal with multiple insurers in the course of their claims
- Understanding policy provisions, rights and obligations was often difficult for consumers who were often required to "read the fine print."

Public insurance was created in order to provide a more equitable automobile insurance environment for Manitobans. Today, Basic compulsory public insurance provides Manitobans with, among other things:

- Unlimited comprehensive medical and rehabilitation coverage based on proven needs (see *CBP.3* for details);
- First-Party physical damage coverage with a Maximum Insured Value of $50,000, which exceeds the First-Party requirements in other private jurisdictions
- Affordable rates (premiums) that are stable and predictable. In a public insurance regime with no-fault injury benefits (and no right to sue), claims costs are stabilized, predictable and controlled, resulting in more comprehensive benefits and affordable premiums

Overall, Manitoba's Public Insurance system, combined with a no-fault injury scheme, provides the best value for Manitobans, in terms of comprehensive coverage, with comparatively affordable rates.

Please see: *Part III Basic Autopac Coverage and Benefits BAC.7* for a summary of Manitoba's comprehensive automobile insurance coverage and benefits.

CBP.3 PIPP BENEFITS OFTEN EXCEED OTHER NO-FAULT PLANS

MPI's Personal Injury Protection Plan (PIPP) provides among the most comprehensive, universally accessible automobile injury coverage in Canada, while helping to provide overall compulsory insurance rates that are consistently among the lowest in the country for comparable coverage and service. Most benefits provide unlimited coverage, with no expiry, based on medical need and proven disability.

PIPP Medical and Rehabilitation coverage in Manitoba is unlimited; in comparison:

- SGI has a maximum limit of $6,813,680
- ICBC has a maximum of $150,000 per person
- Ontario has a $3,500 limit for minor injuries ($65,000 limit for non-minor/non-catastrophic injuries and a $1,000,000 limit for catastrophic injuries)

In addition to unlimited medical and rehabilitation coverage, PIPP provides enhanced benefits for catastrophically injured claimants that is amongst the best coverage for the catastrophically injured within the three no-fault provinces (Manitoba, Saskatchewan, Quebec). Enhanced coverage for catastrophically injured claimants includes:

- Enhanced Income Replacement Indemnity (IRI)
- Enhanced Personal Care Assistance (PCA)
- Enhanced Permanent Impairment (PI)
- Transitional Expense Coverage (TEC) for special circumstances based on demonstrated need
- Modifications to main or secondary home, due to health or family circumstances
- Extraordinary travel and accommodation costs, including attendant costs
- Attendant care to engage in employment
- Motor vehicle acquisition (eligible every 5 years) and adaptation
- Support for participation in leisure and recreational activities

PIPP is monitored and reviewed continuously to ensure that it remains among the most supportive plans in Canada for victims of automobile accidents.

CBP.4 COVERAGE MODIFICATIONS IN OTHER PROVINCES HIGHLIGHT THE VALUE OF BASIC AUTOPAC

Other jurisdictions modify coverage levels from time to time. In recent years, Ontario has reduced some coverages, in order to reduce claims costs, as an alternative to premium increases. SGI made enhancements to their injury coverage (effective January 1, 2017), in some cases to bring coverage levels up to those already provided by MPI.

Currently, ICBC (a tort-based compensation model) is undergoing reform, in order to reduce rising claims costs, and to keep rates affordable.[3] This is expected to involve changing how injuries are treated and compensated by moving toward a care-based model, with increased accident benefits, while taking steps to reduce legal costs. Together, these changes focus on providing timely treatment and support that customers need in order to recover, as opposed to cash settlements (in tort) which attempt to estimate future needs.

The changes being made by ICBC are expected to come into effect on April 1, 2019, and include the following:

- Enhanced accident benefits, aimed at improving care and support for recovery
  - Increase the overall allowance for medical care and recovery expenses to $300,000 (from $150,000), to better support those most catastrophically injured (once legislated, benefit will be retroactive to January 1, 2018)
  - Significantly greater treatment costs will be covered (based on current, fair market rates, that have not been updated since 1991)
  - Customers will no longer be out-of-pocket for most expenses
- More types of service providers will be covered by ICBC, so that customers have more choice about the treatments they are able to receive

[3] https://news.gov.bc.ca/releases/2018AG0003-000164

- Wage loss support up to $740 per week (from $300/week). This will be indexed to inflation
- Homemaker's benefits up to $280 per week (from $145/week)
- Funeral costs up to $7,500 (from $2,500)
- Death benefits up to $30,000 (from $17,580-$20,080)
- Limits to minor injury claims:
  - $5,500 limit on pain and suffering awards for minor injuries.
  - Optional coverage will be available for higher limit in pain and suffering compensation. Limit will be set at $75,000
- Minor injury definition
- New dispute resolution model for minor injury claims (Civil Resolution Tribunal (CRT), which is independent of ICBC)

These expected changes, though relevant to ICBC's current accident benefits coverage, still do not meet the level of benefits currently provided by Manitoba's PIPP benefits. Arguably, ICBC's shift to a care-based model (with measures to reduce legal costs) highlights the value of Manitoba's no-fault (PIPP) system.

Newfoundland and Labrador is currently undergoing an auto insurance review, in light of rising claims costs. The province is exploring caps on minor injuries.[4]

New Brunswick's auto insurers are also calling for significant rate increases, and the provincial government is going to take time to review and consider whether changes are needed to the automobile insurance system.[5]

CBP.5 COMPARISON OF MPI BASIC INSURANCE COVERAGE TO OTHER PROVINCES

The following table provides a detailed comparison of the basic compulsory insurance benefits of five comparable Canadian jurisdictions.

SERVICE DELIVERY MODEL

SDM.1 INTRODUCTION TO SERVICE DELIVERY MODEL

Manitoba Public Insurance (MPI or the Corporation) has made numerous positive changes to its claims processing and customer service operations. In this Rate Application, MPI highlights some of these changes, describes how they benefit customers (and possibly all Manitobans) through more efficient service delivery, and provides examples of the improvements made at each customer "touchpoint", namely:

1. Obtaining a license
2. Calling the contact center about an issue
3. Working with a MPI adjuster on a claim
4. Making claims involving rodents and hail
5. Getting a vehicle estimated for damage
6. Getting a vehicle repaired
7. Buying or repairing a salvage vehicle from MPI
8. Recovering from bodily injury
9. General interaction with MPI online

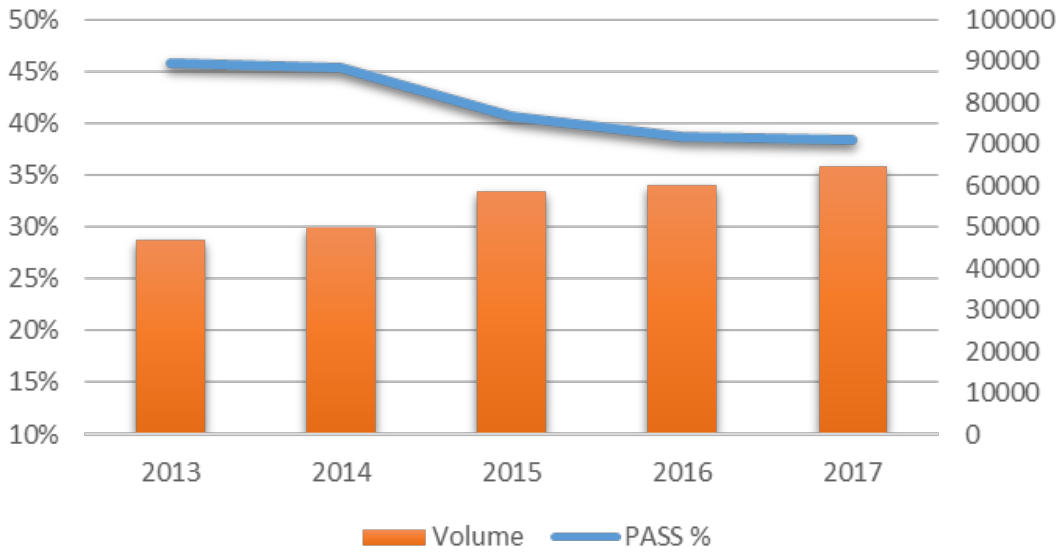
Additionally, this Rate Application outlines the new Customer Experience Program MPI established for 2018/19, which seeks to better measure customer satisfaction at key touchpoints with MPI and with its processes.

SDM.1.1 Driver's Licensing Initiatives

The overall pass rate for MPI customers attempting to obtain their driver's licence through the road test has been declining since 2014. While pass rates for road testing for all classes of driver's licences have declined, the pass rate for road testing for Class 5 licences, the most frequently taken driver's licence road test, has experienced the greatest decline.

Declining pass rates increase demand for services from MPI's driver examiners. When road tests must be re-taken multiple times, the ability of driver examiners to offer services to first time examination candidates decreases. Additionally, the safety and collision risk to drivers and driver examiners increases as the preparedness of examination candidates decreases.

Figure SDM- 1 Class 5 Road Test Pass Rate and Volume



In an effort to reverse the trend of declining pass rates for Class 5 road testing and subsequently improve road safety, MPI has implemented a number of initiatives, including:

- Web Page Re-design: all information pertaining to preparing for a road examination, as well what to expect on your road test, has been compiled into a single web page for ease of access
- Information Hand-out: in addition to the website re-design, all customers who successfully complete the knowledge (written) test are now provided with a document that provides basic information on how to prepare for a road test and points the customer to the re-designed website
- 4-Attempt Policy Change: a customer will be required to take two hours of driving lessons from a certified driving school after the fourth (and each

subsequent) unsuccessful attempt to pass a road test. This limits some customers returning immediately after 20 or 30 failed and potentially unsafe attempts.

In July 2015, new legislation came into effect affecting Class 5A licence holders (Authorized Instruction). Previously, Class 5A licence holders were permitted to re-test immediately following a failed road test. As a result of these legislated changes, Class 5A licence holders must now wait 14 days following a failed road test to re-test, a requirement which mirrors those of the Class 5L Licence (Graduated Driver Licence). The aim of this legislative change was to increase operating efficiencies and improve road safety by mandating a 14-day "cooling-off" period with the expectation that drivers would use this period to better prepare for their next road test.

To this point, the new initiatives and legislative changes have not produced an overall improvement in the pass rate for Class 5 licence road tests. However, MPI will continue to monitor results and look for further process improvements that will increase pass rates.

SDM.1.2 Contact Centre Callbacks

Customers are increasingly less tolerant of service providers who require them to wait on the telephone an excessive length of time before they are able speak with a representative of that service provider. Understanding the importance of our customers' expectation, MPI implemented a customer callback strategy in May 2017. Specifically, when wait times exceed 90 seconds, the automated service prompts customers to provide a name and telephone number, maintains their spot in the queue and will arrange a call-back from a live customer service representative when they become available. MPI expects the callback strategy to increase customer satisfaction by reducing wait times and call-abandonment rates; as well as increasing efficiency by reducing agent idle times (thereby increasing capacity to meet the 90 second service level).

Since the introduction of the strategy in May 2017, 29,312 callbacks have been made to date. The result has been an overall reduction in call-abandonment rates by 0.5% with a 2.32% reduction in January 2018, the month with the highest volume of calls.

SDM.1.3 Working with an Adjuster – Physical Damage

Under the previous "Team Adjusting" service model for Physical Damage (PD) claims a customer was assigned a group of adjusters at the first notice of loss who would complete task-based work required on the claim. Customers could potentially be speaking to a different adjuster each time they called MPI. This resulted in:

- Customers repeating (sometimes numerous times) the details of the claim
- PD adjusters requiring additional time to familiarize themselves with the claim
- Customer complaints surrounding the process and what was perceived as a reduced service level

The service model also resulted in internal challenges for tracking productivity, performance and general metrics:

- Lack of tools for supervisors to accurately measure quality performance, resulting in reduced accountability and limited individualized feedback for adjusters
- Concerns from leadership teams with available metrics and the number of aging claim files.

The Supported Adjusting Service Model was piloted in early 2017 and was formally introduced in June 2017. The new model involves a transition from a team of adjusters working on every PD claim, to a hybrid system of individual and team adjusting. Under this model, individual adjusters are assigned to more contentious claims, resulting in better claims management and more efficient use of time. Since August 2017, less contentious claims are assigned to "Triage Adjusters" who work to resolve claims with customers over the phone instead of in person. If resolved, these claims remain in a team environment and are not individually assigned. The "Transfer

to Triage" program requires Customer Care Agents in the Contact Centre to identify these less contentious claims and to transfer the customer directly to a Triage Adjuster for immediate resolution. For more contentious claims, customers are able to contact their assigned Adjuster directly, but also have the option to speak to a team member if their assigned adjuster is unavailable.

The Supported Adjusting Service Model has already resulted in an improved PD claims experience for customers and MPI staff and has made the process of concluding PD claims more efficient, resulting in a reduction in the average:

- Call time - by 721 hours per month or 2 minutes per call (average number of calls per month = 21,600)
- Age of claim "events" (items of work) - by 4 days (from 7 days to 3 days)
- PD claim duration - by 19 days (from 76 days to 57 days)

Additionally, the Transfer to Triage Program has increased claims management efficiency by reducing the number of adjuster appointments necessary (each appointment lasting 40 minutes on average), while improving customer service by resolving claims on the first call (each call lasting 8 minutes on average). This new model has saved 663 adjuster-appointments to date.

SDM.1.4 Rodent claims successfully modified

In 2008, MPI implemented a "zero tolerance" policy towards rodent infestation claims in vehicles, RVs and trailers, due to the possibility of Hantavirus infection from deer mouse droppings. Under that Policy, vehicles with rodent damage were taken apart, sanitized and often written-off. Since the implementation of the Policy, the number and cost of rodent claims has steadily increased from roughly $2m in 2008/09 to $15m in 2016/17. Additionally, the average length of the repair was exceeding 70 days.

In 2017, MPI introduced revised claims handling and vehicle remediation protocols for rodent infestation claims. These changes simplified the claims handling process, sped

up the vehicle remediation process and significantly reduced the number of and costs associated with rodent remediation claims. These changes also aligned MPI with other insurers, while ensuring the health and safety of customers, based on guidelines from Health Canada and new research by the Public Health Service of Canada[1]. As a result, the changes will benefit all ratepayers as MPI will spend $10.7m less per year on rodent infestation claims.

SDM.1.5 Getting Hail Repaired: Paintless Dent Repair

In 2017, MPI introduced a process to create Paintless Dent Repair estimates for hail claims. Paintless Dent Repair is an industry-standard method of removing dents from the exterior of vehicle body panels without requiring filler material or refinishing. With specialized tools and techniques, a qualified Paintless Dent Repair technician can push or pull dented metal back to its original shape without damaging the panel's painted surface. Unlike conventional repair methods, Paintless Dent Repair does not require sanding, filling or painting materials and, as a result, the cycle times and repair costs are greatly reduced. The Paintless Dent Repair estimating standard and hail calculator enables estimators to determine the cost of damage based on this industry accepted repair process.

These changes simplify the first estimate for hail claims and enhance customer service by increasing the number of Paintless Dent Repair facilities recognized to complete the repair. The Paintless Dent Repair estimating process also reduces the costs associated with hail claims, which benefits all ratepayers.

[1] Please refer back to exhibit 52 provided in the 2018-2019 General Rate Application

SDM.1.6 Getting your vehicle estimated

On March 6, 2017, MPI switched from an estimating "Global Queue" process to an "Estimator Pod" concept process.

Under the Global Queue process, the Estimator who inspected the vehicle and prepared the first estimate would not necessarily receive and approve supplemental estimates once the vehicle was fully inspected by a repair shop. Instead, the task would be handled by the next available Estimator in the queue. This process was not preferred in that it:

- Required estimators to review all preceding estimates, thereby increasing the amount of time required to approve/decline supplemental ones
- Resulted in concerns from the repair shops regarding service times, estimating decisions and estimate inconsistencies
- Made it more difficult to ensure accountability for the overall work product and to produce productivity metrics

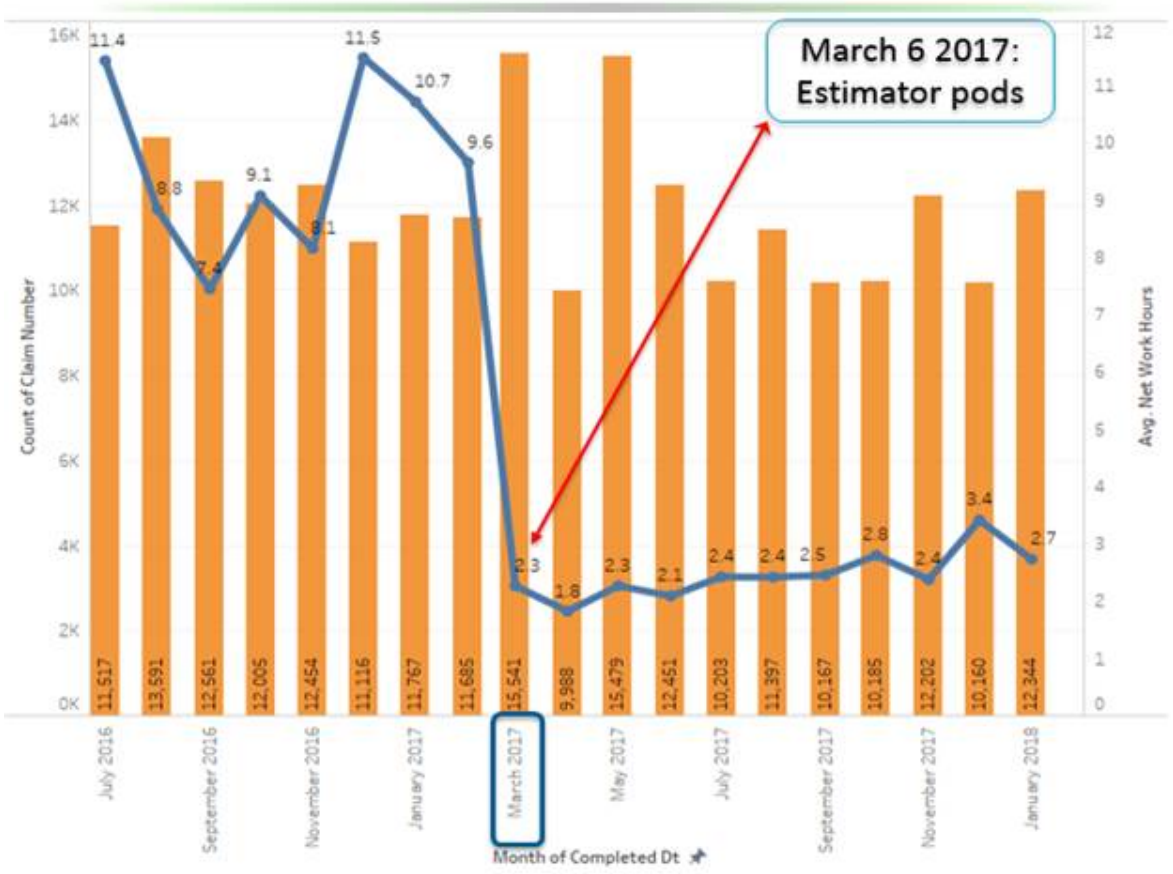
The Estimator Pod process places estimators into small, more localized teams thereby combining the main benefit of the Global Queue process (providing estimators with support) with the benefits associated with having one estimator responsible for all estimates on a claim.

Since its implementation, the move to Estimator Pods has:

- Reduced the number of supplemental estimates per claim
- Improved estimate approval times
- Improved estimating consistency
- Increased estimator ownership and accountability and staff engagement
- Improved repair cycle times
- Reduced estimator overtime by 45%
- Saved MPI $0.8m in compensation for 2018/19

The below graph shows the average number of working hours required to approve supplements before and after the implementation of the Estimator Pods process (with claim volumes staying roughly the same during this period):

Figure SDM- 2 Supplement Performance with Estimator Pods



Additionally, on March 1, 2018, MPI implemented a form of straight-through processing for high-performing repair shops. By complying with MPI estimating standards and establishing a proven record of accomplishment on performance, repair shops can earn the privilege of not requiring estimator approval for jobs valued between $1,500 and $3,500. MPI maintains financial control over these claims by conducting risk-based, post-payment audits.

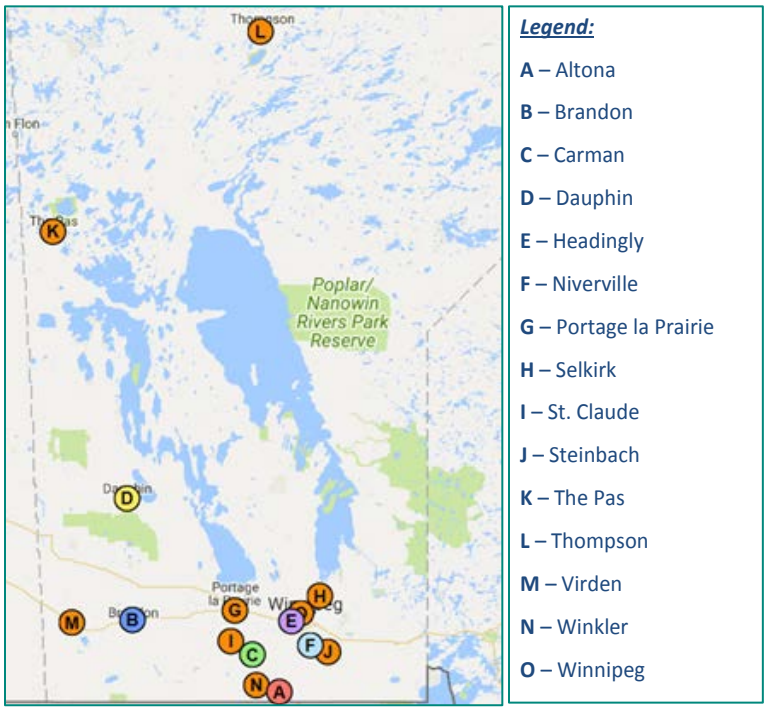
SDM.1.7 Getting your vehicle repaired

SDM.1.7.1 Direct Repair Program Status

MPI implemented the Direct Repair Program on March 1, 2017. In this optional program repair shops (not MPI) write the first estimate on claims. In addition to the Direct Repair Program, MPI also implemented the Direct Repair Plus Program, which permits repair shops enrolled in the Direct Repair Program to handle more perils and claim types than those shops solely in the Direct Repair Program.

In the first year, MPI allowed 74 repair shops (representing 64% of the total light vehicle repair work) to enroll in the Direct Repair Program, of which 6 were also accepted into the Direct Repair Plus Program. Accordingly, the Direct Repair Program is now available to most Manitobans. The map below depicts the current areas that have at least one (1) repair shop participating in the Direct Repair Program.

Figure SDM- 3: Direct Repair Shop Locations



SDM.1.7.2 Direct Repair Maturity Creates Program Sustainability

MPI expects the Direct Repair (DR) Program to continue to grow and generate efficiencies for MPI and repair shops alike as it matures. On the growth side, MPI anticipates that customer adoption rates will increase as they become more familiar with and appreciate the benefits of the Program. On the efficiency side, MPI expects that new efficiencies will be created through a reduction in the number of transactions requiring its review and approval as more repair shops become eligible for enrollment in the Program. MPI also expects that repair shops will also improve their efficiency levels by streamlining their intake and throughput processes. To date, nearly 20,000 first estimates and 25,000 supplemental estimates have been processed through the DR Program and 5 full-time equivalent positions have been reduced (through attrition).

However, the current Light Vehicle Accreditation Agreement between MPI and the repair industry negatively impacts the financial viability of the DR Program. Under this Agreement, from March 1, 2018 until February 28, 2019 (when the Agreement expires), all repair shops completing repairs under the DR Program are entitled to an $81 DR Premium per claim which could cost MPI up to $6.3 million annually. The problem is that this premium currently exceeds the value saved by the Corporation as a result of having repair shops prepare the first estimate. While the repair industry objects to the present eligibility criteria for enrollment in the Program (i.e. it is only available to repair shops that repair more than 260 claims per year and meet certain performance expectations), the $81 Direct Repair Premium limits MPI's ability to expand the eligibility criteria further. MPI is otherwise supportive of expanding the eligibility criteria, as doing so would make the DR Program available to more Manitobans.

SDM.1.7.3 Direct Repair Uptake

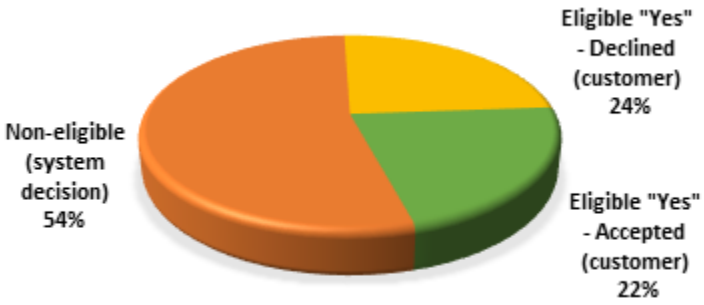
MPI has not actively promoted the DR Program in the 12-month period following its implementation date. The process to enroll a repair shop in the Program takes approximately 12 months as robust internal controls (i.e. audits, inspections,

customer surveys, etc.) must be in place in order to mitigate risk and ensure their successful long-term participation in the Program. Given this, MPI felt that earlier promotion of the program would have been counterproductive, as the Program may not have had the capacity to manage the expectations of customers, resulting in their dissatisfaction with the Program and a reluctance to utilize the Program in the future.

In February 2018, 46% of all PD claims registered were eligible for Direct Repair. Out of these eligible claims, 48% of customers accepted the offer of a Direct Repair estimate. The remaining customers chose not to accept Direct Repair because:

- They were more comfortable with having their vehicle estimated at MPI
- They were not familiar with the Direct Repair program
- They believed that arranging an estimate through MPI would be faster than arranging one through Direct Repair shop
- They were already attending an MPI Service Centre to address adjusting issues such as liability, loss details, etc.

Figure SDM- 4: February 2018 DR and DR Plus Claims

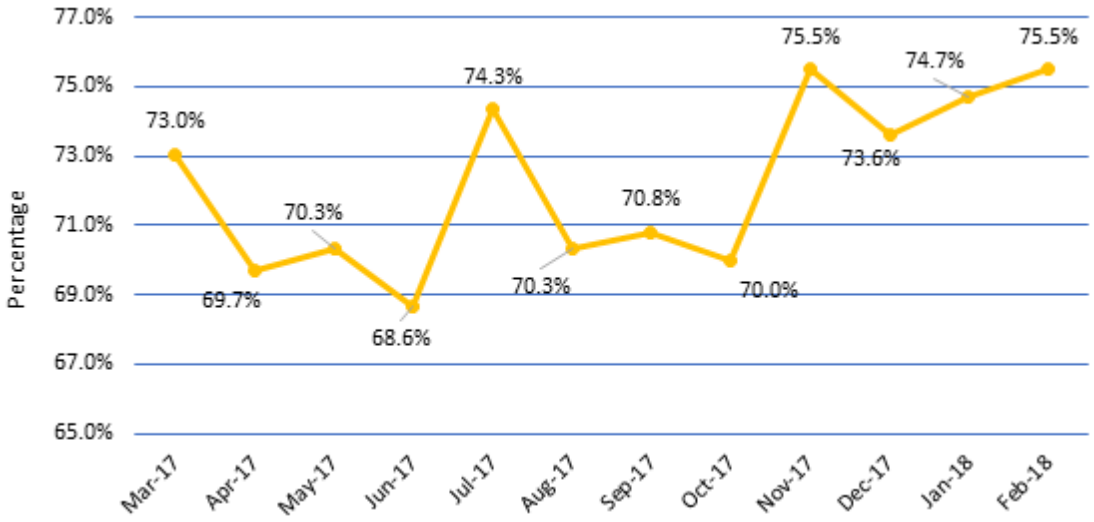


SDM.1.7.4 Creating a Positive Repair Experience

MPI retained an independent firm to survey customers on their experiences with the repair shops completing their insurance-covered repairs. These surveys use the Net Promotor Score Method to gauge the customer loyalty. Currently, MPI's Net Promotor Score is 75.5%, which MPI considers very positive. MPI will continue to monitor the

results of these surveys to ensure that the experience of its customers remains a generally positive one. See Figure SDM-3 below for the Net Promotor Score trend.

Figure SDM- 5: Repair Shop Net Promoter Score



SDM.1.7.5 Industry Performance

The DR Program is highly reliant on creating trust between the repair industry and MPI. MPI developed a series of key performance indicators (shop measures) to monitor and evaluate the performance of shops enrolled in the Program and to assist in determining whether to increase the approval limits available to them. The earned approval limits give shops more control over their intake process and cycle times and generally increase sales volumes. Eligibility for entry into the DR Program is also based on these performance indicators. The two most closely monitored indicators are the Composite Score (tally of all performance measures) and the Ask-Approve Variance. The Ask-Approve Variance measures the instances where MPI has denied a request from a repair shop (currently 1.3%). If they comply with MPI's expectations, repair shops can qualify for enrollment in the DR Program and earn up to $3,500 automatic approval authority.

The tables below illustrate the significant industry performance improvement within the first year of the DR Program.

Figure SDM- 6: Composite Score

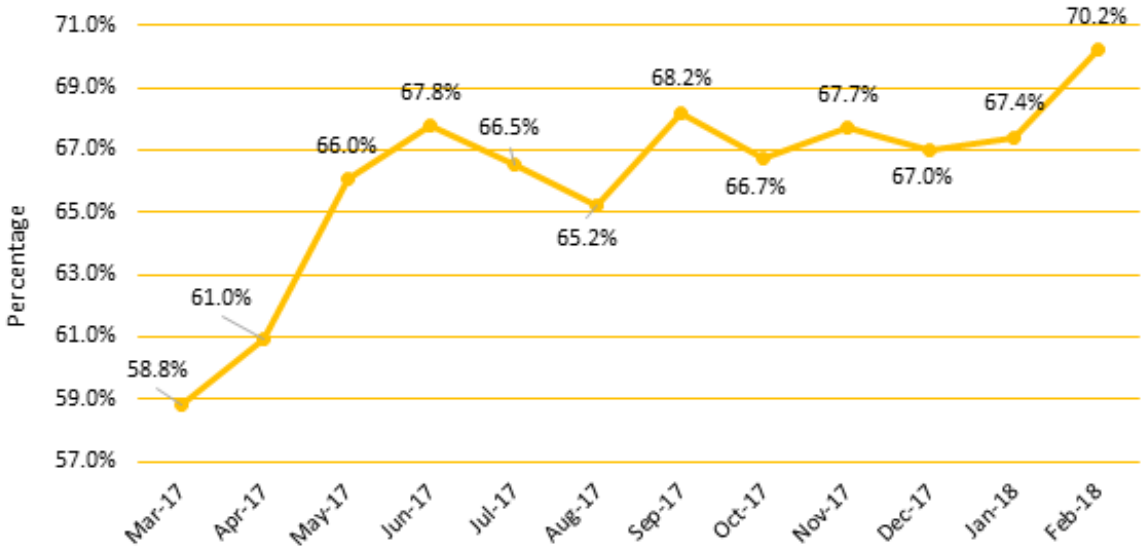


Figure SDM-7: Ask-Approve Variance Ratio

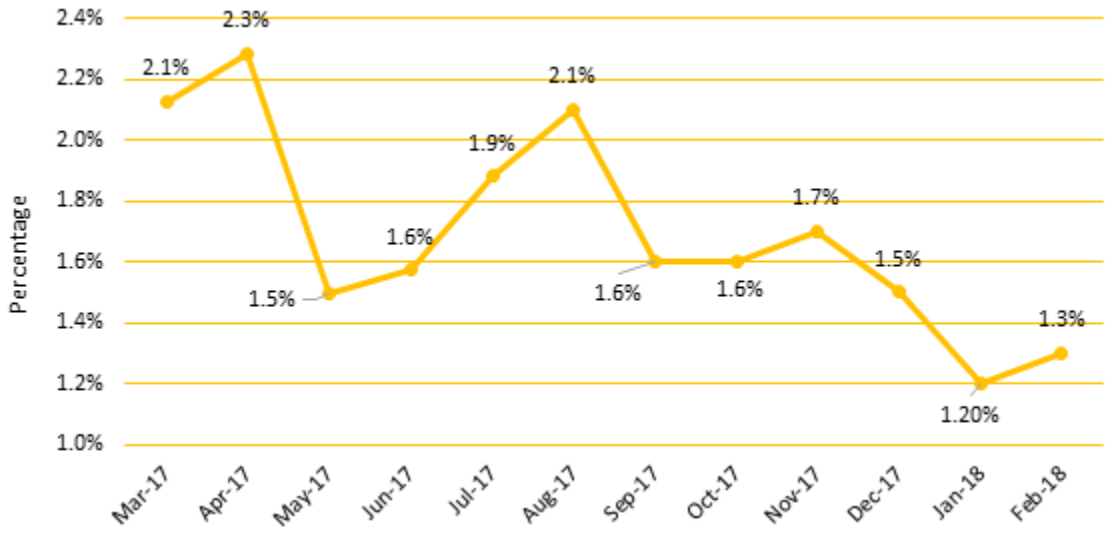

In summary, the first year of the DR Program has been successful on many counts. However, MPI has also learned many lessons and its primary focus will be making the Program more cost effective to ensure its sustainability in the future.

SDM.1.8 Buying or repairing a salvage vehicle

SDM.1.8.1 Repairing salvaged vehicles in Manitoba

As part of MPI's continuing emphasis on ensuring the safety of vehicles on the road and that accredited repair shops have the necessary training, equipment, repair methods and facilities to complete a proper repair, MPI introduced new requirements for the Body Integrity Inspection Program on June 1, 2017. The Body Integrity Inspection Program is part of the Stolen and Wrecked Vehicle Monitoring Program (SWVMP), a Canada-wide vehicle inspection and monitoring program designed to prevent registration of stolen/irreparable vehicles, certify salvageable vehicles (after they have been properly rebuilt) and provide consumers with the information they need about a vehicle to make an informed buying decision. Customers wanting to rebuild a vehicle with a Salvageable status must now complete a repair plan with the inspection mechanic at their Body Integrity Inspection Station prior to starting any repairs on the vehicle. The repair plan must include four colour photos of the vehicle and Original Equipment Manufacturer (OEM) repair procedures. The Body Integrity Inspection Station will do an initial inspection of the vehicle, sign off on the repair plan, and ensure the repairer has the tools and training to repair the vehicle safely. The customer must return to the Body Integrity Inspection Station within 120 calendar days from their initial inspection. If they do not return, the station will void their certificate.

SDM.1.8.2 Buying salvage from MPI

The current Salvage Management System (SMS) runs on an old platform that cannot be enhanced. It has limited capacity for photos, has poor reporting and payment

processes, and does not allow for integration with other MPI software. The current SMS does not allow for any type of salvage revenue or customer improvement opportunities. The SMS review for 2018/19 is to develop a strategy that will address the identified limitations of the current system, provide an improved customer service experience by allowing an online bidding option, increase market penetration and revenues. An integrated online SMS will also help address capacity issues in the Physical Damage Centre holding compound, reduce inventory cycle times, promote a more efficient customer buying process and reduce rural towing and storage costs.

SDM.1.9 Recovering from a Bodily Injury

The Personal Injury Protection Plan (PIPP) is a true no-fault injury compensation scheme protecting Manitobans from the rate instability and premium growth problems faced by many tort-based jurisdictions due to a number of factors, including: unpredictable court settlements, rising litigation costs, fraud and soft fraud, and the pressure to enrich accident benefits to reduce tort actions.

SDM.1.9.1 Current State of PIPP

The injury and medical environment in which PIPP resides continues to evolve due to an overall increase in the complexity of injury claims caused by the rising number of mental health claims, such as addictions, depression, anxiety, and chronic pain, as well as concussion and post-concussion diagnosis. MPI seeks to continuously improve and adapt to these changes given their significant impact to reserves in 2016 and 2017. The downstream impact of this trend on MPI is significant growth in our retained claims beyond five years from first notice of loss (FNOL). Through the deep-dive review of this area in 2017, various process improvements have been initiated that will mitigate this trend.

Centralized Reserving:

On March 1, 2017, injury file reserving moved from being the responsibility of benefit administrators and case managers to that of a centralized reserving unit. The goals

were to improve the consistency and reliability of reserves, and build capacity for the benefit administrators and case managers to allow more time to focus on return to health / work efforts. Effective May 1, 2018, the oversight of this unit will be a shared responsibility between the Director, Injury Claims Management and the Chief Actuary, and Vice President, Risk Management. The purpose for this change is to ensure there is open communication and collaboration between the two areas that will result in improved operational effectiveness, and sound actuarial practices related to reserves.

Interest Policy Change:

Although legislative amendment was not required, MPI recently revised the policy concerning payment of interest on permanent impairment benefits under sections 197.1 and 163 of The Manitoba Public Insurance Corporation Act. MPI now only pays interest if payment is made 30 days after the Corporation issues a decision on permanent impairment or where Internal Review or the Automobile Injury Compensation Appeal Commission overturns a coverage decision. It is estimated this change will save the Corporation approximately $1,000,000 per year.

Claims Intake and Triage:

On May 1, 2017, MPI improved its injury claims intake and triaging processes to identify complex claims early and triage those claims to the most appropriate case management resource. Intervention and rehabilitation efforts were initiated as early in the claim as possible, which is a much better customer outcome. The claims triage model was adapted from the Transport Accident Commission in Victoria, Australia, and customized for Manitoba. It measures a claimant's cognition, resilience, social support, persistent pain, and pre-existing mental health. Development of these claims takes time, but early results are promising, and MPI has seen a two percent (2%) increase in the number of claims closed within the first three months from FNOL.

Workforce Planning:

Part of the BI^3 business case was to reduce FTE costs by adopting more passive case management practices. The outcome was a 28 FTE reduction; however, an unforeseen consequence of this was an overall reduction in case manager capacity, which when combined with the increased complexity of claims, was a factor in the

overall growth in retained claims. A jurisdictional review identified that other jurisdictions are in fact increasing their staffing levels as a means to manage claims for better results.

MPI's response to manage these trends is to add more case management capacity for a more pro-active case management experience with customers. The main effort is to implement a centralized claims intake and triage group by the end of the 2018/19 fiscal year. Treating claims intake and triage as a specialized function is in line with industry best practice and will refine the accuracy of the initial information collected, and further standardize the triage process. This will also remove these functions from case managers, increasing their overall capacity and allow case managers to focus solely on rehabilitation planning and return to work efforts that will reduce disability durations, reduce claims costs, and increase customer service.

SDM.1.10 Introduction of new on-line Customer Self Service

In response to the modern day customer service demands, expectations and needs of consumers, MPI will be introducing a new on-line customer self service delivery channel in the summer of 2018 for mobile, tablet and/or personal computing devices. Customers will be able to utilize this channel to gain access to and pay for MPI services, which do not require informed insurance related consultation and expertise in order to obtain. The initial launch will be focused on class 5 and 6 Knowledge tests and Road test appointments. These high-volume transactions present a good candidate transaction base to launch the new service and provide high-value to customers who require options, flexibility in appointment bookings and available hours of service. This initial on-line presence will be primarily associated with the DVA line of business. However, the base architecture will be utilized and shared amongst all lines of business.

Subsequently over the remainder of 2018, MPI will be finalizing the base architecture components of the new service delivery channel by implementing the following capabilities:

- E-cash payment capability
- Secure Messaging and e-document delivery
- Full authenticated and highly secure user sign-on and authentication

The overall base architecture that will be implemented in 2018 will be extensively utilized by the Basic line of business in that customers will have the ability to make on-line payments with expanded payment methods, receive secure messages which provide updates on claims repair status and introduce an e-document delivery method instead of paper mail for all future MPI related customer communications.

Once the base architecture is in place, MPI will then expand the customer self-service offerings to include (but not limited to):

- Class 1-4 Road and Knowledge tests
- Ability to change or cancel Road and Knowledge tests
- Obtain a driver's abstract
- Obtain a claims experience letter
- Electively transition customers to e-document delivery for all MPI communications versus existing paper mailings
- Driver Education registration
- Driving Instructor related Road tests
- Issue replacement Driver's Licence and Identification card
- Issue replacement vehicle registration/insurance certificates

As MPI continues to expand the associated services available through the new on-line customer service delivery channel, ongoing engagement with customers, Autopac agents and the Insurance Brokers Association of Manitoba will be conducted to ensure a smooth transition for all stakeholders involved and impacted.

MPI also intends on establishing a long-term customer self-service vision and roadmap by the end of 2018. This will set the long-term direction and business case for the completion of this very important customer service delivery channel.

SDM.2 CUSTOMER EXPERIENCE FRAMEWORK

To align with industry best practices and allow for MPI to measure performance against industry standards and against comparable organizations, a new Customer Experience framework is being developed. The new Customer Experience framework will evolve the Corporation's customer-centric focus, introduce new channel choice to customers where needed, align with industry standards, benchmark against comparable organizations in the industry, and allow MPI to have access to near real-time metrics and data upon which to act.

MPI's current Customer Service Standard (CSS) measures, used to monitor operational performance and customer satisfaction, were developed internally in 1998 and have not substantially changed or evolved in the nearly twenty years they have been in use. The focus of CSS has been largely on operational efficiencies more so than on customer expectations. CSS measures follow a delayed reporting structure, typically gathering and reporting feedback three to six months after a customer transaction.

Internal evaluations of CSS have revealed that these measures provide valuable operational input, but may not be optimized to modern expectations for satisfaction or possible points of delight from the customer's perspective. The current operational measures also do not offer the Corporation opportunity to compare against other organizations and industry benchmarks. With a focus on operational standards, the CSS measures do not provide a primary focus on quality of service from the customers' point of view. A lack of real-time customer feedback also impacts the Corporation's ability to respond to issues in the moment.

The overall objectives of the new Customer Experience Framework are to provide MPI with:

- awareness of evolving customer needs and expectations;
- increased understanding of our performance in meeting these customer expectations; and

- pragmatic, cost-effective solutions to address gaps between customer expectations and experiences.

The Customer Experience framework will follow a core strategy that is customer-centric, ensuring that business activities revolve around the customer. It will also implement an ideal vision of what the customer should experience with the Corporation, maintaining a focus on delivering exceptional customer service. The Customer Experience framework will align the Corporation's vision, goals, and objectives with the overall customer expectations by key touchpoint with MPI. A customer-centric focus based on the ideal Customer Experience will lead to a more comprehensive understanding of customer needs, desires, and expectations, contribute to better MPI's products and services, promote greater customer satisfaction, increase staff engagement, and, heighten the Corporation's credibility as a customer-driven company.

The 2018/19 fiscal year will be a developmental year for MPI's Customer Experience framework. While work is completed to define the core dimensions of the new Customer Experience framework, transitional changes will be made to ongoing data collection and feedback mechanisms to ensure the Corporation continues to respond to customer needs and track customer input and satisfaction levels. Development of the new Customer Experience framework is expected to be complete by the end of the fiscal year 2018/19, providing MPI the ability to compare new Customer Experience metrics against industry standards and similar organizations. Ongoing implementation and evolution of the Customer Experience framework will continue well beyond this period.

Attachment A: MPI IT Benchmark and Maturity Assessment – Executive Report

BENCHMARKING

BMK.1 EXECUTIVE SUMMARY

Manitoba Public Insurance (MPI or the Corporation) continues to provide value to Manitobans by containing costs and seeking increased efficiencies through innovation, process changes and leveraging technology. MPI continually reassesses its current practices and looks to anticipate its future needs. The value provided to Manitobans is captured in the Value Equation below, through the combination of price, coverage, service and access.

MPI continues to balance efforts to contain costs while meeting the evolving needs and expectations of Manitobans. MPI has delivered increased value by:

- Providing guaranteed access to superior products and coverage
- Implementing service enhancements
- Implementing loss prevention strategies
- Undertaking IT Optimization projects
- Promoting safer roads through education, awareness and enforcement
- Offering province-wide service accessibility
- Actively managing costs through various cost containment initiatives
- Preparing for a changing auto repair industry

MPI's priority is to provide exceptional value to all Manitobans and as such, improving customer service and corporate performance is paramount. To ensure that MPI is using best practices and best industry standards, it employs Benchmarking to compare its practices and performance against those of other organizations. The resulting information is used to assess and enhance corporate performance. Benchmarking assists MPI in achieving its corporate goals and in attaining optimum performance across all areas. Specifically, this process helps to identify improvement opportunities for managing expenses and improving efficiencies in both services and operations in order to successfully move forward and continue to provide the best value to Manitobans.

This benchmarking report shows positive results in each of the four benchmarking components and confirms that overall performance has improved under MPI's business model and governance practices.

In terms of Operational Efficiency, MPI compares favourably in many aspects against the benchmark groups. This is especially true with regards to the macro-mandate measurements that gauge operational efficiency at a macro level. For corporate and claims performance metrics, the results must be examined within the context of MPI's unique business model. This model currently permits and facilitates a high frequency of claims due to a low Basic deductible and a Driver Safety Rating (DSR) model that does not punitively penalize a customer for filing a claim. This model allows MPI to provide a better customer experience but requires more employees than private-sector models, which often outsource services.

In addition, unlike private insurers, MPI is a not-for-profit Crown Corporation. Since MPI does not earn a profit on Basic insurance, premium revenue will be lower than private companies. Therefore, the ratio of expenses relative to premium revenue will appear higher, all else being equal.

Key metrics comprising IT Service Delivery Capability demonstrate MPI's improvement and growth within this area. Specifically, spending, as a percentage of overall operating expenses, continues to decrease year-over-year. MPI's improving IT maturity has increased the quality and benefits derived from IT initiatives. MPI will

continue to develop its processes; especially its governance and value management process, in order ensure the effectiveness of its future operations.

The results of 'Serving Manitobans and Community Impact' metrics evidence of MPI's commitment to superior service and that of being a strong corporate citizen. MPI consistently scores high in customer and claimant satisfaction surveys, an indication that MPI continues to meet the needs and expectations of Manitobans.

Taken together, these benchmarking results are favourable, evidence the effectiveness of MPI's business model and confirm that MPI continues to achieve its mission of providing exceptional value to Manitobans. MPI will continue to evaluate its corporate performance against the indicators described in this benchmarking framework.

BMK.2 MPI BUSINESS MODEL – SUMMARY OF PERFORMANCE MEASUREMENTS AND RESULTS

The key factors of MPI's business model that impact operating expenses, staffing levels and related benchmarking metrics include:

- **Comprehensive customer service performed internally by MPI employees.** This results in a better customer experience but requires more employees than models which rely on out-sourced call centres or full distributed estimating for example. This means when benchmarking against private insurance companies, MPI's FTEs (Full Time Equivalent) per $100 million of GPW (Gross Premium Written) ratio, for example, will be higher. The additional FTEs will also increase expenses which will in turn increase MPI's total gross expenses as a percentage of the GPW ratio. There is a direct relationship between the number of employees and MPI's business model. MPI requires an adequate complement of employees to make the service delivery model function and meet customer expectations.
- **The Service Centre model and the concept of providing convenient access to services province-wide.** This means that MPI requires strategically located service centres throughout the province to serve low population density areas. This is due to the geographic and demographic realities of Manitoba and requires a sufficient number of employees to fully staff the Service Centres. With more physical space required, there can be a negative effect on occupancy costs and staffing levels. This will result in higher total gross expenses as a percentage of the GPW and higher FTEs per $100 million of GPW ratios for the Corporation.
- **The business model is designed so that customers will use their insurance as needed and not be reluctant to make a claim should they have an accident.** However, this increases the number of claims reported and in turn, requires additional claims personnel to administer end-to-end service. This means that MPI's reported claims per claims FTE and reported claims per 1,000 policies in force ratios will generally be higher than the ratios of private insurance companies.

- **Unlike private insurers, MPI is a not-for-profit Crown Corporation.** Since MPI does not earn a profit on Basic insurance, premium revenue will be lower than private companies. Therefore, the ratio of expenses relative to premium revenue will appear higher, all else being equal for MPI.

BMK.3 MANITOBA PUBLIC INSURANCE BENCHMARKING FRAMEWORK

MPI's benchmarking framework reflects the goals and strategies it has developed to meet the requirements of Manitobans as demonstrated in its Value Equation. The framework includes four major areas of corporate performance. Collectively, the metrics in these areas form an overall, representative benchmarking framework for MPI and its operations.

Benchmarking	Area Description
Operational Efficiency	The capability to deliver products and services to Manitobans in the most cost-effective manner possible while ensuring the high quality of its products, services and support
IT Service Delivery Capability	How effective and mature MPI is in terms of IT organization, processes and infrastructure, including both operational effectiveness indicators and ratings evaluating the effectiveness of its IT departments to meet the needs of the business
Serving Manitobans	Measures corporate performance by monitoring Manitobans' perceptions of the service that MPI provides, as the provincial vehicle insurer and in relation to specific products and services
Community Impact	Measures are designed to assess general perceptions of MPI's performance as a corporate citizen. In addition, MPI consistently monitors self-reported road safety behaviors to identify areas for improvement and to increase the effectiveness of its advertising and educational programs

BMK.4 OPERATIONAL EFFICIENCY

Operational efficiency speaks to MPI's capacity to deliver products and services to Manitobans in the most cost-effective manner possible while ensuring the high quality of its products, services and support.

To attain optimal operational efficiency, MPI seeks to effectively manage expenses by leveraging the resources that contribute to corporate success such as its workforce, technology and business processes.

Methodology

In order to assess its operational efficiency, MPI engages the Ward Group to provide benchmarking services in connection with Ward's Property & Casualty Core Enterprise Operations benchmarking program.

The Ward Group is a provider of benchmarking and best practices research studies for insurance companies in North America. Ward has worked with over 400 companies and performed nearly 3,000 benchmarking exercises since 1991.

The operational benchmarking program provides:

- A staffing and expense benchmark for major corporate functions
- An independent and comprehensive analysis of cost structure
- Statistical benchmarking information, in report form, detailing MPI results and benchmarking group results

The Ward benchmarking process:

- Develops "apples-to-apples" comparisons
- Conducts On-site Best Practices Analysis – Ward spends time at MPI offices to understand business practices, operating philosophies and corporate culture
- Reviews the Results – Ward has on-site meetings with MPI management to review customized results developed specifically for MPI

- Monitors the Results – After the second year of collecting information, a trend analysis report is prepared annually to help MPI management monitor year-to-year performance improvement

For this program, MPI is compared to three benchmark groups.

- Canadian Personal Auto Benchmark Group – 10 Canadian insurers
- Canadian Benchmark Group – 10 Canadian insurers
- US Personal Auto Benchmark Group – 7 US insurers

BMK.4.1 Corporate and Claims Performance

MPI compares well against the benchmark groups in many of the operational efficiency measures. Below are key 2016/17 benchmark indicators that provide confirmation that MPI is operating efficiently and effectively.

Figure BMK- 1: Corporate Performance Results

Line No.	Metric	Corproate Performance Measures	MPI 2012/13	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Canadian Personal Auto Group 2016/17	Canadian Benchmark Group 2016/17	US Personal Auto Group 2016/17
1	4.1.1	Total Gross Expenses as a % of Gross Premiums Written (GPW)	32.01%	30.41%	29.88%	27.89%	27.16%	36.27%	38.86%	36.75%
2	4.1.2	Total Gross Expenses per Policy In Force	$288	$282	$286	$280	$279	$444	$591	$436
3	4.1.3	FTEs per $100 million of GPW	153.25	148.33	140.39	130.98	128.30	104.01	107.79	102.78
4	4.1.4	Ratio of Staff to Management	6.83	7.52	7.04	6.64	6.95	5.72	5.93	5.75
5	4.1.5	Total Personnel expense per FTE	$ 79,058	$ 76,872	$ 78,342	$ 81,473	$ 81,978	$ 92,636	$ 94,396	$ 108,242
6	4.1.6	Loss Ratio	77.75%	88.42%	82.99%	70.90%	85.66%	60.87%	61.71%	61.60%
7	4.1.7	Net Investment Yield	5.88%	7.10%	9.13%	-1.44%	6.08%	3.06%	1.76%	3.00%

BMK.4.1.1 Total gross expenses as % of GPW

Total gross expenses include all underwriting, loss adjusting and investment expenses; however excludes reserve change for loss adjusting expenses. This is the overall expense ratio that shows how much revenue the company is spending on expenses. Generally, a lower expense ratio means the company is more efficient and competitive.

Observation

MPI's gross expense as a % of GPW ratio has steadily decreased annually from 32.01% in 2012/13 to 27.16% in 2016/17. The current decrease can be attributed in part to an increase in gross premiums written as well as cost containment strategies implemented by the Corporation.

The ratio continues to be considerably lower than the benchmark groups. This is notable given the Corporation's break-even mandate that generally results in higher expenses to GPW ratios than those of private insurers. The Corporation's favourable expense drivers include its commission structure, less complex underwriting environment, and lower taxes/assessments and legal expenses.

BMK.4.1.2 Total gross expenses per adjusted policy in force

Total gross expenses include all underwriting, loss adjusting and investment expenses; however excludes reserve change for loss adjusting expenses. Policies in force are represented by an average of the number of beginning and end of fiscal year policies in force. Similar to the expenses per GPW metric, this measure shows how much of the policy premium is used to pay company expenses. Companies can see how much of the policy premium they are spending on expenses and also examine the claims costs per policy to determine if the premium covers both of those costs. If so, this will result in an underwriting profit and if not, then an underwriting loss will occur.

Observation

MPI's total gross expenses per policy in force decreased from $288 in 2012/13 and to

$282 in 2013/14. After a slight increase to $286 in 2014/15, it has decreased to a current low of $279 in 2016/17.

MPI's total gross expenses per policy in force figure remained significantly lower than the benchmark groups. This can be attributed to the Corporation's low claims legal expenses which can be attributed to Manitoba's more economical no-fault insurance system.

BMK.4.1.3 FTEs per $100 million of GPW

This is calculated as FTEs divided by GPW, and measures the number of headcount the organization has compared to premium. Generally the lower the number the more efficient the organization, but some companies outsource more insurance functions than others. Therefore, the differences in business models and the dependency on third parties must be considered when using this metric to compare organizations.

Observation

MPI's FTEs per $100 million of GPW ratio has decreased from 148.33 in 2013/14 to 130.98 in 2015/16. It has since decreased to a low of 128.30 in 2016/17. This result is due to a decrease in FTEs across several functional areas and an increase in GPW.

The Corporation's FTEs per $100 million of GPW ratio has been consistently higher than the Canadian and US benchmark groups. This is due to the Corporation's business model which also impacts this benchmark. As the model is based on end-to-end customer service which is performed internally by MPI employees it requires more employees than do models based on for example, out-sourced call centres or damage estimates handled by repair shops. The MPI model results in a more comprehensive customer experience but requires more staff.

BMK.4.1.4 Ratio of staff to management

This is the number of staff FTEs per manager. A greater span of control has several benefits such as lower compensation (since staff tend to cost less than managers), and better communication with fewer levels of management (i.e. flatter organization structure).

Observation

The staff to management ratio at MPI increased from 6.83 in 2012/13 to 7.52 in 2013/14. The span of control decreased to 7.04 in 2014/15 and to 6.64 in 2015/16. It has since increased to 6.95 in 2016/17 due to a decrease in management.

MPI's staff vs. management ratios are higher than the Canadian and US benchmark groups, indicating that overall, MPI has a "flatter" organizational structure, as compared to the benchmark groups. In addition, the Corporation's overall personnel expenses per FTE and Management personnel expense per FTE are both considerably lower than those of the benchmark groups.

BMK.4.1.5 Total Personnel Expense per FTE

Personnel costs are "fully-loaded," meaning they include salary, overtime, benefit costs, payroll taxes, and retirement costs. This metric measures the average compensation per FTE within the organization. Typically companies compensate employees close to the industry average in order to retain talent. Overpaying can lead to expense challenges and underpaying can lead to lower productivity and higher turnover.

Observation

MPI's personnel expense per FTE has steadily increased from $79,058 in 2012/13 to $81,978 in 2016/17.

The Corporation's personnel expenses continue to be much lower than the benchmark groups. This can be attributed to the Corporation's lower base salaries and the fact that the Corporation does not pay employee bonuses.

BMK.4.1.6 Loss ratio

Calculated as losses incurred (paid claims plus reserve change) divided by Net Premiums Earned, this ratio shows the company how much of the premium is dedicated to paying claims. For-profit companies seek to have a low loss ratio, since this is the biggest cost to the company and has a major impact on their profitability. Public not-for-profit insurers look to have a loss ratio and expense ratio that comes close to breakeven, so the lower the expense ratio, the more they can spend on claims.

Observation

MPI experienced an increase in its loss ratio from 77.75% in 2012/13, to a high of 88.42% in 2013/14. It then decreased to 82.99% in 2014/15 and to a low of 70.90% in 2015/16. In 2016/17, the loss ratio increased to 85.66% due to an increase in losses incurred.

MPI's loss ratios have consistently exceeded those of the benchmark groups. This was expected given that MPI is a not-for-profit corporation and has a mandate of returning benefits to Manitobans while keeping insurance rates affordable.

BMK.4.1.7 Net investment yield

Net investment yield[1] is calculated as net investment income (inclusive of realized and unrealized gains) divided by the average invested assets, the yield shows how much return a company is getting on its assets. Companies tend to seek a high yield since the income offsets the losses and expenses a company incurs.

Observation

MPI's net investment yield increased from 5.88% in 2012/13 to a high of 9.13% in 2014/15. In 2015/16, this metric significantly decreased to -1.44% reflecting a decline in investment income brought about by low interest rates and a decline in the equity market. In 2016/17, net investment yield increased to 6.08%.

Currently, MPI has a greater net investment yield as compared to the Canadian and US benchmark groups.

[1] Net investment yield is calculated in accordance with Ward methodology for the benchmarking exercise.

BMK.4.2 Claims Performance

Figure BMK- 2: Claims Performance Results

Line No.	Metric	Claims Perfromance Measures	MPI 2012/13	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Canadian Personal Auto Group 2016/17	Canadian Benchmark Group 2016/17	US Personal Auto Group 2016/17
1	4.2.1	Claims Expense as % of GPW	7.21%	6.91%	6.60%	6.33%	5.96%	6.96%	7.06%	6.70%
2	4.2.2	Claims Expense per reported claim	$ 264	$ 244	$ 257	$ 247	$ 234	$ 887	$ 1,051	$ 505
3	4.2.3	Reported claims per claims FTE	328.56	341.83	331.19	355.78	371.02	223.74	206.81	279.70
4	4.2.4	Reported claims per 1,000 policies in force	246.20	262.50	245.00	256.90	261.28	95.91	102.09	157.14
5	4.2.5	Personal Lines losses incurred per paid claim	$ 3,115	$ 2,845	$ 3,063	$ 2,841	$ 3,624	$ 7,604	$ 7,262	$ 4,351
6	4.2.6	FTEs per 100,000 Reported claims	560.21	523.32	547.65	510.86	503.72	1,327.96	1,605.18	775.34
7	4.2.7	Management per 100,000 reported claims	71.94	61.81	68.51	66.89	63.39	197.33	231.75	114.93
8	4.2.8	Staff per 100,000 Reported Claims	488.27	461.51	479.14	443.97	440.34	1,130.63	1,373.42	660.41
9	4.2.9	Total Gross Expenses per Reported Claims	$ 1,174	$ 1,073	$ 1,166	$ 1,088	$ 1,066	$ 4,625	$ 5,787	$ 2,772

BMK.4.2.1 Claims Expense as Percentage of GPW

Claims expenses consist of internal and external costs associated with settling claims, including litigation costs. The claims division tends to be the largest division in an insurance company. This measure shows expenses related to settling claims, and generally the lower the metric, the more efficient the claims division.

Observation

MPI's claims expense as a % of GPW has been steadily declining. Since 2012/13, it decreased from 7.21% to 5.96% in 2016/17. This reduction is related to an increase in GPW as well a decrease in claims expenses.

In 2016/17, MPI's claims expense as a % of GPW ratio was lower compared to the other benchmark groups and this is attributed to the difference in litigation expenses between MPI's no-fault system and tort systems.

BMK.4.2.2 MPI's Claims Expense Per Reported Claim

Claims expenses consist of internal and external costs associated with settling claims including litigation costs. Reported claims are the number of claims reported in the fiscal year. This measure shows the average cost of settling a claim, and the lower the metric, the more efficient the claims division.

Observation

Claims expenses per reported claim decreased from $264 in 2012/13 to $244 in 2013/14. It increased to $257 in 2014/15 and has since decreased to a low of $234 in 2016/17. This change is attributed to a decrease in claims expenses.

MPI has consistently maintained significantly lower claims expenses per reported claim dollar value in comparison to the Canadian and US benchmark groups and this again can be attributed to the difference between a no-fault and tort system. However, MPI's business model which results in a high frequency of claims and its efficiency in settling these claims is also a contributing factor for the positive variance between MPI and the benchmark groups.

BMK.4.2.3 MPI's Reported Claims Per FTE

Reported claims are the number of claims reported in the fiscal year. This metric is a workload metric that shows the average number of claims handled per claims FTE. Generally, the higher the metric, the more efficient the company.

Observation

MPI's reported claims per claims FTE has steadily increased since 2012/13. This figure rose from 328.56 in 2012/13 to 341.83 in 2013/14. There was a slight decrease in 2014/15 to 331.19 but the metric increased to 355.78 in 2015/16 and to 371.02 in 2016/17. This result is reflective of an increase in reported claims.

MPI has consistently had significantly higher reported claims per claims FTE ratio compared to the benchmark groups. The high number of reported claims is due to

MPI's business model which results in a high frequency of claims and the high ratio is evidence that MPI has been able to efficiently process the high volume of claims, especially when compared to the benchmark groups.

BMK.4.2.4 MPI's Reported Claims Per 1,000 Policies in Force

Reported claims are the number of claims reported in the fiscal year. Policies in force are represented by an average of the number of beginning and end of fiscal year policies in force. This is a frequency measure that shows how many claims a company has relative to policies in force. The lower the metric, the less claims frequency, which should result in fewer claims.

It should be noted that other jurisdictions may have as many collisions as Manitobans; but lower reported claims stem from the fact that potential claimants in other jurisdictions elect to self-insure in many instances to avoid insurance cost increases.

Observation

Reported claims for every 1,000 policies in force increased from 246.20 in 2012/13 to 262.50 in 2013/14. It decreased to 245.00 in 2014/15 but has since increased to 261.28 in 2016/17. This is due to an increase in the number of reported claims. MPI has a higher frequency of claims and thus a higher reported claims per 1,000 policies due to its business model which is designed to allow customers to use their insurance as needed rather than be reluctant to make a claim should an accident occur.

BMK.4.2.5 MPI's Personal Lines Losses Incurred Per Paid Claim

Personal lines[2] losses incurred refer to MPI's basic line and include claim payments and reserve changes related to personal lines. Paid claims is the number of reported claims the company had in a fiscal year where there was a claim payment. This metric shows the average settlement amount per paid claim. This is a severity metric. In general, a lower metric will result in lower severity and lower loss ratio. The loss ratio is heavily influenced by the frequency of claims (how often) and the severity of claims (how much). This metric and the previous metric show the drivers of the loss ratio.

Observation

Personal losses incurred per paid claim decreased from $3,115 in 2012/13 to $2,845 in 2013/14. It increased to $3,063 in 2014/15 before decreasing to $2,841 in 2015/16. This metric has since increased to $3,624 in 2016/17 due to an increase in losses incurred.

MPI's personal losses incurred per paid claim ratio remains lower than the benchmark groups. This can be attributed to MPI's business model which results in a lower number of severity claims compared to private insurers.

[2]The term Personal lines is a definition derived from the Ward Group methodology that organizes corporate expense data across various lines of statutory business. Personal lines is mostly comprised of MPI's Basic with a small portion of MPI's Special Risk Extension in order to adhere to Ward methodology and to ensure an accurate comparison with benchmark groups.

BMK.4.2.6 MPI's FTEs Per 100,000 Reported Claims

This metric assesses the number of FTEs for every 100,000 reported claims and is a measure of workload and efficiency within a corporation. Generally, the lower the metric, the more resourceful the corporation.

Observation

FTEs per 100,000 reported claims increased from 523.32 in 2013/14 to 547.65 in 2014/15, but has since decreased to 510.86 in 2015/16 and to 503.72 in 2016/17. The decrease over the past several years can be attributed to a combination of an overall decrease in the number of FTEs and an increase in reported claims.

MPI has consistently maintained a significantly lower FTE per 100,000 reported claims compared to the Canadian and US personal auto benchmark groups. This shows that MPI has consistently been very effective in managing a high reported claims volume compared to the benchmark groups.

BMK.4.2.7 MPI's Management Per 100,000 Reported Claims

This metric examines the number of managers per 100,000 reported claims. Management is defined as positions that have direct reports. Ideally, the lower the metric the less top heavy and more efficient the company.

Observation

Since 2012/13, this metric has varied from 71.94 in 2012/13 to 61.81 in 2013/14, before increasing to 68.51 in 2014/15. In 2015/16, the metric decreased to 66.89 and has continued with this trend and decreased to 63.39 in 2016/17. MPI's management per 100,000 reported claims has remained significantly lower than that of the US and Canadian benchmark groups since 2012/13.

BMK.4.2.8 MPI's Staff per 100,000 Reported Claims

This metric examines the proportion of staff to reported claims. A more efficient corporation would display a lower value for this metric, indicating less staff is required to manage reported claims.

Observation

MPI has seen a decrease in staff per 100,000 reported claims, which decreased to 440.34 in 2016/17, from 443.97 in 2015/16. Previously it ranged from a high of 488.27 in 2012/13 to 461.51 in 2013/14.

MPI's staff per 100,000 reported claims continues to be lower than that of the US and Canadian Benchmark groups. This reflects MPI's ability to keep staffing levels lower relative to reported claims, as compared to the benchmark groups.

BMK.4.2.9 MPI's Total Gross Expenses per Reported Claim

Total gross expenses include all underwriting, loss adjusting and investment expenses, but excludes reserve change for loss adjusting expenses. This metric examines gross expenses relative to each reported claim. A lower ratio indicates increasingly efficient operations and use of expenses.

Observation

MPI's total gross expenses per reported claim decreased from $1,174 in 2012/13 to $1,073 in 2013/14. It increased to $1,166 in 2014/15, but has since decreased to $1,066 in 2016/17. The current results can be attributed to an increase in reported claims.

MPI's total gross expense per reported claim has consistently been lower than that of the Canadian and US benchmark groups. This difference can be attributed to MPI's effectiveness in managing reported claims.

BMK.4.3 Macro-Mandate Performance

Historically, MPI has ensured that meets three specific benchmarks as a way of gauging ongoing and annual success in terms of operating efficiency and providing value to Manitobans.

BMK.4.3.1 Premium rates that are on average lower than those charged by private insurance companies for comparable price and coverage

First, as expressed in MPI's corporate goals, it will charge rates that are, on average, "lower than those charged by private insurance companies for comparable price and coverage". The figure below provides sound support for this statement.

Figure BMK- 3: Canada Rates Map

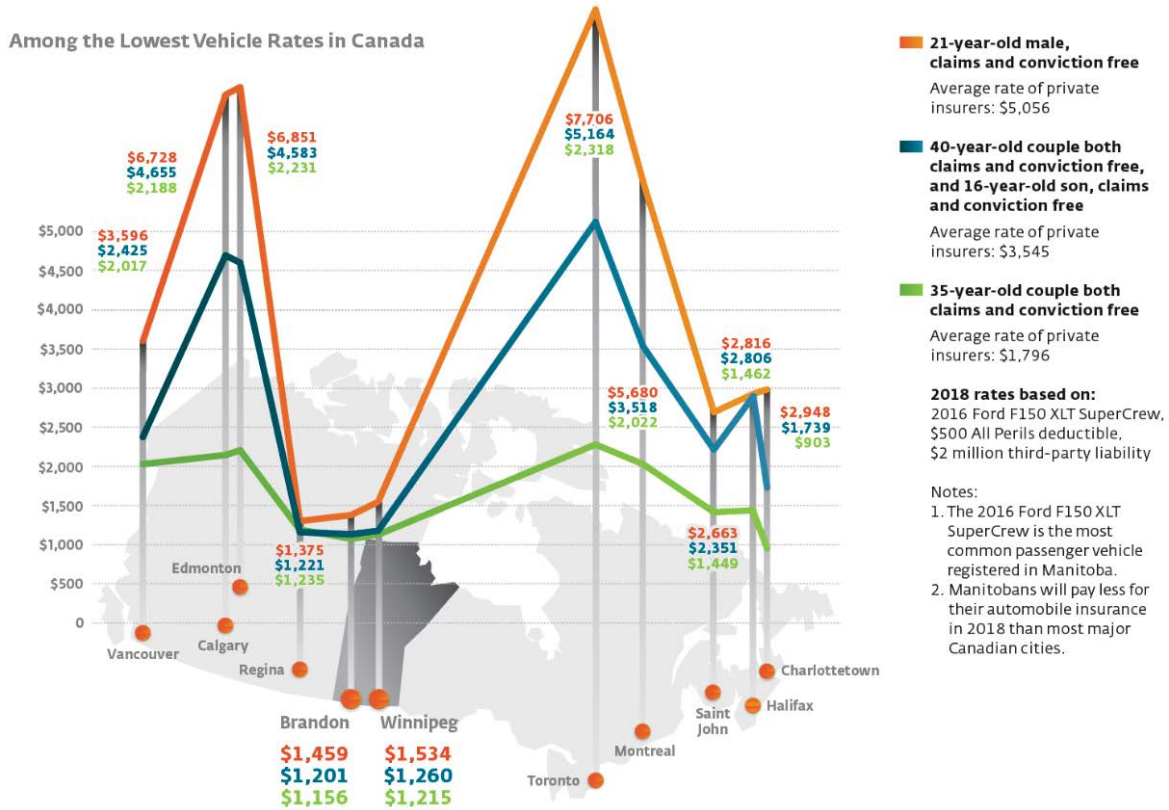

Figure BMK- 4: Passenger Vehicle Rates Comparison Charts by Driver Profile (Winnipeg, Halifax, Calgary, Charlottetown, Quebec City, Regina and Toronto)

Line No.	35 year old couple; both claims and conviction free

26 *The vehicle rates show the minimum, maximum, median, 25th percentile, 75th percentile, and average rates. These measures are calculated using the rates available for each jurisdiction. The rate comparison is based on the 2016 Ford F150 and includes three driver profiles*

27 *Prior to 2018, the 2010 Dodge Grand Caravan SE was most commonly registered vehicle in Manitoba*

[3] The 25th percentile indicates that for the given jurisdiction, 25% of the rates are at or below the specified rate. The 75th percentile indicates that for the given jurisdiction, 75% of the rates are at or below the specified rate.

Figure BMK- 6: Motorcycle rates comparison charts by driver profile (Winnipeg, Calgary, Regina and Toronto)

21 year old male claims and convictions free

Jurisdiction	2014	2015	2016	2017	2018
Winnipeg	$ 1,380	$ 1,249	$ 1,093	$ 1,057	$ 1,118
Calgary	$ 2,427	$ 2,427	$ 2,427	$ 2,427	$ 2,427
Regina	$ 1,929	$ 2,134	$ 2,134	$ 2,134	$ 2,134
Toronto	$ 2,679	$ 2,655	$ 2,570	$ 2,327	$ 2,392

50 year old male claims and convictions free

Jurisdiction	2014	2015	2016	2017	2018
Winnipeg	$ 1,098	$ 994	$ 879	$ 850	$ 898
Calgary	$ 1,053	$ 1,053	$ 1,053	$ 1,053	$ 1,053
Regina	$ 1,724	$ 1,906	$ 1,906	$ 1,906	$ 1,906
Toronto	$ 1,822	$ 1,728	$ 1,585	$ 1,377	$ 1,395

50 year old male One at fault claim in the last year and claims and convictions free prior to that

Jurisdiction	2014	2015	2016	2017	2018
Winnipeg	$ 1,206	$ 1,092	$ 962	$ 931	$ 984
Calgary	$ 1,267	$ 1,267	$ 1,267	$ 1,267	$ 1,267
Regina	$ 1,768	$ 2,000	$ 2,000	$ 2,000	$ 2,000
Toronto	$ 4,033	$ 4,237	$ 4,209	$ 3,701	$ 3,877

The 2018 rates are based on the most commonly registered touring motorcycle in Manitoba, 2013 Harley Davidson FLHX Street Glide , $500 collision deductible, $500 comprehensive deductible, $2 million third-party liability

Previous to 2018, the 2012 Harley Davidson FLHX was the most commonly registered touring motorcycle

The minimum, maximum, median, 25th percentile, and 75th percentile information requested does not exist for motorcycle rates. Currently, there is no single third party data service that provides comparative rates from private insurers for motorcycles in Canada, as exists for auto insurance rates. Therefore, the motorcycle comparative rates are single rate quotes, and are not based on an average.

For all rate comparison macro-mandate metrics, MPI continues to excel; the yearly comparison of rates within Canada provides validation of this. MPI's rates have resulted in insurance rates being amongst the lowest of all vehicle insurers in Canada.

BMK.4.3.2 Basic returns at least 85% of premium revenue to Manitobans in the form of claims benefits

The second key macro-mandate metric for MPI is that the Basic plan returns at least 85% of premium revenue to Manitobans in the form of claims benefits.

One of the most straightforward and effective ways of comparing public auto insurance programs is to look at each premium dollar and how much was returned to the ratepayer in the form of claims payments/benefits. This provides a lateral and accurate comparison while removing the impact of variables, such as:

- Different levels of coverage
- Different pricing and claiming practices
- Different governance and ownership models
- Different marketing and underwriting methods

Figure BMK- 7: Premium Returned for Each Dollar Earned[4]

Line No.	Year	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18
1	Premium returned for each dollar earned	1.04	1.14	1.09	0.93	1.10	0.96

MPI has consistently returned from 95% to 110% of every premium dollar earned and thus, averaged over the 85% target.

[4] Premiums returned in the form of claims benefits is comprised of net claims incurred, claims expense, and road safety and loss prevention expenses.

Figure BMK- 8: Net Claims Incurred as a Percentage of Premiums Earned[5]

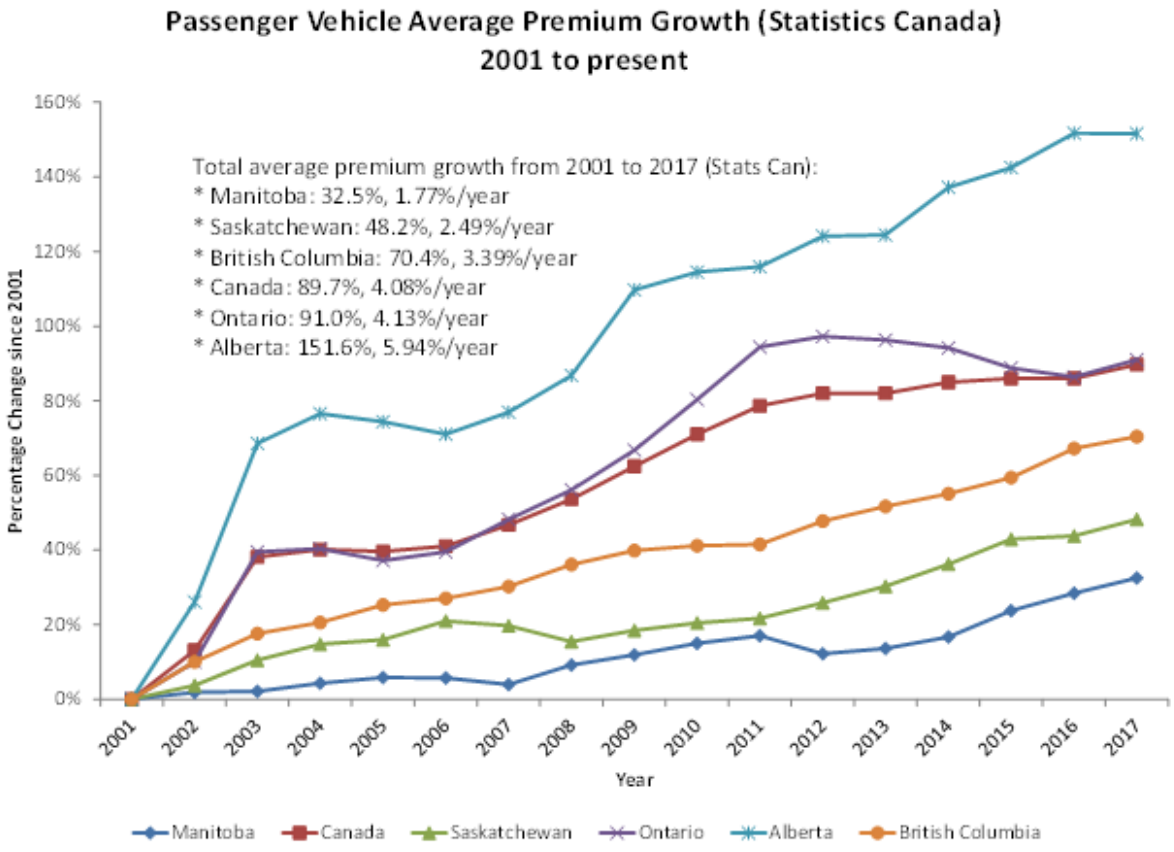
Line No.	Year	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18
1	Net claims incurred as a % of premiums earned	0.87	0.98	0.93	0.77	0.95	0.80

BMK.4.3.3 Lower annual increases in premium growth in comparison to other Canadian auto insurers

The third macro-mandate metric is that MPI's annual average premium growth is lower compared to other Canadian auto insurers. Since 2000/01, Manitoba's premium growth rate has been consistently lower when compared to the growth rates of other Canadian auto insurers and to the national average (currently, 1.77% per year for Manitoba).

[5] Net claims incurred is an estimate of the amount of outstanding liabilities over a given valuation period. It includes all paid claims during the period plus a reasonable estimate of unpaid liabilities.

Figure BMK- 9: Passenger vehicle average premium growth



BMK.5 IT SERVICE DELIVERY CAPABILITY

IT Service Delivery Capability refers to the effectiveness and maturity of a corporation in terms of its IT organization, processes and infrastructure. This measure includes both operational effectiveness indicators (IT spending and IT staffing) and ratings that evaluate the effectiveness of the IT organization to deliver on the needs of the business (IT Score ratings, formerly CIO Scorecard ratings methodology – see section *BMK.5.4.3* for further information).

IT Service Delivery Capability is an important measure, as it demonstrates whether an organization has enhanced processes and capabilities in place to overcome obstacles quickly, to minimize operational risks, and to provide ongoing cost effective operation and service to customers.

Results must be examined within the context of MPI's business model and current corporate priorities that guide IT initiatives. The analytic challenge is that MPI is a hybrid organization – it is an insurer, but our public mission is to serve Manitobans, not maximize revenues.

Overall, Gartner benchmarking results indicate that MPI continues to improve its Maturity (at a 3.9% CAGR over 5 years using the ratings from the CIO Scorecard). IT Spending relative to operating expenses has continued to decrease annually. With a reduction in the current project portfolio, it is expected that going forward personnel spending (specifically consultants) will also decrease. In line with Gartner recommendations and subsequent to conducting a comprehensive review of Business Process Management and associated expenses, MPI has redirected its focus on further developing Enterprise Architecture capabilities to advance corporate IT maturity.

Methodology

For IT benchmarking, MPI engages Gartner Consulting, a leading information technology research and advisory company (see *Part IV(i) Benchmarking Attachment A*). Founded in 1979, Gartner is headquartered in Stamford, Connecticut, USA, has 380,000 client interactions, and more than 1, 900 research analysts and consultants.

The objectives of the Gartner benchmarking engagement are as follows:

1. Communicate how MPI's IT resources are utilized and focused on helping the organization run, grow and transform the company.

2. Evaluate the relative maturity of the IT organization in critical IT disciplines.

3. Demonstrate that the IT organization can quickly react to rapidly changing business requirements and make calculated IT investments that will pay off in the future.

4. Compare relative funding levels of IT at MPI and the distribution of those budget expenditures.

For this exercise, MPI was benchmarked against 12 peer organizations that vary annually. Six of these organizations updated their data from 2015/16 and these updates are included in the peer group averages. The peer group is determined by the role IT plays in the enterprise and consists of organizations within the insurance and provincial government areas that are comparable in size to MPI.

BMK.5.1 IT Spending

BMK.5.1.1 IT Spend as a Percentage of Operating Expense

IT Spend as a percentage of operating expenses is a measure of IT's role in the business, and a measure to assess the comparative level of spending with industry peers. Organizations can use this data to assess the level of spending in their environment and the distribution of spending between applications and infrastructure.

The value of this measure is that it assists in identifying the competitiveness of investment levels relative to operating expenses, a fundamental measure of business performance relative to MPI and other government entities.

Since 2015/16, Gartner has recommended that MPI focus on IT Spend as a percentage of Operating Expenses, rather than Revenue. The rationale is that examination within this parameter gives a more accurate picture of IT spending as MPI's mandate is not focused on maximizing revenues and further, revenues are impacted by investments as compared to its peers within the industry.

Figure BMK- 10: IT Spend Analysis

Line No.	Metric	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Peer Average 2016/17
1	IT Spend as % of Business Operating Expenses	6.9%	5.4%	6.1%	5.4%	4.8%

Observation

MPI's IT Spend as a Percentage of Operating Expenses has stabilized in recent years. This metric rose from 5.4% in 2014/15 to 6.1% in 2015/16 due to a reduction in operating expenses, before decreasing to 5.4% in 2016/17. Although the IT budget has increased, it has done so to a lesser extent than business operating expenses.

Compared to the peer groups (4.8%), MPI's IT Spend relative to operating expenses is slightly higher (5.4%).

As IT operations continue to mature, MPI expects that they will increase business efficiencies and lower overall operating expenses. MPI also continues to exercise a measure of control over its 3rd party service providers through licensing agreements, reporting, the use of consultants to monitor IT Spend, and ensuring that benefits are captured. Furthermore consistent with leading practices, MPI has formed a single consolidated unit overseeing the management of its major IT vendor contracts for the purposes of standardization and identification of opportunities for improvements and cost efficiencies.

BMK.5.1.2 IT Spend to Run, Grow, and Transform the Business

The distribution of IT spending to "run the business," "grow the business" and "transform the business" provides a view of the IT investment profile to support business performance. Classifying IT spending into categories that show impact on business outcomes or success can aid alignment and quantify under-investment in IT. Gartner uses the following portfolio spending categories and defines them as follows:

Run the Business

Run-the business IT initiatives are aimed at essential (and generally non-differentiated) business processes. The objective of a run-the-business initiative is to improve or maintain the desired balance among cost, quality and risk for these essential processes.

Grow the Business

Grow-the-Business is an indicator of how much IT resource is consumed and focused on developing and enhancing IT systems in support of business growth (typically organic growth).

Transform the Business

Transform-the-business is an indicator of how much IT resource is consumed and focused on implementing technology systems that enable the enterprise to enact new business models. According to Gartner methodology, this metric is defined as a "venture" category and would be represented by activities such as brick-and-mortar retailers moving to online shopping; a traditional bank offering online banking (or offering insurance services); or a commercial airline offering new freight services.

A Run-Grow-Transform analysis can determine whether the IT budget properly reflects IT's designated role in achieving the organization's mission. Please see *Part IV(i) Benchmarking Appendix 01* for the current recommendations related to running, growing, and transforming the business.

Figure BMK- 11: IT Spend to Run, Grow and Transform the Business

	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Peer Average 2016/17
Transform	0.0%	0.0%	1.6%	0.0%	12.5%
Grow	46.0%	39.0%	39.7%	41.0%	14.0%
Run	54.0%	61.0%	58.8%	59.0%	73.5%

Observation

The Corporation's proportion of IT Spend on activities that are focused on running the business (vs. growing and transforming) is lower than the peer group. The proportion of IT spend related to growing the business exceeds that of the peer group average.

MPI spending on transforming the business is lower than the peer group average and is not expected to increase as its mission is not to diversify and acquire additional lines of business. As "Catch-up" investments stabilize the run the business metric has remained stable as the focus is on business improvements.

When making investments to grow and improve business, MPI will continue to focus on effective execution to maximize benefits. MPI has taken steps by forming senior leadership committees to oversee vital processes such as Vendor Management and Enterprise Architecture. Additionally, another way this is achieved is through the Value Management process. In taking on projects to add value, MPI follows a systematic value management process which ensures that results and benefits are realized at the various steps within each project. For more detail on the Value Management process please see *Part IV (ii) Value Management*.

BMK.5.2 IT Staffing

It is critical for organizations to understand whether their IT departments are staffed adequately, if their human resources are effective, and whether they are sufficiently trained and motivated to meet changing business needs. The following metrics provide a broad view of IT staffing with regards to internal support and IT hiring strategy.

BMK.5.2.1 MPI's IT FTEs as a Percentage of Company Employees

The percentage of IT employees in the company compared to the total number of employees is a key measure of how critical IT support is to the business. This measure can be heavily influenced, however, by an organization's level of outsourcing. Organizations with high levels of manageability and automation should require fewer operational staff. A higher ratio of IT staff may indicate that more business processes are supported by technology leading to a more efficient overall operation.

Figure BMK- 12: IT FTE as % of Company Employees

Line No.	Metric	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Peer Average 2016/17
1	IT FTE as a % of Company Employees	17.2%	16.6%	16.7%	17.0%	13.0%

Observation

The IT FTE as a percentage of Company Employees ratio has remained relatively consistent from 17.2% in 2013/14 to 16.6% in 2014/15 and 16.7% in 2015/16. It has since increased to 17.0% in 2016/17.

MPI's IT FTEs as a Percentage of Company Employees ratio remains higher than the peer average but this ratio should be considered within the context of the overall enterprise labour sourcing strategy and future-state objectives. In 2016/17, the high ratio is reflective of a number of IT initiatives undertaken by the Corporation. Going forward, MPI has reduced a number of IT initiatives and as a result, a reduction in the proportion of consultants is expected. For more information please see *Part IV Information Technology IT.3, page 5.*

BMK.5.2.2 In-House vs. Contractor IT FTEs

In-house employee vs. independent contractor[6] ratio provides another view of the IT staffing strategy.

IT contract labour or contractor usage can be an effective approach to maintaining flexibility and agility when business conditions are changing. However, retaining contractors for extended periods can be costly and can limit process standardization.

[6] Contractor is Gartner terminology, whereas MPI refers to the term Consultant.

Figure BMK-13: In-house vs. Contractor Distribution

	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Peer Average 2016/17
In-house	64.0%	66.0%	65.1%	67.9%	74.2%
Contractors	36.0%	34.0%	34.9%	32.1%	25.8%

Observation

From 2013/14 to 2016/17 MPI has decreased the proportion of its consultants. This metric decreased from 36.0% in 2013/14 to 32.1% in 2016/17, which is higher than the peer group (25.8% in 2016/17).

The higher consultant ratio is reflective of a greater number of IT initiatives undertaken by the Corporation in the stated years. As previously stated, MPI has reduced its project portfolio and decreases in the number of consultants are expected going forward. Through the formation of a consolidated vendor management unit, MPI will continue to be vigilant in monitoring its outsourcing and consultant usage levels, and take added precautions to ensure appropriate knowledge transfer to ensure internal resources can be used going forward.

For additional description of work being done to replace external labour with internal staff please see *Part IV Information Technology IT.3, page 5.*

BMK.5.3 Infrastructure and Operations Spending

The Infrastructure and Operations metrics evaluate spending related to essential corporate operation components within IT. It focuses on the delivery of both personal computing (i.e., desktop, printers, scanner etc.) and enterprise computing (i.e., data center, operational security, networking and connectivity, etc.) to the enterprise.

BMK.5.3.1 Infrastructure and Operations Spending by Cost Category

Figure BMK-14: Infrastructure and Operations Spending by Cost Category

	MPI 2016/17	MPI 2015/16	Peer Average	Peer 25th Percentile	Peer 75th Percentile
Hardware	$1.6	$3.3	$6.3	$4.3	$7.4
Software	$3.6	$4.1	$3.3	$2.3	$3.7
Disaster Recovery	$0.1	$0.2	$0.7	$0.5	$0.8
Occupancy	$0.5	$0.6	$0.4	$0.3	$0.5
Transmission	$1.5	$1.8	$1.8	$1.2	$2.1
Personnel	$7.4	$7.2	$7.3	$5.4	$8.4
Unallocated	$9.2	$7.0	$-	$-	$-

Observation

In 2016/17, MPI's overall Infrastructure & Operations Spending ($24.0 million) is higher than the peer group average ($19.7 million), with outsourcing costs being the main contributor. This component is comprised of labour and additional 3rd party

services, namely IBM, who is a top-tier provider of expertise and facilities. MPI will continue to partner with IBM to optimize costs within this area.

Since 2015/16, MPI has decreased spending on majority of the cost categories, thus narrowing the gap between its own performance and that of its peers. The unallocated cost category and $9.2 million encompasses the outsourcing expenses after Transmission and Personnel are removed.[7] The outsourcing for the peer groups is included within the allocated categories. Occupancy and software provide opportunities for cost savings.

BMK.5.3.2 Infrastructure and Operations Spending by Sourcing Type

Figure BMK-15: Infrastructure and Operations Spending by Sourcing Type

	MPI 2016/17	MPI 2015/16	Peer Average	Peer 25th Percentile	Peer 75th Percentile
Insourced	$4.1	$6.2	$13.2	$9.8	$15.5
Outsourced	$14.7	$11.7	$4.4	$2.9	$4.9
Contractor	$0.5	$0.8	$0.5	$0.4	$0.6
Maintenance	$4.6	$5.3	$1.5	$1.1	$1.7

[7] Gartner assumes 30% of the outsourced amount in the unallocated category is for personnel.

Observations

MPI's spending on Outsourcing costs increased from $11.7M in 2015/16 to $14.7M in 2016/17. This is due to expenses related to external labour and 3rd party service providers. Across all other components, MPI's expenses decreased. Both Outsourced and Maintenance expenses are significantly higher than the peer group average for Infrastructure and Operations. As stated previously, MPI will continue to focus on effective vendor management with respect to 3rd party service providers in addition to a reduction in its project portfolio. Taken together, future improvements in outsourcing spending are expected. Please see *Part IV, Information Technology IT.3, page 5* for further details on the labour strategy.

BMK.5.4 IT Maturity Ratings (CIO Scorecard)

The IT Maturity ratings (CIO Scorecard) serve to evaluate the effectiveness of the IT organization to deliver on the needs of the business. The CIO Scorecard rating examines MPI's maturity levels across eight key disciplines and compares them to the insurance industry benchmark. Ratings are based on a scale of 1 to 5 with 5 as most mature. Increasing maturity in each of the eight areas is the result of improving the efficiency and effectiveness within both IT and MPI. For example, mature organizations ensure IT governance efforts are focused on capturing benefits realization from its IT investments in the form of lower operating expenses or revenue growth.

It is important to note that Gartner has transitioned to a new methodology (called the IT Score), which improves on the existing CIO Scorecard maturity ratings. As a result, this is the last year the CIO Scorecard maturity ratings will be presented[8].

[8] Due to Gartner's transition to the new IT Score surveys, the Insurance Average data is considered out of date as other companies are no longer submitting data using the prior methodology. As such, the CIO Scorecard maturity ratings should be viewed in the context of trending only and not benchmarking.

Figure BMK- 16: CIO Scorecard Maturity Ratings

Line No.	Metric	Evaluation Capability	MPI 2013/14	MPI 2014/15	MPI 2015/16	MPI 2016/17	Insurance Average 2016/17
1	5.4.1	Infrastructure & Operations	2.6	2.9	3.0	3.1	2.2
2	5.4.2	Cost Containment	2.8	3.0	3.1	3.2	2.5
3	5.4.3	Applications Organization	2.8	2.8	2.9	3.2	2.8
4	5.4.4	Business Process Management	1.4	1.6	1.6	1.6	1.8
5	5.4.5	Enterprise Architecture	3.1	3.2	3.2	3.2	2.5
6	5.4.6	Open Innovation Readiness	3.8	3.8	4.1	4.1	2.5
7	5.4.7	Effectiveness/Innovation Enterprise Viewpoint	4.0	4.0	4.1	4.1	3.2
8	5.4.8	Effectiveness/Innovation IT Organization Viewpoint	3.7	3.8	3.9	3.9	3.2
9	5.4.9	Overall Score	3.2	3.3	3.4	3.5	2.8

Observations

MPI increased its overall CIO Scorecard maturity rating from 3.42 in 2015/16 to 3.52 in 2016/17. This is a result of increases in three of eight components, with the remaining five categories indicating no change in maturity. MPI's Business Process Management (BPM) score remained the same in 2015/16 and 2016/17 at 1.60, and remains an opportunity for improvement. Gartner previously defined BPM as an emerging discipline that leverages various methods to discover, model, analyze, measure, improve and optimize business processes. Overall, BPM is used to align Information Technology and Operational Technology investments to business strategy. Gartner has since revised its methods in assessing BPM (Please see *BMK 5.4.4 IT Score*). In accordance with Gartner recommendations and its own thorough review, MPI has decided to defer emphasis on BPM and redirect focus to the increased development of Enterprise Architecture (EA) capabilities.

MPI's increase in overall CIO Scorecard maturity ratings demonstrates the effectiveness of its IT organization in both supporting and executing business requirements, specifically in the areas of Applications and Infrastructure and Operations. Overall, the annual trending results confirm that MPI IT Governance

efforts and Value Management are focused on linking projects to business value and are ensuring benefits realization from IT investments.

BMK.5.5 IT Score

Previously, the CIO Scorecard was used to assess MPI's process maturity. This methodological approach has since been discontinued by Gartner. The current tool recommended by Gartner for IT maturity assessments is the IT Score. The new measurement will provide a method for annual comparisons with current peer group data from the insurance industry, whereas the CIO Scorecard peer group data is no longer being collected. The IT Score uses a different methodology with additional elements and weightings that vary based on the capability being assessed. All capabilities are rated on a 5 point scale with higher scores indicating better performance.

In the new IT Score methodology it is important to note that BPM has been conceptually modified to reflect an industry change in focus where IT organizations have shifted from business process maturity to an emphasis on improving the partnership between IT and the business itself. According to Gartner, "All enterprise leaders (not just CIOs and IT leaders) must adapt and drive change in order to mature overall maturity beyond level 3 which is a critical step in surviving and exploiting digital business". As a result, BPM is rolled up into the Executive View component to reflect the Corporation's ability to leverage IT for business value.

Similar to BPM, EA has changed for the IT industry in terms of maturity and scope and Gartner has made changes to the way in which this metric is measured. For this reason MPI scores higher on EA in the previous CIO Scorecard maturity ratings but lower in the new IT Score methodology. The two cannot be directly compared as they are measuring the EA capability differently.

Figure BMK-17: IT Score Ratings

Line No.	Metric	Evaluation Capability	MPI 2016/17	Insurance Average 2016/17
1	5.5.1	Executive View	3.4	
2	5.5.2	Applications Organization	2.4	2.4
3	5.5.3	Enterprise Architecture	2.3	3.0
4	5.5.4	Infrastrcuture and Operations	2.7	2.5
5	5.5.5	Vendor Management	3.0	2.5
6	5.5.6	Program and Portfolio Management	3.6	2.8
7	5.5.7	Privacy	4.1	3.3
8	5.5.8	Information Security	3.6	3.0
9	5.5.9	Enterprise	3.1	

Observations

Gartner does not provide benchmarks for the Executive View and Enterprise capability as these assessments are based on a combination of various survey types across participants and not a single survey.

In 2016/17, MPI's overall maturity level is assessed at 3.1 using the IT Score methodology[9]. Furthermore, MPI scores above the insurance average in all but two capabilities. It is on par with the insurance average in Applications Organization with a score of 2.4. EA maturity is lower than the insurance average where MPI scores at 2.3 compared to 3.0 (peer). MPI has increased its governance including regular reviews of all major enterprise architecture decisions, increased engagement with key business stakeholders on major initiatives, and increased Executive awareness activities related to EA. Taken together these initiatives will help establish a more mature EA going forward.

[9] Although MPI's IT maturity score is higher (3.52) using the CIO Scorecard during the same period, the methodologies and associated metrics are different and thus cannot be directly compared.

BMK.6 SERVING MANITOBANS

MPI receives feedback on the service we provide from both customers and the general public. In achieving excellence in customer service, MPI aims to position itself as a strong corporate citizen by offering quality products and services.

Overall, the benchmarking results indicate that MPI continues to perform very well in meeting the needs of Manitobans.

Methodology

The Public Perception Benchmarking Measures are assessed through a telephone survey that collects public feedback on various aspects of the Corporation and its role as the provincial vehicle insurer. Public responses are collected by a third-party research firm that randomly selects residents from Manitoba in addition to those residing in other Canadian jurisdictions. The collection of data from the benchmark provinces is done biennially.

The Customer Service Trending Measures assessing overall customer satisfaction are collected through telephone surveys that measure satisfaction with service provided across specific lines of business. Respondents who have recently used MPI services are randomly selected and interviewed for this purpose.

BMK.6.1 Public Perception Benchmarking Measures

BMK.6.1.1 Service when dealing with vehicle insurer[10]

Manitobans were asked to rate their level of agreement with a number of words that could be used to describe how they feel when dealing with their vehicle insurer. The '*feelings'* were identified by Manitobans in past focus groups, i.e. how they would like to feel when dealing with their ideal insurer. Currently (November 2017) about two-thirds say that when dealing with MPI they feel *protected* (69%), *confident* (68%), *comfortable* (65%), and *looked after* (65%). About six in 10 say they feel *relaxed* when dealing with MPI (57%). MPI scores are slightly below 2017/18 scores for SGI, but higher than 2017/18 ratings for ICBC.

Figure BMK-18: Feelings when dealing with insurance provider by province

Line No.	Feeling	Manitoba 2017/18	Saskatchewan 2017/18	British Columbia 2017/18
1	Protected	5.0	5.0	3.9
2	Confident	4.9	5.0	3.7
3	Looked After	4.9	5.0	3.7
4	Comfortable	4.9	5.0	3.8
5	Relaxed	4.6	4.8	3.6
6	Average rating out of 7, where 1 is strongly disagree and 7 is strongly agree			

[10] The Western Province Poll (which measures the extra-provincial jurisdictions) is used to examine MPI's performance in relation to Saskatchewan and British Columbia and is conducted every second year.

BMK.6.1.2 Experience with vehicle insurer

Manitobans were asked to rate their experience when dealing with their vehicle insurer on a scale of 1 to 7, where 7 indicates an *excellent experience* and 1 means a *very poor* experience. Similar to past findings, about eight in ten Manitobans say they have had good experiences when dealing with MPI (77% in 2017/18). Current MPI ratings are slightly higher than SGI's (73% in 2017/18) while ICBC continues to receive the lowest rating for '*experience*' at 53% (2017/18).

Figure BMK-19: Average rating for experience when dealing with insurer: 2013/14-2017/18

	2013/14	2014/15	2015/16	2016/17	2017/18
Manitoba	5.4	5.3	5.3	5.4	5.3
Saskatchewan	5.3		5.4		5.2
British Columbia	4.5		4.6		4.3

BMK.6.1.3 Describing Vehicle Insurers

Manitobans were asked to rate their level of agreement with a number of words that could be used to describe their vehicle insurer. Results from 2017/18 show that most Manitobans said the following words describe MPI: *accessible* (82%), *trustworthy* (68%), *service-minded* (68%), *good value,* (65%) and *fair* (61%). About half agree that MPI is *caring* (55%), a *leader* (54%), and *innovative* (50%).

Historically, SGI and MPI have received similar ratings for all descriptors with ICBC receiving the lowest scores across all descriptors. MPI's current results trail slightly behind SGI's in 2017/18 but are higher than ICBC's 2017/18 scores.

Figure BMK-20: Agreement with descriptor of insurance provider by province

Line No.	Descriptor	Manitoba 2017/18	Saskatchewan 2017/18	British Columbia 2017/18
1	Accessible	5.5	5.6	4.6
2	Trustworthy	5.0	5.1	3.7
3	Good Value	4.8	4.9	3.5
4	Service Minded	4.9	4.9	3.8
5	Leader	4.6	4.7	3.4
6	Fair	4.7	4.8	3.5
7	Innovative	4.4	4.5	3.3
8	Caring	4.5	4.7	3.3

9 *Average rating out of 7, where 1 is strongly disagree and 7 is strongly agree*

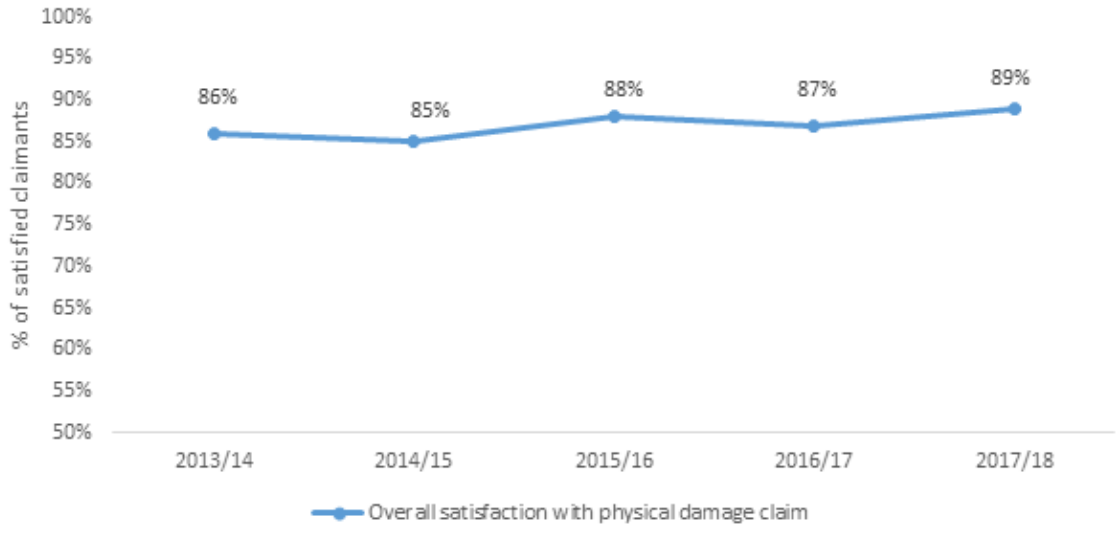
BMK.6.2 Customer Service Trending Measures

MPI uses a variety of surveys to monitor how well it is serving customers and claimants who receive services at MPI Service Centres or broker locations. The survey results indicate overall satisfaction with the service received.

BMK.6.2.1 Physical Damage Claimant Satisfaction Survey

The statistic 'overall satisfaction with physical damage claim' comes from the quarterly Physical Damage Claimant Satisfaction telephone survey. The annual statistic combines the four quarters from the fiscal year. A claimant is deemed to be satisfied if they provided a rating of 4 or 5 in response to the question "Using a 5 point scale where "1" means VERY DISSATISFIED and "5" means VERY SATISFIED, please rate your level of OVERALL satisfaction with respect to your most recent physical damage claim."

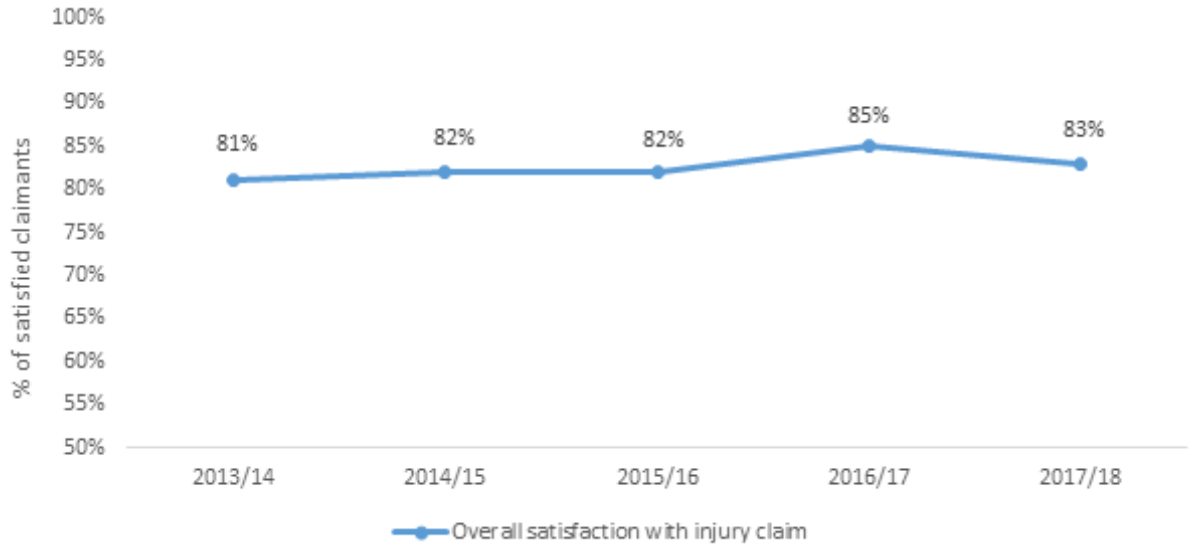
Figure BMK-21: Overall satisfaction with physical damage claim



BMK.6.2.2 Injury Claimant Satisfaction Survey

The statistic "overall satisfaction with injury claim" comes from the Injury Claimant Satisfaction telephone survey which is conducted twice a year. The annual statistic combines the two surveys from the fiscal year. A claimant is deemed to be satisfied if they provided a rating of 4 or 5 in response to the question "Using a 5 point scale where "1" means VERY DISSATISFIED and "5" means VERY SATISFIED, please rate your level of OVERALL satisfaction with respect to your most injury recent claim."

Figure BMK-22: Overall satisfaction with injury claim

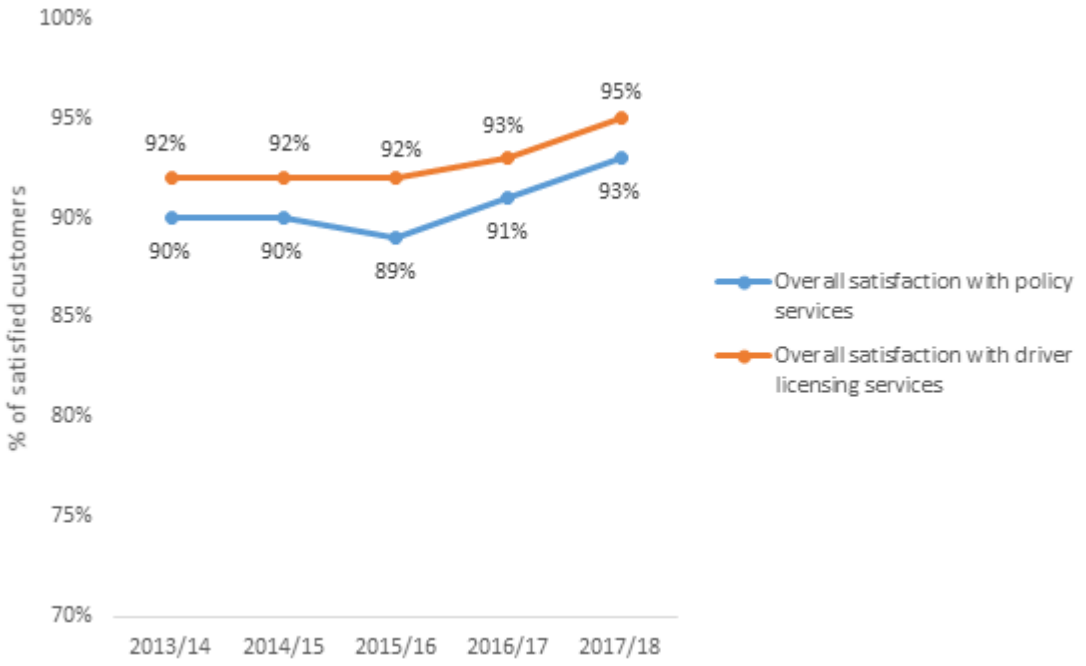


BMK.6.2.3 Insurance and Licensing Customer Satisfaction Survey

The following survey results are from customers visiting either an independent broker agency or an MPI Service Centre for a driver's licence and/or Autopac transaction.

Insurance and licensing customer satisfaction is measured quarterly from the Insurance and Licensing Customer telephone survey. The annual statistics combine the four quarters from the fiscal year. Customers who conducted either a policy transaction or a driver's licence transaction are deemed to be satisfied with the overall level of service they received at broker agencies or MPI Service Centres if they provided a rating of 4 or 5 in response to the question "Using a 5-point scale, where 1 means VERY DISSATISFIED and 5 means VERY SATISFIED, how would you rate your OVERALL satisfaction with the service you received?"

Figure BMK-23: Overall satisfaction with policy and driver licensing services



BMK.7 COMMUNITY IMPACT MEASURES

Community Impact measures are designed to assess general perceptions of MPI's performance as a corporate citizen. In addition, MPI consistently monitors self-reported road safety behaviors to identify areas for improvement and to increase the effectiveness of its advertising and educational programs.

Overall, MPI's Community Impact measures are favourable, with a large majority of Manitobans polled having a favourable view of the Corporation.

Methodology

The Public Perception Benchmarking Measures are assessed annually through MPI's public polling which collects feedback on various aspects related to the Corporation's work as the provincial vehicle insurer. Public response is collected by a third-party research firm that randomly selects residents from Manitoba in addition to those residing in other Canadian jurisdictions.

Influencing Factors

- **Inclusion of Home Insurance:** A factor that may have some impact on scores in Saskatchewan is that the vehicle insurer in this province also offers home insurance. Across all western provinces, people are very favourable toward their home insurer, as compared to their phone company, hydro company, TV service provider and Worker's Compensation Board. The tendency to be favourable toward your home insurer would improve scores for a vehicle insurer if they are one in the same.

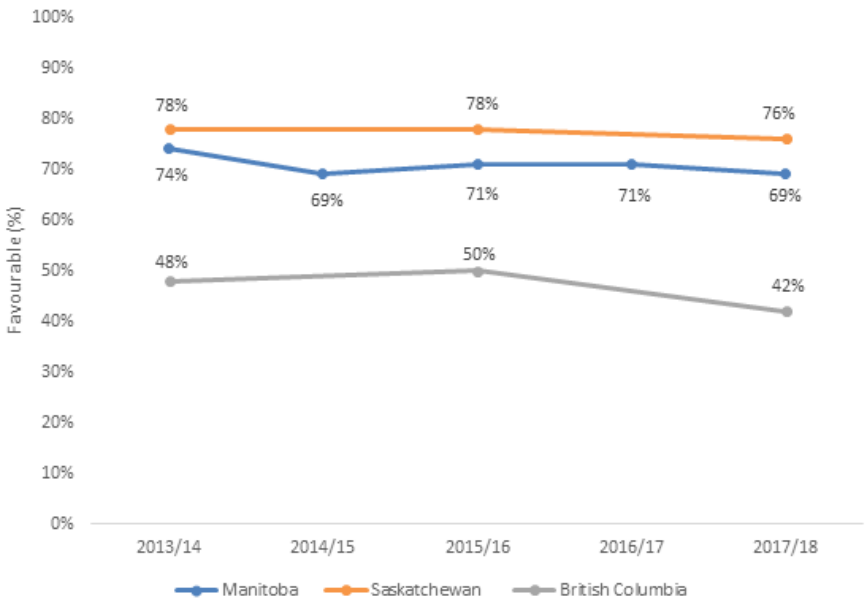
BMK.7.1 Benchmarked Public Perception

BMK.7.1.1 Public support for Manitoba Public Insurance

Manitobans were asked to rate how favourable they are toward their vehicle insurer on a scale out of 7, where 7 indicates very favourable and 1 is very unfavourable. The figure below shows the proportion of respondents who rate their vehicle insurer favourably (5 to 7 out of 7).

MPI's public support continues to be strong and stable; 69 percent of Manitobans have a favourable view of the Corporation, and the Corporation has an annual average mean public support score of 4.9 (out of 7). MPI's favourability score (69%) is below SGI's score (76% in 2017/2018) but well above ICBC's score (42% in 2017/2018). This rank order is consistent with results since 2007.

Figure BMK-24: Proportion of Residents who are favourable toward their vehicle insurer, by Province: 2013/14-2017/18



BMK.7.1.2 Value for Money

About six in ten Saskatchewan residents (61% in 2017/18) and Manitobans (57% in 2017/18) say that the cost of vehicle insurance has a positive impact on how they feel about their vehicle insurer. Only one-quarter of British Columbia residents say the same (25% in 2017/18).

People were asked to rate the extent to which they agree or disagree that their vehicle insurer provides them or residents of their province with good value for their money. Saskatchewan residents are most likely to say they get good value for their money from their vehicle insurer (59% in 2017/18). Slightly fewer Manitobans (55% in 2017/18) also agree with this statement. Manitoba's rating remains well above the rating for ICBC (27%) in 2017/18.

Figure BMK-25: Proportion who agree that their vehicle insurer provides good value, by province[11]

	Manitoba (2017/18)	Saskatchewan (2017/18)	British Columbia (2017/18)
Strongly Agree	22%	27%	9%
Agree	32%	32%	18%
Neutral	26%	29%	25%
Disagree	18%	11%	47%
Don't Know	0	0	1%

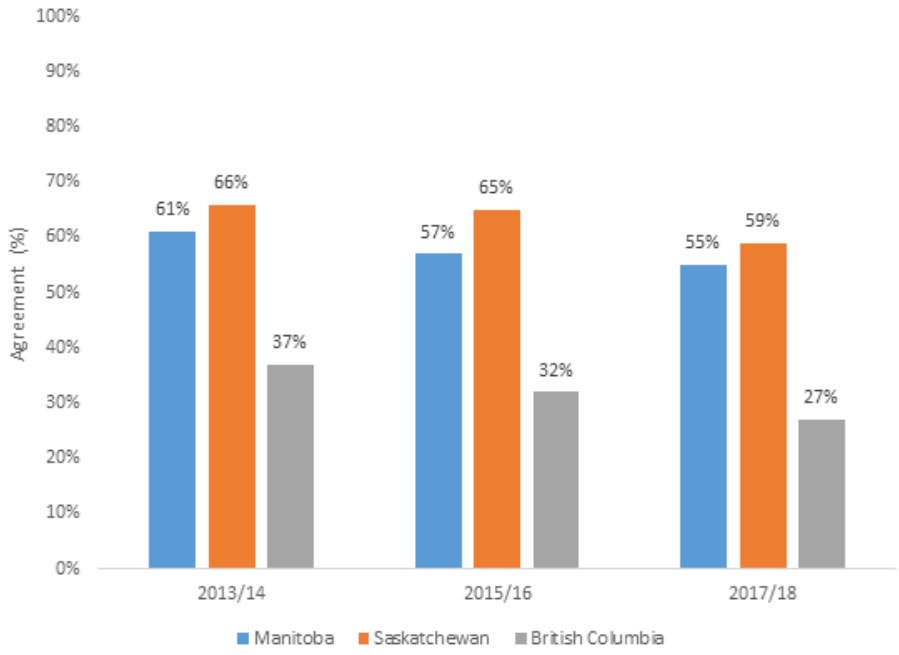
[11] "Don't know" options for Manitoba and Saskatchewan are both <1%. Manitoba's total may not equal to 100% due to rounding

BMK.7.1.3 Value for Money Over Time

The table below summarizes the proportion of residents that either agree or strongly agree that their vehicle insurer provides good value for their money (by province over time).

Since 2009/10, Saskatchewan residents are consistently most likely to say they receive good value for their money from their vehicle insurer. Currently, six in ten Manitobans also agree with this statement.

Figure BMK-26: Proportion who agree that their vehicle insurer provides good value, by province: 2013/14-2017/18



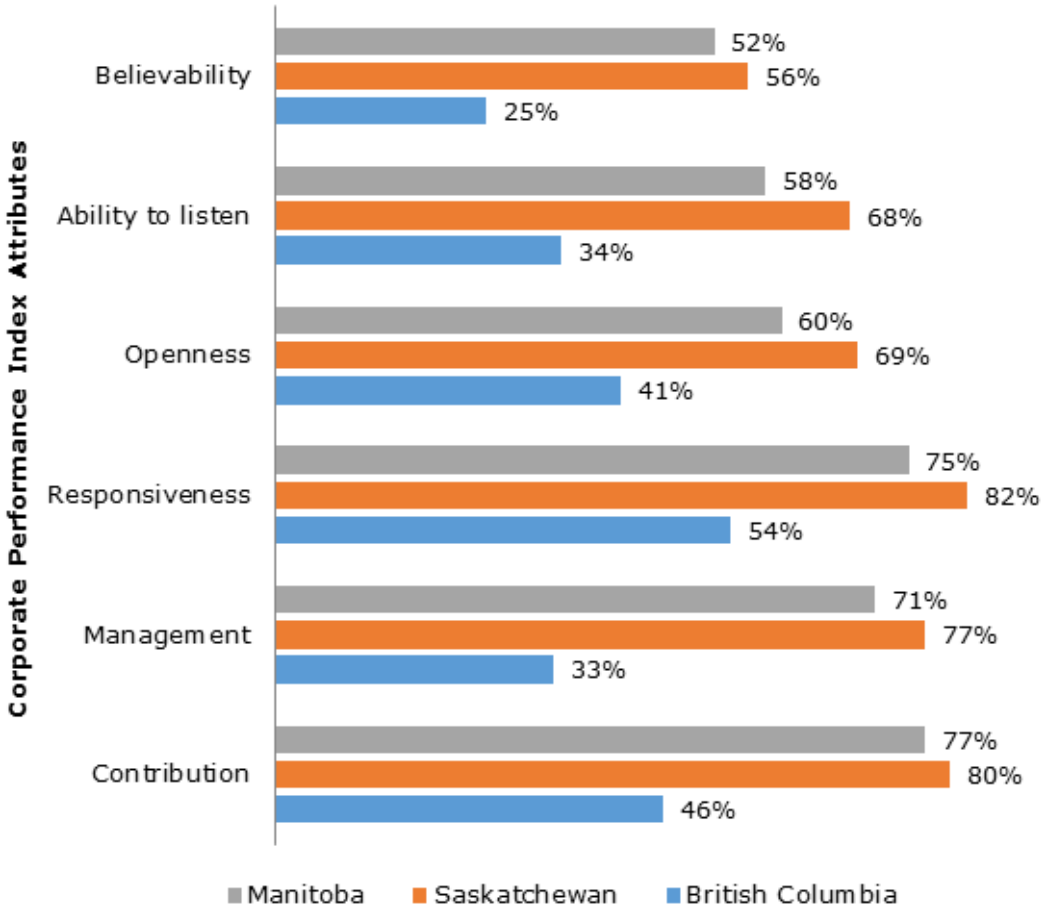
BMK.7.1.4 Corporate Performance Index

Manitobans were asked to rate their vehicle insurer on six attributes used to calculate the Corporate Performance Index. These attributes are:

- Overall management
- Social and economic contribution to the province
- Responsiveness to the public
- Listening to the concerns of the public
- Openness to new ideas
- Believability of the statements the Corporation makes to the public and in the media.

Taken together, MPI's Corporate Performance Index provides a valid and reliable measurement for corporate performance. MPI's scores are slightly lower than those of SGI but again higher than those of ICBC.

Figure BMK-27: Proportion of residents with positive ratings for Corporate Performance Index Attributes, by province: 2017/18

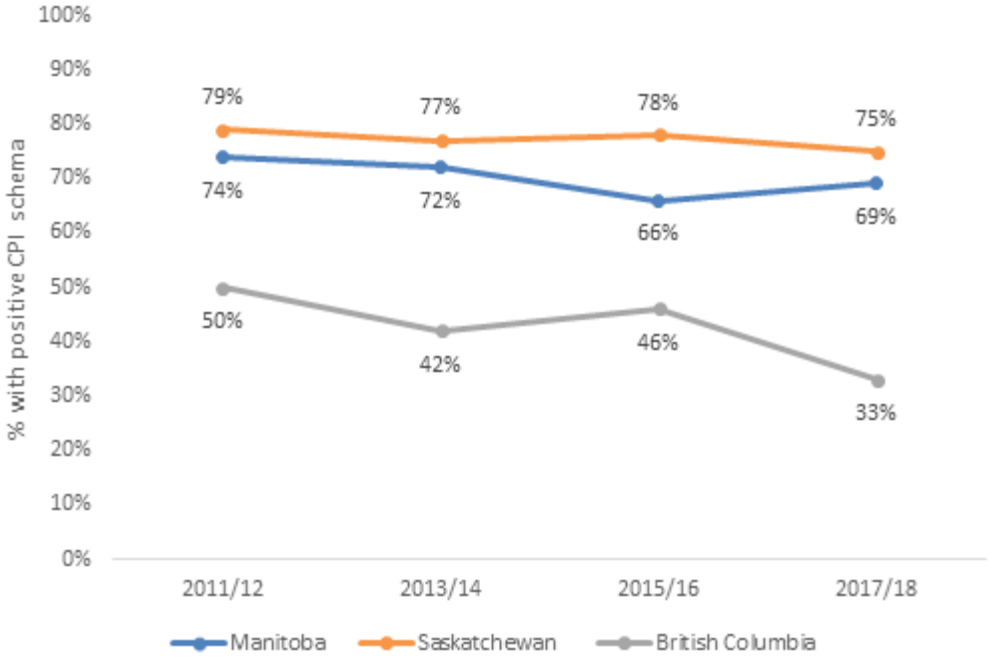


BMK.7.1.5 Overall Corporate Performance Index Over Time

Overall, Corporate Performance Index is calculated by averaging all six attributes.

The figure below shows the proportion of residents over time with a positive Corporate Performance Index schema by province. The proportion of Manitobans who have a positive Corporate Performance Index is 69% in 2017/18; this rating is below SGI's positive rating (75% in 2017/18) but above ICBC's rating (33% in 2017/18).

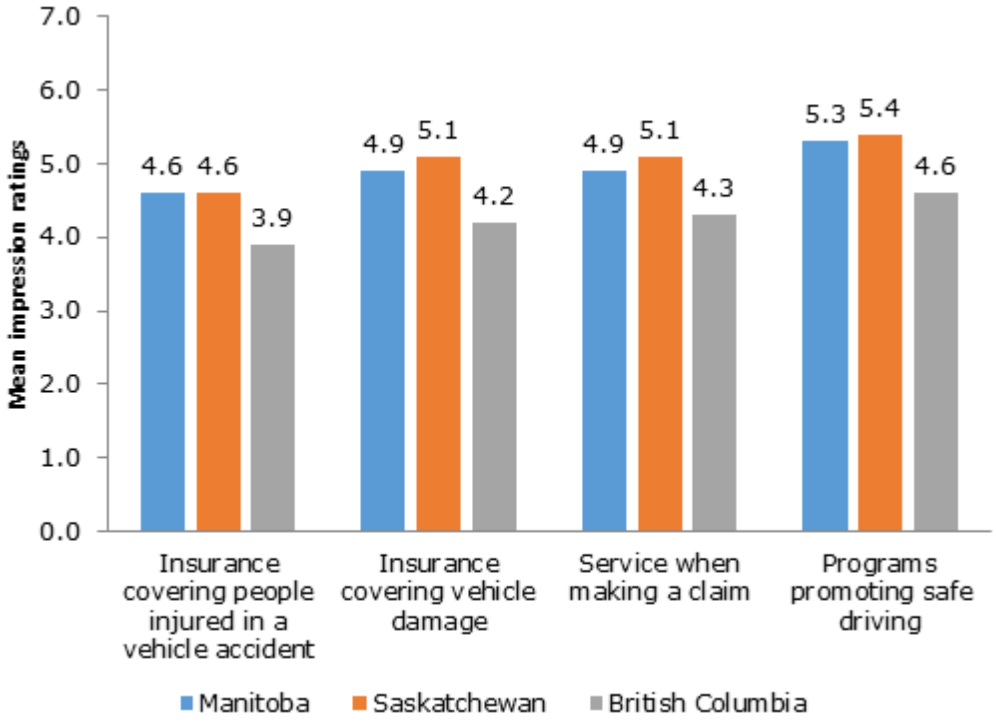
Figure BMK-28: Residents with positive consumer performance index



BMK.7.1.6 Products and Programs

Residents were asked to rate their impressions of several programs and products provided by their vehicle insurer. In each province, residents are most positive about their insurer's programs promoting safe driving and least positive about injury protection. Overall, MPI's scores are comparable to the scores for SGI and higher than the scores for ICBC.

Figure BMK-29: Mean scores for programs and products provided by vehicle insurers 2017/18



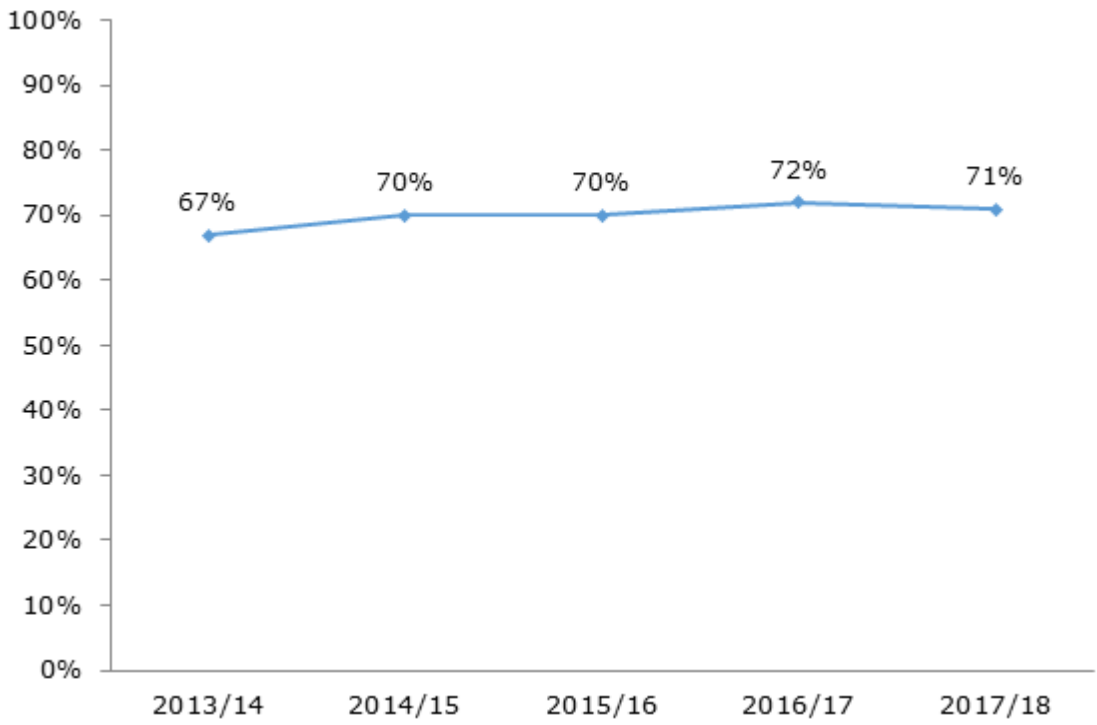
BMK.7.2 Road Safety Public Perception Measures

MPI consistently measures Manitoban's perceptions of its performance related to road safety in order to identify areas for improvement and to increase the effectiveness of its advertising and educational programs.

BMK.7.2.1 Success in Addressing Driving Safety

Manitobans were asked how successful MPI has been in addressing driving safety problems in the province. As shown in the chart below, about seven in ten Manitobans say the Corporation has been successful.

Figure BMK-30: MPI's Success in addressing driving safety issues: 2013/14-2017/18



BMK.7.2.2 Success Addressing Specific Driving Safety Issues in Manitoba

Manitobans were asked to rate (on a scale from 1 to 7, where 1 is very unsuccessful and 7 is very successful) how successful MPI has been in addressing specific driving safety problems in Manitoba. Results show that about eight in ten Manitobans say that MPI is successful in addressing seatbelt use and drinking and driving. About two-thirds say MPI is successful in addressing speed and close to six in ten say MPI is successful in addressing auto theft. In the past four years, the survey included a question on rating the success MPI had in addressing the use of cell phones while driving in Manitoba. About six in ten say that MPI is successful in these efforts.

Figure BMK-31: MPI's success in addressing driving safety issues: 2013/14-2017/18

	2013/14	2014/15	2015/16	2016/17	2017/18
Seat belts	83%	78%	76%	81%	80%
Drinking & Driving	74%	74%	76%	78%	77%
Speed	60%	67%	67%	69%	65%
Autotheft	65%	61%	62%	58%	58%
Handheld Cell Phone Use		57%	61%	60%	61%

Appendix 1: GARTNER'S RECOMMENDATIONS – STATUS UPDATE

As part of the annual scorecard review, Gartner provides MPI with recommendations to further improve process maturity where it concerns Information Technology (IT). These recommendations reflect industry best practices based upon Gartner research. Gartner provides recommendations for all subject areas, meaning that the presence of a recommendation does not represent an area where MPI is deficient (in several cases, Gartner has provided recommendations to areas where MPI exceeds its peer group). MPI reviews and acts upon these recommendations as part of its operational and project activities. All recommendations in this report, and changes made to previously provided recommendations are investigated and applied as resources (staff time and budget) allow. For readability, recommendations marked as rejected, complete or operational in the *2018 GRA information request PUB (MPI) 1-50* have not been included in this document.

As noted in *Part IV(i) BMK Benchmarking Attachment A, page 15* Gartner transitioned from the CIO Dashboard to the IT Score assessment tool. As part of this, Gartner conducted a review of all outstanding recommendations provided using the CIO Dashboard tool and confirmed that they remained appropriate and measurable using the IT Score tool. This resulted in the following changes:

- Where Gartner identified a recommendation as no longer applicable to MPI, it is identified as "Recommendation withdrawn by Gartner" in the table below.
- Where Gartner identified a new recommendation, based on a recommendation which was in the *2018 GRA*, it will be referenced in the Comments.
- Where Gartner identified a new recommendation, not based on previous recommendations, it will be found in *section 5 - New recommendations from IT Score*

The update of the Gartner Scorecard occurred in Q4 2017/18. In past years Gartner performed this exercise in Q3. The change in timing of the Gartner Scorecard results was due to resource constraints and prioritization of corporate initiatives and planning. Completing this scorecard requires input from several key leaders who were all

involved in the re-planning and strategy development that has been occurring. Management is working to move the timeline back from Q4 to Q3 in 2018/19.

Appendix 1: GARTNER'S RECOMMENDATIONS – STATUS UPDATE

#	Description	2019 Application Status	2018 Application Status	Current Status
1. In order for Manitoba Public Insurance (MPI) to better support running the business, MPI should consider:				
1.26	Benchmark service catalog to enhance transparency to the business and drive better IT Economics.	Recommendation withdrawn by Gartner	In Progress (Q4 – 2017-18)	MPI continues to document its key IT services and ensure that they are being delivered effectively. MPI has not been able to find sufficient data to facilitate external benchmarking of these services. At this time, this recommendation has been withdrawn by Gartner as part of their review of all outstanding recommendations.
2. In order for Manitoba Public Insurance (MPI) to better support growing the business, MPI should consider:				
2.06	Consider the acquisition and deployment of dependency mapping tools that connect the relationships between applications and infrastructure resources to business processes in order to ensure appropriate IT resources to support growth.	Recommendation withdrawn by Gartner	Deferred	This recommendation has been withdrawn by Gartner. Based upon a preliminary review of internal capabilities (existing tools and data sources) MPI does not see sufficient value in a tool purchase at this time.

2. In order for Manitoba Public Insurance (MPI) to better support growing the business, MPI should consider *(cont'd):*

#	Description	2019 Application Status	2018 Application Status	Current Status
2.07	Ensure the information needs meet the context of regulatory requirements in order to effectively support new projects.	Recommendation withdrawn by Gartner	New Request, To be evaluated (Q4 2017/18)	Upon further review with Gartner, MPI has confirmed that regulatory requirements are considered in projects. At this time, this recommendation has been withdrawn by Gartner as part of their review of all outstanding recommendations. MPI considers this complete and does not plan to review further.
2.08	Evaluate Bimodal approach that balances 'traditional and efficient' delivery of IT with 'fast and flexible' to address the needs of innovation.	Recommendation revised by Gartner	New Request, To be evaluated (Q4 2017/18)	Please see recommendation 5.08
2.09	Determine if the skills required for digital transformation exist within the organization or are needed from the outside (adaptive sourcing).	Complete	New Request, To be evaluated (Q4 2017/18)	Ensuring the organization has the right skills for current and future needs is an ongoing activity that MPI continues to undertake

3. In order for Manitoba Public Insurance (MPI) to better support transforming the business, MPI should consider:

#	Description	2019 Application Status	2018 Application Status	Current Status
3.02	Increase the span of Enterprise Architecture's (EA) influence throughout business areas by ensuring that governance processes exist and their importance is clearly communicated such that they are not circumvented. Often this involves building up stakeholder support.	See recommendation 5.02	Reworded by Gartner see 3.05	Gartner has consolidated this recommendation into 5.02 going forward.
3.03	Clearly communicate the value of enterprise architecture (EA), or its content, to the key stakeholders in terms that relate to their issues and proactively address their opportunities. This includes business management, key business stakeholders, key IT stakeholders and the overall enterprise architecture community. Look to build business outcome oriented deliverables and communicate success to drive ongoing support for EA.	See recommendation 5.02	Reworded by Gartner see 3.06	Gartner has consolidated this recommendation into 5.02 going forward.
3.04	Ensure that a culturally appropriate future state architecture exists, that a baseline of your current state exists, and a gap analysis is performed.	See recommendation 5.02	Reworded by Gartner see 3.07	Gartner has consolidated this recommendation into 5.02 going forward.

3. In order for Manitoba Public Insurance (MPI) to better support transforming the business, MPI should consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
3.05	Plan the future state architecture to support MPI's goals of access and support for existing and new services.	See recommendation 5.02	On Hold (Review again Q4-2017/18)	Gartner has withdrawn this recommendation and includes the key points in recommendation 5.02. MPI is considering this recommendation as part of the Legacy Modernization business case.
3.06	Perform a baseline of the current state, and perform gap analyses as the architecture is implemented.	See recommendation 5.02	On Hold (Review as part of the budgeting process Q3-2017/18)	Gartner has withdrawn this recommendation and includes the key points in recommendation 5.02. MPI is considering this recommendation as part of the Legacy Modernization business case.
3.07	Continue to increase the span of EA's influence throughout business areas by ensuring that governance processes (as measured by process maturity) and their importance is clearly communicated such that they are not circumvented. Often this involves building up stakeholder support and requires clear communications regarding EA's value to the business.	See recommendation 5.02	In progress (Q4-2017/18)	Gartner has consolidated this recommendation into 5.02 going forward.

3. In order for Manitoba Public Insurance (MPI) to better support transforming the business, MPI should consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
3.08	Evolve contracts with IT service providers so that these are aligned to business outcomes, transformation deliverables, and process performance. Consider a balanced scorecard approach to monitor and track progress.	See recommendation 5.09	To be evaluated (Q4-2017/18)	MPI did not complete an additional review of this recommendation, prior to the changes from Gartner. Gartner has consolidated this recommendation into 5.09 going forward.

4. In order for Manitoba Public Insurance (MPI) to be more effective and innovative, MPI should consider:

4.09	Communicate technical debt to IT and business leadership and develop a long-term program to remove it from the MPI environment (e.g. through increased adherence to technology standards and application re-use) and track the success of those efforts	See recommendation 5.01	In Progress (Q4 - 2017/18)	IT leaders presented an update on Application Portfolio Management to Executive in Q1 – 2018/19 which aligns to this recommendation. Additionally, MPI continues to invest in the Technology Risk Management program which is specifically focused on addressing technical debt. Going forward, this recommendation has been replaced by recommendation 5.01.
4.10	Develop 3 year staffing model to ensure key skills are available in-house to reduce reliance on contractors and consultants	In Progress (Q1 – 2019/20) – please see recommendation 5.04 going forward	In Progress (Q1 - 2019/20)	MPI continues to execute its External labor strategy. Going forward, this recommendation has been replaced by recommendation 5.04.

4. In order for Manitoba Public Insurance (MPI) to be more effective and innovative, MPI should consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
4.12	Review compensation strategies to ensure that MPI is competitive with market rates and can attract the talent it needs to deliver on its mission.	Complete	In Progress (Q3 - 2017/18)	MPI completed a comprehensive review of the majority of IT positions in Q3 2017/18 and will be implementing changes in Q1 2018/19 based on these findings.
4.13	Use a Pace-Layered Application strategy to balance maturity based ITIL and CMMI processes with evolution towards Agile, DevOps, and Automation Reusable used in development for cloud implementation.	In progress (Q4-2018/19)	To be evaluated (Q4-2017/18)	MPI currently leverages ITIL based processes in the delivery of IT services. MPI is looking for an opportunity to pilot Agile / DevOps on a 2018/19 project or operational activity to determine pros / cons over current approaches. An update on this specific recommendation will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider:

5.01	Continue to Maintain Technology Currency: With the accomplishment of modernization and technical updates, MPI should maintain IT assets and continue to invest in technology refreshes to avoid significant capital outlays in future years. Make periodic assessments of technology investments and report findings to executive leadership for I&O.	New	4.09	This recommendation references recommendation 4.09. This is currently being addressed by the Technology Risk Management Program which involves an annual review of IT assets and creation of projects to invest in technology refreshes and other work to maintain said assets. In 2018/19 the spend limit is $4.5M in a combination of IT operational expense and IT operational capital. These initiatives leverage the Value Management process. MPI will continue to assess its technology spend annually and report to Executive as part of the Gartner IT score process. MPI considers this recommendation implemented.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.02	Continue to Improve Enterprise Architecture Maturity: EA requires stronger relationships with business stakeholders, because it involves finding opportunities to deliver transformative value to the business operations by applying information technology to back and front office processes, business information assets, new products and services. Human collaboration and networked relationships should be tested and exploited. Establish reporting for the EA program using metrics to track value delivered to the organization and business outcomes as well as metrics to track continuous improvement of the EA practice itself. Ensure metrics are quantitative (linked to the business outcomes) and qualitative (measuring the perceptions of its stakeholders). Build future state models linked with current state models, ensuring that the future state is consistent with the relevant architecture principles. Integrate Applications into EA by involving enterprise architects in the Applications strategy. Utilize EA principles as a way to ensure the Applications strategy is linked to a business strategy which delivers measurable business value.	New	3.02 to 3.07	This recommendation references recommendations 3.02, 3.03, 3.04, 3.05, 3.06, and 3.07. Expanding Enterprise Architecture capabilities within MPI is a priority in 2018/19 and will be built into the Legacy Modernization program implementation and amendments, and will be part of the corporate strategic planning process. An update on this specific recommendation will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.03	Improve IT Governance Maturity: Improve IT governance maturity by continuing the existing process which matches IT services to business demand and by capturing better metrics to measure the achievement of business outcomes. The governance structure needs to be made more explicit, and should incorporate multiple levels within the organization that are capable of resolving process and policy discrepancies. Governance decisions should be mapped to balancing IT investments against run, grow and transform allocations.	New	N/A	There is anticipated to be additional cost associated with this recommendation (governance, approval layers) without clear net benefit. Further review will occur with Gartner in 2018/19 to better understand this opportunity with an update in the 2020 GRA

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.04	Improve People & Skills Management: Implement process roles within the organization and address collaboration and innovation culture required to improve the relationship with the business. Skills development and training should be improved for all areas of IT, especially for Infrastructure and Operations (I&O). Build a comprehensive strategic workforce plan with specific goals. Establish formalized training policies, mentoring programs and training development plan across all roles. Track employees' skills and competencies, documenting gaps. Define skills requirements and acquire people skills necessary to meet commitments. Utilize the skills inventory to ensure vendor management skills are in place to effectively oversee external providers. Continue to integrate "process" as an organizing construct to complement functional, product and geographical orientation within the organization.	New	4.10	MPI is conducting work force planning activities at the directorate level which will incorporate many of the recommendations listed, as related to training and development. MPI continues to invest in the development of corporate culture and focuses on both innovation and collaboration in those activities. Gartner's recommendations will be included in the appropriate department level work plans. Further review required to determine the potential cost / benefit associated with these changes. This will occur in 2018/19 with an update available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.04 *(cont'd)*	Employees should be able to anticipate the impact of change beyond the processes they participate in and the constituents affected by the processes. Employees should be able to anticipate the impact of change beyond the processes they participate in and the constituents affected by the processes. Ensure that collaboration becomes second nature and resistance to change should be deemed inappropriate. Develop a culture of innovation.			
5.05	Improve the IT Strategic Plan: Implement the following improvements to the IT strategic plan: Ensure the I&O component of the IT strategic plan is documented and formally approved to serve as the basis for annual operational plans and major upgrade initiatives. Ensure business objectives, strategies, plans and needs drive the I&O component of the IT strategic plan and that business needs are defined in sufficient detail to drive investment decisions. Improve alignment between IT and business strategic planning processes.	New	N/A	The IT Strategy and major corporate initiatives address the first and fourth parts of this recommendation. Further exploration of infrastructure operations (including operational plans linked to corporate strategy) will be reviewed further in 2018/19 with an update provided in the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.06	Improve the Use of Standards: Ensure standards are consistently used, measured and monitored. Implement standard, documented processes for Application Development. Maintain a standardized operating environment and work with IBM to increase standardization within the infrastructure	New	N/A	MPI is refining its project delivery processes in 2018/19 which includes the standardization of many deliverables used in Application Development. Additional standardization of deliverables will be reviewed at the completion of this activity. MPI actively engages with IBM to ensure the enterprise computing environment is standardized and appropriately documented. Remediation of any discrepancies found, occurs operationally, or as part of major projects. Further review required to determine the potential cost / benefit associated with these changes. This will occur in 2018/19 with an update available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.07	Improve IT Financial Management Disciplines and Key Performance Indicators (KPIs): Realign cost accounting and financial management away from the asset focused paradigms of a cost center, toward the activity based costing of the service, value and outcome oriented paradigms of a business. IT Financial Management approaches should therefore be based on IT as a service provider which utilizes analytics based asset tracking, chargeback based on volumes and usage and service line trending. For Applications, MPI should continue to improve financial transparency. Develop KPIs for financial management of business applications and categorize spending to develop tighter links to business capability delivery. Include total life cycle costing for Applications that includes operations spending.	New	N/A	MPI is reviewing in 2018/19 to determine potential benefits associated with these changes. An update available for the 2020 GRA reflecting the findings of this review.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.07 *(cont'd)*	For I&O, create business based financial management and performance reporting. Implement tools for business management as well as improved financial management. MPI should continue work on asset/license management, track asset utilization and usage and implement allocation of specific service costs based upon simple IT user metrics (e.g. number of users, PCs, phone sets) as well as unit cost metrics (e.g. cost per Windows Instance).			
5.08	Implement Bimodal Service Delivery Capabilities: Implement bimodal service delivery by creating differentiated processes for predictable Mode 1 work and developing more agile processes for exploratory or experimental Mode 2 work.	New	2.08	This recommendation references recommendation 2.08. MPI is piloting this capability in 2018/19 to better understand the associated cost / benefit of this model. An update will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.09	Improve Vendor Management Capabilities: Implement consistent vendor management approaches, expand vendor management to all vendors and departments and develop standard terms and templates for contracts. Work with vendors to develop better service level agreements (SLAs), and look at ways to integrate IT operations management tools. Create a formalized vendor engagement model, with defined vendor management processes which are implemented for all vendor interactions. Segment vendors that require centralized management and delegate responsibilities for those vendors that do not require sophisticated management. Put in place reporting capabilities for spending management and demand management that support vendor management. Identify vendor performance metrics, track the metrics using tools and enforce consistently across all spending categories.	New	3.08	This recommendation references recommendation 3.08. In July 2017/18 MPI consolidated IT Vendor Management into one team. In 2018/19 the vendor management team will be creating a strategy which will include many of the Gartner recommendations noted in 5.09; An update on the progress of these activities will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.10	Reduce the Risk associated with Privacy Issues: This should be accomplished by ensuring that policies and processes and other defined elements of the enterprise privacy program are reviewed regularly, with solicitation of feedback concerning policy acceptance and performance. Solicit involvement from marketing, employee representatives, external auditors and compliance officers and develop a plan for measuring the success of the enterprise's privacy awareness program. Work to link disparate and currently disjointed elements of the established privacy program and ensure privacy policies apply to all business units and locations.	New	N/A	MPI has a comprehensive privacy program, but will review these specific recommendations for opportunities to improve further. An update on the progress of these activities will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.11	Reduce Information Security Risks: This should be accomplished by creating a formal cross-organizational committee to collaborate on information security issues focused on realistic, actionable metrics for measuring the success and challenges of the security program. Ensure TVM (Threat and Vulnerability Management) processes are documented and formalized, with associated RASCI charts and performance metrics, integrated with the IT change management process and increase the resources allocated to performing formal threat research. Define a formal risk management process using controls assessment tools and services and continue practice of reporting risks to technical staff and perform updated assessment using a 3rd party.	New	N/A	MPI has a comprehensive Information Security program which transitioned from project to operations in 2018/19. MPI will review the operation of this program with Gartner, and confirm that all recommendations are fully addressed. An update on the progress of these activities will be available for the 2020 GRA.
5.12	Explore the Utilization of Cloud Services: Explore dynamic resource sharing (e.g. Cloud) Become the broker of best fit solutions – Cloud and Internal	New	N/A	This recommendation references recommendation 1.27 which was reported as complete in GRA 2018, but needs to be re-evaluated in 2018/19 fiscal. An update on the progress of these activities will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.13	Pursue Improvements in IT Service Management Processes: Establish common processes and ensure they are consistently followed across all teams. Formalize process improvement programs. Invest in process discovery technologies, such as business process analysis, and start building a business process framework and architecture. The IT organization should work with relevant groups within MPI to apply BPM techniques using iterative methods with process owners driving iterations. These methods should be a collection of best practices drawn from Six Sigma, Lean and other methodologies. Pilot use of process modeling and build support for this practice. Build cross-platform IT Service Management processes for incident management, problem management and change management. Formalize release, capacity and service level management. Improve service level management by formulating comprehensive end to end SLAs with customers.	New	N/A	This recommendation references recommendation 1.21 which was reported as complete in GRA 2018. MPI currently has operational IT processes which are consistently applied across all teams. These include incident and change management. Process improvement occurs regularly within each process (conducted by the process leader as opposed to a centralized team). In Q4 – 2017/18 a group of senior leaders presented a proposal to improve BPM (Business Process Management) maturity. This proposal is not planned for implementation within 2018/19 fiscal year due to higher priority work. All other recommendations require further review, which will occur by Q3 – 2018/19. An update on the progress of these activities will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.13 (cont'd)	Define and implement process ownership roles. Define and implement business service management processes and tools. Focus IT processes on automating and optimizing individual service delivery and support processes and perform continuous IT process optimization through trending.			
5.14	Improve Project Portfolio Management (PPM) Maturity through the use of tools: Expand the use of tools which were recently implemented for strategy development and resource management, decision support and risk modelling. Standardize the use of tools where multiple tools exist.	New	N/A	MPI is actively pursuing increased adoption of its PPM tools and processes in 2018/19. An update on the progress of these activities will be available for the 2020 GRA.

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.15	Determine improvements that can be made to the information management strategy. Starting in 2017/18, information management maturity will be measured using the data and analytics survey in the IT Score survey.	New	N/A	A draft data strategy was created in Q1, 2018/19 for use in Q1-Q3 2018/19. This document will be updated in Q3 2018/19 for use in the 2019/20 fiscal year and will incorporate these recommendations. MPI plans to leverage the Gartner Enterprise Information Maturity (EIM) model to measure the effectiveness of its Data and Analytics capabilities. An update on the progress of these activities will be available for the 2020 GRA

5. Using the IT Score tool set, Gartner recommends MPI consider *(cont'd)*:

#	Description	2019 Application Status	2018 Application Status	Current Status
5.16	Replace the CIO Scorecard with Gartner's IT Score Methodology: Replace the CIO Scorecard with Gartner's IT Score methodology which compares MPI with the insurance industry in similar areas and new ones that expand the scope of the analysis. Add two additional surveys (Strategy & Execution, Data & Analytics) to the IT Score methodology to assess the maturity of the IT Strategy and information management disciplines. The addition of these two surveys will also increase the overall confidence level of the enterprise view.	New	N/A	MPI has replaced the CIO Scorecard with Gartner's IT Score methodology and included it in the 2019 GRA. MPI anticipates completing the 2 additional areas, recommended by Gartner, and including the findings as part of the report filed in the 2020 GRA.

Manitoba Public Insurance

Benchmark Findings and Recommendations – Executive Report

Manitoba Public Insurance

This report has been prepared as advice, opinions, proposals, recommendations, analyses or policy options developed by or for the public body or a minister, as per Section 23(1) of the Freedom of Information and Protection of Privacy Act.

Background

Background

- Manitoba Public Insurance (MPI) is a non-profit Crown Corporation that has provided basic automobile coverage since 1971. MPI provides driver and vehicle licensing services, and insurance services through a broker network and throughout MPI in claim centres and customer service centres.
- MPI originally engaged Gartner to prepare CIO and IT Budget Scorecards using 2010/11 budget data. MPI repeated this analysis in 2011/12, 2012/13, 2013/14, 2014/15, 2015/16, and has continued its program in 2016/17.
- The current engagement is using 2016/17 actual financial results.

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

Objectives

MPI has retained Gartner to conduct an annual review of the IT service delivery capability (organization, processes, and infrastructure)

Four Structure Evaluation Instruments

1. IT Budget Assessment
2. CIO Dashboard Survey
3. Infrastructure & Operations (I&O) Scorecard
4. IT Score Survey

Outcomes

- Evaluate the relative maturity of the IT organization in critical IT disciplines
- Assess the IT organization's ability to react to rapidly changing business requirements and make calculated IT investments
- Compare relative funding levels of IT at MPI and the distribution of those expenditures
- Compare MPI's infrastructure and operations costs, staffing and service levels with those of similar enterprises and document findings.
- Establish a baseline for infrastructure and operations spending, staffing and service levels, providing an indicator of where improvements are possible

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

MPI's Mission and level of Project Investment required some additional normalizations and peer group modifications in the Gartner Analysis

Analysis Challenge	Analysis Risk	Analysis Mitigation
MPI is a hybrid organization – it is an Insurer, but its public mission is to serve Manitobans, not maximize revenues	If MPI is successful in its Mission - returning more benefits to Manitobans while driving down prices – revenues will be lower than those of similar organizations who focus on profit maximization	▪ Included 2 Canadian Provincial & Local Government Peers ▪ As government entities do not report revenue and MPI revenue are impacted by investments, focus is placed on IT spend as a % of operating expense.
A total of 12 peer organizations are included in the 2016/17 comparison. It is important to note that the peer group changes from year-to-year as organizations do not necessarily participate every year. Six of the peer organizations from 2015/16 updated their data and this updated data is used in the 2016/17 peer analysis. Year-to-year changes in peer results are reflective of changes in the peer group as well as changes to the individual organisations' data.		

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

MPI's Enterprise Metrics from 2012/13 to 2016/17

	5 Year Trend	CAGR	2016/17	2015/16 - 2016/17 Growth
MPI Revenue		4.6%	$ 1,287,470,000	14.5%
MPI Expenses		5.1%	$ 1,372,674,000	18.8%
MPI IT Budget		-2.4%	$ 74,755,663	5.8%
MPI Run The Business IT Cost		1.3%	$ 44,105,841	4.0%
MPI Change the Business IT Investment		-6.6%	$ 30,649,822	8.4%
MPI Employees		0.5%	1,971	1.9%
MPI IT FTEs		-1.5%	336	3.7%
MPI IT as a % or Revenue		-6.6%	5.8%	-7.6%
MPI IT as a % of Operating Expense		-7.1%	5.4%	-10.9%
MPI Enterprise Maturity Score		3.9%	3.52	2.9%

Observations:

- Revenue has increased while business costs associated with running the business have also increased
- The IT Budget has increased, but to a lesser extent than business OPEX
- MPI's IT Spending as a % of Revenue has decreased by 7.6% year over year and has decreased by 6.6% during the last 5 years
  - Business revenue from policies is higher due to growth in the number of vehicles on the road in Manitoba
- MPI's IT Spending as a % of Operating Expense has decreased by 10.9% year over year and has decreased by 7.1% over the last 5 years
- MPI continues to improve its Maturity (3.9% over 5 years using CIO Dashboard), driving effectiveness
- In 2016/17, overall personnel spending and staffing were higher than Peers

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Key takeaways from the analysis

Key Findings

- Personnel spending and staffing levels remain higher than peers, with a slight increase in IT to Company FTE ratio (16.7% to 17%)
- Similar to previous years, the focus for MPI IT investment is on reliability, availability, and lowering risk. These investments, along with initiatives to provide better access and a better user experience, increase the IT footprint, resulting in higher steady-state IT expenses.
- MPI improved its overall Maturity rating from 3.42 in 2015/16 to 3.52 in 2016/17.
- Similar to previous years, MPI spends 62% of the IT budget on Personnel vs. 45% for the peers. 32% of MPI's IT staff is made up of contractors vs. 24% for the peers. Higher staffing levels relative to peers is particularly evident in Infrastructure and Operations.
- Business Process Management and Enterprise Architecture maturity remains generally low and appears to be an opportunity for improvement.

Implications and Recommendations

- With the accomplishment of modernization and technical updates, MPI should maintain IT assets and continue to invest in technology refreshes to avoid significant capital outlays in future years.
- MPI's IT organization should focus on establishing linkages through enterprise architecture and focus future investments on delivering transformative value to the business operations.
- MPI should develop stronger relationships with business stakeholders.
- Maturity improvements should be focused on governance and metrics to track value delivered to the business and achievement of business outcomes.
- MPI should continue the efforts currently underway to review the size of its retained staff and the number of contractors as it increases its use of third-party support for infrastructure services.
- Internal skills development and training should be a priority.
- MPI should replace the CIO Scorecard with Gartner's IT Score methodology which compares MPI with the insurance industry in similar areas and new ones that expand the scope of the analysis.

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

MPI's IT spending has become more stable in recent years and with an improved ratio vs. business operating expense.

Observations:

- IT spending as a percentage of business operating expense is a better performance indicator for MPI. MPI is supporting a growing business workload with modest increases in IT spending (OPEX increased by 18.8% but IT spending only increased 5.8%.)
- IT Maturity continues to improve and should help MPI contain costs providing leverage in new initiatives.
- Six of the peer organizations from 2015/16 updated their data and this updated data is used in the 2016/17 peer analysis. IT Spending as a % of OPEX has been trending lower for the peer group.

Implications:

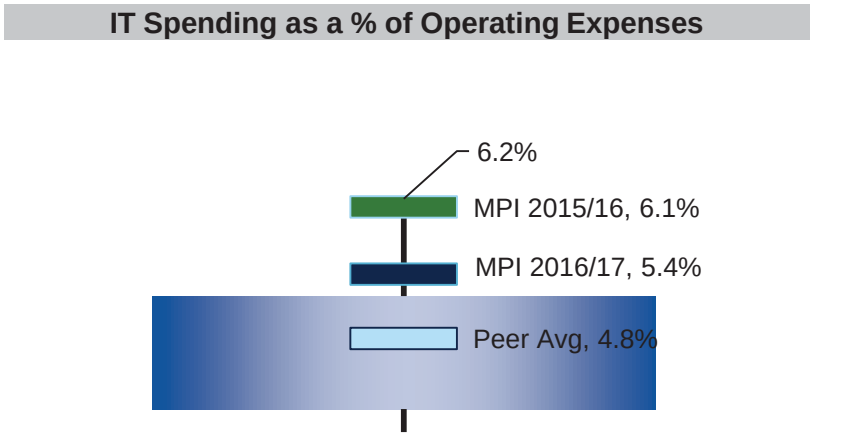
- OPEX spending is higher due to higher claims payouts*. Gartner has observed that mature IT operations contribute towards business efficiencies (lower overall operating expense) in the enterprise. MPI IT should unlock efficiency to the business, which will in turn contribute towards a reduction in OPEX spending (not withstanding other non-IT related expenses.)
- Continuing to work on process maturity will assist in improved efficiency in the IT operations and the delivery of additional value to the organization's business operations.

*** Source:** Manitoba Public Insurance 2016 Annual Report

	Maturity Score	IT as a % of Opex
2010/11	2.46	7.8%
2011/12	2.93	7.1%
2012/13	3.02	7.3%
2013/14	3.20	6.9%
2014/15	3.34	5.4%
2015/16	3.42	6.1%
2016/17	3.52	5.4%
2016/17 Peer	2.84	4.8%

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

MPI's IT Spend as a % of OPEX is lower compared with 2015/16, but higher than the peer group average



Cylinder denotes the median 50% of responses

= Peer Range

= Peer Average

= Peer Middle Quartiles

= MPI

Observations:

- MPI's spending as a percentage of OPEX is lower compared with the previous year's measurement
- MPI's spending as a percentage of OPEX is higher than the peer group

Implications:

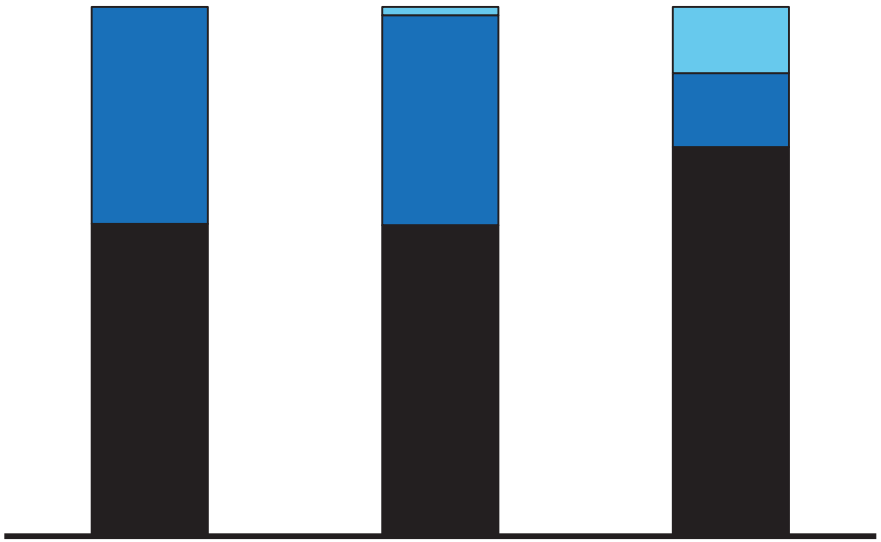
- MPI should continue to invest in strong governance over third-party service providers and continue its continuous improvement initiatives to ensure it receives the expected benefits from its optimization programs.

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

MPI has maintained its "Change the Business" % of its budget and is higher than Peers. IT Spending is focused on internal improvements and delivering new capabilities.

IT Spending to Run, Grow and Transform the Business



Change the business	MPI 2016/17	MPI 2015/16	Peer Avg
Transform	0.0%	1.6%	12.5%
Grow	41.0%	39.7%	14.0%
Run	59.0%	58.8%	73.5%

Run: Run-the-business IT initiatives are aimed at essential (and generally non-differentiated) business processes. The objective of a run-the-business initiative is to improve or maintain the desired balance among cost, quality and risk for these essential processes.

Grow the business: This is an indicator of how much of the IT resource is consumed and focused on developing and enhancing IT systems in support of business growth (typically organic growth).

Transform the business: This is an indicator of how much of the IT resource is consumed and focused on implementing technology systems that enable the enterprise to enact new business models

Observations:

- MPI spending on running the business is lower than the peer group average
- MPI spending on growing the business is higher than the peer group average
- MPI spending on transforming the business is lower than the peer group average
- As the core infrastructure "catch-up" investments end, the run the business metric has remained flat
- MPI has been making investments to continue to support customer service improvements to Manitobans.

Implications:

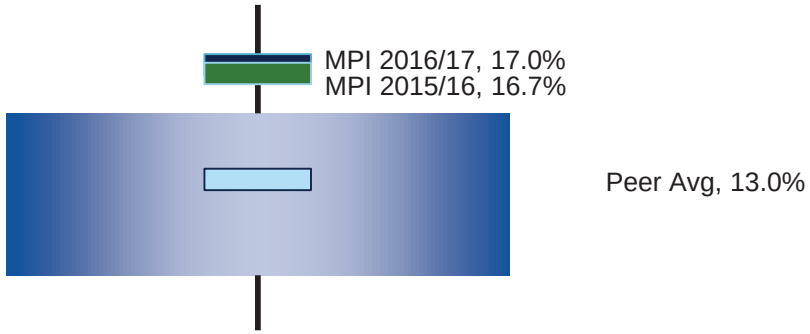
- Lower spending on running the business frees up more IT budget to enable growth
- As MPI continues to make technology investments, it should focus on proper execution of these investments to maximize benefits realization

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

MPI has more IT FTEs as a percentage of total company employees than peers

IT FTEs as a % of Company Employees



Cylinder denotes the median 50% of responses

= Peer Range

= Peer Average

= Peer Middle Quartiles

= MPI

Observations:

- MPI's overall staffing level rose slightly from 324 FTEs to 336 FTEs (16.7% to 17%)
- MPI's staffing level is 33% higher than the peers
- MPI continues to transition to third-party services for a number of areas within Infrastructure and Operations
- The benchmark measured a high level of availability for infrastructure functions (service levels increased year over year and are better than peer averages)

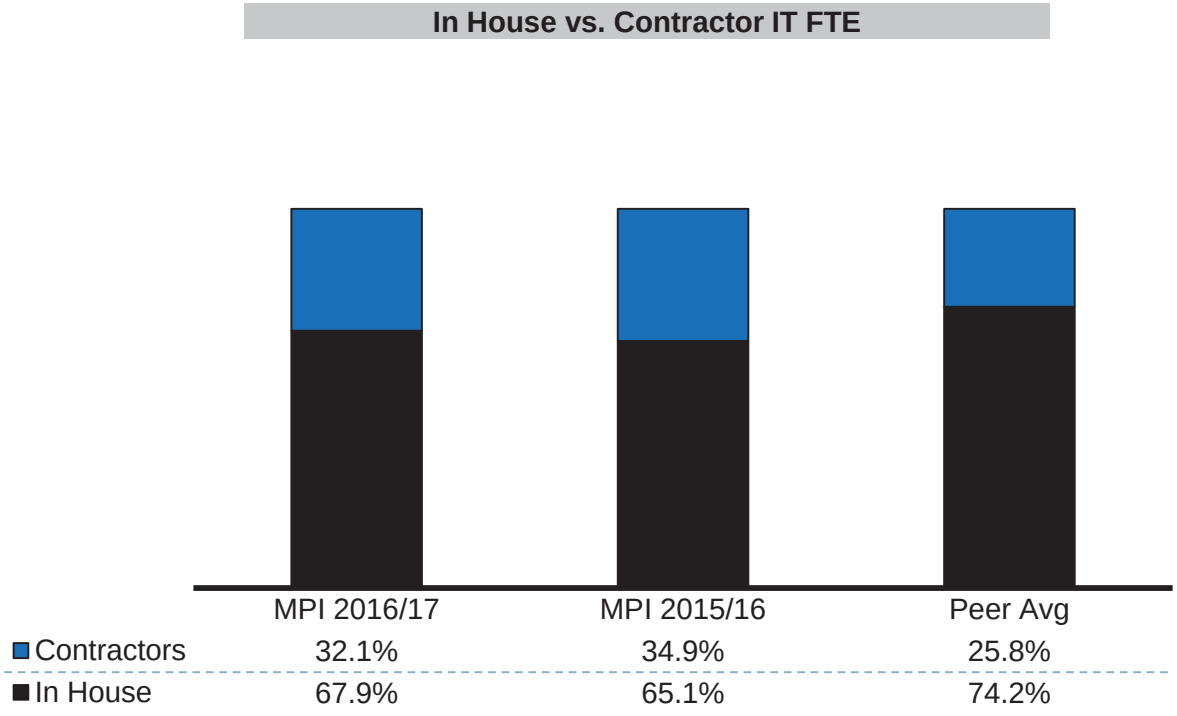
Implications:

- High staffing levels may be due to business growth which limits the ability to optimize costs
- Higher staffing levels may be an enabler of the high levels of service offered by IT to the business
- With the move to third party services come additional requirements for oversight and operational process staff in managing the vendor

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

MPI's proportion of contractors is higher than the peer group average



Observations:

- MPIs proportion of contractors is higher than the peer group average but lower than the previous year's measurement

Implications:

- MPI continues to transition to outsourced services for a number of areas within Infrastructure, making use of contractors to bridge skills gaps
- MPI should continue to monitor skills gaps, looking for opportunities to build internal skills as a way to contain increases in average labour costs

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

At $24 M, MPI's overall Infrastructure & Operations Spending is $4.3 M or 22% higher than the peer group average, driven by higher outsourcing costs. MPI should continue to review this area.

I & O Total Spending by Cost Category

	MPI 2016/17	MPI 2015/16	Peer Avg	Peer 25th	Peer 75th
Hardware	$ 1.602 M	$ 3.257 M	$ 6.271 M	$ 4.525 M	$ 7.388 M
Software	$ 3.582 M	$ 4.095 M	$ 3.293 M	$ 2.275 M	$ 3.661 M
Disaster Recovery	$ 0.116 M	$ 0.150 M	$ 0.701 M	$ 0.468 M	$ 0.778 M
Occupancy	$ 0.528 M	$ 0.625 M	$ 0.391 M	$ 0.294 M	$ 0.459 M
Transmission	$ 1.542 M	$ 1.769 M	$ 1.780 M	$ 1.195 M	$ 2.078 M
Personnel	$ 7.366 M	$ 7.171 M	$ 7.277 M	$ 5.382 M	$ 8.412 M
Unallocated	$ 9.233 M	$ 6.965 M	$ 0.000 M	$ 0.000 M	$ 0.000 M
Total	$ 23.969 M	$ 24.032 M	$ 19.714 M	$ 14.139 M	$ 22.777 M

Observations:

- IT Spending is 22% higher than Workload Peers
- The gap between MPI and peers has narrowed from 2015/16 to 2016/17 (35% to 22%)
- Variances to peers are highest in Occupancy (35%) and Software (9%)
- The unallocated amount of $9.2M is the outsourcing amount after transmission and personnel is removed assuming 30% of the outsourced amount is for personnel. Outsourcing for the peer group is included within the allocated categories.

Implications:

- Occupancy and software costs provide potential opportunities for cost savings.

Note:

- Approximately $482K previously included for software was determined to be out of scope for Infrastructure and operations according to Gartner's consensus model and was removed fro 2016/17. These amounts were included in previous years.

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

MPIs spending outsourcing and maintenance is significantly higher than the peer group average for Infrastructure and Operations

I & O Total Spending by Sourcing Type

	MPI 2016/17	MPI 2015/16	Peer Avg	Peer 25th	Peer 75th
Insourced	$ 4.057 M	$ 6.182 M	$ 13.195 M	$ 9.763 M	$ 15.521 M
Outsourced	$ 14.732 M	$ 11.719 M	$ 4.448 M	$ 2.904 M	$ 4.943 M
Contractor	$ 0.549 M	$ 0.783 M	$ 0.530 M	$ 0.357 M	$ 0.579 M
Maintenance	$ 4.631 M	$ 5.349 M	$ 1.541 M	$ 1.116 M	$ 1.734 M
Total	$ 23.969 M	$ 24.032 M	$ 19.714 M	$ 14.139 M	$ 22.777 M

Observations:

- Outsourced spending is 3.3X higher than the peer group average
- Maintenance costs are 3X higher than the peer group average
- MPI's outsourcing costs include a prepayment for future upgrades as part of a 'vitality' clause in the IBM contract which avoids large single year increases, but presents a higher yearly cost than might be expected.

Implications:

- MPI may benefit from an assessment of the competitiveness of the outsourcing and maintenance agreements

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

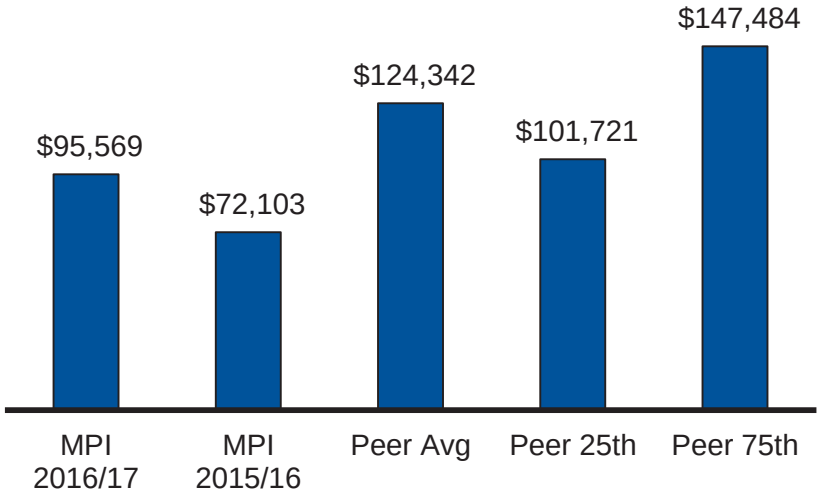
Gartner

MPI's staffing levels for I&O are lower than in 2015/16 and lower than the peer group, however, the staffing levels need to be considered in the context of the high level of outsourcing.

In House vs. Contractor IT FTE

	MPI 2016/17	MPI 2015/16	Peer Avg	Peer 25th	Peer 75th
Insourced	33.5	46.9	46.1	34.8	53.9
Contractor	2.2	5.4	4.3	3.1	5.0
Total	35.7	52.3	50.3	37.9	58.8

Cost per blended FTE



Observations:

- Insourced headcount for I&O has decreased since 2015/16
- MPI has embraced outsourcing for 8 of 10 I&O functions, including Windows Server, Unix Server, Linux Servers, Storage, LAN, WAN, Internet Access Servers, Voice Premises Technology. Service Desk and End-User Computing are retained by MPI.

Implications:

- MPI should evaluate the size of the retained organization in support of IT functions that are handed by the outsourced service provider
- The need for oversight and operational process staff for vendor management may limit staff reduction opportunities

 CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

MPI previously used the Gartner CIO Dashboard to assess MPI's process maturity which has been discontinued. Gartner recommends transitioning to IT Score for 2017/18.

	CIO Dashboard	IT Score
Toolset Overview	• Previously used to assess MPI's process maturity. • This tool has been discontinued by Gartner.	• MPI provided data for 2016/17. • Current tool used by Gartner to perform in-depth maturity assessments.
Comparison Data	• While the framework provides a way to perform year on year comparisons of MPI's maturity level, the peer data should be considered out of date.	• Provides a way to perform year on year comparisons • Current peer data is available for the Insurance industry
Scoring	• MPI's maturity level assessed at level 3.52 using CIO Dashboard methodology during the 2016/17 period.	• IT Score is a different methodology with different weightings in the assessment domains. • MPI's maturity level assessed at level 3.10 using IT Score methodology during 2016/17 period.
Assessment Framework	• Infrastructure and Operations • Applications Organization • Business Process Management • Enterprise Architecture • Cost Containment • Open Innovation Readiness • Effectiveness / Innovation Enterprise Viewpoint • Effectiveness / Innovation IT Organization Viewpoint • Overall Score	• Infrastructure & Operations • Applications Organization • Enterprise Architecture • Vendor Management • Program and Portfolio Management • Security and Risk Management - Privacy • Security and Risk Management - Information Security • Enterprise View

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

MPI saw significant improvements in process maturity in Application Organization, Infrastructure and Operations and Cost Containment

	MPI 2016/17	MPI 2015/16	MPI 2014/15	MPI 2013/14	MPI 2012/13	MPI 2011/12	Insurance Avg
Infrastructure & Operations	3.14	2.98	2.85	2.64	2.32	2.32	2.20
Cost Containment	3.21	3.10	2.97	2.79	2.38	2.15	2.51
Applications Organization	3.17	2.94	2.83	2.81	2.66	2.70	2.76
Business Process Management	1.60	1.60	1.60	1.40	1.40	1.20	1.76
Enterprise Architecture	3.18	3.18	3.18	3.05	2.84	2.73	2.53
Open Innovation Readiness	4.13	4.13	3.75	3.75	3.75	3.63	2.46
Effectiveness/Innovation Enterprise Viewpoint	4.09	4.09	4.00	4.00	4.00	4.00	3.23
Effectiveness/Innovation IT Organization Viewpoint	3.89	3.89	3.78	3.67	3.67	3.44	3.17
Overall Score	**3.52**	**3.42**	**3.34**	**3.20**	**3.02**	**2.93**	**2.82**

Evaluation Criteria: MPI compares itself against seven key criteria that evaluate the effectiveness of the IT organization to deliver to the needs of the business. Comparisons are made to previous years and Gartner's IT Score for the CIO role as the CIO Dashboard has been discontinued. The insurance average had not shown material change over the past few years and can still be considered relevant.

Observations: MPI has improved over 2015/16, especially in Applications (+8%) and Infrastructure & Operations (+6%), but opportunities still remain to improve. Business Process Management is unchanged from last year and is still very low. MPI's overall IT Score was 3.52 (+3% over 2015/16)

Implications: MPI has increased its Maturity across the board, but can still improve in areas such as Business Process Management Increasing Maturity in these areas will improve the efficiency and effectiveness of both IT and MPI overall.

CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

IT Score

MPI's Executive View score is 3.4 and the Enterprise Score is 3.1. These scores will be used for year over year comparisons going forward. Opportunities exist for improvements in enterprise architecture and applications maturity.

	MPI 2016/17	Insurance Avg
Executive View	3.4	-
Applications Organization	2.4	2.4
Enterprise Architecture	2.3	3.0
Infrastructure & Operations	2.7	2.5
Vendor Management	3.0	2.5
Program and Portfolio Management	3.6	2.8
Security and Risk Management - Privacy	4.1	3.3
Security and Risk Management - Information Security	3.6	3.0
Enterprise	3.1	-

Note: Gartner does not provide benchmarks at the overall Enterprise level. The Enterprise and Executive score / assessments are based on a varying compilation of survey types across participants, not just a single survey.

Observations:

- MPI's Executive View score is 3.4 and the Enterprise Score is 3.1. These scores will be used for year over year comparisons going forward.
- Enterprise Architecture maturity is lower than the peer group average

Recommendations:

- Focus initiatives for improvements on enterprise architecture

 CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

Reconciling CIO Dashboard with IT Score

How does Business Process Management, as measured in CIO Dashboard map to the IT Score survey?

- In the CIO Dashboard survey, Business Process Management was assessed in various domains with MPI having low maturity in Organization and Culture and Metrics and Measures. It should be noted that the peer data within is outdated, meaning that MPI was being compared to the industry as it was, several years ago.
- In addition, within the insurance industry, IT organizations have shifted from business process maturity to a focus on improving the partnership between IT and the business.
- The newer IT Score Methodology is based on Gartner research* which finds that Enterprise IT maturity is more than the sum of individual IT functions and technical capabilities. *All* enterprise leaders (not just CIOs and IT leaders) must adapt and drive change in order to mature overall maturity beyond level 3 which is a critical step in surviving and exploiting digital business.
- Instead of simply measuring business process management as a separate domain, the IT Score methodology consists of an executive view which is separate from the IT domains. Rather than a focus on business processes, the domains within the executive view reflect the current focus areas with regard to enabling IT as an enabler for business value.

Why is Enterprise Architecture assessed with a high score in the CIO Dashboard survey and a low score in the IT Score survey?

- In the CIO Dashboard survey, enterprise architecture consisted of multiple domains with MPI being assessed as relatively weak in architecture impact, but stronger in every other domain.
- Similar to business process management, the scope and maturity level of enterprise architecture has changed for IT organizations within the entire insurance industry.
- In the newer IT Score survey, enterprise architecture consists of 7 domains which reflect the current best practice focus areas for modern IT organizations. MPI was assessed with a lower level of maturity in the current domains, most notably governance and metrics. Comparisons are made to recent peer data.

** Source: ITScore for the Enterprise - G00343561*

 CONFIDENTIAL AND PROPRIETARY I © 2018 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner

In Summary, MPI continues to improve in most dimensions measured, but opportunities for continuous improvement remain.

Spending	Spending Allocation	Alignment and Maturity
▪ IT Spending as a % of Revenue dropped from 6.3% to 5.8% – compared with 3.7% for peers ▪ IT Spending as a % of Operating Expense dropped from 6.1% to 5.4% – compared with 4.8% for peers	▪ MPI has moved out of it's "catch up" stage and the balance of spending for growth is decreasing. ▪ MPI continues to spend more on Contractors and external third-parties, which increases spending. ▪ MPI's "Run the Business" spending is lower than the Peers.	▪ MPI improved in many process areas as measured using the CIO Dashboard survey ▪ The overall IT Maturity score increased using the CIO Dashboard survey ▪ Measurements have been made using the new IT Score methodology which will enable ongoing year on year comparisons and comparisons to peer organizations

- MPI's mission is to serve Manitobans, not maximize revenues, which has an effect on metrics reported as a % of revenue. Spending as a % of overall operating expense compares well with peers.
- Improving MPI's long-term IT cost position is reliant on managing outsourced service provider costs and decreasing dependence on outside contractors.
- MPI will increase value to the business through improvements in enterprise architecture which will enable transformative value to the enterprise.
- MPI will enable future maturity and efficiency improvements through a focus on skills development and training.
- MPI will transition to the IT Score survey which reflects priorities and best practices for modern IT organizations and enables peer comparisons

VALUE MANAGEMENT

VM.1 MPI INCORPORATES THE VALUE MANAGEMENT PROCESS IN CAPITAL PROJECTS MANAGED BY THE BUSINESS TRANSFORMATION OFFICE

Manitoba Public Insurance (MPI or the Corporation) has created business cases for Business Transformation Office (BTO) managed projects of $500,000 or more in the 2018/19 Capital Budget as follows:

Project Name	2018/19 Capital Budget
Technology Risk Management	$ 4,500,000
Legacy Systems Modernization	$ 2,000,000
High School Driver Education Phase 3	$1,900,000[1]
Customer Self-Service – Phase 1	$ 1,500,000
BI3/Fineos Upgrade 2020	$ 1,257,000
Credit Card Strategy	$ 1,000,000
Finance Re-engineering	$ 500,000

In April 2018, subsequent to the approval of the 2018/19 Capital budget, a business case was prepared for the Five Year Strategic Space Plan and submitted for approval to the Board of Directors. This multi-phase, multi-year project focuses on the redevelopment of MPI's physical facilities. In the first phase, a budget of $2,065,000 was approved for 2018/19. Details of this business case are commercially sensitive, and are the subject of a motion seeking confidential treatment prior to filing with the PUB.

Additionally, the Customer Self Service – Phase 1 business case contains commercially sensitive information and will also the subject of the aforementioned motion seeking confidential treatment.

[1] The 2018/19 approved budget for HSDE was $900,000 with additional funding of $1 million approved at the April 19, 2018 Board meeting.

PUB Order 29/18 stated the following with respect to directive 11.15 of PUB Order 130/17:

> *The Board is satisfied that Directive 11.15 should be varied such that MPI will be required to file the business case and cost/benefit analysis in the 2020 GRA. The Board will also require that in the 2019 GRA MPI provide an update on the progress made towards completing the review and the business case for the AOL and CARS redevelopment and replacement.*

The progress update on the Legacy Systems Modernization is included in this section *VM.1.2* of this chapter.

A brief overview of the value management business cases are provided below, with the detailed business cases included as Appendices to this chapter.

VM.1.1 Technology Risk Management

MPI recognizes the need to continue to invest in its technical assets, to avoid technology obsolescence, and to achieve the goals identified in the Annual Business Plan.

Information Technology focused investments are proposed annually to improve Technology Risk Management. This will provide regular investment in technology systems and processes to avoid significant capital outlays in future years.

The goal of the Technology Risk Management program is to implement projects that will keep existing technology in a stable and supported state and address other technology risk through process and technology improvements.

Return on investment will be realized through risk reduction. This includes reduced risk of running on unsupported or outdated technologies and reducing risks identified in various risk assessments. Improvements are focused on the following areas:

- Application Risk Management: Investments in the remediation of prioritized recommendations identified by the Application Portfolio Management process. This also includes improvements to how MPI monitors and manages applications.
- Information Security Risk Management: Implement solutions to manage risks identified by the Corporate Information Security Office and as identified through the use of MPI's security risk assessment capabilities.
- Infrastructure Risk Management: Investments in infrastructure upgrades to remain on current and supported technologies. Infrastructure Risk Management invests in technology services and solutions which improves our operation of IT Infrastructure assets within the IBM data center. While some of these costs are covered within the IBM enterprise agreement, it is essential to test and remediate the systems and residing applications after any significant infrastructure upgrades to ensure there is no loss of functionality and to minimize or remove any risk to the business. This may include limited application configuration changes, and related testing, to ensure applications function on updated platforms
- Risk Registry Remediation: Implement solutions to lessen high priority Enterprise risks. This is currently focused on Business Continuity and Disaster Recovery, reducing risk through better event preparedness and by investing in response capabilities.

Financial Cost/Benefits Metrics

Project Costs	$4,500,000

The business cases for these four initiatives are included in *Part V(ii) VM Appendix 1 Technology Risk Management Business Case*. The financial analysis for these business cases are included in:

- *Part V(ii) VM Appendix 1a Application Risk Management Financial Analysis*
- *Part V(ii) VM Appendix 1b Information Security Risk Management Financial Analysis*

- *Part V(ii) VM Appendix 1c Infrastructure Risk Management Financial Analysis*
- *Part V(ii) VM Appendix 1d Risk Registry Remediation Financial Analysis*

The financial analyses are also included in excel format attached to the application PDF.

Technology Risk Management Life Cycle

1. MPI leverages internal expertise and external advisory services to identify specific opportunities for improved Technology Risk Management (ex. Application Portfolio Management process, Information Security Office, Gartner Recommendations).

2. In accordance with the Value Management process, these opportunities are documented, reviewed, and refined. Technology Risk Management uses Value Management templates to collect the initial information on opportunities.

3. Potential opportunities are reviewed for value, and synergy. Where value is confirmed and synergy exists, individual opportunities are combined into projects and costing is completed. Projects are reviewed for inclusion into the program each fiscal year.

4. The final set of business cases follow Value Management processes and are submitted to Executive and Board for approval. In 2018-19, there were four complete business cases (one for each of the four areas above)

5. A program charter is created for the Technology Risk Management for the fiscal year which guides overall program execution.

6. Throughout the delivery of the product(s) or service(s) described in this Charter, the Program Director and Project Managers will leverage the MPI Enterprise Project Management Methodology which will be modified for efficiency and to address the technical focus of Technology Risk Management

projects and the EPMO Toolkit to provide the clearly defined delivery framework for project management consistency.

7. Each project within the program will follow the process outlined above to produce a project specific documentation which guides the delivery of that project's objectives, scope and defined deliverables. All projects will be governed using the program governance approach which includes regular reporting on time, scope, and budget.

8. At completion of a project, lessons learned are completed which are leveraged in future year's planning and execution.

Technology Risk Management Initiatives (2018/19)

Focus	**Application Risk Management**
Project	**Application Performance Management Suite Implementation (APMS)**
Install and integrate an APMS suite into the MPI environment to gain full application end to end insight and the following key functions application performance management, end-user monitoring, infrastructure visibility, and application analytics. This enables better identification of negative application performance and facilitates faster response times to these negative events.	
Project	**VIP Upgrade**
Merge three outdated VIP applications into a single modern application. The three applications in question are VIP Inquiry, VIP2, and VIP_CARS. The focus is to ensure the platform operates on stable / supported infrastructure, uses secure and stable application components, and has the appropriate levels of data protection and auditing. This was recommended by the Application Portfolio Management (APM) process.	

Project	Loss of Use - Platform Upgrade
Upgrade the Loss of Use Web Application (LOU) from its current unsupported VB.NET framework to a current supported environment. This was recommended by the Application Portfolio Management (APM) process.	
Project	**CDW-EDW Migration Strategy**
Conduct a review of the Classic Data Warehouse (CDW) and propose a strategy to reduce support risk and shift workload to other internal platforms.	

Focus	Application Risk Management *(cont'd)*
Project	**Dollar Universe Upgrade 6.7**
Upgrade the Automic Dollar Universe Application Suite to the latest stable version of the product, as recommended by the vendor. This was recommended by the Application Portfolio Management (APM) process.	
Project	**Team Foundation Servers (TFS) and Visual Studio Upgrade**
Refresh the Microsoft Team Foundation Server (TFS) and Visual Studio development environments ensuring operation of current supported versions and to gain capabilities required to support modern application development processes.	
Project	**Informatica Update**
Upgrade Informatica to version 10.1. Version 10.1 will be supported until 2020 (or later). Informatica is used in the extraction, transformation, and loading (ETL) of data which populates the enterprise data warehouse. It is critical for report generation. This upgrade is covered under an existing maintenance agreement with the vendor and is planned to be completed by leveraging internal MPI resources.

Project	**Redacted for IT Security purposes**
Redacted for IT Security purposes	
Project	**Redacted for IT Security purposes**
Redacted for IT Security purposes	

Focus	Infrastructure Risk Management
Project	**File Server Storage Solution**
Redefine the file storage environment in order to reduce operational costs while improving efficiencies and accommodating MPI's evolving business needs.	
Project	**Security Device Refresh**
Execute a refresh for the hardware and add improvements in technology (i.e. High Availability (HA) or Disaster Recovery (DR) capabilities and storage upgrades for retention improvements) if viable within budget and timeline. The Software version will be upgraded to the latest supported version to ensure MPI is maximizing all available features for the Managed SIEM (Security Incident and Event Management) service.	
Project	**SAN Storage and TSM Backup Upgrade**
Modernize storage and backup solutions to ensure supportability, capacity, and value.	
Project	**Windows Server Vitality (2009 -> 2016)**
Reduce the risks associated with running End of Life software in our environment. Execute on IBM contractual agreement to perform a major Operating System upgrade every 4 years and validate the changes through formal testing processes.	

Focus	Infrastructure Risk Management *(cont'd)*
Project	**Intel Server Hardware and VMware ESXi Refresh**

Upgrade plan is to move to execute a "like for like" refresh and expected to move to new IT infrastructure.

Intel Server Hardware Refresh / Vitality

To eliminate and reduce Business impact (IT Security and IT Availability) associated with running End of Life hardware in our environment. HX5 blades (current technology) are no longer in production. To remain current on all major Data Centre platforms, and to execute on IBM contractual agreement to upgrade Data Centre infrastructure once every 5 years.

VMWare ESXi 5.5 Upgrade to ESXi 6.5 (Vitality)

To eliminate and reduce Business impact (IT Security and IT Availability) associated with running End of Life Support platforms in our environment. End of general support for ESXi 5.5 is 2018/09. To remain current on all major Data Centre platforms and to execute on IBM contractual agreement to upgrade Operating Systems and Middleware once every 4 years.

Focus	Risk Registry Remediation
Project	**Risk Registry Remediation - 2018**

Implement solutions to lessen high priority Enterprise risks. Upcoming investments will focus on improving process maturity for Business Continuity Management (BCM) with specific investments in Information Technology Service Continuity Maturity (ITSC). The goals of this project focus on review, refinement, and testing of MPI's IT recovery capabilities. This project addresses recommendations from a 2017/18 external review.

VM.1.2 Legacy Systems Modernization

Project Description

The Legacy System Modernization project will develop a business case package, strategy and roadmap to modernize the following enterprise applications (and associated supporting applications) over a multi-year, multi-phase program:

- AOL, DLS and CARS
- SIS replacement for the SRE line of business
- Financial Re-engineering

Two neutral 3rd party consultant partners will be engaged to perform an independent Legacy Modernization assessment. A neutral 3rd party will ensure that a bias free assessment and target solution is recommended. Their mandate will be:

- Determine if MPI is a good candidate for modernizing legacy systems
- Complete an MPI application assessment and identify highest business and technical risks and priorities
- Recommend a technology solution that fits the depth and breadth of MPI's Legacy Systems business needs, takes into consideration the scale of MPI as an organization, aligns to MPI's core business needs, and modular in design to be easily expanded to respond to new business capabilities that may arise in the future
- Forecast impact to IT staffing and infrastructure
- Establish the high level parameters for the detailed business case
- The preliminary assessment will be reviewed with the MPI Board of Directors before proceeding with the development of the detailed business case.

Business Needs

Business Perspective**:**

- MPI's current enterprise legacy applications are not designed to meet future customer, business and marketplace demands. Constraints include:
    - Fixed batch window from 10:30pm-2:30am impacts demands for 7/24 customer service availability
    - Technologies which cannot be readily exposed to customers' for self-service or Omni channel on modern access platforms
    - Customer information is stored and independently maintained in many systems causing inconsistent or out-of-date reporting
    - Lengthy time to market with product and service improvements
    - Business cases for product and service enhancements are negatively impacted by system implementation costs
    - Becoming incrementally more difficult to meet the needs of Government for system and administrative changes

Security Perspective**:**

- Legacy systems were not designed to handle today's modern security threats
- Security and compliance controls (regulatory / non-regulatory) are needed such as:
    - Role-Based Access Control (RBAC) which supports "need to know"
    - Integration for logging and monitoring services
    - Support of secure network zoning models (Zones of Trust)
- Retrofitting these controls into the legacy applications would be difficult, labour intensive, cost prohibitive and disruptive to business processes
- The ability to support emerging security requirements to defend against cyber threats is required to achieve MPI's stated Capability Maturity goal and desire for continuous improvement

- Security Control Considerations:
    - Access Management: Supportability of advanced access controls such as modern password controls (length, complexity, and strength), multi-factor authentication and centralized identity management.
    - Compliance and Audit Monitoring: Supportability for modern security event logging and monitoring requirements.
    - Segmentation: Ability to increase segmented application layers in support of security boundary controls (Zones of Trust).
    - Application Development Practices: Reducing confidentiality, integrity and availability risks by following defined application development practices and standards that include security best practices.

Technical Perspective**:**

- The current application architecture ranges in age from 25 – 40 years old.
- Availability of resources to support our oldest legacy systems are scarce.
- MPI has a large footprint of aging technologies such as PowerBuilder, COBOL and RPG. Local resources are becoming harder to find.

  Business impact: Shortage of labour increases our operational risk and lengthens business change.

- A new enterprise platform would modernize a significant portion of our infrastructure
    - A consolidated system reduces our technology footprint for production and the corresponding non-production environments
    - Reduces the number of different technologies in use
    - Lowers our IT operating costs by reducing IT infrastructure, software licenses and labour
    - The move to the new platform will eliminate a significant portion of the defects, reducing our overall technical debt

Business impact: Reduces operational IT spend on our core systems.

- A new enterprise platform has a number of technology benefits available. MPI will review platforms that provide:
    - Easier consumption of services available in digital ecosystems such as Amazon's AWS or Microsoft's Azure platforms
    - Built on a common technology platform such as Java or Microsoft
    - Large and healthy local resources pool with these skills
    - Courses available at local post-secondary institutions
    - More accurate view of our "data"

Business Impact: Improves IT agility enabling faster business change

Financial Impact**:**

- Total cost of ownership for all associated platforms continue to increase beyond CPI
- Scarcity of resources will result in increased ongoing costs to secure required resources in the future
- Product and service changes are becoming cost prohibitive from a business case perspective
- Market share for competitive lines may be negatively impacted in the future as other insurers continue to advance technology and customer service offerings

Project Objectives

This project will be responsible for completing a Legacy Modernization assessment to validate and confirm the need for MPI to take future action. This will encompass the completion of an application risk and strategy assessment and the development of a detailed business case which will include the following material:

- Business Case Executive Summary
- Financial analysis for replacing the legacy systems identified as modernization priority during the Application assessment phase of the project

- Business Vision - A strategic description of the business end state
- Project Charter(s)
- Program implementation road map and high-level project plan
- Conceptual Architecture for the business, application and data domains

Project Benefits

The project approach being taken by MPI for such a significant future capital investment demonstrates MPI's ongoing commitment to the Value Management process. An independent 3rd party will review and assess MPI's legacy systems risk and confirm what action MPI should take with respect to the Legacy Modernization program. A detailed business case, risk assessment, plan, roadmap, and financial forecast that defines the multi-year program will be prepared for review and approval by the MPI Board of Directors prior to any Legacy Modernization implementation actions being taken.

Proposed Timing and Significant Milestones

Project Start Date	March, 1, 2018
Vendor RFP Award	April, 1, 2018
Vendor #1 Assessment Start	April, 15, 2018
RFI Vendor Demos	June, 2018
Vendor #1 Board presentation	June 21, 2018
Vendor #2 Assessment Start	July 2018
Vendor #2 Board presentation	September 2018
Development, Release and Evaluation of Product RFP's	July thru November 2018
Final Board presentation of business case and final report	February, 2019
Project End Date	February 28, 2019
Other Milestones	Quarterly check points

Financial Cost/Benefits Metrics

Project Costs	$2,000,000

VM.1.3 High School Driver Education Phase 3

Project Description

The purpose of formal driver education is to establish good driving beliefs and behaviours that contribute to a safe road culture and to develop driving skills to prevent collisions on Manitoba roadways. Educating drivers before they receive their licence is a critical early intervention that positively affects driver preparedness and attitude for the long term.

The High School Driver Education (HSDE) program currently offered by MPI requires renewal to meet the needs of future drivers and the expectations of customers. The redevelopment project is a complete re-visioning, redesign, and redeployment of the program, including what we teach, how we teach, what tools we use, and the delivery model we employ to provide the teenage novice driver with the best foundation possible in preparation for their life as a driver. The redevelopment project represents the first major overhaul of the program since the mid-1990s.

The overall project involves three phases over several years. Phases one (visioning) and two (proof of technology concepts) are complete, with work already progressed in Phase three (curriculum redesign). By using behavioural science, research and proven approaches, the new Driver Z program focuses on altering driver behaviour and reducing a teen's risk of collision.

Project Objectives

The phase three redevelopment of HSDE will be successfully addressed by meeting the following project objectives:

1. Curriculum redesign including: vision, learning objectives, lesson plans, instructional design, complete on-line lessons (students, parents/co-pilots), in-class guided facilitation teaching materials, new scripts and video production, in-class and in-car assessment requirements and methods, parent/co-pilot coaching resources and route guidance, instructor training, and business architecture.

2. Technology support in the form of: estimates, requirements, and development of system integrations, Customer Learning Management System, Customer and Partner Portals, on-line book and pay for course registration, ability to finance enrolment fees for parents, new program-specific application with in-car and in-class assessment and two-way feedback from instructor to student and co-pilot, student progression history and scores, and notifications.

3. People Readiness as evidenced by: prepared and resourced operations within Driver Education department, a recruited and fully trained team of contracted instructors, informed and prepared brokers, and an informed public through executed communication and marketing strategy.

Project Benefits

The value proposition for driver education is simple – if the program is effective, drivers who participate are more skilled and safer than those who do not. This is demonstrated through three primary indicators: testing pass rates (preparedness and skill to drive); traffic conviction rates (attitude); and claims frequency and severity (risk).

- **Preparedness:** Higher first attempt pass rates on knowledge and road tests indicate that educated drivers have more knowledge and skill, making them better prepared to drive than non-educated drivers.
- **Attitude:** Lower traffic conviction rates provide evidence that educated drivers are less likely to speed, drive impaired, or engage in other high risk driving behaviour than non-educated drivers.
- **Risk:** A lower frequency rate and severity of claims for educated drivers is an indicator that represents a reduced risk when behind the wheel than non-educated drivers.

To achieve these outcomes, it is critical for MPI to invest in its driver education programming to develop a higher quality learning experience with proven superior outcomes. With a proven program on offer, it is then critical to maximize participation and reach a broader range of audiences to increase the potential economic and societal benefits associated with the program. The redevelopment of HSDE is expected to achieve the following desired outcomes:

Value Drivers for our customers who require exceptional service and products

- Increase client engagement so students and co-pilots contribute more time and effort to achieve better preparation and safer driving.
- Enhance program reputational value as world-class education product
- Improve driver skills to better perceive and navigate hazards, prepare for different road types and conditions, and operate a vehicle with an appropriate level of confidence and skill
- Improve learning outcomes through broader understanding and deeper critical thinking, thereby impacting the traffic safety culture throughout and beyond the program experience
- Change driver attitude and culture to help Manitobans shift from passive observers to become active participants in our pursuit of zero fatalities on Manitoba roadways

Business Drivers for MPI and its ratepayers

- Reduce rate of at-fault physical damage claims for customers 15-24 years old
- Reduce rate of at-fault serious injury claims and fatality collisions for customers 15-24 year old
- Maintain excellent knowledge tests outcomes and improve poor road test outcomes for program participants
- Reduce the conviction rate for customers 15-24 years old
- Maintain student enrollment and increase completion rates

Financial Cost/Benefits Metrics

Project Costs – Phase 1 & 2	$2,089,352
Project Costs – Phase 3	$2,910,648

	Forecast 2% improvement	**Optimistic 5% improvement**
Net Present Values (Negative)	($ 56,422)	$ 4,042,866
Discounted Payback in years	16.2 years (2030/31)	12.85 years (2026/27)
Internal Rate of Return	6.3%	14.8%

The business case is included in *Part IV(ii) VM Appendix 2 - High School Driver Education Phase 3 Business Case*. The related research studies and financial analysis workbooks to support this initiative are included in:

- *Part V(ii) VM Appendix 2a High School Driver Education Financial Analysis*
- *Part V(ii) VM Appendix 2b High School Driver Education 2 percent PD BI Claims Forecasting*
- *Part V(ii) VM Appendix 2c High School Driver Education 5 percent PD BI Claims Forecasting*

VM.1.4 Customer Self-Service – Phase 1, 2 and 3

Project Description

This project will introduce a new customer self-service channel via the Internet and mobile platforms to meet current and future customer service expectations and needs. Building on the business architecture and technology infrastructure being introduced by the Physical Damage Re-engineering (PDR) program with respect to shop appointment booking as well as the portal technology for the business partner portal, this project will leverage these foundational corporate technology investments and assets to introduce an extended customer self-service channel for high volume/low-value transactions for maximum impact.

Phase 1 (Summer 2018)

The FY17/18 and FY18/19 funding for this project will implement the necessary base business and technical architecture which will provide a long-term and strategic platform for the customer self-service delivery channel and provide some relief to customer service delays being experienced in MPI Service Centres. This will include the implementation of:

- Customer portal for on-line authentication via the following type of devices (mobile phone, personal computer, personal device)
- MPI appointment based services eligibility & booking (for road tests and knowledge tests)

Phase 2 (Fall 2018)

This phase will introduce the expandability customer self-service capability of:

- Secure messaging (i.e. ability to send claims status messages)
- High School Driver's Education Registration
- E-notification (transition from paper mail to on-line e-copy of MPI notifications

Phase 3 (Winter 2018)

This phase will introduce the expandability customer self-service capability of:

- Driver abstracts (ability to purchase and obtain electronic copy)
- Claims experience letters (ability to purchase and obtain electronic copy)

Project Objectives

Introducing a customer self-service delivery channel at MPI will:

- Meet current and ongoing customer service levels and demand
- Eliminate excessive customer service delays at Service Centres
- Reduce operating expenses up to $416,000 per annum
- Is anticipated to reduce broker commissions

Project Benefits

The implementation of Phase 1 through 3 of a customer self-service channel is expected to generate the following project benefits:

- Eliminate excessive customer service delays at Service Centres
- Reduce service center employees which will be met through attrition
- Potentially reduce in broker transaction fees payable
- Meet the current and future customer service needs of an evolving customer base
- Reduce future mailing operational expenses by up to $172,500 per annum

This business case in its current form is not providing a near-term positive financial return on investment. It will however start to provide a positive financial return after year 8. The financial investment is deemed to be strategic in nature and partially a 'cost of doing business' to meet future customer needs from a service delivery and service channel perspective. The business case is also challenged in the early stages due to the licensing model for the portal technology. Until a critical mass of over

300,000 users is met, the portal licensing is an operational costs driver. Once the 300,000 users threshold is reached, surpassed and maintained. The financial benefits of available customer self-serve services opposite the user licensing costs will be more financially viable.

The business case and supporting financial analysis to support this initiative contains commercially sensitive information and is the subject of a motion seeking confidential treatment.

VM.1.5 BI3/Fineos Upgrade 2020

Project Description

In order to comply with the contractual provisions of the software licensing agreement between MPI and Fineos, MPI must maintain a 4-year vitality cycle on the Fineos platform. The last Fineos upgrade was completed in early 2016. Therefore, MPI must complete an upgrade of the Fineos platform before the end of calendar year 2020 to maintain status quo annual licensing rates.

The 4-year vitality cycle is a contractual provision of the MPI/Fineos software licensing agreement which requires MPI to maintain a software upgrade cycle on the software platform. If MPI does not maintain the 4-year vitality cycle, there is an option to exercise a 2-year extended maintenance period with a financial penalty of 2% in annual licensing fees and 10% in the annual customized licensing fee. At the end of the extended maintenance period, if MPI has not upgraded the software, the software will no longer be operationally supported or maintained by Fineos in the event of a defect, business problem, or system issue.

Project Objectives

- Upgrade the Fineos software platform to version 8.8

- De-commission some of the MPI customized functionality onto equivalent version 8.8 out of the box functionality to facilitate the ease and reduce the costs of future upgrades

Project Benefits

- MPI will meet the needs of the 4-year vitality cycle and will avoid incremental annual ongoing licensing costs
- Based on the preliminary scope determination and approach, MPI has identified 11 pieces of custom code that can be retired and migrated to out-of-the-box functionality. This will result in a reduction to the annual MPI customization support/licensing fees related to these identified customizations.
- Fineos platform will be migrated to a more mainstream and supported version of the software to reduce the risk associated with software availability and any maintenance support required by Fineos.

Financial Cost/Benefits Metrics

Project Costs	$2,277,264
Benefits Licensing Fee cost savings/avoidance	$127,000

The business case to support this initiative is included in *Part IV(ii) VM Appendix 4 BI3 – Fineos Upgrade 2020 Business Case*. The financial analysis for this business case is included in *Part IV(ii) VM Appendix 4a BI3 - Fineos Upgrade 2020 Financial Analysis*.

VM.1.6 Credit Card Strategy

A funding envelope for the Credit Card Strategy was approved in the 2018/19 Capital Budget based upon a particular solution. An alternative, less costly, solution is

presently being considered. Management is targeting a completed business case by the Fall 2018.

VM.1.7 Finance Re-engineering

Project Description

The Finance Re-engineering project (FRE) will develop a final detailed business case, strategy and roadmap to build upon the finance re-engineering study conducted by Deloitte in 2015. The FRE project will also revisit the recommendations from the original business case to ensure they are still viable for the current environment.

Ultimately, the Finance Re-engineering program will take documented future requirements and implement them in order to take advantage of opportunities to simplify, standardize and streamline processes, increase automation and improve the timeliness and visibility of financial information. The current project is to assess viability prior to the significant spend decision.

Improving process and technology maturity was identified as a high priority during the Finance Division review. The lack of mature infrastructure fundamentally limits Finance effectiveness and efficiency. The project will re-assess the original recommendations and alignment with the new Legacy Modernization project with the goal of moving this maturity along and allow for increased effectiveness and efficiency while considering impacts of the impending adoption of IFRS 17. Without efficient processes, timely and accurate information cannot be provided to the business.

Project Objectives

This project will be responsible for reassessing the FRE business case and recommendations from the Deloitte study conducted in 2015 and validate and confirm the need for MPI to take future action. This will include the following deliverables:

- Detailed business case

- Financial analysis for updating the finance systems
- Business vision – a strategic description of the business end state
- Project charter
- Project road map

Project Benefits

The project will establish a business case and project charter for the modernizing the systems and processes within the finance function. The project will identify opportunities for process improvements, increased automation, and enhanced efficiencies, which may include:

- Automated, scheduled processes and interfaces
- Automated workflows and approvals
- Electronic reporting and distribution
- Enhanced reporting and analytics
- Enhanced data governance
- Standardized processes with templates and tools
- Establishing a technology roadmap
- Enhanced integration with other corporate systems
- Electronic document management storage and access
- Self-service functionality, reducing paper-based processes

Realizing these opportunities through FRE is expected to deliver more timely and meaningful information to the business end users and stakeholders.

The project approach being taken demonstrates MPI's ongoing commitment to the Value Management process. MPI engaged a 3rd party to review and assess the current financial reporting system and provide independent recommendations. Due to other priorities these recommendations were not acted on and now they are being revisited to ensure their validity and applicability three years later.

An updated detailed business case, roadmap, financial impact will define the multi-year program.

Financial Cost/Benefits Metrics

Project Costs	$500,000

The business case to support this initiative is included in *Part IV(ii) VM Appendix 5 Finance Re-Engineering Business Case*.

VM.2 MPI'S COST BENEFIT ANALYSIS OF CUSTOMER CLAIMS REPORTING SYSTEM (CCRS)

Directive 11.14 of PUB Order 130/17 stated:

> *In the 2019 GRA, the Corporation shall file a cost/benefit analysis of the five remaining projects to be completed as part of the PDR program, should no such costs/benefit analyses form part of the new IT Strategic Plan. The discount rate used in the cost/benefit analysis shall be higher than the 3% previously used in the PDR project costs benefit evaluation. The Corporation shall select and justify the use of an appropriate discount rate commensurate with the risks inherent in the project.*

In response to this directive, MPI has completed an extensive cost benefit analysis and evaluation of the Customer Claims Reporting System (CCRS) aspect of the PDR Program, which is the largest capital investment remaining within the program. This evaluation was completed from multiple perspectives; sensitivity analysis criterion, discount rates, cash flow years, project scope alternatives, full project financial investment ($19M) and remaining financial investment to completion ($9.6M). The multitude of scenarios ensured that an informed decision as to whether or not to proceed with the project could be confidently made.

Customer Focus Group Feedback

In conjunction with the financial analysis, the Corporation also assessed the initiative from a customer perspective. In February 2018, with the assistance of Prairie Research Associates, nine customer focus group sessions were completed to engage customers and obtain feedback on a working prototype of the customer self-service first notice of loss experience and technology (mobile and PC versions of the platform).

- Six groups were segmented by age (18 to 29, 30 to 54, and 55 and older) and length of time since their last vehicle damage claim with MPI (within the past six months or more than two years ago/never had a claim).

- Three groups were conducted with claimants (i.e. within the past six months) split into three sub-groups: those with education no higher than a high school diploma, those whose first learned language was not English, and those who completed the process on PCs in the Corporation's computer lab.

After the completion of the customer focus groups, the following feedback and realizations were obtained:

- Current prototype has many technical, performance, stability and user experience issues
- 44 issues were identified that must be addressed by the MPI team, MPI/Mitchell team and Mitchell team in order to have a more usable product and to maintain customer engagement, adoption and utilization rates
- Despite the above stated technical issues, overall, customer feedback was very positive and receptive to the potential new customer service offering and experience

CCRS "Lite" Scope Option

With the positive customer feedback and overall consumer interest in utilizing this new customer service offering, Executive Sponsors then requested that the MPI project team assess a less complex business and technical solution with a reduced scope and reduced remaining project investment ($4M vs. $9.6M) to determine if a less complex business solution resulted in a more positive financial analysis. Unfortunately, due to the limited automation and internal operational efficiencies that would be realized with this option versus the full project scope, the overall financial analysis of this option resulted in a more negative NPV and a longer payback period and therefore was abandoned. A detailed review of the financials is provided below in the Financial Analysis section.

Project Risks

The remaining project risks were also evaluated in the overall project assessment, and also raised concerns regarding the successful delivery and benefits realization of the initiative. These project risks were as follows:

- Project timeline and budget being successfully met
- With a complete redesign and lack of a working prototype to perform a time and motion study for MPI contact centre staff (primary customer service channel for initiating a first notice of loss for a claim), there is a potential for negative productivity impacts to MPI contact centre first notice of loss process, resulting in having to increase FTE's in order to maintain customer service levels

The risks identified above also reduced the Corporation's confidence in the cost benefit analysis projection results. In order to keep overall project costs down and within budget, a significant portion (~$3M) of the business functionality was targeted to be incorporated into the existing CARS legacy system. With the recently identified Legacy Modernization risks and pending assessment for future viability of existing MPI legacy systems like AOL/CARS, the Corporation also assessed the potential near-term future need to replace CARS and re-invest in a new platform to build out the necessary CCRS business solution. This also presented the need for CCRS to have a pay-back period of less than 5 years in order to be considered a financially viable project worth pursuing.

Financial Analysis

The Corporation assessed the financial viability of the CCRS project from three different perspectives.

- First, from an 'incremental' spend perspective, which assessed the value management of the project from the remaining investment value of $9.6M. This view provided the perspective of 'should MPI continue to invest' in CCRS to its completion.
- Second, from a 'project lifecycle' spend perspective, which assessed the value management of the project for the entire investment value of $18.9M. Within each 'incremental' and 'project lifecycle' perspective models, the "Lite" scope and "Full" scope project costs were also analyzed from a sensitivity analysis perspective.
- Third, from a 'terminate' project perspective, which assessed the value management of terminating the project with a project LTD of $10.2M. This analysis also anticipated a 'status quo' operational model whereby as claims growth occurs over time, a relative growth in FTE's to support the business will be required due to no internal efficiencies gained.

The results of that 'incremental' spend financial analysis, assuming a 9.5% discount rate, are as follows:

Scope Option (Incremental)	**NPV – 10 Cost/Benefit Years (2018/19 to 2027/28)**	**NPV – 15 Cost/Benefit Years (2018/19 to 2032/33)**
CCRS "Lite" ($4M)	$(8,450,792)	$(11,366,373)
CCRS "Project Lifecycle" ($9.6M)	$(5,392,805)	$(3,332,909)

The results of that 'project lifecycle' spend financial analysis are as follows:

Scope Option (Project Lifecycle)	NPV – 10 Cost/Benefit Years (2018/19 to 2027/28)	NPV – 15 Cost/Benefit Years (2018/19 to 2032/33)
CCRS "Lite" ($13.3M)	$(17,957,411)	$(20,257,789)
CCRS "Project Lifecycle" ($18.9M)	$(15,164,729)	$(12,921,293)

The results of that 'terminate' project financial analysis are as follows:

Scope Option (Terminate)	NPV – 10 Cost/Benefit Years (2018/19 to 2027/28)	NPV – 15 Cost/Benefit Years(2018/19 to 2032/33)
CCRS Terminate Project ($10.2M)	$(13,458,581)	$(14,635,490)

Analysis Notes:

- Sensitivity analysis using 6.5% and 9.5% discount rates were performed. The NPV differences were not material to the financial comparison of the scenarios.
- $5.3M of costs previously classified as CCRS were written-off in 2017/18 and were deemed to not be directly related to CCRS. Therefore, not included in the NPV analysis.

Cost Benefit Analysis – financial analysis NPV drivers

- Ongoing Costs – additions
    - Mitchell software licensing costs
    - Software maintenance costs and FTE support requirements
- Ongoing Costs – variances
    - CCRS customer adoption rate percentages over time were reduced to be more realistic

    - Internal Efficiencies – staff productivity gains were reduced to be more realistic
- Project Costs – increased overall costs due to latest project budget forecasts
- Discount rate – 9.5% based on appropriate project risk categorization. The project was assessed as "high" risk and as such the discount rate was determined using a methodology developed by the Value Management Office. For the documented methodology see *VM Appendix 7 Discount Rate Methodology*.

Conclusion

It is acknowledged that customer demands and expectations of on-line and mobile customer self-service options are growing in the marketplace. The financial analysis, project risks and potential technology replacement risks in evaluating the CCRS project did not support the completion of the project at this time. Therefore, the Corporation has made the decision to cancel the CCRS project which has resulted in a FY2017/18 write-off of $9.3M in relation to the CCRS project expenses incurred to-date (note this is in addition to the $5.3M write-off discussed above). This action and result also demonstrates that the Corporation is adhering to the results of a rigorous Value Management process and that the practice of Value Management continues to mature. Gartner has also completed a detailed review of MPI's updated business case for CCRS, in the 2018 Physical Damage Re-engineering Program evaluation (*Part IV(ii) VM Appendix 6 Physical Damage Re-Engineering Program Evaluation 2018*), and acknowledges the appropriate level of detail in recent financial analysis in contrast to the 2017 PDR program review. Gartner has also confirmed support for MPI's decision to terminate the CCRS project based on the results of the 2018 financial analysis.

The Corporation however has not abandoned the business vision of a CCRS like solution in the future. As the results of the Legacy Modernization assessment are available and pending actions and priorities are identified, as well as marketplace advancements in available technologies that provide a similar customer self-service capability, the Corporation may re-develop a business case.

VM.3 MPI HAS COMPLETED AN UPDATED COST BENEFIT ANALYSIS FOR PHYSICAL DAMAGE RE-ENGINEERING (PDR)

Also in response to Directive 11.14 of PUB Order 130/17, whereby the PUB ordered:

> *In the 2019 GRA, the Corporation shall file a detailed breakdown of its analysis on the costs to operate and maintain the PDR Program*

The Corporation has completed a thorough analysis of the overall PDR program from a cost/benefit analysis and ongoing operating, staffing, maintenance and software licensing costs perspective. Incrementally, the Corporation completed a thorough cost/benefit analysis on the Remote Estimating and the CCRS projects.

Three projects, Appointment Manager, Partner Portal, and Enhanced Direct Repair, could not be independently evaluated as the PDR program is complex with many inter-dependencies, and inter-solution components which are very difficult to separate and evaluate independently. These three projects were however included in the overall PDR program cost/benefit and financial analysis. A more detailed explanation is provided below.

Accordingly, MPI believes it satisfied the spirit and intent of PUB Order 130/17 directive 11.14, in a manner that is pragmatic and coherent in the context of the PDR program.

Appointment Manager Project

The scope of this project was to complete a technology and architecture modernization of the Appointment Manager system. Also, the system was enhanced to support the ability for repair shops to manage repair estimate appointments which can be exposed to MPI customers via the CCRS or via the new customer self-service portal. This project is directly tied to the long-term vision and success of the Direct Repair Service model. Also, since the project was 80% complete at the time of the PUB Order and on track from a budget and schedule perspective (Feb. 2018 completion), the Corporation made the decision to complete the project as planned. That decision was supported

by the fact that this project will not have any incremental costs impacts (maintenance, hardware, software licensing) or staffing impact, as this was an upgrade to existing technology versus the introduction of a net new capability and was primarily based on a technology modernization and risk mitigation basis.

It is for the above reasons that the Corporation did not complete an independent cost/benefit analysis for the Appointment Manager project.

Partner Portal

The scope of this project was to complete a technology and architecture modernization of the Partner Portal system. This system is used to provide a secure platform to communicate and share critical information with Manitoba repair industry partners. This projects was completed in September 2017, therefore at the time of receiving the PUB Order, the project spend was incurred and the project was fully operational. As this was a replacement technology to an existing business/technical capability, no incremental maintenance or staffing impact is forecasted. The associated portal licensing expenses are incorporated into the PDR financial analysis.

It is for the above reasons that the Corporation did not complete an independent cost/benefit analysis for the Partner Portal project.

Enhanced Direct Repair

The Corporation did not complete an independent project cost/benefit analysis for the Enhanced Direct Repair project. The Enhanced Direct Repair project included the following scope items:

- Direct Repair Plus
- Enhancements to Direct Repair shop search tool
- New Collaborative Estimating/Direct Repair Parts Solution
- New Loss of Use Solution

The Direct Repair Plus and the Enhancements to the Direct Repair shop search tool are business and technology supported solutions which were part of the Direct Repair launch and commitments and formal agreements made with the Manitoba repair trade. This aspect of the PDR project was the final stage in implementing the overall solution to support the new Direct Repair process and were not independent solution components of the PDR program. A financial cost/benefit analysis of this independent component would not provide any 'measurable' value as it is directly tied to the overall vision and transformation of physical damage claims via Collaborative Estimating and Direct Repair which are the 'core' of the overall PDR program. The project was also nearing completion at the time of receiving the PUB Order.

It is for the above reasons that the Corporation did not complete an independent cost/benefit analysis for the Direct Repair Plus and the Enhancements to the Direct Repair shop search tool.

The new Collaborative Estimating/Direct Repair Parts Solution is a project that has experienced some challenges with respect to finalizing the business and technical solution. Multiple business and technical solutions have been evaluated to ensure that the Corporation's objectives in relation to a new Parts solution are realized. The project team have now finalized the direction and business and technical solution and the project is targeting a FY18/19 project completion.

The projected annual financial benefits of the new Parts Solution are in excess of $2.0M in future years, and with and overall investment of ~$1.5M for project implementation costs, the independent financial return is significant and very positive from a value management measurements perspective. This narrow independent view/analysis however is not an accurate financial measurement of the Parts Solution overall. The Parts Solution was an integrated component of the overall PDR program business case and benefits stream. Thus, other significant components of the PDR program expenditures contributed to the business capability to implement a new Parts Solution. It is therefore concluded by the Corporation that an independent cost benefit/financial analysis of the new Parts Solution is not an accurate reflection of the true cost/benefits of implementing this solution from a value management

perspective. The associated costs/benefits of this project are properly incorporated and included in the overall PDR program financial analysis.

The new Loss of Use Solution has been constructed into two streams from a business and technical solution. The first stream is to implement changes which better streamline and automate the repair shop and rental agency ask/approve process with respect to Loss of Use coverage utilization. By incorporating incremental automation, it is providing an enhanced customer and business partner experience while still managing and monitoring claims costs. The first phase of this solution was implemented in February 2018 and some incremental features are targeted to be implemented at the end of June 2018. The larger 'transformational' changes associated with Loss of Use are pending at this time. In order to proceed with investing in the associated business and technical solution changes, further discussions and negotiations with the Manitoba repair trade are required. At this time, these discussions are pending and will be incorporating into the MPI/Manitoba repair trade negotiations in the fall of 2018. Therefore, the corporation has temporarily suspended further work on the Loss of Use project. At the conclusion of the negotiations, the Corporation will conclude if the final stage of the Loss of Use project should proceed.

As per the Parts Solution stated above, the originally projected annual financial benefits of the new Loss of Use solution are in excess of $3.0M in future years, and with and overall investment of ~$1.4M for project implementation costs, the independent financial return is significant and very positive from a value management measurements perspective. Due to trade negotiations and the pending confirmation of the new business solution, the Loss of Use solution, implementation costs, and benefit stream have been re-forecasted accordingly. This narrow independent view/analysis however is not an accurate financial measurement of the Loss of Use Solution overall. The Loss of Use Solution was an integrated component of the overall PDR program business case and benefits stream. Thus, other significant components of the PDR program expenditures contributed to the business capability to implement a new Loss of Use Solution. It is therefore concluded by the Corporation that an independent cost benefit/financial analysis of the new Loss of Use Solution is not an accurate reflection of the true cost/benefits of implementing this solution from a value

management perspective. The associated costs/benefits of this project are properly incorporated and included in the overall PDR program financial analysis.

Remote Estimating

The Corporation did complete a detailed cost/benefit analysis of the Remote Estimating project during the summer/fall of 2017. This analysis was completed prior to the PUB Order and based on the outcome of that analysis, the Corporation made the decision to cancel the project. The project had a budget of $1.16M and at the time of the decision, $240K had already been incurred. The Remote Estimating project intended to leverage a video streaming technology to streamline and enhance claims estimating processes, quality of repair inspections, and rural claims processing.

As the project progressed into business solution development and contract negotiations with the incumbent vendor, issues and concerns surrounding the business solution, implementation costs, technology costs and software licensing costs, as well as limited FTE savings resulted in an in-depth review of the solution including a detailed financial cost/benefit analysis.

- From this analysis, the Corporation concluded the following:
- Utilization of video streaming technology in the physical damage repair industry would be a leading edge business and technical solution; the physical damage repair industry is primarily utilizing digital photo-based technology vs. video streaming technology
- Technical and business solution could not be successfully implemented within the budget allocation of $1.16M
- Ongoing software licensing costs were significant in comparison to the forecasted operational efficiency benefit and operating costs reductions
- FTE savings and internal efficiency opportunity was not large enough to justify the project investment
- The decision to cancel the project was a difficult decision for the Corporation to make, as this project did provide an opportunity to significantly enhance customer service for physical damage claims for rural Manitoba customers. However, in applying the new corporate Value Management process and

discipline, the Corporation believes the correct decision has been made with respect to the Remote Estimating project in that the investment to complete did not have a meaningful enough financial return to proceed.

PDR Program Financial Analysis

The in-depth review of the PDR project costs, ongoing costs and business benefits streams resulted in the following major variances that ultimately impact the PDR program value management, NPV and project pay-back period:

- Project Costs
  - Project costs for Predictive Analytics incorporated into financial analysis since benefits stream is accounted for in PDR program
  - CCRS project termination costs
- Ongoing Costs
  - Incorporated incremental staff costs for oversight and management of Direct Repair program and shop relationship management
  - Direct Repair premium paid per claim to Direct Repair Shops
  - Mitchell software licensing costs
  - Predictive Analytics operations
  - Partner Portal software licensing costs
  - Predictive Analytics software licensing costs
  - Parts Solution software licensing costs
- Benefits Stream Projection Updates:

Figure VM - 1 Difference between Gartner GRA and MPI at April 2018

Line No.	GARTNER SUBMISSION IN 2018 GRA - PDR FORECASTED BENEFIT STREAM						
1	Program Component	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22
2	Internal Efficiencies/ Process Improvements	$ 380,000	$ 230,000	$ 380,000	$ 750,000	$ 2,040,000	$ 2,650,000
3	Labour Rate/ Repair Shop Savings		$ 3,000,000	$ 3,000,000	$ 3,000,000	$ 3,000,000	$ 3,000,000
4	Parts Sourcing Savings	$ 740,000	$ 1,050,000	$ 1,370,000	$ 2,170,000	$ 2,480,000	$ 2,800,000
5	Loss Prevention / Predictive Analytics			$ 500,000	$ 1,000,000	$ 1,000,000	$ 1,000,000
6	Loss of Use				$ 1,050,000	$ 2,250,000	$ 3,000,000
7	Total Loss Valuation with Salvage					$ 1,200,000	$ 1,200,000
8	**Total**	**$ 1,120,000**	**$ 4,280,000**	**$ 5,250,000**	**$ 7,970,000**	**$ 11,970,000**	**$ 13,650,000**
9	APRIL 19 2018 - CCRS TERMINATION MPI EVALUATION - PER GARTNER CATEGORIES						
10	Program Component	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22
11	Internal Efficiencies/ Process Improvements	$ -	$ 1,278,360	$ 924,526	$ 1,343,115	$ 1,720,246	$ 1,648,821
12	Labour Rate/ Repair Shop Savings	$ -	$ 3,000,000	$ 3,000,000	$ 3,000,000	$ 3,000,000	$ 3,000,000
13	Parts Sourcing Savings	$ -	$ 600,000	$ 1,050,000	$ 1,370,000	$ 2,000,000	$ 2,050,000
14	Loss Prevention / Predictive Analytics	$ -	$ 83,000	$ 500,000	$ 500,000	$ 500,000	$ 500,000
15	Loss of Use	$ -			$ 43,753	$ 89,694	$ 91,936
16	Total Loss Valuation with Salvage	$ -					
17	Claims Audit Recoveries	$ -	$ 518,900	$ 500,000	$ 500,000	$ 500,000	$ 500,000
18	**Total**	**$ -**	**$ 5,480,260**	**$ 5,974,526**	**$ 6,756,868**	**$ 7,809,940**	**$ 7,790,757**
19	**Difference between Gartner GRA and MPI at Jan 2018**	**$ (1,120,000)**	**$ 1,200,260**	**$ 724,526**	**$ (1,213,132)**	**$ (4,160,060)**	**$ (5,859,243)**

- Benefits Stream Variances
  - Loss of Use savings updated based on changes in market place and trade negotiation forecasts
  - Internal efficiencies impacted by CCRS project termination
  - Parts Sourcing savings re-forecasted based on final business solution
  - Loss Prevention/Predictive Analytics re-forecasted based on operational results
  - Total Loss Valuation with Salvage by CCRS/PDR scope changes and CCRS project termination
  - Claim Audit Recoveries based on operational results

- Updated PDR NPV Analysis:

Discount Rate	NPV – 10 Cost / Benefit Years (2017/18 to 2026/27)	NPV – 15 Cost / Benefit Years (2017/18 to 2031/32)	NPV – 20 Cost / Benefit Years (2017/18 to 2036/37)
6.5%	$(58,251,784)	$(57,520,299)	$(56,916,244)
9.5%	$(49,876,271)	$(49,455,378)	$(49,152,881)

Conclusion

The Corporation has concluded the PDR Program did not attain desired results from a project delivery, value management assessment and realization perspective. During the course of the PDR program execution, the Corporation has identified the need for a more formal value management process and with the recent PDR, CCRS and other corporate initiative value management financial analysis and evaluations, the Corporation has demonstrated that the value management process is maturing at MPI. Examples of this would include the following project cancellation/termination decisions made during the course of the PDR program execution:

- Customer Claims Reporting System (CCRS)
- Remote Estimating
- Out-of-Province Estimating
- FNOL – Self Service Analytics
- Towing
- Enhanced Registration Card
- Enhanced Accident Profiling
- Bodily Integrity Inspection Certificate (BIIC) and Certificate of Inspection (COI)

The other lessons learned during the course of the PDR Program:

- Large Capital Program like PDR should have iterative business cases with no longer than 3 years project funding/value management period assessments

- Future software licensing, maintenance and operational support resource expenses need to be properly forecasted and included in financial analysis
- Appropriate Discount Rate needs to be applied to financial analysis based on project risk
- Appropriate project contingency % needs to be incorporated into project cost estimates based on project risks and updated annually based on findings/realizations
- Sensitivity analysis should be performed with respect to benefit stream projections

VM.4 MPI HAS MADE REVISIONS TO THE PROJECT GOVERNANCE FRAMEWORK THAT FORMALLY INCORPORATES THE VALUE MANAGEMENT PROCESS

In recognition of the evolution and increased maturity of the value management process, as well as the involvement of the Value Management Office in the development, review and post implementation reviews of business case realization, as well as the corporate objective of more actively and engaging operational management in the projects associated with their respective business cases, MPI Management has decided to change key project leadership roles and responsibilities and introduce a new role “Operational Business Champion”. As well as more actively engaging the Value Management Office in the entire lifecycle of the project.

Historically, all corporate initiatives were led from a business perspective by the Corporate Initiatives Sponsor. The Corporate Initiatives Sponsor served as the champion of all corporate projects and was the principal interface between the initiatives and the business community.

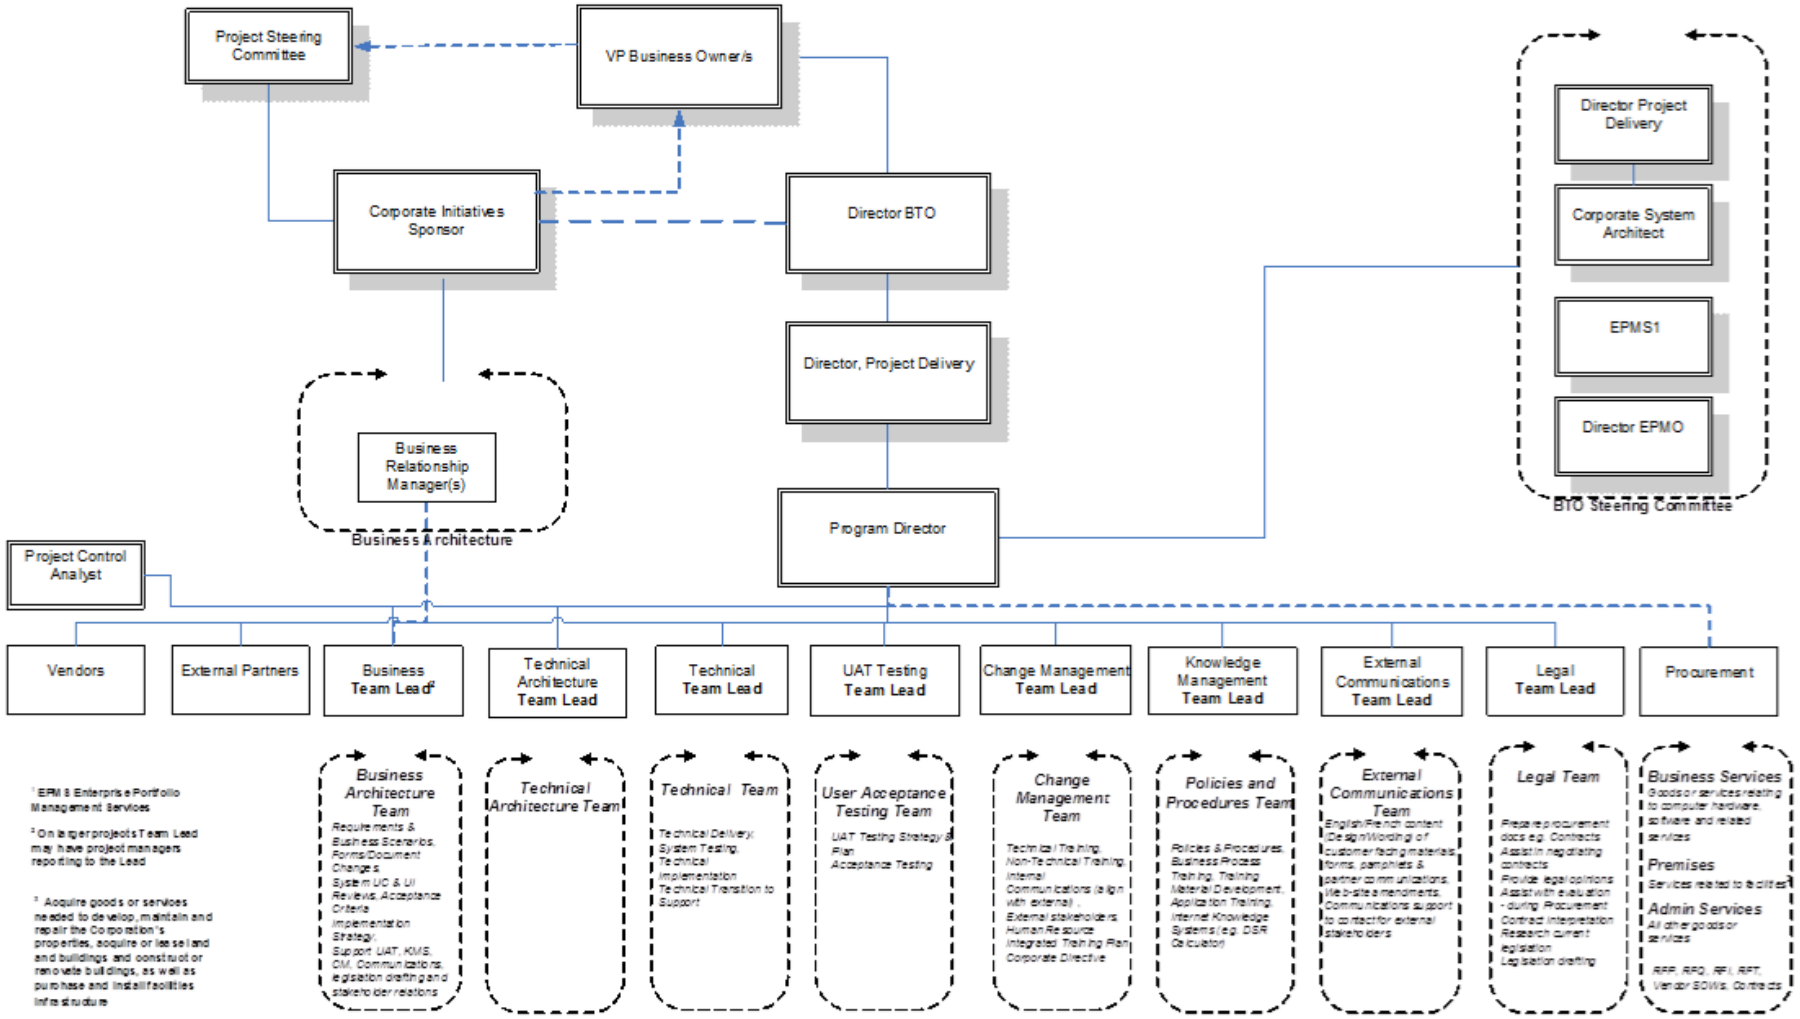
The Corporate Initiatives Sponsor had the authority to accept all deliverables and resolve all project issues.

Responsibilities included:

- Authorize and approve adequate budget and resources to successfully complete corporate initiatives
- Promote the benefits of the initiatives so as to gain buy-in from stakeholders
- Promote strategic and tactical direction to initiatives
- Overall acceptor of key project deliverables

In addition to assuming the role of champion on corporate initiatives, provided Business Strategy and Business Architecture support services from a project resourcing perspective.

Figure VM- 2: Historical view of project organizational structure and governance

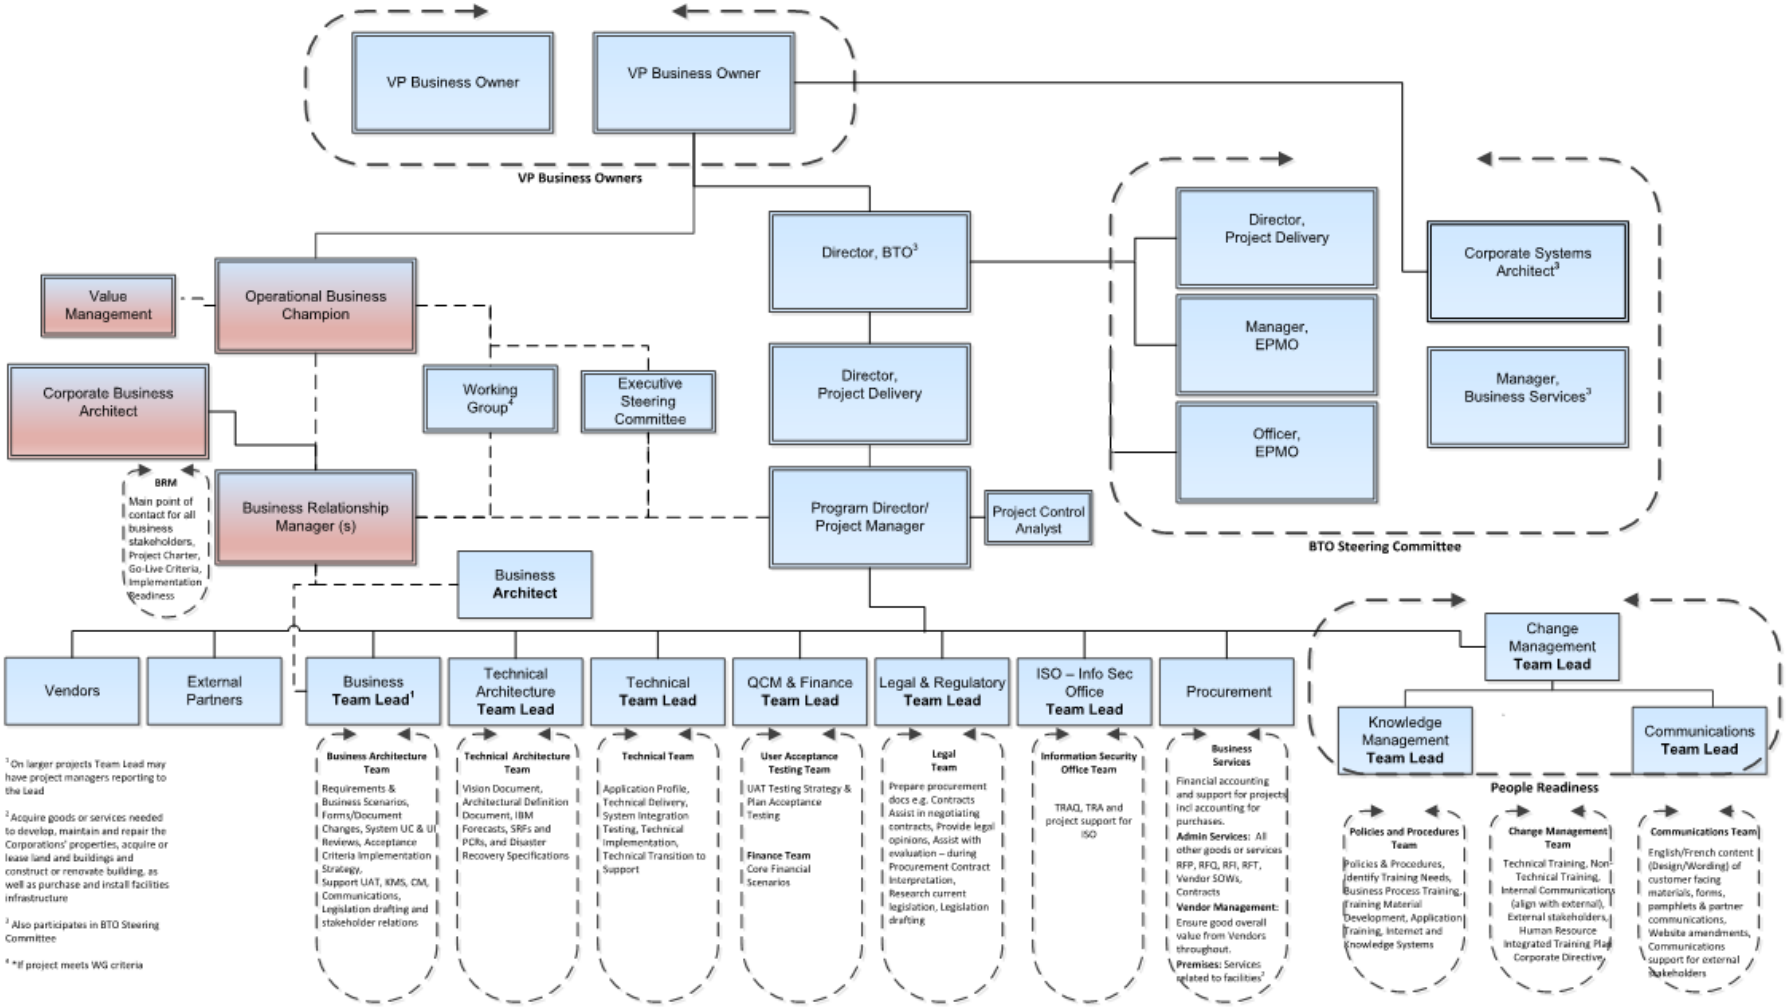


The new “Operational Business Champion” role will provide MPI operational management with the opportunity to become more actively involved, engaged, responsible and accountable for the development of future business cases for consideration and in the delivery of the business solution, project execution and overall expected benefits and ongoing costs realization.

The Operational Business Champion will have delegated responsibility/accountability and the proper authority and decision making to be successful in achieving:

- Corporate project objectives
- Project business case & value management measurements
- Future operational cost projections
- Review/approve business solution to ensure alignment to business case
- Shared accountability with Business Transformation Office (BTO) with respect to project scope, budget, milestones, and delivery date targets realized
- Personal & divisional performance management objectives, actions and timelines

Figure VM- 3: New view of project organizational structure and governance



As part of the new project organizational structure and governance model, the Value Management Office will continue to play a critical role in evaluating, measuring, and validating the business value of corporate initiatives.

This will be achieved by including the Value Management Office as follows:

- Business case draft review/feedback
- Project Change Requests and Decision Requests – review/assess potential impact to business case
- Validate assumptions from business case throughout the project
- Value management will need to link in on the project close out report to trigger future work required to measure benefits realization
- Complete project post-implementation review and benefits realization validation

In conclusion, MPI Management is confident that the introduction of the Operational Business Champion role and new project organizational structure and governance model will effectively align to the go the forward principles, expectations and outcomes that the value management process is expected to achieve.

Manitoba Public Insurance

Business Case

PROJECT NAME:	ITBT-2018-103 Technology Risk Management Program (2018-19) Application Risk Management
DATE CREATED:	9/20/2017
PREPARED/SUBMITTED BY:	Lawrence Lazarko & Karthi Pariyasamy
BUSINESS OWNER	Alex Ramirez, Jonathan Yakel, Karthi Pariyasamy
DEPARTMENT	Information Technology, Enterprise Systems Support
DIVISION	ITBT

PROJECT DESCRIPTION:

Application Risk Management: Invests in Information Technology application upgrades to remain on current and supported technologies. These investments are in people, process, and technology and include selection, design, deployment, testing and the remediation required to implement successfully. (Often applications will require updates / upgrades to work with each other. These application changes are included in scope where feasible).

BUSINESS NEED:

Application Risk Management: ensures maximum service availability and recoverability by ensuring information technology applications remain at peak effectiveness (free of defects, patched to resist security exploits, and compatibility with each other)

PROJECT OBJECTIVES:

Application Risk Management: invests in technology services and solutions which improves the operation of IT Applications within the IBM data centre. Investments in 2018/19 include:

- VIP Application Re-platform (off of Access 2003)
- Loss of Use Re-platform (off of .Net 2.0)
- Application Performance Management Suite (Enhanced Monitoring and Troubleshooting, deploy before BI3 upgrade)
- Team Foundation Server Upgrade
- Informatica 10 Upgrade
- CDW-EDW Strategy and Operational risk management
- Dollar Universe Upgrade

For each of the upgrade/improvement initiatives listed above in the project objectives section, a separate set of project documents will be completed. The individual project documents will address detailed project objectives/benefits and the monitoring of costs and benefits.

PROJECT BENEFITS:
• Optimal availability of applications, supporting key business services • Improved ability to identify and resolve application performance problems (down, degraded) • Improved support by having applications on a vendor supported version • Cost saving through better error detection and remediation • Reduce risk to business by upgrading aging and unsupported software platforms • Improved security and access controls • Improved integration with newer technologies

MONITORING OF ACTUAL PROJECT BENEFITS:
• Successful implementation of solutions (people, process, technology) which address the noted business needs, retaining the ability to receive / apply vendor updates and security patches • Each individual initiative will outline how it intends to monitor its costs and achievement of benefits • APM process will be used to gauge the risk level after the implementation of each initiative

IMPACT ANALYSIS:	
Who will be impacted	**What is the impact**
MPI Communications	Limited communications anticipated
MPI Human Resources	Additional roles and responsibilities may be required of existing staff. This may require training which would be implemented as part of the project.
MPI Organizational Readiness (Change Management)	Limited training required
Other Departments within MPI (please specify and add more rows as needed)	Limited change anticipated.

RISK ANALYSIS:		
Potential Risk	**Likelihood (L,M,H)**	**Description of Impact of Risk and description of planned action taken to mitigate this risk**
Risks/Obstacles of Proceeding with Project		
Resource conflicts between this project and other projects or operational activities	M	Secure additional resources to allow required activities to be completed in parallel. If this is not possible, look for synergies to gain efficiencies. As a last resort, leverage change control to reduce scope.

Risks of NOT Proceeding with Project		
Additional downtime is incurred due to errors in or the inefficient execution of processes / procedures	H	There is increasing risk to availability of key services if continued investments in Information Technology Infrastructure are not made to keep up with new / emerging / future threats.

Legend L=Low; M=Medium; H=High

PROPOSED TIMING

Start in April 2018 and continue until February 2019 with quarterly progress checkpoints and regular reporting (weekly progress, monthly executive, and quarterly Gartner review)

LEGAL REVIEW REQUIRED?

No X Yes

If yes, include legal review's response:

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED?

(To be considered for medium and detailed business cases)

No **Yes** X

Yes: As per standard application services process Enterprise Architecture and Information Security will be consulted for all initiatives.

ENTERPRISE ARCHITECTURE REVIEW:

(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)

Business Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes / No
Technical Architecture	Reviewed Date: Nov 28, 2017 Review Completed By: Gary Dessler Findings: All of the application listed will require some level of architecture support. No concerns with the applications listed. Recommended to proceed: Yes

ENTERPRISE ARCHITECTURE REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
INFORMATION SECURITY REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Information Security Office	Reviewed Date: December 6, 2017 Review Completed By: Colin McDonald (David Bravi) Findings: ISO will need to be engaged to conduct a review and determine if a TRA is required, and to identify the applicable security policies and standards. Recommended to proceed: Yes

HIGH LEVEL ESTIMATED COST/BENEFIT ANALYSIS:		
Project cost (must be completed)		
• Total estimated range of project cost	$	$875,000
• Capital percentage (if known)	%	77%
Estimated reduction/(increase) in cost (must be completed if applicable)		
• Continuing annual cost reduction/(increase) amount	$	(83,000) in 2019/20 increasing to (90,594) in 2022/23 (Year 5)
• One time cost reduction	$	0
• Other (specify)	$	0
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	0
• One time revenue increase	$	0
• Other	$	0

Cost/Benefit Analysis		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs	N/A
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs	N/A
• Internal Rate of Return (IRR)	%	N/A
• Net Present Value (NPV)	$	(1,034,130)
• Other (specify)		Benefit is derived from the reduction of corporate risk, and by ensuring suitable information technology application capabilities are in place

INITIAL ASSUMPTIONS:	
Cost Assumptions	External Labour: $125 / hr Internal Labour: $75 / hr Technology cost estimates are based expert judgement from the IBM, IT, and ESS teams. Cost refinement will occur in Q4 2017-18.
Cost/Benefit Assumptions	Benefits associated with each solution are independent
Other Assumptions	The continuing annual cost increases represent operating costs for licensing and IBM maintenance.

CONSTRAINTS/DEPENDENCIES:	
Cost Constraints	The ability to secure external resources with the necessary skills for the outlined rate
Schedule Constraints/ Dependencies	The resources are able to complete the required deliverables in the estimated time. These estimates were completed by MPI internal staff who are familiar with what is required for this activity, but may over / under estimate some activities. A contingency amount has been added to address this.
Other Constraints/ Dependencies	

SIGNIFICANT MILESTONES:	
Project Start Date	April 30, 2018
Project End Date	February 28, 2019
Other Milestones	Quarterly check points

APPROVAL REQUEST/RECOMMENDATION:
Requesting the Vice President of Information Technology and Business Transformation approve the following: The request for $875,000 be included in the Budget as part of the Technology Risk Management program (2018/19 fiscal year).

SIGN-OFF BY DOCUMENT CONTRIBUTORS: *(Sign if you have contributed to this document and are comfortable with proceeding to the next stage, as indicated above)*

Manitoba Public Insurance

Business Case

PROJECT NAME:	ITBT-2018-101 Technology Risk Management Program (2018) Information Security Risk Management
DATE SUBMITTED:	9/20/2017
PREPARED/SUBMITTED BY:	Lawrence Lazarko & Rafiq Valliani
BUSINESS OWNER	Colin McDonald, Rob Crittenden, Alex Ramirez
DEPARTMENT	Information Security Office, Information Technology
DIVISION	ITBT

PROJECT DESCRIPTION:

Information Security Risk Management: Invest in process and technology to protect MPI from current, emerging, and future threats. These further investments build processes and technologies reviewed, recommended, and deployed in 2017/18.

BUSINESS NEED:

Information Security Risk Management: MPI collects, stores, and leverages customer and partner data as part of the insurance, registry, and identity services it provides. It is important to continue investments in people, processes, and technology to address current, emerging, and future threats.

The ISSRM program will complete in Feb 2018 and leveraged the ISO 27001/27002, version 2005. MPI is expected to achieve the target level of maturity, set at the start of the program. Further investment is required to maintain this level of maturity when compared to newer standards which require higher levels of Cyber Security awareness, responsiveness, and protection.

PROJECT OBJECTIVES:

The project will be complete / successful when it has implemented solutions which address the following business needs, they include:

- [Redacted for IT security reasons]
- [Redacted for IT security reasons]
- [Redacted for IT security reasons]
- [Redacted for IT security reasons]
- [Redacted for IT security reasons]
- [Redacted for IT security reasons]

For each of the upgrade/improvement initiatives listed above in the project objectives section, a separate set of project documents will be completed. The individual project documents will address detailed project objectives/benefits and the monitoring of costs and benefits.

PROJECT BENEFITS:
• Reduced risk from current, emerging, and future information security threats • Optimized investment in efficient processes and the right technologies

MONITORING OF ACTUAL PROJECT BENEFITS:
• Successful implementation of solutions (people, process, technology) which address the noted business needs • Measurement of process maturity • Measurement of the effectiveness of Information Security Solutions

IMPACT ANALYSIS:	
Who will be impacted	**What is the impact**
MPI Communications	Limited communications anticipated
MPI Human Resources	Additional roles and responsibilities may be required of existing staff. This may require training, discussions with MGEU.
MPI Organizational Readiness (Change Management)	Change support will be required in cases where there are significant changes to processes / procedures, and in cases where awareness training is required.
Other Departments within MPI (please specify and add more rows as needed)	Limited change anticipated

RISK ANALYSIS:		
Potential Risk	**Likelihood (L,M,H)**	**Description of Impact of Risk and description of planned action taken to mitigate this risk**
Risks/Obstacles of Proceeding with Project		
Resource conflicts between this project and other projects or operational activities	M	Secure additional resources to allow required activities to be completed in parallel. If this is not possible, look for synergies to gain efficiencies. As a last resort, leverage change control to reduce scope.
New requirements for projects and operational activities	M	Apply changes to new projects going forward. Implement changes / remediation, required for in flight projects, as part of continuous improvement activities.
Significant amounts of parallel activities	H	Additional change management activities may be required to ensure effective technology onboarding and adoption.

Risks of NOT Proceeding with Project		
Additional downtime is incurred due to errors in or the inefficient execution of processes / procedures	H	There is increasing risk to availability of key services if continued investments in Information Security are not made to keep up with new / emerging / future threats.
Customer and Partner information have a significant market value making MPI a target for cyber threats	H	There is increasing risk to integrity / confidentiality of key customer / partner information if continued investments in Information Security are not made to keep up with new / emerging / future threats. There is also reputational risk, that customers / partners lose trust in working with MPI as a result of a breach which results in incremental costs to restore this trust.
Legend L=Low; M=Medium; H=High		

PROPOSED TIMING

Start in April 2018 and continue until February 2019 with quarterly progress checkpoints and regular reporting (weekly progress, monthly executive, and quarterly Gartner review)

LEGAL REVIEW *REQUIRED*?

No X Yes

A decision regarding the necessity of a Legal review will be revisited prior to initiating each project/ initiative.

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED?
(To be considered for medium and detailed business cases)

No **Yes** X

Reviews will be completed prior to initiating each project/ initiative.

ENTERPRISE ARCHITECTURE REVIEW:
(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)

Business Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes / No

ENTERPRISE ARCHITECTURE REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Technical Architecture	Reviewed Date: Dec 12, 2017 Review Completed By: Gary Dessler Findings: Most of the initiatives identified will require involvement from the Technical Architecture team. Please include an architect in the project work going forward. Recommended to proceed: Yes

INFORMATION SECURITY REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Information Security Office	Reviewed Date:2017-12-06 Review Completed By: Colin McDonald (Leroy de Souza) Findings: Please ensure that the Information Security Office is engaged during each of the project phases so that updated corporate security policies and standards are identified and met. Recommended to proceed: Yes

HIGH LEVEL ESTIMATED COST/BENEFIT ANALYSIS:		
Project cost (must be completed)		
• Total estimated range of project cost	$	1,700,000
• Capital percentage (if known)	%	100%
Estimated reduction/(increase) in cost (must be completed if applicable)		
• Continuing annual cost reduction/(increase) amount	$	(229,000) in 2018/19 to (338,301) in 2022/23 (Year 5)
• One time cost reduction	$	0
• Other (specify)	$	0
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	0
• One time revenue increase	$	0
• Other	$	0

Cost/Benefit Analysis		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs	N/A
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs	N/A
• Internal Rate of Return (IRR)	%	N/A
• Net Present Value (NPV)	$	(2,853,997)
• Other (specify)		Benefit is derived from the reduction of corporate risk, and by ensuring suitable information security capabilities are in place

INITIAL ASSUMPTIONS:	
Cost Assumptions	External Labour: $125 / hr. Internal Labour: $57 / hr. Technology cost estimates are based on expert judgement from the ISO team. Cost refinement will occur in Q4 2017-18. With significant Information Security investments occurring in significant changes occurring in industry (ex. new and emerging Cyber Security threats), further refinement of scope will be required to ensure maximum usage of the allocated funds.
Cost/Benefit Assumptions	Benefits associated with each solution are independent
Other Assumptions	The continuing annual cost increases represent maintenance of various network and security applications and the data loss prevention solutions.

CONSTRAINTS/DEPENDENCIES:	
Cost Constraints	The ability to secure external resources with the necessary skills for the outlined rate
Schedule Constraints/ Dependencies	The resource is able to complete the required deliverables in the estimated time. These estimates were completed by MPI internal staff who are familiar with what is required for this activity, but may over / under estimate some activities. A contingency amount has been added to address this.
Other Constraints/ Dependencies	

SIGNIFICANT MILESTONES:	
Project Start Date	April 30, 2018
Project End Date	February 28, 2019
Other Milestones	Quarterly check points

APPROVAL REQUEST/RECOMMENDATION:
Requesting the Vice President of Information Technology and Business Transformation approve the following: This request for $1,700,000 to be included in the Budget, as part of the Technology Risk Management program (2018/19 fiscal year)

Business Case

PROJECT NAME:	ITBT-2018-102 Technology Risk Management Program (2018-19) Infrastructure Risk Management
DATE SUBMITTED:	9/20/2017
PREPARED/SUBMITTED BY:	Lawrence Lazarko
BUSINESS OWNER	Rob Crittenden, Alex Ramirez, Jonathan Yakel, Al Williams
DEPARTMENT	Information Technology, Enterprise Systems Support
DIVISION	ITBT

PROJECT DESCRIPTION:

Infrastructure Risk Management: Invests in Information Technology infrastructure upgrades to remain on current and supported technologies. These investments are in people, process, and technology and include selection, design, deployment, testing and the remediation required to implement successfully. (Often applications will require updates / upgrades to work on different infrastructure. These application changes are included in scope where feasible).

BUSINESS NEED:

Infrastructure Risk Management: ensures maximum service availability and recoverability by ensuring information technology infrastructure remains at peak effectiveness (free of defects, patched to resist security exploits, and compatibility with different applications)

PROJECT OBJECTIVES:

Infrastructure Risk Management: invests in technology services and solutions which improves our operation of IT Infrastructure assets within the IBM data centre. Investments in 2018/19 include:

Foundational platform Upgrades to maintain supportability, avoiding infrastructure risk:

- Intel Server Hardware and VMware ESXi Refresh
- Windows Server Vitality (2008 > 2016)

Hardware vitality to avoid failure, improve performance, and invest in newer platforms that provide infrastructure maximization:

- File Server Storage Solution
- SAN Storage and TSM Backup
- Security Device Refresh

For each of the upgrade/improvement initiatives listed above in the project objectives section, a separate set of project documents will be completed. The individual project

documents will address detailed project objectives/benefits and the monitoring of costs and benefits.

PROJECT BENEFITS:

- Optimal availability of infrastructure, supporting key business services.
- Maintaining vendor support to minimize risk to business applications
- Where environments are more complex we are looking to invest some extra time and effort into making sure that vendor best practices are followed, to maximize uptime of the environment.

MONITORING OF ACTUAL PROJECT BENEFITS:

- Software Platform Upgrades, will be completed, keeping the platform in a supported position with the vendor
- Hardware updates for filesystems and server hardware will be selected, ordered, installed and the migration to these platforms will be completed.
- Overall, successful implementation of solutions (people, process, technology) will address the noted business needs, retaining the ability to receive / apply vendor updates and security patches

IMPACT ANALYSIS:

Who will be impacted	What is the impact
MPI Communications	Limited communications anticipated
MPI Human Resources	Additional roles and responsibilities may be required of existing staff. This may require training which would be implemented as part of the project.
MPI Organizational Readiness (Change Management)	Very limited change required; however training of ITBT Support staff, on new platforms, may be required.
Other Departments within MPI (please specify and add more rows as needed)	Very limited outside of ITBT, as this would be limited to the underlying platforms – system users should see little to no impact.

RISK ANALYSIS:		
Potential Risk	**Likelihood (L,M,H)**	**Description of Impact of Risk and description of planned action taken to mitigate this risk**
Risks/Obstacles of Proceeding with Project		
Resource conflicts between this project and other projects or operational activities	M	Secure additional resources to allow required activities to be completed in parallel. If this is not possible, look for synergies to gain efficiencies. As a last resort, leverage change control to reduce scope.
Significant volume of upgrades / updates may result in additional change to applications	H	Any unplanned scope / risk identified will be addressed via project change control, leveraging project contingency as required.

Risks of NOT Proceeding with Project		
Additional downtime is incurred due to errors in or the inefficient execution of processes / procedures	H	There is increasing risk to availability of key services if continued investments in Information Technology Infrastructure are not made to keep up with new / emerging / future threats.
Legend L=Low; M=Medium; H=High		

PROPOSED TIMING

Start in April 2018 and continue until February 2019 with quarterly progress checkpoints and regular reporting (weekly progress, monthly executive, and quarterly Gartner review)

LEGAL REVIEW REQUIRED?

No **Yes** - Prior to starting each new upgrade/improvement/ project

If yes, include legal review's response:

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED?
(To be considered for medium and detailed business cases)

No **Yes** - Prior to starting each new upgrade/improvement/ project

ENTERPRISE ARCHITECTURE REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Business Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes / No
Technical Architecture	Reviewed Date: Dec 1, 2017 Review Completed By: Gary Dessler Findings: Please include technical architecture when this initiative begins. Recommended to proceed: Yes.

INFORMATION SECURITY REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)* **Yes** - Will be done prior to starting each new upgrade/improvement/ project	
Information Security Office	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes / No

HIGH LEVEL ESTIMATED COST/BENEFIT ANALYSIS:		
Project cost (must be completed)		
• Total estimated range of project cost	$	1,625,000
• Capital percentage (if known)	%	100%
Estimated reduction/(increase) in cost (must be completed if applicable)		
• Continuing annual cost reduction/(increase) amount	$	175,000 in 2018/19, increasing to 605,740 in 2022/23 (Year 5)
• One time cost reduction	$	0
• Other (specify)	$	0
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	0
• One time revenue increase	$	0
• Other	$	0

Cost/Benefit Analysis		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs.	4.19
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs.	3.83
• Internal Rate of Return (IRR)	%	17.0%
• Net Present Value (NPV)	$	356,312
• Other (specify)		Benefit is derived from the reduction of corporate risk, and by ensuring suitable information technology infrastructure capabilities are in place

INITIAL ASSUMPTIONS:	
Cost Assumptions	External Labour: $125 / hr Internal Labour: $45 - $75 / hr Technology cost estimates are based expert judgement from the IBM, IT, and ESS teams. Cost refinement will occur in Q4 2017-18.
Cost/Benefit Assumptions	The Cost/Benefit of keeping current on technology, is that we retain vendor support, maintain the ability to patch (which can include security patches) and reduce overall risk to the computing environment. It also helps to keep the level of technical debt from increasing. The net annual cost reduction represents reduced IBM maintenance costs slightly offset by external storage costs.

Other Assumptions	Based upon technology assessed in 2016-17, prices may change during procurement

CONSTRAINTS/DEPENDENCIES:	
Cost Constraints	The ability to secure external resources with the necessary skills for the outlined rate
Schedule Constraints/ Dependencies	Resource are able to complete the required deliverables in the estimated time. These estimates were completed by MPI internal staff who are familiar with what is required for this activity, but done so with limited understanding of the other IT impacting business cases that would impact resourcing. A contingency amount has been added to hopefully address this.
Other Constraints/ Dependencies	

SIGNIFICANT MILESTONES:	
Project Start Date	April 30, 2018
Project End Date	February 28, 2019
Other Milestones	Quarterly check points

APPROVAL REQUEST/RECOMMENDATION:
Requesting the Vice President of Information Technology and Business Transformation approve the following: The request for $1,625,000 be included in the Budget as part of the Technology Risk Management program (2018/19 fiscal year).

Business Case

PROJECT NAME:	ITBT-2018-100 Technology Risk Management Program (2018) Risk Registry Remediation
DATE SUBMITTED:	9/21/2017
PREPARED/SUBMITTED BY:	Lawrence Lazarko/ Kenton Friesen
BUSINESS OWNER	John Remillard, Jonathan Yakel, Lawrence Lazarko, Alex Ramirez
DEPARTMENT	Information Technology, Business Architecture, ESS
DIVISION	ITBT

PROJECT DESCRIPTION:

Risk Registry Remediation: Implement solutions to lessen high priority Enterprise risks. Upcoming investments will focus on improving process maturity for Business Continuity Management (BCM) with specific investments in Information Technology Service Continuity Maturity (ITSC). The goals of this project focus on review, refinement, and testing of MPI's IT recovery capabilities:

- Update IT major incident and disaster recovery processes and procedures to reflect additional technical and business scenarios.
- Execute major incident and disaster recovery exercises simulations and tests, based on processes and procedures, and report on the results.
- Further refine processes and procedures based upon the outcome of these exercises, simulations and tests.
- Further integrate Information Technology Service Continuity processes into Information Technology Operational Processes and Business Transformation Project Delivery processes ensuring operational and project changes incorporate requirements for, and ensure updates to Information Technology Service Continuity processes. This ensures continuous maintenance of the processes and procedures, and/or documented additions for new scenarios.

The project will attempt to find resources internally to fulfill project resourcing needs. If resources are not available internally, then the project will work with the Enterprise Project Management Office (EPMO) to secure resources through the master service agreement with MPI's resourcing partners DXC Technologies (formerly HP) and IBM.

BUSINESS NEED:

Risk Registry Remediation: Implement solutions to lessen high priority Enterprise risks. Past investments have focused on:

- Business Continuity and Disaster Recovery, which reduced enterprise risk through better event preparedness and by investing in response capabilities. This was delivered as part of the Information Technology Optimization Program and prior to the Technology Risk Management program.

- Data masking, which reduced enterprise risk by ensuring personally identifiable information (PII) was protected from unauthorized use outside of production environments. This involved masking or "changing" data (ex. key identifiers such as Customer Name) so that it is still usable for application development and testing purposes, but no longer reflects a specific customer. Additional processes and safeguards were also implemented into non-production environments where data could not be masked. This was delivered in Year 1 and Year 2 of the Technology Risk Management program.

In Q2 – 2017/18 MPI engaged IBM Resiliency Services (RS) for a Recoverability Assessment (RA). The document was completed in Q3 2017-18 and identified recommendations for improvement. MPI also completed a self-assessment using the Gartner ITScore for Business Continuity Management (BCM) as a baseline and verified ratings and findings with a Gartner Analyst. This assessment also highlighted recommendations for further improvement.

The BCMP Strategic and Annual Work Plan identifies the Loss of Technology (aka Disaster Recovery/ DR) as one of the pillars of the BCM Program. This includes maturing MPI Loss of Technology as such there are integration points between this project and the BCMP Strategic and Annual Work Plan.

MPI has the technical and process capability to recover from a significant disaster (loss of an entire computing facility) through the Information Technology Optimization program. Since the completion of that program however, the business need has increased to include further recovery scenarios (recover part of the computing environment). MPI has the technical and IT process capability to do this, but has not fully documented new or evolving scenarios, and does not have a regular plan to test and validate these scenarios.

PROJECT OBJECTIVES:

The project will be complete / successful when it has:

- Addressed the recommended remediation identified by IBM Resiliency Services (RS) in the Recoverability Assessment (RA) report.
- Implemented continuous improvement processes that will contribute to increasing BCMP maturity.
- Created Business Continuity Management (BCM) and Information Technology / Disaster Recovery (IT/DR) artifacts that address the IBM recommended remediation (e.g. procedures, response plans, exercises plans, etc.).

PROJECT BENEFITS:

- The recommended remediation identified by IBM Resiliency Services (RS) in the Recoverability Assessment (RA) report have been addressed (e.g. resiliency improved, increase BCMP maturity, etc.).
- Improve MPI's capability to respond to an IT service disruption through enhanced processes and procedures, resulting in less downtime.

- Improve auditability of these processes / procedures through validation exercising and testing.
- Continuous improvement processes implemented will ensure capabilities are not reduced through project or operational change, and that maturity increases over time without further project investment.

MONITORING OF ACTUAL PROJECT BENEFITS:

- Annual maturity assessment, with results provided as per the Value Management process.
- A quarterly report from the Business Continuity Management Program (BCMP) team outlining exercises / tests executed and the results, as well as the ongoing review of processes and procedures.
- Project timelines and costs are to be monitored by the Technology Modernization Program project management team, with assistance from the BCMP Team.
- BCMP Team to validate that the recommended remediation activities identified by IBM Resiliency Services (RS) in the Recoverability Assessment (RA) report have been implemented.
- Reassessment of the Gartner BCM Maturity Score and compare the new score with the previous score.
- Validate that the project deliverables have been created as planned (e.g. MPI DR run books, DR response plan, DR exercise plan, etc.) and are readily accessible to MPI for use in case of a DR incident.

IMPACT ANALYSIS:

Who will be impacted	What is the impact
MPI Communications	No significant impact
MPI Human Resources	Based upon the insights gained from IBM Resiliency Services (RS), Gartner, and findings from major incidents which occurred in 2017-18, it is recommended that additional outside expertise be brought in to augment the existing team and cross train MPI resources (providing long term capability).
MPI Organizational Readiness (Change Management)	No significant impact
Other Departments within MPI (please specify and add more rows as needed)	Additional work will be required from the Business Continuity Management Program (BCMP) Team and members of the Information Technology and Business Transformation division to ensure that processes / procedures are adhered to and the outlined testing, reporting, metrics and continuous improvement are executed to achieve and maintain the desired level of maturity.

	The other ITBT directorates / department impacted may include Business Architecture, Technical Architecture, Information Technology (IT), Enterprise Systems Support (ESS) and the Information Security Office (ISO). This will include connecting the DR processes implemented with the procedures for gathering technical DR requirements, change management, problem management, incident management, project management, etc. All of which is to ensure that the DR capabilities created are done to meet the expectations of the business in a disaster situation (i.e. Recovery Time Objective or RTO).

RISK ANALYSIS:		
Potential Risk	**Likelihood (L,M,H)**	**Description of Impact of Risk and description of planned action taken to mitigate this risk**
Risks/Obstacles of Proceeding with Project		
Resource conflicts between this project and other projects or operational activities.	M	Secure additional resources to allow required activities to be completed in parallel. If this is not possible, look for synergies to gain efficiencies. As a last resort, leverage change control to reduce scope.
New requirements for projects and operational activities	M	Apply changes to new projects going forward. Implement changes / remediation, required for in flight projects, as part of continuous improvement activities.

Risks of NOT Proceeding with Project		
Additional downtime is incurred due to errors in or the inefficient execution of processes / procedures.	H	Refined processes and procedures, along with regular testing and reported metrics address this.
Insufficient resources to execute 2018-19 Business Continuity Management program.	M	Past attempts to execute this operationally, in parallel to other priorities, has not yielded the desired level of results and metrics. The resource(s) requested will enable the desired results to be achieved.
Additional time to develop this capability.	M	The skillset required for this work differs from that of internal staff. It will take longer to do.
Legend L=Low; M=Medium; H=High		

PROPOSED TIMING
Start in April 2018 and continue until February 2019 with quarterly progress checkpoints and regular reporting (weekly progress, monthly executive, and quarterly Gartner review)
LEGAL REVIEW REQUIRED?
No X Yes **To be confirmed prior to start of start of project.**

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED? *(To be considered for medium and detailed business cases)*	
No Yes X	
To be completed prior to start of project	
ENTERPRISE ARCHITECTURE REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Business Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes / No
Technical Architecture	Reviewed Date: Dec 1, 2017 Review Completed By: Gary Dessler Findings: The project is approved to proceed. Architecture support will be provided as needed. Recommended to proceed: Yes

INFORMATION SECURITY REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Information Security Office	Reviewed Date: December 6, 2017 Review Completed By: Colin McDonald (David Bravi) Findings: ISO will need to be engaged to ensure security related items are considered as part of the process. Recommended to proceed: Yes

HIGH LEVEL ESTIMATED COST/BENEFIT ANALYSIS:		
Project cost (must be completed)		
• Total estimated range of project cost	$	300,000
• Capital percentage (if known)	%	0%
Estimated reduction in cost (must be completed if applicable)		
• Continuing annual cost reduction amount	$	0
• One time cost reduction	$	0
• Other (specify)	$	0
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	0
• One time revenue increase	$	0
• Other	$	0

Cost/Benefit Analysis		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs.	N/A
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs.	N/A
• Internal Rate of Return (IRR)	%	N/A
• Net Present Value (NPV)	$	(281,690)
• Other (specify)		Benefit is derived from the reduction of corporate risk, and by ensuring suitable business continuity capabilities are in place and regularly validated through test and full exercises.

INITIAL ASSUMPTIONS:	
Cost Assumptions	Assumes 2000 hours of external resources time as follows: • 400 hours on MPI specific run books (how to manuals, refinement of existing and creation of new) • 800 hours on response planning, exercising of responses, and documenting results and metrics • 150 hours on review of / updates to the BCMP Loss of Technology Strategy • 250 hours on updates to the Business Impact Assessment documents, including continuous improvement processes • 200 hours on cross training MPI staff • 200 hours for Project Manager This uses the BTO external rate of $125 / hr. and includes 8% contingency. The project hours assigned to BCMP internal staff (400 hours) are assigned a labour rate of $75/hr.
Cost/Benefit Assumptions	Assumes the Gartner ITScore (method of measuring benefits) does not change, and that we use the results of the 2017-Q3 IBM assessment (that there are no new requirements added beyond what was included in that review).
Other Assumptions	There is no opportunity to eliminate BCMP operational activities in order to release internal staff to work on this project beyond the 400 hours currently assigned. The project plan (including milestones, deliverables, etc.) will be monitored by Technology Modernization (TechMod) resources.

CONSTRAINTS/DEPENDENCIES:	
Cost Constraints	The ability to secure external resources with the necessary skills for the outlined rate.
Schedule Constraints/ Dependencies	The resource is able to complete the required deliverables in the estimated time. These estimates were completed by MPI internal staff who are familiar with what is required for this activity, but may over / under estimate some activities. A contingency amount has been added to address this.
Other Constraints/ Dependencies	This assumes assistance and oversight from the existing MPI Business Continuity Program (BCMP) Team (estimate of 400 hours in total). If this cannot be provided, then there is risk some deliverables may not fully integrate into the larger corporate processes.

SIGNIFICANT MILESTONES:	
Upon Approval	Upon Approval a Resource Request is to be submitted as per master agreements in preparation for the project start date (approval expected in January, March, or February 2018).
Project Start Date	April 30, 2018
Project End Date	February 28, 2019
Other Milestones	Quarterly check points

APPROVAL REQUEST/RECOMMENDATION:
Requesting the Vice President of Information Technology and Business Transformation approve the following: The inclusion of $300,000 in the Budget, as part of the Technology Risk Management program (2018/19 fiscal year)

PROJECT NAME: ITBT-2018-103 Technology Risk Management Program (2018) Application Risk Management

List all major financial assumptions used to develop the Financial Template

Line No.	Spreadsheet Assumptions		Source
2	Project Contingency	15%	Project
3	Interest/Discount Rate for NPV calculation	6.50%	See **Note 1** for guidance on discount rate to use for calculating net present value. 4% for low risk project; 6.5% for medium risk project; or 9.5% for high risk project.
5	Inflation increase on expenses/costs	2.50%	Finance unless fixed price - amend specific cells
6	Benefits Gross up as % of Salary	30%	HR/Finance covers pension, cpp, ei, heath benefits, etc.

7 **Note 1** Risk free discount rate (i.e. Corporate Cost of Capital or the average expected investment return from MPI's investment portfolio as projected for the next several years (See 2018 GRA) is 4%. This is the rate to be used on low risk initiatives such as repetitive MPI work where the risks to the success of the project are known and have been managed well in the past. A premium rate can be added to the discount rate to reflect riskier than normal project initiatives where there is greater uncertainty of realizing the projected future cash flows or of estimating costs. For these medium risk projects we recommend a discount rate of 6.5%. For instance, the longer the period of expected cash flows, the riskier the realization of such cash flows. Also initiatives in areas new to the corporation or where the corporation has no past experience, this increases the risk of realizing projected cash flows or estimating costs. In these circumstances, this warrants a higher discount rate in calculating the net present value of a project's cash flows. For these high risk projects we recommend a discount rate of 9.5%.

8 **Project Specific Assumptions (please list)**

9	1	The ability to secure external resources with the necessary skills for the outlined rate.
10	2	This document is a summary of multiple work estimates: - ITBT-2018-004 - Application Performance Management Suite - ITBT-2018-005 - VIP - ITBT-2018-055 - TFS - ITBT-2018-006 - LOU - ITBT-2018-001 - Informatica - ITBT 2018-008 - CDW and EDW - ITBT 2018-009 - Dollar U Upgrade
11	3	Staff costs included in the $75 /hr resource estimate value
12	4	Additional benefits from Application Dynamics (Monitoring) resulting in availability improvements, reduced staff effort (small), OT charges (small) are not factored in at this point
13	5	TFS: One time costs includes Project manager, IIS resources and standing up of 2 windows servers, 1 SQL Database se
14	6	The ongoing cost for the "hardware" servers is assumed to be the same cost as the 3 TFS 2012 servers that are going to be decommissioned as part of this initiative

PROJECT NAME: ITBT-2018-101 Technology Risk Management Program (2018) Information Security Risk Management

List all major financial assumptions used to develop the Financial Template

Line No.					
1	**Spreadsheet Assumptions**		**Source**		
2	Project Contingency	15%	Project		
3	Interest/Discount Rate for NPV calculation	6.50%	See Note 1 for guidance on discount rate to use for calculating net present value. 4% for low risk project; 6.5% for medium risk project; or 9.5% for high risk project.		
4	Inflation increase on expenses/costs	2.50%	Finance	unless fixed price - amend specific cells	
5	Benefits Gross up as % of Salary	30%	HR/Finance	covers pension, cpp, ei, heath benefits, etc	
6	**Note 1**	Risk free discount rate (i.e. Corporate Cost of Capital or the average expected investment return from MPI's investment portfolio as projected for the next several years (See 2018 GRA) is 4%. This is the rate to be used on low risk initiatives such as repetitive MPI work where the risks to the success of the project are known and have been managed well in the past. A premium rate can be added to the discount rate to reflect riskier than normal project initiatives where there is greater uncertainty of realizing the projected future cash flows or of estimating costs. For these medium risk projects we recommend a discount rate of 6.5%. For instance, the longer the period of expected cash flows, the riskier the realization of such cash flows. Also initiatives in areas new to the corporation or where the corporation has no past experience, this increases the risk of realizing projected cash flows or estimating costs. In these circumstances, this warrants a higher discount rate in calculating the net present value of a project's cash flows. For these high risk projects we recommend a discount rate of 9.5%.				
7	**Project Specific Assumptions (please list)**				
8	1	The ability to secure external resources with the necessary skills for the outlined rate.			
9	2	This is a combination of multiple sub documents - Redacted for IT Security reasons			
10	3	Staff costs included in the $75 /hr resource estimate value

6 **Note 1** Risk free discount rate (i.e. Corporate Cost of Capital or the average expected investment return from MPI's investment portfolio as projected for the next several years (See 2018 GRA) is 4%. This is the rate to be used on low risk initiatives such as repetitive MPI work where the risks to the success of the project are known and have been managed well in the past. A premium rate can be added to the discount rate to reflect riskier than normal project initiatives where there is greater uncertainty of realizing the projected future cash flows or of estimating costs. For these medium risk projects we recommend a discount rate of 6.5%. For instance, the longer the period of expected cash flows, the riskier the realization of such cash flows. Also initiatives in areas new to the corporation or where the corporation has no past experience, this increases the risk of realizing projected cash flows or estimating costs. In these circumstances, this warrants a higher discount rate in calculating the net present value of a project's cash flows. For these high risk projects we recommend a discount rate of 9.5%.

7 **Project Specific Assumptions (please list)**

8	1	The ability to secure external resources with the necessary skills for the outlined rate.
9	2	Assumes the Gartner ITScore (method of measuring benefits) do not change, and that we use the results of the 2017-Q3 assessment (that there are no new requirements added beyond what was included in that review).
10	3	The skillset required to do this work is not required long term (that it can be developed within existing MPI staff) and can be cross trained without any changes to position descriptions (assuming no union concern or impact).
11	4	This assumes assistance and oversight from the existing MPI Business Continuity Team (estimate of 400 hours in total). If this cannot be provided, then there is risk some deliverables may not fully integrate into the larger corporate processes.
12	5	Adjusted contingency to 8% to reflect budget constraints.

EXECUTIVE OVERVIEW

PROJECT DESCRIPTION

The purpose of formal driver education is to establish good driving beliefs and behaviours that contribute to a safe road culture and to develop driving skills to prevent collisions on Manitoba roadways. Educating drivers before they receive their licence is a critical early intervention that positively affects driver preparedness and attitude for the long term.

The High School Driver Education (HSDE) currently offered by Manitoba Public Insurance (MPI or the Corporation) requires renewal to meet the needs of future drivers and the expectations of customers. The redevelopment project is a complete re-visioning, redesign, and redeployment of the program, including what we teach, how we teach, what tools we use, and the delivery model we employ to provide the teen novice driver with the best foundation possible in preparation for their life as a driver. The redevelopment project represents the first major overhaul of the program since the mid-1990s.

The overall project involves three phases over several years. Phases one (visioning) and two (proof of technology concepts) are complete, with work already progressed in Phase three (curriculum redesign). By using behavioural science, research and proven approaches, the new Driver Z program focuses on altering driver behaviour and reducing a teen's risk of collision.

PROJECT OBJECTIVES

MPI has the mandate to be the sole provider of voluntary HSDE programming in the province, representing a unique opportunity to develop skilled, knowledgeable, and responsible drivers (customers) to minimize insurance claims and create a culture of road safety consciousness and action in the Manitoba driving population. This opportunity is matched by the Corporation's obligation to be exceptional in the products and services it provides to customers. Manitobans have entrusted MPI to develop and deliver the best driver education programming possible for their children and the Corporation must respond with the best product and outcomes achievable within its capacity as a public insurer.

The phase three redevelopment of High School Driver Education will be successfully addressed by meeting the following project objectives:

1. Curriculum redesign including: vision, learning objectives, lesson plans, instructional design, complete on-line lessons (students, parents/co-pilots), in-class guided facilitation teaching materials, new scripts and video production, in-class and in-car assessment requirements and methods, parent/co-pilot coaching resources and route guidance, instructor training, and business architecture.

2. Technology support in the form of: estimates, requirements, and development of system integrations, Customer Learning Management System, Customer and Partner Portals, on-line book and pay for course registration, new program-specific application with in-car and in-class assessment and two-way feedback from instructor to student and co-pilot, student progression history and scores, and notifications.

3. People Readiness as evidenced by: prepared and resourced operations within Driver Education department, a recruited and fully trained team of contracted instructors, informed and prepared brokers, and an informed public through executed communication and marketing strategy.

PROJECT BENEFITS

The value proposition for driver education is simple – if the program is effective, drivers who participate are more skilled and safer than those who do not. This is demonstrated through three primary indicators: testing pass rates (preparedness and skill to drive); traffic conviction rates (attitude); and claims frequency and severity (risk).

- **Preparedness:** Higher first attempt pass rates on knowledge and road tests indicate that educated drivers have more knowledge and skill, making them better prepared to drive than non-educated drivers.
- **Attitude:** Lower traffic conviction rates provide evidence that educated drivers are less likely to speed, drive impaired, or engage in other high risk driving behaviour than non-educated drivers.
- **Risk:** A lower frequency rate and severity of claims for educated drivers is an indicator that represents a reduced risk when behind the wheel than non-educated drivers.

To achieve these outcomes, it is critical for MPI to invest in its driver education programming to develop a higher quality learning experience with proven superior outcomes. With a proven program on offer, it is then critical to maximize participation and reach a broader range of audiences to increase the potential economic and societal benefits associated with the program. The redevelopment of HSDE is expected to achieve the following desired outcomes:

Value Drivers for our customers who require exceptional service and products

- Increase client engagement so students and co-pilots contribute more time and effort to achieve better preparation and safer driving.
- Enhance program reputational value as world-class education product
- Improve driver skills to better perceive and navigate hazards, prepare for different road types and conditions, and operate a vehicle with an appropriate level of confidence and skill
- Improve learning outcomes through broader understanding and deeper critical thinking, thereby impacting the traffic safety culture throughout and beyond the program experience
- Change driver attitude and culture to help Manitobans shift from passive observers to become active participants in our pursuit of zero fatalities on Manitoba roadways

Business Drivers for MPI and its ratepayers

- Reduce rate of at-fault physical damage claims for customers 15-24 years old
- Reduce rate of at-fault serious injury claims and fatality collisions for customers 15-24 year old
- Maintain excellent knowledge tests outcomes and improve poor road test outcomes for program participants
- Reduce the conviction rate for customers 15-24 years old
- Maintain student enrollment and increase completion rates

PROPOSED TIMING AND SIGNIFICANT MILESTONES

The proposed timing and significant milestones are noted as reference and subject to change.

- Dependent projects completed, May – October 2018
- Curriculum content completed, June 2018
- Development of technologies completed, October 2018
- Testing concludes, February 2019
- Pilot begins, March 1, 2019
- Full implementation, Fall 2019

FINANCIAL COST AND BENEFITS METRICS

As stated in the Project Benefits section of this business case, the benefits that support this initiative are primarily focused on achieving best practices in preparing Manitoba drivers to operate motor vehicles safely and thus reducing risk on the road.

A measurable financial benefit of a better prepared driver is a reduction in at-fault accidents and corresponding claims. An increase in supervised practice from 24 to 45 hours is estimated to decrease collision claim risk by two percent (2%) and is supported by evidence as an anticipated outcome for this project. Empirical data is not available to consistently estimate the impact that program aspects will have on claims risk at this time; however the incorporation of these practices has the potential to extend claims benefits further. It is reasonable that a hypothetical five percent (5%) improvement in claims could be achieved as an optimistic target.

Our analysis of historical property damage (PD) and bodily injury (BI) claims experience for HSDE drivers over a 5 year period (2013 to 2017) demonstrates fairly consistent results in terms of the percentage of HSDE customers with at-fault claims in comparison to the total population of HSDE customers in the age group of 15 to 24 years old. Based on this analysis we have established the following baseline, forecast and optimistic outcomes:

Physical Damage Claims Experience

	Historical PD Claims Experience	Forecast 2% improvement	Optimistic 5% improvement
Percentage to total HSDE 15-24 yr age group	8.59%	**8.42%**	8.16%
Reduction in number of HSDE Customers with At Fault Claims – 2020/21		**8**	19
Average Claim Cost per Customer – 2020/21		**$ 5,408**	$ 5,408
Annual Cost Avoidance – 2020/21		**$ 43,264**	$ 102,752

Reduction in number of HSDE Customers with At Fault Claims – 2029/30		**147**	367
Average Claim Cost per Customer – 2029/30		**$ 8,390**	$ 8,390
Annual Cost Avoidance – 2029/30		**$ 1,233,330**	$ 3,079,130

Bodily Injury Claims Experience

	Historical BI Claims Experience	Forecast 2% improvement	Optimistic 5% improvement
Percentage to total HSDE 15-24 yr age group	0.674%	**0.660%**	0.640%
Reduction in number of HSDE Customers with At Fault Claims – 2020/21		**1**	2
Average Claim Cost per Customer – 2020/21		**$ 8,563**	$ 8,563
Annual Cost Avoidance – 2020/21		**$ 8,563**	$ 17,126
Reduction in number of HSDE Customers with At Fault Claims – 2029/30		**12**	29
Average Claim Cost per Customer – 2029/30		**$ 10,233**	$ 10,233
Annual Cost Avoidance – 2029/30		**$ 122,796**	$ 296,757

The resulting key financial metrics of the business case under the forecast and optimistic scenarios are:

	Forecast 2% improvement	Optimistic 5% improvement
Net Present Values (Negative)	**($ 56,422)**	$ 4,042,866
Discounted Payback in years	**16.2 years (2030/31)**	12.85 years (2026/27)

Internal Rate of Return	**6.3%**	14.8%

OVERVIEW

PROJECT DESCRIPTION

The purpose of formal driver education is to establish good driving beliefs and behaviours that contribute to a safe road culture and to develop driving skills to prevent collisions on Manitoba roadways. Educating drivers before they receive their licence is a critical early intervention that positively affects driver preparedness and attitude for the long term.

HSDE currently offered by MPI requires renewal to meet the needs of future drivers and the expectations of customers. The redevelopment project is a complete re-visioning, redesign, and redeployment of the program, including what we teach, how we teach, what tools we use, and the delivery model we employ to provide the teen novice driver with the best foundation possible in preparation for their life as a driver. The redevelopment project represents the first major overhaul of the program since the mid-1990s.

MPI's effort and investment in the creation of a new and best driver education program predates the current project. In depth summative and formative evaluations of the existing program in the early 2000s represented the Corporation's desire to understand what aspects of its program reflected best practices and identified gaps and opportunities for more effective programming. A comprehensive *Global Analysis of Emerging, Promising, and Best Practices in Driver Education*, completed by the American Driver & Traffic Safety Association (ADTSEA) for MPI in 2013 provided a fulsome review and roadmap for future design efforts considered within scope of the HSDE Redevelopment Project. The document has been modified to include text boxes which indicate how the resulting MPI Driver Z program project is addressing the findings and building the program to incorporate best practice from around the world.

The overall project involves three phases over several years. Phases one (visioning) and two (proof of technology concepts) are complete, with work already progressed in Phase three (curriculum redesign). By using behavioural science, research and proven approaches, the new Driver Z program focuses on altering driver behaviour and reducing a teen's risk of collision.

Phase One: Engagement with IBM to create stakeholder profiles (students, parents/guardians, and instructors) and establish a journey map of the program experience to focus tactical and strategic redevelopment efforts. Tactical outcomes included online/web learning technologies, increasing and improving practice driving time, use of vehicle telematics[1], and stronger parental/co-pilot and student engagement. A roadmap for implementation and the transition to an envisioned future state and identification of strategic priorities was completed, providing the foundation for future phases of development.

Phase Two: Proof of technology concepts to determine if telematics, simulators and mobile/on-line learning technologies would be valuable additions to the program to enhance learning and if they could

[1] Telematics is a method of monitoring a vehicle and the driving behaviours of the operator. The technology combines Global Positioning System with on-board vehicle diagnostics to record and map where a vehicle has travelled and, by also using telemetry, can monitor and record speed, braking and cornering experiences, and other data that may be useful in objectively determining driver behaviour.

be successfully operationalized efficiently and effectively. Multiple hypotheses were developed and tested in real-world class scenarios. Results informed the approach to curriculum redesign in Phase three.

Phase Three: Redevelopment activities associated with the detailed vision and associated curriculum for the new program, including the integration of new technologies, learning tools and instructor competencies and supports. These new technologies leverage MPI's developed Partner Portal and KT applications. New technologies will be developed to support detailed in-car and in-class learning objectives and lesson plans with integration of higher-order learning strategies; the development of on-line mobile learning components for students, parents and co-pilots; a flexible delivery model design for interchangeable components; reimagined video, animations, and simulations; new assessment and progression dashboard with gamification and social community connectivity; and modified timeline of course events and requirements. Phase three carries the project through limited pilot implementation and concludes at the full operational implementation in the fall of 2019/20. Based on this timing, financial benefits related to claim cost savings will begin in mid-2020/21 with the first full year of financial benefits realized in 2021/22. See Appendix A, B and C for further details.

The business case for driver education programming redevelopment is rooted in the Corporation's commitment to provide exceptional products and services to our Manitoba customers. The Corporation must meet its obligation with investment that will provide value to program participants and ratepayers alike. The business case reflects the financial implications for the entire project but is focused on curriculum redesign, technology support, and people readiness in Phase three that is required to pilot and implement the program fully in 2019/20.

BUSINESS NEED

MPI is mandated to be the sole provider of voluntary HSDE programming in the province, representing a unique opportunity to develop skilled, knowledgeable, and responsible drivers (customers) to minimize insurance claims and create a culture of road safety consciousness and action in the Manitoba driving population. This opportunity is matched by the Corporation's obligation to be exceptional in the products and services it provides to customers. Manitobans have entrusted MPI to develop and deliver the best driver education programming possible for their children and the Corporation must respond with the best product and outcomes achievable within its capacity as a public insurer.

The *Road to Zero: Manitoba Road Safety Plan 2017-2020* has established a vision for road safety and the priorities that will be pursued to achieve it. To address the 'Toward Zero' vision, free of traffic fatalities and injuries, MPI and the Province of Manitoba have prioritized increased access to driver education programming in Manitoba and improved safety outcomes for young road users and novice drivers. The best tool in achieving objectives related to these priorities is HSDE in Manitoba.

The value proposition for driver education is simple – if the program is effective, drivers who participate are more skilled and safer than those who do not. This is demonstrated through three primary indicators: testing pass rates (preparedness and skill to drive); traffic conviction rates (attitude); and claims frequency and severity (risk).

- **Preparedness:** Higher first attempt pass rates on knowledge and road tests indicate that educated drivers have more knowledge and skill, making them better prepared to drive than non-educated drivers.

- **Attitude:** Lower traffic conviction rates provide evidence that educated drivers are less likely to speed, drive impaired, or engage in other high risk driving behaviour than non-educated drivers.

- **Risk:** A lower frequency rate and severity of claims for educated drivers is an indicator that represents a reduced risk when behind the wheel than non-educated drivers.

To achieve these outcomes, it is critical for MPI to invest in its driver education programming to develop a higher quality learning experience with proven superior outcomes. With a proven program on offer, it is then critical to maximize participation and reach a broader range of audiences to increase the potential economic and societal benefits associated with the program.

In general, instructional pedagogy has evolved over time and is adaptive to new technology tools. MPI recognizes that its HSDE must also evolve and adapt to customer needs, the changing learning landscape, and innovations in education technology to enable the best outcomes. The Corporation has identified opportunity to improve the program and make further progress on its loss prevention objectives within the population of young drivers in Manitoba.

The community of road safety practice in the developed world provides sufficient evidence to prove that jurisdictions with the most rigorous driver education, public awareness, and proactive enforcement strategies have made the best progress on safety outcomes, including serious injuries and fatality rates.

An example of proven practice is teenSMART, a private U.S.-based driver education system which claims that, in repeated trials, students who complete the program have up to 30% fewer collisions one year after training than those who didn't take teenSmart.[2] An independent review by the Traffic Injury Research Foundation (TIRF), concludes, "Considering all the available evidence, it is possible that teenSMART does in fact have a safety effect which may range from as low as 4%, based on recent evidence about the impact of driver education, to 28%, based on insurance claims data and discount practices. These estimates provide a range of potential safety benefits that have been used in a cost-benefit analysis"[3].

The Insurance Institute for Highway Safety has quantified the expected change in collision claims and fatal crashes associated with the proven practice of supervised practice hours of driving under Graduated Driver Licensing schemes across the U.S. A state that implements 25 hours of mandatory supervised driving can expect a 7% reduction in collision claims and a 1% reduction in fatal collisions. If the number of hours of supervised driving in increased to 45 hours, the risk of collision claims is reduced by 11% and fatal crashes decreases by 3%. For an increase in supervised driving to 70 hours, risk of collision claims is reduced by 17% and fatal crashes by 4%[4]

To this end there is a business need to reduce claim frequency and correspondingly claim costs by improving the claims experience of drivers graduating from the HSDE program. In recent years HSDE drivers in the 15-24 year old age group have experienced at-fault physical damage claims at the rate of over 8% (number of HSDE customers with claims as a percentage of total HSDE customers) and BI claims

[2] teenSMART website, May, 2018.
[3] TIRF White Paper on teenSMART, December 2016.
[4] IIHS GDL Crash Reduction Calculator, May, 2018 (Alabama state example – baseline 0 hours supervised practice time).

at the rate of over 0.6%. By incorporating best and proven practices into MPI's new driver education programming, the Corporation is confident that these rates can be reduced.

PROJECT OBJECTIVES

Project objectives for phase one and two included the following:

1. Stakeholder profiles and journey map for potential development and implementation.

2. Assessment of new technology concepts identified in phase one.

   Online learning: The online learning component of the proof of concept demonstrated an increase in student and parent/guardian engagement. The possibilities for the technology to provide repeated touch points and opportunities to interact with the program and cement higher order learning will, therefore, be expanded and further tested as part of the curriculum redevelopment.

   Driving Simulators: IBM concluded that in order to effectively hone skills, the existing curriculum would require adjustment to enable significantly more time for simulator use by students (up to six hours per student). Future feasibility may be contemplated for specific applications (i.e. remote communities without infrastructure) and consider the needs of students, operationalization of the technology, and associated costs. Phase 3 will incorporate the use of observable video simulations to teach situational driving, decision making, hazard perception, etc.

   Telematics: The telematics solution tested with instructor vehicles and a portion of guardian/parent vehicles saw an increase in objective feedback and higher engagement levels, thereby demonstrating the value of the technology. Due to some challenges with the vendor and the beta level of technology, the project recommended a broader pilot study to include more participants. It is important for parents to recognize the outputs and outcomes of the telematics devices and promoting the benefits will be important to encourage optimal use of the technology.

   Dash Cameras: Dash camera data consumption is very high and presents significant logistical and cost challenges. If pursued, IBM recommended that the Corporation revisit its need to store all video information centrally and suggested investigation of an approach to store video in a secure in-vehicle box, assuming this would address privacy and liability considerations.

The phase three redevelopment of HSDE will be successfully addressed by meeting the following project objectives:

1. Curriculum redesign including: vision, learning objectives, lesson plans, instructional design, complete on-line lessons (students, parents/co-pilots), in-class guided facilitation teaching materials, new scripts and video production, in-class and in-car assessment requirements and methods, parent/co-pilot coaching resources and route guidance, instructor training, and business architecture.

2. Technology support in the form of: estimates, requirements, and development of system integrations, Customer Learning Management System, Customer and Partner Portals, on-line book and pay for course registration, new program-specific application with in-car and in-class

assessment and two-way feedback from instructor to student and co-pilot, student progression history and scores, and notifications.

3. People Readiness as evidenced by: prepared and resourced operations within Driver Education department, a recruited and fully trained team of contracted instructors, informed and prepared brokers, and an informed public through executed communication and marketing strategy.

PROJECT BENEFITS

The redeveloped program will achieve success by creating a positive traffic safety culture and elevating knowledge and behaviour on the roadway. This will contribute to a reversal in the climbing trend in at-fault claims, both physical damage and bodily injury, for the 15-24 year old demographic. It is important to recognize that in addition to an upgrade to the HSDE curriculum, a reversal of trend will be contingent on variables external to driver education (vehicle technology, vehicle usage and kilometers driven, societal change, or the introduction of new legislative countermeasures preventing risky behaviour, etc.).

The program indicators of success will be measured annually through the Driver Education data dashboard, leveraging existing benchmarks for claims, fatalities/injuries, traffic convictions, course completion and pass rates. New benchmarks and data collection will be established for engagement measurement. Culture scores within Customer Research will be leveraged to measure driver attitude and culture.

Multiple reduction scenarios are calculated in the project financial summary – two percent reduction is the estimated forecast for this business case and five percent reflects optimistic potential improvement to provide a range of possible project financial benefit outcomes. Five year historical claim frequency and claim costs form the basis for establishing a baseline to measure claim cost avoidance targets. The different scenarios are predicated on different target assumptions for improvements in at-fault claim frequency for HSDE customers graduating from the new curriculum being implemented as part of Phase 3 of the project and applying average PD and BI claim costs factoring inflation. The forecasted benefits results are used to calculate the financial net present value ranges of this project. See Appendix A.

The redevelopment of HSDE is expected to achieve the following desired outcomes:

Value Drivers for our customers who require exceptional service and products

- Increase client engagement so students and co-pilots contribute more time and effort to achieve better preparation and safer driving.
  Intended outcome: Continuous improvement to program performance metrics, feedback and outcomes as compared to program participants in current program.

- Enhance program reputational value as world-class education product
  Intended outcome: Improvement in parental/guardian support measured through feedback and engagement as compared to program participants in current program.

- Improve driver skills to better perceive and navigate hazards, prepare for different road types and conditions, and operate a vehicle with an appropriate level of confidence and skill

Intended outcome: Stronger skills and preparedness in the real world driving environment that contribute to reduced rate of claims and severity of same.

- Improve learning outcomes through broader understanding and deeper critical thinking, thereby impacting the traffic safety culture throughout and beyond the program experience
  Intended outcome for redevelopment: Better decisions of participants on the road with less propensity for risk which is indicated by reduced traffic convictions for program participants.

- Change driver attitude and culture to help Manitobans shift from passive observers to become active participants in our pursuit of zero fatalities on Manitoba roadways
  Intended outcome for redevelopment: Improved scores on traffic safety culture surveys for the youngest driver demographic.

Business Drivers for MPI and its ratepayers

- Reduce rate of at-fault physical damage claims for customers 15-24 years old
  Intended outcome: A reduction in the rate of claims frequency, achieved incrementally as students graduate the new program. By 2030 the entire eligible 15-24 year old age cohort will have exposure to the new program and when benefits of redevelopment will reach their full maturity. Historical PD claims experience for HSDE customers indicates that approximately and consistently over 8% of drivers in the cohort experience an at-fault claim, (8.62% in 2017 and a three year average of 8.59%). A two percent improvement to the three year average at-fault rate of claims for each new group of graduates equates to 8.42% of graduates experiencing at-fault claims). The estimated claims avoidance for this group is a reduction of 147 claims equating to $1.21M annually in claims cost avoided by 2030.

  Note that PD claims are a product of many other factors beyond driver education, and costs are impacted by inflation and an evolving manufacturing and repair industry. Therefore, to monitor the realization of benefits, the *rate* of at-fault claims will be the primary indicator for this outcome.

- Reduce rate of at-fault serious injury claims and fatality collisions for customers 15-24 year old
  Intended outcome: Downward trending of at-fault serious injury and fatality collisions by 15-24 year olds over ten years. A reduction in BI at-fault claims[5] rate for 15-24 year olds by two percent (falling from 0.674% - three year average to 0.66%) for each graduating cohort, equates to the estimated claims avoidance for this group of approximately 12 claims per year or $123 K annually. However, similar to PD, medical and rehabilitative costs, inflation and other confounding variables will impact injury costs. Therefore, the *rate* of at-fault fatality and injury claims will be the primary indicator of benefits.

- Maintain excellent knowledge tests outcomes and improve poor road test outcomes for program participants
  Intended outcome: Improve the Class 5 road test pass rate to 75 per cent for program participants and maintain knowledge test past rate of 85 per cent. This is anticipated to result in less road tests administered; however, testing is demand driven and staff reductions will be dependent upon operational need and customer service requirements that are difficult to predict in the long term.

[5] 2016/17 and 2017/18 average total value of injury claims costs and trend increase over 2012-2017.

Therefore, there are no financial benefits quantified in this business case for the 75% first attempt road test pass rate target. The decrease in test attempts will be spread across the province and the entire population of driver examiners and service centres.

HSDE students have experienced consistently high knowledge test pass rates compared to those who don't take the course (85% versus 60% pass on first attempt). Moving course material that is taught to prepare learners for the knowledge test to a self-directed on-line format comes with some degree of risk. This is offset by the classroom review which shall be further incorporated into the course, and this current program outcome should be sustained.

- Reduce the conviction rate for customers 15-24 years old
  Intended outcome: Downward trending of conviction rates will demonstrate that the education program has changed young driver attitudes and behaviors. This intended outcome will not be quantified into financial benefits.

- Maintain student enrollment and increase completion rates
  Intended outcome: Maintain enrolment of eligible demographic and increase completion rate from 30 per cent to 50 per cent. Better completion rate will achieve more sanctioned on-road practice and a larger student audience will expand incremental benefits.

BACKGROUND – DRIVER EDUCATION

Across Canada and the developed world, young, novice drivers contribute to crash losses that are disproportionate to their representation in the driver population and the distances they drive. New drivers need between five and seven years to reach mature risk levels and driver education is intended to accelerate this process.

The Manitoba HSDE program was started in 1966 under the Department of Public Works and later operated by Manitoba Driver and Vehicle Licensing. MPI assumed responsibility for the program in 1987 and branded the curriculum as its own in 2006.

The program is currently delivered by approximately 200 contracted instructors who are supported and supervised by program administrative staff within the Driver Education and Training department of MPI. At present, the course consists of 34 hours of in-class instruction in two hour sessions twice per week and 16 hours of in-car instruction (eight hours as a driver and eight as an observer of another student driver). The program is structured traditionally in lecture format supported by PowerPoint slides and supplemented by a variety of activities, class discussion and guest speakers. Once in-class and in-car lessons are complete, parents and guardians are expected to practice on their own for the following 6-7 months prior to challenging the road test. Parents/guardians participate in a special two hour session that is intended to set expectations, provide information and teaching tips. This is their only direct involvement in the course.

The new curriculum is an expression of the best and most up to date research in a variety of relevant fields. It has been developed to incorporate best practices in road safety such as the Safe Systems Approach and traffic safety culture concepts, while folding in proven and effective driver education practices from other leading programs, like teenSMART. This includes addressing the chief factors behind motor vehicle crashes (visual search, hazard detection, speed adjustment, space management, risk perception and lifestyle issues) and incorporating interactive computer based lessons, increased

parental/guardian involvement (safe driving discussions, videos and in-car driving exercises that reinforce on-line and in-class learning) and a substantial increase in dedicated practice time for students. Recent developments in neuroscience, learning theory and adolescent behaviour change models have also heavily influenced the curriculum with methods, mediums and content designed to reflect how to most effectively educate young people and enhance their capabilities to learn and retain content. Various studies and sources were referenced through development and formative and summative evaluations of HSDE over the past decade have provided guidance in the redevelopment effort for driver education.

STRATEGIC IMPORTANCE

Corporate Purpose

The Corporation's emphasis on loss prevention is formalized in our Loss Prevention Strategy and Framework, which amalgamates the various loss prevention elements that contribute to our overall loss goal of reduced claims and lower claims costs. Driver Education represents a critical and direct intervention in support of the Corporate objective to prevent loss.

Corporate Mission

The mission of MPI is, "Exceptional coverage and service, affordable rates and safer roads through public auto insurance." Successful loss prevention and road safety initiatives are perfectly aligned with the Corporate Mission of risk reduction and are expected by Manitobans.

APPROACH

DRIVER Z

The new HSDE program, branded as "Driver Z" (Z, pronounced 'zed'), incorporates progressive curriculum design, new technology elements, and a restructured program delivery model that will provide extended, interactive engagement with students throughout their 5A Authorized Instruction (Learners) stage of license and beyond.

Through a blended learning approach focused on building higher-order thinking skills, the overall goal of the program is to help young drivers:

- Develop greater capacity for decision making, judgment, attitude, hazard perception and reduce their propensity to take risks
- Shift their mindsets and behaviour as they learn technical skills to become safer drivers

The new curriculum will be an interactive experience for students and guardians, replacing conventional instruction with a blended higher order learning approach that is focused on key learning outcomes that are introduced and revisited for deeper understanding as the learner moves through the program of study. By engaging students' higher-order thinking skills systematically, Driver Z will drive the change from rote recall of facts to the analysis and evaluation of real world situations and respond appropriately.

Learners will engage in a set of experiences including peer and application based learning, and then are helped to process and draw meaning from them, building on previous experiences and moving to broader, deeper or more complex understandings to enable positive behavior and decision making. Direct linkages are developed between on-line, in-class and in-car experiences, with specific focus on the main causes of novice driver judgement error and crashes – the teenage brain, visual search, hazard detection, speed adjustment, space management, risk perception and lifestyle issues (risk taking behaviour, impairment, fatigue, etc).

Current HSDE instruction is highly focused on lower level, traditional learning approaches - memorization, lecture explanations to help students understand rules of the road and applying knowledge in the car during practice lessons. Driver Z will allocate the lowest level learning requirements to on-line, self-directed student sessions and reserves valuable class time to focus on analysis, evaluation and creativity to build upon foundational cognitive skills to strengthen overall development.

Driver Z Curriculum Learning Path

The learning path in Driver Z is non-linear, with various modes of learning occurring in a coordinated manner.

Online Learning takes place before students enter the classroom. It establishes expectations for the program, guides participants through important information and provides regular assessment opportunities.

Instructor-Led classroom sessions are designed to create an environment that encourages students to engage in activities and discussion to strengthen foundational skills and apply, analyze and evaluate new information.

In-car instruction creates a safe environment for students to practically apply learned skills, react and respond on the roadway, and receive regular feedback for future improvement. Increased practice time with learning, coaching and support further elevates learning.

The Capstone Project is a unique addition to the program focused on inviting students to transform the knowledge acquired and create personalized projects highlighting what they have learned.

Students will be engaged in the **Driver Z Community** application as they progress and complete their on-line learning, in-class and in-car lessons and independent practice hours before their final in-car lesson and road test. Gamification and visual assessment enables students and co-pilots to manage time, progress and requirements in an entertaining model.

What's New for Students

Online Learning Community

- An integrated program model with a specialized application for the Driver Z community
- Engaging on-line self-directed learning, at their own pace in small, bite-size components
- Gamification to motivate and encourage students with instant feedback and progress measures
- Ongoing assessment and communication between instructor and co-pilot
- Expanded accessibility for different abilities, languages and access capacities
- Messaging between instructor and student
- Integrated social media
- Reminders and alerts to help them stay on schedule and complete requirements
- Integration of online learning modules with new interactive electronic Manitoba Driver Handbook

In the Classroom

- Higher order experiential and peer-based learning
- Linkage between in-class learning and in-car skills development
- One class per week with short, daily on-line tasks (videos, quizzes, etc.) to prepare learner for class activities and discussion

- Capstone project to showcase what the student has learned throughout the Driver Z experience

In the Car

- Telematic and instructor-observed assessment information and feedback loop
- 15 hours in-car instruction concurrent with in-class lessons. Must qualify for final in-car lesson (45 hours of independent practice required under supervision of co-pilot must be achieved before final lesson is scheduled)
- Expanded practice requirements to 45 hours to receive Driver Z certification

What's new for Co-pilots (Parents/Guardians/Qualified Family or Friend)

- Completion of pre-class co-pilot training with customized content and assessments
- Regular, short, instructional videos and pointers delivered just-in-time to refresh skills and knowledge to enable correct coaching
- Fully developed co-pilot resources and guidance for in-car practice sessions
- Access to the student dashboard to monitor progress, receive assessments and log practice information
- Feedback on instructor-led in-car lessons to guide co-pilot practice time
- Reminders and alerts to stay informed if their child is falling behind or if co-pilot action is required
- Messaging between instructor and co-pilot (and parent)

What's new for Instructors

- Updated competency model to ensure instructors have the right skills and competencies to deliver the Driver Z program with ongoing performance management
- On-board training vehicle telematics to provide objective assessment and feedback to students and co-pilots
- Modular, flexible resource options to build the in-class course that best meets the needs of their student demographics and geography, for instance: specially designed instruction resources for northern remote students with limited infrastructure
- In-car assessment technology to enable instantaneous feedback and easier assessment
- Designed facilitator guides with timing, tips and scripting
- Ongoing access to resources, support and updates to curriculum to keep current and on trend

TIME, EFFORT, COSTS

IMPACT ANALYSIS

Estimated Impact: Internal Staff			
Estimated Time Commitment Scale (days, weeks, months)			
LOW Time commitment ≤ 2 work weeks	**MEDIUM** Time commitment of 2-4 work weeks	**HIGH** Time commitment of more than 4 work weeks	
Impacted Stakeholders	**Description of potential impact**	**Level of Impact**	**Type of Impact – Project or Operations**
Manager, Driver Education	With the new Driver Z program, the leader and manager of the department is engaged throughout the program/project as they are responsible for budget and resources and ongoing operationalization of the program.	**High**	**Project and Operations**
Driver Education – Program Delivery Coordinator, Course Coordinator, Liaison Officers, Training Clerks, Curriculum Developer & Training Support Specialist	Changes to current departmental processes to facilitate the newly redesigned Driver Z program. This team of individuals oversees aspects of the program and individuals have specific responsibilities for supporting and engaging with participants, instructors, schools, etc. This group is key to the ongoing operationalization of the Driver Z program with required updates and changes. This includes: monitoring performance with key metrics, score cards, etc.to ensure corrective needs are met with ongoing alignment of corporate vision, mission, trends, etc.	**High**	**Project and Operations**
Road Safety	Coordination of activities and campaigns to reinforce and share road safety culture philosophy.	**Low**	**Project and Operations**
Communications and Digital & Creative Engagement Services	Will support the strategy to staff and ensure consistent messaging including creation of content and delivery mechanisms. This includes the creation of concept videos and procedural content animations. The redesign of the handbook is a dependency – but not included as project work, delivered operationally.	**High**	**Project and Operations**
Human Resources	The engagement of this team is required for assisting with instructor core competencies, performance, and recruitment. Ensures changes with our internal complement of staff are appropriately reflected in their jobs.	**Low**	**Project**
KMS	The training and communication related to the new processes for all audiences, including but not limited	**High**	**Project**

	to: online learning, instructor led training, audience materials, policies, procedures, etc.		
Organizational Change Management	A resource allocated to the project to ensure change management strategy is created and implemented. Some aspects of change extend to partners and therefore activities must be coordinated from a stakeholder management perspective.	**High**	**Project**
Organizational Development	The coaching and facilitation core competency content for delivery and support to instructors and internal staff.	**Medium**	**Project**
Service Centre Representatives	See brokers.	**Low**	**Operations**
Contact Centre	Ability to provide information to customers about the program and support brokers in business transactions.	**Low**	**Operations**
IT Support Desk	The team which will support the business application and IT components of the program.	**Low**	**Operations**
Business Transformation and Information Technology Division	This is the architecture, delivery and technology are of the project team where resource assignment will include: project managers, architects – business and technical, developers, analysts, support personnel, etc.	**High**	**Project**

Estimated Impact: Partners/External			
Estimated Time Commitment Scale (days, weeks, months)			
LOW Time commitment ≤ 2 work weeks	**MEDIUM** Time commitment of 2-4 work weeks	**HIGH** Time commitment of more than 4 work weeks	
Impacted Stakeholders	**Description of potential impact**	**Degree of impact**	**Type of Impact – Project or Operations**
Instructors – In-Class & In-Car	The desired behaviour for instructors is now a facilitator and coach for the program. The performance expectations and new core competency model with feedback will be enacted. The in-class content is supplemented by online and social learning while the in-car content is now geared towards related skills and personalization to add value to in-car practice. The necessary skills to deliver the new program will be changing from the previous lecture style model requiring all instructors to adopt the new mindset. The in-car model is also changing to the final lesson adjacent to eligibility for the road test.	**High**	**Operations**
Driving Schools	The new program and practice hours model for in-car and copilot are further reaching and may impact schools in their current delivery model.	**Low**	**Operations**

High Schools and Administrators	The requirements to facilitate the program with a new schedule need to be communicated to schools and gaps must be addressed to facilitate new items like larger attendance for the combined student, parent/guardian and co-pilot evening.	**Medium**	**Operations**
Brokers	The brokers will have a change to their processes for prospective participants in the Driver Z program. This includes but is not limited to the updated new customer processes to facilitate self-service options.	**Medium**	**Operations**
IBAM	Governing body for brokers who may have concerns about new process and transactions and how it will affect compensation, etc.	**Low**	**Operations**
MB Public	The new program designed to shift mindsets and behaviours. Focus on how participants think and make decisions behind the wheel, as well as the technical components of driving. Currently have some understanding of previous program, concerns about young drivers, and road safety.	**Medium**	**Operations**

Estimated Impact: Program Participants			
Estimated Time Commitment Scale (days, weeks, months)			
LOW Time commitment ≤ 2 work weeks	**MEDIUM** Time commitment of 2-4 work weeks	**HIGH** Time commitment of more than 4 work weeks	
Impacted Stakeholders	**Description of potential impact**	**Degree of impact**	**Type of Impact – Project or Operations**
Students	The new program is an interactive program with learning spanning pre, during and post classroom learning leveraging best practices and technology for engagement and enablement. Continued engagement is sought through the program and beyond throughout the GDL process.	**Medium**	**Operations**
Parents/Guardians and Copilots	The program encourages greater involvement by this audience and provides additional supports to enable a more structured and facilitative approach to support students.	**High**	**Operations**
Other Driver Education Audiences	The content could be leveraged in the future for other audiences includes: adult driver education, driver improvement and control, etc.	**Low**	**Operations**

COSTS AND BENEFITS

History

- In Phase 1, IBM completed a study and established a roadmap and vision for a new HSDE Program with a cost of $4.5M - $8.0M over 3 years.
- MPI Management set HSDE program budget at $5.5M (based on a funding envelope approach vs. project estimate) and received board approval for funding.
- In June '14 as part of PUB GRA 2015 – MPI filed HSDE project charter which stated project budget $5.5M – this amount was later revised and decreased to $5M.
- As part of FY17/18 Capital budget finalization, reductions in capital spend were required to achieve corporate financial targets, resulting in HSDE program funding being reduced to $4.0M.

Current

- Project forecast is now $5.0M.
- Project assumes that the entire budget, including contingency, will be consumed. The requested $1.0M in incremental funding at the April 19, 2018 Board meeting is less than the project initial estimates; project will be designed and trimmed to fit.
- Approx. $1.0M over current approved project funding level of $4.0M & 8 months past desired implementation timeframe (but still under $5.5M – original program funding).
- Pilot in March 2019 with full implementation in Fall of 2019.

Summary of Costs –

HSDE Board Approved Funding at 2017/18 Capital Budget		**$ 4,000,000**
Phase 1 - 2014/15 - Actuals	$ 314,771	
Phase 1 - 2015/16 - Actuals	$ 327,274	
Total Phase 1 Project Costs	$ 642,045	
Phase 2 Technology PoCs - 2016/17 - Actuals	$ 1,335,305	
Phase 2 Technology PoCs - 2017/18 - Actuals	$ 112,002	
Total Phase 2 Project Costs	$ 1,447,307	
Total Phase 1 & 2 Completed Project Costs		$ 2,089,352
Remaining Board Approved Funding Available for Phase 3		$ 1,910,648
Phase 3 2017/18 - Actuals	$ 680,791	
Phase 3 2018/19 - Forecast	$ 2,229,857	
Total Phase 3 Forecast		$ 2,910,648
Shortfall in Existing Funding Envelope to Complete Phase 3	$ (1,000,000)	
Total Additional Funding Requested - April 2018		$ 1,000,000
Total HSDE Project Funding Phase 1, 2 and 3		**$ 5,000,000**

Summary		
Project Costs		
• Total estimated range of project cost	$	5,000,000 including all contingency
• Capital percentage	%	Phase 1 & 2 expensed, Phase 3 expected to be 100% Capital
Estimated reduction in cost (must be completed if applicable)		
• Continuing annual cost avoidance amount – realized in FY 2029/30.	$	2% reduction at-fault claims 1,356,126 5% reduction at-fault claims 3,375,887
• Other (Cost Avoidance)	$	N/A
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	525,000 (10,500 participants at increase fee of $50)
Cost/Benefit Analysis		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs	**2% reduction - 16.20 (forecast)** 5% reduction – 12.85 (optimistic)
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs	**2% reduction – 13.52 (forecast)** 5% reduction – 11.49 (optimistic)
• Internal Rate of Return (IRR)	%	**2% reduction - 6.3% (forecast)** 5% reduction – 14.8 % (optimistic)
• Net Present Value (NPV) (Based on discounted rate of 6.5%)	$	**2% reduction – (56,422) - negative** 5% reduction – 4,042,866

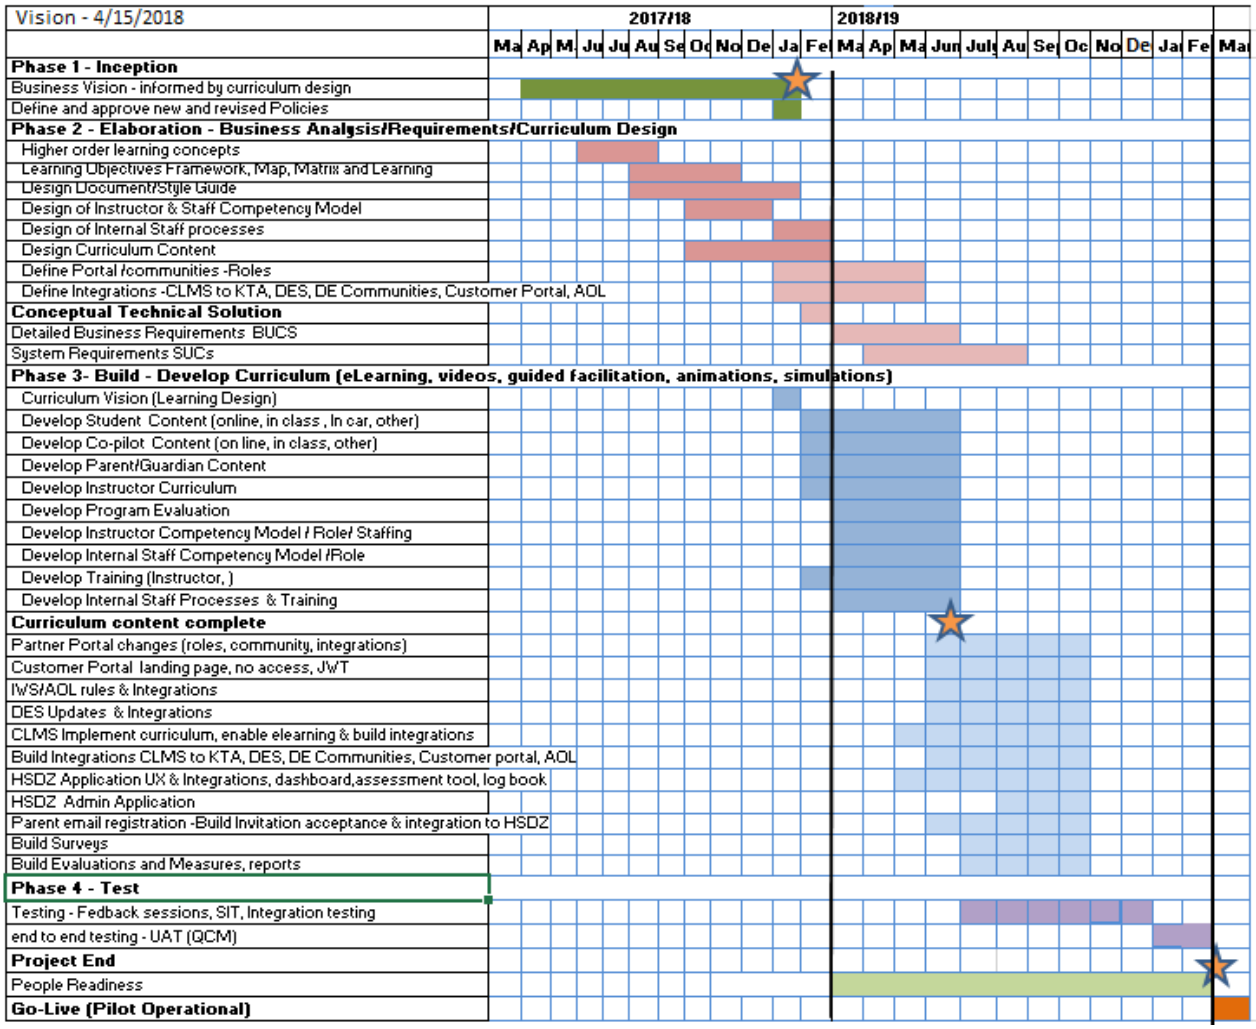
Estimated Costs:	Unquantifiable Benefits:
Entire Program cost of $5.0 M.	MPI's exceptional service requirement for its customers extends to driver education. Manitobans expect and deserve programming that incorporates best practice and proven learning strategies from around the globe. Manitobans have entrusted MPI to develop and deliver the best driver education programming possible for their children and the Corporation has an obligation to respond with the best product and outcomes achievable within its capacity as a public insurer. • Worldwide best practice in driver education has moved to reinforce a strong traffic safety culture, integrate higher order learning and engagement, and increase practice time. • We will teach skills and build knowledge • We will connect meaningfully with our students • We will shape beliefs, values, and attitudes • We will shape the culture and develop new potential ambassadors within each student • We will add value for ratepayers by developing the best drivers in Canada

RISK ANALYSIS

Potential Risk	Likelihood *L – Low M – Medium H – High*	Description of Impact of Risk	Accept & Manage Risk
Risks/Obstacles of Proceeding with Project			
New Technology	**High**	These aspects are critical to engagement in the new Driver Z program – the customer focus is important in aligning to make the new program successful for all participants, instructors, etc. Examples of challenges: Driver Z application and crossing boundaries of communities, hierarchies, pools, etc., relationships for parent and co-pilot with the many to many aspects, telematics for instructors, copilots suspended mid-program, etc. And, meeting the needs of the exception audience for accessibility (access, etc.). Testing and piloting of the program with initial and ongoing adjustments – including focus groups to ensure solution meets customer needs (participants, instructors, internal, etc.) for corporate business case and benefits alignment and realization (tangible and intangible – societal), etc.	Yes
Resistance and lack of buy In among stakeholders	**High**	Engagement and enablement of customers, instructors and internal staff is critical to embed the loss prevention culture in all stakeholders and ensure success in the new Driver Z program. Unmanaged expectations or poor communications could leave the users feeling like they were not heard, creating poor staff engagement. If staff are not engaged properly, resistance to change could be significant and costly to the corporation. The team must work closely with all affected stakeholders to ensure they have what they need to achieve success – communication, training, and ongoing engagement and updates to the program are critical here. Partnership with the organizational change management and engagement with stakeholders will mitigate this risk.	Yes
Validity of Solution	**Medium**	There has been a significant amount of research done of the new reimagined journey and curriculum with best practices. As the solution continues to evolve it will be tested with pilot groups and incremental research to ensure that analysis and continuous improvement is incorporated. Decisions have been made to leverage leading practices including online learning and mitigation to encourage reviews and practice of knowledge higher order learning.	Yes
Resources Allocation and	**Medium**	Dependencies from constraints and other projects, expertise and skill specialization, needing a technical implementation	Yes

Schedule Slippage		manager, to using internal where possible to other projects, etc. Project management being critical to ensure tasks, activities, etc. have the necessary focus.	
Budget	**Medium**	The program will include the alignment of solutions with fiscal program/project mandates and optimizing/leveraging existing technology where possible. This means that the team will look for opportunities to streamline and build to cost by prioritization of the solution components.	Yes
Parallel Streams of Work	**Medium**	Parallel streams of work need to be strategically integrated with coordination between different business units working on same tasks. This will be achieved with colocation of project team members and regular status meetings and check points to ensure alignment.	Yes
Public Perception	**Medium**	Costs of the project may be viewed as not required for the core business. Demonstration of the long term ROI and overall positive financial impact of both the cost reductions will mitigate this risk. Comparisons to industry standards and other jurisdictions provide evidence that these changes can create significant impact both financially and societally and this must be stressed to Manitobans for support in the program.	Yes
Risks of NOT Proceeding with Project			
Claims rates remain the same or increase	**High**	The costs of claims continue to rise with the 15-24 year old age group and liability and exposure is also increasing year over year.	Yes
Program remains out of date and content and delivery is not best practice	**High**	If our program does not reflect our values and the culture we are creating internally and externally – then staff, partners and the public may feel like they are not being heard, creating poor engagement and obsolescence. If we do not take advantage of the opportunity to stay current and on trend for this demographic we may be seen as disconnected and therefore the program will be looked at as poor value and not realize the results. We need to remain relevant to Manitobans and emphasize the importance of this program in creating better drivers to make everyone safer.	Yes

PROPOSED TIMING



ASSUMPTIONS

INITIAL ASSUMPTIONS

Cost Assumptions	• Of the remaining forecasted budget for Year 5, about $1 Million is intended for project resources, both technical and business, to facilitate and enable the new curriculum in development of supporting technologies and interfaces. The original estimates for this work take the project beyond $5 Million however we will be designing and trimming costs accordingly to adhere to budget. • Phase 3 Pilot implemented start of FY 2019/20; Launch will occur in Fall 2019/20 and first full year of HSDE is FY 2020/21. The first full year when all customers in the age group 15-24 years will have accessed the Phase 3 curriculum is 2029/30. • No incremental operating costs from HSDE Phase 3 - Costs to administer the program remain unchanged at $4.93 M regardless of enrollment (i.e. 10,232 in 2016 and 10,628 in 2017). • Temporary resources will be required to support the pilot and implementation with operational resources. An estimated $200,000 in licensing fees beginning in FY 2019/20 based on and quotes provided by vendors to date.
Cost/Benefit Assumptions	• As the project is implemented the benefits will be realized based on the annual progression of participants through the program to full realization after ten years. See Benefits Section of Business Case. • The cost avoidance benefit target of 2% of at-fault claims for HSDE customers are calculated using a 3 year averages (2015 to 2017) of at-fault claims experience as a base. See Appendix B and C for detailed calculations. • The assumed annual percentage increase in future year PD and BI claim costs is estimated at 5% and 2% as provided by MPI's Actuarial department. • The features of the new program provide confidence that improvements will be realized are based on research, studies and best-practices as documented, included but not limited to: increased practice times, etc. • Driver Examiner FTE efficiencies are based on an improved 1st attempt road test pass rate. (A reduction 2 FTEs in 2021/22). • Cost recovery from students increasing by 100% from $50 to $100. The average cost is ~450 per student and in Northern Communities with smaller class sizes, $800 per student. The $50 fee increase to HSDE customers will not be implemented until the third full year of implementation, 2022/23.

Other Assumptions	• Efforts will continue to further review the admin costs for cost savings needed to address- inflationary pressures, rationalization of fleet, etc. • The benefits and claim savings are related to student participation and do not reflect any incremental effects to adjacent audiences that participate in the program or those that are offered content/learning: ie. guardians/parents, copilots, adult/new immigrant driver education, etc. • The costs related to customer self-serve and book and pay functionality are not included in this business case. • Conceptual technical solution options are high level and are based on system functions desired which shall be validated during the analysis phase. • Any potential monetization as a result of the newly developed program is not contemplated in the calculations. • The social impact is not quantified in quantitative measures.

CONSTRAINTS/DEPENDENCIES

Cost Constraints	The approved Board budget for the program/project is 5 million dollars therefore all associated costs must adhere to this constraint.
Schedule Constraints/ Dependencies	• Resources are available in the timeframe required, including but not limited to: Systems Analysts, Developers, KMS, Web & Multimedia. This includes a blend of internal and external resources weighted more towards external since internal resource as availability is very limited with other projects still underway – customer self-services, etc. • UAT Test cycle availability • Technical estimates include Previous estimates for Non- technical resources remain unchanged (Training, testing, curriculum) and technical estimates include the breakdown of 20% BA, 40%SA, 40% Dev.
Other Constraints/ Dependencies	There are multiple pieces of functionality being delivered by other dependent projects, dates are based on current targets and may change: - Book and Pay delivered from CSS project end of July 2018 - Parental consents delivered from CSS project end of July 2018 - Full authentication being delivered by CSS project required by August 2018 - Secure messaging being delivered by CSS project required by August 2018 - Customer Landing page being delivered by CSS project; requirements needed by May 2018 - Portal Registration being delivered by CSS project; requirements needed by May 2018 - Single Sign on Functionality being delivered by CSS project; requirements needed by May 2018 - CLMS Instructor Access being delivered by CLMS project; needed by end of August 2018

CONSULTATION

The project team has included various business groups to provide input into the solution and all relevant project/program components. Furthermore, the team has included both internal and external stakeholders as well as vendors in consultation.

1	**Spreadsheet Assumptions**		**Source**	
2	Project Contingency	20%	Project	
3	Interest/Discount Rate for NPV calculation	6.50%	See **Note 1** for guidance on discount rate to use for calculating net present value. 4% for low risk project; 6.5% for medium risk project; or 9.5% for high risk project.	
4	Inflation increase on expenses/costs	2.50%	Finance	unless fixed price - amend specific cells
5	Benefits Gross up as % of Salary	30%	HR/Finance	covers pension, cpp, ei, heath benefits, etc

6 **Note 1** Risk free discount rate (i.e. Corporate Cost of Capital or the average expected investment return from MPI's investment portfolio as projected for the next several years (See 2018 GRA) is 4%. This is the rate to be used on low risk initiatives such as repetitive MPI work where the risks to the success of the project are known and have been managed well in the past. A premium rate can be added to the discount rate to reflect riskier than normal project initiatives where there is greater uncertainty of realizing the projected future cash flows or of estimating costs. For these medium risk projects we recommend a discount rate of 6.5%. For instance, the longer the period of expected cash flows, the riskier the realization of such cash flows. Also initiatives in areas new to the corporation or where the corporation has no past experience, this increases the risk of realizing projected cash flows or estimating costs. In these circumstances, this warrants a higher discount rate in calculating the net present value of a project's cash flows. For these high risk projects we recommend a discount rate of 9.5%.

7 **Project Assumptions**

8 **Fee increase for HSDE Program**

9 The current costs to administer the program of $4.9M in FY2017/18 (See Finance reporting "Program 7 High School Driver Ed FY17-18.xlsx")

10 a. The cost recovery is increasing from $50 per student to an incremental $50 in 2021/22 resulting in the cost to participants of the new program

11 i. The average cost to the corporation per participant is approximately $450, however northern communities where class sizes are closer to 6-10 students the proportional cost is closer to $800 per student.

12 ii. See appended slide deck for a jurisdictional scan containing information on other North American jurisdictions that provide similar services and costs associated.

13 b. Efforts will continue to further maintain the admin costs by finding further cost savings - inflationary pressures, rationalization of fleet, etc.

14 The costs related to customer self-serve and book and pay functionality are not included in this business case.

15 Any monetizaton is considered a bonus and is not included in the calculations.

16 The social impact of this project is not quantified in quantitative measures.

43 **Project Cost Assumptions (please list)**

44 1. Years 1-4 project costs are based on actuals. Year 5 costs are estimates.
45 2. Incremental costs for 1M (including any contingency) CR on Option One included in 18/19 . Some costs are already allocated in placeholders and are maintained based on the respective estimated costs.
46 3. Project assumes that the entire budget, including contingency, will be consumed. The requested 1M in incremental funding is less than the project initial estimates; project will be designed and trimmed to fit .
47 4. Placeholders for initial operating costs allocations including printing materials, training with vendors (estimated for Humphrey Group or other vendor), and KTA upgrades.
48 5. Video asset purchasing costs allocated based on estimates provided by vendor.
49 6. Estimates do not include costs for internal non-incremental resources
50 7. Year 5 resources are estimated based on conceptual technical solution. Assumes blend of internal and external resources however weighted more towards external since internal resource availability is very limited with other projects still underway.
51 8. External resources costed at blended rate of $125/hr. Internal incremental resources costed at $75/hour (including salary benefits).
52 9. Estimates are based on project completion date of February 2019

24 **Describe in detail all Project Impact amounts below:**

25 1. The licensing costs are associated with maintaining the technologies involved with enablement of the program, including but not limited to: video assets, etc. The increase in costs are based on inflation as per project assumptions.

26 2. The benefits and claim savings are related to student participation and do not reflect any incremental effects to adjacent audiences that participate in the program or those that are offered content/learning: ie. guardians/parents, copilots, adult/new immigrant driver education, etc.

27 a. PD Claims Cost Avoidance, to develop better and safer drivers, will be measured by tracking PD At-Fault Claims for HSDE graduates of new Phase 3 curriculum. See PD Table below.

28 b. BI Claims Cost Avoidance, to develop better and safer drivers, will be measured by tracking At-Fault BI Claims for HSDE Graduates of new Phase 3 curriculum. See BI Table below.

30 **PD At Fault Claims Cost Avoidance Table See "PD and BI forecast Analysis - HSDE dynamic model vers3.xlsx" for source details and related assumptions.**

		%	FY20/21	FY21/22	FY22/23	FY23/24	FY24/25	FY25/26	FY26/27	FY27/28	FY28/29	FY29/30

37 **BI At Fault Claims Cost Avoidance Table See "PD and BI forecast Analysis - HSDE dynamic model vers3.xlsx" for source details and related assumptions.**

		%	FY20/21	FY21/22	FY22/23	FY23/24	FY24/25	FY25/26	FY26/27	FY27/28	FY28/29	FY29/30
39	1	1	2,596	7,945	13,506	19,286	25,293	31,531	38,010	44,734	51,713	58,953
40	2	2	8,563	17,468	26,727	36,348	46,345	66,178	77,144	88,524	100,330	122,796
41	3	5	17,126	43,670	71,272	99,957	129,766	160,718	192,860	226,228	260,858	296,757
42	4	0	0	0	0	0	0	0	0	0	0	0
43	5	10	25,963	79,446	135,058	192,862	252,925	315,313	380,096	447,344	517,129	589,528

44 3 Cost savings are based on the 15-24 year age range where participants of the program are anticipated to be 1/10 of the range based on new program launch. With the launch occuring in fiscal mid-year the first year FY 19/20 demonstrates a 50% savings of the forecast for 2020/21, and benefits on an annual basis are then incrementally reflected per year at the respective 10%.

45 4 Liaison Officer Term 1 and Term 2 staffing is explained in "Liaison Officer temp staffing.docx" and financial costs calculated on "Liaison Officer Staffing" tab on this workbook.

46 5. See Staffing tab for details on FTE reductions

47 6. To estimate HSDE participants for revenue forecasting we used HSDE Enrollment numbers from IWS and revenues validated in financial statements. In 2016 enrollment was 10,232 and in 2017 it was 10,628.

48 Based on these totals an average of 10,500 was used and assumes the improved curriculum will offset the potential negative impact to enrollment of a fee increase. Strategies will be developed to maintain enrollment at current levels.

	ASSUMES Fee increase to take effect in 2022/23	FY20/21	FY21/22	FY22/23	FY23/24	FY24/25	FY25/26	FY26/27	FY27/28	FY28/29	FY29/30

Staffing Assumptions

Improve the Class 5.0 road test pass rate to 75%. This will result in a reduction of 3,000 second attempt road tests in 2021/22 first full year of curriculum participants being eligible to take road test. Converts to 2 FTE savings in 2021/22. See "HSDE forecast FTE savings for pass rate improvements vers3 May 18.xlsx" for details.

The salary amount is based on mid-range of 52K for a customer service representative class specification and speaks to improvement of first attempt road test past rates to 75% for participants, operational efficiencies.

PROJECT NAME: High School Driver Education (HSDE)

Term 1 Liaison Officer	$	95,000.00	
# of months		23	Nov 1, 2018 to Sept 30, 2020
	$	4,130.43	Monthly salary

	$ 21,478	$ 64,435	$ 37,587	**$ 123,500**

Term 2 Liaison Officer	$	66,000.00	
# of months		16	March 1, 2019 to June 30, 2020
	$	4,125.00	Monthly salary

	2018/19	2019/20	2020/21	Total
Salary	$ -	$ 49,500	$ 16,500	$ 66,000
30% benefits	$ -	$ 14,850	$ 4,950	$ 19,800
	$ -	$ 64,350	$ 21,450	$ 85,800

BlackBerry	$	700	
	$	**86,500**	**$ 210,000**

The business is requesting approval to hire two (2) Term Liaison Officers (LO):

- **LO Term (1) - November 1, 2018 until September 30, 2020**
- **LO Term (2) - March 1, 2019 until June 30, 2020**
- There is **no operations budget** for these term positions currently. The Department is committed to delay hiring until absolutely necessary to minimize the DE over-budget impact for current fiscal (Nov 1 – Feb 28, 2019).

Estimate on total cost (for use in financial analysis in BC):

• Term one	@	$95,000
• Term two	@	$66,000
• Blackberry	@	$700
		$161,700
plus 30% benefits		$48,300
Total		**$ 210,000**

Manitoba Public Insurance

Business Case

PROJECT NAME:	Customer Self Service – Phase 1 , 2 and 3
DATE SUBMITTED:	November 16, 2017
PREPARED/SUBMITTED BY:	John Remillard, Corporate Business Architect, Business Architecture
BUSINESS OWNER	Brad Bunko, VP, IT & Business Transformation & CIO Curtis Wennberg, VP, Customer Service & COO
DEPARTMENT	Service Operations / Business Architecture
DIVISION	Customer Service and Information Technology & Business Transformation

PROJECT DESCRIPTION:
(Provide a summary description of the project along with the current process and proposed future process)

This project will introduce a new customer self-service channel via the Internet and mobile platforms to meet current and future customer service expectations and needs. Building on the business architecture and technology infrastructure being introduced by the Physical Damage Re-engineering program (PDR) with respect to shop appointment booking as well as the portal technology for the business partner portal, this project will leverage these foundational corporate technology investments and assets to introduce an extended customer self-service channel for high volume/low-value transactions for maximum impact.

The Business Transformation Office will assume responsibility for oversight, management, and delivery of this project. Corporately, other key stakeholders include Service Operations, Broker Support Services and Finance.

<u>Phase 1 (Summer 2018)</u>
The FY17/18 and FY18/19 funding for this project will implement the necessary base business and technical architecture which will provide a long-term and strategic platform for the customer self-service delivery channel and provide some relief to customer service delays being experienced in MPI Service Centres. This will include the implementation of:

- Customer portal for on-line authentication via the following type of devices (mobile phone, personal computer, personal device)
- MPI appointment based services eligibility & booking (for road tests and knowledge tests)

<u>Phase 2 (Fall 2018)</u>

This phase will introduce the expandability customer self-service capability of:

- Secure messaging (i.e. ability to send claims status messages)
- High School Driver's Education Registration

- E-notification (transition from paper mail to on-line e-copy of MPI notifications

Phase 3 (Winter 2018)

This phase will introduce the expandability customer self-service capability of:

- Driver abstracts (ability to purchase and obtain electronic copy)
- Claims experience letters (ability to purchase and obtain electronic copy)

This project is also strategically related to the High School Driver's Education – Phase 3 project, the Legacy Systems Modernization project, the customer self-service strategy and roadmap, and Broker Compensation Negotiations FY19/20.

The above stated customer self-service strategy and roadmap and the Broker Compensation Negotiations FY19/20 will collectively establish the long-term vision, priorities, capabilities and overall financial viability of migrating further existing services to the customer self-service channel.

After the base infrastructure is implemented for customer self-service, it will be imperative to invest in future customer self-service 'applets' which align to the direction of the Legacy Systems Modernization project. Also, as each service offering is considered for the customer self-service delivery channel, this business case will be updated accordingly with transaction migration impacts and associated impact to customer portal licensing costs, MPI FTE impacts, MPI operating costs, and broker compensation impacts.

BUSINESS NEED:
(Provide a detailed description of the project/initiative and how it will satisfy the business need. Include opportunities and the issues that led you to prepare this document)

Currently, at peak times throughout the day, urban Service Centres are 'deflecting' up to 20% of our customers to local Autopac agencies due to excessive wait times (excess of 25 minutes) to receive service at the front counter.

Autopac agents also continue to deflect complicated, time-consuming transactions to Service Centres.

In looking at other related Canadian insurers, SGI offers a far greater presence for customer self-service with up to 80% of their transactions available. MPI will review and consider similar self-service offerings in the long-term strategy and roadmap.

Online Service	MPI	SGI

Schedule Estimate	**No**	**Yes**

With the marketplace changes in society and business, customers are getting self-service options from brokers, insurance providers, banks and similar organizations to MPI. In 2014, MPI launched the first customer self-service transaction via the on-line credit card payment process. To-date, no targeted marketing nor aggressive customer communications have occurred and yet over 50,000 customers utilized this service last year.

Lastly, with the pending High School Driver's Education curriculum re-design launch in 2018, there is an opportunity for MPI to permanently establish 'a new way of doing business' with these year-over-year new customers to MPI. With a strong and meaningful customer self-service channel with transactions and capabilities that are relevant to customer needs, the self-service channel will become 'the future way to seek services' with MPI for this customer demographic. This will ultimately transform the service delivery model and ensure that MPI remains relevant to Manitobans' from a customer service perspective.

PROJECT OBJECTIVES:
(List SMART objectives – Specific, Measurable, Attainable, Realistic, Time-limited)

Introducing a customer self-service delivery channel at MPI will:

- Meet current and ongoing customer service levels and demand
- Eliminate excessive customer service delays at Service Centres
- Reduction in operating and other expenses up to $776,000 per annum

PROJECT BENEFITS:

(Provide a description of the benefits that this project/initiative would provide)

The implementation of Phase 1 of a customer self-service channel is expected to generate the following project benefits:

- Eliminate excessive customer service delays at Service Centres
- Reduce Service Centre FTE's by up to 14 through attrition
- Reduction of broker transaction fees
- Meet the current and future customer service needs of an evolving customer base
- Reduce future mailing operational expenses by up to $172,500 per annum

This business case in its current form is not providing a near-term positive financial return on investment. It will however start to provide a positive financial return after year 7. The financial investment is deemed to be strategic in nature and partially a 'cost of doing business' to meet future customer needs from a service delivery and service channel perspective. The business case is also challenged in the early stages due to the licensing model for the portal technology. Until a critical mass of over 300,000 users is met, the portal licensing is an operational costs driver. Once the 300,000 users threshold is reached, surpassed and maintained, the financial benefits of available customer self-serve services opposite the user licensing costs will be more financially viable.

Also, the near-term high-volume/low-value transactions and services envisioned for the customer self-service delivery channel are 'flat fee' based broker compensation transactions. Thus, not having a significant impact on the overall $80M broker compensation operating expenses overall.

An opportunity exists to also introduce a 'kiosk' model for customer self-service in MPI service centres. This concept and associated costs for computer equipment and/or premises renovations have not been incorporated into the business case at this time. This will be a concept that is observed and continuously reviewed and evaluated with subsequent iterations of the business case in conjunction with the customer self-service strategy and roadmap.

This project provides many opportunities to enhance customer service and reduce operational costs from a MPI service centre, mailing costs, and broker compensation expense perspective. Strategic conversations between MPI executive management, MPI Board of Directors, and IBAM executive are required to determine:

- How quickly do we transition to the customer self-service channel
- Which inventory of products, services can be made available thru the customer self-service channel
- What does the future Autopac agent commission structure look like in co-relation to a customer self-service channel

MONITORING OF ACTUAL PROJECT BENEFITS: *(List tools and processes to monitor attainment of listed project benefits*
• Corporate FTE levels • Customer transaction volumes by service channel (self-service, MPI service centres, Autopac agents) • Broker transaction fees • Corporate mailing expenses

IMPACT ANALYSIS: *(Describe the quantifiable and non-quantifiable effects of the outcome of this project. Include a summary only)*	
Who will be impacted	**What is the impact**
Service Centre Operations	Service Centre Operations (front counter service representatives) – reduction in effort and associated staffing required as customers transition to the self-service channel as the primary channel
Driver Licensing	Reduction in effort required to support customer service needs as customers transition to self-service channel as a primary channel
Communications	Customer communications campaign to inform customers of new customer service delivery channel will be required. Conduct client polls to confirm support of new customer self-service strategy
Human Resources	Staff reductions are anticipated to occur via attrition versus staff redeployments
Autopac Agents	Reduction in customer traffic for high volume/low value transactions and corresponding fees
Premises	Reduction in Service Centre real estate footprint over time and facilitate/align to strategy to decommission Service Centre locations

RISK ANALYSIS: *(Describe the impact of risk and the likelihood of it happening, both for proceeding or not proceeding with the project)*		
Potential Risk	**Likelihood (L,M,H)**	**Description of Impact of Risk and description of planned action taken to mitigate this risk**

Risks/Obstacles of Proceeding with Project *(A high likelihood of risk without sufficient planned action for mitigation, may impact the discount rate used in calculating the Net Present Value of forecasted financial benefits. Impact to be discussed with the VM office)*		
Customer transition rate to self-service channel slower than anticipated	M	Will impact business case savings stream and overall financial return of the project. Adoption rates in financial analysis are deemed conservative.

Autopac agents concerned about self-service channel and MPI long-term direction and intentions	M	Will require ongoing dialogue with the broker community.

Risks of NOT Proceeding with Project		
Customer opinion of MPI and services offered could be negatively impacted	M	MPI relevance to and opinion of Manitobans' could suffer.
Lost opportunity to reduce operational costs	M	Operational cost savings opportunity would be lost or deferred
Customer service delays in Service Centres will continue and increase into the future	M	MPI service centres will continue to experience customer service delays and line-ups of customers. Service operation will need to consider FTE increases or service centre front-counter staffing models which increase service availability. There is a risk of increasing ongoing operating costs.
Legend L=Low; M=Medium; H=High		

PROPOSED TIMING
(When, how long, and organizational capacity)

Initial implementation in June 2018, with subsequent expanded service offerings each quarter over FY 18/19.

LEGAL REVIEW REQUIRED?

No X Yes

If yes, include legal review's response:

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED?
(To be considered for medium and detailed business cases)

No Yes X

Enterprise Architecture is already engaged and involved with the business case preparation and the project.

ENTERPRISE ARCHITECTURE REVIEW:

(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)

Business Architecture	Reviewed Date:

	Review Completed By: Findings: Recommended to proceed: Yes / No
Technical Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes/No

INFORMATION SECURITY REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Information Security Office	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes / No

HIGH LEVEL ESTIMATED COST/BENEFIT ANALYSIS:		
Project cost (must be completed)		
• Total estimated range of project cost	$	3,179,495
• Capital percentage (if known)	%	100
Estimated reduction/increases in cost (must be completed if applicable)		
• Continuing annual cost reduction amount	$	500k to 1.5M from 2019/20 to 2023/24
• Continuing annual cost (increases)	$	(330k) to (720k) from 2019/20 to 2023/24
• Other (specify)	$	
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	
• One time revenue increase	$	
• Other	$	

Cost/Benefit Analysis *(To generate these measures see Business Case Financials template at end of package)*		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs	➢ 8
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs	8 years
• Internal Rate of Return (IRR)	%	(34 %)
• Net Present Value (NPV)	$	(2,227,360)
• Other (specify)		

INITIAL ASSUMPTIONS: *(What are you assuming to be true, or what conditions are you assuming will prevail that will make this achievable?)*	
Cost Assumptions	• Customer self-service project will fund customer portal user authentication development and will incur customer portal user licensing costs
Cost/Benefit Assumptions	Customer adoption rates will be impacted by other corporate projects (High School Driver's Education) Broker negotiations in FY18/19 will consider impact of customer self-service project and delivery channel.
Other Assumptions	

CONSTRAINTS/DEPENDENCIES: *(What are the constraints or dependencies, if any, that limit the range of options?)*	
Cost Constraints	
Schedule Constraints/ Dependencies	Project assumes High-School Driver's Education launch by Spring 2019
Other Constraints/ Dependencies	

SIGNIFICANT MILESTONES: *(List the high-level key events, and their dates, that need to occur for this project to be delivered as planned)*	
Project Start Date	FY 17/18
Phase 1 Implementation	June, 2018
Phase 2 Implementation	Fall, 2018
Phase 3 Implementation	Winter, 2018
Project End Date	FY 18/19
Other Milestones	Remaining phases will be part of customer self-service strategy, roadmap and updated business case.

APPROVAL REQUEST/RECOMMENDATION: *(Indicate what project stage and funding $ amount you are requesting approval for)*
Requesting approval of $1.5M for FY 18/19 and approval to proceed with pursuing base technology architecture by end of FY 18/19.

PROJECT NAME: Customer Self Service

List all major financial assumptions used to develop the Financial Template

Line No.	Spreadsheet Assumptions		Source
2	Project Contingency	15%	Project
3	Interest/Discount Rate for NPV calculation	6.50%	See **Note 1** for guidance on discount rate to use for calculating net present value. 4% for low risk project; 6.5% for medium risk project; or 9.5% for high risk project.
4	Inflation increase on expenses/costs	2.50%	Finance unless fixed price - amend specific cells
5	Benefits Gross up as % of Salary	30%	HR/Finance covers pension, cpp, ei, heath benefits, etc

6 **Note 1** Risk free discount rate (i.e. Corporate Cost of Capital or the average expected investment return from MPI's investment portfolio as projected for the next several years (See 2018 GRA) is 4%. This is the rate to be used on low risk initiatives such as repetitive MPI work where the risks to the success of the project are known and have been managed well in the past. A premium rate can be added to the discount rate to reflect riskier than normal project initiatives where there is greater uncertainty of realizing the projected future cash flows or of estimating costs. For these medium risk projects we recommend a discount rate of 6.5%. For instance, the longer the period of expected cash flows, the riskier the realization of such cash flows. Also initiatives in areas new to the corporation or where the corporation has no past experience, this increases the risk of realizing projected cash flows or estimating costs. In these circumstances, this warrants a higher discount rate in calculating the net present value of a project's cash flows. For these high risk projects we recommend a discount rate of 9.5%.

7 Project Specific Assumptions (please list)

8 * Service Centre operations staff reductions will occur thru attrition

9 * High school driver's education launch in FY 19/20 is linked to success of customer adoption rates of customer self-service

10 * ongoing mailing costs reductions will be realized by customer adoption of e-notifications vs. paper mail customer communications channel

11 * customer self-service project will fund the customer portal development in FY 17/18 & carryover into FY 18/19

12 * An assumption is being made that all customers which adopt customer portal will elect to transition to e-notification for all MPI letters etc.

13 * Note this project has future anticipated funding of $1.0M in FY 19/20 and FY 20/21 respectfully that is not accounted for in the project costs all future expanded customer self-service capabilities associated with that funding will have to demonstrate via a revised business case that the investment is worthy of consideration

14 **Based on PMIS licencing scale and the user thresholds, once the threshold is met and maintained for 3 months, the higher volume and lower price per user will immediately apply**

26	Total Project Impact	0	(71,890)	163,906	306,447	495,428	708,264	778,156	2,380,311

27 Describe in detail all Project Impact amounts below:

28	**Customer Take up rate**							
29	MPI Customer Base	1,000,000						
30	Road test/Knowledge test volume	100,000						
31	Customer self service txn adoption rate % for Broker commission (see last assumption below)	10%	20%	30%	40%	50%	50%	
32	HSDE	10,500	10,500	10,500	10,500	10,500	10,500	
33	HSDE parent/co-pilot	22,050	22,050	22,050	22,050	22,050	22,050	
34								
35	Customer self service (services)		20,000	30,000	40,000	50,000	50,000	
36	Customer self service (e-docs)		20,000	40,000	60,000	80,000	100,000	
37	HSDE for life		10,500	21,000	31,500	42,000	52,500	
38	HSDE parent/co-pilot for life		7,277	14,553	21,830	29,106	36,383	
39	**Total - customer portal licences**	**32,550**	**90,327**	**138,103**	**185,880**	**233,656**	**271,433**	

40 * Maintenance costs are a post-implementation operations based funding allocated provided to add minor features/resolve production issues for implemented functions in FY18/19, not associated with adding new capabilities/service. Timing of expense is related to timing of implementation of customer portal and initial self-service functions

41 * Licensing costs are based on PMIS Licensing costs model. Based on customer/user take-up rates the associated rate will be incurred annually per customer

42 * HSDE take-up; assumption is that all year over year HSDE students, parents and co-pilots will utilize the Customer Portal in order to access necessary/applicable content, service and functions associated with the new HSDE program. Volume is based on operational take-up rates for HSDE program

43 * A management decision has been made that customer self-service will incur all associated customer portal licensing fees. (i.e. HSDE business case will not incur portal licensing fees, will be allocated to this business case)

44	*	HSDE for life - assumption is that all HSDE customer are new customers to MPI and based on demographic and customer service needs/preferences will continue to use customer portal as a primary service channel into the future
45	*	HSDE parent/co-pilot for life - assumption is that 1/3 of HSDE parents/co-pilots will prefer to permanently transition for the new customer portal service channel (deemed to be a conservative estimate)
46	*	For 'customer self service' adoption rates - assumed 2% of MPI customers will elect/prefer to transition to the new customer portal service delivery channel (deemed to be a conservative estimate)
47	*	Overall - as the premlinary services planned to be migrated to the customer self-service channel (road/knowledge test appointment bookings, driver abstracts, claims experience letters, and secure messaging for claims status, and electronic document delivery vs. paper mail for customer communications/mailings) the main MPI benefit/impact will be to service provided at MPI service centres vs. Autopac agents.
48	*	Mailing costs - $1 for every edocs customer and HSDE for life and HSDE parent/co-pilot for life.

PROJECT NAME:	BI3/Fineos Upgrade 2020
DATE SUBMITTED:	November 6, 2017
PREPARED/SUBMITTED BY:	John Remillard, Corporate Business Architect, Business Architecture
BUSINESS OWNER	Curtis Wennberg, VP, Customer Service & COO; Brad Bunko, VP, IT, Business Transformation & CIO
DEPARTMENT	Business Architecture
DIVISION	Information Technology & Business Transformation

PROJECT DESCRIPTION:
(Provide a summary description of the project along with the current process and proposed future process)

In order to comply with the contractual provisions of the software licensing agreement between MPI and Fineos, MPI must maintain a 4-year vitality cycle on the Fineos platform. The last Fineos upgrade was completed in early 2016. Therefore, MPI must complete an upgrade of the Fineos platform before the end of calendar year 2020 to maintain status quo annual licensing rates.

The 4-year vitality cycle is a contractual provision of the MPI/Fineos software licensing agreement which requires MPI to maintain a software upgrade cycle on the software platform. If MPI does not maintain the 4-year vitality cycle, there is an option to exercise a 2-year extended maintenance period with a financial penalty of a small % in annual licensing fees and a larger % in the annual customized licensing fee. At the end of the extended maintenance period, if MPI has not upgraded the software, the software will no longer be operationally supported or maintained by Fineos in the event of a defect, business problem, or system issue.

It should be noted that the last upgrade (to release 8.01) of the BI3/Fineos platform was the first upgrade since the initial implementation of the product (release 6.5) in 2010. This project experienced unforeseen technical complications and project execution complexities resulting in significant cost and schedule overruns. The primary lesson learned from that project was to maintain a consistent and more timely cycle of system upgrades.

The Enterprise Systems Support area will assume responsibility for leadership, oversight and delivery of the project and will directly engage and involve key stakeholders from the Injury Claims Management area as well as Financial Services as part of the project delivery cycle.

MPI intends to upgrade to release 8.8of the Fineos software. Prior to the software upgrade component of the project, the ESS will work with Injury Claims Management to prioritize existing MPI customizations of the software that can now be transitioned to out of the box

functionality. The scope and actual customizations will be finalized in preliminary project planning and will be incorporated into four 6-week software delivery cycles.

Due to the limited MPI experience in upgrading the Fineos software, it is highly recommended that the upgrade begin well in advance of the December 2020 deadline for the 4-year vitality cycle as a risk mitigation action to ensure project completion before the December 2020 deadline. Also, from a corporate project portfolio perspective, the timing of the upgrade is optimal as large delivery projects such as PDR are reaching completion and prior to potential start-up of the Legacy Modernization Program.

BUSINESS NEED:

(Provide a detailed description of the project/initiative and how it will satisfy the business need. Include opportunities and the issues that led you to prepare this document)

The Fineos platform is considered to be a "Tier 1" application, and the associated system performance and availability are critical in supporting the Injury Claims Management Department and our PIPP benefits related customers in their rehabilitation case management needs.

Therefore, the Fineos system must be operational and in a stable state to successfully meet the needs of MPI's ongoing day-to-day operational and customer service aspects of our PIPP benefits business. It is therefore critical that the Fineos platform be upgraded to comply with software licensing and support requirements of the software licensing agreement between MPI and Fineos to maintain technical viability and operational support of the software platform.

PROJECT OBJECTIVES:

(List SMART objectives – Specific, Measurable, Attainable, Realistic, Time-limited)

- Upgrade the Fineos software platform to version 8.8
- De-commission some of the MPI customized functionality onto equivalent version 8.8 out of the box functionality to reduce the future effort and costs of future upgrades

PROJECT BENEFITS:

(Provide a description of the benefits that this project/initiative would provide)

- MPI will meet the needs of the 4-year vitality cycle and will avoid incremental annual ongoing licensing costs
- Based on the preliminary scope determination and approach, MPI has identified 11 pieces of custom code that can be retired and migrated to out-of-the-box functionality. This will result in a reduction in the annual MPI customization support/licensing fees related to these identified customizations.
- The anticipated cost savings/avoidance of the two benefits above amount to $127k annually.

- Fineos platform will be migrated to a more mainstream and supported version of the software to reduce the risk associated with software availability and any required maintenance support on required by Fineos.

MONITORING OF ACTUAL PROJECT BENEFITS AND ACTUAL PROJECT COSTS:
(List tools and processes to monitor attainment of listed project benefits and of project costs)

- Successful completion of the project before the 4-year vitality cycle cut-off period
- Annual licensing costs are status quo (without financial licensing cost penalties) based on software licensing agreement licensing fees and actual expenditures incurred. Vendor Licensing fees will be monitored to ensure no penalties are being charged. Tracked to IT Licensing G/L account.
- Annual customized licensing fees are reduced. This will be tracked to IT Licensing G/L Account.

IMPACT ANALYSIS:
(Describe the quantifiable and non-quantifiable effects of the outcome of this project. Include a summary only)

Who will be impacted	What is the impact
Injury Claims Management	The staff will need to be trained on a new version of the software from a user interface and policies and procedures perspective. Size of impact can only be confirmed at the end of the project inception phase. Based on historical upgrades, 2 full-time SMEs were required for the duration of the project.
IT & Enterprise Systems Support	The staff will need to be trained on a new version of the software from a user interface and policies and procedures perspective. Size of impact can only be confirmed at the end of the project inception phase. Based on high-level planning, a team of 6 FTE's and one team leader will be required for the duration of the project.
Finance	Finance staff will need to be engaged on the project to perform quality assurance testing and validation of existing finance policies and procedures. Based on historical upgrade experience, 1 FTE will be required to support acceptance testing phase of the project.
Knowledge Management Services	KMS staff will need to be engaged on the project to prepare updated policies and procedures and training material. Preliminary planning assumes 1 FTE will be required in support for the duration of the project.

RISK ANALYSIS:
(Describe the impact of risk and the likelihood of it happening, both for proceeding or not proceeding with the project)

Potential Risk	Likelihood (L,M,H)	Description of Impact of Risk and description of planned action taken to mitigate this risk

Risks/Obstacles of Proceeding with Project *(A high likelihood of risk without sufficient planned action for mitigation, may impact the discount rate used in calculating the Net Present Value of forecasted financial benefits. Impact to be discussed with the VM office)*		
Project Complexity, schedule and costs	M	The last upgrade of the Fineos platform was a large upgrade and the first upgrade completed since the initial project implementation. The project experienced many challenges from a technical, complexity and project schedule and costs over-run perspectives. MPI is still immature on this platform from an upgrade path perspective, thus, there are inherent risks regarding project complexity, size, and associated project schedule and costs. The project approach to reduce the MPI customizations will reduce overall complexity of the upgrade. Incrementally, this is not a 'major' platform and version release like the previous upgrade in 2016. Therefore, based on feedback and advice from Fineos experts, the upgrade will not be as complex.

Risks of NOT Proceeding with Project		
Increase in Fineos annual licensing costs	H	The MPI/Fineos software licensing agreement requires MPI to maintain a 4-year vitality cycle without financial penalties. If MPI does not maintain that cycle, incremental annual licensing fees will be incurred.
Stability and support of Fineos Platform	H	MPI must maintain the 4-year vitality cycle to maintain software support and ongoing patches and defect resolutions to the software.
Security and operating system risks of cyber threats	M	Ongoing security patches and enhancements are made in the software with releases. Maintaining an upgrade cycle is imperative to reduce the likelihood of a security based incident.
Legend L=Low; M=Medium; H=High		

PROPOSED TIMING *(When, how long, and organizational capacity)*
Project to be initiated in 3rd quarter of FY18/19 and conclude by end of 2nd quarter FY 19/20 which provides ample schedule contingency for the 4-year vitality cycle and the associated due date of December 2020.

LEGAL REVIEW REQUIRED?
No - no impact to licensing agreements, MSA is expected.

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED? (To be considered for medium and detailed business cases)
No this is an existing enterprise Tier 1 application and no changes to infrastructure, hardware etc. are anticipated as part of this project. Enterprise Architecture resources will be engaged as part of the project.

ENTERPRISE ARCHITECTURE REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Business Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes
Technical Architecture	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes

INFORMATION SECURITY REVIEW: *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*	
Information Security Office	Reviewed Date: Review Completed By: Findings: Recommended to proceed: Yes

HIGH LEVEL ESTIMATED COST/BENEFIT ANALYSIS:		
Project cost (must be completed)		
• Total estimated range of project cost	$	2,277,264
• Capital percentage (if known)	%	100
Estimated reduction in cost (must be completed if applicable)		
• Continuing annual cost reduction amount	$	licensing fees cost avoidance and reductions of $126.9k in 2020/21, increasing annually to $136.7k in 2023/24.
• One time cost reduction	$	0
• Other (specify)	$	0
Estimated increase in revenue (must be completed if applicable)		
• Continuing annual incremental increase in revenue	$	0
• One time revenue increase	$	0
• Other	$	0

COST/BENEFIT ANALYSIS *(To generate these measures see Business Case Financials template at end of package)*		
• Discounted Payback in years *(The year discounted benefits exceed discounted costs)*	Yrs	N/A – this upgrade is considered a costs of doing business and supporting the day-to-day operations for our PIPP aspect of our business.
• Payback in years *(The year accumulated benefits exceed accumulated costs)*	Yrs	N/A – this upgrade is considered a costs of doing business and supporting the day-to-day operations for our PIPP aspect of our business.
• Internal Rate of Return (IRR)	%	N/A – this upgrade is considered a costs of doing business and supporting the day-to-day operations for our PIPP aspect of our business.
• Net Present Value (NPV)	$	(1,682,581)
• Other (specify)		
Annual licensing cost avoidance	$	

INITIAL ASSUMPTIONS: *(What are you assuming to be true, or what conditions are you assuming will prevail that will make this achievable?)*	
Cost Assumptions	Assume two external resources; Technical Architect, and Project Manager and various internal staff as detailed in the Financial Analysis file that outlines the project costs
Cost/Benefit Assumptions	

Other Assumptions	Project can be completed within the forecasted funding and before end of calendar year 2020.

CONSTRAINTS/DEPENDENCIES: *(What are the constraints or dependencies, if any, that limit the range of options?)*	
Cost Constraints	
Schedule Constraints/ Dependencies	Project must be completed before end of calendar year 2020 otherwise annual financial licensing penalties will be incurred
Other Constraints/ Dependencies	

SIGNIFICANT MILESTONES: *(List the high-level key events, and their dates, that need to occur for this project to be delivered as planned)*	
Project Start Date	June FY 18/19
Customization Sprint #1	July, 2018
Customization Sprint #2	August, 2018
Customization Sprint #3	September, 2018
Customization Sprint #4	October, 2018
Software Upgrade start	November, 2018
Project End Date	June FY 19/20
Other Milestones	

APPROVAL REQUEST/RECOMMENDATION: *(Indicate what project stage and funding $ amount you are requesting approval for)*
Requesting approval for overall capital project funding allocation of $2,277,263. The fiscal year capital investment/funding is as follows: FY18/19 $1,256,939 FY 19/20 $1,020,325

PROJECT NAME: BI3/Fineos Upgrade 2020

List all major financial assumptions used to develop the Financial Template

Line No.	Spreadsheet Assumptions		Source	
2	Project Contingency	15%	Project	
3	Interest/Discount Rate for NPV calculation	6.50%	See **Note 1** for guidance on discount rate to use for calculating net present value. 4% for low risk project; 6.5% for medium risk project; or 9.5% for high risk project.	
5	Inflation increase on expenses/costs	2.50%	Finance	unless fixed price - amend specific cells
6	Benefits Gross up as % of Salary	30%	HR/Finance	covers pension, cpp, ei, heath benefits, etc

7 **Note 1** Risk free discount rate (i.e. Corporate Cost of Capital or the average expected investment return from MPI's investment portfolio as projected for the next several years (See 2018 GRA) is 4%. This is the rate to be used on low risk initiatives such as repetitive MPI work where the risks to the success of the project are known and have been managed well in the past. A premium rate can be added to the discount rate to reflect riskier than normal project initiatives where there is greater uncertainty of realizing the projected future cash flows or of estimating costs. For these medium risk projects we recommend a discount rate of 6.5%. For instance, the longer the period of expected cash flows, the riskier the realization of such cash flows. Also initiatives in areas new to the corporation or where the corporation has no past experience, this increases the risk of realizing projected cash flows or estimating costs. In these circumstances, this warrants a higher discount rate in calculating the net present value of a project's cash flows. For these high risk projects we recommend a discount rate of 9.5%.

8 **Project Specific Assumptions (please list)**

- project will start in June of FY2018/19 and will be completed by Jun FY 2019/20
- 9 the upgrade will not have any impact to ongoing licensing, maintenance, hardware or staff support expenses
- the upgrade will not require any net new hardware to be purchased as part of the project costs or post-implementation costs
- 10 BI3 platform is on a 4 year vitality cycle, option for 2 year extended but a small % increase in the annual license fee and larger % increase in the annual customized license fee if 4 year vitality cycle is not adhered to.
- 11 Project will be completed by ESS team (vs. BTO) and associated supporting business/operation teams

Manitoba Public Insurance

Business Case

PROJECT NAME:	Finance Re-engineering (FRE) Project (FY18/19)
DATE SUBMITTED:	Nov 25, 2017
PREPARED/SUBMITTED BY:	Cynthia Campbell, Corporate Controller John Remillard, Corporate Business Architect
BUSINESS OWNER	Mark Giesbrecht, Brad Bunko
DEPARTMENT	Finance, Business Architecture
DIVISION	Finance & Information Technology & Business Transformation

PROJECT DESCRIPTION:
(Provide a summary description of the project along with the current process and proposed future process)

In 2015, MPI issued an RFP to hire a consulting firm to review the Finance Division in order to determine the Finance Division vision, mission, and structure to ensure the best use of corporate resources and consistently meet all the Divisional objectives and deadlines in a timely manner. This Finance Division Review was conducted and completed by Deloitte with a report submitted in March 2015.

The Finance Division Review identified opportunities to improve the finance systems and processes to support the success of Finance operations. These opportunities were further explored during a separate engagement in 2015, conducted by Deloitte, which resulted in documented business requirements to simplify, standardize and streamline processes, increase automation and improve the timeliness and visibility of financial information. These requirements formed the basis for the Finance Re-engineering (FRE) project.

Due to other priorities and limited funding, the original FRE project was deferred.

In conjunction with the Legacy Systems Modernization and HRMS - Human Resource Management System Phase 3 / 4 project, the 2018/19 funding for this renewed project will involve an assessment of the long-term strategic fit and viability of the Infor suite of products, potential expanded utilization of the Infor suite as part of the strategy to decommission the Legacy Systems (AOL, DLS, CARS) as well as re-validation of the business vision, roadmap, budget and business case for the Finance Re-engineering program.

The key deliverables from the 2018/19 spend will be a business case, strategy and roadmap, including updating the business requirements established in 2015. This will determine the estimated future spend in 2019/20 and beyond.

BUSINESS NEED:
(Provide a detailed description of the project/initiative and how it will satisfy the business need. Include opportunities and the issues that led you to prepare this document)

The 2015 Finance Division review identified the need for improving process and technology maturity as a high priority. The lack of mature infrastructure fundamentally limits Finance's effectiveness and efficiency. This project will move this maturity along and allow for increased effectiveness and efficiency. Without efficient processes, timely and accurate information cannot be provided to the business.

The current Finance systems are not meeting the current business users needs, the second engagement with Deloitte outlined the future business requirements and the potential for efficiency and effectiveness within the Finance Division. The resulting business case will expand on the infrastructure (human & technical) necessary to support the end users in decision making through improved processes, systems, and the development of performance measures. This project will outline the roadmap to be able to deliver on these potential improvements in order to increase effectiveness and efficiency.

PROJECT OBJECTIVES:
(List SMART objectives – Specific, Measurable, Attainable, Realistic, Time-limited)

This project will be responsible for reassessing the original 2015 FRE business case and recommending and validating and confirming the need for MPI to take future actions. This current project will include the following deliverables:

- Detailed business case
- Financial analysis for updating the financial systems and processes
- Business vision – a strategic description of the business end state
- Project charter
- Project road map

Ultimately the overall objectives of the FRE program is to:

- Provide timely access to accurate financial information
- Increase efficiency and effectiveness of financial processes and system integration
- Provide appropriate support to other Divisions within the Corporation to guide decision making

PROJECT BENEFITS:
(Provide a description of the benefits that this project/initiative would provide)

The assessment will yield an updated business case and establish an updated project roadmap and execution timelines while ensuring that enterprise architecture principles are applied regarding the future solution for FRE and the Legacy Systems Modernization projects. The assessment will also validate the need for the FRE program prior to the significant spend decision being made.

MONITORING OF ACTUAL PROJECT BENEFITS: *(List tools and processes to monitor attainment of listed project benefits*
Completion of a document outlining an updated project roadmap, and a business case with a cost benefit analysis and specific deliverables for the FRE initiative for Board approval, will be evidence of progress of the stated Project benefits for this business case.

IMPACT ANALYSIS: *(Describe the quantifiable and non-quantifiable effects of the outcome of this project. Include a summary only)*	
Who will be impacted	**What is the impact**
Finance	Significant SME support and engagement will be required to complete this project
Information Technology	Significant support and engagement will be required to complete this project
Vendor Management	Provide advice and support with respect to potential Infor MSA and/or licensing impacts

RISK ANALYSIS: *(Describe the impact of risk and the likelihood of it happening, both for proceeding or not proceeding with the project)*		
Potential Risk	**Likelihood (L,M,H)**	**Description of Impact of Risk and description of planned action taken to mitigate this risk**

Risks/Obstacles of Proceeding with Project *(A high likelihood of risk without sufficient planned action for mitigation, may impact the discount rate used in calculating the Net Present Value of forecasted financial benefits. Impact to be discussed with the VM office)*		
Corporate capacity to complete this project, HRMS phase ¾ and Legacy Systems Modernization concurrently	M	Advance planning and corporate project portfolio management and resource management
Resource conflicts between this project and other financial operational activities (regular reporting and project based)	M	Where necessary, secure additional resources to allow required activities to be completed in parallel.
Significant amounts of parallel activities relating to changing systems or changing operational requirements (such as IFRS, ALM, etc.)	M	Additional change management activities may be required to ensure effective understanding and eventual adoption of the proposed changes

Risks of NOT Proceeding with Project		
Independent business and technical architecture views will be established for FRE, HRMS phase ¾ and Legacy Systems Modernization. This could result in a non-optimal business and technical strategic solution to meet future business needs	H	Project re-work may be required if the projects proceed independently.
Legend L=Low; M=Medium; H=High		

PROPOSED TIMING*(When, how long, and organizational capacity)*
Start May 1, 2018 and meeting associated significant milestones

LEGAL REVIEW REQUIRED?
No X Yes

ENTERPRISE ARCHITECTURE AND INFORMATION SECURITY REVIEW REQUIRED? *(To be considered for medium and detailed business cases)*
No X Yes
Enterprise Architecture has been engaged during the development of this business case and will be engaged during the project.
ENTERPRISE ARCHITECTURE REVIEW: The enterprise Architecture team is aware and engaged on this initiative. *(Technical review of the proposed solution to ensure alignment to corporate policies, standards, and business rules)*

Executive Summary

Context and Background

In response to an order from the Public Utilities Board (PUB), MPI has contracted Gartner to conduct an assessment of the PDR program as follows: The PUB ordered that in the 2019 GRA, the Corporation shall file an update, prepared by Gartner, to its 2017 PDR report. The 2017 Order required … *an independent assessment on the development and roll-out of the PDR Project, including the progress of the pilots, the timing of full implementation, the costs of the project and the anticipated savings to be derived from the project.*

Evaluation Approach

Gartner assigned additional senior resources to conduct the updated assessment. The new team is comprised of the leader of our Western Canada Public Sector practice, and the Vice President, Solution and Pricing. They are being supported by the established Gartner team that conducted the review in 2017.

The team reviewed a number of key program artifacts including the following:

- An MPI Management presentation regarding the PDR Program to the MPI Board of Directors (dated April 19, 2018) restating the PDR cost and benefit projections.
- MPI-generated value management analysis which provided data and analysis supporting the Management analysis and recommendations
- Project status reports
- Interviews on site at MPI on April 19, 2018

Program Structure and Disposition

Over the past 5+ years MPI has been on a journey to improve service to Manitobans in three areas:

- Physical damage
- Loss prevention / road safety
- Customer service

This evolved into a business case for PDR with projections for costs at $65M and the identification of a high level benefits stream. The overall business case (benefits – costs) has been analyzed and refined by MPI's value management team and the project team over the past year.

As the program evolved, two conditions developed:

1. MPI had difficulties measuring/breaking out some of the ongoing costs, especially licensing, due to complex license schemes from vendors and components from multiple vendors being used, and re-used, across multiple projects.
2. Senior executives led negotiations with the repair industry (savings) and solution vendors (costs) with limited engagement at the business unit level for developing, monitoring and delivering projected benefits. The resulting agreements sometimes limited the business unit's ability to achieve projected benefits.

MPI management has recently conducted a detailed assessment of current costs/expenditures to date, the balance of the approved available budget, and a detailed evaluation of the benefits that could be achieved from the expenditure of the remaining funds. They concluded that the

benefits to be achieved would not be supported by the cost to achieve them, and they have recommended to the MPI Board of Directors that the CCRS component of the PDR program be cancelled.

Note: there are a few smaller projects within the PDR program continuing and all will complete in 2018/19.

Comparison between 2017 and 2018

Based on the information provided by MPI, Gartner's 2017 report indicated that the PDR Program, was showing a lengthy payback period, but a positive Net Present Value (NPV) of $13.7M (using a 3% discount rate approximating MPI's cost of capital) over the period from inception (2010/11) until 10 years after go-live when benefits start to accrue in 2016/17.

In early 2018, after further internal analysis, the MPI management team restated a number of the projected costs and benefits of the overall PDR program. Management provided the restated analysis to the MPI Board on April 19, 2018.

There is a significant difference in some of the costs and the benefits, and the overall Net Present Value (NPV), between the 2017 Gartner report and the 2018 MPI team restatement. The key differences are an expected project costs of $57M as opposed to the originally projected $65M, and a negative NPV of ($49.9M) as opposed to the pre-restatement Gartner projected $13.7M.

At the highest level the factors for these differences are threefold:

- Some costs that should have been attributed to the PDR Program were not included in the original analysis.
- New evidence shows that some benefits of the PDR Program are planned to be lower than projected.
- MPI is using a newly agreed upon risk-based standard discount rate of between 6.5% and 9.5% for NPV calculations to make project investment decisions.

Gartner has reviewed the MPI restatement. To the degree that the data/analysis has been made available to Gartner, we believe that the restatement is complete and correct.

Gartner Perspective

Gartner has reviewed the latest iteration of the PDR Value Management/Business Case data and related assumptions. It would appear that, in addressing the request from the Board, MPI has followed the advice provided by Gartner and applied a much more rigorous approach to the PDR business case and application of the value management framework. The MPI financial analysis is much more detailed, complete, and sophisticated than we have seen in the past. There is a much greater focus on value management and benefits realization which is a key driver for program success.

MPI has continued to mature its value management capabilities and is now formally tracking benefits. This leads to a more holistic, and potentially more conservative, view of benefits than was previously the case due to the higher level of accountability and operational involvement across MPI for achieving the forecasted costs and benefits. We view this as a positive step forward for MPI.

Gartner's independent analysis, based on the more detailed data available, supports the current value projections. Gartner supports MPI's decision to terminate the CCRS component of the PDR program and to finish the few remaining components in 2018/19.

PDR 2018 Program Evaluation

Report Context and Background

In response to an order from the Public Utilities Board (PUB), MPI has contracted Gartner to conduct an assessment of the PDR program as follows. The PUB ordered that in the 2019 GRA, the Corporation shall file an update, prepared by Gartner, to its 2017 PDR report. The 2017 Order required … *an independent assessment on the development and roll-out of the PDR Project, including the progress of the pilots, the timing of full implementation, the costs of the project and the anticipated savings to be derived from the project.*

The 2017 report provided an assessment of the PDR program including:

- Progress of pilots to date
- Timing of full implementation
- Project costs
- Savings / benefits to be realized

Gartner is pleased to provide this update as requested by MPI. Gartner Consulting provides fact-based consulting services to help clients use and manage IT to enable business performance by bringing together research insight, benchmarking data, problem-solving methodologies and hands-on experience to improve the return on IT investment.

The Gartner report addresses the issues raised in the PUB and also provides an update to the project constraints / challenges identified in the previous report.

Evaluation Approach

Gartner has assigned additional senior resources to conduct the updated assessment this year. The new team is comprised of the leader of our Western Canada Public Sector practice, and the leader of our Solution and Pricing team. They are being supported by the Gartner team that conducted the reviews in 2016 and 2017.

The team reviewed a number of key program artifacts including the following:

- An MPI Management presentation regarding the PDR Project to the MPI Board of Directors (dated April 19, 2018) restating the PDR cost and benefit projections.
- MPI-generated spreadsheets which provided data and analysis supporting the Management analysis and recommendations
- Project status reports

Gartner interviewed a number of key individuals including multiple project managers and business relationship managers and senior members of the MPI program and project organization including the Enterprise Architect, solution architects, the Business Transformation Office, Business Architecture, and Value Management.

Prior PUB orders specified five key areas (Progress of pilots to date, Timing of full implementation, Project costs, Maintenance costs, Savings / benefits to be realized). Given that the program is being completed, we address here the overall program cost and projected benefits to be achieved, and compare that to the findings of the previous reports.

Physical Damage Re-engineering (PDR) Program

Overview

Over the past 5+ years MPI has been on a journey to improve service to Manitobans in three areas:

- Physical damage
- Loss prevention / road safety
- Customer service

This evolved into a business case for PDR with projections for costs at $65M and a high level benefits stream. The overall business case (benefits – costs) has been analyzed and refined by MPI's value management team over the past year.

As the program evolved, two conditions developed:

1. MPI had difficulties measuring/breaking out some of the ongoing costs, especially licensing, due to complex license schemes from vendors and components from multiple vendors being used, and re-used, across multiple projects.
2. Senior executives led negotiations with the repair industry (savings) and solution vendors (costs) with limited engagement at the business unit level for developing, monitoring and delivering projected benefits. The resulting agreements sometimes limited the business unit's ability to achieve projected benefits.

To improve its ability to achieve forecasted benefits, MPI has recently updated its project management methodology by introducing value management and increasing the engagement and accountability of operational management for achieving projected benefits. These changes enable a more holistic, and potentially more conservative, view of costs and benefits and adds assurances that business case costs and benefits will be achieved.

PDR has delivered benefits in the estimating process, but not the claims submission and adjusting process. MPI has re-evaluated the degree to which PDR can support enhancements to claims submission and adjusting, and has determined that an approach that is likely to have more success will be to focus on the claims process as the core of their claims and repairs business. This has increased the focus on legacy modernization and MPI is now investigating the marketplace to understand the capabilities of various vendors in supporting claims processing.

MPI management has recently conducted a detailed assessment of current costs, remaining approved available budget, and a detailed evaluation of the benefits that could be achieved from the expenditure of the remaining funds. They concluded that the benefits to be achieved would not be supported by the cost to achieve them, and they have proposed to the MPI Board of Directors that the CCRS component of the PDR project be cancelled and the few remaining components be completed in 2018/19.

PDR Program Objectives

The PDR project has delivered on some of the MPI originally specified business objectives:

- Ensure vehicles are repaired in a safe and cost-effective manner

- Deliver and orchestrate the full lifecycle of physical damage claims management services, in partnership with the extended repair industry, to meet customers' evolving needs for quality, safety, cost control and service.
- Work with business partners to promote a local collision repair industry that is healthy and sustainable in both economic and environmental terms.
- Work with the global industry to foster safe and cost-effective vehicle repair and occupant protection.

Gartner reported in 2017 that the PDR program was expected to deliver the following:

- Reduction of 50% physical (PD) claims effort in Contact Centre activity.
- Direction of nearly 85% of estimates to distributed estimating (DE) shops
- Correct Repair shop will be identified 98+% of the time.
- Once a vehicle is at repair shop, claim is ready for repairs 98% of the time—no waiting for customer or shop.
- Customers and shops are not required to repeat work already performed, as measured by new process design and customer service experience
- Lower overall claims spend in comparison to current operations which will also preserve relative claims costs in relation to industry
- Less hands-on MPI involvement for most processes for simpler claims through a reduction in the amount of adjuster time and effort required for new First Notice of Loss (FNOL) claims
- Smaller MPI operational footprint achieved through decommissioning and / or repurposing MPI service centres
- Mitigation of leakage risks through ongoing claims financials management, forecasting, audit and monitoring
- Continued health of the overall Repair industry measured by the continued profitability of the Manitoba repair industry.
- Vehicle repairs meet relevant standards as defined and measured by quality of repairs standards and KPI's.

The current projections indicate that the following benefits will not be achieved:

- Reduction of 50% physical (PD) claims effort in Contact Centre activity.
- Direction of nearly 85% of estimates to distributed estimating (DE) shops
- Correct Repair shop will be identified 98+% of the time.
- Once a vehicle is at repair shop, claim is ready for repairs 98% of the time—no waiting for customer or shop.
- Less hands-on MPI involvement for most processes for simpler claims through a reduction in the amount of adjuster time and effort required for new First Notice of Loss (FNOL) claims
- Lower overall claims spend in comparison to current operations which will also preserve relative claims costs in relation to industry

However, the benefits below are projected to be achieved and have MPI's management commitment to track the achievement of the benefits.

- Mitigation of leakage risks through ongoing claims financials management, forecasting, audit and monitoring

- Continued health of the overall Repair industry measured by the continued profitability of the Manitoba repair industry.
- Vehicle repairs meet relevant standards as defined and measured by quality of repairs standards and KPI's.
- Customers and shops are not required to repeat work already performed, as measured by new process design and customer service experience
- Smaller MPI operational footprint achieved through decommissioning and / or repurposing MPI service centres
- Internal efficiencies previously reported have been achieved (and as per Table 1, are expected to continue)

In addition MPI is achieving other benefits to which it is not possible to assess a financial benefits. These are:

- Improved customer service
- Reduced technical risk
- Reduced fraud risk

Table 1: MPI Committed benefits from PDR though 2021/22

Savings Category	2017/2018	2018/2019	2019/2020	2020/2021	2021/2022
Internal Efficiencies	$1, 278,360	$ 924,526	$1,343,115	$1,720,246	$ $1,648,821
2017/18 internal efficiencies as a result of Direct Repair are actuals					
Labour Rate Differential	$3,000,000	$3,000,000	$3,000,000	$3,000,000	$3,000,000
Labour Rate Differential represents the $3 million reduction in labour rates that was achieved by paying the Mitchell licensing fees on behalf of body shops from implementation of DR (2017/18) to expiration of 2nd term of Mitchell Licensing agreement (2022/2023)					
Parts Savings	$ 600,000	$1,050,000	$1,370,000	$2,000,000	$2,050,000
2017/18 parts savings are actuals and savings are monitored in the monthly Estimatics dashboard for Alternate Parts					
Predictive Analytics	$ 83,000	$ 500,000	$ 500,000	$ 500,000	$ 500,000
Source is Special Investigations Unit (SIU)					
Loss of Use	$ -	$ -	$ 43,753	$ 89,694	$ 91,936
Loss of Use staffing reductions - 1.5 FTE saving due to automation of certain claim process efforts					
Claims Audit Recoveries	$ 518,900	$ 500,000	$ 500,000	$ 500,000	$ 500,000
2017/18 claims audit recoveries as a result of Direct Repair are actuals					

Totals	**$5,480,260**	**$5,974,526**	**$ 6,756,868**	**$7,809,940**	**$7,790,757**

MPI has created a new corporate value management process, a new strategic objectives "ownership" direction and a new corporate performance management program. Through these directions, programs and initiatives MPI will be tracking the achievement of all projects business cases and their value delivery.

PDR Program Progress

The PDR program started in 2013. In late 2013 / early 2014 MPI conducted a comprehensive assessment to confirm that the program would still provide the projected benefits. A "Business Re-Visioning" project completed in early 2015 defined an approach which would focus on key outcomes which would drive achievement of the overall business case.

Toward the end of fiscal 2016/2017, MPI restructured the PDR program as reported by Gartner in the May 2017 report:

- Eight PDR projects have been completed.
- Seven PDR projects have been cancelled. MPI determined that they are not strategic and do not add to the business case.
- Five projects now comprise the remainder of the PDR program. Some of these were components of the original PDR projects and some have been added to the program.

At the time of this review, these five remaining projects have been cancelled or largely completed with a few components to complete in 2018/19 as follows:

Completed Projects

1. Appointment Manager
   - A technology refresh of an existing platform as well as the ability to be exposed to external partners over the internet and the ability to support customer self-service. Expands the capability to integrate shop scheduling into the portal.
   - Budget $1.4M, completed at a cost of $1.45M.
   - Outcome: Technology updated; customer scheduling not enabled as yet
2. Enhanced Direct Repair Capabilities
   - Delivers the ability for certified shops to process a broader set of more complex claims and repair types.
   - Budget $2.99M, completed with reduced scope at a cost of $1.80M
   - Outcome: Besides expanding to a broader set of claims, it Includes new functionality such as enabling clients to find a certified shop based on geo-locating capabilities
3. Partner Portal
   - Provides a technical platform for provisioning and management of authentication and authorization for external partner access to MPI services. It also integrates services such as appointment manager (which is not currently enabled). Finally is has updated the technology to avoid obsolescence risk
   - Completed for $2.56M on a budget of 2.41M with change requests.

- Outcome: An improved platform this is the major vehicle for repair shop communications (i.e. repair standards, qualification standards etc.)

In-flight Projects that complete in 2018/19

1. Parts / Loss of Use, budgeted within Enhanced Direct Repair
   - The actual parts budget was $1.2M and the forecast spend is $0.5M
   - The reduction in parts spending represents about 50% of the difference between enhanced direct report budget ($3M) and actual ($1.7M)
   - Loss of Use benefits projected in table 1. MPI originally projected a larger benefit stream but has not been able to reach agreement regarding required changes with repair shops and has therefore removed both further spending and projecting further benefits for Loss of Use Phase 2.

Cancelled Projects

1. Customer Claims Reporting System (CCRS)
   - Included Optimized Adjusting, co-development of the Mitchell solution, building out the CARS solution, managing the change management for the delivered solutions, and building out the analytics tools to monitor and manage the new service delivery channel.
   - Termination costs of $10.2M
2. Remote Estimating
   - Project intended to enable remote and rural repair shops to participate in a collaborative estimating process by equipping rural repair shops with technology to share digital imaging with MPI estimators.
   - Budget $220K, $240K spent.

MPI continued to evolve the PDR program and its definition of projects, as PDR is wound down there are sixteen projects completed (excludes PDR unallocated which is an accounting entry and not a project), one that is still in-flight (Parts / Loss of Use within Enhanced Direct Repair) and eight projects cancelled (see Table 2).

Table 2: Project Status with Benefit streams

Program / Project	Budget	Spend as of March 31, 2018	Disposition (complete / cancelled)	Benefit Stream
Completed / In-flight Projects				
PDR – Original approved budget unallocated	$2.8M	$0.0	N/A	N/A
PDR Phases 1&2	$3.11M	$3.11M	Complete	N/A
Appointment Manager	$1.4M	$1.45M	Complete	Not enabled
Enhanced Direct Repair	$2.99M	$1.80M	In-flight, Parts and Loss of Use remaining to complete	• All Loss of Use • Internal efficiencies & process improvements • Labour rate • Customer Service

Program / Project	Budget	Spend as of March 31, 2018	Disposition (complete / cancelled)	Benefit Stream
Portal	$2.41M	$2.56M	Complete	• Risk Reduction • Service Improvement
Mitchell Data Services (Tableau) - MDS	$0.15M	$0.15 M	Complete	• Contributes to Claims Audit recoveries • Fraud Risk reduction
PDR Program Management	$5.01M	$5.0 M	Complete	N/A
Website Redesign and Portal Consolidation	$4.54M	$4.54M	Complete	• Fraud Risk Reduction • Service Improvement
Collaborative Estimating (CE) & Autochex	$10.75M	$10.75M	Complete	Labour rate
Direct Repair (DR) – previously Distributed Estimating (DE)	$5.26M	$5.26M	Complete	• Labour rate (DR is the primary driver) • Internal efficiencies & process improvements • Customer Service
Accreditation	$1.12M	$1.12M	Complete	Fraud Risk reduction
Shop Support Administration	$1.7M	$1.7M	Complete	N/A
Interim Shop Search	Included in Direct Repair	Included in Direct Repair	Complete	Customer Service
Shop Training Management	$0.12M	$0.12M	Complete	N/A
Parts	Included in enhanced direct repair	Included in enhanced direct repair	In-flight as part of Enhanced Direct Repair	All Parts benefits
Predictive Analytics / Loss Prevention	Not budgeted	$2.19M	Complete	Loss Prevention
Autochex	Included in Collaborative Estimating	Included in Collaborative Estimating	Complete	Customer Service (measurement)
Not in 2017 Report				
JSST (Joint Solution Support Team)	$0.05M	$0.05M	Complete	N/A
PDR Re-Visioning	$0.47M	$0.47M	Complete	N/A
Cancelled Projects				

Program / Project	Budget	Spend as of March 31, 2018	Disposition (complete / cancelled)	Benefit Stream
Customer Claims Reporting System (CCRS)	$23.39M	$16.08M	Cancelled	N/A
Remote Estimating	$0.22M	$0.24M	Cancelled	N/A
Out of Province Estimating	$0.0	$0.0	Cancelled	N/A
FNOL – Self Service Analytics	$0.0	$0.0	Cancelled	N/A
Towing	$0.0	$0.0	Cancelled	N/A
Enhanced Registration Card	$0.0	$0.0	Cancelled	N/A
Enhanced Accident Profiling	$0.0	$0.0	Cancelled	N/A
Body Integrity Inspection Certificate (BIIC) and Certificates of Inspection (COI)	$0.0	$0.0	Cancelled	N/A
Total	$65.49M	$56.59M		

The most ambitious area of PDR was Customer Claim Reporting System (CCRS). Based on a partnership with Mitchell, it proposed to significantly innovate around customer service while providing an extensive collection of trusted data that would provide an analytics base to enable future efficiencies and product improvements and be the basis for road safety analysis.

As noted earlier, in 2018 MPI re-evaluated the degree to which PDR can support enhancements to claims submission and adjusting, and has determined that a more successful approach will be to focus on assessing commercially available solutions can address legacy modernization needs for the claims process. As the project developed a number of elements became clear:

- Claims are complex transactions and they happen infrequently and at a time of high stress for the user; thus the user experience needs to be both simple and sophisticated.
- This is a complex area where experimentation is risky and expensive
- This area is new to both MPI and Mitchell
- Mitchells' estimating based accident reporting system would need to be integrated into MPIs legacy back end system for which MPI is currently assessing the business case and effort to replace.

MPI concluded that it should cancel CCRS and wait for the claims vendors to develop these capabilities while it focuses on "simpler" client interactions.

Note:Current Mitchell cost projections are conservative as Mitchell is a valued partner and future negotiations may enable MPI to limit these fees and/or reallocate some of them to other functional areas.

Comparison between May 2017 and April 2018 Analysis

Gartner reported in early 2017 that, the Program, was showing a lengthy payback period, an Internal Rate of Return of 7% and a Net Present Value (NPV) of $13.7M (using a 3% cost of capital), over the period from inception (2010/11) until 10 years after go-live when benefits start to accrue in 2016/17.

Late in 2017, after requests to management for more detailed analysis, the MPI management team restated a number of the projected costs and benefits of the overall PDR program. Management provided the restated analysis to the Board on April 19, 2018.

There is a significant difference in some of the costs and the benefits, and the overall Net Present Value (NPV), between the 2017 Gartner report and the 2018 MPI team restatement. The key differences are an expected project costs of $57M as opposed to the originally projected $65M, and a NPV of ($49.9M) as opposed to the Gartner projected $13.7M.

At the highest level the factors for these differences are threefold:

- Some costs that should have been attributed to the Program were not included in the analysis.
- New evidence shows that some benefits of the PDR Program (without CCRS) are planned to be lower than projected.
- MPI is using a newly agreed upon standard for a corporate cost of capital of between 6.5% and 9.5% for NPV calculations to make project investment decisions.

Gartner has reviewed the MPI restatement. To the degree that the data has been made available to Gartner, we believe that the restatement is complete and correct.

This report to MPI management and to the PUB, provides Gartner's perspective on the restated PDR value proposition, and on the likely final disposition of the PDR project outcomes.

Gartner developed the 2016 and 2017 analysis framework and the resulting NPV calculations based solely on input provided in interviews with MPI management and with PDR project leadership, and on reviews of project status reports, change requests, budgets, and benefit projections. Gartner made a number of requests for clarification and additional detail on external costs, as well as on the benefits estimates that were provided

An analysis of the differences between the Gartner May 2017 report and the April 2018 MPI analysis follows.

Cost of Capital	
Discount rate (cost of capital) at 3%	Gartner requested that MPI provide a cost of capital/rate of return for determining the NPV, and was told that MPI did not have a standard rate of return, or an NPV template at that time. Gartner made the assumption that MPI, as a Crown Corporation, has very easy access to low cost capital, and therefore selected a low number (3%) at roughly double the inflation rate for the purposes of calculating the NPV. MPI had not previously utilized NPV analysis as part of project investment decisions and ongoing evaluation. Gartner introduced this as part of our assessment report to the PUB. We understand that MPI is adopting this analysis as standard practice, and it is as part of that effort that MPI has developed its proposed corporate cost of capital.

Increased costs	
Mitchell Licensing Fees not included in Total cost of the program	Gartner asked about incremental (software licensing) costs just for PDR, and was informed that the contract was complex and it was impossible to separate these cost components, as it was part of an integrated contract with other Mitchell services. To address this lack of detailed data, among other things, Gartner reported that: • "MPI has operationalized a large number of the PDR projects and the ongoing operations of the solutions are funded through existing MPI operating budget." • "… solutions that are provided on a Software as a Service (SaaS) have no upgrade, support, or maintenance fees and the maintenance and upgrade charges are included in the SaaS subscription agreement and that these costs were included in operating costs" • "The current fee, and projected future fees should be specified in the vendor agreement and should be completely transparent and accounted for in MPI's operating budget. Gartner has not reviewed each of these agreements to confirm that this is the case for all of these agreements and what the pricing amount and structure is for each."
Direct Repair premium paid to repair shops	The $81 premium is paid on all claims made by Direct Repair certified shops. This cost was not reported to Gartner until after the 2017 Report. It wasn't mentioned/discussed in any of the interviews we conducted at that time, nor was it included or referenced in any of the documentation reviewed by Gartner. As such, it was not included in the total program costs documented in the 2017 report.
Changes in Benefit Stream	
Internal Efficiencies	MPI projected internal efficiencies to reach $2.65M per year by 2021/22. This is revised to $1.65M due to the loss of benefits from cancelled projects.
Parts Source Savings	MPI projected annual savings of $2.8M by 2021/22; this is revised to $2.05M after the change in the solution to Car Parts Pro.
Loss Prevention / Predictive Analytics	MPI projected savings of $0.5M by 2018/18 and increasing to $1.0M by 2019/20. This is revised to $0.5M 2018/19 and continues at that level based on actual results.
Loss of Use benefit	MPI forecast $1.05M in 2019/20 rising to $3M by 2021/22. As MPI was unable to negotiate this benefits with the industry, this benefits is now forecast at $0.1M (due to reduced headcount from improved procedures)
Total Loss benefit	This component was removed from the Program subsequent to the last report due to the cancellation of Loss of Use Phase 2.
Claims Audit recoveries	This is a net new benefit of $0.5M / year. It was not previously described by MPI and was not included in the Gartner analysis.

Gartner Perspective on PDR Program Disposition

Gartner Prior Advice to MPI Management

Gartner has provided the following recommendations to MPI management in quarterly reviews going back as far as the December 2016 review:

- Mature value management/benefits realization process.
- Emphasize realistic business cases, disciplined project gating and pragmatic business expectations

Some of the value management / benefits realization recommendations we provided included:

- Retroactively include specific projects in the value management process, notwithstanding an MPI policy that only projects initiated after the advent of the value management framework should follow that framework
- Expand application of the Value Management process to newly identified projects, but also to some of the key projects already in flight – such as PDR, etc.
- Expand the Value Management role beyond advisory and facilitation to include hands on support for organizational units in their development of business cases, baselines, processes, and reporting for value management. Extending it to include value management engagement during project execution (e.g. review of the development of value tracking and measurement into solution deliverables).
- Developing business cases which are realistic and map project deliverables to business value/outcomes with enough details to track identified benefits.
- Increase focus on disciplined adoption of the value management / benefits realization processes.
- Development of communication, measurement processes and tools which make it clear that business owners are accountable for benefits realization

Gartner Conclusions

Gartner has reviewed the latest iteration of the PDR Value Management/Business Case data and related assumptions. It seems that, in addressing the request from the Board, MPI has followed the advice Gartner provided and has applied a much more rigorous approach to the PDR business case and application of the benefits realization framework. The MPI financial analysis is much more detailed, complete, and sophisticated than we have seen in the past. There is a much greater focus on benefits realization which is a key driver for program success.

MPI has continued to mature its value management capabilities and is now formally tracking benefits. This leads to a more holistic, and potentially more conservative view of benefits than was previously the case due to the higher level of accountability across MPI for achieving the forecasted benefits. We view this is a positive step forward for MPI.

Gartner's independent analysis, based on the more detailed data available, supports the current value projections. Gartner supports MPI's decision to terminate the CCRS component of the PDR program and to finish the few remaining components in 2018/19.

We recognize that this is a difficult decision to make given the amount of investment to date, but endorse the newly applied Value Management discipline/approach that has been applied to the PDR Program, and the need for MPI to continually evaluate of the costs/benefits of its large, long-term projects to ensure value is being delivered to stakeholders. The decision to terminate PDR formally recognizes that the expected benefits were not achieved, and in doing so limits the potential future costs (losses) that would have been incurred.

Through the program, MPI has learned that a subset of their clients are quite willing to do accident reporting online and see this capability positively. MPI will keep the vison of a more online enabled business and work towards lower cost and likely more incremental solutions. Mitchell remains a valued partner and future negotiations may enable MPI to limit these fees and/or reallocate some of them to other functional areas.

Gartner has provided advice and recommendations to MPI management to further enhance the likelihood of project and program success in the Appendices to this document.

Appendix: Management Considerations

MPI's Development of Strategic Principles

It seems that through the recent analysis resulting in the restatement of PDR value, and in cancelling the CCRS component of PDR, MPI has developed what is effectively an initial set of strategic principles for MPI. We have captured them for use as a basis for MPIs evolving strategic framework, as follows:

- MPI will use vendor provided claims processing capabilities, either COTS in house or SAAS, as the business process base for long term partner interactions based on the outcome of the legacy modernization review
- MPI will enhance customer service through enhanced web based capabilities, e.g. MPI will endeavor to provide an online claims capability similar to other NA auto insurers
- MPI will be a market place follower, using broadly available software and services from the marketplace services to provide service to clients in the most cost effective manner possible

We see these principles as an important component of a strategic framework that will guide IT (and likely other) investments over the next 3-5 years.

Strategic principles are an essential component of a strategy framework; they provide the guardrails for decision making, and when applied consistently throughout the enterprise ensure that decisions are made on a consistent basis and in line with the enterprise's long-term direction.

The definition and execution of strategy involves many decisions. Without guidance on how to make these decisions, MPI runs the risk of making inconsistent or even contradictory decisions and/or decisions that are not consistent with its strategies, goals and objectives.

Strategic principles, in addition to shaping and influencing the decisions made when creating and executing strategic plans, also provide a starting point for the development of more detailed principles in areas such as the target architecture and operating model required to achieve the enterprise's objectives.

Strategic principles should be focused on the decisions, actions and behaviors that will ensure that MPI stays on track to deliver its strategy. We commend MPI on starting to identify the areas of your strategy where clear guidance is required. In our experience these will often be areas that are either new to MPI or where a change in approach is required. Other organizations have found that strategic principles for risk, innovation, talent and investment priorities are also very useful.

To be effective, a strategic principle must:

- Connect to business outcomes. The principle should be clearly connected to how the enterprise defines success. MPIs business value analysis can provide key insights for developing these principles. Generally, we believe that in the public sector, if your agency's objective is to better serve your citizens, your principles should directly support that mission.
- Be specific to MPI. The principle should not be generic. It should not be applicable to any enterprise anywhere. It should be clear that the principle is specific to your organizational objectives and situation.
- Be clear enough that it cannot be misinterpreted. The meaning of principle should be transparent across the enterprise. There should be no room for ambiguity or differences in how the principles will be applied across the organization.
- Drive decision making. The principle should drive toward a particular alternative. It should help an associate choose between different options, guiding their behavior.

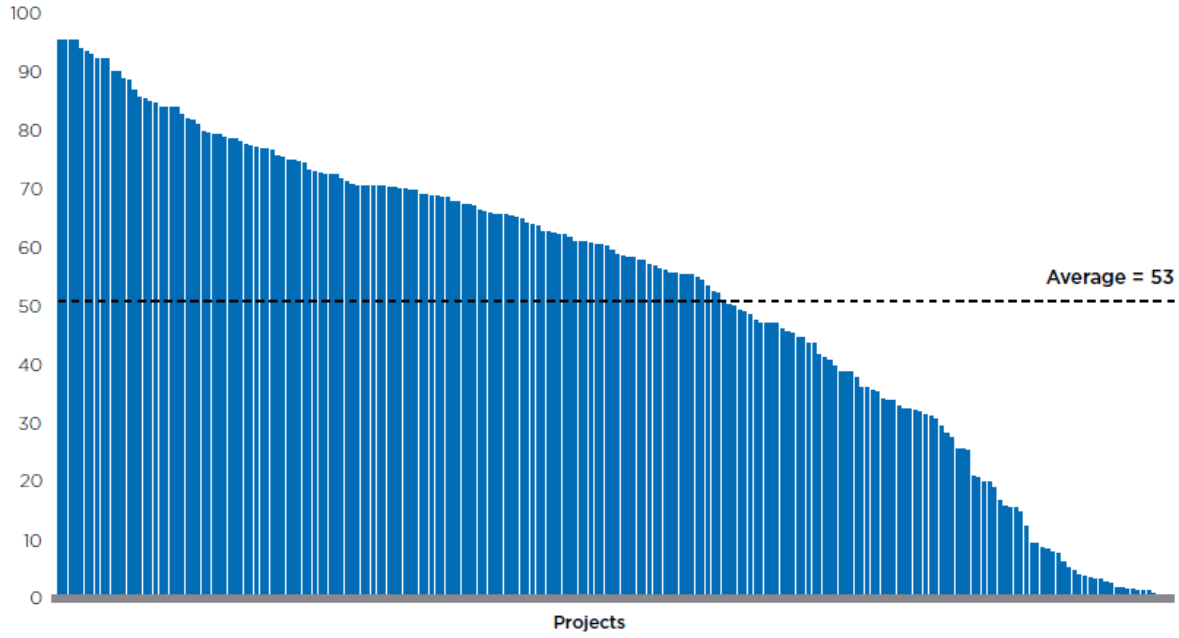
Gartner Insights on IT Project Success

Background and Context

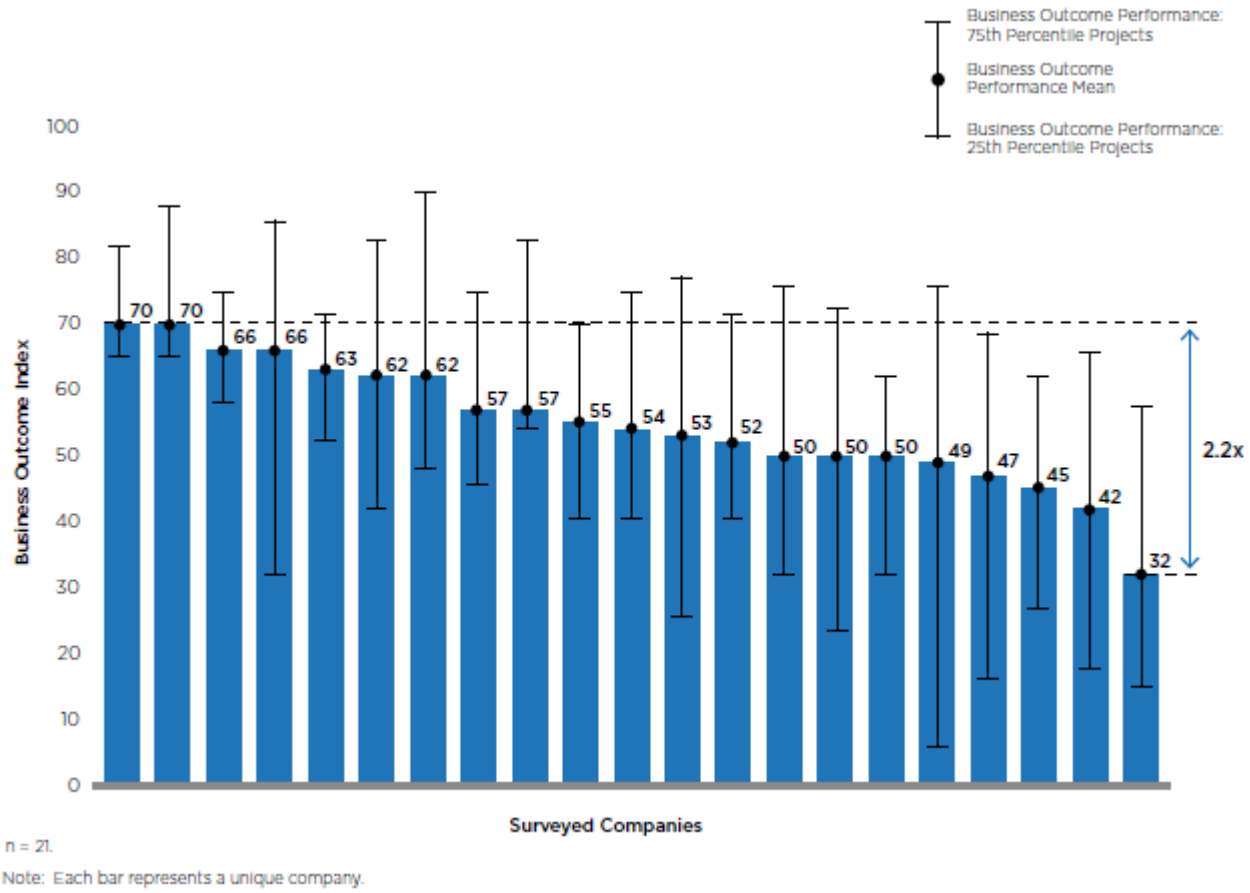
CIO magazine reports that “fifty percent of businesses had an IT project fail during the last year,” while the New York Times finds, “94 percent of large federal information technology projects over the past 10 years were unsuccessful … and 41.4 percent failed completely.” The consequences of project failure can be catastrophic — the Harvard Business Review found that one in six technology projects are “black swans” that fail spectacularly, with a cost overrun of 200 percent on average.

Project failure can not only derail progress towards strategic priorities but also catastrophically impact the bottom line. An analysis by the PMO Executive Council (part of Gartner’s 2017 acquisition the Corporate Executive Board) of their project database reveals a disturbing reality: even among those projects that are delivered at least 90% on time and on budget, the majority fail to deliver business outcomes.

The top-performing projects in terms of budget and schedule compliance attain an average of only 53% of their business outcome expectations.



The Council found that best performing organizations are more than two times better at delivering on business outcomes than the worst performing companies. Also, best performing companies are more reliable at delivering projects to business outcomes.



The conclusion is that projects must be managed from the beginning to deliver business outcomes. MPI is well positioned to continue to improve its ability to deliver business outcomes based on current investments and the positive evolution that Gartner has observed.

Observations for MPI

- Continue to invest in Value Management. MPI has made significant progress in applying value management principles to its project portfolio. We'd recommend this focus be extended into project management teams and MPI's project management methodology. Specifically we recommend that MPI:
    - Emphasize general management capabilities when selecting a project manager and provide stakeholder management training and insights as it is the number one driver of sponsor satisfaction
    - Continue to explicitly link project objectives to organizational goals. A project team and sponsor who can specifically link planned project outcomes to broader organizational goals can continually assess project effectiveness and make earlier and better decisions about changes in scope, timelines, budgets and overall project value.
- Further increase the focus of plans to business outcomes. MPI's project resource management plans should include resources at project conception / initiation time that define project success in terms of business outcomes, and the plans should ensure there is

a matching investment as project phases complete to ensure that benefits are harvested or realized.
  - This requires up front scope to be clear while allowing room for flexibility to manage uncertainties and changes to benefit profiles as the project evolves.
  - The up-front investment should endeavor to create leading indicators of benefits realization and imbed them into project health checks

- Harness the Power of Stakeholders.
  - Expand engagement with stakeholders at project conception and launch as that is the best time to both foster collaboration and provide delivery flexibility to match stakeholder needs and constraints.
  - Educate sponsors into the issues they will need to take ownership of and address throughout the course of the projects.

The Evolution of P&C Insurance and MPI

Background and Context: The Digitalization of P&C Insurance

Gartner Research indicates that Digitalization is beginning to radically transform the worldwide property and casualty insurance industry. Understanding the impact of the most transformational technologies, such as artificial intelligence (AI) and analytics, will be difficult for many P&C organizations given the large number of emerging technologies that are being developed and the budgetary restrictions that are a reality for MPI and most P&C firms.

Gartner sees technology advancing in these area that will affect MPI:

- Mobility and customer support, MPI's customers are no longer tethered to, nor expect service primarily from, a computer. Instead, they are tied to mobile devices, text messaging and social media.
- Maturing use cases for Artificial Intelligence (AI) in areas such as claims handling, where combinations of cognitive computing and Chatbot's are supporting touchless claims processing.
- Continued evolution and adoption of telematics among worldwide auto insurers to support new business models. This includes a growing focus on in-depth analytics, including the use of Internet of Things (IoT) data for behavioral modeling.
- Greater acceptance of software as a service (SaaS) solutions by P&C insurers for policy administration.
- Innovation centering on product development, including the development of on-demand insurance products and improvements in customer experience management.

As unsettling and challenging as these technologies seem, we believe that transformation is essential and required to withstand new market challenges, such as disruption from consumer demand, new market entrants in neighboring markets causing MPI's clients to demand changes in service, and shrinking profit margins.

Observations for MPI

MPI is well aware that the ground shifting beneath it is part of a much bigger and wider change occurring across the majority of public- and private-sector enterprises. We believe that MPI will be affected by many of the same technology advances and business pressures as others in the P&C industry are facing.

To respond to these challenges, Gartner believes that IT organizations need to evolve into a "Bimodal" organization. A bimodal capability is the marriage of two distinct, but coherent approaches to creating and delivering business change:

- Mode 1 is a linear approach to change, emphasizing predictability, accuracy, reliability and stability.
- Mode 2 is a nonlinear approach that involves learning through iteration, emphasizing agility and speed and, above all, the ability to manage uncertainty.

Organizations need to change their methods. They need to adopt more appropriate governance and planning mechanisms, as well as create a capability and a culture that allows them to experiment more, fail fast, fail small and fail visibly. They need to manage this capability in combination with running the more-predictable, mission-critical steady state. This is a bimodal capability.

Gartner has surveyed many organizations to ask "What is the main thing that prevents your IT organization from becoming more bimodal?" There are dozens of areas that clients see impacting their future but the big three are:

1. Culture / Business Culture
2. Priority
3. The Legacy Environment

Culture / Business Culture

Fifteen percent of organization say that culture change is the biggest inhibitor to the bimodal evolution. MPI has made significant advances in recognizing business benefit as the key outcome of projects and this is driving culture change. When combined with a focus on continuous learning, a focus on teams vs. individuals and on personal commitment across IT and the business, MPI has the tools to continue to evolve its culture. Cultural change is a complex and long-term undertaking, and bimodal is about culture change right across the enterprise, not just within the IT organization. MPI can begin developing bimodal capabilities by:

- Starting small.
- Celebrating the value and contribution of both modes, and ensure equity in terms of reward, recognition, development and remuneration. Do not allow Mode 2 to act or be perceived as the "cool kids." The use of analogies can help here: Gartner uses the analogy of Mode 1 "samurais" and Mode 2 "ninjas." We have also seen the use of classical musicians versus jazz ensembles, among others. Ensure the analogy is positive for both sides.
- Showing leadership, personal involvement and commitment to the bimodal cause.

Priority

Thirteen percent of organizations currently adopting a bimodal approach are constrained in their ability to expand the use of bimodal because they consider that they have competing priorities, with other important and/or more urgent things gaining their attention.

MPI has a significant project portfolio led by legacy modernization that it is assessing to understand the costs and benefits over the next 3 -5 years. We recommend MPI take advantage of its new senior leadership team and the engagement of all key business stakeholder to ensure bimodal is a driver of those planned changes by creating a two- to three-year vision of the bimodal capability. To keep the development moving, it's important to have an idea about what capabilities MPI believes it will need in the longer term. This includes:

- How the goals for bimodal will evolve
- The areas of the business to which it will be applied, e.g. internet claims
- The clear roadmap for the legacy environment and enable mode 2 investments around this base
- The capabilities the organization will need to develop (for example, Service Oriented Architecture - SOA), adaptive sourcing, innovation management)

Legacy

Ten percent of organizations cite the constraints of their legacy environment as the primary limitation to them being able to further expand bimodal.

While initial efforts to become bimodal focus on creating a Mode 2 capability, we know that when it gets to the point of scaling the Mode 2 capability, it is actually the renovation of the legacy environment that unleashes the full potential of bimodal.

Fortunately, MPI has already made a commitment to a legacy modernization assessment to assist in determining its future course of action regarding its legacy applications. As such, as MPI embarks on planning for the renovation in parallel to the development of the Mode 2 capabilities, it will need to consider the following key elements (as well as others that will be more unique to MPI):

- Making SOA a key element of new applications
- Creating and sharing Application Program Interfaces (APIs)
- Rationalizing applications
- Changing governance and funding mechanisms to support these activities

Garner encourages the leadership team at MPI to:

- Have an ongoing dialogue regarding legacy renovation across the organization
- Secure and re-affirm sponsorship for renovation from key business stakeholders, particularly those who have imperatives to support new capabilities, and use that as leverage to gain support for the renovation.
- Continue to make the re-envisioning of your application integration and SOA strategies a top priority
- Develop the business application and infrastructure Total Cost of Ownership (TCO) models, using renovation work to optimize the TCO.
- Create a Pace-Layered Application Strategy that recognizes that the business requires several types of applications with different governance, sourcing, funding, data/process integrity, software development and deployment models
- Recognize that it is not possible to move the technology from monolithic IT to bimodal IT without making fundamental changes in the way that money flows to IT. Ensure that re-architecting the money flow is a priority initiative within the bimodal transformation.
- Continue to invest in and improve the level of capability across all eight key disciplines of application value management; in particular, application portfolio management (APM) and project and portfolio management (PPM) highlighted in the list below
    - **Application portfolio management (APM)**
    - **Project and portfolio management (PPM)**
    - Staffing, skills and sourcing
    - Financial analysis and budgets
    - Management of architecture
    - Software processes
    - Operations and support collaboration
    - Vendor management

MPI Determination of Cost of Capital for Value Management Business Cases

Summary:

Proposing a standard corporate Cost of Capital (hurdle rate) for the financial analysis of business cases from March 1, 2018[1] onward as follows:

- 4.0% for low risk projects
- 6.5% for medium risk projects
- 9.5% for high risk projects

Background:

- The Cost of Capital, or hurdle rate, undergoes a regular review to ensure that an appropriate discount rate is applied to cost benefit analysis of projects and other initiatives. This review will be performed on annual basis or more frequently as deemed necessary by MPI Finance.
- Several methods to determine the cost of capital are evaluated and compared to ensure MPI's unique position as a Crown corporation in a competitive market sector is considered.

Cost of Capital (Discount Rate):

Net Present Value (NPV) is a calculation of the present value of a series of cash inflows and outflows over a specified period of time. A key factor is the discount rate utilized to calculate the value of future cash flows in today's dollars. The discount rate should be reflective of the associated risk and the alternative options for utilizing the funds (i.e. a market investment).

The resulting Net Present Value (NPV) is used for decision support purposes to help assess, as required, whether or not a project is attaining the required return on investment or meeting a minimum target. The alternatives reviewed as possible options for the cost of capital for MPI are:

Option	***Description***	***Hurdle Rate***
Option 1	*MPI Expected Average Investment Return*	4.0%
Option 2	*Risk Based Model (Capital Asset Pricing Model)*	6.5%
Option 3	*Average Return on Equity Model*	9.5%

[1] The Initial review was conducted in July 2017 resulting in the following rates ; 4.0%; 6.0% and 10.0%

MPI Determination of Cost of Capital for Value Management Business Cases

Option Analysis – performed by the Value Management Office with input from the Investment Department

Option 1: Average investment return

MPI's actual average investment return on fixed income securities was 3.6%[2]. The overall average investment return on the entire investment portfolio in 2017 was 6.3% and over the last four years was 6.4%[3], however the financial model used for the General Rate Application (2018 GRA) is projecting returns of approximately 4.0% for the next several years.

This represents the investment returns that would have been realized if funds remained within the investment portfolio (i.e. an opportunity cost). That is, when the Corporation has funds available, it can utilize the funds to invest in its portfolio or to invest in projects.

- **Pros** – It is reflective of the Corporation's opportunity cost on a relatively low risk basis. This rate is also comparable to MPI's available access to debt capital as a Manitoba crown corporation [4].

- **Cons** -- MPI's investment portfolio is a conservative portfolio with 70%[5] invested in fixed income bonds aimed to achieve reasonable returns due to the need to comply with government regulations. A hurdle rate based on this rate may be too low to reflect the true risk of corporate projects that are being considered. It encourages decision-making that is not consistent with project risks.

Option 2: Risk Based Model (Capital Asset Pricing Model)

A second alternative is to use a discount rate derived from a risk based model (i.e. Capital Asset Pricing Model) utilizing a minimum rate of return adjusted with a risk premium. This approach for dealing with the relationship between risk and expected return is widely accepted in the business environment.

Using this approach, the discount rate would be 6.35% using an industry average beta (risk factor)[6]. For rounding purposes the discount rate is shown as 6.5%

---

[2] Based on the Feb 2017 naïve forecast in the 2018 GRA. It is the average YTM of the total fixed income portfolio over the 5 year forecast.

[3] The 1 and 4 year total MPI portfolio returns Wes S updated to 2017 are from a returns report from Ellement (MPI's 3rd party return calculation provider).

[4] From the perspective of debt financing the Province's Department of Finance advised that based on Feb 2018 rates, MPI could obtain financing for a 10 year period at 3.5% to 3.625%and for 20 years at 3.625% to 3.75% - Source M. Giesbrecht.

[5] Next year we will need to change the % allocation. We will be adding more fixed income as a result of the ALM study. The change has yet to be formally approved.

[6] See Appendix A for the calculation

MPI Determination of Cost of Capital for Value Management Business Cases

- **Pros** – Incorporates a minimum rate of return adjusted with a risk premium that is comparable to industry.

- **Cons** – Like any model, it is limited by the assumptions made regarding how the market operates and the relationship between variables. Note also that the risk premium is calculated based upon the observed results of US Insurance Firms classified as Property & Casual (P&C) firms.

Option 3: Average Return on Equity Model

As MPI's capital cost structure does not include long-term debt, all projects are funded through retained earnings. For this reason, the discount rate could be set at the expected return shareholders (people of Manitoba) would demand.

One external benchmark for this rate is the average return on equity within a comparable benchmark group in the Canadian Property and Casual (P&C) industry. The average of the 3-year Return On Equity (ROE) reported in 2014 – 2016 is approximately 9.5%[7].

- **Pros** – It is reflective of a competitive rate of return that would be expected in a competitive, profit-seeking, environment.

- **Cons** - When using industry average rate of return as a benchmark for MPI, one must also consider that the industry includes insurers with different capital structures, who are involved in various insurance lines, and have different opportunities and constraints than MPI.

Using the industry average as a hurdle rate will encourage competitive decision making that is comparable to that in the private sector. There is an associated risk that will exist if the Corporation is attempting to meet its social mandate while trying to make decisions using a private sector hurdle rate.

Recommendation

In determining the cost of capital with the above methods a range in rates of 4.0% to 9.5% was calculated. Previous MPI practice was to utilize a singular rate, namely 4.0% which was based on MPI's average return on investments (Option 1 above).

[7] See Appendix B for a list of P&C returns taken from the 2016 SCOR Report

MPI Determination of Cost of Capital for Value Management Business Cases

We recommend that a set of criteria be established that defines the appropriate option and discount rate that should be used in calculating a project's Net Present Value.[8]

Option 1 – MPI Expected Average Investment Return

This Option should be selected for:

- recurring or repetitive projects
- low risk of not meeting the intended deliverables (known and manageable obstacles to project objectives)
- Short project life span (project expected to be completed within 24 months).

Option 2 – Risk Based Model (Capital Asset Pricing Model)

This Option should be selected for:

- All projects that are not defined in Option 1 and 3. This would comprise the majority of MPI new projects.
- The higher discount rate over Option 1 reflects the fact that there is greater risk to attaining project deliverables, there may be a longer project life span and therefore the expectations for positive financial returns are set at a higher level.
- This presumes that the risk analysis as described in the business case, irregardless of the net financial benefits, is within the corporation's risk tolerance level and the identified risks are deemed to be manageable and subject to mitigation.

Option 3 – Average Return on Equity Model

This Option should be selected for:

- Initiatives in areas new to the corporation or where the corporation has no past experience; this increases the risk of realizing projected cash flows or controlling estimated costs. An additional consideration is whether the initiative impacts the Basic or non-Basic line of business. In some instances a higher return and expected cost of capital may be expected from our competitive line.

[8] We also noted that other Options could be considered such as deriving a discount rate in reference to the capital required to meet MCT (Minimum Capital Test) for the relevant line of business. This option has not been pursued at this time.

MPI Determination of Cost of Capital for Value Management Business Cases

Overall consideration

Beyond the guidelines provided above regarding risk, the rational for choosing the risk level and related discount rate should be clearly explained in the business case based on consultation between business case stakeholders and the Value Management Office/Chief Financial Officer.

MPI Determination of Cost of Capital for Value Management Business Cases

Appendix A

Capital Asset Pricing Model (CAPM)

In equation form, the CAPM is represented as follows:

(1) $k_e = R_f + ß * (R_m - R_f)$

where

k_e is the required return on equity capital.

R_f is the current expected return on risk-free assets. The interest rate on a 2 year term Government of Canada (GOC) bond is used to represent a close proxy for a risk free rate for MPI. The 2 year GOC rate (as of Feb 1, 2018) is 1.9%[9].

ß is the degree of systematic market risk for the stock (correlation to the broader market). It reflects the company's ability to achieve the return on investment expected by its shareholders while meeting the debt service requirements of its lenders. Although MPI does not have a calculated ß, data from Value Line indicates that US companies in the Insurance (Property/Casual) sector have an average ß of 0.84[10].

R_m is the expected return on risky equity investments, and (Rm - Rf) represents the premium required by investors in the average stock in the market. The expected return on MPI's combined Canadian and US equity portfolio is forecasted at 7.2%[11].

Substituting these values into formula (1) we get (2).

(2) $Ke = 1.9 + .84 * (7.2 – 1.9)$

$Ke \approx 6.35$

Therefore, rounded to the nearest half percent, Ke, the required return on equity capital is calculated at 6.5%.

.

[9] Source:Bank of Canada. Higher risk rates are the 3 year GOC rate of 2.0% and 5 year rate of 2.14%
[10] Average beta calculated from Value Line data for 50 publicly traded US P&C insurance firms as of January 2018. Source: Damodaran Online
[11] 2018 GRA forecasted return was 7.2%. The 2019 GRA forecast hasn't been determined yet.

INFORMATION TECHNOLOGY

IT.1 USING INFORMATION TECHNOLOGY TO DELIVER VALUE

To continue to provide value to its customers and partners, Manitoba Public Insurance (MPI or the Corporation) must always seek to improve and evolve how it delivers products and services. This requires regular review and ongoing investments in people, processes and technology. This cannot occur in isolation as business success requires the right Business and Information Technology (IT) capabilities at the right time. IT is only effective when working in lockstep with the Business Units to determine those capabilities. Further, developing new capabilities or enhancing existing capabilities must occur in a structured and systematic approach, with the appropriate level of oversight and external review.

This year's IT chapter highlights this in the following sections:

- IT Strategy: Using Enterprise Architecture concepts, MPI highlights linkages between the Business Plan and Capital Master Summary. This strategy emphasizes the Business and IT capabilities needed to ensure MPI is successful, as defined in its Annual Business Plan.
- External Labour Update: An update has been included below highlighting continued progress towards reducing the number of consultants and the targeted cost savings. A separate appendix has been provided which further quantifies this progress including supporting tables from past GRA submissions.
- Project Updates: Reflecting emphasis on how IT supports MPI's objectives and strategies, project updates are now included in the Value Management section.
- Benchmarking: The latest Gartner assessment of IT capabilities is included in the Benchmarking section, including an update on Gartner recommendations and related next steps.

IT.2 USING IT STRATEGY TO CONNECT THE BUSINESS PLAN AND CORPORATE CAPITAL MASTER SUMMARY

In the 2016 GRA, MPI shared its IT Strategy in *2016 GRA Volume I IT Strategy* which outlined:

- The Basis for the IT strategy, including Architectural Drivers and Principles
- Key Drivers for Change (Business Drivers and Information Technology Drivers)
- The Corporate Roadmap of Strategic IT Initiatives

In the 2019 GRA, MPI has continued to evolve and has a new IT Strategy which focuses on the alignment between Business objectives and strategies, and IT investments. This new document focuses less on specific projects and more on bridging strategy and action, ensuring that the necessary Business capabilities and IT capabilities are developed or improved to meet business needs. This document leverages the MPI Annual Business Plan published in April 2018. Key sections of this year's IT strategy include:

- Business Context, Business Objectives, and Strategies; highlights the current context, objectives, and strategies for business success which will be considered in this IT strategy
- Major Influences and Guiding Principles; describes several major influencers that need to be considered in the strategy and reflects experiences and best practices which are used to guide all IT decisions and shape the development of business and IT capabilities
- Developing Business and IT Capabilities and Required capabilities; defines and explains the business and IT capabilities which are required for development through active or yet to be planned projects (aligned to key business objectives and strategies)
- Applying the IT Strategy to Projects and Operations; provides an overview of the methodology, and highlights how the strategy is expected to impact both business and IT capabilities, and the organization in general

The IT strategy has been included in *Part IV(ii) IT Appendix 2 – IT Strategy 2018-19* and will be updated annually.

IT.3 EFFECTIVELY MANAGING IT LABOUR

As per Order 128/15 – 10.4 MPI developed an approach to transition up to 27 positions from external to internal over the 2016-17 to 2019/20 fiscal years. Details on this approach can be found in GRA 2017 - Volume I, Chapter 3, Section IT Update. The 2019 GRA update on this strategy is as follows:

- To date, twenty (20) positions have been successfully converted from external to internal.
- Cost savings are in line with amounts that were previously submitted to the PUB.
- Potential positions to be converted continue to be assessed and MPI remains committed to converting the remaining seven (7) positions by 2019/20.
- Once the external labour strategy has been fully executed the annual cost savings are expected to be between 2.4 and 3.0 million per annum.
- MPI continues to explore opportunities to reduce the volume of and costs related to the use of external labour and anticipates additional measures in place in Q4 2018/19; the approach and related business case are currently under development.
- An update on the results of the external labour strategy and the additional measures taken in 2018/19 will be included in the 2020 GRA.

MPI has updated and filed previously requested tables and charts related to External Labour, please see: *Part IV(ii) IT Appendix 1– External Labour Measures and Metrics* to further quantify this update.

IT.4 MPI EFFECTIVELY MANAGES STRATEGIC CORPORATE INITIATIVES

As noted in the introduction, the IT Strategy highlights linkages between the Business Plan and Capital Master Summary. Details for these projects, including business cases have been included in the 2019 Rate Application. Please see: *Part IV(ii) Value Management* and related Value Management appendices.

IT.5 MPI EFFECTIVELY MANAGES INFORMATION TECHNOLOGY COSTS

To ensure comparable performance to an industry peer group, MPI continues to leverage benchmarking services provided by Gartner. The results and findings based upon 2016/17 data are included in the Benchmarking Chapter, as well as Gartner recommendations and responses/actions. Please see:

- *Part IV(i) Benchmarking BMK.5 IT Service Delivery Capability*
- *Part IV(i) Benchmarking Attachment A – Gartner CIO Scorecard*
- *Part IV(i) Benchmarking Appendix 1 – Gartner Recommendations*

Appendix 01: EXTERNAL LABOUR - MEASURES AND METRICS – STATUS UPDATE

TABLE NAME(s): Figure IT App 1– 1 IT Personal / Figure IT App 1– 2 IT Personal Costs

REFERENCE: Update on PUB (MPI) 1-31 (2018 GRA) & (II Exp. Appendix 18 PUB/MPI 1-18 (2017 GRA) - Figure IT - 1: IT Personal & Figure IT - 2: IT Personal Costs

DESCRIPTION: Figure 1 below contains a 5 year historical summary and a 3 year forecast for both internal resources and consultants that have worked and are expected to work within the Information Technology area. Figure 2 below provides the actual spend for 2017/18 and also the forecasted spend on internal and external resources for the next three years.

ASSUMPTIONS / CONSIDERATIONS / NOTES:

- Tables updated to include 2020/21 figures and revised forecasts for 2018/19 and 2019/20.
- Figure 1: Note - As of May 2018 # of external has been reduced to 82.
- Figure 1: Corporate Reorganizations occurred in 2017/18 and 2018/19 which resulted in 35.6 internal FTE being transferred into the division from other areas of the corporation. The increase has been identified as a separate line item in Figure 1 below.
- Figure 1: 18 Consultant Conversions also appear as a separate line item below. These positions were added into the operational budgets (2017/18 & 2018/19). Note – Three additional conversions occurred in 2016/17…these positions are reflected in the project budgets.
- Figure 1: Additional changes listed decrease the overall FTE totals by 2.5 in 2017/18 and 0.6 in 2018/19.

- Figure 2: Approximated internal costs based on budgeted/forecasted FTEs. Approximated external costs based on anticipated consultants in relation to known projects.

TABLE NAME(s): Figure IT App 1- 5 IT Personal – Internal (FTE) / Figure IT App 1- 6 IT Personal – Consultants (FTE) / Figure IT App 1- 7 IT Personal – Internal Costs / Figure IT App 1- 8 IT Personnel - Consultant Costs / Figure IT App 1- 9 IT Personal - FTE 2011/12 – 2020/21 / Figure IT App 1- 10 IT Personal – Costs 2011/12 – 2020/21 / Figure IT App 1- 11 Average Cost per FTE

REFERENCE: Update on PUB (MPI) 2-17 (2018 GRA) & PUB (MPI) 1-31, PUB (MPI) 1-27 (2017 GRA) – Figure IT - 6 thru 12.

DESCRIPTION: The tables below contain a 5 year historical summaries of IT Personal and their related costs. The last three tables provide a broader perspective and cover a ten year period (7 years actual and 3 years forecast).

ASSUMPTIONS / CONSIDERATIONS / NOTES:

- Figure IT App 1- 5 to 8 updated to include forecasts to 2020/21
- Figure IT App 1- 9 to 11 updated to include forecasts to 2020/21

- Figure IT App 1- 5 to 7: Major changes for 2017/18 & 2018/19 include the following:
  - Corporate Reorganizations – 27.6 FTE added to division in 2017/18 & 8 FTE added in 2018/19
  - Consultant Conversions – 11 FTE added to operational budget in 2017/18 and 7 FTE added in 2018/19
  - New Positions/Reductions – Net change -2.5 FTE in 2017/18 and -0.6 FTE in 2018/19.
- Figure IT App 1- 5: The remaining consultant conversions will occur in the 2019/20 budget.
- Figure IT App 1- 6: Variance in 2017/18 was due to additional testing requirements for the CLMS and the Infor Lawson upgrade projects. Projects went a little longer than anticipated…as of May 2018 the number of consultants has been reduced to 82. As noted in the IT Chapter, External Labour Update, it is anticipated that there will be additional reductions to 2019/20 numbers. Specific details are not available at the time of this submission so previous forecasts have been leveraged.
- Figure IT App 1– 7: Variances due to the staff increase as explained in the major changes note above.
- Figure IT App 1- 8: The variance mainly reflects changes to major projects requiring fewer consultants and the external labour strategy accelerating vs. plan.
- Figure IT App 1- 11: * denotes an increase in average consultant fee for 2013/14 is due to one-time transition/migration cost of IBM data center operations. The additional reduction measures identified in the IT Chapter, External Labour Update, are anticipated to further reduce average external labour cost per hour.

  An update is expected in 2018/19 and will be included in GRA 2020.

Message from the Chief Information Officer at MPI

Manitoba Public Insurance's Information Technology Strategy establishes the strategic direction for information technology (IT) investments within the corporation for the foreseeable future. At its core, the strategy is intended to guide which IT capabilities will be created to support the business capabilities required to meet the Corporation's business objectives. This will result in the delivery of better products and services, and ultimately enhancing the value being offered to Manitobans.

At MPI, business and technology decisions need to envision beyond the corporation and consider the extended enterprise of business partners while continuing to align to the service of our customers. The goal of this alignment is to support the persistent optimization of core business functions, including ensuring the Corporations' ability to adapt to changes in the auto insurance and registration environment.

The maturing of value management within the corporation has created a more formalized process in the selection of candidate initiatives. Included in this are specific actions designed to strengthen current enterprise governance, a key to our success going forward.

This year, MPI is performing an assessment of our legacy systems to see if they are a candidate for modernization based upon their ability to meet the needs of the corporation into the future. Some of the drivers of this assessment are the evolving customer expectations on service delivery, product and service flexibility and agility, and application risk. Given the pervasiveness of our legacy systems within our technology infrastructure, the outcome of this assessment may have a significant impact on our IT roadmap and how IT capabilities are created for the next several years.

On an annual basis, the Information Technology and Business Transformation division (ITBT) will update this strategy to reflect the progress made and any changes required to maintain alignment to the Corporation's business plan.

_____

Brad Bunko

Vice President, IT, Business Transformation & Chief Information Officer

1. Executive Summary

This IT Strategy marks the start of a fundamental shift in how MPI views new technology and how new technology will be implemented. Over the last two years (since our last IT Strategy) there has been careful consideration by Management and our Board as to how we need to evolve to increase our effectiveness at introducing the technology needed for business transformation. The following table summarizes the significant changes we have adopted in our strategy by indicating what our past practice was, what are new practice is and how we will ensure our change has been effective.

Where we were	**Where we are going**	**How we are going to measure success**
Leaders in creating innovation and pursuing unproven technologies	Adopt proven mainstream technology	Through the maturity of the products and solutions we implement
Executed High risk projects	Identify all risks prior to project initiation and incorporate into project decision	Risks initially unaccounted for do not surface during or post project delivery. Projects attain value benefits stream projections
Project Governance with non-business project sponsor for all projects	Project sponsor is the Operational Business Champion, will have shared accountability with the Business Transformation Office and has a long term stake in ensuring the benefits stream is met	Ongoing benefit realization is achieved through the Operational Business Champion.
Customize out of the box software to suit our processes	Align, wherever possible, our processes to industry best practices that is incorporated in vendor provided software	Reduced software costs and adoption of industry best practices
Candidate project were not vetted through a detailed value management process	Value management discipline becomes engrained in MPI process and culture and participates through the project lifecycle and beyond	Project decisions are based on the Value Management Process. IT expenditures will only be incurred after a value management assessment has been completed.
Technology driven change within the organization	IT capabilities are created to support Business Capabilities that are needed in pursuit of a Business Objective	Business value for IT expenditures

Within MPI's Annual Business Plan (published April 30, 2018) MPI outlines its mandate and strategic direction. This plan highlights MPI's key priorities and considerations (internal/external environment, and associated risks) as well as key metrics and targets, budgetary and human resource requirements, and capital plans.

The Annual Business Plan effectively sets the corporate direction for the 2018/19 fiscal year, and provides guidance for future years. It does this by highlighting the priorities which have been traditionally found in many supporting documents such as detailed budgets, schedules, briefing notes and business cases; and providing clear guidance on the path forward for the Corporation. The Annual Business Plan outlines strategies and specific activities that will support the achievement of the following business objectives and related strategies.

Business Objectives; with a focus on core Auto Insurance and DVA:

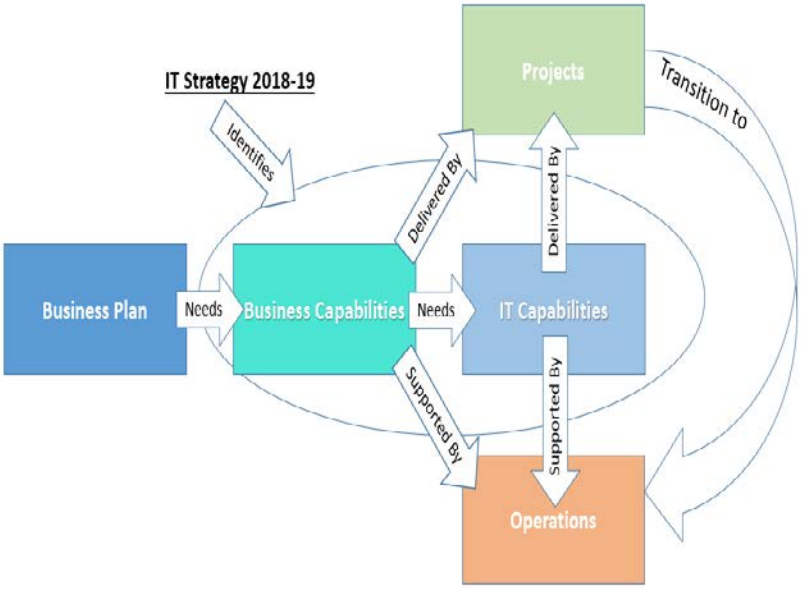
- Rate Stability and Predictability
- Operational Excellence
- Product and Service leadership

The IT Strategy fulfills a similar purpose, providing corporate IT direction for 2018/19 fiscal year and guidance for future years. Its primary purpose is to support the business objectives and strategies outlined in the Annual Business Plan; outlining which business and IT capabilities are needed to achieve these, and which specific capabilities need to be added, changed or improved to ensure MPI is successful in achieving its business objectives. The IT Strategy outlines how the practice of Enterprise Architecture will be used to ensure that the right set of capabilities are developed, at the right time, for the right cost.

This IT Strategy is a considerable evolution from an earlier version (June 2015) with significant emphasis on supporting the MPI business. This IT Strategy also reflects improved process maturity in several key areas:

- Enterprise Architecture: Increased emphasis on definition and alignment of capabilities.
- Information Security: Increased alignment to industry frameworks and best practices have brought structure and focus to this domain.
- Value Management: Improved focus on business cases and linking projects to business objectives and strategies.

By design, the IT Strategy sets the technology path forward based on the business context, business objectives, and business strategies for the current fiscal year and for future years. The IT strategy then applies guiding principles and considers major influences to develop the business capabilities and IT capabilities required to be successful. Business and IT capabilities are delivered by projects. Successfully implemented projects result in the transfer of business and IT capabilities to operational areas, which leverage and maintain these capabilities.



The Value Management process provides oversight to these projects to ensure they deliver appropriate business value for the investment made, as documented in the business case.

The Legacy Modernization Assessment project will have a significant influence on the future direction of IT within MPI. This assessment will review the feasibility and cost of replacing our core Insurance and Driver/Vehicle Registration systems and will complete at the end of Fiscal Year 2018/19. For this reason, this version of the IT Strategy will provide direction for the current year and guidance for foreseeable future years, with the understanding that significant change may be driven by the Legacy Modernization Assessment and will need to be factored into future versions of the IT Strategy.

The value of Legacy Modernization is derived from supporting the current and future needs of the Insurance and Driver/Vehicle registation businesses. Potential solutions will be evaluated for upfront value (business and IT capabilities gained by modifying existing processes and avoiding customization) and long term cost effectiveness .

There are also changes to the business context, objectives and strategies which need to be reviewed and considered on an ongoing basis. To ensure continuous alignment to the business direction, the IT Strategy will be reviewed, updated and communicated annually.

2. Introduction

Manitoba Public Insurance (MPI) has demonstrated a dedication to cost containment and a commitment to providing Manitobans with automobile insurance rates that continue to be among the lowest in Canada. Given the continuous advance in technology and the changing automotive industry, the Corporation also continues to refine and adapt our products and services with our customers and business partners in mind. By continuing to focus on our existing value proposition, as well as exploring new ways to create value for our customers, by consistently providing exceptional coverage and services, MPI can achieve its mission and maintain control of costs.

Exceptional coverage and service when combined with a focus on cost control is challenging when using legacy technologies. For a time, legacy systems can be stretched and strained beyond their original designs, but there is a price - incrementally increasing costs with each major enhancement. However, moving away from these legacy systems, without proper planning and diligence, can have significant cost implications and not deliver the required business value. Legacy system modernization requires major decisions to be made: such as, whether to build or buy, what technology to grow or replace, what change is critical now, and what change can be deferred. These major changes cannot be considered in isolation. They must be confirmed as appropriate for the business environment, aligned to current and future business needs, and consider the current technology environment and parallel technology priorities. The focus of this IT Strategy to provide clarity and focus on IT matters, in a way that is continually aligned to business needs.

This IT Strategy uses the concept of capabilities (combinations of people, processes, and technologies to achieve a business outcome), to ensure there are effective links between major documents such as the Annual Business Plan to the Corporate Capital Master Summary. The advantage of this approach is that it results in continuity and consistency across multiple parallel initiatives. This approach can be adjusted based upon the approved program portfolio, and complements the Value Management process / business cases which illustrate the proposed projects are prudent and necessary.

The IT Strategy is focused on the current and future needs of the business, and captures the key context, considerations and principles which frame this understanding. To ensure a full and comprehensive view, business needs must be examined at the highest level (Annual Business Plan), then specific strategies and objectives based on the business plan, then specific plans to impliment those strategies and achieve the objectives (operational and capital projects).

The IT Strategy then outlines the capabilities needed to meet these needs and the approach to integrate these capabilities into projects and operations in the 2018/19 fiscal year. The information is organized as follows:

- Business Context, Business Objectives, and Strategies; highlights the current context, objectives, and strategies for business success which will be considered in this IT strategy
- Major Influences and Guiding Principles; describes several major influencers that need to be considered in the strategy and reflects experiences and best practices which are used to guide all IT decisions and shape the development of business and IT capabilities
- Developing Business and IT Capabilities and Required capabilities; defines and explains the business and IT capabilities which are required for development through active or yet to be planned projects (aligned to key business objectives and strategies)
- Applying the IT Strategy to Projects and Operations; provides an overview of the methodology, and highlights how the strategy is expected to impact both business and IT capabilities, and the organization in general

3. Business Context

These external drivers will shape our business over the foreseeable future include:

- *Changing customer expectations:*
  Customers expect enhanced service capabilities that are oriented toward the customer experience they have grown accustomed to from online retailers. These enhanced service capabilities affect the speed (faster responses from insurance companies), access to and quality of service (more self-service and better analytical insight into customer preferences), and product features (more-individualized products and services). These customer expectations vary based upon demographics and require MPI to refine its methods for measuring customer expectations and engagement, and further developing analytic capabilities. The introduction of new channels adds complexity to the service delivery model and increase expectations for service availability for any technology solution.

- *Partnerships and the extended enterprise:*
  Product delivery through insurance brokers and physical damage claims services provided by the repair industry are critical to the MPI service delivery model. MPI will continue to be an extended enterprise, reliant upon partners to provide services directly to customers with IT systems acting as the conduit between all parties. These systems need to interoperate with an increasing volume and variety of partner and customer technologies.

- *Traffic Safety Culture:*
  MPI, in partnership with Manitoba Infrastructure, is pursuing the goal of having the safest roads in Canada and pursuing the objective of significantly reducing fatalities on our roadways. This goal is challenged by new trends such as “texting and driving” which impacts claims frequency, as well as potential impacts as a result of the legalization of cannabis. MPI continues to invest in education, control, and awareness programs. Integrating technology solutions into these programs allows MPI to reach customers in new ways. Through the use of analytics, program results can be further quantified and improved.

- *Vehicle technology changes:*
  New technologies, such as partial and full autonomous vehicles and the Internet of Things (IoT), are changing the risk landscape for insurance companies. With the potential to affect premiums going forward there is the need to monitor these changes and take appropriate actions to mitigate their associated risks. The near term impact can be seen in Physical Damage costs as new technologies (ex. automatic parking, pedestrian emergency braking) reduce the frequency of accidents but result in higher severity (aluminum alloys require special tools and training; and in vehicle technologies increase the cost and complexity of repairs). This requires the technology behind estimating and adjusting solutions to be flexible, continuously updated, and consistently available – connecting MPI and its repair partners.

- *Insurance Industry Requirements:*
  The insurance industry is facing changing regulations and in some cases, more supervision by regulators at the federal or global level. This results in stricter solvency capital regulations that are forcing insurers to set aside more capital for the business that they are underwriting, and to increase investments in information/cyber security. MPI needs to continue to monitor these regulatory changes to be prepared for, and to ensure compliance as required.

4. Business Objectives and Strategies

Our corporate mission statement outlines the foundation for how MPI will be successful as a business:

Exceptional coverage and service, affordable rates and safer roads through public auto insurance.

This will be accomplished through a focus on the effective management of claims, underwriting and investment income. This cannot be done in isolation. In order to meet the diverse needs of our geographically dispersed customers, MPI must incorporate effective partnerships in the delivery of products, programs and services, as well as a deep understanding and adaptation to ongoing industry changes. This will require new technical capabilities which must be secure, reliable, and cost effective but also responsive to the needs of customers and partners and adaptable to the changes in products, services, and programs.

Objective 1: Rate Stability and Predictability

Strategy: The Basic compulsory insurance program must be operated on a self-sustaining basis with sufficient capital reserves, while maintaining stability, predictability and affordability. Strategic focus will be on risks, opportunities, and threats which materially impact this goal such as agreement negotiations with Brokers and the Repair Industry, Investment and Capitalization strategies, Claims control programs, and management of enterprise risk and related safeguards such as reinsurance.

Objective 2: Operational Excellence

Strategy: The Corporation will continue to demonstrate fiscal prudence and sound financial management practices while driving cost-containment, streamlining of operations and elimination of unnecessary operational expenses. This strategy will be supported by Capital projects and major technological initiatives will focus on supporting and optimizing core business functions, including ensuring the Corporation's ability to adapt appropriately to changes in the auto insurance and registration environment. These enterprise wide activities include creating an overall roadmap for online products and services, corporate wide efforts to enable a high performing culture, and new reporting and dashboards. This also includes division level optimization of key processes (appeals, financial management, information technology, and facilities).

Objective 3: Product and Service Leadership

Strategy: The Corporation will continue to evolve to address the changing needs of Manitobans including services to Manitobans in rural, northern, and remote communities. This will be facilitated through analysis of current stakeholders, the review and refinement of the existing product suite, and the implementation of a customer needs and experience framework. Opportunities will be explored to deliver the technical components of these initiatives in a timely fashion using new agile processes.

Clearly defined business objectives, backed by strategies to achieve them, are the first step in defining the business capabilities required for success. Section 6 outlines key considerations which help MPI guide the selection and prioritization of new capabilities. Section 8, outlines those capabilities and the need for changes and improvements needed to ensure success.

To ensure a full and comprehensive view needs must inform strategies, which must inform plans. At the highest level business needs must be consistent with the Annual Business Plan. Then specific strategies and objectives must then be developed based on the business plan. Finally, the specific plans to impliment those strategies and achieve the objectives (operational and capital projects) must be devised. For example, the following of Corporate Strategic Priorities focus on achieving core business objectives, and were considered in the development of capabilities (or needs, see section 8), but also need to be evaluated for the potential impact on the strategy to achieve Legacy Modernization.

ALM Implementation	Repair Negotiation	Online Self Service
Broker Negotiation	Risk Appetite	Performance Culture
Capitalization Autopac	Appeal Process Review	Reinsurance
Claims Cost Control	DVA Review	Reports / Dashboards
Customer Experience	Finance Re-Engineering	Space Plan
Product Suite Review	IT Legacy Update	Stakeholder Agenda Analysis

*Dark shading denotes Legacy Modernization impact, light shading denotes potential Legacy Modernization impact

5. Major Influences

The following pre-existing projects and processes have a significant impact on many business and IT capabilities proposed in this strategy. A brief summary of each and their impacts is highlighted here:

Legacy Modernization

A Legacy Modernization assessment has been established to determine how our existing application infrastructure can be modernized to be successful in meeting the current, new and known future business requirements. Potential solutions will be evaluated for upfront value (business and IT capabilities gained by modifying existing processes and avoiding customization) and long term cost effectiveness. The core objectives of the project are:

- Perform a detailed assessment of our core systems and their associated business processes.
- Perform an industry survey of available technologies in both the Property & Casualty Insurance policy issuance and claims administration, and in the Driver and Vehicle Administration domain.
- Create a set of recommendations and guidelines defining how to transform MPI's legacy systems to meet long term business needs and close identified gaps in business and IT capabilities.
- Create an Application Strategy that outlines how MPI will address the proposed recommendations for transforming MPI's legacy systems to meet long term business needs
- Create a detailed comprehensive Business Case that outlines the costs, benefits, and risks for implementing and then operationalizing the solution defined by the Application Strategy.

The results from the assessments and the industry surveys will be used as input into developing a detailed business case which will be presented to MPI's Board of Directors. During the process of completing these assessments, MPI will gain detailed, third party, insight into the business and IT capabilities provided by key systems. These insights may have a significant impact in how business and IT capabilities are created for the foreseeable future and may significantly shape the 2019/20 IT strategy and 2019/20 project portfolio.

Information Security and IT Risk Management Processes

Mature Information Security and IT Risk management are critical to the success of the modern corporation due to the complex and changing IT and information security risk landscapes. Effective governance and oversight must exist, continually identifying threats, evaluating risks, and enhancing controls and capabilities. To guide these activities, MPI has formed the Information Security Office (ISO) which manages three key governance functions: Information Security, IT Risk Management and Information Security Architecture.

The ISO has established the IT Risk Management practice through a framework for defining and measuring key IT risks in the areas of application, infrastructure, security and compliance, resourcing, and project management. IT Risk Management ensures that appropriate information technology and business process and controls are in place, measured, effective, and aligned to defined risk tolerances.

The role of ISO is critical to maintaining compliance to information security standards, requirements, evolving customer and regulatory expectation and requirements, evolving contractual commitments and controls with strategic business partners, while ensuring technology change are aligned to risk practices and measures, including monitoring and aligning our Information Security maturity targets.

Data and Analytics Processes

To maximize the business value found within its data, MPI consolidated four operational departments and centralized them within one directorate in Q2, 2017/18. In the short term this created operational efficiencies and improved service delivery on data and analytic initiatives. A second step has been the creation of a draft Data Strategy which outlines a corporate level governance structure over data and analytics, and a roadmap for incremental improvements in people, processes and technology. To support the business strategies, this area will focus on the implementation of standardized dashboards and consistency in reporting key performance indicators (KPIs) for strategic priorities and corporate performance measures. As part of the Legacy Modernization program, this area will ensure that the proposed system solutions incorporate the data and analytics capabilities required to produce accurate reporting and actionable business insights upon implementation and in the future.

Technology Risk Management Program

The Technology Risk Management (TRM) program provides regular investment in technology systems and processes. This ensures that existing technologies stay on supported versions and technology risks are addressed through process and technology improvements. Investments are identified and prioritized annually. The 2018/19 program budget will be spread across 4 key areas: Application Risk Management, Infrastructure Risk Management, Information Security Risk Management and Risk Registry Remediation. Investments in 2018/19 include the increased adoption / deployment of Information Security technologies and the upgrade and/or replacement of significant parts of the IBM managed IT infrastructure (including network, security, and storage devices). These projects will require careful planning and coordination to minimize any downtime associated with the changes.

Value Management Process

MPI has continued to increase its use of the Value Management process to effectively identify, qualify, quantify, and evaluate projects. Value Management begins with business cases which; outline the goals and scope of an initiative, highlight the associated cost and benefit estimates, and present the monetary impact using a consistent set of financial measures. The process continues over the duration of the project, with emphasis on delivery to the business case and review of any project changes which materially impact the business case. At the completion of projects, Value Management confirms attainment of business case goals, including attainment of financial measures. The Value Management process also includes steps to review candidate projects for potential synergies or conflicts. The outcome of this review is recorded in the Enterprise Architecture section of the business case and looks for conflicts on a business, technical or security architecture perspective.

Enterprise Architecture Process

Enterprise Architecture (EA) is the discipline of proactively and holistically managing business and IT capabilities by identifying and analyzing the execution of change toward the desired business vision and outcomes. EA delivers value by presenting business and IT leaders with complete recommendations for adjusting processes and projects to achieve business outcomes that align to the business plan. MPI is actively pursuing improvements to its EA process maturity as a way to reduce the risk and cost associated with implementation of the key business strategies. EA involves Business Architecture, Technical / Data Architecture, and the ISO and is a key input to upcoming major initiatives (there is a specific focus on EA within Legacy Modernization). EA actively integrates business plans, business capabilities, IT capabilities, and leverages industry best practices and MPI guiding principles to ensure consistency and efficiency across the enterprise. EA is a critical process to the development and maintenance of the IT Strategy.

6. Guiding Principles

Guiding principles represent distilled organizational knowledge and best practices acquired through experience and are used to support the organizational decision making. This knowledge was collected and considered as part of the preparation of this strategy, and will be used to guide the development of business and IT capabilities.

- Enterprise Architecture shall align solutions with the Corporation's mission and vision to maximize business value while providing business agility, reducing complexity and total cost of ownership
- IT services of the Corporation shall be governed and managed centrally.
- IT services and solutions shall align and evolve with the Corporation's security, privacy and business continuity policies, standards and requirements to ensure information is appropriately safeguarded.
- Technology solutions shall leverage industry proven technologies and shall be maintained such that they operate within the vendors' supported set of technologies.
- Commercial software shall be considered before in-house custom development.
- MPI will seek to standardize its products and processes, where prudent, to avoid uneconomical customization of commercial software.

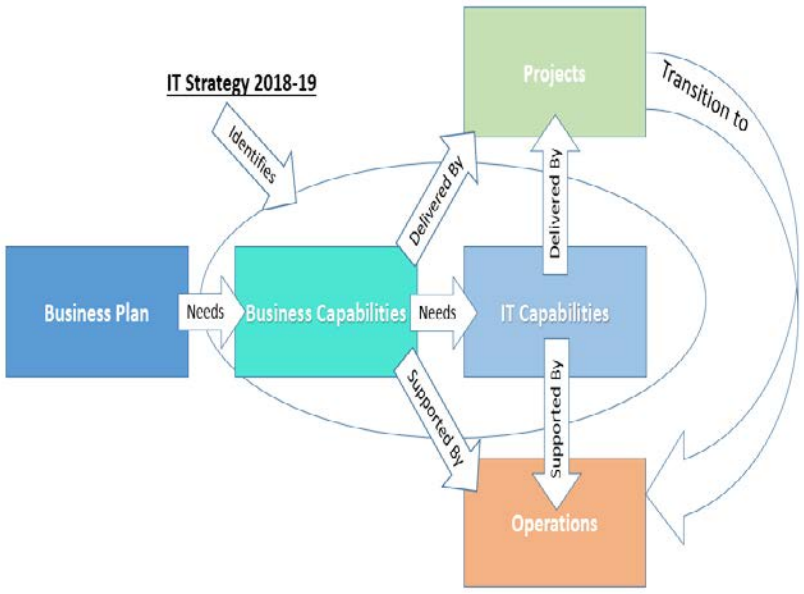
7. Developing Business and IT Capabilities

Enterprise Architecture identifies two concepts (Business Capability and IT Capability) which enable the connection between business strategy, objectives and specific IT initiatives:

- Business Capability: A business capability refers to a combination of resources (people, organizational structures, assets, systems, technologies and partnerships) that is necessary to reach the future state described by the business strategy. For MPI, the business strategy is included in the 2018/19 Annual Business Plan.
- Information Technology Capability: An IT capability refers to a combination of resources (people, organizational structures, assets, systems, technologies and partnerships) that is necessary to support a business capability. For MPI, IT projects are completed to add or change IT capabilities.

MPI is investing significant operational effort in establishing and advancing Enterprise Architecture based upon recommendations from Gartner and comparison to peer organizations.

The MPI Annual Business Plan summarizes the needs of the corporation for the next fiscal year. These needs are met using a combination of people, processes and technology to achieve the intended business result. Within this IT Strategy, MPI has shared the business and IT capabilities which will achieve the top business objectives. The next section illustrates that business capabilities may exist independently, or may be supported by one or more technology solutions, each with their own requirements for people, process, and technology. These have been referred to in this strategy as IT capabilities. MPI deploys new capabilities via projects, and then transfers ongoing support, maintenance and continuous improvement of capabilities to operational departments.



The IT Strategy illustrates how business goals, objectives and strategies (outlined in the Annual Business Plan), translate into business capabilities and IT capabilities, and will be delivered by projects and supported by operations. Each major project in the Corporate Capital Master Summary has a business

case associated with it, which outlines the specific needs of the business. These needs can be translated into business capabilities which can be linked back to this IT Strategy.

8. Required Business and IT Capabilities

The following key capabilities are under development, with most starting within the 2018/2019 fiscal year.

8.1 Introduction of internet customer self-service channel for purchasing products and services

Business Objective: Operational Excellence

Business Capabilities: In FY18/19, MPI will introduce a new secure internet based customer self-service channel for purchasing products and services which are high volume and low complexity in nature (i.e. appointment based services like knowledge and road tests). MPI intends to expand these service offerings and capabilities over the next several years.

IT Capabilities: A secure customer self-service channel requires new technologies which effectively manage a customer identity and provide secure ways to interact with MPI, including information lookup and payment. These new interactions need to ensure the right balance of security and functionality, and have appropriate measures to log / track the transaction for quality assurance purposes. Information must be accessible on demand, but must also ensure the appropriate privacy controls are in place to prevent unauthorized disclosure. Legacy Modernization assessment will further guide this activity as the IT capabilities required on current platforms versus newer industry solutions could be very different.

Related Project(s): Customer Self-Service; Legacy Modernization Assessment

8.2 Introduction of secure customer messaging and electronic documents to increase customer communication channels and reduce ongoing mailing costs

Business Objective: Product and Service Leadership

Business Capabilities: In conjunction with the internet customer self-service channel, MPI will be introducing secure customer messaging via email and / or SMS text messages, as well as electronic document distribution via a secure MPI customer portal 'inbox'. MPI will be utilizing email and / or SMS text messages as a communication medium in conjunction with the new driver's education program to provide drivers with reminder messages, driving and testing feedback, and to increase overall communications between MPI, instructor and the students. Incrementally, MPI will utilize the new secure 'inbox' as a means to transform MPI customer communications from a paper-based mailing medium to electronic documents. Initially, this service will be an optional service offering to customers.

IT Capabilities: A secure method of communication with customers and partners needs significant Information Technology capabilities. These new interactions need to have the right balance of security timeliness and functionality, be built on platforms that are designed for higher availability, and able to handle spikes in transaction volume around peak business times. Diligence is also required to link digital and physical transactions (started by SMS, continued by e-mail, finished in person). This complexity along with the rapidly expanding number of devices and communication platforms results in additional efforts for testing on the deployment and continued support of new transaction types.

Related Project(s): Customer Self-Service Project; High School Driver's Education Program

8.3 Introduction of customer feedback and survey mechanisms as part of customer self-service experience

Business Objective: Product and Service Leadership

Business Capabilities: As part of the customer self-service channel, MPI will be introducing new real-time customer feedback tools with the capability to capture feedback and opinions regarding our products and the customer's overall service experience. This capability will also be extended to the MPI public website to provide Manitobans with an incremental customer feedback and survey mechanism for all future customer service experiences.

IT Capabilities: The ability to measure and report on customer feedback requires several different technologies. The first focuses on the secure capture of information, and includes the appropriate mechanisms for a customer to "opt-out" which will be consistent across connections. The second ensures information provided by customers is analyzed and reported in a timely, secure and consistent way with the appropriate privacy controls. Finally, information that is no longer required needs to be securely disposed of.

Related Project(s): Customer Self-Service project is a prerequisite. A separate business case and project will be required to deliver this capability.

8.4 Enhanced performance measurements and real-time dashboard reporting

Business Objectives: Operational Excellence, Product and Service Leadership

Business Capabilities: In FY18/19, MPI will be establishing performance measurements which will serve as corporate KPI's into the future. Once established, it is envisioned that real-time dashboard reporting of these KPI's will be operationalized and made available to all key MPI stakeholders.

IT Capabilities: Online customer experience management and real-time dashboard creation require the expansion of existing capabilities and technologies to analyze and consolidate existing and new data sources. Capabilities gained in this activity can be leveraged to enhance both pre-existing and new internal operational reporting. Legacy Modernization assessment will further guide this activity as the IT capabilities required on current platforms versus newer industry solutions could be very different.

Related Project(s): Customer Self-Service project is a prerequisite. A separate business case and project will be required to deliver this capability. Legacy Modernization Assessment will guide the capabilities considered in this area.

8.5 Increase efficiency and effectiveness of corporate financial reporting processes and controls

Business Objective: Operational Excellence

Business Capabilities: MPI intends to complete an assessment of its current financial reporting processes and controls in the near term. As a starting point, the Corporation will utilize the recently completed (2015) Finance study and re-validate and adjust findings based on current and future corporate needs. The assessment will also determine the corporate impacts, gaps and remediation priorities to ensure the corporation is in compliance to IFRS 17 accounting standards and requirements, prior to the January 2021 financial reporting deadline. Additionally, MPI will assess and confirm the future viability and alignment of the existing financial technology suite based on the findings of the Legacy Modernization Assessment engagement.

IT Capabilities: The existing financial platform will be further reviewed to confirm it can perform the business functions required, and can be augmented with additional solutions as required and feasible. As part of this assessment, vendor and industry best practices will be reviewed to identify opportunities to meet business needs and further leverage platform capabilities. IT capabilities will include technology solutions to facilitate self-service capabilities and process automation opportunities. These activities need to be closely aligned to the Legacy Modernization Assessment.

Related Project(s): Finance Re-engineering; Legacy Modernization Assessment

8.6 Transform the Driver's Education Program to modern learning tools, media and introduce social media collaboration

Business Objective: Product and Service Leadership

Business Capabilities: In spring 2019, MPI intends to launch a new driver's education program which will transform the existing program from a lecture and paper-based medium for training, to a more modern demographically focused medium which leverages video, computer based simulation exercises, gamification, social media collaboration and the mobile platform as the primary technology base. This will result in:

- Improved driver education program and services
- New channel for driver education for instructors, students, and related customers
- Supports for the implementation of social media with appropriate policies, controls and oversight

IT Capabilities: These business capabilities require new skill sets within MPI (web development for mobile devices, including standards for accessibility) and new technical capabilities (enhanced testing on mobile devices). These platforms also have a higher expectation for availability (24/7 operation), which requires different types of support and transaction processing which avoid downtime. These activities also generate new types of transactions and related meta-data which requires different solutions to track and manage in ways that are secure and efficient.

Related Project(s): High School Driver's Education Program

8.7 Further streamline key Physical Damage processes to maintain effective cost control

Business Objective: Rate Stability and Predictability

Business Capabilities: Further streamline the core business capabilities, processes and administration to enable better management of claims costs. This will be completed by enhancing claims cost controls related to the different factors which affect claim severity. This involves a review and potential changes to estimating processes and standards, repair processes and guidelines, and changes to repair certification and related training. This also requires the capability to continually evolve all these areas as manufacturer requirements and vehicle composition (ex. advanced metals, increasingly complex onboard computing) changes.

IT Capabilities: Ensure that the existing vendor supplied platforms can be updated where existing IT capabilities have been replaced with updated products (such as estimating standards) without incurring significant cost and / or with limited business process disruption. This technology management capability needs to apply to both MPI and Repair Shops. This also requires the introduction of a new commercial parts sourcing solution which will replace a current MPI custom solution.

Related Project(s): Enhanced DR Capabilities (Parts, LOU)

8.8 Ensure consistent and necessary investments in Information Security Resiliency and IT Risk Management

Business Objectives: Rate Stability and Predictability, Operational Excellence

Business Capabilities: Continue to monitor and evolve information and cyber security risks, and IT security defense plans, measures and actions. Maintain effective operational controls to ensure the timely completion of threat identification, threat response and ongoing preventative measures. Assess the effectiveness of measures and safeguards, and optimize over time.

IT Capabilities: This requires the introduction of new IT capabilities throughout the lifecycle of a system. This begins with requirements, design, and development, including security requirements and review throughout. It continues into testing and through implementation, ensuring no security gaps exist when a project is deployed into production. This continues with regular reviews to ensure operational activities (ex. system patching, defect fixes) reduce risks consistently, and do not create new security vulnerabilities. Monitoring capabilities are enhanced to look for known threats and unusual patterns of behavior (emerging, not reported, threats or MPI specific attacks). The Legacy Modernization assessment has the potential to make recommendations which could significantly change the focus of these investments.

Related Project(s): Technology Risk Management; Credit Card Strategy; BI3 Fineos Upgrade; Legacy Modernization Assessment

8.9 Complete market and stakeholder analysis to ensure continued product excellence

Business Objectives: Product and Service Leadership

Business Capabilities: A review of product suites and the needs of key stakeholders will occur in the 2018/19 fiscal year. It is anticipated that changes to products and services may be recommended from this review. Changes to Business Capabilities may / may not require changes to IT capabilities. A recent example of this type of change has been the introduction of Transportation Network Companies, which is leveraging existing IT capabilities in new ways.

IT Capabilities: The identification of impacts to IT capabilities will be determined based on the outcome of the product suite review. This will be updated in the 2019/20 IT Strategy and may include new business cases and related initiatives

Related Project(s): AOL PUB Release; SRE

9. Applying the IT Strategy

Overview

The MPI Annual Business Plan summarized three business objectives and their related strategies.

- Rate Stability and Predictability
- Operational Excellence
- Product and Service Leadership

The IT Strategy outlines both the business and IT capabilities which will be required to achieve these objectives. The Strategy provides the framework for evaluating, planning and building MPI business and IT capabilities necessary to ensure MPI is successful in attaining these objectives.

Organizational Impact

Executing the portfolio of initiatives necessary to achieve MPI's business objectives will have a major impact on the MPI corporate culture, and will require higher levels of collaboration, and accountability within divisions and between departments. To facilitate this, the corporation has reorganized its divisions to recognize its increased emphasis on risk management, align operational functions and to improve the management of claims. Examples of key areas of change include:

- Continued development and formalization of Value Management processes are being adopted across the corporation.
- Strategic Projects have an additional leadership role; Operational Business Champion (OBC). This role is accountable for making key decisions (in consultation with Executive Sponsors), on the initiative.
- Project and Operational financial reporting, as well as technology procurement have been consolidated and transitioned to the Finance division.
- The Data and Analytics team has been formed and is responsible for the maturing of corporate data and analytics competencies and standards, as well as development, implementation, and ongoing maintenance of corporate dashboards, thereby increasing the transparency on strategic priorities and key corporate metrics.
- The Application Services group has been successfully integrated into the Enterprise System Support directorate resulting in end to end operational support capabilities for critical corporate applications.
- The Information Security Office has expanded its scope of responsibilities, providing services at a corporate level.

Changing roles, skills, and priorities to support business and IT capabilities

Delivering the business capabilities and related IT capabilities will require changes to employee skill sets. There will be an increasing emphasis on analytical skills, technical skills (newer coding practices optimized for web development), and business, technical and security architectural skills. MPI is active in the development of internal staff through project and operational opportunities. MPI is also executing an External Labour strategy to ensure MPI transitions knowledge and skills from external contractors / consultants to internal staff.

Prioritization is also occurring to ensure there are sufficient resources to develop the required capabilities. Select non-critical operational work was deferred until the end of Q1-2018/19 allowing more internal resources to participate in key projects. This is a balance, because as significant changes are implemented, the importance of operational processes which quickly identify and resolve application defects, remains critical to the integrity and availability of key corporate systems. These operational processes must not be negatively impacted by any changes in staffing allocation to build capabilities, doing so would increase risk to the stability of key platforms.

As MPI considers the future of its core system (Legacy Modernization Assessment), MPI will revalidate the long term mix of analytical, technical, and architectural consultants required to support its critical applications and propose a staffing strategy to align to the long term corporate requirements. It will also continue to evaluate the requirement for, and priority of, operational work related to Legacy platforms.

Delivering projects which result in new / enhanced IT and Business capabilities

To support the deployment of the business and IT capabilities identified in section 8, some projects will require an additional delivery approach which provides more agility and improves time to deliver. The existing delivery model focuses on structure, rigor and consistency and has a formal progression of steps including:

- Production of detailed business requirements
- Detailed technical requirements and solution designs
- Comprehensive testing and implementation
- Solution delivery and warranty

MPI is currently exploring an additional methodology which can operate in parallel (An Agile methodology) which focuses on rapid, small deliveries. This would be used to bring solutions to production more quickly, often using pilots to provide proof of value before embarking on a full project using the traditional 'waterfall' delivery methodology. This also provides MPI with practical experience in alternate delivery models which are seeing increased adoption in the insurance industry. This broader experience allows MPI to better partner with current and future strategic technology providers, leveraging and learning their best practices.

Ongoing Oversight and Governance

Developing this IT Strategy has provided MPI with the opportunity to confirm the alignment of the business plan, business capabilities, IT capabilities and IT projects. The result is a single document which succinctly links the MPI business plan, business strategy, key business process documentation, and project documents (such as business cases and project / program charters) resulting in increased transparency and clarity. This document is used within MPI to guide project and operational teams.

Enterprise Architecture concepts and practices have been critical to the development of this strategy. MPI continues to develop its Enterprise Architecture process maturity, with assistance from Gartner research and experts, and through initiatives such as the Legacy Modernization assessment. As Enterprise Architecture process maturity continues to improve, and further clarity on future business and IT capabilities emerge, updates to this document will be required.

On an annual basis, MPI will update this strategy to reflect the progress made and any changes required to maintain alignment to the Corporation's business plan.

PART V:

PF.10 STATEMENT OF CHANGES IN EQUITY – 0.0% RATE CHANGE 17

PROFORMAS

There are a total of ten statements presented in the Pro Forma section of the 2019 General Rate Application (GRA). The first three financial statements, PF.1 through PF.3, illustrate the 2019 GRA base forecast that supports this application's request for a 2.2% rate increase. These pro formas, contain two columns for 2018/19, the 'Budget Year' preceding the rating years, denoted as "B" and "FB". The "B" column represents the Board of Director's approved Budget for 2018/19. The "FB" column represents the updated base assumption for the rating years for modeling purposes only.

The notable update included in the 2019 GRA pro forma financial statements is the inclusion of the Board of Director's approved asset liability management review that was ordered by the Public Utilities Board in 2017 GRA (order 162/16, 10.13) and 2018 GRA (order 130/17) hearings.

When comparisons are made against 2018/19, the Forecast Base (FB) is the basis for comparison, as this scenario reflects the assumptions that underpin the requested rate increase in this application.

The next four pro forma statements PF.4 through PF.7 contain comparatives of actual, budgeted, and forecasted statements of operations between this year's GRA versus last year's GRA. The last three pro forma statements, PF.8 though PF.10 reflect the 2019 GRA base forecast except with a 0% rate increase.

The pro forma financial statements included here have been presented on the same basis utilized in the Corporations most recent fiscal year end. No attempt has been made to adjust future forecasted years for upcoming accounting standards such as IFRS 17 or IFRS 9.

Forecasting Methodology

The forecasted motor vehicle written premiums are calculated as follows:

Current Year's Written Premium Forecast =
Previous Year's Written Premium
x (1+ Volume Factor)
x (1+ Upgrade Factor)
x (1+ Rate Change)
- Net Fleet Rebates
- Anti-Theft Discounts

The motor vehicle earned premium forecast is based on the written premium forecast and the historical relationship between premiums written and earned.

The following figure provides a summary of the motor vehicle premium forecast by component. The sections below describe the forecast details for each component of the motor vehicle premium forecast.

REV.1.1 Volume Factor

The volume factor represents the growth rate in Basic earned vehicle units over a given insurance year. An earned unit represents the portion of the earning period that a vehicle has Basic insurance. For example, a private passenger vehicle insured for three months of the insurance year would be approximately 0.25 earned units (i.e. 3 months / 12 months = 0.25).

Earned units are classified into *The Highway Traffic Act* (HTA) vehicles (private passenger, commercial, public and motorcycles) and non-HTA vehicles (trailers and off road vehicles).

Figure REV- 4: Volume Factor Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	Volume Factor	1.50%	1.50%	1.50%	1.50%	1.50%

Forecasting Methodology

For the purposes of forecasting motor vehicle premiums, Manitoba Public Insurance (MPI or the Corporation) forecasts overall volume growth based only on the historical HTA unit growth data. Although HTA units account for only 76% of total earned units, they represent over 98% of total Basic written premiums. Therefore, the HTA unit forecast is the most relevant to the overall Basic vehicle premium forecast.

Historical Results

The figure below shows the historical volume growth for HTA, non-HTA and total Basic earned units over the past fifteen years.

Figure REV- 5: HTA and Non-HTA Earned Units – 2003/04 to 2017/18

Line No.	Year	HTA	% Change	Non-HTA	% Change	Total	% Change
1	**2003/04**	694,822	0.90%	123,580	3.95%	818,402	1.35%

10	**2012/13**	811,247	2.51%	230,202	6.95%	1,041,448	3.46%
11	**2013/14**	822,677	1.41%	241,392	4.86%	1,064,070	2.17%
12	**2014/15**	834,238	1.41%	249,247	3.25%	1,083,485	1.82%
13	**2015/16**	847,108	1.54%	255,740	2.61%	1,102,848	1.79%
14	**2016/17**	860,978	1.64%	264,141	3.28%	1,125,119	2.02%
15	**2017/18**	873,374	1.44%	271,423	2.76%	1,144,797	1.75%
16	**Averages**						
17	**3-Year**		1.54%		2.88%		1.85%
18	**5-Year**		1.49%		3.35%		1.91%
19	**10-Year**		1.74%		5.22%		2.45%
20	**15-Year**		1.60%		5.66%		2.35%

Over the last five years the HTA unit growth rate has averaged 1.49%. If the 'high growth' years in 2011/12 and 2012/13 are excluded, then the long term HTA growth rate appears to be close to 1.50% per year.

The growth rate for Non-HTA (i.e. trailers and ORVs) units appears to have stabilized at approximately 3.0% after experiencing more than a decade of growth rates in excess of 4.0% (2004/05 to 2013/14 average growth of 6.93% per year). MPI has expected that the high growth rates of non-HTA units would eventually return to more modest levels. As explained above, MPI does not use non-HTA growth rates for forecasting overall motor vehicle premium growth.

This Year's Forecast

The HTA units are forecast to grow by 1.50% per year in 2018/19 and, thereafter, based on the recent five year average and the long-term average excluding certain 'high growth' years.

Comparison to Last Year's Forecast

The following figure shows the projected HTA volume factors along with a comparison to last year's forecast.

Figure REV- 6: HTA Earned Unit Forecast

Line No.	Year	This Year	Last Year	Difference
1	**2017/18(a)**	1.44%	1.50%	-0.06%
2	**2018/19 and thereafter**	1.50%	1.50%	0.00%

REV.1.2 Upgrade Factor

The upgrade factor measures the changes in the average vehicle premium that occur from sources other than rate changes. There are two upgrade factors used by MPI for forecasting purposes: (i) vehicle upgrade and (ii) Driver Safety Rating (DSR) upgrade.

The vehicle upgrade factor measures the impact on vehicle insurance premiums from changes in the distribution of the vehicle population. Such distributional changes can occur for rate groups, vehicle types, body styles, insurance uses and territories.

The DSR upgrade factor measures the impact on vehicle insurance premiums from changes in the average DSR level of registered vehicle owners. The vehicle merit discount level is a direct function of the registered owner's DSR level.

Figure REV- 7: Upgrade Factor Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	**Upgrade Factor**	2.39%	2.54%	2.58%	2.51%	2.54%

Forecasting Methodology

Vehicle Upgrade: The vehicle upgrade factor is forecasted based on an analysis of the following:

- historical vehicle upgrade factors
- changes in the rate setting methodology (e.g. rate line)
- changes in trends in the vehicle population (e.g. more vehicles moving to all purpose)

DSR Upgrade: The DSR upgrade factor is forecasted based on a simulation of all drivers and vehicle owners in the DSR model. This model is described in section *REV.2 Driver Premiums*.

The actual upgrade factors are estimated using the Rate Model Method. The Rate Model method takes a snapshot of the vehicle fleet at the same point in time from the current year and the previous year. The average premium is then calculated for both vehicle populations using the latest year's approved rates (i.e. 2018/19 rates). The percentage change in the average premium of this year's vehicle fleet relative to last year's vehicle fleet is the total upgrade (i.e. vehicle and DSR upgrade) of the vehicle fleet for that year.

To calculate the vehicle upgrade, the above procedure is repeated except with all vehicles held at their base rates (i.e. no vehicle merit discount). This calculation eliminates the impact of changes in the average DSR level. The DSR upgrade factor is equal to the overall upgrade minus the vehicle upgrade.

Similar to the earned unit forecasting methodology, the upgrade factor is calculated using only HTA units.

Historical Results

The figure below summarizes the recent historical trends in the overall upgrade, the vehicle upgrade, and the DSR upgrade for HTA vehicles.

Figure REV- 8: Historical Upgrade Factors

Line No.	Insurance Year	Vehicle Upgrade	DSR Upgrade	Total Upgrade

3	2015/16	2.54%	-0.16%	2.38%
4	2016/17	2.23%	-0.24%	1.99%
5	2017/18	2.32%	0.08%	2.40%
6		Statistics		
7	3 Year Avg	2.36%	-0.10%	2.26%
8	5 Year Avg	2.45%	-0.01%	2.44%

After remaining very stable at approximately 2.60% per year from 2011/12 to 2015/16, the vehicle upgrade factor fell to 2.23% in 2016/17 and 2.32% in 2017/18. The main cause of the decrease in vehicle upgrade is a drop in the number of customers that 'upgraded' their vehicles (i.e. purchased newer vehicles). From 2011/12 to 2015/16 the average age of an HTA vehicle was stable at approximately 9.92 years; however, in 2016/17 and 2017/18 the average age increased to 10.05 years and 10.21 years respectively. If the 'age of vehicle' distribution had remained the same in 2017/18, then the upgrade factor would have been approximately 2.55%. The Corporation does not anticipate vehicle age to continue this upward trend in future years.

The DSR upgrade is less significant than the vehicle upgrade and turns positive for this past fiscal year from negative. The main reason is because most of the large cohort of drivers that were placed on the DSR scale at +10 in 2010/11 reached their maximum discount on the DSR in 2016/17. The Corporation anticipated a positive DSR upgrade factor in last year's forecast. The DSR upgrade should be closer to zero in future years at the movement of drivers continues to stabilize over time.

This Year's Forecast and Comparison to Last Year's Forecast

The figure below provides a comparison of this year's forecast to last year's forecast.

Figure REV- 9: Upgrade Forecast Comparison

Line No.		Vehicle Upgrade			DSR Upgrade		
1	Year	This Year	Last Year	Difference	This Year	Last Year	Difference
2	2017/18 (a)	2.32% (a)	2.50%	-0.18%	0.08%	0.14%	-0.06%
3	2018/19	2.45%	2.50%	-0.05%	-0.06% *	0.02%	-0.04%
4	2019/20	2.45%	2.50%	-0.05%	0.09%	0.07%	0.02%
5	2020/21	2.45%	2.50%	-0.05%	0.13%	0.12%	0.01%
6	2021/22	2.45%	2.50%	-0.05%	0.06%	0.04%	0.02%
7	2022/23	2.45%	2.50%	-0.05%	0.09%	n/a	n/a

* Note: The 2018/19 DSR upgrade was adjusted to recognize the introduction of DSR discounts for taxi VFH, limousine VFH, and accessible VFH. The reduction is 0.1%

Although the Corporation does not expect the increases in vehicle age to continue over the long term, we have given some weight to the recent experience. For 2018/19 onwards, MPI has judgmentally adjusted down the vehicle upgrade forecast by 0.05% from 2.50% to 2.45%.

The DSR upgrade factor is forecasted based on the DSR simulation model (described in section *REV.2*). Further, we've adjusted the DSR upgrade factor for 2018/19 to account for the introduction of DSR discounts for taxi vehicle-for-hire (VFH), limousine VFH, and accessible VFH. These vehicles became eligible for DSR discounts as a result of the introduction of The Local Vehicles for Hire Act, which came into force on February 28, 2018. The DSR upgrade factor was adjusted downwards based on the assumption that the introduction of DSR discounts for these vehicles will result in a $1,000,000 reduction in premiums. The adjustment reduced the DSR upgrade factor by 0.1%.

REV.1.3 Net Fleet Rebates

Customers are deemed to be a fleet owner when they have ten or more vehicles registered on the first day of any customer month. Fleet premiums are determined on a retrospective basis on the actual loss experience of the fleet in the policy year. The loss experience is the ratio between all losses paid by MPI and fleet premiums. Claims are included according to the degree of responsibility with the exception of comprehensive claims, which are fully included in the loss ratio calculation. The current maximum amount used for any individual loss is $25,000.

At the end of their experience period, fleet owners will receive either a rebate, a surcharge, or have no change in premiums from the base premiums paid at the start of the policy year.

Rebates and surcharges will vary depending on the loss ratio. For the 2018/19 policy year, the maximum rebate is 33% of fleet premiums and the maximum surcharge is 50% of fleet premiums. These percentages were chosen to reflect a fleet program break-even loss ratio of 80% to 85%. *Part VIII Application Rate Table ART.4* shows the fleet rebate and surcharge scale. Further information on the fleet program is contained in *Part V(ii) Vehicle Classification System*.

Figure REV- 10: Net Fleet Rebates Attributed to Basic Only Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Net Fleet Rebates	(14,935)	(15,532)	(16,150)	(16,796)	(17,463)

Forecasting Methodology

Fleet premiums are assumed to grow based on the: (i) overall rate change for all vehicles; (ii) HTA volume factor; and (iii) vehicle (HTA) upgrade factor (Please see sections *REV.1.1* and *REV.1.2 Upgrade*).

The percentage of rebates and surcharges are forecasted based on the historical experience of the fleet program. In the 2012/13 policy year, the fleet scale was changed to include rebates from a maximum 25% up to 33%. To account for this change MPI restated the historical results based on the current scale.

Historical Results

The figure below shows the historical results for the fleet program, on a corporate basis, under the previous and current fleet scale. The figures in bold represent the actual fleet results. The remaining figures represent historical data that was adjusted to reflect the current fleet scale.

Note: Since fleets are rated on a retrospective basis, the net fleet rebates are not calculated until after the policy year. For example, fiscal year 2015/16 (shown in the figure below) represents the net fleet premiums from the 2014/15 policy year.

Figure REV- 11: Fleet Premiums

Line No.		Old Fleet Scale			Current Fleet Scale			
1	Fiscal Year	Rebates	Sur-charges	Net Rebates	Rebates	Sur-charges	Net Rebates	Total Premiums

This Year's Forecast and Comparison to Last Year's Forecast

The Corporate fleet forecast, along with a comparison to last year's forecast, is shown in the figure below. The forecast includes the volume and upgrade assumptions from sections *REV.1.1* and *REV.1.2*. The allocation of net fleet rebates to Basic is shown in the last column.

Figure REV- 13: Fleet Premiums

Line No.	Fiscal Year	Total Premiums	Rebates	Sur-charges	Net Rebates	Last Year	Difference	Net Rebates Attributed to Basic Only
1	*($000)*							
2	**2017/18 (a)**	$71,501	$16,396	$2,529	$13,867	$15,462	-$1,595	$13,340
3	**2018/19**	$76,274	$18,265	$2,739	$15,525	$16,277	-$752	$14,935
4	**2019/20**	$79,323	$18,995	$2,849	$16,146	$16,934	-$788	$15,532
5	**2020/21**	$82,476	$19,750	$2,962	$16,788	$17,621	-$833	$16,150
6	**2021/22**	$85,775	$20,540	$3,081	$17,459	$18,332	-$873	$16,796
7	**2022/23**	$89,185	$21,356	$3,203	$18,153	$19,077	-$924	$17,463

The percentage of rebates (24.79%), surcharges (3.44%), and net rebates (21.35%) in the figure below are based on the five year average from the restated history of the fleet program.

Figure REV- 14: Percentage of Fleet Premiums

Line No.	Fiscal Year	Rebates	Surcharges	Net Rebates	Net Rebates Last Year	Difference
1	**2017/18(a)**	23.62%	3.88%	19.74%	22.04%	-2.30%
2	**2018/19 and thereafter**	24.79%	3.44%	21.35%	22.04%	-0.69%

REV.1.4 Anti-Theft Discounts

MPI provides vehicle owners with a $40 anti-theft discount if they install an approved aftermarket theft deterrent system (i.e. immobilizer) device in their vehicle. The Immobilizer Incentive Program has resulted in over 200,000 immobilizer installations since its implementation in 2006/07.

Figure REV- 15: Anti-Theft Discounts Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	**Anti-Theft Discounts**	-$2,719	-$2,367	-$2,087	-$1,837	-$1,618

Forecasting Methodology

To predict the amount of anti-theft discounts in future periods. MPI: (i) forecasts the number of earned units with anti-theft devices; and (ii) multiplies the earned units by the $40 anti-theft discount. The earned unit forecast is made by reviewing the historical attrition rates of vehicles by model year. The attrition rate measures how the number of vehicles in a given model year changes as these vehicles age. This forecast also considers the number of new installations that occur in future periods.

Historical Results and Forecast Details

The figure below shows this year's anti-theft discount forecast along with a comparison to last year's forecast.

Figure REV- 16: Anti-Theft Discounts

Line No.	Year	This Year's Forecast	Last Year's Forecast	Difference
1	*($000)*			
2	**2017/18 (a)**	($3,115)	($3,093)	($22)
3	**2018/19**	($2,719)	($2,778)	$59
4	**2019/20**	($2,367)	($2,471)	$104
5	**2020/21**	($2,087)	($2,190)	$103
6	**2021/22**	($1,837)	($1,937)	$100
7	**2022/23**	($1,618)		

REV.1.5 Total Motor Vehicle Premium

Sections *REV.1.1* through *REV.1.4* provide the details of the forecasts for each of the components of written motor vehicle premium. The Motor Vehicle Premiums Written and Earned Premium Revenues figure on page 4 of this document shows how the forecast components result in the overall written premium forecast.

Figure REV- 17: Motor Vehicle Premium Forecast

Line No.	Fiscal Year	2017/18	2018/19	2019/20	2020/21	2021/22
1	*($000)*					
2	**Written Premium**	958,740	1,025,482	1,068,082	1,112,891	1,158,599
3	**Earned Premium**	925,950	994,660	1,048,409	1,092,198	1,137,491

Written Motor Vehicle Premiums

A comparison of this year's and last year's total written vehicle premium forecast is shown below:

Figure REV- 18: Motor Vehicle Premiums Written, Assumes 2.2% rate change to 2019/20 Rates

Line No.	Fiscal Year	This Year	Last Year	Difference	% Difference
1	*($000)*				
2	**2017/18 (a)**	955,941	958,740	(2,799)	-0.29%
3	**2018/19**	1,019,281	1,025,482	(6,201)	-0.60%
4	**2019/20**	1,085,082	1,068,082	17,000	1.59%
5	**2020/21**	1,130,121	1,112,891	17,230	1.55%
6	**2021/22**	1,176,226	1,158,599	17,627	1.52%
7	**2022/23**	1,224,492	1,205,902	18,590	1.54%

The 2017/18 written vehicle premiums were $6.4 million under-budget as a result of a lower than expected HTA volume factor (actual: 1.44%; forecast: 1.50%) and HTA upgrade factor (actual: 2.40%; forecast: 2.64%). In 2018/19, the forecast is $6.2 million lower than last year's forecast as a result of: (i) $4.4 million reduction from the rolling forward of the lower base revenue in 2017/18; (ii) $1.2 million reduction because of the difference between the applied for 2.7% rate increase and the PUB ordered 2.6%; and (iii) the remainder is attributable to lower than expected upgrade factor (2018 General Rate Application (GRA) forecast is 2.52%, 2019 GRA forecast is 2.39%). In 2019/20 and through the remaining forecast, premium written revenues are greater than expected due to the applied for 2.2% rate increase in this year's GRA.

Earned Vehicle Premiums

Figure REV- 19: Earned Motor Vehicle Premium Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	**Earned Premium**	991,058	1,054,643	1,109,287	1,154,898	1,202,165

MPI forecasts the earned motor vehicle premium as follows:

Current Year's Earned Premium =
Beginning of Year Unearned Premium Balance + Premiums Written in the Year –
Expected Unearned Premiums During the Year

Figure REV-2 on page 4 of this chapter shows the resulting earned premiums based on the above formula. The 'Beginning of Year Unearned Premium Balance' is the actual balance from the financial system at year end. The 'Current Year's Written Premium' is based on the forecasted written premium from the previous section. The 'Unearned Premiums During the Year' is the expected unearned premium balance at year end. It is calculated by multiplying the current year written premiums by the historical ratio of unearned premiums to written premiums (46.26%).

A comparison of this year's and last year's earned vehicle premium forecast is shown below:

Figure REV- 20: Motor Vehicle Premiums Earned – Assumes 2.2% Rate Change in 2019/20

Line No.	Year	This Year	Last Year	Difference	% Difference
1	*($000)*				
2	**2017/18 (a)**	922,617	925,950	(3,333)	-0.36%
3	**2018/19**	991,058	994,660	(3,602)	-0.36%
4	**2019/20**	1,054,643	1,048,409	6,234	0.59%
5	**2020/21**	1,109,287	1,092,198	17,089	1.56%
6	**2021/22**	1,154,898	1,137,491	17,407	1.53%
7	**2022/23**	1,202,165	1,184,057	18,108	1.53%

The explanation for the earned motor vehicle premium forecast follows directly from the written premium forecast. Due to staggered renewals, the 2.2% assumed rate increase to 2019/20 policies is only partially earned in the 2019/20 fiscal year.

REV.2 DRIVER PREMIUMS

A basic insurance premium is charged on every Manitoba driver licence to ensure that all Manitoba drivers share the risk of accidents. Effective March 1, 2010, MPI implemented the DSR program as a method of classifying driver risk. The insurance premium charged on the licence varies based on the risk of the driver as measured by the DSR scale. The DSR program is described in detail in *Part V(ii) Driver Classification System*. The DSR scale is shown in *Part VIII Application Rate Table ART.3* and in *Part V(i) Revenue Appendix 1*.

Driver Premium Forecast ($000)

Figure REV- 21: Driver Premium Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	**Written Premium**	68,902	70,903	72,885	74,723	76,565
3	**Earned Premium**	59,546	69,896	71,887	73,798	75,638

Forecasting Methodology

Driver premiums are forecasted by simulating the movements of all drivers on the DSR scale. The forecast considers the following five components:

- The number of earned driver units by DSR level
- The expected movement of drivers on the DSR scale, including drivers entering and exiting the system
- The average number of earned units per driver by DSR level (i.e. the average portion of a year that a driver at a given DSR level keeps their licence active)
- The driver licence premiums by DSR level
- Percentage reduction in drivers' premiums from appeals

Earned Driver Units

A driver unit represents one active driver licence for a full year. Drivers can earn partial driver units if they enter or exit the system in the middle of a year, choose not

to renew their licence, receive a suspension, etc. The following figure shows the historical driver unit growth over the past ten years.

Figure REV- 22: Historical Earned Driver Units

Line No.	Fiscal Year	Driver Units	Annual Change
1	2008/09	748,304	1.74%
2	2009/10	760,143	1.58%
3	2010/11	772,922	1.68%
4	2011/12	795,972	2.98%
5	2012/13	810,697	1.85%
6	2013/14	822,988	1.52%
7	2014/15	833,376	1.26%
8	2015/16	846,099	1.53%
9	2016/17	857,597	1.36%
10	2017/18	869,829	1.43%
11		Averages	
12	3-Year		1.44%
13	5-Year		1.42%
14	10-Year		1.69%

The driver unit growth rate was 1.43% in 2017/18 compared to the forecasted 1.50% from last year. Going forward, MPI expects driver units will grow at a similar pace as HTA vehicles. Alternatively stated, MPI expects the ratio of HTA vehicles per driver to remain stable. The figure below shows the earned driver unit forecast by fiscal year.

Figure REV- 23: Earned Driver Unit Growth Forecast

Line No.	Fiscal Year	Earned Driver Units	Annual Change	Last Year's Forecast	Difference
1	2017/18 (a)	869,829	1.43%	1.50%	-0.07%
2	2018/19	882,876	1.50%	1.50%	0.00%
3	2019/20	896,119	1.50%	1.50%	0.00%
4	2020/21	909,561	1.50%	1.50%	0.00%

Expected Driver Movement

The forecasted driver movement probabilities for 2017/18 policy year and beyond were judgmentally selected based on the past seven years actual driver movement probabilities.

The figure below shows the forecasted probability of upward movement (i.e. infraction free driving year) by DSR level in the last two forecasts. The actual driver movement

matrix includes all of the over 500 possible movement combinations for drivers on the DSR scale.

Figure REV- 24: Probability of Upward Movement on the DSR Scale by DSR Level

Line No.	DSR	This Year	Last Year	Difference
1	**15**	94.2%	94.8%	-0.6%
2	**10 to 14**	88.5%	89.6%	-1.1%
3	**0 to 9**	79.9%	80.5%	-0.6%
4	**-1 to -10**	72.0%	72.6%	-0.5%
5	**-11 to -20**	62.2%	62.5%	-0.3%

The upward movement probabilities have largely stabilized as the DSR program has matured.

Average Number of Earned Driver Units per Driver Count

After predicting the movement of drivers by DSR level, MPI calculated the expected earned driver units at each DSR level. This adjustment is required because driver premiums are only received for the portion of the year that the licence is active. Also, the earned driver units per driver are not consistent by DSR level, as demerit drivers are much more likely to have a licence for less than a full year.

The following figure shows the fitted average earned driver units per driver counts used in this year's versus last year's forecast. The 2016/17 policy year figures were used to make this year's forecast as they are considered to be the most relevant for forecasting purposes.

Figure REV- 25: Earned Driver Units per Driver Count by DSR Level

Line No.	DSR	This Year	Last Year	Difference
1	**15**	0.990	0.992	-0.002
2	**10 to 14**	0.989	0.992	-0.003
3	**0 to 9**	0.980	0.981	-0.001
4	**-1 to -10**	0.963	0.963	-0.001
5	**-11 to -20**	0.892	0.899	-0.007

The driver counts are multiplied by the expected number of units per driver to produce the estimated earned drivers by DSR level. The figures below show the projected

number and distribution of earned drivers by fiscal year over the forecast period. The detailed forecast of driver units for all DSR levels is provided in *Part V(i) Revenue Appendix 1*.

Figure REV- 26: Fiscal Year Earned Driver Units by DSR Level

Line No.	DSR	2017/18(a)	2018/19	2019/20	2020/21
1	**15**	272,648	280,204	286,903	286,951
2	**10 to 14**	174,149	165,940	163,901	167,708
3	**0 to 9**	350,203	360,842	367,025	374,062
4	**-1 to -10**	62,508	64,824	66,792	68,956
5	**-11 to -20**	10,321	11,067	11,498	11,884

5	**-11 to -20**	1.2%	1.3%	1.3%	1.3%

Driver Licence Premiums by DSR Level

MPI is not proposing any changes to the DSR driver licence premiums or the vehicle premium discounts by DSR level in the 2019/20 rate application. The DSR premium and vehicle premium discount tables are shown below and in *Volume II Application Rate Table ART.3*.

Figure REV- 28: Driver Licence Premiums by DSR Level

Drivers License Premium and Vehicle Premium Discount Table	DSR Level	2019 Driver License Premium	2019 Vehicle Premium Discount
Merits	15	$15	33%
	14	$20	30%

	-20	$3,000	0%

DSR Upgrade

The forecasted DSR vehicle premium upgrade factors, discussed in section *REV.1.2*, are not a part of the driver premium forecast. However, the calculation of DSR

upgrade is a direct output from the DSR simulation model, which is why the details of this forecast are shown in this section.

To calculate the projected DSR upgrade factors, MPI first forecasts the number of earned HTA vehicle units per earned driver units at each DSR level. The figure below shows the estimated vehicles per driver used in this year's and last year's forecast. The forecast is based on the 2016/17 policy year data at 12 month. The detailed forecast of HTA vehicle units per driver for all DSR levels is provided in *Part V(i) Revenue Appendix 1*.

Figure REV- 29: Earned HTA Vehicle Units per Earned Driver Unit by DSR Level

Line No.	DSR	This Year	Last Year	Difference
1	**15**	1.22	1.22	0.01
2	**10 to 14**	1.14	1.13	-0.01
3	**0 to 9**	0.67	0.66	-0.03
4	**-1 to -10**	0.71	0.70	0.00
5	**-11 to -20**	0.77	0.77	-0.02

The above figure is multiplied by the forecasted number of earned drivers to produce a distribution of HTA vehicles by DSR level. MPI calculates the average vehicle discount level based on this revised distribution. The DSR upgrade measures the year-to-year changes in the average vehicle discount level. The output from the model is discussed in section *REV.1.2 Upgrade*.

Driver Premium Appeals

A driver is able to appeal the additional driver premium on their driver's licence to the Rates Appeal Board through the rates appeal process. The figure below shows the reduction in driver premium from appeals for the DSR demerit levels over the past three policy years.

Figure REV- 30: Driver Written Premium Appeal Reduction Percentage

Line No.	DSR Level	2014	2015	2016
1	0	-0.34%	-0.27%	-0.34%
2	-1	-0.69%	-0.69%	-0.23%
3	-2	-0.05%	-0.27%	-0.56%
4	-3	1.48%	1.20%	1.09%
5	-4	0.59%	0.37%	0.49%
6	-5	1.90%	1.91%	1.57%
7	-6	1.38%	0.98%	0.57%
8	-7	0.93%	0.72%	0.55%
9	-8	0.91%	0.64%	0.38%
10	-9	1.51%	0.53%	0.36%
11	-10	0.64%	0.51%	0.58%
12	-11	0.87%	1.04%	1.83%
13	-12	1.74%	1.84%	1.93%
14	-13	1.36%	0.49%	1.93%
15	-14	2.31%	2.08%	2.06%
16	-15	1.08%	3.18%	2.79%
17	-16	0.85%	3.49%	3.65%
18	-17	2.71%	3.24%	2.54%
19	-18	2.42%	3.14%	2.09%
20	-19	5.50%	3.96%	2.89%
21	-20	3.05%	3.59%	3.19%

Based on the above historical information, MPI determined that an adjustment for appeals was necessary. The appeals reduction for the forecasted period was judgmentally selected based on the recent three policy year's percentage reductions.

Forecast Results and Comparisons

The written driver premium forecast is calculated by multiplying the policy year projected earned driver units by the driver licence premiums at each DSR level after adjustment for appeals. The earned driver premium is calculated based on the written premium and the historical relationship between written and earned driver premiums.

The figures below compare this year's written and earned driver premium forecasts:

Figure REV- 31: Driver Written Premium Forecast

Line No.	Year	Written Premium This Year	Written Premium Last Year	Written Premium Difference
1	*($000)*			
2	2017/18(a)	$50,187	$50,334	($147)
3	2018/19	$68,902	$69,149	($247)
4	2019/20	$70,903	$71,252	($349)
5	2020/21	$72,885	$73,311	($427)
6	2021/22	$74,723	$75,163	($440)
7	2022/23	$76,565		

Figure REV- 32: Driver Earned Premium Forecast

Line No.	Year	Earned Premium This Year	Earned Premium Last Year	Earned Premium Difference
1	*($000)*			
2	2017/18(a)	$49,204	$49,434	($230)
3	2018/19	$59,475	$59,671	($197)
4	2019/20	$69,895	$70,192	($298)
5	2020/21	$71,886	$72,274	($388)
6	2021/22	$73,797	$74,230	($433)
7	2022/23	$75,637		

The slight reduction in 2018/19 written driver premium forecast can be attributed to the reduction in the driver unit forecast.

REV.3 REINSURANCE PREMIUM CEDED

MPI's Basic reinsurance program consists of two main components:

- The Catastrophe program protects MPI against major weather related physical damage events such as hail and flood.
- The Casualty Excess of Loss program protects MPI against the cost of serious bodily injury claims under PIPP and third party liability legal actions in jurisdictions outside Manitoba.

Figure REV- 33: Basic Reinsurance Premium Ceded Forecast

Line No.	Fiscal Year	2017/18 (Actual)	2018/19 (Budget)	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	**Catastrophe**	9,274	9,148	9,331	9,517	9,707	9,901
3	**Casualty**	2,017	2,048	2,089	2,131	2,173	2,216
4	**Total**	**11,291**	**11,196**	**11,420**	**11,648**	**11,880**	**12,117**

Catastrophe Program

As described in the 2015 GRA, MPI has moved from a multi-year structure to an annual structure for the catastrophe reinsurance program. The overall program is shown in the following figure.

Figure REV- 34: Reinsurance Premiums Ceded – Catastrophe Program

Line No.	Fiscal Year	2017/18(a)	2018/19*	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	**10M xs 15M**	1,428	1,395	1,423	1,451	1,480	1,510
3	**25M xs 25M**	2,792	2,634	2,687	2,741	2,796	2,851
4	**50M xs 50M**	2,233	2,193	2,237	2,282	2,327	2,374
5	**100M xs 100M**	1,847	n/a	n/a	n/a	n/a	n/a
6	**100M xs. 200M**	974	n/a	n/a	n/a	n/a	n/a
7	**50M xs 100M (New)**	n/a	1,096	1,118	1,140	1,163	1,186
8	**115M xs 150M (New)**	n/a	1,830	1,866	1,903	1,941	1,980
9	**Total**	**$9,274**	**$9,148**	**$9,331**	**$9,517**	**$9,707**	**$9,901**

10 (a) 2017/18 actual reinsurance premiums paid including reinstatement premiums
11 * 2018/19 reinsurance premiums reflect the actual amounts negotiated by the Corporation

- MPI continues to self-insure the first $15 million of each catastrophic incident.
- The layers above in line 5 & 6 (100M xs 100M) & (100M xs 200M) were restructured during 2018/19 program renegotiations and no longer exist. These two layers were replaced by (50M xs 100M) and (115M xs 150M).
- All layers in 2018/19 are 100% insured.

In keeping with MPI's emphasis on cost containment, renewal premiums for 2018/19 are once again below those forecasted in the 2018 GRA and below the actual 2017/18 premiums, as more favourable terms were secured. For the past four consecutive years, MPI has been able to negotiate lower rates than forecast. Prospectively, premiums are projected to grow by assumed inflation of 2.0% per year over the forecast period.

Casualty Program

There was no structure changes to the casualty reinsurance program at the 2018/19 renewal. The overall program was placed as follows:

Figure REV- 35: Reinsurance Premiums Ceded – Casualty Program

Line No.	Fiscal Year	2017/18(a)	2018/19*	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	**5M xs 5M**	762	793	808	824	840	857
3	**10M xs 10M**	580	580	592	604	616	628
4	**30M xs 20M**	675	675	689	703	717	731
5	**Total**	**2,017**	**2,048**	**2,089**	**2,131**	**2,173**	**2,216**
9	*** 2018/19 reinsurance premiums reflect the actual amounts negotiated by the Corporation**						

MPI negotiated reductions in premiums for the 2018/19 Basic casualty program resulting in a savings of approximately $10,000 from forecast. Premiums are forecasted to grow by assumed inflation of 2.0% per year over the forecast period.

Total Reinsurance Program – Catastrophe and Casualty

The following figure shows the total Basic earned reinsurance premiums ceded:

Figure REV- 36: Total Earned Reinsurance Premiums Ceded

Line No.	Fiscal Year	This Year	Last Year	Difference	% Difference
1	*($000)*				
2	**2017/18(a)**	$11,291	$11,291	$0	0.0%
3	**2018/19***	$11,196	$11,517	($321)	-2.8%
4	**2019/20**	$11,420	$11,747	($327)	-2.8%
5	**2020/21**	$11,648	$11,982	($334)	-2.8%
6	**2021/22**	$11,881	$12,222	($341)	-2.8%
7	**2022/23**	$12,119	N/A	N/A	

MPI's 2018/19 reinsurance renewal resulted in a reduction to Basic reinsurance earned premiums ceded of $321,000 relative to last year's forecast. The revised forecast assumes these savings will continue throughout the forecast period with inflationary growth of 2.0% per year.

REV.4 SERVICE FEES AND OTHER REVENUE

Service fees represent charges for services related to the Basic insurance coverage offered by MPI. These fees are outlined in *Part V(i) Revenues Appendix 2*.

Service fees and other revenue account for approximately 2.0% to 2.5% of annual revenues for the Basic Program. There are approximately 25 to 30 service fees and revenue types that are allocated to Basic. Service fees and other revenue include revenue from quarterly and monthly pre-authorized payment plans, late payment fees, motor vehicle transaction fees (MVTF), dishonoured payment fees, pre-authorized default fees and other fee related items.

MPI has not applied for any change in Service Fee rates in the 2019 GRA and there are no new Service Fees within the forecast as compared to the 2018 GRA. MPI conducted a Service Fee Review in 2017/18, which is provided in Appendix 3.

The following sections provide the details of the Service Fee and Other Revenue forecast by component.

Figure REV- 37: 2019 GRA - Basic Service Fee Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	**MV Transaction Fees**	6,049	6,227	6,392	6,561	6,735
3	**MV Late Payment Fees**	709	704	696	688	680

12	*** MV = Motor Vehicle**					

Motor Vehicle Transaction Fees (MVTF)

MVTFs is the largest category within Service Fees and Other Revenue. This category consists of approximately 15 different types of service fees.

The service fees in this category have a price range of $9 to $15 and are expected to remain the same over the forecasting period. MVTFs are predominantly comprised of ownership document fees and short term policy fees, which accounts for approximately 75% of total MVTFs.

Forecasting Assumptions

The MVTFs forecast is based on historical average growth rates.

Figure REV- 38: Motor Vehicle Transaction Fee Forecast

Line No.	Fiscal Year	2017/18(a)	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	**Motor Vehicle Transaction Fees**	5,872	6,049	6,227	6,392	6,561	6,735
3	**Last Year's Forecast**	5,806	5,960	6,111	6,243	6,379	-
4	**Difference**	**66**	**89**	**116**	**148**	**182**	**-**

Motor Vehicle Late Payment Fees

Motor vehicle late payment fees remain unchanged at $20. The forecast for late fees is based on the forecasted volume increases as well as product maturity considerations. A negative correlation is observed between pre-authorized payment and late fees; as pre-authorized payments increases, late payment fees decreases.

Figure REV- 39: Motor Vehicle Late Payment Fee Forecast

Line No.	Fiscal Year	2017/18(a)	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	**Late Payment Fees**	709	709	704	696	688	680

4	**Difference**	**91**	**91**	**87**	**86**	**84**	**-**

Dishonoured Cheque Fees and Default Fees

Dishonoured Cheque Fees and Default Fees for returned quarterly time payments and preauthorized monthly time payments remain unchanged at $20. A positive correlation is observed between pre-authorized payment and default fees; as pre-authorized payments increases, default fees increases.

Forecasting Assumptions

The forecast is based on expected volume increases and product maturity considerations.

Figure REV- 40: Dishonoured Cheque Fee and Default Fee Forecast

Line No.	Fiscal Year	2017/18(a)	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*

4	Difference	(30)	(27)	(32)	(33)	(33)	-
5	*PAD = Pre authorized default						

Arrears Interest

Arrears interest is the interest charged on outstanding customer financial obligations.

Forecasting Assumptions

The forecast is based on expected volume increases.

Figure REV- 41: Arrears Interest Forecast

Line No.	Fiscal Year	2017/18(a)	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	Arrears Interest	77	89	91	93	94	96
3	Last Year's Forecast	96	101	104	106	108	-
4	Difference	(19)	(12)	(13)	(13)	(14)	-

Finance Plans

Quarterly and monthly time payment financing plans offered by MPI include a $4 administration fee and interest charges. Customers opting to select financing can arrange to have recurring payments made at pre-determined frequency on specified date by setting up a preauthorized payment.

Forecasting Assumptions

The assumptions used to calculate finance administration fees and financing interest for the forecasting period are shown in the figure below:

Figure REV- 42: Finance Plans - Assumptions

Line No.	Fiscal Year	2017/18(a)	2018/19	2019/20	2020/21
1	% Taking Quarterly Time Payments	7.80%	7.80%	7.80%	7.80%
2	% Taking Monthly Time Payments	35.70%	35.70%	35.70%	35.70%
3	% Taking Annual Payments	56.50%	56.50%	56.50%	56.50%
4	Basic HTA Volume Increase (Decrease)	1.50%	1.50%	1.50%	1.50%
5	Basic Upgrade/drift Factor Increase (Decrease)	2.40%	2.39%	2.54%	2.58%
6	Basic Rate Increase (Decrease)	3.70%	2.60%	2.20%	0.00%
7	Quarterly/Monthly Time Payment Fee	$4	$4	$4	$4
8	Average Financing Interest Rate (Prime+2%)	4.98%	5.45%	5.45%	5.45%

Financing interest rates for quarterly and monthly payments are based on the prime rate set by the Bank of Canada plus 2%. Financing administration fees are based on the number of actual and expected transactions.

The forecast for quarterly and monthly financing interest revenue is based on the prior year's amount multiplied by a compounded growth rate comprised and calculated as follows:

*Interest rate * volume factor * upgrade factor * the expected rate change.*

The financing interest revenue is expected to decrease as compared to last year's forecast. The decrease is due to a lower than expected premiums.

Figure REV- 43: Forecasted Average Financing Interest Rate (Prime + 2%)

Line No.	GRA	2018 GRA	2019 GRA
1	2018/19B	6.74%	5.45%
2	2019/20F	7.20%	5.45%
3	2020/21F	7.20%	5.45%
4	2021/22F	7.20%	5.45%
5	2022/23F	7.20%	5.45%

Figure REV- 44: Finance Plans Forecast including Driver License Financing

Line No.	Fiscal Year	!017/18(a)	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	Quarterly Financing Interest	1,699	1,937	2,192	2,415	2,659	2,928
3	Monthly Financing	9,617	10,963	12,407	13,671	15,049	16,571
4	Financing Admin Fees	2,226	2,337	2,446	2,548	2,654	2,765
5	Total	13,542	15,237	17,045	18,634	20,361	22,263
6	Last Year's Forecast	13,934	15,879	17,801	19,759	21,929	-
7	Difference	(392)	(642)	(756)	(1,125)	(1,568)	-

As shown above the difference is related to the prime rate forecast. As the interest rate is forecasted to be lower in the 2019 GRA as compared to the 2018 GRA, the financing interest revenue is also lower.

Drivers Ed Course Fees

MPI offer drivers education courses at a nominal fee to ensure accessibility to Manitobans.

Figure REV- 45: Drivers Ed Course Fees

Line No.	Fiscal Year	2017/18(a)	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*

Total Basic Service Fees and Other Revenue

The figure below contains the total forecasted Basic Services Fees and Other Revenues for 2017/18 to 2023/24, along with a comparison to last year's forecast.

Figure REV- 49: Total Service Fees and Other Revenue

Line No.	Year	This Year	Last Year	Difference	% Difference
1	***($000)***				
2	**2018/19B**	$22,834	$22,204	$630	2.84%
3	**2019/20F**	$23,832	$24,328	($496)	-2.04%
4	**2020/21F**	$25,839	$26,431	($592)	-2.24%
5	**2021/22F**	$27,612	$28,532	($920)	-3.22%
6	**2022/23F**	$29,524	$30,849	($1,325)	-4.29%
7	**2023/24F**	$31,617	0	0	0

Overall, the forecast for Service Fees and Other revenue is lower in this year's GRA as compared to last year's GRA submission. The main reason for the reduction in revenue is primarily related to lower than expected prime interest rates which unfavorably affected interest revenue.

Appendix 2: BASIC SERVICE AND TRANSACTION FEES

The Revenue Appendix 2 table displays the 2019/20 Basic Autopac Service and Transaction Fees. For 2019/20, no changes are proposed to Service and Transaction Fees.

NAME	CURRENT FEE	WHEN & WHY CURRENT FEE ESTABLISHED
Dishonoured Cheque	$20	Increased from $10 on Mar 1, 1992
Dishonoured Cheque (Electronic)	$20	Introduced on Mar 1, 2000 with implementation of 12-Pay
Late Payment	$20	Introduced on Mar 1, 1988 with time payment plan extended to three installments.
4 Payment Financing	$4 plus financing at prime plus 2%	This changed from a flat fee of $14 with implementation of Autopac-on-line in July, 1995.
12 Pre-Authorized Payment Financing	$4 plus financing at prime plus 2%	Reduced to $4 from $8 on Mar 1, 2005 – to reflect the fact that implementation costs for the monthly payment plan have been fully amortized. Both financing administration fees will now be the same at $4.
Mid-term change 4 payment to 12 Pre-Authorized Payment Financing	$4 plus Interest Adjustment	Introduced on Mar 1, 2000 with implementation of 12-Pay.
Ownership Document	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Transfer	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.

NAME	CURRENT FEE	WHEN & WHY CURRENT FEE ESTABLISHED
Load Increase/Decrease	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Vehicle Class Change	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Estate-to-Spouse Transfer	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Sticker Replacement	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Plate Replacement includes sticker (except Semi-trailer)	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Plate Replacement for Semi-trailer	$4	This fee was reduced to $4 Mar 1, 1996 from $9.
Registration Card Replacement	$9	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Coverage Reduction, except in the case of a reduction of excess value coverage	$15	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Claims Record Request	$15	This fee was established Mar 1, 1993 to help compensate for the rise in claims costs and decrease in rate return on investments.
Request for Proof of Insurance	$15	Introduced in 1995.

NAME	CURRENT FEE	WHEN & WHY CURRENT FEE ESTABLISHED
Historical Document Request	$15	Introduced in 1996.
Prorating: New Applications	Daily	This has been in effect since July 1, 1995. Motorists renewing or making changes to their Autopac coverage anytime during the month will have their premiums calculated from the day their new insurance coverage takes effect. This way, you are only paying for the actual number of days you are insured.
Cancellations: Annual policy except motorcycle, moped, mobility vehicle, trailer less than $2500, snow vehicle (DVA), off-road vehicle, collector vehicle.	Short Rate subject to minimum retained premium of $25	July 1, 1995 – cancellation takes effect from the day you cancel your policy subject to short rate factors and a minimum retained premium of $25. Previously cancellation based on 1/12th of annual premium for each full calendar month remaining in the term of coverage.
Short term policy except motorcycle, moped, mobility vehicle, collector vehicle.	Short rate subject to minimum retained premium of $25 or 30 days written premium, whichever is greater	Introduced with introduction of Short Term Policies on Mar 1, 1998.
Motorcycle, moped, mobility vehicle, snow vehicle (DVA), collector vehicle.	Seasonally prorated	Seasonal Proration introduced on Mar 1, 2001.
Off-road vehicle, trailer $2,500 or less.	No refund	Mar 1, 1993 introduced for trailers as they are rated on their declared value, not on their declared use.

Appendix 3: Service Fee Review

Introduction

The majority of the Basic Insurance service and transaction fees were introduced in the 1990s and have not been updated since their introduction. Increasing service and transaction fees will not result in increased revenue to MPI because the net zero overall effect of the breakeven rate setting model will correspondingly reduce premium revenue. That said, a review was necessary to assess the appropriateness of many of the long-standing MPI service fees, and to respond to Directive 11.6 of PUB Order 130/17.

Although a majority of the fees are outdated, MPI is not requesting any changes to service fees in the 2019 GRA. Changing service fees is complicated by the close relationship between Basic Insurance and MPI's role as the administrator of *The Drivers and Vehicles Act* on behalf of the Government of Manitoba. A benefit to Manitobans of the integration of Basic Insurance and Driver Vehicle Administration (DVA) is that customers have a one stop shop for their vehicle registration, licensing and insurance requirements. A consequence of the integration is that it is not readily apparent to the consumer whether a particular fee paid to MPI is a Basic Insurance related service fee or a DVA related service fee. To complicate the matter further, the Automobile Insurance Certificates and Rates Regulation (M.R. 23/2017) specifies that a number of services have a dual component whereby part of the fee paid by the customer is Basic Insurance related and another part is DVA related.

DVA related fees collected by MPI are monies passed onto the Government of Manitoba. These fees are government revenue. The Government of Manitoba in turn reimburses MPI for expenses associated with its administration of the DVA. MPI and the Government are in the process of reviewing DVA related service fees. Accordingly, it would be premature to seek changes to the Basic service and transaction fees prior to MPI knowing the outcome of any change by the Government to the DVA service fees charged by MPI.

Current Service Fees

MPI collects three categories of service and transaction fees related to Basic Insurance and DVA.

1. Basic Insurance service and transaction fees;
2. DVA service and transaction fees;
3. Service and transaction fees that are a hybrid of 1 and 2.

The chart below lists all the fees for the first and third categories.

The following list are the hybrid services (third category).

- Ownership Document
- Transfer
- Load Increase/Decrease
- Vehicle Class Change
- Estate-to-Spouse Transfer
- Sticker Replacement
- Plate Replacement (except Semi-trailer)
- Registration Card Replacement
- Coverage Reduction
- Claims Record Request
- Request for Proof of Insurance
- Historical Document Request
- Change of Insurance use from/to collector

The total fee charged to customers for the hybrid services is currently $15 ($9 MPI, $6 Government). In this Rate Application (see *Part V(i) REV Appendix 2*), and prior applications, MPI has only referenced the $9 fee as this fee is the one specified in the Automobile Insurance Certificates and Rates Regulation as the fee charged by MPI.

The $6 fee is charged by Government for DVA services and is not for Basic Insurance services.

Adequacy of Current Service Fees

The table below provides a comparison of the total service fees charged at MPI, SGI, and ICBC. MPI was unable to determine what portion, if any, of the various SGI and ICBC fees were of a hybrid nature similar to those charged to Manitoba residents. For reference, the table also includes an estimate of what the fee would be, if it had escalated by the consumer price index (CPI) since the fee's inception.

Fee Type	Current Total Fee	Direct Costs	MPI Staff Costs	Broker Costs	CPI Increase since inception	Other Jurisdictions		
						MB Hydro	ICBC	SGI
Dishonoured Cheque	$20	$15	$6.41	n/a	$31.85	$20	$18	$15

EXPENSES

EXP.1 ANOTHER YEAR OF PRUDENT FISCAL MANAGEMENT

As illustrated in prior General Rate Applications (GRA), the Corporation's prudent management of operating costs has ensured the 2019 GRA requested rate increase is not a result of operating expenses. MPI continues to focus on containing and, where feasible, reducing operating expenses, which has resulted in reductions in the current rating years (2019/20 and 2020/21), over the prior GRA forecast.

The various comparatives within this chapter support MPI's continued diligence in controlling and reducing expenses. The following, highlights the steps MPI has taken to demonstrate fiscal restraint on to the benefit of ratepayers:

- Expected reduction in Full Time Equivalent (FTE) staffing counts equating to 3.6% from 2020/21 as compared to the 2017/18 budgeted levels
- Overall reduction in 2017/18 normal operating expenses of approximately 1% as compared to 2016/17 despite increases related to contractual workforce general wage increase obligations and CPI increases
- Achievement of the 2017/18 Management controlled stretch target of more than the initially anticipated $2.6 million
- A 2018/19 budget which includes the achievement of the 15% management reductions from 2016/17 as well as committed staff reductions through improvement initiative efficiencies
- Reduction in implementation expenses in the rating years and throughout the forecast mainly due to an enhanced focus on value management related to projects and a zero budget for insertions of work
  Continued reduction of building expenses via identification of efficiencies/synergies which has led to further building closures

Figure EXP-1 below provides a comparison of the prior year and current year forecasted Basic expenses over the rating years (2019/20 and 2020/21). Total Basic Expenses have been grouped into two main categories: allocated expenses from Corporate, and direct expenses. As illustrated in line 6 below, the basic expenses reflect a decrease of approximately $5.1 million, or 2.2% decrease, in comparison to the same rating years (2019/20 and 2020/21) from the 2018 GRA. This follows the same pattern as presented in last year's GRA, and once again supports the Corporation's continued focus on and commitment to managing and controlling operating costs.

Figure EXP- 1: Expense Comparison – 2019 vs. 2018 GRA Rating Years

Line No.		2019 GRA Avg. of Rating Yrs	2018 GRA Avg. of Rating Yrs	Change (2019-2018)	Change (Percent)
	(C$ 000s, rounding may affect totals)				
1	Basic Allocated Corporate Expenses				
2	Claims Expense	137,322	141,326	(4,004)	-2.8%
3	Road Safety/Loss Prevention	12,755	13,079	(324)	-2.5%
4	Operating	74,959	76,366	(1,407)	-1.8%

EXP.2 EXECUTIVE SUMMARY

The costs associated with delivering Universal Compulsory Automobile Insurance (the Basic program) to Manitoba motorists fall into seven major categories: Net Claims Incurred; Claims Expenses; Road Safety/Loss Prevention Expenses; Operating Expenses; Regulatory/Appeal Expenses; Commissions; and Premium Taxes.

Costs relating to net claims incurred will be discussed in *Part V(i) CI Claims Incurred*, while the remaining costs will be discussed in this part.

This section will describe how the Corporate (insurance and non-insurance lines of business) expense categories (Claims Expenses, Operating Expenses, Road Safety/Loss Prevention expenses, and Regulatory/Appeal expenses) are derived for the Basic program based on the cost allocation methodology approved by the Public Utilities Board (PUB) in Board Order 157/12. Costs associated with Commissions and Premium Taxes are directly incurred by the Basic line of business and are discussed in sections *EXP.7* and *EXP.8*, respectively.

As will be shown throughout this part, MPI continues to consistently and diligently manage Corporate and Basic operating costs. The Corporation continues to seek ways to implement cost reduction measures, take advantage of efficiencies/synergies, and manage controllable expenses where possible. The Corporation was successful in absorbing inflationary increases and other pressures during the 2017/18 year and has targeted this same outcome in 2018/19.

EXP.2.1 Corporate Expense Overview/Summary of Forecast

The first section of this chapter provides a brief overview of the Corporate/Basic operating expenses as well as a summary table that lists the key assumptions used in last year's rate application as compared to this year's rate application. To assist in the analysis and understanding, Corporate expenses are separated into three categories: Normal Operating (day to day); Improvement Initiative – Ongoing (future normal operating); and Improvement Initiative – Implementation (one time project expense).

EXP.2.2 Cost Containment

Within the Cost Containment section, an update on MPI's current year and future year's cost containment strategies are discussed. As will be illustrated, MPI continues to make strides in reducing operating expense related costs primarily related to building closures, fleet reductions, and sponsorship reductions.

EXP.2.3 Corporate Operating Expenses and Variance Analysis

Expense variances over the prior year's forecast are best explained at the Corporate expense level due to the various changes in the year-over-year Basic allocation percentages. Corporate expenses are classified into various expense categories. Only the largest and most relevant categories will be analyzed and discussed. The detailed analysis and explanations are provided for the following expense categories:

- Compensation
  - Salaries
  - Benefits
- Data Processing
- Special Services
- Building Expenses
- Road Safety/Loss Prevention Program
- Printing, Stationery and Supplies
- Postage
- Driver Education Program
- Furniture and Equipment
- Merchant Fees and Bank Charges
- Amortization
- Other

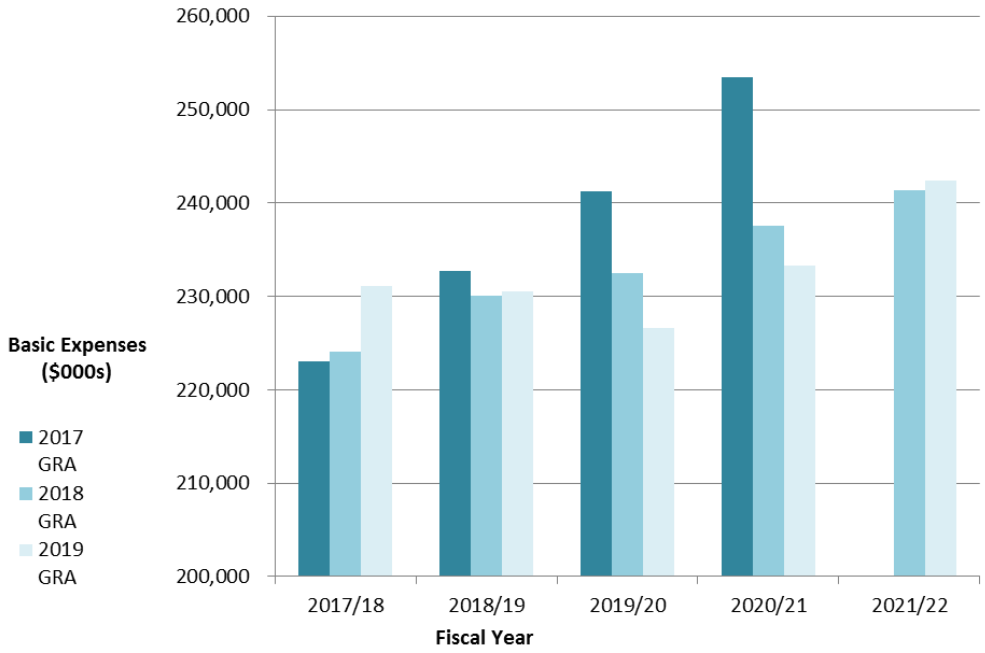
EXP.2.4 Expense Allocation Process

Total Basic expenses include expenses allocated from Corporate expenses through an allocation methodology. The purpose of the allocation methodology is to distribute/separate Corporate expenses into the four lines of business (LOB) via various allocators. Subsequently, each LOB is further segmented into four expense line items as shown on the Statement of Operations (Claims Expense, Operating expense, Loss Prevention/Road safety, and Regulatory/Appeal). This allocation methodology was developed in consultation with Deloitte Canada and was approved by the PUB in Board Order 157/12. Key allocation drivers embedded in the process include the following: full time equivalent (FTE) proportion of claims and operating staff; proportion of claims incurred costs for each LOB compared to total Corporate claims incurred; Business Transformation Office (BTO) departmental allocation; and weighted customer contact centre call ratio (WCCCCR). Please refer to *Figure EXP-4: Summary Table of Assumptions* for a summary of the key expense drivers and allocators used in this year and last year's forecast. As shown in *Appendix 7*, the percentage of corporate operating expenses allocated to Basic insurance has remained consistent over the last several years at 76% to 77% of total costs.

EXP.2.5 Basic Expenses

Upon the completion of the allocation process, expenses attributable to the Basic program are established for Normal Operations and Improvement Initiatives. Basic expense variances are explained either by the increase/decrease in Corporate expenses and/or a change in the allocation drivers/percentages. A high level illustration of Basic expenses forecasted in this year's GRA as compared to the last two GRA's has been provided in the following chart and will be discussed in further detail in section *EXP.5.2*.

Figure EXP- 3: Total Basic Expense 3 Year GRA Comparison



The preceding chart shows forecasted Basic expenses (Normal Operations and Improvement Initiatives) in this year's rate application as compared to the last two rate applications (2017 and 2018 GRA's). The increase in expenses for the 2017/18 fiscal year is primarily attributable to the impairment expense related to various initiatives including the Customer Claims Reporting System. The Corporation undertook an extensive review of projects, as detailed in *Part IV(ii) Value Management*. Upon completion of the review, any initiative costs that did not meet the criteria for capitalization were expensed in 2017/18. For the years 2018/19 and outward, forecasted expenses overall, are lower, most notably in the 2019 GRA rating years (2019/20 and 2020/21). This is a result of various Management actions / cost containment strategies taken to control costs. Such actions include Management invoked stretch targets, FTE reductions, overtime reductions, reductions in Improvement Initiative related expenses, and a focus on change to business processes and reducing controllable operational expenses where possible. These cost saving approaches are all discussed in greater detail in the subsequent sections.

EXP.2.6 Basic Capital and Related Expense

Basic capital is comprised of seven asset categories. These asset categories include: land, buildings, land improvements, data processing equipment, automobiles, office furniture and equipment, and deferred development costs. Deferred development costs are associated with project initiatives MPI has undertaken. Tracking and understanding capital cost spending is imperative in the GRA forecast as all capital expenditures are ultimately expensed over the life of the asset whereby each asset class has varying amortization/depreciation periods. For example, building capital costs are recognized as an expense over a period of 40 years whereas data processing equipment costs are recognized as an expense over a period of 3 years. All capital expenditures utilize the straight line depreciation/amortization method.

Section *EXP.6.3* discusses in detail all capital expenditures and associated depreciation/amortization. Also discussed in this section are the implementation expenses related to the various projects currently underway or anticipated in the future. This will be followed by a discussion and explanation on the variances between this year's GRA and last year's GRA submission. As will be demonstrated, MPI has once again taken significant steps to reduce budgeted and forecasted capital expenditures when compared against prior GRA's. A key focus going forward, related to capital projects, is to ensure initiatives undertaken support and optimize our core business functions.

EXP.3 EXPENSE OVERVIEW

Corporate operating expenses include costs to run MPI's four lines of business (Basic, Extension, Special Risk Extension, and Drivers and Vehicles Act) with the exception of claims payments, broker commissions, and premium taxes. In the rating years (2019/20 and 2020/21), total Basic expenses represent approximately 18.6% of total Basic costs (operating expenses plus claims incurred, commissions, and premium taxes). This is approximately 0.8% less when compared to the 2018 GRA. Although the expense section in this year's GRA will focus on explaining expenses from a

Corporate perspective, the allocated Basic expenses are the basis for determining the 2019/20 rate requirement.

Corporate expenses are comprised of three main categories:

- Normal Operating Expenses
- Improvement Initiative–Ongoing Expenses
- Improvement Initiative–Implementation Expenses

Normal Operating expenses include expenses incurred to manage the day-to-day operations of MPI and are generally fixed (non-discretionary) in nature. Improvement Initiatives are project costs that will increase efficiency and/or provide better customer service. There are two types of Improvement Initiative expenses: Ongoing and Implementation.

Improvement Initiative-Ongoing expenses are expenses that occur as a result of a project that typically transfers into normal operations once the project has been completed. These expenses are forecasted as ongoing-improvement initiative expenses while the project is in progress and become normal operating expenses upon project completion. Examples include salaries, licensing costs for purchased software, future maintenance on hardware purchase, and amortization related to deferred development. Amortization of deferred development expenses generally have a large impact on normal operations expenses and are therefore shown at the bottom of the summary expense tables.

Improvement Initiatives–Implementation expenses are one-time expenses related to a project, which cease upon completion of the project. Examples include software and hardware purchases.

EXP.3.1 Summary of Key Expense Drivers & Allocators

To forecast expenses accurately and reliably, it is imperative that MPI understand cost behaviors and associated underlying cost drivers in order to derive appropriate

assumptions. The table below outlines the key assumptions used when forecasting expenses for this year's rate application compared to last year's application, along with the corresponding section where these assumptions are supported.

Figure EXP- 4: Summary Table of Assumptions

Line No.		2018 GRA	2019 GRA	Reference
1		2018/19 – 1868.7	2018/19 – 1874.1	
2	FTE Count	2019/20 – 1794.5	2019/20 – 1877.1	Figure EXP-14
3		2020/21 – 1794.5	2020/21 – 1859.1	
4				
5	FTE Allocator			
6	Claims	67.78%	67.95%	Figure EXP-38
7	Operating	32.22%	32.05%	Figure EXP-38
8	Claims Incurred Allocator			
9	Basic % (4 year rolling average)	Avg 87.0% throughout forecast period	Avg 87.0% throughout forecast period	Figure EXP-35
10	BTO Project Department Allocation	2018/19 – 71.6%	2018/19 – 72.6%	
11	Basic Portion	2019/20 – 82.1%	2019/20 – 72.8%	
12		2020/21 – 82.1%	2020/21 – 81.6%	Figure EXP-37
13	Weighted Customer Contact Centre Call Ratio(WCCCCR)			
14	(4 year rolling average)			
15	Total Operating	93.40%	93.22%	Figure EXP-36
16	Salaries Growth Rates			
17	Economic Increase – In Scope	1.75%-2018/19	2.00%-2018/19	
18		2.00%-2019/20	2.00%-2019/20	
19		1.00%-2020/21	0.00%-2020/21	Figure EXP-13
20	Step in Scale – In Scope	1.75%	1.75%	
21	Step in Scale – Out of Scope	2.25%	2.25%	EXP.4.1.2
22	Most other Expense Category Growth Rates	0% in 2018/19 and 2019/20, 2.0% remaining forecast	0% in 2018/19 and 1.9% in 2019/20, 2.0% remaining forecast	Expense Book

Overall, most assumptions remain similar to the prior year with key differences related to FTE counts, salary growth rates, and the application of CPI for the year 2019/20.

EXP.3.2 Cost Containment

MPI continues to prioritize and control day-to-day operational expenses and project expenses. MPI is committed to providing value to Manitobans through cost containment, which has become firmly embedded into MPI's culture.

As presented in the 2018 GRA (Volume II – Expenses, EXP.1 & Volume II Expense Appendix 6, page 10), during the 2017/18 fiscal year, the Corporation established corporate expense stretch targets whereby new strategies and methods were implemented to reduce day to day operating expenses. Management implemented cost containment measures related to the following:

- Entry Level Professional Truck Driver Training Program;
  - Discontinued non basic Driver training
- Information Technology;
  - Reduce costs related to equipment and smart phones
- Forward Collision Avoidance Systems for Taxicabs;
  - Initiative was deferred
- Corporate Vehicle Fleet reductions
  - Approximately 40-45% of the corporate fleet was eliminated
- Corporate Sponsorships
  - Overall reduction in corporate sponsorships
- Road Safety Advertising
  - Overall reduction in road safety promotion
- Deferral of department redevelopments
  - Space redevelopment initiative was deferred

Upon initial recommendation and subsequent review, it was anticipated the Corporation could achieve a $2.6 million savings based on cost reduction strategies related to the above expense items.

The progress of the strategies and savings were closely monitored throughout the 2017/18 fiscal year. This prudent approach, has resulted in an excess savings of $1.3 million for a total amount of savings of $3.9 million. The detailed results of each strategy are as follows:

Figure EXP- 5: 2017/18 Cost Containment

Line No.	Cost Saving Category	2017/18A
	($000's, except where noted)	
1	Entry Level Professional Truck Driver Training	450
2	Information Technology	366
3	Smart Phones - VOIP	82
4	Road Safety Advertising	160
5	Road Safety/Loss Prevention Initiative - Forward Collision Avoidance	164
6	Corporate Vehicle Fleet	882
7	Reduction in Corporate Sponsorships	192
8	Road Safety Advertising	300
9	One time deferral of department redevelopments	1,300
10	Total 2017/18 Savings	3,896

EXP.4 CORPORATE OPERATING EXPENSE

The following table reflects one year of actual, one year of the forecast base, and four years of forecast for total corporate operating expenses. This is normal operating expenses plus all expenses related to current and expected initiatives.

Figure EXP- 6: Total Corporate Operating Expenses

Line No.	Expense	2017/18A	2018/19FB	2019/20F	2020/21F	2021/22F	2022/23F

Note: Table includes improvement initiative (ongoing and implementation) expenses

Corporate expenses are grouped into 21 expense categories as listed above, including 4 categories related to compensation. As mentioned in prior GRA submissions, these categories allow MPI to understand, manage, and investigate variances to assist in controlling costs. As explained above, Corporate operating expenses include all normal operations (day to day expenses) plus all improvement initiative expenses (implementation and ongoing).

The year over year increases and decreases are primarily driven from contractual wage increases, pension obligation valuations, inflationary increases, and amortization expenses related to deferred development capital costs.

The following pie charts illustrate the composition of the expense categories which make up Corporate expenses.

Figure EXP- 7: 2017/18 Budget – Total Corporate Expenses (2018 GRA)

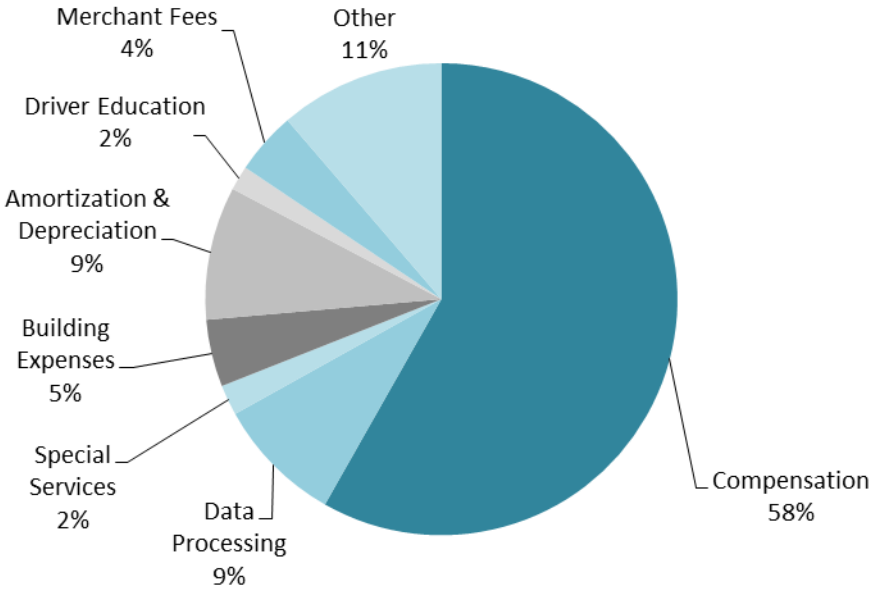

Figure EXP- 8: 2017/18 Actual – Total Corporate Expenses

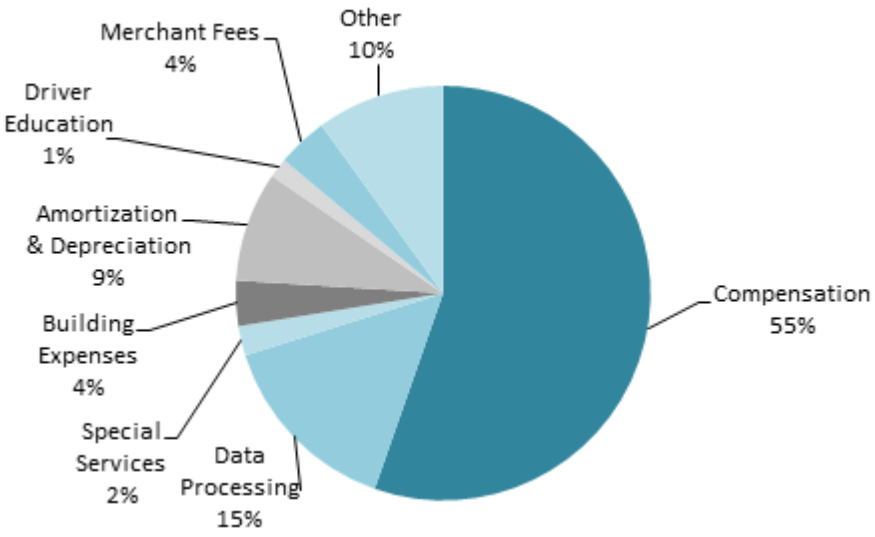
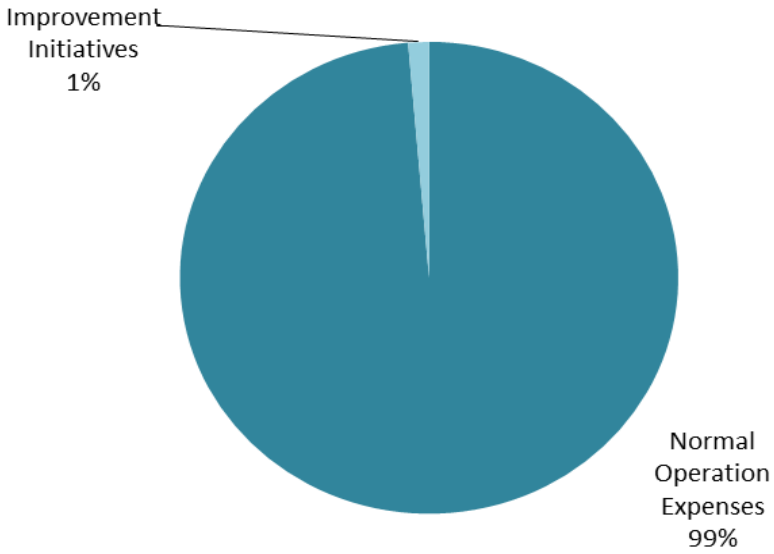


The above charts show a comparison of the expense grouping composition of the 2017/18 budget versus the 2017/18 actual. Decreased grouping percentages occurred for compensation and building expenses whereas increased grouping percentages occurred for data processing expenses. All other groupings remain relatively stable. Explanations for these variances will be discussed in *EXP.4.2* for normal operations, and *Appendix 7* for total Corporate expenses.

The compensation expense category drives the majority of all corporate operating costs and makes up approximately 55% of MPI's overall Corporate expenses for 2017/18. Compensation includes the costs related to salaries, benefits, overtime, and health and education tax. As this category is the primary contributor to Corporate expenses, a greater focus on this category is explained in the following section.

The chart below illustrates for the 2018/19 forecast base year. The majority (99%) of Corporate expenses are considered normal operating expenses with the remaining 1% of total Corporate expenses related to the implementation expenses for initiative projects. This percentage is the same as presented in last year's GRA, which supports continued steps in mitigating project costs. The corporation is committed to managing only core business functions.

Figure EXP- 9: 2018/19 Forecast Budget – Total Corporate Expenses



The following section will provide analysis of changes in year-over-year Corporate normal operating expenses. As mentioned earlier, expenses are best analyzed at the Corporate level as this removes the impacts of the allocation process. Overall Basic is consistently approximately 76% of Corporate expenses. The table presents expenses via major expense category for normal (day to day) operating expenses only. Total corporate expenses (normal operations plus project related expenses) will be discussed in *Appendix 7*.

EXP.4.1 Corporate Normal Operating Expenses

Corporate Normal Operating expenses are the day-to-day expenses MPI incurs to manage its operations. With approximately 99% of Corporate expenses attributable to normal operations, this expense type has the largest impact to the rate requirement for the Basic program and thus will be explained in detail within the largest or most variable expense categories.

EXP.4.1.1 Corporate Normal Operating Expenses – Detailed Expenses

The table below shows the breakdown of the Corporate Normal Operating expenses.

Figure EXP- 10: Corporate Normal Operating Expenses

Line No.	*Category*	*Section*	*2017/18A*	*2018/19FB*	*2019/20F*	*2020/21F*	*2021/22F*	*2022/23F*

27	% increase / (decrease) over prior year			11.27%	-26.81%	-3.92%	-27.37%	-40.40%
28	Total Expenses	*EXP.4.2.14*	276,588	297,625	293,239	298,853	298,738	298,825

The expenses above for 2018/19 represent MPI's annual normal operations forecast base. The expenses for subsequent years (2019/20 and onward) are forecasted based on the previously outlined assumptions. A section reference has been provided for those expense categories with significant variances from last year's GRA. Expanded

analysis of all Corporate Normal Operating expenses is available *Appendix 5* and *Appendix 7.*

EXP.4.1.2 Compensation – Salaries

Description

Salaries represent all regular payments associated to MPI's staff, as well as other salary related accounts including retirement allowances, maternity benefits, vacation payouts/buyouts, and banked vacation. Salaries are 1 of 4 categories within the Compensation grouping and represent approximately 46% of all Corporate Normal Operating expenses.

Forecasting Assumptions

To derive the forecast for salaries, current actual salaries are taken at a point in time (during the 2017/18 fiscal year) and then forecasted using the estimation, or application of known increases, related to five key drivers. These five key drivers are: economic increases, step in scale increases, budgeted / forecasted FTE count changes, provision for vacancy allowances, and other salary account changes.

The five key drivers of forecasted salaries expenses are described in detail as follows:

- **Economic Increases –** Represents the contractual general wage increases as specified within the Collective Agreement as negotiated between MPI and the Manitoba Government Employees Union (MGEU). The most recently completed negotiations between MPI and MGEU related to economic increases occurred in 2016/17 whereby the contract covered the periods 2016/17 through to 2020/21.
    - The negotiated and forecasted economic increases are shown below:

Figure EXP- 11: Economic Increases Negotiated (In Scope Staff)*

Line No.	Effective Date	Rate	Fiscal Year	Impact
1	September 22, 2013	0.00%	2013/14	0.00%
2	September 21, 2014	2.75%	2014/15	1.15%
3	September 20, 2015	2.75%	2015/16	2.75%
4	September 18, 2016	2.00%	2016/17	2.38%
5	September 17, 2017	1.50%	2017/18	1.75%
6	September 16, 2018	2.00%	2018/19	1.75%
7	September 15, 2019	2.00%	2019/20	2.00%
8	September 26, 2020	0.00%	2020/21	1.00%
9	September 25, 2021	0.00%	2021/22	0.00%

** Effective from September 23, 2012 to September 17, 2016 (Contractual)*

** Effective from September 18, 2016 to September 26, 2020 (Contractual)*

- **Step in Scale Increases -** The Collective Agreement specifies a pay plan. Each in-scope position aligns to a salary range which has six "steps". The incumbent of a position will be eligible for up to five annual 3.5% increases until they reach the maximum salary (step) for the specific position. Upon reaching the maximum salary, the incumbent will only be eligible to receive a general wage increase as provided above. The forecasted rate used in this year's GRA is 1.75% (assumption is 50% of employees will receive), which is consistent with the rate used in prior years.
- **Full Time Equivalent (FTE) Counts –** Represents the equivalent number of employees (staff) who are working full time hours.

The table below shows the five year historical and five year forecast of actual and budgeted staffing levels.

Figure EXP- 12: Normal Operations Staffing*

Line No.	Fiscal Year	Actual	Budget	Over (Under) Variance
1	2013/14A	1,890.3	1,936.7	(42.0)
2	2014/15A	1,874.8	1,934.7	(44.4)
3	2015/16A	1,866.7	1,927.7	(52.9)
4	2016/17A	1,898.9	1,898.7	(32.0)
5	2017/18A	1,860.9	1,910.0	(49.1)
6	2018/19FB	-	1,874.1	-
7	2019/20F	-	1,877.1	-
8	2020/21F	-	1,859.1	-
9	2021/22F	-	1,853.1	-
10	2022/23F	-	1,853.1	-

**The above table includes 13.0 FTE in 2018/19 FB and onward. This is related to an increase required for Personal Injury Plan Protection Case Managers. As the expected costs for these positions are expected to be offset with claims savings, these do not factor into the compensation analysis*

The figure above summarizes staffing levels actual to budget FTEs up to 2017/18 and then presents the Corporation's FTE forecast thereafter. The forecast includes staff reductions associated to improvement initiative efficiencies. The expense dollars related to these expected savings are classified as an Improvement Initiative - ongoing expense, but to get a true reflection of future normal operations FTE counts, these have been included in the table above. Staff counts continue to remain consistently below budgeted levels for the past five years. This variance is primarily attributable to the Corporation's Vacancy Management Program which was set up as a means to contain costs.

The budget and forecast reflects MPI's commitment to continual cost savings through the management of staff reductions. It is anticipated MPI will reduce staff FTE counts by approximately 51 positions by 2020/21 as compared to 2017/18 budgeted levels through realizing synergies/efficiencies from projects, and seeking ways to improve and simplify business processes.

For a detailed review of 2017/18 actual versus budgeted and 2018/19 budgeted staffing levels please refer to *Appendix 10* and *Appendix 11*.

- **Other Salary Adjustments -** These include a number of salary related items, such as retirement payments/provisions, sick leave provision, vacation payouts/buyouts, and banked vacation. The largest component represents retirement payments, which is a function of the number of retirements in a particular year. This category also contains the Health and Well Being Flexible Spending account and an allowance for in-scope staff who work in downtown Winnipeg.
- **Vacancy Allowance -** In the normal course of operations, vacant positions arise from staff turnover related to job changes, retirements, resignations etc. This results in a certain number of positions being vacant at any given point in time. This vacancy means that salary dollars are not being paid, which in effect reduces salary expense. In order to more accurately reflect budgeted and forecasted salary expenses, the Corporation accounts for these cumulative non remunerative vacancies through a vacancy allowance provision. The budgeted and forecasted vacancy allowance is provided in *Figure EXP -13*.

To illustrate the year over year forecasting methodology using all five salary expense drivers, *Figure EXP -13* below illustrates the various changes involved to derive normal operating salaries from the actual salary expense in the 2017/18 fiscal year through to the 2020/21 forecasted year. The major increases are generally attributable to mandated in-scope economic and step in scale increases.

9	Economic - Inscope	1.75%	884	2.00%	2,020	1.00%	1,202	
10	Economic - Out of Scope	1.50%	350	2.00%	560	2.00%	601	
11	Steps in scale	1.75%	2,367	1.75%	2,437	1.75%	2,530	
12	Other Salary Acct adjustments**		2,399		(545)		(52)	
13	Other / Rounding		(89)		(34)		(1)	
14	Total		136,551		140,889		144,837	

**Note: Gross Salaries* - *Gross Salaries are determined based on the assumption that all budgeted FTE positions are filled throughout the entire year. Gross Salaries include regular salaries, plus all other salaries accounts including vacation payouts and buyouts and retirement payouts*

***Note: Other Salary Accounts* - *Other Salary accounts is described in EXP. 4.1.2 and includes 9 other accounts pertaining to various other salary related items*

EXP.4.1.3 Historical Corporate Salary Analysis – Normal Operations

The above section described the steps to calculate the budgeted and forecasted salary expenses relating to this year's GRA. The following tables reflect analysis related to the historical corporate salary expenses for normal operations. For the purpose of this analysis, "other" salary accounts (banked vacation, accrued vacation, retirement allowance, etc.) are not included. The analysis below relates to regular salaries only.

Figure EXP- 14: Corporate Annual Salary – Normal Operations

Line No.	Fiscal Year	Corporate Annual Salary	Change from prior year	Change (%)	Average actual FTE	Average Salary per FTE	Change (%)
	(C$000s, except where noted)						
1	2013/14A	115,344	1,283	1.12%	1890.3	61.02	1.36%
2	2014/15A	116,457	1,113	0.96%	1874.8	62.12	1.80%
3	2015/16A	120,666	4,209	3.61%	1866.7	64.64	4.06%
4	2016/17A	127,761	7,095	5.88%	1898.9	67.28	4.08%
5	2017/18A	126,504	-1,257	-0.98%	1860.9	67.98	1.04%

Figure EXP- 15: Corporate Annual Salary Changes – Normal Operations

Line No.	Fiscal Year	Change due to Economic Increase	Change due step in scale and other	Total Change due to salary rate changes	Change due to FTE changes	Total salary Increase	Change in Average Actual FTE	Change in Average Salary per FTE ($)
	(C$000s, except where noted)							
1	2013/14A	-	1,551	1,551	(268)	1,283	(4.4)	0.82
2	2014/15A	1,326	750	2,077	(964)	1,113	(15.5)	1.10
3	2015/16A	3,203	1,529	4,732	(522)	4,209	(8.1)	2.52
4	2016/17A	2,872	2,057	4,929	2,166	7,095	32.2	2.64
5	2017/18A	2,214	2,236	4,450	(5,706)	(1,257)	(38.0)	0.70

The two figures above, provide a detailed analysis of the year-over-year changes as it relates to normal operation salary expenses for the period from 2013/14 to 2017/18.

Figure EXP - 14 illustrates the year–over-year dollar and percentage changes along with the corresponding dollar and percentage changes in average salary. A highlight of this table is the favorable change form 2016/17 compared to 2017/18. Despite mandated salary and step in scale increases for in-scope staff, overall salary expense has decreased by approximately $1.3 million, or about 1%. This is due to many factors, including controlling FTE counts, managing the vacancy allowance, and applying a 0% general wage and merit increase to Management in 2017/18. This further demonstrates the continued Corporate commitment to prudent fiscal management.

Figure EXP - 15 provides a breakdown as to the reasons for the increase/decrease in normal operations salary expense. Annually the majority of growth is attributable to economic and step in scale increases with the remaining variance attributable to FTE changes. The Corporation reduced the FTE composition by 38 in 2017/18 as compared to 2016/17.

Figure EXP – 16 provides further details on the drivers of the overall dollar changes in the form of a percentage. The majority of the year-over-year changes are attributed to the mandated economic increases and the step in scale increases. In 2016/17, a large portion of the increase was due to FTE count increases, whereas in 2017/18 the majority of the decrease is also due to FTE counts. For a detailed analysis on

compensation (including benefits, overtime and Health & Education tax) for the preceding three tables please refer to *Expense Appendix 12*.

Figure EXP- 16: Compound Annual Salary Analysis Percentage Change

Line No.	Fiscal Year	% change due to economic increase	% change due to steps in scale and other	% change due to all salary level changes	% change due to FTE changes	Total % change in salaries
1	2013/14A	0.00%	1.36%	1.36%	-0.24%	1.12%
2	2014/15A	1.15%	0.65%	1.80%	-0.84%	0.96%
3	2015/16A	2.75%	1.31%	4.06%	-0.45%	3.61%
4	2016/17A	2.38%	1.70%	4.08%	1.80%	5.88%
5	2017/18A	1.73%	1.73%	3.47%	-2.02%	1.44%
6	Compounded Annual Growth Rate					
7	2013/14 to 2017/18	2.02%	1.39%	3.34%	-1.11%	2.34%
8	2016/17 to 2017/18	2.09%	1.76%	3.81%	-1.48%	2.39%

To further analyze salary expenses, the percentage compounded change in economic increases, steps in scale, and FTE changes have been provided in the table above.

Percentage change due to Economic Increase

The compounded annual growth rate for economic increases since 2013/14 has been 2.02%. This compounded annual growth rate increases is due to higher negotiated rates in 2014/15, 2015/16, and 2016/17. For the past two years (2016/17 and 2017/18), the average growth in this category has been 2.09%. The change in economic increase is one of the primary drivers for changes in the salary expense category.

Percentage change due to Step in Scale and Other

This category includes step in scale increases during the year in addition to various other factors that causes changes in salaries. The average compounded growth rate has remained fairly consistent over the prior two and four consecutive years, as can be seen from the 1.39% and 1.76% increase respectively.

Percentage changes due to Staff Changes

The last key driver in assessing actual regular Normal Operations salaries is all related FTE changes from year to year including vacancy management and turnover. Throughout the historical period (2013/14 through to 2017/18), the percentage change in salaries due to FTE growth is nearly zero (1.11% decrease). From 2016/17 to 2017/18, FTE changes account for a 1.48% decrease in salaries. The negative average throughout the past four years is fully attributable to the Corporate focus on containing salary expenses through the management of FTE counts.

EXP.4.2 2019 GRA vs. 2018 GRA Comparative Analysis

EXP.4.2.1 Corporate Normal Operations

The following table presents the variance in salaries between this year's forecast (2019 GRA) and last year's forecast (2018 GRA).

Figure EXP- 17: Salaries Variance (Total net Salaries)

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	130,641 (a)	133,292	(2,651)	-1.99%
2	2018/19FB	136,551	136,515	36	0.03%
3	2019/20F	140,889	141,264	(375)	-0.27%
4	2020/21F	144,837	144,216	621	0.43%

The differences in the salaries forecasts are due to the following:

- The 2017/18 decrease is mainly due to lower overtime than expected of about approximately $720,000 and the remainder due to regular salaries.
- In 2018/19 and onward, the salary levels are expected to be similar to that forecasted in the 2018 GRA. The year over year increases and decreases are attributable to general wage and step in scale increases combined with offsetting FTE reductions.

EXP.4.2.2 Compensation – Benefits

Description

As part of the overall compensation for employees, MPI provides various employee benefits including a defined benefit pension plan, post-retirement extended health benefits, employment insurance premiums, Canada pension plan premiums, group life premiums, and employer contributions to medical and dental plans.

Forecasting Assumptions

Each benefit is forecasted based on individual behaviors, expected rate increases/decreases, and discussions and advice from benefit consultants.

The following table presents the variance in Benefits between this year's forecast (2019 GRA) and last year's forecast (2018 GRA).

Figure EXP- 18: Benefits Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	30,987 (a)	32,791	(1,804)	-1.05%
2	2018/19FB	33,579	33,756	(177)	-1.44%
3	2019/20F	34,469	34,621	(152)	-1.41%
4	2020/21F	35,197	35,687	(490)	-1.37%

The primary difference is due to the following:

- In 2017/18, the under budget variance is primarily due to Canada Pension Plan contributions and Employment Insurance premiums of about $900,000, Pension / Superannuation contributions are approximately $370,000 lower than budget and group long term disability accounts for about $350,000 of the variance.

EXP.4.2.3 Data Processing

Description

Data Processing represents costs associated with maintenance and licensing of computer hardware /software and system applications. Also included in this technology related expense category is external labor costs and computer costs. See EXP. *Appendix 19* for a detailed analysis of Corporate Information Technology departmental and corporate costs, which represent the majority of this line item.

Forecasting Assumptions

In consultation with the Information Technology Department, a long term vision is established for data processing expense requirements. All major sub categories (licensing, hardware, external labor, software, and maintenance) are reviewed and future expense increases/decreases are approximated.

The following table presents the variance in data processing between this year's forecast (2019 GRA) and last year's forecast (2018 GRA).

Figure EXP- 19: Data Processing Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	22,042 (a)	22,975	(933)	-4.06%
2	2018/19FB	24,416	22,900	1,516	6.62%
3	2019/20F	24,247	23,048	1,199	5.20%
4	2020/21F	25,244	23,509	1,735	7.38%

Data Processing expense differences compared to last year's GRA submission are mainly due to the following:

- Lower than budget results in 2017/18 is primarily due to lower than expected external labor of approximately $860,000
- In 2018/19, costs are greater than expected versus the 2018 GRA mainly due to IBM Data Centre and costs for additional IBM Security Operations services of about $800,000 and greater than expected licensing fees of approximately $600,000

- In 2019/20, the variance is reduced as the Corporation is anticipating a reduction in External labor costs of approximately $500,000
- In 2020/21, the variance for data processing expenses increases to approximately $1.7 million as the Corporation expects an increase to IBM Data Centre Operations of approximately $600,000

EXP.4.2.4 Special Services

Description

Special Service expenses are unique expenses often associated to one or a small number of cost centres. This expense category includes such items as auctioneer and auditor fees, external consulting costs related to operational initiatives, and the employee opinion survey.

Forecasting Assumptions

Special services expenses have been forecasted to decrease in 2018/19 and 2019/20 by approximately 4% in each year and then indexed by CPI over the remaining forecast.

The following table presents the variance in special services between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 20: Special Services Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	6,867 (a)	6,117	750	12.26%
2	2018/19FB	7,790	5,880	1,910	32.48%
3	2019/20F	5,999	5,650	349	6.18%
4	2020/21F	5,884	5,762	122	2.12%

Special Services expense differences compared to last year's GRA submission is mainly due to the following:

- In 2017/18, Special Services expenses are greater than budget of approximately $1.4 million primarily due to Special Services – Other. This has been partially offset by lower than expected expenses related to PIPP Mediation of $300,000 and customer service standards of $240,000.
- In 2018/19 Special Services is expected be approximately $1.9 million greater than what was forecasted in the 2018 GRA. This is due to a $1.5 million greater than expected special services expense for a strategic spend with Executive and a $225,000 greater than expected expense related to International Financial Reporting Standards.

EXP.4.2.5 Building Operating Expenses

Description

Building operating expenses are the costs incurred to operate all properties and buildings used in MPI's operations. This includes costs related to insurance, general maintenance, repairs or upgrades. Also included are expense items related to rent, utilities, security costs, and janitorial services.

Forecasting Assumptions

Annually, MPI assesses its physical capacity to run operations in determining the optimum levels for cost containment and customer service. As presented in last year's GRA, it was expected the Corporation would close the Flin Flon Claims Centre and the Pacific Avenue Service Centre. These closures have both been completed with savings to occur in the 2018/19 fiscal year. For the Pacific Service Centre this is one year sooner than expected. Most other expenses related to building costs have a 0% CPI increase for 2018/19, with CPI increases applied in 2019/20 and onward.

The following table presents the variance in building expenses between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 21: Building Operating Expenses Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	10,575 (a)	13,510	(2,935)	-21.72%
2	2018/19FB	10,705	12,318	(1,613)	-13.09%
3	2019/20F	12,162	12,231	(69)	-0.56%
4	2020/21F	12,044	12,478	(434)	-3.48%

Actual and forecasted Building operations expenses vary from the prior year's application mainly due to the following:

- The under budget variance during 2017/18, was mainly a result of the cancellation of departmental space redevelopments at the Cityplace building. This was a cost containment initiative which brought in savings of about $1.3 million. Also contributing to the less than expected expenses is snow removal, general maintenance & repairs, and contracted cleaning services of about $550,000. The remaining favorable variance is due to major projects related to buildings of about $900,000 that were canceled.

- In 2018/19, the forecast in the 2019 GRA is $1.6 million better than the forecast in the 2018 GRA. This is primarily due to a $1.5 million reduction related to deferred departmental space redevelopments at the Cityplace building.

EXP.4.2.6 Road Safety/Loss Prevention Program

Description

The Road Safety and Loss Prevention Program cost category is comprised of expenses which include the immobilizer program (for 2018/19 only), roadwatch, impaired driving & distracted driving strategies along with other initiatives. This category also includes safety grants and programming. *Appendix 15* provides additional detailed information on Basic Road Safety and Loss Prevention Program costs.

Forecasting Assumptions

One of the key differences in this years rate application is related to the cost of delivering the Immobilizer program. This highly successful program has matured and the Corporation has made the decision to discontinue this program commencing in 2019/20. Other key areas expected to see growth/decline include the impaired driving strategies, distracted driving, and road watch program. CPI growth has been applied at 1.9% in 2019/20 and 2.0% in 2020/21 and onward.

The following table presents the variance in road safety and loss prevention expenses between this year's forecast (2019 GRA) and last year's forecast (2018 GRA).

Figure EXP- 22: Road Safety / Loss Prevention Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	3,327 (a)	4,622	(1,295)	-28.02%
2	2018/19FB	4,842	3,899	943	24.19%
3	2019/20F	3,578	3,713	(135)	-3.64%
4	2020/21F	3,497	3,787	(290)	-7.66%

Variances from this year's, compared to last year's, GRA are primarily due to the following:

- In 2017/18, lower than expected expenses of approximately $1.3 million were primarily due to the Immobilizer Program lower than expected ($350,000) and the Road Watch program coming in under budget by approximately $290,000. Also contributing to the decrease, were less than expected expenses related to the safety program evaluation and vehicle safety strategies of $400,000.
- In 2018/19, the Corporation anticipates expenses to be approximately $950,000 greater as compared to what was presented in the 2018 GRA. This is attributable to approximately $400,000 greater than expected spending on the Roadwatch program, a one year deferral related to vehicle safety strategies of $240,000, and $130,000 related to speed management strategies. Please see *Part VII Loss Prevention* and *Appendix 15* for further detail.

EXP.4.2.7 Printing, Stationery, Supplies

Description

Printing, Stationery, and Supplies include the cost of general office supplies, reference materials, photocopying expenses, and printed forms. Also included in this category are computer accessories and supplies.

Forecasting Assumptions

For the years 2019/20 and onward, all printing, stationery, and supply accounts are forecasted with expected CPI growth.

The following table presents the variance in printing, stationery and supplies expenses between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 23: Printing, Stationery, Supplies Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	4,071 (a)	4,582	(511)	-11.15%
2	2018/19FB	4,753	4,751	2	0.04%
3	2019/20F	4,637	4,865	(228)	-4.69%
4	2020/21F	4,386	4,963	(577)	-11.63%

Overall Printing, Stationery, and Supply expenses are lower when compared to last year's forecast. Differences are primarily due to the following:

- During 2017/18, the under budget variance of approximately $500,000 is due to less than expected expenses of about $180,000 for computer accessories/supplies and approximately $225,000 related to printed forms and stationery.
- In the years 2019/20 and 2020/21, the less than anticipated spend on printing, stationery, and supplies is primarily related to non-Basic items as well as computer accessories/supplies.

EXP.4.2.8 Postage

Description

Postage is comprised of all expenses related to the distribution and mailing of communication and correspondence to various stakeholders. Postage expenses include the costs of regular mail, refund checks, statement of accounts, and renewals.

Forecasting Assumptions

The expected costs for postage are determined in consultation with the applicable business units. For the years 2019/20 through to 2020/21 growth assumptions have been set at 1.9% and 2.0% respectively.

The following table presents the variance in postage between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 24: Postage Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	4,823 (a)	4,556	267	5.86%
2	2018/19FB	4,183	4,556	(373)	-8.19%
3	2019/20F	3,170	4,556	(1,386)	-30.42%
4	2020/21F	3,314	4,647	(1,333)	-28.69%

Postage variances are mainly due to the following:

- The large reductions related to postage expenses occurring in 2019/20 and 2020/21 is related to the removal of expedited mail delivery service where indicated. The Corporation is planning on shifting the use of expedited mail to regular mail delivery service which will provide significant cost savings to the Corporation.

EXP.4.2.9 Driver Education Program

Description

The Driver Education Program cost category is comprised of all expenses related to the oversight of the Driver Education Program. Expense types include Drivers Education instructor expenses such as mileage and insurance, as well as materials for students and expenses related to instructor courses. These expenses contribute towards shaping good driving behaviors that will result in safe driving.

Forecasting Assumptions

The expected costs are determined in consultation with the applicable business units. General cost increases have been set at 1.9% in 2019/20 and a 2.0% CPI growth thereafter.

The following table presents the variances in Driver Education Program expenses in this year's forecast (2019 GRA) as compared to last year's forecast (2018 GRA)

Figure EXP- 25: Driver Education Program Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	4,557 (a)	4,916	(359)	-7.30%
2	2018/19FB	4,541	4,745	(204)	-4.30%
3	2019/20F	4,578	4,245	333	7.84%
4	2020/21F	4,669	4,330	339	7.83%

The primary difference attributed to the 2017/18 fiscal year and subsequent forecast years is related to the following:

- In 2017/18 lower than budgeted expenses occurred for non-Basic expenses of approximately $270,000 for third party education and training contract, with the remaining variance primarily associated to Driver Vehicle expenses.
- In 2019/20 and 2020/21, the higher than expected expense is mainly due to an increase in the Commercial Driving School Contractor expense of about $350,000

EXP.4.2.10 Furniture and Equipment

Description

This expense category includes all non-capital furniture and equipment purchases and maintenance thereof. These expenses include items such as filing cabinets, chairs, and computer equipment such as laptops, hard drives, and monitors.

Forecasting Assumptions

The expected costs are determined in consultation with the applicable business units. One of the key drivers to this expense category is computer equipment which occasionally requires a refresh due to technological obsolescence. Commencing in 2020/21 and onward an annual 2.0% CPI growth has been applied to the forecast.

The following table presents the variance in furniture and equipment expenses between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 26: Furniture and Equipment Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	598 (a)	1,835	(1,237)	-67.41%
2	2018/19FB	1,563	1,765	(202)	-11.44%
3	2019/20F	1,289	1,426	(137)	-9.61%
4	2020/21F	1,387	1,455	(68)	-4.67%

Forecasted Furniture & Equipment expenses vary from last year's GRA submission. Differences are primarily due to the following:

- In 2017/18, the main driver for the $1.2 million favorable expense variance is due to the deferral of various IT equipment refreshment cycles. This included desktop PC's, printers, and wireless devices.

EXP.4.2.11 Merchant Fees & Bank Charges

Description

Merchant Fees & Bank Charges are the costs paid to credit card companies in exchange for providing a service to policyholders with multiple payment options. These fees include electronic and standard transactions and the rates are subject to change by the Merchant or Bank.

Forecasting Assumptions

The business unit overseeing all Merchant Fee accounts conducts an annual analysis in preparation of the 2018/19 budget and forecast cycle. The budget accounts for incurred actual amounts, volume increases and rate changes. Based on this analysis, the 2018/19 budget and 2019/20 & 2020/21 forecast years were established.

The following table presents the variance in merchant fees and bank charges between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 27: Merchant Fees and Bank Charges Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	11,772 (a)	12,567	(795)	-6.33%
2	2018/19FB	12,579	13,032	(453)	-3.48%
3	2019/20F	13,081	13,621	(540)	-3.96%
4	2020/21F	13,565	13,893	(328)	-2.36%

In the year 2017/18 less than expected Merchant fee expenses were incurred mainly due to less premiums collected as compared to budget and lower credit card fees.

EXP.4.2.12 Other

Description

Other expenses include many smaller expense categories and are comprised of the following:

- Corporate/Community Relations
- Corporate Training
- Director's Expenses
- Memberships/Conferences
- Miscellaneous expenses

Forecasting Assumptions

In the 2019 GRA, all "other" accounts are forecast with CPI growth (1.9%) in 2019/20 and 2.0% of CPI growth in each year thereafter.

The following table presents the variance in "other" expenses between this year's forecast (2019 GRA) and last year's forecast (2018 GRA)

Figure EXP- 28: Other Variances

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	5,090 (a)	4,004	1,086	27.12%
2	2018/19FB	6,192	3,642	2,550	70.02%
3	2019/20F	6,412	3,574	2,838	79.41%
4	2020/21F	6,518	3,645	2,873	78.82%

- At the time of filing the 2018 GRA, a $2.64 million stretch target was budgeted in this expense category, as cost saving strategies were not fully known. As strategies were confirmed, and savings realized, these permanent savings are now removed from the "Other" budget / forecast and reflected in the actual expense categories. This accounts for the higher than expected other expense throughout the 2017/18 to 2020/21 period.

EXP.4.2.13 Amortization of Deferred Development

Description

Amortization expenses related to deferred development are associated with capital expenditures from prior years. Deferred development is primarily costs related to retaining the services of consultants and internal labor required for improvement

initiatives. Also included is the costs related to the purchase of software. Amortization of deferred development expenses related to in-progress projects are forecasted and classified as an ongoing expense, while amortization of deferred development expenses related to completed projects are forecasted and classified as normal operations expenses. Please refer to *Appendix 18* for historical data and additional detail on deferred development expenses.

Forecasting Assumptions

Amortized Deferred Development expenses are amortized or expensed on a straight line basis. The amortization of deferred development expenses begin March 1st of the year following the completion of the project. Costs are generally amortized over 5 years with the exception of certain upgrade projects whereby costs are amortized over 4 years.

The following table presents the variance in amortization and deferred development between this year's forecast (2019 GRA) and last year's forecast (2018 GRA).

Figure EXP- 29: Amortization and Deferred Development Variances

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	20,756 (a)	21,234	(478)	-2.25%
2	2018/19FB	23,313	21,234	2,079	9.79%
3	2019/20F	14,865	12,966	1,899	14.65%
4	2020/21F	13,377	11,479	1,898	16.53%

Forecasted amortization expense variances can be explained either through timing relating to the completion of the project or the decision to no longer pursue a project as compared to the prior year's GRA submission.

Differences related to this year's GRA compared to last years are primarily due to the following:

- In 2017/18, the variance is mainly due to slightly less than expected amortization expenses related to the Physical Damage Re-Engineering project (Phase 3) and the Technology Risk Management project.

- In 2018/19 and outward, the variances are primarily due to incoming transfers from ongoing related amortization expenses. Due to completion, the following Basic related projects were transferred into normal operations amortization expense (2019 GRA) from an ongoing expense (2018 GRA):
  - Corporate Learning Management
  - Appointment Manager
  - Physical Damage Centre of Excellence
  - Phase 2 of the Information Security and Strategy initiative

EXP.4.2.14 Overall Normal Operating Expenses

The following table presents the variance in overall normal operating expenses between this year's forecast (2019 GRA) and last year's forecast (2018 GRA).

Figure EXP- 30: Total Corporate Normal Operating Expenses Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance – 2019 vs 2018	% Change
	(C$000s)				
1	2017/18A	276,588 (a)	290,112	(13,524)	-4.66%
2	2018/19FB	297,625	292,771	4,854	1.66%
3	2019/20F	293,239	290,274	2,965	1.02%
4	2020/21F	298,853	295,319	3,534	1.20%

- During 2017/18 the Corporation reduced expenses as compared to budget by approximately 4.7%. This was primarily a result of continued cost containment measures and the prudent management of expenses. Reductions in the following expense categories has led to another year of under budget variances:
  - Salaries
  - Overtime
  - Benefits
  - Building expenses
  - Furniture & equipment
  - Data Processing

- The greater than expected variance of $4.9 million in 2018/19 is primarily related to the amortization of deferred development expenses. As projects have completed during 2017/18, the amortization expense has flowed into normal operations in 2018/19. Also, contributing to this increase is Road Safety expenses related to the Road Watch program, and special services expenses related to strategic operational initiatives.
- In 2019/20 and 2020/21, the $3 million and $3.5 million increase respectively include amortization and data processing expense increases.

The following table has been provided which represents the compounded average annual growth rates of Corporate Normal Operations expenses shown over two different time periods; the last four years of actual results and the next three years of the forecast (which includes the rating years).

Figure EXP- 31: Corporate Normal Operations Expense – Compounded Annual Growth Rates

Line No.	Expense	14/15 - 17/18 (4 years)	18/19 - 20/21 (3 years)
1	Compensation - Salaries	2.2%	3.5%
2	Compensation - Overtime	-23.3%	21.2%
3	Compensation - Benefits	3.0%	4.3%
4	Compensation - H & E Tax	3.0%	2.9%
5	Sub Total - Compensation	2.0%	3.8%
6	Data Processing	5.1%	4.6%
7	Special Services	-0.2%	-5.0%
8	Building Expenses	-4.0%	4.4%
9	Safety/Loss Prevention Programs	-7.2%	1.7%
10	Telephone/Telecommunications	-9.4%	2.8%
11	Public Information/Advertising	-6.4%	6.9%
12	Printing, Stationery, Supplies	-2.3%	2.5%
13	Postage	3.8%	-11.8%
14	Regulatory/Appeal	2.8%	2.9%
15	Travel and Vehicle Expense	-11.6%	11.8%
16	Driver Education Program	5.0%	0.8%
17	Grants in Lieu of Taxes	2.2%	1.6%
18	Furniture & Equipment	-18.2%	32.4%
19	Merchant Fees & Bank Charges	-	4.8%
20	Other	-5.1%	8.6%
21	Sub total - Other Normal Operating Expenses	0.2%	3.2%
22	Depreciation-Capital Assets	-6.8%	10.9%
23	Amortization-Deferred Development	23.8%	-13.6%
24	Subtotal - Depreciation / Amortization	13.7%	-7.8%
25	Total Expenses	2.3%	2.6%

One of the key highlights within expenses for the 2019 GRA is based on the column illustrating fiscal periods 2014/15 through to 2017/18. Notable average expense reductions include many of the controllable expense categories such as overtime, special services, buildings, telephone/telecommunications, public information/advertising, printing stationery and supplies, travel and vehicle expense furniture and equipment, and other. All of these expense categories have averaged an annual negative growth since 2014/15. This supports the strides the Corporation continues to make as it relates to managing and monitoring expenses. Areas with positive growth are generally less controllable, including salaries (mandated salary increases and step in scale growth), benefits and grants in lieu of taxes.

The forecast period from 2018/19 through to 2020/21 reflects an overall expected average increase of only 2.6%. This represents a low growth percentage when consideration is made for natural expense growth, mandated salary increases of 1.75% to 2.0%, and an expected 4.3% average growth in non-discretionary benefit costs.

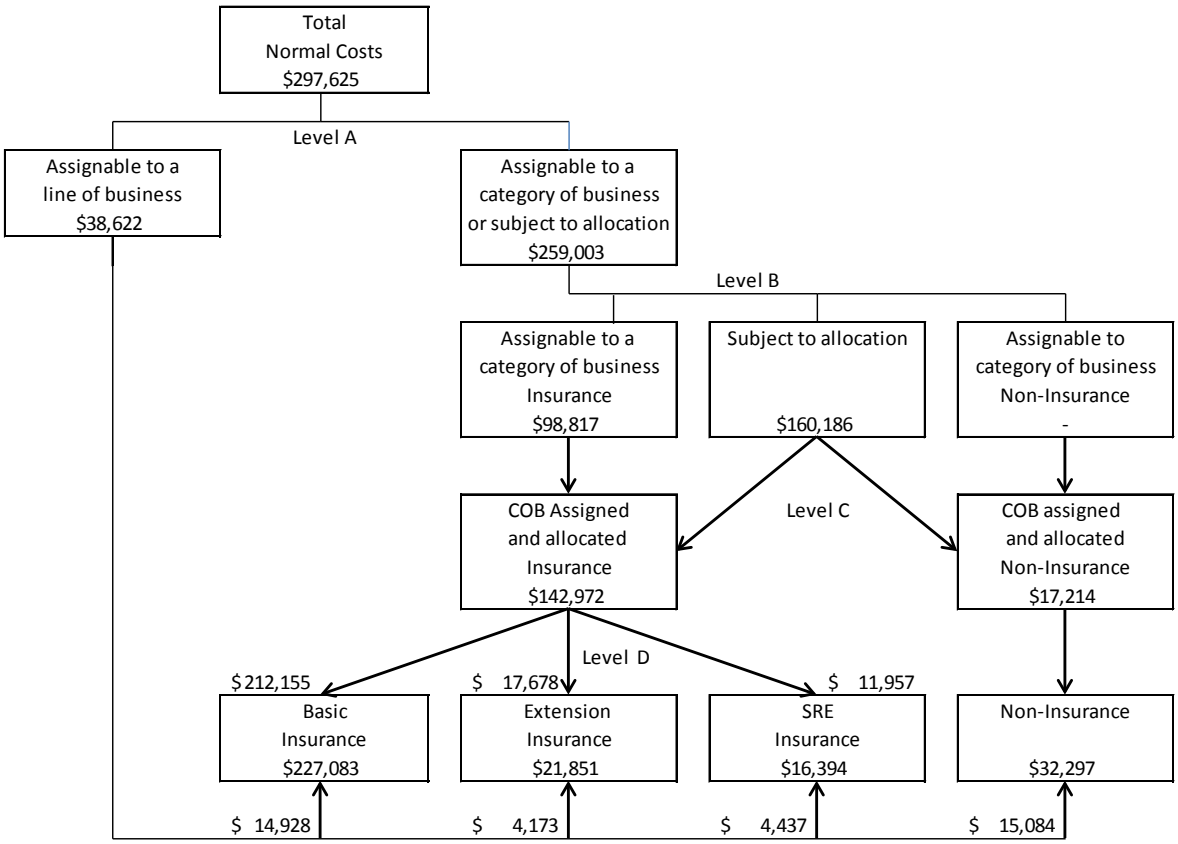
EXP.5 COST ALLOCATION METHODOLOGY

MPI allocates expenses between the major lines of business/divisions based upon the PUB approved expense allocation methodology. In 2009, MPI, in consultation with Deloitte, developed a new cost allocation method that was approved by the PUB in Board Order 157/12[1]. The cost allocation methodology compiles all corporate normal operating expenses within MPI and ultimately distributes these expenses into the four lines of business (Basic, Extension, Special Risk Extension, and *The Drivers and Vehicles Act*) and subsequently to the four expense groupings found on the Statement of Operations (Claims, Operating, Road Safety, and Regulatory Appeal) through the use of various steps and allocators.

The following illustration has been provided for the 2018/19 budget year:

[1] In Board Order 157/12, pages 31 and 32, the PUB authorized the use of Deloitte Allocation Methodology for rate setting purposes. http://www.pub.gov.mb.ca/pdf/mpi07/157-12.pdf

Figure EXP- 32: Cost Allocation Flowchart



Essentially, the corporation expects a normal operations operating expense budget of approximately $297.6 million for the fiscal 2018/19. Once these expenses flow through the allocation process, Basic total normal operations expenses total approximately $227.1 million. To further aid in the understanding of the allocation process, the sequence of steps has been individually explained as follows:

Purification

The first step in the process is referred to as purification. During the purification process all identifiable direct accounts and expenses are charged against the applicable line of business, all occupancy and benefit expenses are distributed to the various cost centers within MPI and subsequently assigned into allocation cost categories. Annually, MPI makes changes to the purification process via review of square footage assigned to each department. New departments and physical moves due to organizational changes are taken into account when allocating occupancy costs.

MPI added three new departments during 2017/18 and for the 2018/19 budget year, while discontinuing one operating department during the 2017/18 fiscal year. These include the following:

Additions:

- 408 - Budgeting
- 409 – Total Loss and Evaluations
- 410 – Customer and Corporate Communications

Discontinued department:

- 017 – Pacific Avenue Service Centre
- 185 – Brandon Testing Service Outlet

Once purification of the expenses is complete, expenses are then allocated through a five step process as illustrated above in *Figure EXP-34*. This is further described in more detail below.

Level A

After completion of purification (all expenses assigned to insurance and non-insurance allocation groupings), the cost allocation methodology illustrated above is initiated. In Level A, all allocation groupings directly assignable to one of the four lines of business are undertaken. For example, all of the costs related to the Compulsory Insurance Department are assigned to the Basic line of business. All expenses related to the Special Risk Extension (SRE) department are assigned to the SRE line of business. The expenses that are not directly identifiable to a specific line of business then proceed to level B of the allocation process.

Level B

The expenses remaining from Level A are classified into one of 3 categories of business (COB):

- Insurance – This category includes all expenses related to the Basic, Extension, and SRE lines of business
- Non–Insurance – This category includes all expenses related to *The Drivers and Vehicles Act* line of business
- Subject to allocation – The remaining expenses that cannot be directly assigned to insurance or non–insurance

An example of an insurance related cost are expenses related to the injury claims subdivision and the Physical Damage Centre. Expenses related to PIPP and injury claims are all relative to the insurance side of the business.

Level C

This level takes all expenses that cannot be assigned to a COB or LOB category. Essentially this level allocates costs related to corporate support functions. These include such areas as Corporate Information Technology, Human Resources, and Accounting and Finance costs. Costs in this category are classified as "subject to allocation" and assigned to an insurance, non-insurance, or "subject to allocation" category. The primary allocator used in this level is the weighted customer contact centre call ratio (WCCCCR) allocator described below. Other allocators, such as work effort and a category of business salary ratio are also used to separate insurance and non-insurance related expenses.

Level D

All expenses that have been classified as insurance through levels B and C, are now subject to allocation to one of 3 insurance related lines of business, Basic, Extension, or SRE. This allocation is conducted primarily based on the claims incurred allocator, but also utilizes other allocators such as claims reserves/unearned premiums for the Investment Department. At the culmination of level D, all expenses will now have been assigned to one of the four lines of business.

Level E

Once all Corporate Normal Operating expenses have been allocated to one of the four lines of business, the expenses need to be further assigned to one of the four expense line items on the Statement of Operations. These are Claims, Operating, Road Safety,

and Regulatory Appeal. To accomplish this, all identifiable allocation groupings are assigned directly to one of these expense line items. For example, all expenses related to physical damage and injury claims are assigned to Claims, all expenses associated with central administration and Finance are assigned to Operating. The expenses remaining that are not directly related are then allocated to Claims or Operating based on FTE proportions.

To illustrate the sequence of steps within the allocation process, the 2018/19 budget year has been demonstrated for Corporate Normal Operations allocations within *Appendix 14*.

Also, please refer to *Appendix 13* which provides detailed definitions for the allocation methodology. A detailed breakdown of the Basic share of Normal Operating Expenses has been provided in *Appendix 2*, *Appendix 3* and *Appendix 7*, including the Basic percentage of the Corporate Normal Operating Expenses.

Improvement Initiatives Allocations

The cost allocations for improvement initiatives follow a different methodology. Each project is allocated independently. Upon approval for implementation, each project is individually assessed to determine relativity against the four lines of business in Level D and four expense categories at Level E. Based on this assessment, the project isallocated accordingly.

EXP.5.1 Allocators of Expenses related to the Basic Program

Once Corporate expenses are determined they are subjected to the allocation methodology recommended by Deloitte in order to derive Basic-only expenses.

The key allocation drivers in the process include LOB claims incurred proportions, the BTO department allocation, Weighted Customer Contact Centre Call Ratio (WCCCCR), and FTE proportions to Claims and Operating. These four primary allocators are described below.

EXP.5.1.1 Claims Incurred Allocator

Description

The claims incurred allocator is established using a four year rolling average and is based on the proportion of claims incurred for each line of business relative to the claims incurred expected corporately. It is utilized at level D in the allocation process. The greater percentage in the claims incurred allocator means a greater amount of expenses being allocated to the Basic program.

The selection of this allocator is due to the alignment of the costs being allocated. Claims incurred dollars represent the driver of claims handling expenses.

The following table shows a comparative of the claims incurred allocator used in this year's GRA as compared to last year's GRA.

Figure EXP- 33: Claims Incurred Allocator Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance 2019 vs 2018
1	2018/19FB	87.3%	87.3%	0.0%
2	2019/20F	86.8%	87.1%	-0.3%
3	2020/21F	87.0%	86.8%	0.2%

The above variances indicate that a lesser amount of expenses will be allocated to the Basic line of business in the 2019 GRA as compared to that forecast in the 2018 GRA for the 2019/20 year and a greater amount will be allocated in the 2020/21 year.

EXP.5.1.2 Weighted Average Customer Contact Center Call Ratio Allocator (WCCCCR)

Description

The basis of determining this allocator is through a log of calls received at the MPI Contact Centre. All calls related to the Drivers and Vehicles Administration (DVA) line of business are identified and utilized for the purpose of allocating expenses to DVA

within Level C. The WCCCCR is also based on a four year rolling average. Once this percentage is established it remains static throughout the forecast years.

Figure EXP- 34: Weighted Average Customer Contact Center Call Ratio Allocator (WCCCCR) Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance 2019 vs 2018
1	2018/19FB	93.2%	93.4%	-0.2%
2	2019/20F	93.2%	93.4%	-0.2%
3	2020/21F	93.2%	93.4%	-0.2%

The greater percentage in WCCCCR means a greater percentage allocated to the remaining three lines of business [Basic, Extension and Special Risk Extension (SRE)] and lower percentage allocated to DVA. As the percentage in this year's forecast is lower compared to last year's forecast, this means a lower amount of expenses are being allocated to Basic, Extension and SRE as compared to last year.

EXP.5.1.3 Business Transformation Office Allocator (BTO)

Description

The Business Transformation Office (BTO) is responsible for overseeing all corporate initiatives. The normal operating expenses incurred annually for this department (approximately $5.6 million) are allocated based on the allocated LOB cost proportions for projects undertaken for that year. The percentage allocator is solely dependent on the type of project. If MPI works on more Basic related projects in one year, then most of the $5.6 million will be allocated to this line of business. If MPI undertakes primarily non-Basic related projects, then the $5.6 million will be allocated mostly to the non-Basic lines of business. This allocator is dynamically applied in each forecast year. As the LOB cost composition for all annual projects change, so too does the allocation.

The following table indicated that a greater portion of BTO related expenses will be allocated to the Basic line of business as compared to the three non-Basic lines of business.

Figure EXP- 35: Business Transformation Office Allocator (BTO) Variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance 2019 vs 2018
1	2018/19FB	72.6%	84.3%	-11.7%
2	2019/20F	72.8%	71.6%	1.2%
3	2020/21F	81.6%	82.1%	-0.5%

The variance reflected in the 2018/19 forecast base year, indicates that a lesser amount of Basic expenses will be allocated as compared to the 2018 GRA. The greater the percentage, the greater the amount of expenses assigned to Basic.

EXP.5.1.4 FTE Proportions Between Claims and Operating Allocator

Description

At Level E, the primary allocator used to split expenses into the Statement of Operations categories (Claims expense and Operating expense) is FTE proportions. These proportions are established based on an assessment of FTE staff for all allocation groupings deemed as a shared cost for claims and operating staff. Examples include the accounting and finance allocation grouping, Contact Centre, and the Fair Practices Office. Based on the analysis completed for 2018/19, the following table indicates there will be a slight upward shift in claims expense relative to operating expense in the forecast.

Figure EXP- 36: FTE proportions between claims and operating allocator variance

Line No.	Fiscal Year	2019 GRA Forecast	2018 GRA Forecast	Variance 2019 vs 2018
1	2018/19FB - Claims	67.95%	67.80%	0.15%
2	2018/19FB - Operating	32.05%	32.20%	-0.15%
3	2019/20F - Claims	67.95%	67.80%	0.15%
4	2019/20F - Operating	32.05%	32.20%	-0.15%
5	2020/21F - Claims	67.95%	67.80%	0.15%
6	2020/21F - Operating	32.05%	32.20%	-0.15%

EXP.5.2 Allocated Basic Normal Operating Expenses

The following represents the percentage of corporate normal operating expenses allocated to Basic for the period from 2017/18 to 2022/23:

Figure EXP- 37: Corporate Normal Operations Operating Expenses Allocation % to Basic

Line No.		2017/18A	2018/19FB	2019/20F	2020/21F	2021/22F	2022/23F
1	% Basic	76.25%	76.30%	75.68%	76.03%	75.71%	76.06%
2	Increase / (Decrease)		0.05%	-0.62%	0.35%	-0.32%	0.35%

As shown in the above table, the allocation to Basic is consistently around 76%. The slight volatility is due to the allocator percentages as described above. The reason for the slight decrease in Basic from 2018/19 to 2019/20 is primarily due to the decrease in the claims incurred allocator. As this allocator decrease, so do the expenses associated with Basic.

Once Corporate Normal Operating expenses are allocated to the Basic line of business via the approved allocation methodology, total Basic expenses are then determined which has a direct impact on the establishment of the rate requirement. The following table shows the historical and forecasted year-over-year results for Basic normal operating expenses along with the compounded annual growth rates.

Figure EXP- 38: Basic Normal Operations by Category

Line No.	Expense	2017/18A	2018/19FB	2019/20F	2020/21F	2021/22F	2022/23F
	($000's, except where noted)						
1	Compensation - Salaries	98,041	101,798	104,474	108,025	109,758	112,634
2	Compensation - Overtime	805	1,441	1,436	1,433	1,432	1,437
3	Compensation - Benefits	23,364	25,044	25,571	26,262	26,805	27,688
4	Compensation - H & E Tax	2,123	2,183	2,237	2,287	2,329	2,388
5	Subtotal - Compensation	124,333	130,466	133,718	138,007	140,324	144,147
6	Data Processing	18,045	19,961	19,704	20,602	20,979	21,504
7	Special Services	5,623	6,271	4,806	4,770	4,838	4,979
8	Building Expenses	8,193	8,243	9,312	9,273	9,438	9,681
9	Safety/Loss Prevention Programs	3,029	4,358	3,106	3,044	3,102	3,178
10	Telephone/Telecommunications	1,680	1,732	1,764	1,814	1,849	1,895
11	Public Information/Advertising	1,936	2,339	2,370	2,426	2,473	2,534
12	Printing, Stationery, Supplies	1,080	1,700	1,650	1,567	1,596	1,634
13	Postage	3,242	2,887	2,174	2,280	2,323	2,380
14	Regulatory/Appeal	4,122	4,179	4,334	4,479	4,582	4,689
15	Travel and Vehicle Expense	670	932	945	968	985	1,010
16	Driver Education Program	3,600	3,879	3,885	3,974	4,049	4,147
17	Grants in Lieu of Taxes	1,506	1,454	1,504	1,573	1,601	1,641
18	Furniture & Equipment	489	1,275	1,045	1,128	1,149	1,177
19	Merchant Fees & Bank Charges	8,460	9,175	9,539	9,893	10,091	10,294
20	Other	3,961	4,908	5,048	5,148	5,245	5,373
21	Subtotal - Other Normal Operating Expenses	65,636	73,293	71,186	72,939	74,300	76,116
22	Depreciation-Capital Assets	3,830	4,107	4,729	5,303	5,242	4,800
23	Amortization-Deferred Development	17,098	19,217	12,293	10,963	6,306	2,228
24	Subtotal - Depreciation / Amortization	20,928	23,324	17,022	16,266	11,548	7,028
25	Total Expenses	210,897	227,083	221,926	227,212	226,172	227,291

From 2017/18 to 2018/19, the overall total Basic Normal Operating expenses increase by approximately $16.2 million. This is mainly due to expected increases in various non-controllable expense categories including salaries (mandatory salary increases), Benefits, merchant fees (transaction volume increases), and amortization of deferred development. From 2018/19FB to 2019/20, the corporation anticipates overall Basic Normal Operating expenses to decrease by approximately $5.2 million. This is primarily driven by less expenses related to the amortization of deferred development.

To further analyze the Basic Normal Operating expenses, compounded annual growth rates have been established for four years of actual, followed by three years of budget and forecast.

Figure EXP- 39: Basic Normal Operation Expense – Compounded Annual Growth Rates

Line No.	Expense	14/15 - 17/18 (4 years)	18/19 - 20/21 (3 years)
1	Compensation - Salaries	2.8%	3.3%
2	Compensation - Overtime	-23.4%	21.2%
3	Compensation - Benefits	3.7%	4.0%
4	Compensation - H & E Tax	3.7%	2.5%
5	Sub Total - Compensation	2.6%	3.5%
6	Data Processing	6.2%	4.5%
7	Special Services	4.7%	-5.3%
8	Building Expenses	-2.5%	4.2%
9	Safety/Loss Prevention Programs	-7.6%	0.2%
10	Telephone/Telecommunications	-8.6%	2.6%
11	Public Information/Advertising	-5.9%	7.8%
12	Printing, Stationery, Supplies	-11.8%	13.2%
13	Postage	5.1%	-11.1%
14	Regulatory/Appeal	3.0%	2.8%
15	Travel and Vehicle Expense	-12.6%	13.0%
16	Driver Education Program	3.0%	3.3%
17	Grants in Lieu of Taxes	2.8%	1.5%
18	Furniture & Equipment	-17.3%	32.1%
19	Merchant Fees & Bank Charges	6.1%	5.4%
20	Other	-4.8%	9.1%
21	Sub total - Other Normal Operating Expenses	0.9%	3.6%
22	Depreciation-Capital Assets	-6.4%	11.5%
23	Amortization-Deferred Development	21.6%	-13.8%
24	Subtotal - Depreciation / Amortization	13.0%	-8.1%
25	Total Expenses	2.9%	2.5%

The differences in Basic expenses between rate applications is best described as follows:

1. Changes in the total Corporate operating expense being allocated, and;

2. Changes in the percentage allocated to Basic.

Evaluating Basic Normal Operating expenses is similar to the evaluation completed for Corporate Normal Operating expenses, except for the inclusion of the various allocator changes discussed above. Included in the above analysis is four years of actual data

and three years of forecasted data. From 2014/15 through to 2017/18, the Corporation's overall basic normal operating expenses grew an average of 2.9% per annum. This growth is primarily attributed to the increase in amortization expenses related to deferred development costs for projects. With the Corporation enhancing its review on projects through the value management process, costs are expected to decrease going forward.

It should be noted, that during this period the Corporation also incurred mandatory salary increase and general inflationary growth. Despite this unavoidable growth, the Corporation's expenses were at 2.9% average annual growth. This is primarily attributable to corporate cost containment efforts. Many expense categories have seen negative average growth rates including overtime (-23%), building (-2.5%), safety/loss prevention (-7.6%), telephone/telecommunications (-8.6%), public information/advertising (-5.9%), printing stationery & supplies (-11.8%), travel and vehicle expense (-12.6%), furniture & equipment (-17.3%), and other (-4.8%).

From 2018/19 through 2020/21, the corporation expects a modest average growth in Basic normal operating expenses of 2.5%. This is primarily due to the application of CPI to most expense categories of 1.9% in 2019/20 and 2.0% in 2020/21, as well as contractual salary increases.

For further analysis of compounded annual growth rates at the Basic total level (Normal Operating Expense and Improvement Initiative – ongoing Expense), please refer to *Appendix 4*.

EXP.5.3 Allocated Basic Road Safety/Loss Prevention Program and Driver Education and Improvement

Every year, expenses related to Road Safety/Loss Prevention and Driver Education and Improvement are reviewed and discussed to ensure that MPI is continuing to focus attention on these important areas as it relates to the Basic program. MPI has always been committed to loss prevention in order to mitigate risk on Manitoba roads and therefore this expense category is highlighted within this section. A review of

current 2017/18 Normal Operating Basic actual and 2018/19 forecasted expenditures has been provided in the table below. A further detailed analysis of this section has been provided in *Appendix 15*.

Figure EXP- 40: Road Safety and Loss Prevention Program Costs

Line No.	Program	2017/18 Actual	2018/19 Forecast Base	Increase (Decrease)
	(C$000's)			
1	Driver Education and Improvement	3,600	3,879	279
2	Impaired Driving Prevention Strategies	1,725	2,127	402
3	Speed Management Strategies	135	384	249
4	Occupant Safety Education Strategies	101	280	180
5	Auto-Crime Prevention Strategies	1,514	1,732	218
6	Motorcycle Safety Education	77	40	(37)
7	Vulnerable Road User Education Strategies	420	419	(1)
8	Safety Programming Other	587	1,323	736
9	Safety Grants and Sponsorships	-	-	-
10	Road Safety Production and Advertising	79	166	87
11	Program Evaluation	23	137	114
12	Cell Phone/Distracted Driver Advertising	330	219	(112)
13	Other	1,823	-	(1,823)
14	Total Program Costs	10,413	10,704	292
15	Departmental Expenses	2,733	2,901	168
16	Total Program Costs/Expenses	13,146	13,606	460

MPI continues to closely monitor spending related to Road Safety and Loss Prevention. It is imperative these programs continue to meet the ultimate objectives of reducing claims and subsequent claims costs. Notable variances above include the impact of re-categorizing the High School Driver Education project (Phase 3) from a deferred development capital cost to a data processing expense. As this project no longer met the criterion for capitalization the full cost of the project was expensed in 2017/18.

EXP.6 ALLOCATED BASIC IMPROVEMENT INITIATIVES AND CAPITAL EXPENDITURES

As described in section *EXP.5*, the allocation of Improvement Initiative expenses, both Implementation and Ongoing, is project specific. Improvement Initiative - Implementation expenses are included in this section as part of the overall discussion of capital expenditures. Also included in this section is a discussion on administrative or normal operations capital.

EXP.6.1 Administrative Capital and Initiative Capital Costs Expenditures

There are two types of capital expenditures incurred by MPI in the delivery of the Basic program to Manitoba motorists – administrative capital (which includes physical properties) and capital associated with the implementation of Corporate initiatives.

Administrative capital costs are depreciated over time and are included in Corporate Normal Operating expenses. These costs are allocated across the various lines of business under the approved cost allocation methodology. Administrative capital includes costs for the regular replacement of capital items such as furniture, fixtures and equipment. Administrative capital also includes property and premises upgrades and expansions to ensure MPI is meeting customer demand. Administrative capital is evaluated to determine if it meets the criteria under International Financial Reporting Standards for capitalization on an item by item basis and, if qualified, the costs are depreciated over time. Depreciable periods can range anywhere from three years for data processing equipment to 40 years for buildings.

Project capital costs can be specific to particular lines of business or the costs can be shared amongst all lines of business. These costs are allocated based on an independent review of each initiative. Project capital costs are generally categorized as deferred development as well as some depreciable capital related to data processing equipment.

A key distinction to make when discussing capital is the difference between depreciation expense and amortization expense. Depreciation expense is associated with physical or tangible assets such as buildings, automobiles or equipment. Amortization expense is associated with intangible assets such as deferred development. Generally, amortization expenses are costs comprised of consultant fees but can also be related to the purchase of packaged software, data processing costs related to the testing of systems, and internal labor required for assisting with project implementation.

The table below shows Basic's share of all capital expenditures anticipated over the next five budget and forecast years. The top section is related to capital and

implementation expense associated with initiatives, whereas the middle and last part of this section is related to Administrative or normal operations capital. Also of note is the column to the right called Unassigned Capital. This is the 2017/18 budgeted variance in project capital and expense that has been unassigned to a fiscal year due to the timing of filing the rate application.

Figure EXP- 41: Basic Capital Expenditures

Line No.		2017/18A	2018/19FB	2019/20F	2020/21F	2021/22F	2022/23F	Unassigned Capital
	(C$000s except where noted)							
1	Deferred Development	(574)	7,436	18,611	27,195	20,350	20,689	(75)
2	Capital	936	-	-	-	-	-	534
3	Implementation Expenses	20,459	3,420	757	757	757	757	189
4	Subtotal	20,821	10,856	19,368	27,952	21,107	21,446	648
5	Land and Buildings	2,663	2,422	3,069	1,560	2,763	5,197	-
6	Automobiles	330	924	486	327	547	255	-
7	Furniture and Equipment	1,075	2,023	2,661	1,395	1,408	1,526	-
8	Subtotal	4,068	5,369	6,216	3,282	4,718	6,978	-
9	Investment Capital	246	1,309	639	513	741	2,220	-
10	Total Capital Expenditures	25,135	17,534	26,223	31,747	26,566	30,644	648

The pattern of year-over-year capital related expenditures is consistent with prior years and illustrates MPI's commitment to focusing on core insurance activities,, while eliminating unnecessary capital expenditures. Automobile costs are expected to decrease in 2019/20 while furniture and equipment costs are lower than in prior GRA submissions. Another notable change is the deferred development decrease in 2018/19. As the Corporation focuses solely on optimizing core business functions only, these capital costs have declined in comparison to prior years. Also, see *Appendix 16*, *Appendix 17* and *Appendix 18* for historical data and comparatives on deferred development and capital expenditures.

EXP.6.2 Total Basic Capital Expenditures – BTO Project Costs

Implementation expenses for BTO projects are costs incurred for the development of new projects, systems, system enhancements and process improvements. Based on the type of expense incurred and the use of the expenditure, costs are classified into deferred development, capital expenditure and implementation expense.

Forecasting for initiatives takes place throughout the fiscal year. Projects are submitted based on the results of: i) the strategic planning process and from divisional management and staff to improve MPI operations in areas such as customer service and product enhancements; and ii) savings related to improved processes, enhancement to current processes, etc. Each project submission is scrutinized through the value management process as demonstrated in *Part IV (ii) Value Management* and then ascends to the appropriate level of authority including the Executive Committee and the Board of Directors. *Part IV (ii) Value Management* also describes the new project governance framework for managing and monitoring new initiatives.

The following figure outlines in detail, all Basic related projects currently in progress at the time of filing the 2019 GRA as well as Basic related projects expected to be undertaken.

75 ***The total unassigned capital in Table 6.2 is different from Table 6.1. Only current projects are presented in Table 6.2.*

1 The above table illustrates the overall costs associated with current approved projects
2 over the forecast period that will have an impact on the Basic program. Notable
3 projects included Technology Risk Management, Legacy Modernization, and the
4 Finance Re-Engineering Initiative. For a comparative view of BTO Project costs
5 forecasted for the current GRA as compared to last year's GRA, please see *Appendix*
6 *17*.

EXP.6.3 Total Basic Associated Capital Expenses

An understanding of future capital requirements and subsequent depreciation/amortization is critical to forecasting rating impacts on the Basic program. Depreciation and amortization expenses are directly associated with capital purchases and account for approximately 8.3% of all Basic expenses in 2018/19, falling to 9.7% in 2021/22.

Figure EXP- 43: Basic Ongoing / Depreciation / Amortization Expenses

42	Total Amortization Expenses	17,099	19,215	12,458	11,130	6,470	2,393
43	Total Ongoing/Depreciation/ Amortization Expenses	20,959	23,525	20,144	20,699	23,817	23,663

The table above represents the various Basic expenses related to ongoing initiatives expenses as well as depreciation and amortization expenses related to capital expenditures for normal operations and projects. The ongoing expenses are comprised primarily of amortization expense, but also contain a small portion of expenses related to depreciation and data processing. These ongoing expenses relate to in-progress and forecasted projects. Once the project is completed, the estimated expense amounts

shown above are expected to transfer into normal operations. The depreciation expenses are related to the capital purchases required to manage the day-to-day operations and are captured in normal operations. The amortization expenses are related to all past projects that have been completed on or before the end of 2018/19. These amortization expenses were previously classified as ongoing expenses but transferred into normal operations as the projects completed. Due to the timing of project completion and changing estimates, MPI does not include ongoing expenses in normal operations but rather, tracks them separately until projects are complete.

Ongoing expenses (primarily amortization) are expected to increase as new projects reach completion, while normal operations amortization expenses will decline as former projects become fully amortized (for most projects, after five years). This explains the increasing and decreasing trends within these categories.

EXP.7.1 Description

Compensation in the form of commissions and flat fees are paid out to brokers (approximately 300) across Manitoba for selling MPI's Basic insurance products. There are variable commissions related to the purchase of Basic insurance policies and flat fees which are paid out for administering various types of transactions. Examples of flat fee transaction types include cancellations, buyouts, document replacement and midterm changes. Flat fees represent approximately 16% of overall commissions paid out on the Basic program. Commissions related to administering driver's licenses are also included.

Commission rates are generally established through negotiation with the Insurance Brokers Association of Manitoba, and then reflected in provincial regulation (*Agent Commissions Regulation, M.R. 93/2009* under *The Manitoba Public Insurance Corporation Act*).

EXP.7.2 Forecasting Assumptions

For 2018/19 and onward, the Basic variable commission rates are calculated based on an effective interest rate of 3.25% of Premiums Written; these amounts also include Drivers Variable commissions. Flat fees are subject to CPI increases and are forecasted based on transaction volumes and range from about $4.61 to $21.70 per transaction.

EXP.8 PREMIUM TAXES

Figure EXP- 45: Premium Taxes Summary from Total Corporate and Basic

EXP.8.1 Expenses

Description

Premium taxes (above) are taxes paid by MPI on the premiums collected.

Forecasting Assumption

Costs associated with Premium Taxes are directly related to the Basic line of business insurance policies. The Basic amount of premium taxes is calculated based on 3.0% of earned premiums.

The following table illustrates the calculated values for premium taxes:

Figure EXP- 46: Premium Tax Calculations

EXP.9 CONCLUSION

MPI continues to control corporate wide spending to support rate predictability and stability for all Manitobans. Reductions in FTE counts, reducing overtime, focusing on core business initiatives, and employing successful cost containment strategies are the primary ways the Corporation has demonstrated prudent fiscal management.

As a result of MPI's continued focus on prudently managing its operating expenses, forecasted operating expenses do not form part of the 2.2% rate indication. The Corporation believes that continued diligence in managing and reducing operating expenses will support the new corporate mission: *to provide exceptional coverage and service, affordable rates and safer roads through public auto insurance.*

Below are the internal operation measures that are traditionally provided through the information request process.

Appendix 7: 2018 GRA VERSUS 2019 GRA COMPARATIVE

The following series of tables compares forecasted corporate expenses from the 2018 GRA to actual and forecasted expenses from equivalent periods in the 2019 GRA. Explanations are provided for significant ($500,000 or greater) differences between expense category amounts for the 2018 GRA and 2019 GRA for 2017/18 through 2020/21.

The common variance explanations found throughout the corporate expense forecast as well as cost containment measures undertaken by the corporation are as follows:

- Lower depreciation expenses due to automobile depreciation related to the corporate fleet reduction as well as an overall expected reduction to administrative capital
- Lower than expected amortization of deferred development expenses due to certain projects no longer meeting deferred development capital criterion and thus all cumulative costs fully expensed in 2017/18
- Lower than expected postage expenses related to the transition from expedited mail to regular mail delivery service.
- Lower building expenses due to strategic postponement of building redevelopment
- Higher “other” expenses due to the actual expense savings relating to the 2018 GRA Stretch target (expense savings) of $2.64 million being recorded to the relevant expense categories and not to the “other” expense category where the savings were budgeted.

In Appendix 7, the details of both changes in corporate operating expense and changes in the percentage allocated to Basic are provided on an expense line basis. The schedules also show total corporate operating expenses split between normal operating expenses and corporate improvement initiatives; ongoing and implementation expenses.

The lead table summarizes all expenses from a corporate and Basic perspective in the different views (normal operations and initiatives as well as claims, operating, road safety, and regulatory) throughout the expense book.

As shown in the expense summary table, Basic expenses are consistently around 76% of the overall corporate expenses. Fluctuations in Basic related expenses are primarily

attributable to the various allocators used during the allocation process as well as the projects undertaken in the forecast.

Also presented in the lead table is the distribution of claims and operating expenses:

- Basic expenses associated with operating functions of the Corporation account for approximately 60% of corporate operating expenses
- Basic expenses associated to claims functions account for approximately 88% of corporate claims expenses.

A larger percentage of claims expenses is allocated to Basic due to certain claims related departments having an expense allocation weighting of 100% to the claims expense category. This drives a higher proportion of claims expense to Basic, than for operating expenses, which have more equally distributed allocation weightings, resulting in a lower allocation to Basic.

The following tables provide the source information for the above summary table. The first comparative is between the 2017/18 actual expenses against the 2018 GRA budget. The second table compares the 2018/19 budget in this year's GRA against the 2018 GRA forecast and the remaining years in 2019/20 and 2020/21 compare forecasts from this year's GRA to last year's GRA, respectively.

2017/18 CORPORATE TOTAL Comparative Explanations:

a) **Compensation - Salaries** - $2.5 million decrease compared to the 2018 GRA is mainly a result of the following:

- Lower than expected regular salaries is the primary contributor to the decrease. The Corporation continues to diligently manage FTE hiring's upon vacancy which accounts for the majority of the savings

b) **Benefits –** $1.8 million decrease compared to the 2018 GRA is primarily attributed to the following:

- Lower Canada Pension Plan contributions and Employment Insurance Premiums of approximately $900,000
- Lower than expected employer pension superannuation expense of approximately $360,000
- Lower than expected Group Long Term Disability premiums of $350,000

c) **Data Processing –** $18.7 million increase compared to the 2018 GRA is primarily due to the following:

- Impairment of various project costs totaling approximately $20.3 million occurred during the 2017/18 fiscal year. These projects no longer met the criterion to be classified as deferred development capital costs and thus were expensed.
- Partially offsetting the above expenses were approximately $1.6 million of less than expected external labor expenses. This is primarily related to external labor for CARS and AOL of about $1.7 million.

d) **Special Services** – $0.8 million increase compared to the 2018 GRA is primarily due to the following:

- The over budget expenses for special services expense is mainly due to approximately $1.1 million in Special Services – other for Executive, which is partially offset by approximately $310,000 reduction for customer service standards and $240,000 reduction related to PIPP Mediation.

e) **Building Expenses -** $2.9 million decrease compared to the 2018 GRA is primarily due to the following:

- Cancellation of departmental redevelopments within Cityplace account for approximately $1.3 million of the decrease
- Also contributing to the under budget variance are less than expected expenses for snow removal, general maintenance, and cleaning of approximately $550,000
- The remaining under budget expenses relates to major project expenses on various buildings including Gateway, Main Street, and Bison Service Centres

f) **Safety / Loss Prevention Expenses -** $1.3 million decrease compared to the 2018 GRA is primarily due to the following:

- Lower than expected expenses related to the Road Watch and Immobilizer programs of $630,000
- Lower than expected expenses related to the safety program evaluation and vehicle safety strategy of approximately $400,000 with the remainder due to various smaller accounts

g) **Advertising and Public Information –** Approximately $580,000 decrease compared to the 2018 GRA related to speed management of approximately $240,000, $110,000 for distracted driving, $120,000 community promotion and the remainder due to other safety initiatives

h) **Printing, Stationery, and Supplies** - $0.5 million decrease compared to the 2018 GRA is due to approximately $180,000 under budget for printed forms and stationery, with the remaining $220,000 variance due to less than expected office supplies

i) **Travel and Vehicle Expenses -** $0.6 million decrease compared to the 2018 GRA is primarily related to the corporate fleet reduction. This was one of the 2017/18 corporate cost containment strategies implemented by Management. The savings of $640,000 mainly related to lower insurance and gasoline expenses

j) **Furniture and Equipment**– $1.7 million decrease compared to the 2018 GRA due primarily to the following:

- Lower than expected expense related to computer equipment of approximately $1 million
- Lower than expected expenses due to wireless equipment of about $150,000
- Lower than expected expenses related to a non-basic project of approximately $500,000

k) **Merchant Fees** – $0.8 million decrease compared to the 2018 GRA due primarily to lower than budgeted volume related to credit card processing

l) **Other** – $1.0 million increase compared to the 2018 GRA due primarily to the following:

- At the time of filing the 2018 GRA, a $2.64 million stretch target was budgeted in this expense category, as cost saving strategies were not fully known. As strategies were confirmed, and savings realized, these permanent savings are now removed from the “Other” budget / forecast and reflected in the actual expense categories.

m) **Depreciation of Capital Investments** – $0.6 million decrease compared to the 2018 GRA due primarily to the following:

- Lower than expected automobile depreciation of approximately $260,000 related to the corporate vehicle fleet cost saving initiative
- Lower than expected depreciation expense of approximately $250,000 for data processing equipment

2018/19 CORPORATE TOTAL Comparative Explanations:

a) **Compensation - Salaries** - $1.0 million increase compared to the 2018 GRA is related to the following:

- Approximately $700,000 greater than expected for severance/retirement payouts and the remaining increase due to higher than expected FTE count of approximately 6 FTE

b) **Special Services –** $1.9 million increase compared to the 2018 GRA is primarily due to the following:

- This is mainly due to a $1.5 million greater than expected special services budget for potential implementation of new strategies under new Executive leadership and a $225,000 greater than expected expense related to International Financial Reporting Standards.

c) **Building Expenses** – $1.6 million decrease compared to the 2018 GRA is mainly due to the following:

- This is primarily due to a $1.5 million reduction related to a deferral with departmental space redevelopments at the Cityplace building.

d) **Safety / Loss Prevention Program -** $0.9 million increase compared to the 2018 GRA is mainly due to the following:

- This is attributable to approximately $400,000 greater than expected spending on the Roadwatch program, a one year deferral related to vehicle safety strategies of $240,000, and $130,000 related to speed management strategies.

e) **Furniture & Equipment -** $0.7 million decrease compared to the 2018 GRA is mainly due to the following:

- This is primarily due to $500,000 in expense for a non-basic project that was forecasted in the 2018 GRA but not in the 2019 GRA.

f) **Other -** $2.5 million increase compared to the 2018 GRA is mainly due to the following:

- At the time of filing the 2018 GRA, a $2.64 million stretch target was budgeted in this expense category, as cost saving strategies were not fully known. As strategies were confirmed, and savings realized, these permanent savings are now removed from the "Other" budget / forecast and reflected in the actual expense categories.

g) **Depreciation of Capital Investments -** $0.9 million decrease compared to the 2018 GRA is mainly due to the following:

- Approximately $300,000 lower than expected automobile depreciation related to the corporate vehicle fleet cost saving initiative
- The remainder is due to various items including lower than expected depreciation expense of approximately $160,000 for data processing equipment, lower building depreciation (sale of Pacific Avenue Service Centre), and significantly less administrative capital purchases related to systems furniture, demountable wall systems, roofing systems etc.

h) **Amortization of Deferred Development -** $2.6 million decrease compared to the 2018 GRA is mainly due to the following:

- Approximately $800,000 related to the one year deferral of project completion for the Infor/Lawson upgrade project
- Approximately $700,000 due to the reclassification of the High School Driver Education – Phase 2 project. This project was deemed to no longer meet deferred development capitalization criterion, and thus was fully expensed in the 2017/18 fiscal year

- Approximately $400,000 of less than expected amortization associated with the Physical Damage Reengineering (PDR) – phase 3 project. A portion of this project was fully expensed in 2017/18
- Approximately $300,000 related to the one year completion deferral for the Enhanced DE project

2019/20 CORPORATE TOTAL Comparative Explanations:

a) **Compensation – Salaries** - $2.5 million increase compared to the 2018 GRA is related to the following:

- This increase is primarily related to greater than expected FTE counts in the 2019 GRA as compared to the 2018 GRA. During the 2018 GRA, the Corporation estimated improvement initiative efficiencies for the Customer Claims Reporting System (CCRS) and a non-Basic project. As CCRS has been suspended and the non-Basic project delayed, the FTE savings are not forecast to be realized.

b) **Data Processing –** $2.3 million decrease compared to the 2018 GRA is primarily due to the following:

- The decrease is mainly due to the Corporation no longer including a budget for insertions of work. In the 2018 GRA, the Corporation set aside $2.0 million related to insertions of work (Government related projects) whereas in the 2019 GRA, there is no budget.

c) **Postage** – $1.4 million decrease compared to the 2018 GRA is mainly due to the following:

- The large decrease is associated with the removal of expedited mail. Where possible, the Corporation is transitioning from expedited mail to regular mail as a means of saving on costs.

d) **Merchant Fees -** $0.5 million decrease compared to the 2018 GRA is mainly due to the following:

- Lower than budgeted volume related to credit card processing

e) **Other -** $2.8 million increase compared to the 2018 GRA is primarily due to the following:

- At the time of filing the 2018 GRA, a $2.64 million stretch target was budgeted in this expense category, as cost saving strategies were not fully known. As strategies were confirmed, and savings realized, these permanent savings are now removed from the "Other" budget / forecast and reflected in the actual expense categories

f) **Depreciation of Capital Investments -** $0.8 million decrease compared to the 2018 GRA related to:

- As mentioned in prior years above, the majority of the decrease is related to the corporate fleet reduction. Also contributing to this decrease is an expected decrease in administrative capital additions.

g) **Amortization of Deferred Development –** $6.2 million decrease compared to the 2018 GRA due to:

- The main reason for this decrease is related to the Customer Claims Reporting System project. During the 2018 GRA, the Corporation expected approximately $4.7 million of amortization expense to commence in 2019/20. Based on further analysis conducted during the 2017/18 fiscal year, this project was deemed not suitable at this time and was suspended. All cumulative costs related this to project were fully expensed in 2017/18 and a result, there is no anticipated amortization in future years.
- Approximately $700,000 is due to the reclassification of the High School Driver Education – Phase 2 project. This project was deemed to no longer meet deferred development capitalization criterion, and thus was fully expensed in the 2017/18 fiscal year.

2020/21 CORPORATE TOTAL Comparative Explanations:

a) **Compensation - Salaries** - $2.7 million increase compared to the 2018 GRA is related to the following:

- This increase is primarily related to the greater than expected FTE counts in the 2019 GRA as compared to the 2018 GRA. During the 2018 GRA, the Corporation estimated improvement initiative efficiencies for the Customer Claims Reporting System (CCRS) and a non-Basic project. As CCRS has been suspended and the non-Basic project delayed, the FTE savings are not forecast to be realized.

b) **Data Processing –** $0.7 million decrease compared to the 2018 GRA is primarily due to the following:

- Normal operations is greater than expected by approximately $1.7 million due to expected increases related to the IBM Data Centre of $1.2 million and licensing charges of $650,000
- This is more than offset by Data Processing expenses related to improvement initiatives by approximately $2.5 million. Improvement initiative implementation expenses are approximately $1.6 million lower primarily due to the elimination of the insertions of work budget. In addition, improvement initiatives ongoing expenses are approximately $900,000 lower due to lower than expected project expenses for license fees and software.

c) **Printing Stationery and Supplies** – $0.6 million decrease compared to the 2018 GRA is mainly due to the following:

- This decrease is mainly attributable to an expected reduction in computer accessories and supplies of approximately $340,000 with the remainder due to non-Basic items.

d) **Postage -** $1.3 million decrease compared to the 2018 GRA is mainly due to the following:

- The large decrease is associated to the removal of expedited mail. Where possible, the Corporation is transitioning from expedited mail to regular mail as a means of saving on costs.

e) **Regulatory Appeal -** $0.5 million increase compared to the 2018 GRA is primarily due to the following:

- This increase is mainly due to greater than expected costs related to the Public Utilities Board of approximately $370,000 with the remaining due to increased expenses for the Claimant Advisory Office and the Automobile Injury Claims Commission

f) **Other -** $2.8 million increase compared to the 2018 GRA is due to the following:

- At the time of filing the 2018 GRA, a $2.64 million stretch target was budgeted in this expense category, as cost saving strategies were not fully known. As strategies were confirmed, and savings realized, these permanent savings are now removed from the “Other” budget / forecast and reflected in the actual expense categories.

g) **Depreciation of Capital Investments –** $0.7 million decrease over the 2018 GRA due to the following:

- As mentioned in the years above, the majority of the decrease is related to the corporate fleet reduction. Also contributing to this decrease is an expected decrease in administrative capital additions.

h) **Amortization of Deferred Development -** $5.0 million decrease over the 2018 GRA primarily related to the following:

- The main reason for this decrease is related to the Customer Claims Reporting System project. During the 2018 GRA, the Corporation expected approximately $4.7 million of amortization expense to commence in 2019/20. Based on further analysis conducted during the 2017/18 fiscal year, this project was deemed not suitable at this time and was suspended. All cumulative costs related this to project were fully expensed in 2017/18.

Appendix 8: AVERAGE REGULAR SALARY BY CLASSIFICATION

The following schedule shows an average annual regular salary per full time equivalent employee categorized into four general classifications. Regular salaries are described as an approximate average of a full time equivalent employee in the respective classification, which has been earned in normal operations. Regular Salaries do not include overtime, banked vacation, accrued vacation or retirement allowance. The calculation for the five year actual has been derived by dividing the total regular salaries of all employees by the number of employees within each classification. When calculating the average, part time and hourly employee's salaries have been converted into full time equivalent annual salaries. All historical values are calculated using a point in time data. The calculation for the 5 years of forecast data (2018/19 through to 2022/23) has been calculated by applying step in scale and economic increases to the 2017/18 actual amounts.

Note: Regular salaries does not include overtime, banked vacation, accrued vacation, retirement allowance.
* Rating Years

The historical trend of average salaries are not always in line with CPI primarily due to the negotiated increases under the collective agreement in addition to market adjustments. For further details regarding negotiated increases and forecast salary growth rates please refer to *Part V(i) – Expenses section EXP.4.1.2* of the application.

Appendix 9: STAFFING LEVELS BY CATEGORY (NORMAL OPERATIONS 2017/18)

The following schedules show the budget versus actual comparative of average corporate staffing levels for each position category by division for period 2017/18. The Corporation consists of seven divisions that are comprised of four main position types.

NORMAL OPERATIONS COMPARISON ACTUAL VS. BUDGET 2017/2018

Line No.	CATEGORY	Customer Service	Loss Prevention & Communications	People & Product	Finance	Management, Internal Audit & Regulatory	Legal & General Counsel	IT & BT	Management Reductions	Total
1	Management	(19.8)	2.2	(13.9)	1.9	(1.5)	(0.4)	(4.8)	19.0	(17.3)
2	Supervisory	(3.7)	6.7	(2.0)	2.0	0.0	0.0	1.0	0.0	4.0
3	Technical/Professional	(45.0)	49.5	(46.2)	18.7	0.2	1.2	5.9	0.0	(15.8)
4	Clerical	(50.8)	23.6	(7.5)	3.0	0.0	1.0	1.7	0.0	(29.0)
5	Student/Intern	1.6	3.9	3.1	0.0	0.0	0.0	2.9	0.0	11.5
6	Total	(117.7)	85.9	(66.5)	25.6	(1.3)	1.8	6.7	19.0	(46.6)

Explanation of variance: Actual FTE counts were less than budget due to active management of vacancies to control costs.

Appendix 10: STAFFING LEVELS BY CATEGORY (CORPORATE 2017/18)

The following schedules show total corporate staffing levels by different category. The first three schedules list staffing levels by normal operations, specialty programs and improvement initiatives. The last three schedules list staffing levels on a consolidated basis with a comparative to budgeted total for each position category by division for the 2017/18 period. The Corporation consists of seven divisions that are comprised of four main position types. The "management reductions column" in each schedule represents the number of FTE reductions for the Corporation that were budgeted in that fiscal year.

In the 2017/18 fiscal year the overall $1.6 million decrease is mainly due to the change related to Full Time Equivalent (FTE) count reductions as compared to 2016/17. Also, largely contributing to this decrease is the significant reduction in overtime costs. This is a trend that continues for the Corporation.

The three tables above illustrate a year-over-year comparative of overall corporate compensation. This includes normal operating costs plus expenses related to improvement initiatives. Also included are overtime, benefits expenses, and health and education taxes.

One trend to highlight above is the continued decrease related to the change in overtime expenses. The Corporation continues to manage all controllable expenses where possible. For the past four years, overtime expenses have continued to decline, with a cumulative four year decrease of approximately $1.9 million.

Appendix 13: COST ALLOCATION METHODOLOGY

Acronym Key

B – Basic

E – Extension

SRE – Special Risk Extension

FTE – Full Time Equivalent

WCCCCR – Weighted Average Customer Contact Center Call Ratio

Detailed Allocation Definitions:

Category	Cost Category	Accounting Units	PUB Approved Method
Injury Claims Management - PIPP	A	018,042,048, 052,054,404	Based on Claims under Mgmt (B&E) then 100% Claims
Injury Claims Management - Liability	S	019	Based on Claims under Mgmt (B,E &SRE) then 100% Claims
Claims Ins Support Operations	B	003,011,079	Insurance based on Claims Incurred (B,E&SRE) then 100% Claims
Loss Prevention Programs	C	008,010	Insurance based on Claims Incurred (B,E&SRE) then 100% Road Safety/Loss Prevention
Driver Records	E	104	50/50 Insurance/Non-Insurance then Insurance 100% Basic Operating
Vehicle Registration	F	102	Based on estimated work effort (13.4% Insurance 86.6% Non-

Category	Cost Category	Accounting Units	PUB Approved Method
			Insurance) then Insurance 100% Basic operating

16	*Other includes projects / initiatives															

The table above provides a comparison of forecasts presented in the 2019 and 2018 GRAs, respectively. As can be seen, the 2019 GRA forecast is generally lower when compared to the 2018 GRA forecast for the period 2019/20 to 2021/22. The primary reason for this is due to the elimination of the Immobilizer Program expenses commencing in 2019/20. The Corporation has determined that approximately 99% of most at risk older vehicles are immobilized. This, coupled with the fact vehicles manufactured after 2006 are equipped with factory immobilizers, allowed the Corporation to discontinue the program. For further discussion related to Road Safety and Loss Prevention, please refer to *Part VII Working Towards Safer Roads through Effective Public Auto Insurance*.

NOTE: Basic % of capital estimated

2017/18

Land and Building

Land and Building costs are lower than expected for 2017/18 mainly due to decreased spending for various buildings.

Automobiles

The number of vehicles requiring replacement decreased.

Office Equipment / Systems Furniture

Equipment spending on Systems Furniture for various locations did not materialize.

Data Processing Equipment

Data Processing equipment costs are lower than the 2018 GRA forecast mainly due to some deferred IT division spending.

Deferred Development

Deferred Development is higher in comparison to the 2018 GRA submission mainly due to higher Partner Portal, Corporate Learning Management and High School Driver Education - Phase 3.

Impairment of Deferred Development

Impairment of the following initiatives were recognized in 2017/18; portion of Physical Damage Re-engineering – Phase 3, Customer Claims Reporting System, portion of Enhanced DR Capabilities, High School Driver Education – Phase 2, PDR Remote Estimating, Finance Re-engineering, HRMS – Phase 3 & 4, and Technology Innovation and Capabilities.

Implementation Expense

Implementation Expenses are lower than the 2018 GRA forecast mainly due to reduction in Credit Card Strategy expenses.

2018/19

Land and Building

Land and Building costs are forecasted to be slightly lower than the 2018 GRA submission mainly due to expected decrease in spending for various buildings.

Automobiles

The forecasted number of vehicles that require replacement has decreased.

Office Equipment / Systems Furniture

Expected spending on Systems Furniture for various locations has been deferred.

Data Processing Equipment

Data Processing equipment costs are forecasted to be slightly higher in comparison to the 2018 GRA.

Deferred Development

Deferred Development forecast is lower in comparison to the 2018 GRA submission mainly due to reductions in Customer Claims Reporting Systems, HRMS-Ph3/4, Legacy Systems Modernization and Insertions of Work offset by increases in Customer Self-Service, Credit Card Strategy and High School Driver Education - Phase 3.

Implementation Expense

Implementation Expenses are higher than the 2018 GRA forecast mainly due to increases in Legacy Systems Modernization, Enhanced Direct Repair Capabilities and Financial Re-engineering Initiative offset by reduction in the Insertions of Work expense.

Appendix 19: INFORMATION TECHNOLOGY COSTS

The following tables provide a comprehensive analysis of Corporate Information Technology (CIT) expenses and capital expenditures. This includes both historical actual from 2013/14 to 2017/18 and the forecast period from 2018/19 to 2022/23.

The first table provides a summary, including compounded annual growth rates for all corporate expense costs related to IT within MPI.

Figure EXP App 19 – 1: Information Technology Costs (Corporate)

Line No.	Summary	2013/14A	2014/15A	2015/16A	2016/17A	2017/18A	2018/19B	2019/20F	2020/21F	2021/22F	2022/232F	Compound Annual Growth 13/14A-17/18A (5 years)	Compound Annual Growth 18/19B-22/23F (5 years)

1

The table below provides the number of Consultants supporting IT operational activities as well as Consultants utilized on projects. The subsequent Basic Program costs for these Consultant activities are also provided. Improvement Initiative Costs do not include deferred development costs.

Figure EXP App 19 – 4: Summary of Consultant Costs and FTE

Line No.	Consultants - Corporate[1]	2013/14A[3]	2014/15A	2015/16A	2016/17A	2017/18A	2018/19B	2019/20F[4]	2020/21F[4]
1	IT Operational Activities	49	40	37	31	17	16	20	20
2	Improvement Initiatives	71	70	77	76	90	66	60	60
3	Total	120	110	114	107	107	82	80	80
4	Consulting Costs - Basic only								
5	IT Operational Activities[2]	6,311	5,084	3,831	4,376	2,568	2,880	2,480	2,480
6	Improvement Initiatives	23,100	14,553	17,214	15,528	11,778	8,637	7,853	7,854
7	Total	29,411	19,637	21,045	19,904	14,346	11,517	10,333	10,334

(1) Contractor counts vary throughout the year. For this table on September of each fiscal year (mid-point) thus 2016-17 actuals do not reflect all contractor conversions in Q3 and Q4. Please see GRA 2017 Volume I, Chapter 8, IT.2 for details on this.

(2) Basic IT Operational Activities are estimated at 80% of Corporate

(3) Adjusted as the improvement initiatives total had previously included IT Operational Activities, some license fees and software maintenance.

(4) Any changes to the planned improvement initiatives for 2019/20 and 2020/21 will impact the number of consultants.

Appendix 20: ORDER 11/18 DIRECTIVE 6.8

PUB Order 11/18 Directive 6.8

Directive 6.8 of PUB Order 11/18 reads:

> *In the 2019 GRA, the Corporation shall provide information as to the total cost resulting from the vehicles for hire rating model. The total cost information shall include, but will be not be limited to:*
>
> *6.8.1 The financial impact of changes on the Corporation's pro forma financial forecast;*
>
> *6.8.2. Driver safety rating premium discounts;*
>
> *6.8.3. Reduced deductible from $600.00 to $500.00 for taxicabs, limousines and accessible vehicles for hire;*
>
> *6.8.4. One-time and ongoing information technology costs related to upgrading or modifying the AOL and CARS programs to accommodate vehicles for hire; and*
>
> *6.8.5. Broker commission and service fees relating to transactions associated with vehicle for hire registration and time band selection.*

Compliance with these directives is provided below.

6.81 Financial Impact on Proformas

The financial impact of changes to the Corporation's Statement of Operations (PF-1) is provided below.

32	Net Income (Loss) - 2019/20 Basic Rate Change of +2.2%	34,424	135,556	17,901	17,675	1,605	(9,795)
33	Net Income impact - Increase / (Decrease)	-	(437)	(1,040)	(1,172)	(1,157)	(1,255)

The Statement of Operations above reflects the Basic forecasted revenues and expenses excluding the impacts related to the vehicle for hire initiative. Overall, the net income is slightly higher versus the 2019 base GRA forecast which is primarily attributable to the added premium revenue related to driver safety rating program.

6.82 Driver safety rating premium discounts

MPI anticipates that for the 2019/20 rating year there will a reduction in premium revenue of $1M as a result of allowing Taxi VFH, Limousine VFH and Accessible VFH to be eligible for DSR discounts. The $1M was determined based on MPI's response to PUB (MPI) 12, which was filed as part of the interim VFH filing. MPI has incorporated this reduction in its determination of the rates for 2019/20.

6.83 Reduced deductible from $600.00 to $500.00 for taxicabs, limousines and accessible vehicles for hire

MPI anticipates that the claims costs increase from reducing the deductible from $600 to $500, for Taxi VFH, Limousine VFH and Accessible VFH, will be offset by the claims costs decrease from reduced loss exposure for these three insurance uses i.e. there will be net zero impact. Further, historical data for the last 10 years (from 2008 to 2017) indicates an average of 800 collision and comprehensive claims a year for these three insurance uses. Assuming that there is no reduction in loss exposure (as anticipated), and all the claims are at-fault claims, the maximum annual impact is minimal, at $80,000 annually.

6.84 One-time and ongoing information technology costs related to upgrading or modifying the AOL and CARS programs to accommodate vehicles for hire

The information technology costs related to upgrading or modifying the AOL and CARS programs to accommodate vehicles for hire is forecasted to be $600,000. As of March 31, 2018, the life-to-date spend is $365,343.

6.85 Broker commission and service fees relating to transactions associated with vehicle for hire registration and time band selection.

Broker commissions are not recorded in a manner that allows MPI to determine the Basic commissions paid specifically for VFH associated transactions. However, the Corporation estimates that the broker commissions paid on Basic policy transactions for policies with vehicle for hire insurance use is approximately $22,000 for the period of March 1, 2018 to May 24, 2018. There were no service fees collected relating to transactions associated with vehicle for hire registration and time band selection.

NET CLAIMS INCURRED

The Total Net Claims Incurred (CI) is the amount that appears on Manitoba Public Insurance's (MPI or the Corporation) Statement of Operations. The Total Net CI in a given fiscal year is the sum of the following amounts:

- Reported claims incurred in the fiscal year (incurred = paid + change in case reserve)
- Change in actuarial provisions (i.e. incurred-but-not-reported)
- Change in claims incurred financial provisions (i.e. loss adjustment expenses, reinsurance recoveries, premium deficiency)

The above items are described in detail in this document. The net CI represents the Basic claims incurred from section *CI.12.1.2* plus the additional claims provisions described in sections *CI.12.2 through CI.12.6*.

Figure CI- 1: Net Claims Incurred

Line No.		2017/18	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*						
2	Claims Incurred before Financial Provisions						
3	Weekly Indemnity	$129,832	$88,113	$97,141	$99,358	$99,540	$100,275
4	ABO - Indexed	$17,901	$72,226	$78,135	$80,356	$80,943	$82,044
5	ABO – Non-Indexed	$37,142	$30,664	$31,387	$31,877	$32,325	$32,780
6	PIPP Enhancements	$2,148	$8,983	$10,629	$11,095	$11,226	$11,484
7	Public Liability - BI	$4,680	$5,096	$5,214	$5,271	$5,340	$5,411

9	Comprehensive	$69,497	$99,974	$105,494	$111,624	$118,151	$125,002
10	Property Damage	$48,647	$46,869	$48,499	$50,185	$51,943	$53,779
11	Total	$726,240	$790,845	$846,233	$892,705	$938,021	$987,550
12	Unallocated Loss Adjustment Expenses	$42,252	$50,135	$52,371	$54,921	$57,537	$60,210
13	Change in Internal Loss Adjustment Expense Provision	($2,219)	$4,679	$6,988	$7,329	$7,035	$6,961
14	Change in Reinsurance Ceded Provision	($676)	$0	$0	$0	$0	$0
15	Other Financial Adjustments	($2,722)	$0	$0	$0	$0	$0
16	Change in DPAC / Premium Deficiency Provision	$4,364	($28,521)	($5,380)	($4,243)	$3,999	$7,997
17	Total Net Claims Incurred	$767,240	$817,139	$900,212	$950,712	$1,006,592	$1,062,718

The 2019/20 net CI forecast has decreased by $12.6 million from last year's forecast as a result of the following:

- Physical Damage: $18.5 million decrease before interest rate impacts
- Premium Deficiency and DPAC Write-Down: $7.9 million favourable impact
- Interest Rate Impact: $6.7 million unfavourable interest rate impact
- Unallocated and Internal Loss Adjustment Expenses: $6.5 million unfavourable impact
- PIPP and Bodily Injury: $0.7 million increase before interest rate impacts
- Net effect of all other financial provisions: $0.1 million favourable impact

CLAIMS INCURRED

In this document, the CI is shown on both an accident year basis and a fiscal year basis.

On an accident year basis, CI represents the total of paid losses, case reserves, and incurred-but-not-reported (IBNR) for all claims that occur in a given accident year. The accident year CI is used for rate setting purposes.

On a fiscal year basis, CI represents the total reported CI in a given fiscal year (i.e. paid + change in case reserves) plus the change in IBNR in the fiscal year. The fiscal year basis is used for financial reporting only.

The CI forecasts on an accident year and fiscal year basis are provided in section *CI.12.1*.

CI.1 FORECAST METHODOLOGY

The primary actuarial technique used in claims forecasting is the loss development technique. The technique assumes that the historical development patterns in accident year paid and incurred losses can be used to predict the development of paid and incurred losses in future periods. For each coverage grouping, development assumptions are selected starting from the accident year in which the claims occur and extending until all claims from that accident year are assumed to be closed (i.e. ultimate). The claims forecasts in this section use the development assumptions from the February 2018 Appointed Actuary's report *Part VIII External Actuary Review of Policy Liabilities Attachment A*. The claims development exhibits by coverage are provided at the end of this section. For more details on the loss development technique see the October 2017 Appointed Actuary's report (*Part VIII External Actuary Review of Policy Liabilities Attachment B*).

MPI starts by forecasting the accident year ultimate incurred losses and then uses the development assumptions to project 'backwards' the paid and incurred losses from ultimate to 12 months. In general, it is assumed that the historical ultimate losses are the best predictor of future ultimate losses by accident year. However, there are circumstances where this assumption may not be appropriate because of significant changes in claims patterns (actual or expected). In these cases, the methodology used to make the forecast will be described in the applicable section of this document.

The application of assumed loss development patterns results in a projection of paid and reported losses by fiscal period from the current year until all claims are paid. These payment 'cash flows' are discounted to a present value basis at the end of each fiscal year using the assumed investment return at that date. Actuarial Provisions for Adverse Deviation (PfADs) are then applied to the discounted loss payments. The assumed PfADs are from the February 2018 Appointed Actuary's report. The IBNR amounts are then calculated at each fiscal year-end. The IBNR is equal to the present value of all future unpaid claims including actuarial PfADs minus the projected case reserves (i.e. amounts already set aside for these claims by case managers).

The CI by fiscal year are calculated as the reported incurred plus the change in the IBNR provision in that fiscal year.

CI.2 GENERAL FORECASTING ASSUMPTIONS

This section outlines the general forecasting assumptions that apply to all of the individual forecasts.

CI.2.1 Volume Growth

For forecasts where claims growth is assumed to follow the growth in vehicle units (e.g. Collision coverage), selected the forecasts in *Part V(i) Revenues REV.1.1* are based on volume growth factors under *The Highway Traffic Act* (HTA). The assumed HTA volume growth in this year's forecast is 1.50% per year.

CI.2.2 Development Assumptions

The details on the paid and incurred development assumptions by coverage are provided in the October 2017 and February 2018 Appointed Actuary's reports (*Part VIII External Actuary Review of Policy Liabilities*). The figure below shows the paid and incurred assumptions for each major coverage category.

Figure CI- 2: Percentage of Total Ultimate Paid in Each Year

Line No.	Cover	1	2	3	4	5	6	7	8	9	10+

7	Property Damage	81.61%	15.56%	2.59%	0.28%	0.17%	-0.02%	-0.05%	-0.05%	-0.05%	-0.03%

CI.2.3 Historical Ultimate Incurred Losses by Accident Year

The details of the assumptions used to estimate the historical accident year ultimate incurred are provided in the October 2017 and February 2018 Appointed Actuary's Reports (*Part VIII External Actuary Review of Policy Liabilities*). The CI section of the application describes how the historical ultimate incurred losses are used for forecasting purposes, but it does not restate the detailed information provided in the Appointed Actuary's reports.

CI.2.4 Manitoba Inflation Rate

The projected Manitoba inflation rate is based on the average forecast from TD Economics, RBC Economics, BMO Financial Group, and Global Insight. The Manitoba inflation rate is forecasted at 2.0% in 2018/19 and 2.0% thereafter. Please see *Part VI Investments INV.14.2.2* for more information. MPI assumes the long term forecasted inflation rate of 2.0% for the purposes of indexing.

CI.2.5 Discount Rate

As part of the Corporation's Asset and Liability Management (ALM) Strategy, the calculation of the discount rate has changed from a duration weighted yield of the fixed income portfolio to a dollar weighted yield of the fixed income portfolio. This

change in methodology increased the discount rate by 15 basis points. For an outline of the Corporation's ALM Strategy see *Part VI Investments INV.16*. A detailed description on the claims liability discount rate calculation is included in the October 2017 Appointed Actuary's Report (*Part VIII External Actuary Review of Policy Liabilities Attachment B*).

MPI's forecasts include a calculation of the projected claims liability discount rates at each fiscal year end. The forecasted discount rate is used to re-evaluate claim liabilities at each fiscal year end, which results in a fiscal year net CI forecast *including* the expected impact of interest rate changes. The figure below shows the assumed discount rates at each fiscal year end. PIPP claims liabilities that are indexed annually based on Manitoba inflation (i.e. Weekly Indemnity and Accident Benefits Other – Indexed) are discounted based on the 'real' rate (i.e. net of inflation). All other claim liabilities are discounted based on the 'nominal' rate. The full details on the interest rate forecast are provided in *Part VI Investments INV.14*.

Figure CI- 4: Assumed Claims Liability Discount Rate

Line No.	Fiscal Year End	Nominal	Real
1	2017/18 (a)	3.47%	1.44%
2	2018/19	3.51%	1.48%
3	2019/20	3.47%	1.44%
4	2020/21	3.42%	1.39%
5	2021/22	3.37%	1.34%
6	2022/23	3.32%	1.30%

CI.2.6 Duration of Claims Liabilities

MPI's Investment Policy Statement (IPS) states that the duration of the fixed income portfolio will match the duration of claims liabilities. Based on the projected interest rates used in the fixed income asset forecast, MPI's overall claims duration was recalculated at the end of each quarter. *Part VI Investments INV.4* provides additional information on the fixed income duration assumptions for the forecast. The forecasted

claims liability durations including all actuarial provisions are shown in the figure below.

Figure CI- 5: Assumed Claim Liability Modified Duration (Years)

Line No.	Fiscal Year End	Duration
1	2017/18 (a)	10.17
2	2018/19	10.02
3	2019/20	9.96
4	2020/21	9.91
5	2021/22	9.85
6	2022/23	9.79

CI.2.7 Margins for Adverse Deviation

The margins for adverse deviation used in the claims forecast are the same as those used in the February 2018 Appointed Actuary's report. A summary of the margins for each coverage are provided in the figure below.

Figure CI- 6: Margins for Adverse Deviation

Line No.		MFAD
1	Interest Rate Margin For Adverse Deviation – All Coverages	0.50%
2	Claims Development Margin for Adverse Deviation:	
3	· Weekly Indemnity	15.00%
4	· Accident Benefits – Other (Indexed)	15.00%
5	· Accident Benefits – Other (Non-Indexed)	10.00%
6	· Public Liability	15.00%
7	· Collision	7.50%
8	· Comprehensive	7.50%
9	· Property Damage	5.00%

CI.2.8 Indexed Case Reserves

Prior to 2015/16, MPI did not index case reserves for coverages that are subject to indexation. As a result, the projected *reported* incurred did not account for the increase in benefits from indexation. MPI has since indexed its case reserves as presented in *Appendix 1 Table 7* and *Appendixes 1b through 2f Table 6*. This change increases the yearly reported incurred for these coverages, which is offset by an equal decrease in IBNR. *Appendix 1 Tables 7 through 10* and *Appendixes 1b through 2f Tables 6 through 9* are now indexed to reflect this change.

CI.3 CLAIMS INCURRED BEFORE PROVISIONS

The sections that follow provide the CI forecasts on an accident year and fiscal year basis before the inclusion of CI financial provisions (e.g. loss adjustment expenses, reinsurance recoveries, premium deficiency). The figure below shows the forecast of fiscal year CI before financial provisions.

Figure CI- 7: Claims Incurred before Provisions Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Weekly Indemnity	$88,113	$97,141	$99,358	$99,540	$100,275
3	ABO - Indexed	$72,226	$78,135	$80,356	$80,943	$82,044
4	ABO – Non-Indexed	$30,664	$31,387	$31,877	$32,325	$32,780
5	PIPP Enhancements	$8,983	$10,629	$11,095	$11,226	$11,484
6	Public Liability - BI	$5,096	$5,214	$5,271	$5,340	$5,411
7	Collision	$438,921	$469,735	$502,938	$538,554	$576,775
8	Comprehensive	$99,974	$105,494	$111,624	$118,151	$125,002
9	Property Damage	$46,869	$48,499	$50,185	$51,943	$53,779
10	Basic Total	$790,845	$846,233	$892,705	$938,021	$987,550

CI.4 WEEKLY INDEMNITY

Weekly Indemnity provides coverage for loss of wages resulting from the insured's inability to work following an automobile accident.

Figure CI- 8: Claims Incurred Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Weekly Indemnity	$88,113	$97,141	$99,358	$99,540	$100,275

CI.4.1 Accident Year Ultimate Forecast

Weekly Indemnity is forecasted based on the historical accident year claims counts, severity, and ultimate losses for this coverage (*Appendix 1 Table 1*). The figure below shows the historical experience and the forecasted ultimate losses for Weekly Indemnity along with a comparison to last year's forecast.

Figure CI- 9: Weekly Indemnity Ultimate Losses

Line No.	Accident Year	Claim Count Incurred >$0	Severity	Ultimate ($000)	Annual % Change	Last Year's Forecast ($000)	Variance to Forecast ($000)
1	2003/04	2,109	$25,555	$53,896	-6.21%	$54,093	($197)
2	2004/05	2,040	$23,383	$47,702	-11.49%	$45,835	$1,867
3	2005/06	1,942	$30,199	$58,646	22.94%	$56,891	$1,755
4	2006/07	2,102	$35,474	$74,567	27.15%	$71,164	$3,403
5	2007/08	2,051	$35,535	$72,882	-2.26%	$71,896	$987
6	2008/09	1,884	$37,564	$70,771	-2.90%	$69,155	$1,616
7	2009/10	1,878	$35,658	$66,966	-5.38%	$63,876	$3,091
8	2010/11	1,929	$44,342	$85,539	27.73%	$79,796	$5,742
9	2011/12	1,833	$45,174	$82,795	-3.21%	$76,575	$6,220
10	2012/13	2,028	$46,164	$93,615	13.07%	$73,567	$20,048
11	2013/14	1,897	$41,447	$78,636	-16.00%	$80,004	($1,369)
12	2014/15	1,664	$39,967	$66,523	-15.40%	$72,903	($6,380)
13	2015/16	1,815	$46,870	$85,048	27.85%	$70,449	$14,598
14	2016/17	1,817	$45,087	$81,912	-3.69%	$64,966	$16,945
15	2017/18	1,850	$41,186	$76,173	-7.01%	$72,058	$4,115
16	5-year Trend	1,826	$44,290	$80,797	6.06%	$64,928	
17	10-year Trend	1,795	$45,376	$81,697	-1.50%	$71,750	
18	All year Trend	1,758	$49,252	$88,468	-0.17%	$78,534	
19	2018/19	1,707	$45,012	$76,840	0.88%	$72,093	$4,747
20	2019/20	1,680	$45,800	$76,953	0.15%	$72,107	$4,846
21	2020/21	1,653	$46,602	$77,046	0.12%	$72,100	$4,947
22	2021/22	1,626	$47,418	$77,119	0.09%	$72,070	$5,049
23	2022/23	1,599	$48,248	$77,171	0.07%		

As shown in the above figure, there were significant increases made to the prior year's ultimate loss estimates in the October 2017 (*Part VIII External Actuary Review of Policy Liabilities Attachment B*) and February 2018 Appointed Actuary's reports (*Part VIII External Actuary Review of Policy Liabilities Attachment A*). In particular, the ultimate loss estimates for the 2010/11 through 2016/17 accident years were increased by $55.8 million over last year's estimates. The increase is driven primarily by the introduction of centralized reserving. An outline of centralized reserving can be found in *Part VIII External Actuary Review of Policy Liabilities*.

The 2018/19 forecasted ultimate losses of $76.8 million are based on the forecasted non-zero claim counts and severity. Claim counts were forecasted based on the all year trend line as shown in the above figure.

The 2018/19 severity is based on the six-year average of the ultimate severity indexed to current levels, excluding the most recent year, with two years of severity growth plus indexation applied. Severity growth is determined by calculating a weighted average severity growth based on the ultimate severity of claims broken down into three groups: (i) claims with incurred between $0 and $100,000, (ii) claims with incurred between $100,000 and $250,000; and (iii) claims with incurred greater than $250,000. Severity growth is then calculated based on the last 17 years (excluding the two most recent years) trend in these three groups. The two most recent years are excluded because it generally takes at least two years for case managers to reasonably assess the reserve requirements for serious injury claims. The seventeen-year trend is used because this is the farthest back that MPI has data available in this format. A weighted average severity growth is calculated between these three severity groups to produce the forecasted severity trend.

Figure CI- 10: Weekly Indemnity Ultimate Severity

Line No.	Accident Year	Average Severity $0-$100,000	$100,000-$250,000	$250,000+
1	2003/04	$7,066	$158,667	$702,560
2	2004/05	$6,329	$165,753	$697,225
3	2005/06	$7,212	$158,952	$751,922
4	2006/07	$7,361	$153,293	$695,448

CI.4.2 Fiscal Year Claims Incurred Forecast

The figure below shows the historical and projected fiscal year CI for Weekly Indemnity. The reported incurred, which are shown in *Appendix 1 Table 5* for Pre-PIPP and *Appendix 1 Table 3*, are based on the projected ultimate losses and the incurred development assumptions. The change in IBNR, which is shown in *Appendix 1 Table 5* for Pre-PIPP and *Appendix 1 Table 9*, is based on the projected ultimate losses, assumed paid development factors, claims liability discount rates, and provisions for adverse deviation. The change in IBNR is shown with and without the impact of changing interest rates.

Figure CI- 11: Weekly Indemnity Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast
1	*($000)*								
2	2013/14	$105,880	($11,837)	$0	$241	($11,596)	$94,284	$94,284	$0
3	2014/15	$66,093	$56,900	$0	$3,977	$60,877	$126,971	$126,971	$0
4	2015/16	$70,518	($34,648)	($17,608)	$42,682	($9,573)	$60,945	$60,945	$0
5	2016/17	$93,476	($4,227)	$0	$36,334	$32,108	$125,584	$125,584	$0
6	2017/18	$172,511	($7,609)	$0	($35,070)	($42,679)	$129,832	$51,643	$78,189
7	2018/19	$95,183	($4,126)	$0	($2,944)	($7,070)	$88,113	$89,680	($1,567)
8	2019/20	$90,810	$4,217	$0	$2,114	$6,332	$97,141	$87,539	$9,602
9	2020/21	$91,481	$5,621	$0	$2,256	$7,877	$99,358	$86,985	$12,373
10	2021/22	$92,295	$4,979	$0	$2,266	$7,245	$99,540	$87,419	$12,121
11	2022/23	$92,407	$4,981	$0	$2,887	$7,867	$100,275		

The 2017/18 Weekly Indemnity CI was over budget by $78.2 million as a result of several factors. Reported claims increased $87.1 million over the budget of $85.4 million. Lower than expected interest rates caused a decrease in IBNR of $7.6 million relative to the budgeted decrease of $34.4 million in last year's forecast. The remaining impact stems mainly from the changes in assumptions and methodology used in the October 2017 *(Part VIII External Actuary Review of Policy Liabilities Attachment B)* and February 2018 Appointed Actuary's reports *(Part VIII External Actuary Review of Policy Liabilities Attachment A)*, which can be broken down as follows:

- The loss development factors were revised which caused a decrease in IBNR of $41.3 million.
- The change in the selected IBNR resulted in a decrease in IBNR of $15.3 million.
- The selected margin for claims development was changed which caused a decrease in IBNR of $15.0 million.

In 2019/20, the CI forecast increases over last year's forecast as a result of a decreasing discount rate and higher forecasted ultimates.

CI.5 ACCIDENT BENEFITS OTHER (ABO) – INDEXED

Accident Benefits Other – Indexed provides coverage for an insured's medical and rehabilitation expenses including travel expenses and personal care costs arising as a result of an automobile accident.

Figure CI- 12: Claims Incurred Forecast

19	2018/19	11,737	$5,440	$63,849	-8.31%	$68,219	($4,370)
20	2019/20	11,758	$5,491	$64,567	1.13%	$68,984	($4,417)
21	2020/21	11,779	$5,543	$65,294	1.12%	$69,758	($4,465)
22	2021/22	11,800	$5,596	$66,028	1.12%	$70,541	($4,513)
23	2022/23	11,821	$5,649	$66,770	1.12%		

The 2018/19 ultimate losses of $63.8 million are based on the forecasted claim counts and severity. Per the above figure, claim counts are forecasted based on the all year trend line.

The 2018/19 severity is based on the six-year average of the ultimate severity indexed to current levels, excluding the most recent year, with two years of severity growth plus indexation applied. Severity growth is determined by calculating a weighted average severity growth based on the ultimate severity of claims broken down into three groups: (i) claims with incurred between $0 and $100,000, (ii) claims with incurred between $100,000 and $250,000; and (iii) claims with incurred greater than $250,000. Severity growth is then calculated based on the last seventeen years

(excluding the two most recent years) trend in these three groups. The two most recent years are excluded because it generally takes at least two years for case managers to reasonably assess the reserve requirements for serious injury claims. The seventeen-year trend is used because this is the farthest back that MPI has data available in this format. A weighted average severity growth is calculated between these three severity groups to produce the forecasted severity trend.

Figure CI- 14: Accident Benefits Other – Indexed Ultimate Severity

Line No.	Accident Year	Average Severity $0-$100,000	$100,000-$250,000	$250,000+

CI.5.2 Fiscal Year Claims Incurred Forecast

The figure below shows the historical and projected fiscal year CI for Accident Benefits Other - Indexed. The reported CI, which are calculated in *Appendix 2 Table 3*, are based on the projected ultimate losses and the incurred development assumptions. The change in IBNR, which is shown in *Appendix 2 Table 8*, is based on the projected

ultimate losses, assumed paid development factors, claims liability discount rates, and provisions for adverse deviation. The change in IBNR is shown with and without the impact of changing interest rates in the figure below.

Figure CI- 15: Accident Benefits Other – Indexed Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast
1	*($000)*								
2	2013/14	$82,867	($9,096)	$0	$2,965	($6,131)	$76,736	$76,736	$0
3	2014/15	$49,102	$46,922	$0	$11,405	$58,327	$107,429	$107,429	$0
4	2015/16	$59,839	($26,782)	($13,584)	$12,566	($27,799)	$32,039	$32,039	$0
5	2016/17	$66,910	($2,969)	$0	$11,680	$8,711	$75,621	$75,621	$0
6	2017/18	$46,866	($4,560)	$0	($24,405)	($28,966)	$17,901	$55,652	($37,752)
7	2018/19	$76,904	($2,415)	$0	($2,263)	($4,678)	$72,226	$82,893	($10,667)
8	2019/20	$77,561	$2,456	$0	($1,881)	$575	$78,135	$82,112	($3,976)
9	2020/21	$78,793	$3,256	$0	($1,693)	$1,563	$80,356	$82,712	($2,356)
10	2021/22	$80,068	$2,867	$0	($1,993)	$874	$80,943	$83,750	($2,807)
11	2022/23	$81,419	$2,853	$0	($2,228)	$625	$82,044		

The 2017/18 Accident Benefits Other - Indexed CI was under budget by $37.8 million as a result of the lower than expected reported claims which were $32.5 million under the budget of $79.3 million. This was offset by lower than expected interest rates which caused a decrease in IBNR of $4.6 million relative to the budgeted decrease of $23.9 million in last year's forecast. The remaining impact stems mainly from the changes in assumptions and methodologies used in October 2017 *(Part VIII External Actuary Review of Policy Liabilities Attachment B)* and February 2018 Appointed Actuary's reports *(Part VIII External Actuary Review of Policy Liabilities Attachment A)*, which include the following:

- The loss development factors were revised which caused an increase in IBNR of $0.6 million.
- The change in the selected IBNR resulted in a decrease in IBNR of $10.0 million.
- The selected margin for claims development was changed which caused a decrease in IBNR of $10.4 million.

In 2019/20, the CI forecast decreases over last year's forecast as a result of a decreasing discount rate and lower forecasted ultimates.

CI.6 ACCIDENT BENEFITS OTHER (ABO) – NON-INDEXED

Accident Benefits Other – Non-Indexed coverage provides lump sum payments in the event that the insured is permanently injured or deceased as a result of an automobile accident.

Figure CI- 16: Claims Incurred Forecast

17	10-year Trend	1,422	$21,773	$30,598	1.02%	$28,751	
18	All year Trend	1,386	$22,677	$31,211	-0.29%	$29,755	
19	2018/19	1,360	$22,723	$30,911	2.31%	$30,466	$445
20	2019/20	1,360	$23,046	$31,350	1.42%	$30,877	$473
21	2020/21	1,360	$23,374	$31,796	1.42%	$31,293	$503
22	2021/22	1,360	$23,706	$32,249	1.42%	$31,715	$533
23	2022/23	1,360	$24,044	$32,707	1.42%		

The 2018/19 ultimate losses of $30.9 million are based on the forecasted claims counts and severity. Claim counts are forecasted based on the six-year average of the ultimate claim counts, excluding the most recent year and remain at that level throughout the forecast period (based on historical trends).

The 2018/19 severity is based on the six-year average of the ultimate severity, excluding the most recent year, with two years of severity growth applied. Severity growth is determined by calculating a weighted average severity growth based on the ultimate severity of claims broken down into three groups: (i) claims with incurred between $0 and $100,000, (ii) claims with incurred between $100,000 and $250,000; and (iii) claims with incurred greater than $250,000. Severity growth is then

calculated based on the last seventeen years (excluding the two most recent years) trend in these three groups. The two most recent years are excluded because it generally takes at least two years for case managers to reasonably assess the reserve requirements for serious injury claims. The s-year trend is used because this is the farthest back that MPI has data available in this format. A weighted average severity growth is calculated between these three severity groups to produce the forecasted severity trend.

CI.6.2 Fiscal Year Claims Incurred Forecast

The figure below shows the historical and projected fiscal year CI for Accident Benefits Other – Non-Indexed. The reported CI, which are calculated in *Appendix 3 Table 3*, are based on the projected ultimate losses and the incurred development

assumptions. The change in IBNR, which is shown in *Appendix 3 Table 8*, is based on the projected ultimate losses, assumed paid development factors, claims liability discount rates, and provisions for adverse deviation. The change in IBNR is shown with and without the impact of changing interest rates in the figure below.

Figure CI- 19: Accident Benefits Other – Non-Indexed Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast

6	2017/18	$34,170	($92)	$0	$3,064	$2,972	$37,142	$29,610	$7,532
7	2018/19	$30,564	($48)	$0	$148	$100	$30,664	$30,535	$130
8	2019/20	$31,179	$50	$0	$158	$208	$31,387	$30,890	$497
9	2020/21	$31,668	$65	$0	$144	$209	$31,877	$31,300	$578
10	2021/22	$32,138	$57	$0	$130	$187	$32,325	$31,718	$607
11	2022/23	$32,603	$57	$0	$120	$177	$32,780		

The 2017/18 Accident Benefits Other – Non-Indexed CI was over budget by $7.5 million as a result of the higher than expected reported claims which were $4.8 million over the budget of $29.3 million.

Including interest rate impacts, the 2019/20 CI is $31.4 million, which is essentially unchanged from last year's forecast.

CI.7 PIPP ENHANCEMENTS

On October 8, 2009, the provincial government enacted improvements to PIPP benefits to claimants who meet the definition of "Catastrophic Injury". Further improvements to PIPP benefits were enacted on August 19, 2011 and May 1, 2015.

A list of all improvements is provided below (all figures at March 1, 2018 levels):

1. The minimum Income Replacement Indemnity for catastrophically injured claimants was increased to the Industrial Average Wage.

2. The maximum monthly Personal Care Assistance payment for catastrophically injured claimants was increased to $5,620.

3. The Vehicle Purchase Policy for catastrophically injured claimants was revised to allow for the purchase of a new vehicle every five years.

4. Claimants were now entitled to an Annual Spending Allowance for extraordinary expenses for leisure and recreational activities, with biannual limits ranging from $500 to $4,000 depending on the extent of the claimants' injuries.

5. Improvements to PIPP benefits per a reinterpretation of section 138 of *The Manitoba Public Insurance Corporation Act*. These improvements include benefits for modification of a secondary residence, as well as reimbursement for extraordinary expenses to support continuation of pre-accident activities.

6. The primary caregiver of a deceased claimant's dependants is now eligible for caregiver weekly indemnity benefits. Eligibility for this benefit depends on the deceased claimant's occupation directly preceding the accident. These payments start at $454 per week for one dependant and $596 per week for four or more dependants.

7. The maximum Permanent Impairment benefit for catastrophically injured claimants was increased to $247,477.

8. If death (of a claimant) occurs more than 90 days after the accident, both the Death and Permanent Impairment benefits are now payable. Previously, the Death benefit payable was offset by the Permanent Impairment benefit already paid.

Figure CI- 20: Claims Incurred Forecast

2	PIPP Enhancements	$8,983	$10,629	$11,095	$11,226	$11,484

CI.7.1 Accident Year Ultimate Forecast

MPI forecasts PIPP Enhancements based on the historical ultimates as many claimants are not categorized as catastrophically injured claimants until twelve or more months after the date of loss. The figure below shows the historical and forecasted ultimate losses for PIPP Enhancements along with a comparison to last year's forecast. The detailed breakdown of the forecasts for each PIPP enhancement are included in *Appendixes 1b, 2b, 2c, 2d, 2e, 2f, 2g, and 3b*.

Figure CI- 21: PIPP Enhancement Ultimate Losses

Line No.	Accident Year	Ultimate ($000)	Annual % Change	Last Year's Forecast ($000)	Variance to Forecast ($000)
1	2003/04	$4,670	-29.88%	$5,089	($419)
2	2004/05	$6,887	47.46%	$6,962	($75)
3	2005/06	$5,814	-15.58%	$5,596	$218
4	2006/07	$9,902	70.31%	$10,021	($120)
5	2007/08	$8,534	-13.82%	$7,627	$906
6	2008/09	$6,290	-26.29%	$6,171	$119
7	2009/10	$6,380	1.43%	$6,319	$61
8	2010/11	$4,221	-33.84%	$5,199	($978)

10	2012/13	$5,387	-0.61%	$5,791	($404)
11	2013/14	$4,524	-16.03%	$4,401	$123
12	2014/15	$4,828	6.72%	$5,604	($776)
13	2015/16	$6,524	35.12%	$8,571	($2,048)
14	2016/17	$9,719	48.99%	$9,918	($198)
15	2017/18	$8,846	-8.99%	$8,075	$771
16	5-year Average	$6,888	13.16%	$7,314	
17	10-year Average	$6,214	3.49%	$6,536	
18	All year Trend	$6,949	12.69%	$7,408	
19	2018/19	$7,597	-14.12%	$8,075	($478)
20	2019/20	$7,597	0.00%	$8,075	($478)
21	2020/21	$7,597	0.00%	$8,075	($478)
22	2021/22	$7,597	0.00%	$8,075	($478)
23	2022/23	$7,597	0.00%		

Although the year-to-year changes in PIPP enhancement ultimate losses are highly variable, the long term trend appears to be relatively flat. The 2018/19 ultimate losses were selected based on the ten year average, with the exception of Caregiver Death Benefits which was forecasted at $2.0 million. For 2019/20 and thereafter, the ultimate losses were assumed to grow at 0%.

CI.7.2 Fiscal Year Claims Incurred Forecast

The figure below shows the historical and projected fiscal year CI for PIPP Enhancements. The reported CI, which are calculated in Table 3 of each Appendix, are

based on the projected ultimate losses and the incurred development assumptions. The change in IBNR, which is shown in Table 8 of each Appendix, is based on the projected ultimate losses, assumed paid development factors, claims liability discount rates, and provisions for adverse deviation. The change in IBNR is shown with and without the impact of changing interest rates in the figure below.

Figure CI- 22: PIPP Enhancements Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast
1	*($000)*								
2	2013/14	$5,623	($2,330)	$0	($6,584)	($8,915)	($3,292)	($3,292)	$0
3	2014/15	$4,905	$12,477	$0	($7,393)	$5,084	$9,989	$9,989	$0
4	2015/16	$4,264	($6,607)	($3,285)	$1,350	($8,542)	($4,278)	($4,278)	$0
5	2016/17	$3,988	($708)	$0	$5,629	$4,920	$8,908	$8,908	$0
6	2017/18	$8,106	($1,098)	$0	($4,860)	($5,958)	$2,148	$4,771	($2,623)
7	2018/19	$12,167	($580)	$0	($2,604)	($3,183)	$8,983	$11,095	($2,111)
8	2019/20	$9,214	$591	$0	$824	$1,414	$10,629	$10,908	($280)
9	2020/21	$8,650	$786	$0	$1,659	$2,445	$11,095	$11,037	$58
10	2021/22	$8,699	$695	$0	$1,832	$2,527	$11,226	$11,270	($44)
11	2022/23	$9,007	$525	$0	$1,952	$2,477	$11,484		

The 2017/18 PIPP Enhancements CI was under budget by $2.6 million as a result of the lower than expected reported claims which were $3.1 million under the budget of $11.2 million.

The reported incurred forecast in 2018/19 increases significantly as the development assumptions assume that a large percentage of the current IBNR for PIPP Enhancements will be reported. Thereafter, the reported incurred is more reflective of the ultimate forecast and assumed loss development factors.

The 2019/20 PIPP Enhancement CI forecast is $0.3 million or 2.6% lower than last year's forecast of $10.9 million.

CI.8 PUBLIC LIABILITY – BODILY INJURY

Public Liability – Bodily Injury provides third-party liability protection to the insured against a claim or suit for bodily injury arising out of the operation of a vehicle.

Figure CI- 23: Claims Incurred Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23

22	2021/22	95	$55,886	$5,299	1.35%	$4,688	$611
23	2022/23	95	$56,641	$5,371	1.35%		

The 2017/18 ultimate incurred was $1.1 million higher than forecasted as a result of higher than expected claim counts.

The 2018/19 ultimate losses of $5.1 million are based on the forecasted claim counts and severity. Claim counts are forecasted based on the six-year average of the ultimate claim counts, excluding the most recent year and remain at that level throughout the forecast period (based on historical trends).

The 2018/19 severity is based on the six-year average of the ultimate severity, excluding the most recent year with two years of severity growth applied. Severity growth is determined by calculating a weighted average severity growth based on the ultimate severity of claims broken down into two groups: (i) claims with incurred between $0 and $100,000; and (ii) claims with incurred greater than $100,000.

Severity growth is then calculated based on the last seventeen years (excluding the two most recent years) trend in these two groups. The seventeen-year trend is used because this is the farthest back that MPI has data available in this format. A weighted average severity growth is calculated between these two severity groups to produce the forecasted severity trend.

Figure CI- 25: Public Liability – Bodily Injury Ultimate Severity

Line No.	Accident Year	Average Severity $0-$100,000	Average Severity $100,000+

The figure below shows the historical and projected fiscal year CI for Public Liability – Bodily Injury. The reported CI, which are calculated in Table 3 of each Appendix, are based on the projected ultimate losses and the incurred development assumptions. The change in IBNR, which is shown in Table 8 of each Appendix, is based on the projected ultimate losses, assumed paid development factors, claims liability discount rates, and provisions for adverse deviation. The change in IBNR is shown with and without the impact of changing interest rates in the figure below.

Figure CI- 26: Public Liability – Bodily Injury Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast
1	*($000)*

17	7-year	0.092	-2.11%	0.029	1.23%	0.121	-1.40%
18	All-year	0.097	-0.76%	0.030	1.91%	0.127	-0.22%

CI.9.1.1 Collision Repair Frequency

Relative to the long term average, the last four accident years have had below average Collision frequency. Some of the reduction in the past four years is related to mild winters; however, there has also been a reduction in summer Collision frequency over the past six years. For forecasting purposes, MPI has selected the latest frequency of 0.097 and a -0.50% trend rate which is reflective of the long term trends.

CI.9.1.2 Collision Total Loss Frequency

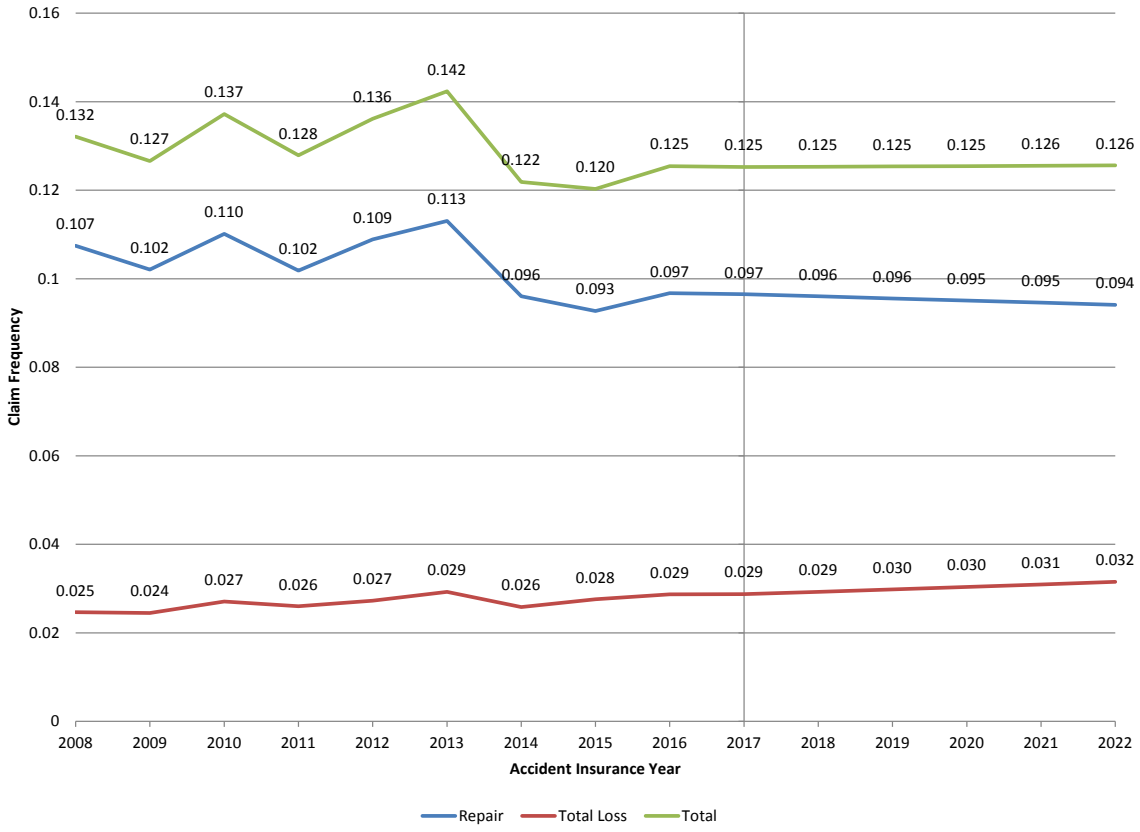
Collision total loss frequency has been increasing over the past decade. As vehicles become increasingly complex and more expensive to repair, there has been an increase in the percentage of Collision claims resulting in total losses. MPI has selected

the latest frequency of 0.029 and a 1.85% trend rate which is reflective of the long term trends.

CI.9.1.3 Collision Frequency Forecast

The chart below shows the historical and forecasted frequencies for Collision repair and Collision total loss.

Figure CI- 29: Ultimate Basic Collision Frequency per Earned Vehicle Unit Excluding $0 Claims



CI.9.2 Collision Severity

The figure below shows the historical average severities and severity growth rates for Collision repair, total loss, and overall Collision claims as at ultimate.

Figure CI- 30: Ultimate Collision Severity by Claim Type

Line No.	Accident Year	Repair Severity	% Change	Total Loss Severity	% Change	Total Severity	% Change
1	2008/09	$1,914	2.37%	$4,699	-0.69%	$2,434	1.44%

CI.9.2.1 Collision Repair Severity

Ultimate Collision repair severity increased by 3.54% in 2017/18, which (subject to future claims development) was the lowest growth rate since the 2010/11 year. MPI has experience abnormally high severity growth of approximately 5.73% (compounded) per year in the 2011/12 through 2016/17 period. It is too early to determine if the latest year's results reflect a change in the recent trends.

CI.9.2.2 Collision Total Loss Severity

Ultimate Collision total loss severity increased by 6.20% in 2017/18. The increased total loss severity is highly correlated with the change in the average BlackBook value, which increased by approximately 9.92% in 2017/18 relative to the 4.43% increase in 2016/17.

CI.9.2.3 Collision Severity Forecast

Based on the information provided in the previous sections, MPI has forecasted Collision repair and total loss severity as follows:

Figure CI- 31: Ultimate Basic Collision Severity per Non-Zero Claim

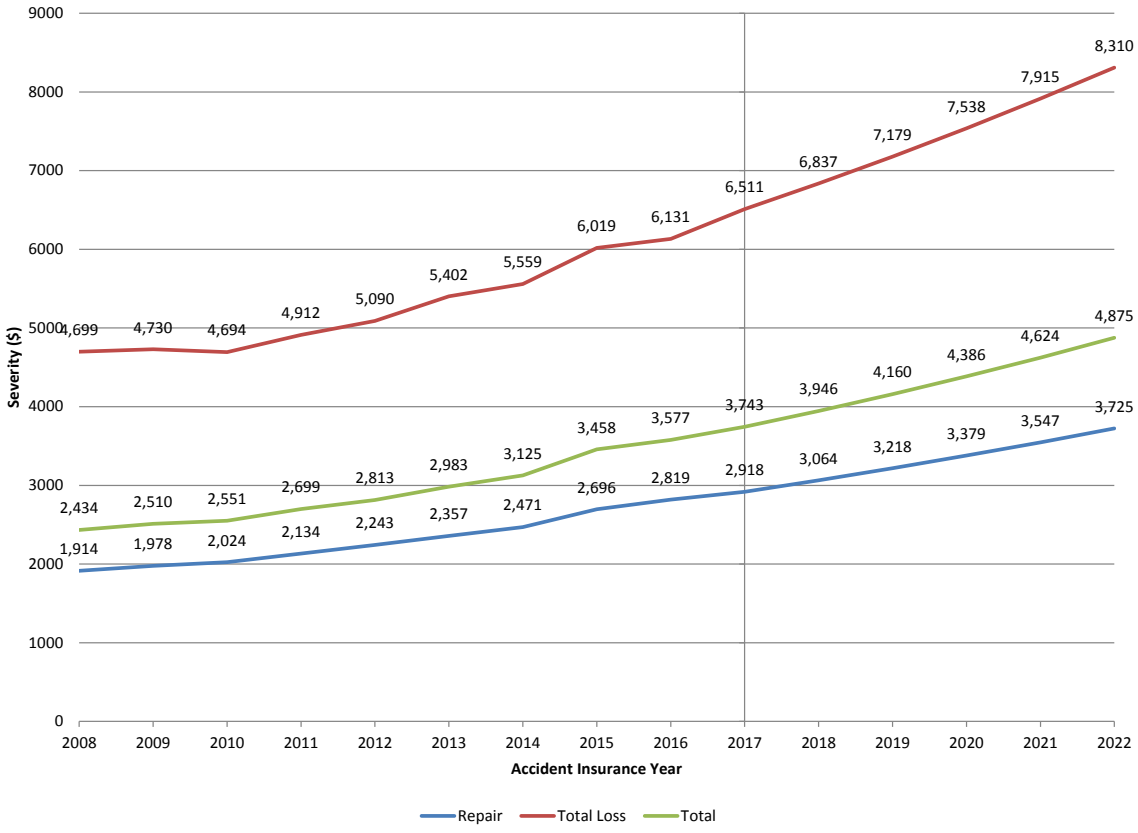

Figure CI- 32: Collision Ultimate Severity Growth Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	Collision Repairs	5.00%	5.00%	5.00%	5.00%	5.00%
2	Collision Total Loss	5.00%	5.00%	5.00%	5.00%	5.00%
3	Total Collision	5.42%	5.42%	5.43%	5.43%	5.43%

The Collision repair and Collision total loss severity forecasts are supported by the recent historical growth rates. Collision repair severity growth was forecasted at 5.00% which follows the 5-year Olympic average of 4.82% and the longer term growth rates. Collision total loss severity growth was forecasted at 5.00%, which follows the three and five-year average growth rates of approximately 5.08%.

CI.9.3 Ultimate Collision Forecast

The figure below shows the historical experience and the forecast by accident year for Collision, along with a comparison to last year's forecast. The 2019/20 ultimate Collision losses are forecasted at $469.2 million, or 1.1% lower than last year's forecast of $474.5 million.

Figure CI- 33: Collision Ultimate Incurred

CI.9.4 Collision Fiscal Year Claims Incurred Forecast

The historical and forecasted fiscal year CI for Collision, along with a comparison to last year's forecast, is shown in the figure below. Due to the short-tail nature of this coverage, changing interest rates do not have a significant impact on Collision IBNR calculations. The changes to the forecast compared to last year follow closely with the changes in the ultimate incurred forecast discussed in the previous section.

Figure CI- 34: Collision Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast

CI.10 COMPREHENSIVE

Comprehensive provides coverage for damages to the insured's vehicle not covered under Collision coverage (e.g. hail, theft, vandalism, glass, etc.).

Figure CI- 35: Claims Incurred Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Comprehensive	$99,974	$105,494	$111,624	$118,151	$125,002

CI.10.1 Comprehensive Frequency

CI.10.1.1 Comprehensive Hail Claim Count

The figure below shows the historical (ten year) Hail claim count experience excluding $0 claims. In 2017 MPI implemented Paintless Dent Repair for minor hail claims as outlined in *Part IV Service Delivery Model SDM.1.8*. This initiative has greatly reduced the severity of hail claims. By reducing the cost to repair claims there will be less

claims that are a total loss. Therefore, MPI has selected a ten-year average of claims and applied the latest repair and total loss ratio of 21% and 79% respectively.

Figure CI- 36: Comprehensive Hail Claim Count Excluding $0 Claims

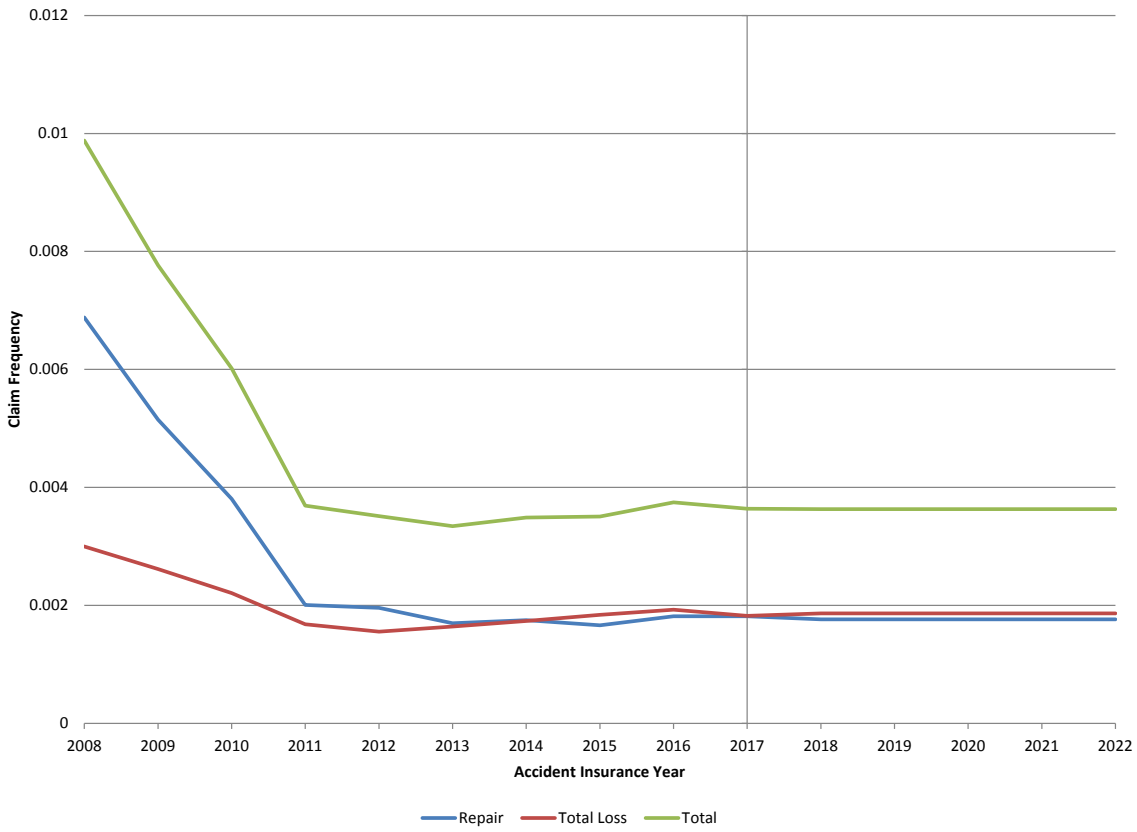
Figure CI- 39: Basic Comprehensive Theft Frequency Excluding $0 Claims



CI.10.1.3 Comprehensive Vandalism Frequency

The figure below shows the historical (ten year) Vandalism claim count excluding $0 claims per HTA unit. In October 2015, MPI began waiving the deductible on vandalism claims for customers who purchased the $200 or $100 reduced deductible products. This change is believed to be a contributing factor to the 43.83% increase in Vandalism frequency in 2015/16 and 2016/17. However, 2017/18 vandalism frequency is similar to the frequency observed in the 2007/08 to 2010/11 period, so the increase may simply be a reversion to historical vandalism rates. MPI selected a two-year average claim frequency for its forecast.

Figure CI- 40: Comprehensive Vandalism Frequency Excluding $0 Claims

Line No.	Accident Year	Repair Frequency	% Change	Total Loss Frequency	% Change	Total Frequency	% Change

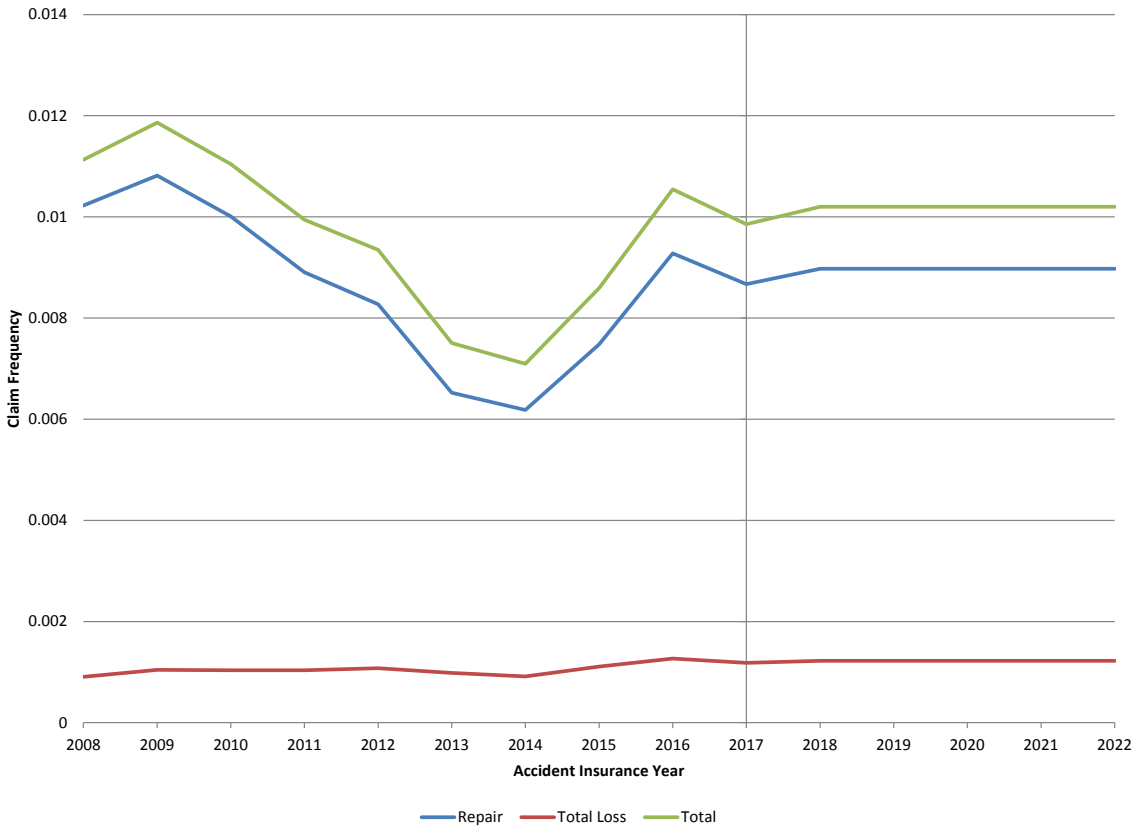
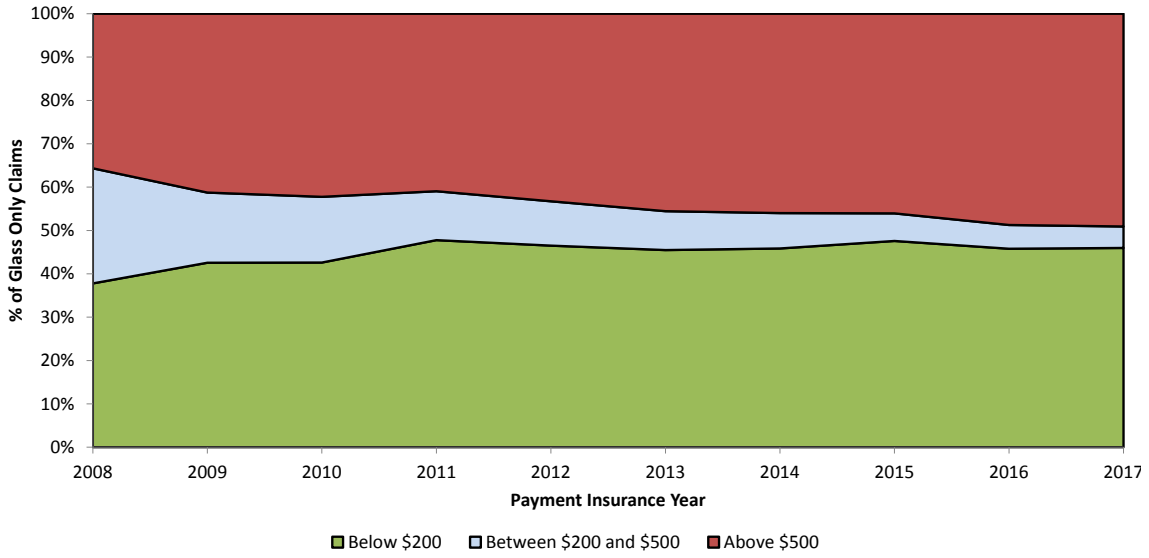
Figure CI- 41: Basic Comprehensive Vandalism Frequency Excluding $0 Claims



CI.10.1.4 Comprehensive Glass Claim Count

Glass claims have been steadily increasing over the past ten years. MPI looked at Glass claims gross of the Basic Deductible to see if there was a trend.

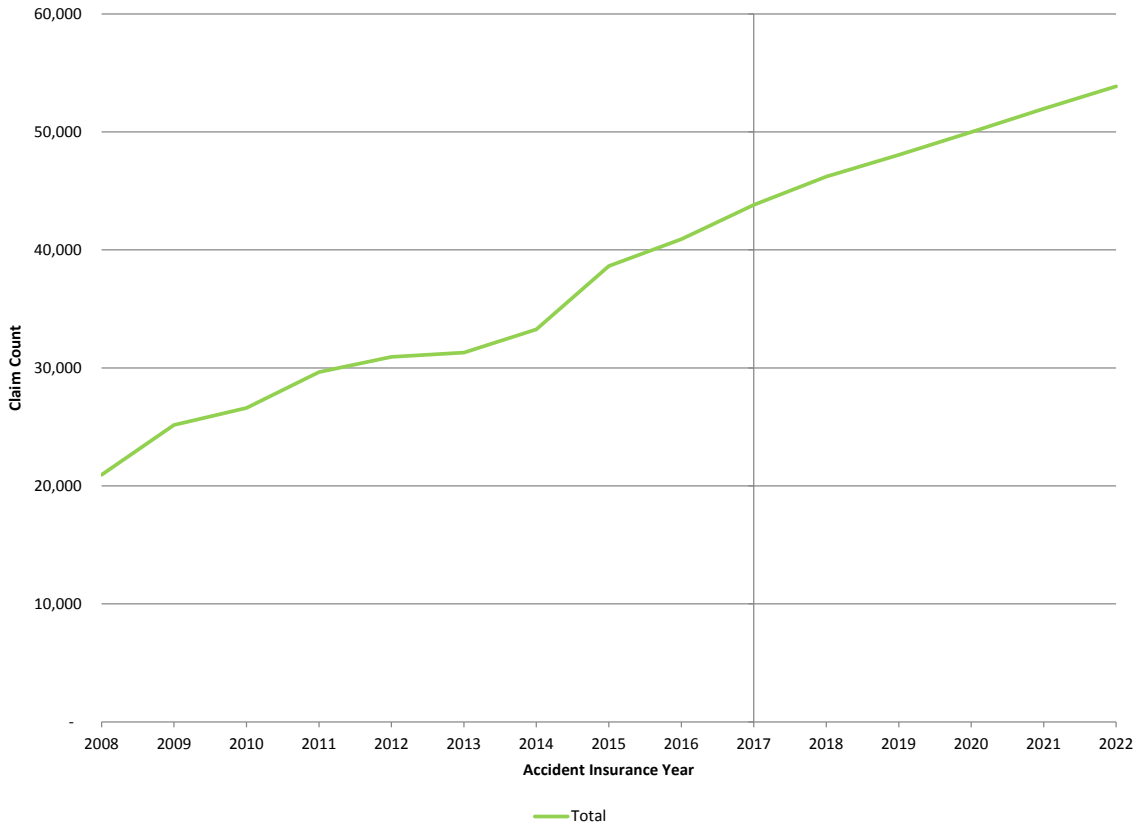
Figure CI- 42: Distribution of Glass Claim Counts Gross of the Basic Deductible



The portion of Glass claims that fall above the $500 deductible has been increasing. This means that as the cost of parts and labour increase, more Glass claims will move above the Basic deductible of $500. MPI used Glass claims from 2017/18 and forecasted the distribution of claim counts that would fall above the Basic deductible of $500. What MPI found is that the majority of the Glass claims around the $500 Basic deductible have already increased to above the Basic deductible.

Based on the above, MPI believes that future increases in Basic Glass claim counts will be at a slower rate than in recent years. MPI selected an average claim count growth rate of 4.22% during the forecast period.

Figure CI- 43: Basic Comprehensive Glass Claim Count Excluding $0 Claims



CI.10.1.5 Comprehensive Rodent Frequency

The figure below shows the historical (ten year) Rodent claim count excluding $0 claims per HTA unit. The Rodent Claims Strategy was successful in reducing the repair costs of rodent claims in 2017/18 as outlined in *Part IV Service Delivery Model SDM.1.4*. By reducing the cost to of repair claims there will be less claims that are a total loss. Therefore, MPI has selected the latest total claim count and applied the latest repair and total loss ratio of 91% and 9% respectively.

Figure CI- 44: Comprehensive Rodents Frequency Excluding $0 Claims

Line No.	Accident Year	Repair Frequency	% Change	Total Loss Frequency	% Change	Total Frequency	% Change

Figure CI- 47: Basic Comprehensive Other (Fire, Lightning, Other) Frequency Excluding $0 Claims

CI.10.2 Comprehensive Severity

CI.10.2.1 Comprehensive Hail Severity

The figure below shows the historical (ten year) Hail average severities and severity growth rates by repair, total loss, and overall claims at ultimate. Hail severity can be highly variable based on the size and severity of the storm. In 2017 MPI implemented Paintless Dent Repair for minor hail claims as outlined in *Part IV Service Delivery Model SDM.1.8*. This has greatly reduced the severity of hail claims. However, given the low number of hail claims in 2017/18, it's not clear how well the Paintless Dent Repair program would do in a major hail storm. Because of the low credibility of

2017/18 results, MPI has selected a weighted average severity (33%/67%) of the last two years giving the latest year the most weight. That severity is assumed to grow at the longer term average severity growth rates of 4.00% and 3.50% for repair and total loss respectively.

Figure CI- 48: Comprehensive Hail Severity Excluding $0 Claims

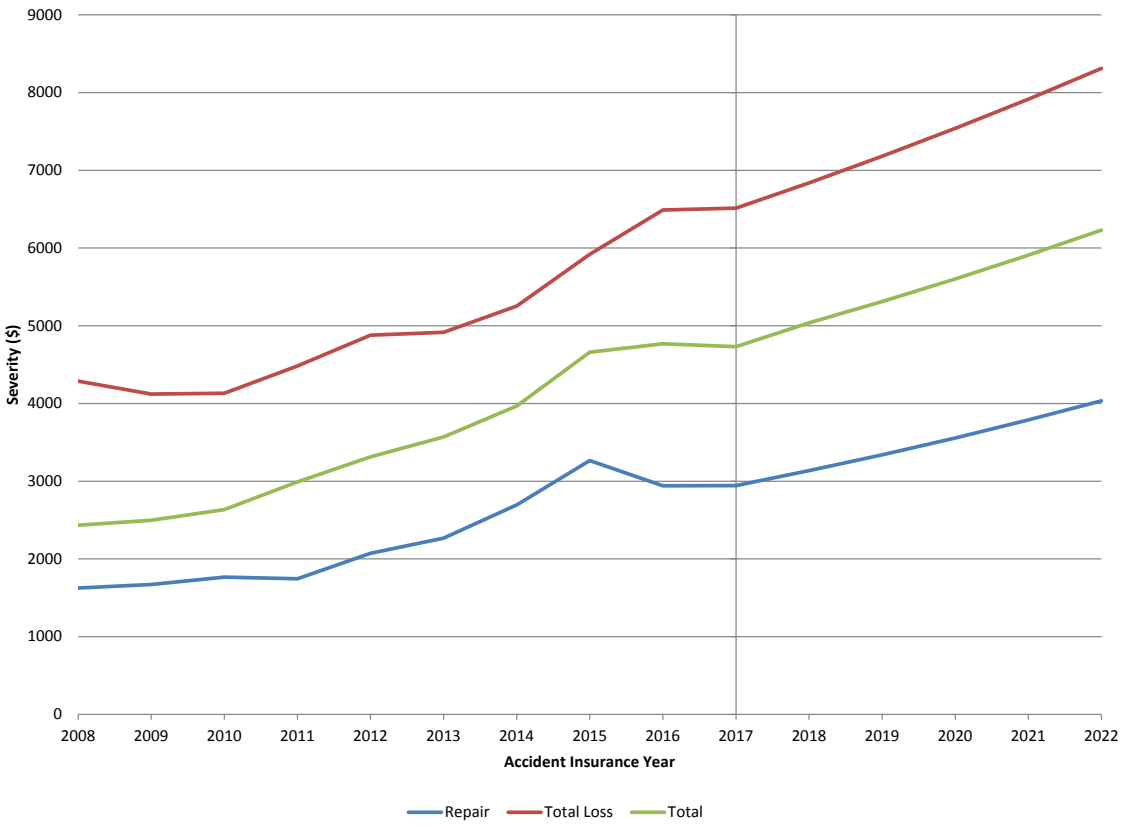
Figure CI- 51: Basic Comprehensive Theft Severity Excluding $0 Claims



CI.10.2.3 Comprehensive Vandalism Severity

The figure below shows the historical (ten year) Vandalism average severities and severity growth rates for repair, total loss, and overall claims at ultimate. In October 2015, MPI began waiving the deductible on vandalism claims for customers who purchased the $200 or $100 Extension reduced deductible products. This change appears to have caused an increase in the reporting of lower severity vandalism claims (some of which exceed the $500 Basic deductible threshold) resulting in a lower than normal increase in Vandalism average severity growth for 2015/16 and 2016/17. As such, MPI selected the most recent severity and a longer term average severity growth rate of 3.25% and 3.50% for repair and total loss respectively.

Figure CI- 52: Comprehensive Vandalism Severity Excluding $0 Claims

Line No.	Accident Year	Repair Severity	% Change	Total Loss Severity	% Change	Total Severity	% Change

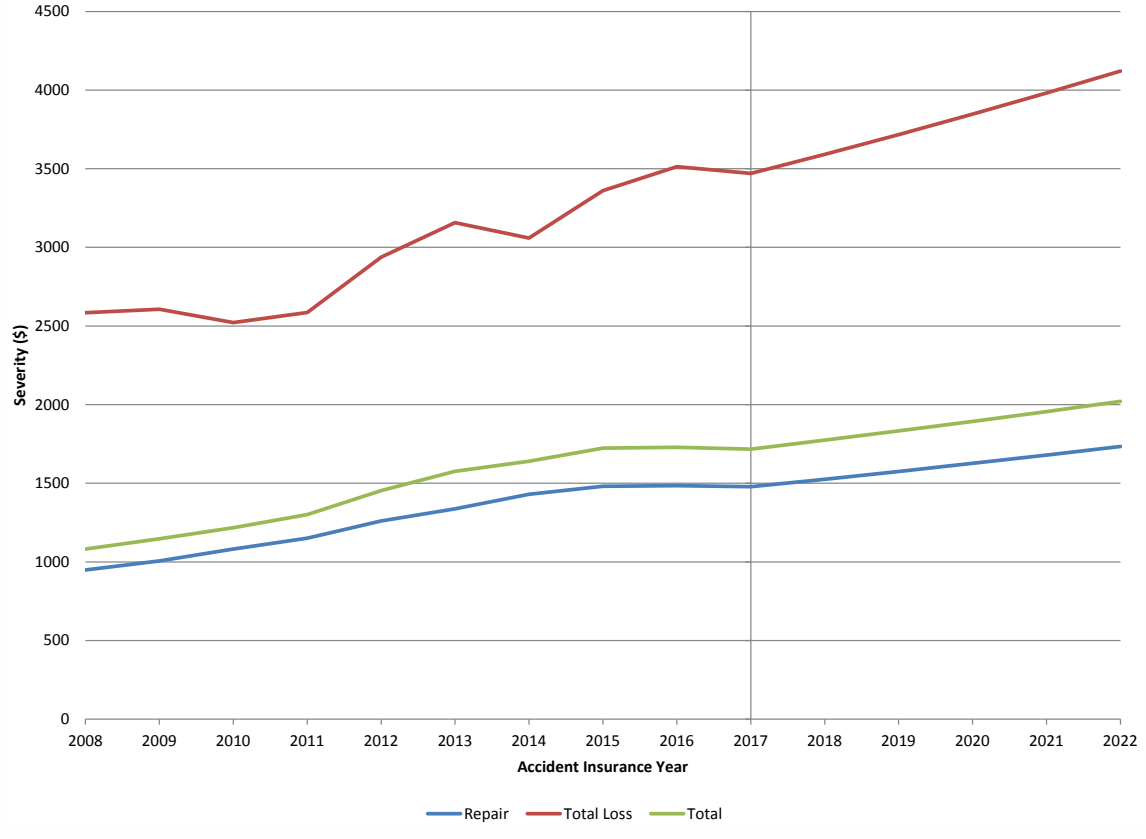
Figure CI- 53: Basic Comprehensive Vandalism Severity Excluding $0 Claims



CI.10.2.4 Comprehensive Glass Severity

The figure below shows the historical (ten year) Glass average severities and severity growth rates. Basic Comprehensive Glass covers the portion of a Glass claim over the Basic deductible of $500. As the average Glass claim gross of the Basic deductible increases, the average Glass claim net of the Basic deductible increases at a higher rate. This effect make the Glass severity growth appear abnormally high on a net basis, even though the severity growth is close to inflationary on a gross basis (e.g. ten year average gross severity growth of 2.46%). MPI selected the all-year trend to forecast average Glass claim severity gross of the Basic deductible. To calculate the Basic portion, MPI subtracted the $500 deductible. This results in a 2018/19 Glass claim severity net of the Basic deductible of $371. The severity growth gross of the

Basic deductible is forecasted at the all-year exponential trend rate of 2.00%. This corresponds to an average severity growth net of the Basic deductible of 4.51%.

Figure CI- 54: Comprehensive Glass Severity Excluding $0 Claims

Line No.	Accident Year	Gross of Basic Deductible	% Change	Net of Basic Deductible	% Change

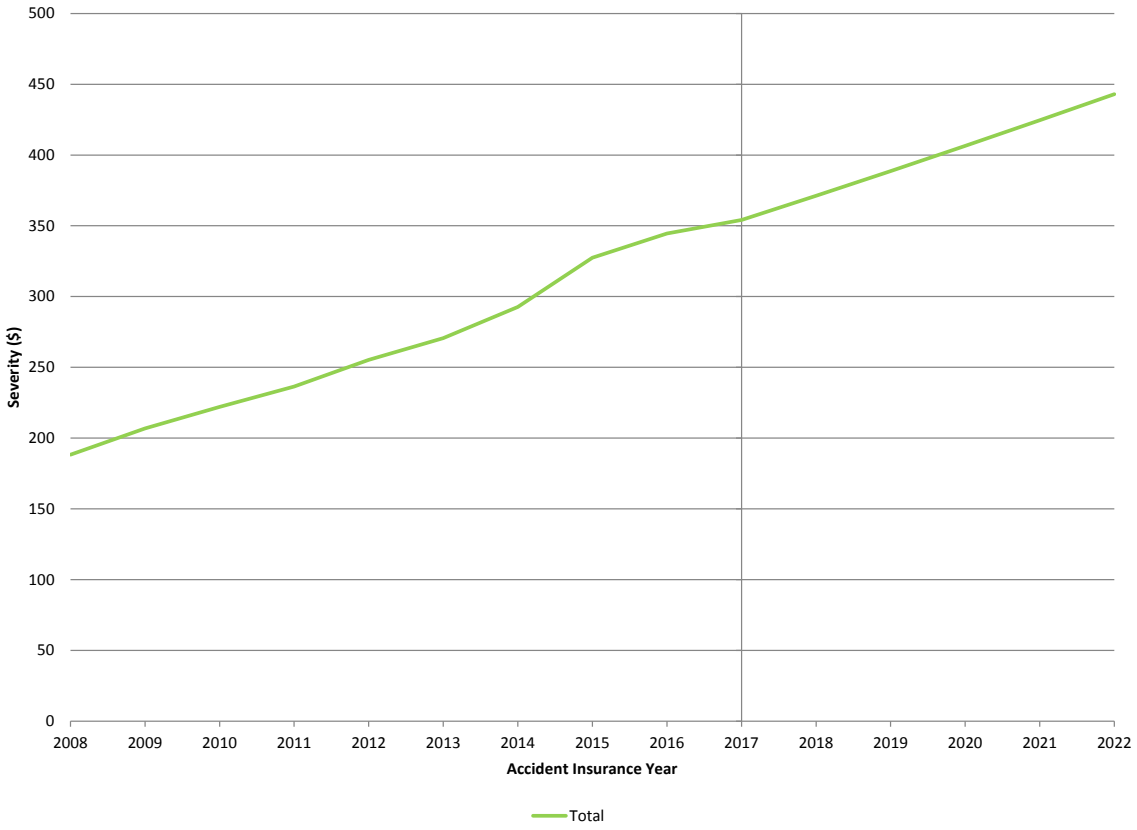
Figure CI- 55: Comprehensive Glass Severity Excluding $0 Claims



CI.10.2.5 Comprehensive Rodent Severity

The figure below shows the historical (ten year) Rodent average severities and severity growth rates for repair, total loss, and overall claims at ultimate. The Rodent Claims Strategy was successful in reducing the repair costs of rodent claims in 2017/18 as outline in *Part IV Service Delivery Model SDM.1.4*. For repair claims, MPI has selected the latest claim severity and applied a longer term average severity growth rate of 4.00%. For total loss claims, it's unclear how severity will grow given the low number of total loss claims in 2017/18. Therefore, MPI has selected a weighted average severity (33%/67%) of the last two years giving the latest year the most weight.

Figure CI- 56: Comprehensive Rodents Severity Excluding $0 Claims

CI.10.2.6 Comprehensive All Other Severity

The All Other category contains claims that do not fall into the previous categories. These claims types include fire, lightning, wind, and flood claims. The figure below shows the historical (ten year) All Other average severities and severity growth rates by repair, total loss, and overall claims at ultimate. The average severity growth rates for repair and total loss have been fairly stable over the long term. For repair, MPI selected the most recent repair severity and the longer term average severity growth rate of 4.50%. For total loss, MPI selected a three-year average severity and a longer term average severity growth rate of 4.00%.

Figure CI- 58: Comprehensive All Other Severity Excluding $0 Claims

CI.11 PROPERTY DAMAGE

Property Damage provides third-party liability protection to the insured against a claim or suit for property damage arising out of the operation of a vehicle.

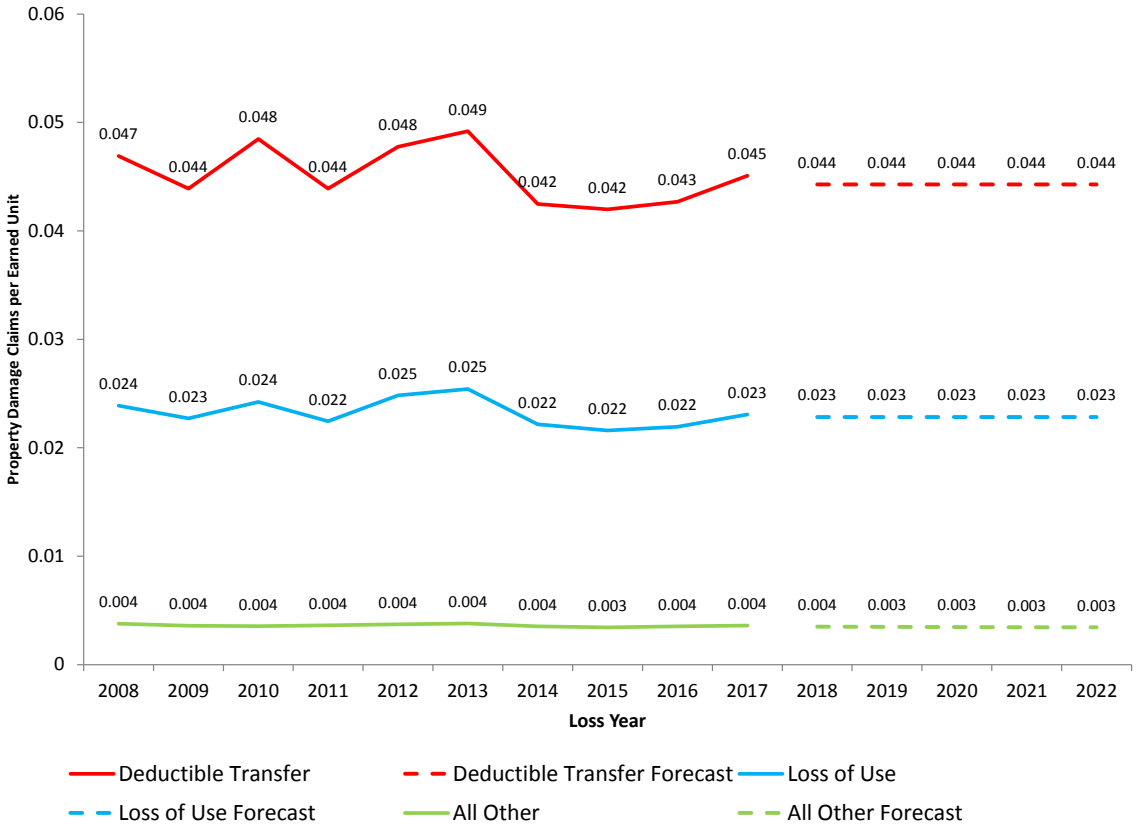
Figure CI- 62: Claims Incurred Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Property Damage	$46,869	$48,499	$50,185	$51,943	$53,779

CI.11.1 Property Damage Frequency

The Property Damage frequency forecast is split into three coverage categories: Third Party Deductible Transfer, Third Party Loss of Use, and Other Property Damage. Both Third Party Deductible Transfer and Third Party Loss of Use are highly correlated with Collision. As shown in the graph below, we have forecasted frequency based on the 5-year average and to remain flat over the forecast period with the exception of Other Property Damage which is forecast at the three-year average and to decline 0.50% over the period.

Figure CI- 63: Ultimate Basic Property Damage Frequency Excluding $0 Claims



CI.11.2 Property Damage Severity

The figure below shows the historical property damage severities split into the three coverage categories.

Figure CI- 64: Property Damage Severity by Coverage Category Excluding $0 Claims

Line No.	Accident Year	Third Party Deductible Transfer Severity	% Change	Third Party Loss of Use Severity	% Change	All Other Severity	% Change
1	2008/09	$502	0.16%	$400	0.68%	$3,906	7.49%
2	2009/10	$505	0.52%	$413	3.32%	$3,978	1.85%
3	2010/11	$504	-0.14%	$414	0.15%	$3,876	-2.56%
4	2011/12	$506	0.26%	$415	0.15%	$4,393	13.32%
5	2012/13	$505	-0.04%	$442	6.71%	$4,437	1.01%
6	2013/14	$507	0.22%	$503	13.69%	$4,684	5.56%
7	2014/15	$514	1.47%	$482	-4.27%	$4,786	2.18%
8	2015/16	$513	-0.12%	$490	1.78%	$4,871	1.79%
9	2016/17	$519	1.02%	$495	1.07%	$5,104	4.77%
10	2017/18	$516	-0.46%	$499	0.74%	$5,103	-0.01%
11				Straight Average			
12	3-year	$516	0.14%	$495	1.20%	$5,026	2.18%
13	5-year	$514	0.43%	$494	2.60%	$4,910	2.86%
14	10-year	$509	0.29%	$455	2.40%	$4,514	3.54%

CI.11.2.1 Third Party Deductible Transfer Severity

Severity is very stable as it is deductible based. Severity growth over the last ten years has been 0.29% on average. As such, we selected a three-year average of $515 with no growth.

CI.11.2.2 Third Party Loss of Use Severity

There have been large changes in severity in the history for third party loss of use. MPI has selected three-year average of $495 with a 4.00% severity growth based on the all-year trend.

CI.11.2.3 All Other Severity

MPI selected the three-year average of $5,026 with 3.50% severity growth based on the all-year average.

CI.11.3 Property Damage Ultimate Forecast

The figure below shows the historical experience and forecast by accident year for Property Damage, along with a comparison to last year's forecast.

Figure CI- 65: Property Damage Ultimate Incurred

Line No.	Accident Year	Claim Frequency	Severity	Ultimate ($000)	Annual % Change	Last Year's Forecast ($000)	Variance to Forecast ($000)
1	2008/09	0.051	$947	$36,015	5.03%	$35,965	$51
2	2009/10	0.047	$966	$34,937	-3.00%	$34,921	$15

5	2012/13	0.051	$1,001	$41,770	11.46%	$41,689	$81
6	2013/14	0.053	$1,045	$45,594	9.16%	$45,371	$223
7	2014/15	0.046	$1,073	$41,004	-10.07%	$40,929	$76
8	2015/16	0.045	$1,079	$41,203	0.48%	$41,150	$53
9	2016/17	0.046	$1,107	$43,652	5.94%	$41,997	$1,655
10	2017/18	0.048	$1,119	$46,445	6.40%	$44,360	$2,085
11	5-year Trend	0.044	$1,139	$44,884	5.53%	$42,475	
12	10-year Trend	0.046	$1,145	$46,830	3.58%	$45,394	
13	All year Trend	0.047	$1,137	$47,033	2.81%	$45,876	
14	2018/19	0.048	$1,096	$46,849	0.87%	$45,967	$882
15	2019/20	0.048	$1,117	$48,465	3.45%	$47,649	$816
16	2020/21	0.048	$1,139	$50,150	3.48%	$49,408	$742
17	2021/22	0.048	$1,161	$51,908	3.51%	$51,247	$661
18	2022/23	0.048	$1,184	$53,743	3.54%		

Based on the ultimate frequency and severity forecasts, the 2019/20 Property Damage ultimate is $48.5 million, or 1.71%, higher than last year's forecast of $47.6 million.

CI.11.4 Fiscal Year Claims Incurred Forecast

The historical and forecasted fiscal year CI for Property Damage, along with a comparison to last year's forecast, are shown in the figure below. Due to the short-tail

nature of this coverage, changing interest rates do not have a significant impact on IBNR calculations.

Figure CI- 66: Property Damage Claims Incurred

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast

CI.12 BASIC TOTAL

This section summarizes the overall forecast for Basic before and after CI financial provisions.

CI.12.1 Claims Incurred Before Provisions

This section shows the total of all Basic coverage categories that were described in sections *CI.3* through *CI.11*.

Figure CI- 67: Claims Incurred before Provisions Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Basic Total	$790,845	$846,233	$892,705	$938,021	$987,550

CI.12.1.1 Accident Year Ultimate Forecast

The figure below shows the historical and forecasted Basic ultimate losses, along with a comparison to last year's forecast.

Figure CI- 68: Total Basic Ultimate Incurred

Line No.	Accident Year	Ultimate ($000)	Annual % Change	Last Year's Forecast ($000)	Variance to Forecast ($000)
1	2013/14	$640,278	3.00%	$654,925	($14,647)
2	2014/15	$589,944	-7.86%	$606,701	($16,757)
3	2015/16	$710,586	20.45%	$693,654	$16,932
4	2016/17	$747,599	5.21%	$725,964	$21,635
5	2017/18	$725,014	-3.02%	$750,179	($25,165)
6	2018/19	$768,995	6.07%	$787,266	($18,270)
7	2019/20	$808,678	5.16%	$826,660	($17,982)
8	2020/21	$851,029	5.24%	$868,546	($17,516)
9	2021/22	$896,226	5.31%	$905,018	($8,792)
10	2022/23	$944,409	5.38%		

The 2019/20 total Basic ultimate incurred forecast is $18.0 million or 2.18% lower than last year's forecast as a result of:

- Comprehensive Hail: $11.5 million decrease
- Collision and Property Damage: $4.4 million decrease
- Comprehensive Theft and Vandalism: $1.6 million decrease
- All Other Comprehensive: $1.5 million decrease
- PIPP and Bodily Injury: $1.5 million increase
- PIPP Enhancements: $0.5 million decrease

CI.12.1.2 Fiscal Year Claims Incurred Forecast

The figure below shows the historical and projected fiscal year CI for all Basic coverages in the 2019 GRA forecast.

Figure CI- 69: Total Basic Claims Incurred – 2019 GRA Forecast

Line No.	Fiscal Year	Reported	Change in IBNR: Interest Rate Impact	Change in IBNR: Interest Rate Margin Change	Change in IBNR: All Other Changes	Change in IBNR: Total Change in IBNR	Claims Incurred	Last Year's Forecast	Variance to Forecast

7	2018/19	($16,105)	($14,489)	$0	($1,752)	($16,242)	($32,347)
8	2019/20	($17,316)	$5,727	$0	($809)	$4,918	($12,397)
9	2020/21	($15,416)	$9,948	$0	($1,766)	$8,183	($7,233)
10	2021/22	($14,170)	$8,934	$0	($2,222)	$6,713	($7,458)
11	2022/23						

As described in *CI.3* through *CI.11*, the 2017/18 fiscal year results were 1.68% or $12.0 million over budget mainly as a result of (i) lower than expected interest rates, (ii) higher than expected increases in PIPP case reserves and (iii) associated IBNR adjustments from the Appointed Actuary's reports.

The 2019/20 CI is forecasted at $846.2 million, or 1.44% lower than last year's forecast of $858.6 million. Excluding interest rate impacts, the 2019/20 CI would be $838.9 million, or 2.11% lower than last year's 2019/20 forecast of $857.0 million. Similar to the previous section, the main cause of this $19.7 million deviation from forecast (excluding interest rate impacts) is from the Comprehensive Hail, Theft, Vandalism and Collision forecasts as outlined in section *CI.12.1.1*.

CI.12.2 Unallocated Loss Adjustment Expenses (ULAE)

ULAE represents claims costs that cannot be allocated to individual claims (e.g. towing charges, payments to Manitoba Health, and medical consultants' fees). The amounts paid for ULAE are added to fiscal year net CI.

Figure CI- 72: Unallocated Loss Adjustment Expenses

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	ULAE	$50,135	$52,371	$54,921	$57,537	$60,210

CI.12.2.1 ULAE Forecast

The figure below shows the historical and forecasted ULAE, along with a comparison to last year's forecast. The most significant ULAE item is payments to Manitoba Health (shown below), which are calculated based on MPI's agreement with Manitoba Health. The Direct Repair Program was implemented on March 1, 2017. MPI currently has an agreement with the repair industry that states Direct Repair shops will be entitled to an $81 premium on the completion of a first estimate beginning March 1, 2018. MPI has budgeted $6.0 million per year for this Direct Repair expense. For more information, please see *Part IV Service Delivery Model SDM.1.6*. A detailed forecast for all other ULAE categories is shown in *Appendix 8*.

Figure CI- 73: Unallocated Loss Adjustment Expenses

Line No.	Fiscal Year	Manitoba Health	All Other	Direct Repair	Total	Last Year's Forecast	Variance to Forecast
1	*($000)*						
2	2013/14	$24,829	$7,465	$0	$32,294	$32,294	$0
3	2014/15	$25,418	$11,777	$0	$37,195	$37,195	$0
4	2015/16	$26,943	$13,081	$0	$40,024	$40,024	$0
5	2016/17	$27,240	$12,629	$0	$39,869	$39,869	$0
6	2017/18	$29,408	$12,844	$0	$42,252	$42,205	$47
7	2018/19	$30,293	$13,842	$6,000	$50,135	$43,912	$6,224
8	2019/20	$32,259	$14,112	$6,000	$52,371	$45,901	$6,470
9	2020/21	$34,535	$14,386	$6,000	$54,921	$47,910	$7,011
10	2021/22	$36,884	$14,653	$6,000	$57,537	$50,195	$7,342
11	2022/23	$39,282	$14,928	$6,000	$60,210		

The 2019/20 ULAE forecast increased by $6.5 million, or 14.10%, over last year's forecast mainly because of the Direct Repair expense forecasted at $6.0 million.

CI.12.3 Change in Internal Loss Adjustment Expenses (ILAE)

The provision for ILAE refers to the unpaid amounts required to handle and maintain claims until all claims are paid (ultimate). This provision is reviewed annually as part of the review of policy liabilities. The change in this provision is reported in the fiscal year net CI.

Figure CI- 74: Change in ILAE Provision Forecast

2	Change in ILAE	$4,679	$6,988	$7,329	$7,035	$6,961

CI.12.3.1 ILAE Forecast

The calculation of the latest ILAE is shown in detail in the February 2018 Appointed Actuary's Report (*Part VIII External Actuary Review of Policy Liabilities Attachment A*). For forecasting purposes, the change in the ILAE at a given fiscal year end was calculated by totaling 9.20% of the change in unpaid claims and 9.20% of the change in IBNR for that year.

Figure CI- 75: Change in ILAE Provision

Line No.	Fiscal Year	Change in Unpaid Claims	Change in IBNR	Change in ILAE	Last Year's Forecast	Variance to Forecast
1	*($000)*					
2	2013/14	$92,195	($5,168)	$12,579	$12,579	$0
3	2014/15	$83,811	$112,907	$8,015	$8,015	$0
4	2015/16	($303)	($33,132)	$503	$503	$0
5	2016/17	$3,752	$52,437	$10,168	$10,168	$0
6	2017/18	$35,783	($75,409)	($2,219)	($4,904)	$2,685
7	2018/19	$56,331	($5,468)	$4,679	$6,656	($1,977)
8	2019/20	$63,395	$12,560	$6,988	$5,853	$1,135
9	2020/21	$63,747	$15,918	$7,329	$5,637	$1,692
10	2021/22	$61,607	$14,857	$7,035	$5,535	$1,499
11	2022/23	$60,234	$15,432	$6,961		

The change in ILAE follows directly from the projected changes in unpaid claims and IBNR for overall Basic coverages.

CI.12.4 Reinsurance Ceded Claims

Reinsurance ceded represents the actual or estimated amount of claims ceded to reinsurers. The change in the amount recoverable from reinsurers is recorded as part of the fiscal year net CI.

Figure CI- 76: Reinsurance Ceded Claims Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23

2	Reinsurance Ceded	$0	$0	$0	$0	$0

CI.12.4.1 Reinsurance Claims Ceded Forecast

MPI assumes there are no changes to reinsurance claims ceded amounts in the forecast period. The figure below provides the historical changes in reinsurance ceded

amounts. A negative figure indicates amounts that were ceded to reinsurers, which reduces overall CI. For more details on MPI's reinsurance programs see *REV.3*.

4	2015/16	($1,076)
5	2016/17	$786
6	2017/18	($676)

CI.12.5 Change in Premium Deficiency or DPAC Write-Down

Deferred policy acquisition costs (DPAC) represent the premium taxes and commissions that are deferred to reflect the unearned portion of existing policies. As part of the October and February policy liability valuations, MPI calculates the Equity in the Unearned Premiums (EUP). The EUP equals the unearned premiums minus the expected claim costs and expenses associated with these unearned premiums. If the EUP is less than the DPAC asset, then MPI must write-down the DPAC asset to the amount of the EUP. If the EUP is negative, then MPI must write-down the DPAC asset to zero and post a premium deficiency equal to the amount of the negative EUP. The change in the DPAC write-down or premium deficiency is recorded in the current fiscal year's net CI.

Figure CI- 78: Change in Premium Deficiency or DPAC Write-Down Forecast

Line No.	Fiscal Year	2018/19	2019/20	2020/21	2021/22	2022/23
1	*($000)*					
2	Change in Premium Deficiency/DPAC	($28,521)	($5,380)	($4,243)	$3,999	$7,997

CI.12.5.1 Premium Deficiency Forecast

Starting with the 2017 General Rate Application, MPI has provided a forecast for the changes in the premium deficiency and DPAC asset. In previous years MPI did not forecast this item because the financial model did not have the functionality to calculate these amounts.

In 2017/18, MPI increased the DPAC write-down by $2.4 million and increased the premium deficiency by $2.0 million (from $6.8 million to $8.8 million). MPI continues to have a DPAC write-down of $32.1 million as of February 28, 2018 mainly as a result of the continued low interest rate environment. For comparison, the actual interest rate used in the Appointed Actuary's report for year-ending February 28, 2018 was 3.47%, whereas the forecasted interest rate per the 2018 GRA was 3.78%.

Figure CI- 79: Change in Premium Deficiency or DPAC Write-Down

Line No.	Fiscal Year	This Year's Forecast	Last Year's Forecast	Variance to Forecast
1	*($000)*			
2	2013/14	$25,203	$25,203	$0
3	2014/15	($7,584)	($7,584)	$0
4	2015/16	($14,959)	($14,959)	$0
5	2016/17	$12,971	$12,971	$0
6	2017/18	$4,364	($12,128)	$16,492
7	2018/19	($28,521)	($9,474)	($19,048)
8	2019/20	($5,380)	$2,471	($7,852)
9	2020/21	($4,243)	$3,625	($7,868)
10	2021/22	$3,999	$6,251	($2,252)
11	2022/23	$7,997		

In 2018/19, MPI is forecasting a $19.7 million decrease in the DPAC write-down (from $32.1 million to $12.4 million) and a reduction of the premium deficiency by $8.8 million (from $8.8 million to $0.0 million). The $19.7 million decrease in the DPAC write-down can be largely attributed to the 2018 GRA approved rate increase of 2.60% and the ALM strategy which increased the discount rate. Thereafter, the change in the DPAC write-down is negative because of the proposed 2019 GRA rate

increase of 0.10% plus 2.10% capital maintenance provision. The figure below shows how the DPAC write-down and premium deficiency is calculated.

CI.12.6 Total Fiscal Year Net Claims Incurred

The Total Net CI is the amount that appears on MPI's Statement of Operations. This amount represents the Basic CI from section *CI.12.1.2* plus the additional claims provisions described in sections *CI.12.2* through *CI.12.5*.

CI.12.6.1 Fiscal Year Net Claims Incurred Forecast

The figure below shows the historical and projected fiscal year CI for all Basic coverages including claims provisions.

Figure CI- 81: Total Basic Net Claims Incurred Including Claims Provisions

9	2020/21	$892,705	$54,921	$7,329	$0	$0	($4,243)	$950,712
10	2021/22	$938,021	$57,537	$7,035	$0	$0	$3,999	$1,006,592
11	2022/23	$987,550	$60,210	$6,961	$0	$0	$7,997	$1,062,718

The figure below compares this year's net CI forecast to last year's forecast.

Figure CI- 82: Total Basic Net Claims Incurred including Claims Provisions Comparison to Last Year's Forecast

Line No.	Fiscal Year	This Year's Forecast	Last Year's Forecast	Variance to Forecast
1	*($000)*			
2	2013/14	$747,435	$747,435	$0
3	2014/15	$745,835	$745,835	$0
4	2015/16	$666,404	$666,404	$0
5	2016/17	$860,034	$860,034	$0
6	2017/18	$767,240	$739,415	$27,825
7	2018/19	$817,139	$864,286	($47,147)
8	2019/20	$900,212	$912,856	($12,644)
9	2020/21	$950,712	$957,110	($6,398)
10	2021/22	$1,006,592	$1,007,461	($869)
11	2022/23	$1,062,718		

The 2017/18 net CI was $27.8 million over budget as a result of:

- Low Interest Rates: $51.4 million over budget
- Premium Deficiency and DPAC Write-Down: $16.5 million over budget
- Collision and Property Damage: $2.9 million over budget
- Unallocated and Internal Loss Adjustment Expenses: $2.7 million over budget

These increases were offset by:

- Comprehensive: $37.4 million under budget
- PIPP and Bodily Injury: $5.4 million under budget
- Allowance for doubtful accounts: $2.2 million under budget
- Change in Reinsurance Ceded: $0.7 million over budget

The 2019/20 net CI forecast has decreased by $12.6 million from last year's forecast, as a result of the following:

- Physical Damage: $18.5 million decrease before interest rate impacts
- Premium Deficiency and DPAC Write-Down: $7.9 million favourable impact
- Interest Rate Impact: $6.7 million unfavourable interest rate impact
- Unallocated and Internal Loss Adjustment Expenses: $6.5 million unfavourable impact
- PIPP and Bodily Injury: $0.7 million increase before interest rate impacts
- Net effect of all other financial provisions: $0.1 million favourable impact

RATEMAKING

RM.1 CERTIFICATE OF THE ACTUARY

I, Luke Johnston, a Fellow of the Canadian Institute of Actuaries, certify that:

1. I have derived the indicated rate(s) in accordance with Accepted Actuarial Practice in Canada, on behalf of Manitoba Public Insurance (MPI or the Corporation) , for the Basic Autopac program (Basic) for rates effective March 1, 2019 for new and renewal business.

2. I have reviewed the data underlying this rate application for reasonableness and consistency, and I believe the data is reliable and sufficient for the determination of the indicated rate changes.

3. The indicated rate changes, shown in the table below, have been calculated in accordance with Accepted Actuarial Practice in Canada. These indicated rate changes assume a 0% profit provision, and include a net capital maintenance provision (CMP).

Figure RM- 1: Indicated Rate Change

Line No.	Major Class	Current Average Rate	Indicated Average Rate	Indicated Rate Change
1	**Private Passenger**	$1,111	$1,138	2.4%
2	**Commercial**	$780	$798	2.4%
3	**Public**	$2,003	$2,014	0.6%
4	**Motorcycles**	$797	$822	3.1%
5	**Trailers**	$81	$78	-4.7%
6	**Off-Road Vehicles**	$10	$8	-20.0%
7	**Overall**	$855	$874	2.2%

RM.2 RATE MODEL

The impacts of adjustments to vehicle premiums are simulated through the use of a rate model. The model analyzes the combined impact on premiums resulting from rate and classification changes. The 2019/20 rate modeling process considered the impact on a vehicle population of 1,149,140 vehicles.

The rate model uses the vehicle population in Manitoba at a point in time. This point in time was chosen to obtain the greatest number of vehicles registered. With the exception of the following seasonally used vehicles, the vehicle population was taken as of November 1, 2017.

- Snowmobiles and snow vehicles as of January 1, 2018
- Motorhomes, motorcycles, mopeds, trailers and off road vehicles (except for snowmobiles and snow vehicles) as of August 1, 2017

For Basic Autopac, the vehicle classification plan groups vehicles together by using the following four classifications – rating territories, insurance uses, vehicle rating factors, and driving records. When any of these classification components change (e.g. passenger vehicle rate groups) or the relationship between components change (e.g. relationship between rates for passenger vehicle rate groups), the impact is determined by applying the changes to the rate model.

Rate group classification and relativity changes are applied to the model one at a time. To ensure that these changes do not result in a revenue increase or decrease, offsets are added to ensure revenue neutrality. For 2019/20, the following changes were applied:

- Rate group changes for the Canadian Loss Experience Automobile Rating (CLEAR) rated passenger vehicles and light trucks
- Rate group changes for heavy trucks and heavy-rated–as-light trucks
- Rate line changes for passenger vehicles, light trucks, heavy trucks, motorcycles, mopeds and mobility vehicles, motorhomes, trailers, and buses

For further information on the vehicle classification plan, refer to *Part V(ii) VCS Vehicle Classification System*. For further information on the rate group classification and relativity changes for 2019/20 and their impact on the vehicle population in the rate model, refer to *RM.3*.

After all classification and relativity changes are applied, experience adjustments are applied to produce the overall revenue change. Experience adjustments represent the revenue changes required for each individual classification group (e.g. All Purpose Passenger Vehicles in Territory 1). For further information on the determination of the required rate changes, refer to *RM.4*. For information on experience adjustments, refer to *RM.5*.

Finally, rates are adjusted to ensure relative ranking rules between vehicle classifications are maintained and rate changes are capped as per rules approved by the Manitoba Public Utilities Board (PUB or the Board). For further information on relative ranking and capping rules, refer to *RM.5.3*.

RM.3 RATE GROUP AND RATE LINE

Vehicle rating factors, reflecting the characteristics of a vehicle, are used to group together vehicles with similar risks. Vehicle rating factors include rate group, gross vehicle weight, engine displacement, seating capacity, and bodystyle. This section discusses the changes made to the rate groups for the different vehicle types, as well as the associated rate line changes.

Further information on the vehicle rating factors can be found in *Part V(ii) VCS Vehicle Classification System*.

RM.3.1 Rate Group

For 2019/20, rate group changes were applied to passenger vehicles, light trucks, heavy-rated-as-light trucks, and heavy trucks.

Passenger Vehicle and Light Trucks (including Heavy-Rated-as-Light Trucks)
The CLEAR system is used for assigning rate groups to passenger vehicles and light trucks (including heavy-rated-as-light trucks). Changes to rate group assignments from updated CLEAR rate groups result in changes to overall revenues. Offset adjustments are applied to ensure revenue neutrality. Two offsets are calculated for CLEAR rated vehicles, one for passenger vehicles (1.62%), and one for light trucks (2.46%). For each respective vehicle type, the offset is calculated based on the percentage change in revenue, and is then applied equally to the rates for all rate groups. Rate group offsets are applied to all insurance uses for passenger vehicles and light trucks, except those which are flat rated (i.e. one rate applies to all rate groups).

For 2019/20, the effects of CLEAR rate group reassignments to passenger vehicles and light trucks (including heavy-rated-as-light trucks) are as follows:

- 47.7% (384,308 vehicles) receive lower rates
- 0.3% (2,495 vehicles) remain unchanged
- 52.0% (419,099 vehicles) receive higher rates

Of those increasing:

- 21.9% (91,941 vehicles) increase by less than $20
- 11.3% (47,467 vehicles) increase by $20 to $29
- 7.2% (30,227 vehicles) increase by $30 to $39
- 20.8% (87,254 vehicles) increase by $40 to $49
- 17.8% (74,588 vehicles) increase by $50 to $59
- 9.8% (41,252 vehicles) increase by $60 to $69
- 6.5% (27,042 vehicles) increase by $70 to $79
- 2.9% (12,318 vehicles) increase by $80 to $89
- 1.4% (5,873 vehicles) increase by $90 to $99
- 0.3% (1,136 vehicles) increase by $100 to $149
- (1 vehicle) increase by $150 to $199

Heavy Truck Rate Groups

As in previous years, heavy truck rate groups are adjusted down one rate group per model year. This adjustment allows for the newest model year vehicles to be assigned the highest rate group while vintaging the remaining model year vehicles.

The annual vintaging of the heavy truck rate groups results in a change in revenue. A rate group offset adjustment of 3.52% was applied to ensure revenue neutrality.

Heavy trucks which do not carry physical damage coverage are flat rated, and are therefore unaffected by rate group changes and the offset adjustment.

For 2019/20, rate group changes for heavy trucks with physical damage coverage resulted in:

- 42.9% (11,700 vehicles) decrease in rate
- 57.1% (15,577 vehicles) increase in rate

Of those increasing:

- 89.4% (13,933 vehicles) increase by less than $20

- 9.6% (1,484 vehicles) increase by $20 to $29
- 0.9% (139 vehicles) increase by $30 to $39
- 0.1% (21 vehicles) increase by $40 to $59

RM.3.2 Rate Line

While the individual rate group assigned is an important factor in the premium paid, an equally important factor is how rate groups relate to one another and to the underlying costs of providing Basic Autopac coverage. The relationship between rate groups is defined by a rate line, which is individually determined for different vehicle types. Rate line relativity adjustments are applied to passenger vehicles, light trucks, heavy trucks, motorcycles, motorhomes, buses, and trailers. These adjustments modify the relative difference between rates charged across the rate group spectrum.

RM.3.2.1 Rate Line Relativity Analytical Process

The analytical process consists of the following steps:

- Historical loss data is organized by coverage, rate group, territory, and insurance use.
- For each coverage (collision, comprehensive, Personal Injury Protection Plan (PIPP), third party liability, and property damage), losses are examined for differences across rate groups. Historically, it has been shown that physical damage coverages (collision and comprehensive) increase by rate group, while the other coverages (PIPP, third party liability and property damage) do not have a consistent relationship by rate group.
- The minimum bias procedure is used to develop combined (collision and comprehensive) physical damage relativities. These relativities are then used to produce the expected average physical damage costs by rate group.
- Costs for the other coverages (PIPP, third party liability and property damage) and for operating expenses are then added to the selected physical damage

costs. The outcome is a set of indicated relativities relating the average total cost per rate group.

- Curves are fitted to the indicated rate line relativities using regression analysis. In general, the fitted curves are used as the selected relativities. However, indicated relativities are occasionally used if the experience for a certain rate group does not fit well with the selected regression line.
- The selected relativities are then credibility weighted with the current relativities.

Rate line relativities for passenger vehicles, light trucks, heavy trucks, motorcycles, motorhomes, trailers and buses can be found in *Ratemaking Appendix 1*.

RM.3.2.2 Rate Line Impacts

Passenger Vehicles and Light Trucks

All insurance uses for passenger vehicles, light trucks, and heavy-rated-as-light trucks, excluding Police/Emergency trucks which are flat rated, receive rate line adjustments. A rate line offset adjustment of -3.72% was applied to passenger vehicles and -4.51% was applied to light trucks to ensure revenue neutrality.

For 2019/20, due to rate line adjustments:

- 49.9% (401,851 vehicles) receive a rate decrease
- 4.6% (37,380 vehicles) remain unchanged
- 45.5% (366,671 vehicles) receive a rate increase

Of those receiving an increase:

- 74.0% (271,417 vehicles) increase by less than $20
- 14.4% (52,903 vehicles) increase between $20 and $29
- 3.6% (13,308 vehicles) increase between $30 to $39
- 3.2% (11,862 vehicles) increase between $40 to $49
- 2.2% (7,945 vehicles) increase between $50 to $59

- 2.2% (7,962 vehicles) increase between $60 to $69
- 0.3% (1,274 vehicles) increase between $70 to $149

Heavy Trucks

Rate line differentials are applied to all heavy truck insurance uses that are not flat rated. A rate line offset adjustment of 2.44% was applied to ensure revenue neutrality.

For 2019/20, of heavy trucks receiving rate line changes:

- 60.0% (16,357 vehicles) decrease in rate
- 0% (0 vehicles) remain unchanged
- 40.0% (10,920 vehicles) increase in rate

Of those increasing:

- 56.5% (6,167 vehicles) increase by less than $20
- 39.3% (4,294 vehicles) increase between $20 to $49
- 4.0% (437 vehicles) increase between $50 to $99
- 0.2% (22 vehicles) increase between $100 to $149

Motorcycles, Mopeds and Mobility Vehicles

Unlike other vehicle types, a significant portion of motorcycle claims costs are injury related, which do not vary greatly relative to the value of the motorcycle. As a result, the rate line for motorcycles is much flatter in comparison to other types of vehicles.

Rate line adjustments are applied to all vehicles in the motorcycle major class, which includes motorcycles, mopeds, and mobility vehicles. A rate line offset adjustment of -0.72% was applied to ensure revenue neutrality.

For 2019/20, as a result of rate line adjustments:

- 65.9% (11,218 vehicles) decrease in rate
- 4.2% (716 vehicles) remain unchanged

- 29.9% (5,091 vehicles) increase in rate

Of those increasing:

- 66.2% (3,372 vehicles) increase by less than $10
- 27.2% (1,383 vehicles) increase between $10 to $19
- 5.1% (260 vehicles) increase between $20 to $29
- 1.1% (58 vehicles) increase between $30 to $39
- 0.3% (17 vehicles) increase between $40 to $49
- 1 vehicle increase between $70 to $79

Motorhomes

Rate line adjustments are applied to motorhome insurance uses. A rate line offset adjustment of 0.19% was applied to ensure revenue neutrality.

For 2019/20, as a result of rate line changes:

- 33.9% (1,616 vehicles) decrease in rate
- 15.4% (735 vehicles) remain unchanged
- 50.7% (2,421 vehicles) increase in rate

Of those receiving rate increases:

- 99.1% (2,399 vehicles) increase by less than $10
- 0.9% (22 vehicles) increase between $10 to $19

Trailers

Rate line adjustments are applied to trailers. A rate line offset adjustment of -0.46% was applied to ensure revenue neutrality.

For 2019/20, as a result of rate line changes:

- 33.1% (66,536 vehicles) decrease in rate
- 60.5% (121,371 vehicles) remain unchanged

- 6.4% (12,770 vehicles) increase in rate

Of those receiving rate increases:

- 100% (12,770 vehicles) increase in the range of $1 - $9

Buses

All insurance uses for buses, excluding Transit Buses in Territory 1 which are flat rated, receive rate line adjustments. A rate line offset adjustment of 0.11% was applied to buses to ensure revenue neutrality.

For 2019/20, due to rate line adjustments:

- 66.0% (2,442 vehicles) receive a rate decrease
- 8.5% (314 vehicles) remain unchanged
- 25.5% (944 vehicles) receive a rate increase

Of those receiving an increase:

- 73.8% (697 vehicles) increase by less than $10
- 25.6% (242 vehicles) increase between $10 to $19
- 0.6% (5 vehicles) increase between $20 to $29

RM.3.3 Combined Effect of Vehicle Rate Group and Rate Line Changes

To ensure revenue neutrality, combined offset adjustments are applied to offset changes in total revenue resulting from both rate group (*RM.3.1*) and rate line changes (*RM.3.2*). These combined offset adjustments are determined for each respective vehicle type. Rate Group, Rate Line and Combined Offsets are listed in *Ratemaking Appendix 2*.

For 2019/20, as a result of combined rate group and rate line changes (for those vehicles receiving either one or both adjustments):

- 48.3% (511,301 vehicles) decrease in rate
- 11.9% (125,955 vehicles) are unchanged
- 39.8% (422,097 vehicles) increase in rate

Of those increasing:

- 15.7% (66,298 vehicles) increase by less than $10
- 5.0% (21,166 vehicles) increase between $10 and $19
- 7.7% (32,546 vehicles) increase between $20 and $29
- 7.9% (33,377 vehicles) increase between $30 and $39
- 12.5% (52,624 vehicles) increase between $40 to $49
- 39.7% (167,469 vehicles) increase between $50 to $99
- 9.0% (38,149 vehicles) increases between $100 to $149
- 2.3% (9,877 vehicles) increase between $150 to $199
- Less than 0.1% (121 vehicles) increase between $200 to $249
- 0.1% (464 vehicles) increase between $250 to $299
- Less than 0.1% (6 vehicles) increase between $300 or more

On a percentage increase basis, of those increasing:

- 65.0% (274,372 vehicles) increase by less than 5 percent
- 22.9% (96,674 vehicles) increase between 5 and 6 percent
- 0.9% (3,763 vehicles) increase between 6 and 7 percent
- Less than 0.1% (6 vehicles) increase between 7 and 8 percent
- 4.6% (19,636 vehicles) increase between 8 and 9 percent
- 0.9% (3,958 vehicles) increase between 9 and 10 percent
- 5.6% (23,633 vehicles) increase between 10 and 11 percent
- Less than 0.1% (48 vehicles) increase between 11 and 20 percent
- Less than 0.1% (7 vehicles) increase 20 percent or more

RM.4 REQUIRED RATES AND RATE CHANGES

This section provides the methodology used to determine the average required vehicle premium rates for the Basic program for the 2019/20 rating year[1]. The methodology used is in accordance with Accepted Actuarial Practice in Canada.

RM.4.1 Overview of the Methodology

The purpose of ratemaking is twofold:

(i) To determine the overall expected costs resulting from policies issued for rating year 2019/20.

(ii) To allocate the overall expected costs equitably to all insureds. The cost to the insured is the required rate.

Contributors to the overall expected costs are divided into two major categories:

(i) Claims Costs – all costs associated with the settling of claims

(ii) Non-Claims Costs – divided into the following subcategories:

- Commissions
- Premium Taxes
- Claims Expenses
- Operating Expenses
- Regulatory/Appeal
- Road Safety/Loss Prevention
- Fleet Rebate
- Anti-Theft Discount

[1] Rating year is also referred to as policy year. The rates charged when policies are issued or renewed are dependent on the rating year for the policyholder at the time of issuance or renewal. The rates charged for rating year 2019/20 are referred to as 2019/20 rates.

- Reinsurance

Other income sources serve as offsets to reduce the overall expected costs. Other income sources include driver premiums, and service fees and other revenues.

The required rate is determined first on an overall fleet basis. The overall fleet is then divided into six major classifications, and a required rate is determined for each major classification. Each major classification is then further divided into vehicle groups using rating variables, and a required rate is determined for each distinct vehicle group.

RM.4.1.1 Pure Premium Approach

The determination of the overall required rate and the major classification required rates are done using the pure premium approach. This approach is independent of the current premium structure.

Claims costs are first individually determined for the following coverages:

(i) Third Party Liability – Separated into Bodily Injury and Property Damage.

(ii) Accident Benefits, also known as Personal Injury Protection Plan (PIPP) – Separated into Income Replacement Indemnity, Accident Benefits - Other (Indexed), and Accident Benefits - Other (Non-Indexed)

(iii) All Perils – Separated into Collision and Comprehensive

These claims costs are then divided by the number of insured units to determine the respective pure premiums. The total pure premium for all coverages is then calculated. Non-claims costs on a per unit basis are then added to the total pure premium to determine the total costs per unit. The required rate is then determined by deducting the other income sources on a per unit basis from the total costs per unit.

The required rate change is derived by taking the required rate and dividing it by the current average rate adjusted for anticipated classification drift.

RM.4.1.2 Relativity Approach

The determination of the required rates for all vehicle groups is done using the relativity approach. A thorough discussion of this approach is presented in *RM.4.4*. Briefly, the relativity approach compares the risk of each vehicle group to all other vehicle groups within the major classification. This relative risk is then used to determine the required rate for the vehicle group.

RM.4.2 Determination of the Overall Required Rate

RM.4.2.1 Claims Costs

The claims costs used for ratemaking are based on the results of MPI's claims forecasting process. A thorough discussion of the methodology and results of this process is presented in *Part V(i) Claims Incurred*.

Rating Year Claims Costs

MPI's basis for analyzing and forecasting claims costs is by grouping claims based on accident year, which is the year in which the accident occurred. For rating purposes, claims costs must be grouped based on rating year, which is the rating year of the policy in effect when the accident occurred. As such, claims costs on an accident year basis must be converted to claims cost on a rating year basis.

In respect of the 2019/20 rating year, claims costs are incurred over accident years 2019/20 and 2020/21. This is a result of staggered renewals, i.e. policies are renewed throughout the rating year, which results in the last policies for the rating year expiring on February 28, 2021. As such, claims costs for accident years 2019/20 and 2020/21 are converted to claims costs for rating year 2019/20.

A detailed discussion of the methodology used to convert the claims costs from an accident year basis to a rating year basis, including the derivation by coverage of the rating year 2019/20 claims costs, is presented in *Ratemaking Appendix 9 Table 2*.

Improvements to PIPP Benefits

On October 8, 2009, the provincial government enacted improvements to PIPP benefits to claimants who meet the definition of "Catastrophic Injury". Further improvements to PIPP benefits were enacted on August 19, 2011 and May 1, 2015.

A list of all improvements is provided below (all figures at March 1, 2018 level):

(i) The minimum Income Replacement Indemnity for catastrophically injured claimants was increased to the Industrial Average Wage.

(ii) The maximum monthly Personal Care Assistance payment for catastrophically injured claimants was increased to $5,620.

(iii) The Vehicle Purchase Policy for catastrophically injured claimants was revised to allow for the purchase of a new vehicle every five years.

(iv) Claimants were now entitled to an Annual Spending Allowance for extraordinary expenses for leisure and recreational activities, with biannual limits ranging from $500 to $4,000 depending on the extent of the claimants' injuries.

(v) Improvements to PIPP benefits per a reinterpretation of section 138 of *The Manitoba Public Insurance Corporation Act*. These improvements include benefits for modification of a secondary residence, as well as reimbursement for extraordinary expenses to support continuation of pre-accident activities.

(vi) The primary caregiver of a deceased claimant's dependents is now eligible for caregiver weekly indemnity benefits. Eligibility for this benefit depends on the deceased claimant's occupation directly preceding the accident.

(vii) If death (of a claimant) occurs more than 90 days after the accident, both the Death and Permanent Impairment benefits are now payable. Previously, the Death benefit payable was offset by the Permanent Impairment benefit already paid.

(viii) The maximum Permanent Impairment benefit for catastrophically injured claimants was increased to $247,477.

For the purpose of determining the overall required rate and the major classification required rates, the claims costs for these improvements were added to overall PIPP claims costs as follows:

- Improvement (i) – Added to Income Replacement Indemnity
- Improvements (ii) to (vii) – Added to Accident Benefits - Other (Indexed)
- Improvement (viii) – Added to Accident Benefits - Other (Non Indexed)

Discounting Claims Costs

To comply with Accepted Actuarial Practice in Canada, the 2019/20 rating year claims costs must be discounted using an appropriate investment return to reflect the time value of money.

Payments were discounted from the midpoint of the development quarter/year to the end of rating year 2019/20 i.e. February 29, 2020.

The investment return used to discount future payments is based on the market value weighted yield of MPI's marketable bonds portfolio i.e. the new money yield. The investment return of 3.21% reflects the projected yield as at the midpoint of rating year 2019/20 i.e. September 1, 2019. Per the Canadian Institute of Actuaries' Consolidated Standards of Practice, paragraph 2620.15 states that the selected investment return is assumed to represent the "*expected investment income to be earned on assets that might be acquired with the net cash flows resulting from the revenue at the indicated rate*". Further, per paragraph 2620.16, the possible sets of such assets the actuary could consider using include "*fixed income assets of appropriate duration*".

The calculation of the discounted claims costs by coverage for rating year 2019/20 is presented in *Ratemaking Appendix 9 Table 2*.

Total Pure Premium

Ratemaking Appendix 9 Table 1 provides a summary of the claims costs for the 2019/20 rating year by coverage. The total pure premium is the total discounted claims costs for all coverages divided by the corresponding total number of insured units. The table below summarizes the total discounted claims costs for the 2019/20 rating year (per *Ratemaking Appendix 9 Table 1*).

Figure RM- 2: Rating Year 2019/20 Discounted Claims Costs

Line No.	Coverage	Discounted Claims Costs
1	***($000)***	
2	Bodily Injury	4,634
3	Property Damage	48,524
4	Income Replacement Indemnity	67,570
5	PIPP Enhancement	1,018
6	Accident Benefits – Other (Indexed)	59,037
7	PIPP Enhancement	4,664
8	ULAE[1]	36,881
9	Accident Benefits – Other (Non-Indexed)	29,908
10	PIPP Enhancement	970
11	Collision	479,833
12	ULAE[1]	16,774
13	Comprehensive	107,302
14	Incurred Claims (Excl PIPP Enh & ULAE[1])	796,809
15	PIPP Enhancement	6,653
16	ULAE[1]	53,655
17	**Total Incurred Claims**	**857,117**

18 [1]ULAE refers to Unallocated Loss Adjustment Expense, which are claims costs which cannot be allocated to individual claims.

Based on the forecasted total number of insured units for the 2019/20 rating year of 1,200,000:

2019/20 Rating Year Total Pure Premium

= $857,117,000 / 1,200,000 = $714.26

RM.4.2.2 Non-Claims Costs

Beyond the settling of claims, the total premiums collected must also be sufficient to cover non-claims costs. The following subsections discuss these costs on an undiscounted basis, reference the sources for the figures as appropriate, and provide a basis for which these costs are assumed to be incurred.

Ratemaking Appendix 9 Table 3 summarizes the derivation of claims expenses on both an undiscounted and discounted basis for rating year 2019/20. *Ratemaking Appendix 9 Table 4* summarizes the derivation of all other non-claims costs on a discounted basis for rating year 2019/20.

Commissions

Commissions paid to brokers consist of two components. The first component is a variable commission paid as a percentage of written premiums (both motor vehicles and drivers). These commissions are not "clawed back" when policies are cancelled mid-year. The second component is a commission flat fee paid per transaction.

For the 2019/20 rating year, the variable commission rate is 3.00% of written premiums. A commission rate of 3.24% of written premiums was selected to account for commissions not being "clawed back".

The commission flat fees for the 2019/20 rating year are $6,723,000, which corresponds to the commission flat fees for the 2019/20 fiscal year. This cost was allocated uniformly over development year 2019/20.

A history of earned commissions is presented in *Ratemaking Appendix 9 Table 5*.

Premium Taxes

Premium taxes are paid at a rate of 3.0% of written premiums (both motor vehicles and drivers).

Claims Expenses

The claims expenses for the 2019/20 rating year are assumed to be 17.25% of undiscounted claims costs for the 2019/20 rating year or $141,239,000.

To determine the 17.25%, we first calculated the ratios of paid claims expenses to paid claims for fiscal years 2019/20 to 2022/23. We then applied these ratios to the claims costs for rating year 2019/20 based on when these claims costs are expected to be incurred/paid. The 17.25% was then selected based on this review. Details of the review are presented in *Appendix 9 Table 3*.

Operating Expenses

The operating expenses for the 2019/20 rating year are $74,970,000, which corresponds to the average of the operating expenses for fiscal years 2019/20 and 2020/21 (*Part V(i) Pro Formas, Page 15*).

This cost was allocated as follows:

- Front-end cost – Two-thirds of the operating expenses (i.e. 2/3 * $74,970,000) were considered as front-end cost i.e. the initial cost of writing/issuing the insurance policy. This cost was allocated uniformly over development year 2019/20 based on the assumption that policies are written uniformly throughout the year.
- Maintenance and servicing of policy – The remaining one-third of the operating expenses (i.e. 1/3 * $74,970,000) was considered as the cost to maintain and service the insurance policy. This cost was allocated based on the portion of premium earned in the development quarter (for policies with rating year 2019/20) per the table below:

Figure RM- 3: Allocation by Development Quarter

Line No.	Development Year	Q1	Q2	Q3	Q4
1	2019/20	1/32	3/32	5/32	7/32
2	2020/21	7/32	5/32	3/32	1/32

Regulatory / Appeal

The regulatory/appeal costs for the 2019/20 rating year are $4,919,000, which corresponds to the average of the regulatory/appeal costs for fiscal years 2019/20 and 2020/21 (*Part V(i) Pro Formas, Page 15*). This cost was allocated uniformly over development years 2019/20 and 2020/21.

Road Safety / Loss Prevention

The road safety/loss prevention costs for the 2019/20 rating year are $12,757,500, which corresponds to the average of the road safety/loss prevention costs for fiscal years 2019/20 and 2020/21 (*Part V(i) Pro Formas, Page 15*). This cost was allocated uniformly over development years 2019/20 and 2020/21.

Fleet Rebate

MPI has a retrospective rating program for fleets. Historically, the program has an "off-balance" in that rebates exceed surcharges. A history of net fleet rebates is presented in *Ratemaking Appendix 9 Table 7*.

The fleet rebates for the 2019/20 rating year are $16,150,000. The $16,150,000 corresponds to the fleet rebates for the 2020/21 fiscal year (*Part V(i) Revenues Rev.1.3*) since rebates/surcharges are only assessed at the end of each fleet's registration period. This cost was allocated uniformly over development year 2020/21.

Anti-Theft Discount

The anti-theft discounts for the 2019/20 rating year are $2,367,000, which corresponds to the anti-theft discounts for the 2019/20 fiscal year (*Part V(i) Revenues Rev.1.4*). This cost was allocated uniformly over the development year 2019/20.

Reinsurance

The calculation of the pure premium was done net of ceded claims resulting from major catastrophes. In the most recent 20 years, MPI has had four major catastrophes as follows:

(i) Aug 21, 2001 Hail Storm – Gross claims of $18,442,000

(ii) Aug 9 & 10, 2007 Hail Storm – Gross claims of $45,144,000

(iii) Aug 13 & 14, 2009 Hail Storm – Gross claims of $30,267,000

(iv) Jun 2 & 3, 2011 Hail Storm – Gross claims of $14,377,000

(Note: All figures as of Feb 28, 2018)

Due to a lack of catastrophe experience, it is difficult to determine an experience-based catastrophe load. Instead, as a proxy, the catastrophe load was derived using the forecasted catastrophe reinsurance written premium.

MPI is also protected financially from any losses from a single incident exceeding $5,000,000 through casualty reinsurance.

The costs of reinsurance for the 2019/20 rating year are $2,110,000 and $9,424,500 for casualty reinsurance and catastrophe reinsurance respectively. These figures correspond to the average of the reinsurance ceded written premiums for fiscal years 2019/20 and 2020/21. The reinsurance programs for these two fiscal years provide reinsurance coverage for losses for rating year 2019/20, which can occur over the two fiscal years.

The costs of reinsurance were allocated uniformly over development years 2019/20 and 2020/21. Further details on reinsurance can be found in *Part V(i) Revenues Rev.3*.

Discounting Non-Claims Costs

Similar to the discounting of claims costs, non-claims costs were discounted from the midpoint of the development quarter/year to the end of rating year 2019/20 (i.e. February 29, 2020). The table below summarizes the undiscounted and discounted non-claims costs for the 2019/20 rating year (per *Ratemaking Appendix 9 Table 3* and *Ratemaking Appendix 9 Table 4*), as well as the discounted costs per unit based on the forecasted total number of insured units of 1,200,000.

Figure RM- 4: Rating Year 2019/20 Non-Claims Costs

Line No.	Description	Undiscounted Costs ($000)	Discounted Costs	Disc Costs / Insured Unit
1	Commission Flat Fees	6,723	6,830	5.69
2	Claims Expenses	141,239	137,449	114.54
3	Operating Expenses	74,970	75,770	63.14
4	Regulatory/Appeal	4,919	4,920	4.10
5	Road Safety/Loss Prevention	12,758	12,760	10.63
6	Fleet Rebate	16,150	15,898	13.25
7	Anti-Theft Discount	2,367	2,405	2.00
8	Reinsurance – Casualty	2,110	2,110	1.76
9	Reinsurance - Catastrophe	9,425	9,426	7.86

RM.4.2.3 Costs Offsets – Other Income Sources

Apart from vehicle premiums, MPI receives income from two other sources[2]. This income offsets some of the costs incurred, thus lowering the required rate. The following subsections discuss these income sources on an undiscounted basis, reference the sources for the figures as appropriate, and provide a basis for which these costs are assumed to be incurred. *Appendix 9 Table 4* summarizes the derivation of these income sources on a discounted basis for rating year 2019/20.

Driver Premium

The driver premiums for the 2019/20 rating year are $70,903,000, which corresponds to the written driver premium for fiscal year 2019/20 (*Part V(i) Pro Formas, page 15*). This income was allocated uniformly over development year 2019/20.

Service Fees and Other Revenues

The service fees and other revenues for the 2019/20 rating year are $26,280,000, which corresponds to the average of the service fees and other revenues for fiscal years 2019/20 and 2020/21 (*Part V(i) Pro Formas, page 15*).

[2] Investment income earned on the RSR is not considered a costs offset for determining the breakeven required rates. Instead, this investment income is considered in the determination of the Net CMP discussed in *Ratemaking RM.4.2.7*.

This income was allocated based on the portion of premium earned in the development quarter (for policies with rating year 2019/20) per the table below:

Figure RM- 5: Allocation by Development Quarter

Line No.	Development Year	Q1	Q2	Q3	Q4
1	2019/20	1/32	3/32	5/32	7/32
2	2020/21	7/32	5/32	3/32	1/32

Discounting Other Income Sources

Similar to the discounting of claims costs, other income sources were discounted from the midpoint of the development quarter/year to the end of rating year 2019/20 (i.e. February 29, 2020). The table below summarizes the undiscounted and discounted other income sources for the 2019/20 rating year (per *Ratemaking Appendix 9 Table 4*), as well as the discounted costs per unit based on the forecasted total number of insured units of 1,200,000.

Figure RM- 6: Rating Year 2019/20 Other Income Sources

Line No.	Description	Undiscounted Costs ($000)	Discounted Costs	Disc Costs / Insured Unit
1	Driver Premium	70,903	72,035	60.03
2	Service Fees and Other Revenues	26,280	26,282	21.90

RM.4.2.4 Calculation of Overall Required Rate

The overall required rate for the 2019/20 rating year was calculated by equating the total income sources with total expenditures. The calculation of this rate, “P”, on a per unit basis is presented below.

INCOME SOURCES

Vehicle Premium	=	P
Driver Premium	=	*$60.03*
Service Fees and Other Revenue	=	*$21.90*
Total Income	=	*$81.93 + $P*

EXPENDITURES

Claims Costs	=	*$714.26*
Claims Expense	=	*$114.54*
Operating Expense	=	*$63.14*
Regulatory/Appeal	=	*$4.10*
Road Safety/Loss Prevention	=	*$10.63*
Commissions	=	*0.0324 x ($P + $60.03)*
Premium Taxes	=	*0.0300 x ($P + $60.03)*
Commission Flat Fee	=	*$5.69*
Catastrophe Load	=	*$7.86*
Casualty Load	=	*$1.76*
Fleet Rebates	=	*$13.25*
Anti-Theft Discount	=	*$2.00*
Total Expenditures	=	*$940.98 + (0.0624 x $P)*

OVERALL REQUIRED RATE, P

$81.93 + $P	=	*$940.98 + (0.0624 x $P)*
$P	=	*$916.22*

An overall required rate of $916.22 is required if premiums for the 2019/20 rating year are all received on February 29, 2020. However, premiums for the 2019/20 rating year are received from March 1, 2019 to February 29, 2020.

Similar to the discounting of costs, the revenue stream resulting from vehicle premiums must recognize the time value of money. Vehicle premiums received are discounted from when they are received to the end of rating year 2019/20 i.e. February 29, 2020.

MPI has assumed that premiums will be received uniformly over the 2019/20 fiscal year as policies are renewed. Based on this assumption, it has been determined that an adjustment factor of 0.9843 to be applied to the overall required rate such that the final overall required rate is $901.83. An overall required rate of $901.83 is required, so that when investment income is considered on premiums received, the overall required rate as of February 29, 2020 is $916.22.

The factor of 0.9843 is derived as follows assuming that premiums will be received uniformly over the 2019/20 fiscal year.

Figure RM- 7: Derivation of Adjustment Factor

Line No.	2019/20 Fiscal Quarter	Weight	Factor
1	1	25%	1.0280 = 1.0321 ^ (10.5 /12)
2	2	25%	1.0199 = 1.0321 ^ (7.5 /12)
3	3	25%	1.0119 = 1.0321 ^ (4.5 /12)
4	4	25%	1.0040 = 1.0321 ^ (1.5 /12)
5		Weighted Factor:	1.0160
6		Reciprocal of Weighted Factor:	0.9843 = 1 / 1.0160

RM.4.2.5 Calculation of the Overall Required Rate Change

The overall required rate change was determined using the following four steps:

(i) Calculated the 2018/19 average rate.

(ii) Estimated the impact of vehicle drift.

(iii) Calculated the 2019/20 average rate without rate change based on the 2018/19 average rate and the vehicle drift.

(iv) Calculated the required rate change by comparing the 2019/20 average rate without rate change to the required rate.

The 2018/19 average rate of $857.67 was calculated based on the total premiums and total units derived from the population of vehicles as at November 1, 2017; the total premiums were calculated based on the approved 2018/19 rates.

Even without any rate change, the 2018/19 average rate is expected to change as the vehicle population changes. Newer and more expensive vehicles entering the fleet are subjected on average to higher rate groups thus increasing the overall average rate. Conversely, older vehicles placed in lower rate groups will result in a decrease in the overall average rate. The total impact of these changes is the vehicle drift.

The estimated annual overall vehicle drift for fiscal year 2017/18 was 2.24% as determined per the rate model. For fiscal years 2018/19 and 2019/20, the projected annual overall vehicle drifts are 1.96% and 2.15% respectively[3].

The 2019/20 average rate without rate change was calculated by projecting the 2018/19 average rate forward, based on the drift, to February 29, 2020, the average earning date for the March 2019 rate. This required a projection period of 28 months from November 1, 2017. As such, the appropriate vehicle drift factor is:

$$(1.0224)^{4/12} \times 1.0196 \times 1.0215 = 1.0492$$

The 2019/20 average rate without rate change was then calculated as:

2019/20 Average Rate Without Rate Change
= 2018/19 Average Rate x Vehicle Drift
= $857.67 x 1.0492 = $899.87

The required rate change was then calculated as:

Required Rate Change
= (2019/20 Required Rate) / (2019/20 Avg. Rate Without Rate Change) - 1
= ($901.83 / $899.87) – 1 = 0.2%

[3] Figures reflect overall vehicle drift. The HTA vehicle drift is 2.40%, 2.39% and 2.54% for 2017/18, 2018/19 and 2019/20 respectively per *Part V(i) Revenues Rev.1.2*.

RM.4.2.6 DSR Discounts for Vehicle-for-Hire (VFH) Vehicles

The Local Vehicles for Hire Act came into force on February 28, 2018, and allowed for a new class of Vehicles For Hire (VFH) in addition to the existing taxicab/livery service.[4]

One outcome of this change is the introduction of DSR discounts for certain vehicles previously not eligible for these discounts, specifically taxis, limousines, and wheelchair livery. With the reclassification of these vehicles as taxi VFH, limousine VFH and accessible VFH, these vehicles are now eligible for DSR discounts (if registered to an individual customer) similar to the new class of VFH vehicles i.e. passenger VFH.

To account for the introduction of DSR discounts for these vehicles (taxi VFH, limousine VFH and accessible VFH), an adjustment was made to the required rate change. The adjustment was necessary since the required rate change was determined excluding a corresponding potential reduction in loss exposure for these vehicles. The adjustment removed the required rate increase, which would have been applicable to all vehicles, as a result of providing Driver Safety Rating (DSR) discounts to specific vehicles.

The adjustment was calculated assuming a $1,000,000 reduction in premiums, which reflects the approximate reduction as a result of providing the DSR discounts. This is equivalent to approximately a 0.1% decrease in the required rate change, reducing the required rate change from 0.2% to 0.1%.

RM.4.2.7 Net Capital Maintenance Provision

For rating year 2019/20, MPI is applying for a Net CMP equivalent to an additional 2.1% required rate increase. The Net CMP is required to maintain capital adequacy in fiscal year 2019/20. Specifically, the Net CMP ensures that the Minimum Capital Test

[4] For a detailed discussion of this, refer to *Part V(ii) Vehicle for Hire*.

(MCT) ratio, which compares capital available to capital required, at fiscal year-end 2019/20 is unchanged from fiscal year-end 2018/19.

The Net CMP of 2.1% is comprised of a 1.2% decrease in the required rate change from the investment income earned on the Rate Stabilization Reserve (RSR), offset by a 3.3% increase in the required rate change to maintain capital adequacy in fiscal year 2019/20.

To determine the 1.2% decrease from the investment income earned on the RSR, we first looked at the ratio of the investment income earned on the RSR to the Basic Vehicle Written Premium for the 2019/20 fiscal year. This calculation is presented in the table below.

Figure RM- 8: Ratio of Investment Income on RSR to Basic Vehicle Written Premium

Line No.	Description	Source	Fiscal Year 19/20
1	Basic Vehicle Written Premium	Part V(i) Proformas, Page 15	1,061,339
2	Investment Income from RSR	Part VI Investments, INV.19	11,830
3	Investment Income from RSR as percent of Basic Vehicle Written Premium		1.1%

We then applied the ratio of 1.1% as a cost offset to the required rates. This has the effect of decreasing the required rate change by 1.2% from 0.1% (per *Ratemaking RM.4.2.6*) to -1.1%.

After applying the required rate change of -1.1%, we compared the MCT ratio at fiscal year-end 2019/20 to fiscal year-end 2018/19. To ensure that the MCT ratio at fiscal year-end 2019/20 remains unchanged from fiscal year-end 2018/19, we had to revise the required rate change to 2.2%, which reflects an increase of 3.3% (from -1.1%).

Including the additional 2.1% required rate increase from the Net CMP results in a final required rate change of 2.2%.

RM.4.3 Major Classification Required Rates

For each major class – Private Passenger, Commercial, Public, Motorcycles, Trailers, and ORV's (or major class 1, 2, 3, 4, 5, and 6 respectively) – we employed the same approach to calculating the required rates as for the overall. The following additional considerations were made in the calculation of the major classes' required rates. The calculations of the indicated pure premiums by coverage for each major class are presented in *Ratemaking Appendix 9 Table 9*.

(i) The sum of the claims costs from the six major classes does not equal the overall claims costs due to MPI's procedure for coding losses. In the event that the insurance use, which determines the major class, is not applicable (for example pedestrian or cyclist claims), no entry is made in the insurance use field when the claim is processed. In addition, claims such as unidentified motorists are not coded with a specific insurance use. As such, the claims costs for these claims cannot be attributed to a major class.

(ii) Further to consideration (i), MPI revised its claims costs allocation for PIPP coverages pursuant to Board Order 97/05, Order #1(b):

> *"In any accident involving one or more MPI-insured vehicles and (i) one or more unidentified hit-and-run offenders, or (ii) another injured party or parties (including cyclists, pedestrians, and occupant(s) of out-of-province vehicles)… 50% of total PIPP costs are to be effectively allocated across all vehicle rating categories."*

In complying with this order, a special "pool" class was set-up. All PIPP claims costs which were to be allocated across all vehicle rating categories were assigned to the "pool" class. This included PIPP claims costs as per the order above, plus all PIPP claims costs arising out of consideration (i) which could not be successfully allocated as per the order.

The Board Order further added to the difference in claims costs as discussed in consideration (i) above. The pro-rata adjustment to account for this difference is described in considerations (x) and (xi) below.

(iii) Further to consideration (ii), pursuant to Board Order 122/10, MPI expanded Board Order 97/05, Order #1(b) to include single vehicle accidents involving wildlife/livestock. For accidents of this nature, 50% of total PIPP costs were allocated to the major class of the single vehicle, with the remaining 50% allocated to the "pool" class. This change resulted in a reduction of PIPP costs allocated to the major classes as presented in the table below.

Figure RM- 9: Reduction of PIPP Costs

Line No.	Major Class	Reduction
1	Private Passenger	1.80%
2	Commercial	1.25%
3	Public	0.30%
4	Motorcycle	4.25%
5	Overall	1.88%

The reduction is absorbed by the "pool" class and allocated across all vehicle rating categories.

(iv) Unallocated Loss Adjustment Expenses (ULAE) and the impact of improvements to PIPP benefits were not considered in the derivation of the indicated pure premiums by major class per *Ratemaking Appendix 9 Table 9*. The pro-rata adjustment to account for this is described in consideration (x) below.

(v) The calculation of the loss development factors by major class used data that, in some cases, exhibit significant year-to-year fluctuations and/or is not fully credible. The selected factors used considered both the major classes' indications and the overall loss development factors taken from the "Appointed Actuary's Report as at February 28, 2018" as presented in *Part VIII External Actuary Review*.

(vi) The historical pure premiums were trended forward to reflect the anticipated 2019/20 rating year costs levels.

For Income Replacement Indemnity, Accident Benefits - Other and Bodily Injury, trends were selected, by coverage, based on the extrapolation of past trends in the overall pure premiums. For these coverages, the selected trends were based on the overall indicated exponential trends for pure premiums for 2003/04 to 2017/18 rounded up to the nearest 0.25% i.e. a 15-year trend. A trend of 0.00% was judgmentally selected if the indicated exponential trend was negative. The overall indicated exponential trends for pure premiums were derived based on HTA insured units only. This recognizes that the claims costs for these coverages are driven primarily by HTA insured units.

For Collision, Comprehensive and Property Damage, trends were calculated, by coverage, based on the extrapolation of past trends in the overall pure premiums, as well as in the major classes' pure premiums. For these coverages, the trends were initially selected based on the overall indicated exponential trends for pure premiums. Then, by major class, these initial selected trends were compared to the trends based on the respective major class's indicated exponential trends for pure premiums. If a significant difference is observed and the goodness-of-fit of the major class's indicated exponential trend is high (as measured by the R-squared), then the initial selected trend is revised to the major class's indicated exponential trend. This recognizes the differences in trends by major class, and reflects the differences where appropriate.

Further considerations for Collision, Comprehensive and Property Damage:

- The overall indicated exponential trends for pure premiums were derived based on Highway Traffic Act (HTA) insured units only. This recognizes that the primary driver of claims costs for these coverages are HTA insured units.
- The selected trends were rounded up to the nearest 0.25%.
- A trend of 0.00% was judgmentally selected if the indicated exponential trend was negative.

- For Collision, the initial selected trend was based on the overall indicated exponential trend for pure premiums for 2008/09 to 2017/18 i.e. a 10-year trend. The selection of a shorter experience period recognizes both the stability in the year-over-year growth in pure premiums and the pure premium trends for more recent years.
- For Comprehensive and Property Damage, the initial selected trend was based on the overall indicated exponential trend for pure premiums for 2003/04 to 2017/18 i.e. a 15-year trend.

The historical pure premiums were trended forward to February 29, 2020, the average accident date for all policies written under the March 1, 2019 rates. For the 2017/18 pure premiums, this required a trending of two and a one-half years from the average accident date of August 31, 2017. This assumes a uniform distribution of renewals and claims across all months.

The derivation of the overall trends, by coverage, is shown in *Ratemaking Appendix 9 Table 8*.

(vii) In calculating the indicated pure premiums, equal weights were given to historical indicators. For almost all major classes and coverages, we used data for the five most recent years. Exceptions to this are as follows:

- For the Motorcycles major class, we used data for the 10 most recent years for Accident Benefits - Other and Income Replacement Indemnity to better smooth out the larger volatility in the data.
- For Serious Losses[5], we used data for the 10 most recent years for Accident Benefits - Other (Indexed) and Income Replacement Indemnity to better smooth out the larger volatility in the data.
- For the ORV's major class, we used data for the 10 most recent years for Bodily Injury and Property Damage to better smooth out the larger volatility in the data.

[5] For the purpose of ratemaking, a Serious Loss incident refers to an incident whereby the total Accident Benefits (PIPP) claims costs for the incident is greater than $500,000.

(viii) The calculation of the indicated pure premiums for Comprehensive coverage was done net of the total claims costs resulting from major catastrophes.

(ix) Per Board Order 156/06, an analysis was performed to determine the reduction in Collision claims costs for the Motorcycle major class if such costs were allocated equally to all vehicles involved in an accident involving a vehicle in the Motorcycle major class. Based on the analysis, for the 2019 GRA, the Collision pure premium for the Motorcycle major class was reduced by 24.50%, with the impact then allocated equally on a per unit basis to major classes 1, 2, and 3.

The table below presents the reduction in the Collision claims costs for the Motorcycle major class for the most recent five years based on the revised claims costs allocation. The reduction of 24.50% was based on the 5-year weighted hi-lo average.

Figure RM- 10: Collision Claims Costs for the Motorcycle Major Class

Line No.	Insurance Year	Current Allocation SV Incident	Current Allocation MV Incident	Revised Allocation SV Incident	Revised Allocation MV Incident	$ Decrease	% Decrease
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
1	13/14	566,698	590,111	566,698	295,055	295,055	25.51%
2	14/15	686,560	509,189	686,560	254,595	254,595	21.29%
3	15/16	723,891	659,190	723,891	329,595	329,595	23.83%
4	16/17	778,284	788,593	778,284	394,296	394,296	25.16%
5	17/18	728,477	690,072	728,477	345,036	345,036	24.32%
6	All Years	3,483,911	3,237,155	3,483,911	1,618,577	1,618,577	24.08%

7 SV – Single Vehicle; MV – Multiple Vehicle
8 (5) = 50% of (3)
9 (6) = [(2) + (3)] - [(4) + (5)]
10 (7) = (6) / [(2) + (3)]

(x) As a result of the above considerations, by coverage, the total claims costs from the six major classes will not equal the overall claims costs. In *Figure RM-10* (see below), the pure premiums as calculated in *Ratemaking Appendix 9 Table 9* were balanced to the overall pure premium on a pro-rata basis to account for this.

(xi) Further to consideration (x) and as a result of considerations (ii) and (iii), only 79.5% of the overall claims costs for Income Replacement Indemnity

(IRI), 77.2% for Accident Benefits - Other (Indexed) and 74.1% for Accident Benefits - Other (Non-Indexed) were balanced based on actual major class experience. The remaining 20.5%, 22.8% and 25.9% respectively, representing the percentage of claims costs assigned to the "pool" class, were allocated equally on a per unit basis to major classes 1, 2, 3, and 4.

The table below summarizes the above considerations, and presents the calculation of the major classes' total pure premiums.

Figure RM- 11: Rating Year 2019/20 Total Pure Premium by Major Class

Line No.	Coverage	Private Pass	Comm	Public	Motor-Cycle	Trailer	ORV
1	Pure Premium from Appendix 9, Table 9*

22	Income Replacement Indemnity	15.49	15.49	15.49	15.49	0.00	0.00
23	Total Pure Premium	940.12	641.95	1,683.91	661.38	56.97	4.87

24 *Accident Benefits - Other and Income Replacement Indemnity adjusted for wildlife/livestock costs reduction per Board Order 126/10.

25 *Collision adjusted for cost allocation per Board Order 156/06.

(xii) Consistent with last year, based on the "HTA Power Unit Basis" approach, the Trailers and ORV's major classes were allocated 0% of the standard allocation of operating expenses.

(xiii) The overall non-claims costs were allocated to the respective major classes as follows:

- Claims expenses were allocated on the basis of claims costs.
- Operating expenses, regulatory/appeal, road safety/loss prevention, commission flat fees, fleet rebates, anti-theft discount, and reinsurance were allocated on a per unit basis to applicable major classes.
- Premium taxes and commissions on vehicles are 3.00% and 3.24% respectively of the major classes' required rates.
- Premium taxes and commissions on drivers are 3.00% and 3.24% respectively of the driver premiums as applicable to the major classes.

(xiv) The overall other income sources were allocated to the respective major classes as follows:

- Driver premiums and service fees were allocated on a per unit basis to applicable major classes.

(xv) The major classes' required rates were balanced back to the overall revenue requirements calculated in *Ratemaking RM.4.2*.

(xvi) The applied for rate change for each major class was credibility weighted depending on the number of insured units in the class. In doing so, the methodology assigns a measure of reliability to the major class experience on its own, and then balances that with the overall experience. The applied for rate change for each major class was assigned a credibility of $\frac{N}{N+K}$. Here, *N* is the number of insured units in the class and *K* is a constant. The constant, *K*, is equal to 6,000, and was judgmentally chosen in order that the largest major class – Private Passenger – was at least 99% credible.

The complement of credibility, $1-\frac{N}{N+K}$, was assigned to the overall applied for rate change.

(xvii) Similar to the adjustment done for the overall required rate change, an adjustment was made to the credibility weighted required rate change for the Public major class to account for the introduction of DSR discounts for vehicles classified as taxi VFH, limousine VFH and accessible VFH. The adjustment was necessary since the required rate change was determined excluding a corresponding potential reduction in loss exposure for these vehicles. The adjustment removed the required rate increase, which would have been applicable to all vehicles in the major class, as a result of providing DSR discounts to specific vehicles in the major class.

The adjustment was calculated assuming a $1,000,000 reduction in premiums, which reflects the approximate reduction as a result of providing the DSR discount. This is equivalent to approximately a 3.8% decrease in the required rate change for the major class.

Figure RM- 11 summarizes the calculation of the major classes' required rates based on breakeven rates, which assumes a 0% profit provision, prior to the inclusion of the net CMP. Figure RM- 12 summarizes the calculation of the major classes' required rates based on breakeven rates, and including the net CMP.

Figure RM- 12: Rating Year 2019/20 Major Classification Required Rate Changes – Breakeven Rates

Line No.	Coverage	Overall	Private Pass	Comm	Public	Motor-Cycle	Trailer	ORV

RM.4.4 Vehicle Group Required Rates

The composition of vehicles in each major class was subdivided using the following rating variables:

- Territory
- Insurance use
- Rate group
- Gross vehicle weight (GVW) – trucks in the Commercial and Public major classes only
- Body style and engine displacement – Motorcycles major class only

MPI uses these rating variables to further differentiate the required rates for different vehicle groups. An explanation of the rate group relativities is contained in *Ratemaking RM.3*. The discussion below focuses on the relativity approach used to determine and apply the relativities for the other rating variables.

The concept of relativities is commonly used in the insurance industry. Simply put, if we chose a distinct group from an entire population, the relativity of the group is a measure of the risk of the group compared to the population. For example, a group, which on average costs twice as much to insure when compared to the population, will have a relativity of two. The use of relativities promotes equitable rates since riskier groups can expect to pay more than groups with lower risk.

To determine the relativities for the rating variables applicable to respective major classes, MPI ran the following three steps for each major class. MPI has assumed that the territory distribution for each major class is distinct and independent. For the major class:

(i) Determined the actual or raw relativities.

(ii) Determined the current relativities.

(iii) Based on the raw and current relativities, determined the new relativities.

In each of the above three steps, the relativities were balanced in order that the average relativity for each rating variable within the major class is one.

To determine the actual or raw relativities, the claims costs and earned units were first arranged by applicable rating variables. For higher accuracy and also to smooth out year-to-year fluctuations, data for the five most recent insurance years – 2013/14 to 2017/18 – were used. Data for the 10 most recent years – 2008/09 to 2017/18 – were used for PIPP claims costs resulting from Serious Loss incidents.

For claims costs, we started with the total claims costs for all coverages as presented in *Ratemaking Appendix 9 Table 10*. These claims costs were then adjusted. For each of the five insurance years, as applicable;

(i) Deducted the claims costs resulting from Serious Loss incidents as presented in *Ratemaking Appendix 9 Table 11*.

(ii) For the claims costs presented in *Ratemaking Appendix 9 Table 11*, calculated the 10-year average.

(iii) Added the 10-year average back into the claims costs calculated in (i) above.

The adjusted claims costs are presented in *Ratemaking Appendix 9 Table 12*. The earned units are presented in *Ratemaking Appendix 9 Table 13*. *Ratemaking Appendix 9 Table 14* presents the pure premiums, which are the adjusted claims costs per earned unit.

Using the pure premiums and earned units as discussed above, as well as the minimum-bias procedure[6], the raw relativities for the rating variables applicable to the major class were then calculated.

To determine the current relativities, a similar approach to the above was used. However, instead of using the pure premiums and earned units to determine the relativities, the current average rates and total units derived from the population of vehicles per the rate model were used instead. The current average rates reflect the

[6] Refer to https://www.casact.org/pubs/forum/02fforum/02ff591.pdf for a detailed discussion of the minimum bias procedure.

approved 2018/19 rates. Current relativities must be determined since current average rates are not based strictly on a relativity approach[7].

The new relativities were determined based on a credibility weighted average of the raw relativities and current relativities. In doing so, the methodology mitigates against large fluctuations that can occur in the raw relativities, a result of the individual groupings not being large enough to be statistically reliable. For each raw relativity, a credibility of $\frac{N}{N+K}$ was assigned. Here, N is the 5-year earned units used to determine the raw relativity and K is a constant. The constant, K, is equal to 60,000, and was judgmentally chosen in order that the largest insurance use – All Purpose Passenger Vehicle – was at least 95% credible. The complement of credibility, $1-\frac{N}{N+K}$, was assigned to the corresponding current relativity.

The credibility assigned to each raw relativity was subjected to a minimum of 10% (i.e. if $\frac{N}{N+K}$ <10%, the raw relativity was assigned a credibility of 10%) and the remaining 90% was assigned to the current relativity. Assigning a minimum credibility ensures that the new relativities for smaller groups partially reflected their historical claims costs.

The derived raw and current relativities, the assigned credibilities, and the new relativities for all major classes are presented in *Ratemaking Appendix 9 Table 15*.

[7] This is a due to various factors including balancing to the overall and major classes' rate requirements, capping of rate changes, changes in the composition of vehicles (especially for smaller vehicle groups), reclassification of vehicles, etc.

The new relativities were then used to determine the indicated rates for all distinct vehicle groups based on the following formula:

$$\left(RR_C - E_C\right) \times \prod RV_{C,I} + EX_C + \sum \left(E_{C,H} \times P_{C,H}\right)$$

For major class C; C = 1, 2, 3, 4, 5, and 6;

RR_C is the required rate

E_C is the per unit operating expense*

$RV_{C,I}$ is the relativity for the rating variable applicable to the vehicle group; I representing the number of distinct rating variables[8]

EX_C is the per unit operating expense* exclusive of all targeted initiatives

$E_{C,H}$ is the per unit operating expense* of targeted initiative H; H = 1 to # of targeted initiatives

$P_{C,H}$ is the indicator for targeted initiative H with a value of 1 if the initiative targets the combination or 0 otherwise

*Refers to the sum of operating expense, regulatory/appeal and road safety/loss prevention

We have assumed that the relativities interact multiplicatively, the common approach in the insurance industry.

There is no targeted initiative for the 2019/20 rating year. As such the per unit operating expense exclusive of all targeted initiatives, EX_C, is equal to $102.88 for C = 1, 2, 3, and 4, and $0.00 for C = 5 and 6.

Ratemaking Appendix 9 Table 16 presents the indicated rates for all distinct vehicle groups using the above formula.

The indicated rates were balanced back to the revenue requirements by major class as calculated in *RM.4.3*. The balanced indicated rates were then compared to the current

[8] For example, for all vehicles in the Private Passenger major class, I = 2 since only the territory and insurance use relativities (for the major class) are applicable.

average rates to determine the balance indicated rate changes. This approach assumes that the relative average rate group and discount levels do not vary between the experience period and the rating period.

RM.5 EXPERIENCE ADJUSTMENTS

Experience rate adjustments applied to each risk classification are presented in *Ratemaking Appendix 3*.

RM.5.1 Rules

1. If the indicated increase or decrease is 10% or less, set the initial estimate of the experience adjustment as the amount of the indicator.

2. If the indicated increase or decrease is greater than 10%, set the initial estimate of the experience adjustment as 10%, plus one-third the difference between the indicated increase or decrease and 10%, to a maximum of an additional 5%.

3. From adjustment (2) above, if the indicated decrease is 25% or more, the initial estimate of the experience adjustment is capped at –15%. Similarly, if the indicated increase is 25% or more, the adjustment is capped at 15%.

4. Since adjustment (2) above limits the maximum experience adjustment to 15%, the rate adjustment is balanced to arrive at the same overall revenue as if the indicated increase or decrease had been applied. The 15% maximum increase or decrease still applies.

5. The above rules apply with some exceptions to the Motorcycles major class. The above rules do not apply to the U-drive Moped insurance use in Territories 2, 3, and 4. A detailed explanation of the exceptions made to the above rules is contained in RM.5.2 below.

6. In response to Board Order 148/04, all 2019/20 rates are subject to a ± 20% cap from 2018/19 rates.

RM.5.2 Exceptions

For the Motorcycles major class, the following modifications were made:

- Mopeds and motorcycles with a Motorscooter body style and an engine displacement less than or equal to 500 cc's were rated together. The initial estimates of the experience adjustments, by territory and use (all purpose and pleasure), are based on the weighted averages of the indicated changes. The rules per *RM.5.1* above continue to apply. This maintains the synchronization of rates for these vehicles as in last year's rate application.
- The initial estimates of the experience adjustments for motorcycles in the middle engine displacement (ED) range (between 500 to 1000 cc's) and high-ED range (greater than 1000 cc's) were adjusted as follows:
  - If there are more motorcycles in the middle ED range than the high ED range (by territory, use, and body style) and the initial estimates of the experience adjustment for the high ED range is lower, then adjust the estimate for the high ED range to be equal to the estimate for the middle ED range.
  - If there are more motorcycles in the high ED range than the middle ED range (by territory, use, and body style) and the initial estimates of the experience adjustment for the middle ED range is higher, then adjust the estimate for the middle ED range to be equal to the estimate for the high ED range.

  This ensures that the rates for motorcycles in the high ED range will continue to be higher than the corresponding rates for motorcycles in the middle ED range.

For the U-Drive Moped insurance use in territories 2, 3, and 4, the indicated rate adjustments were not calculated due to a lack of experience. Consistent with last year, the rates for this insurance use, by territory and rate group, are set equal to the rates for the All-Purpose Moped insurance use.

RM.5.3 Special Adjustments and Capping

MPI uses relative ranking rules to ensure that less restrictive rating categories have higher rates than more restrictive ones, resulting in special rate adjustments. These adjustments are made to the rates after all classification and experience adjustments have been completed.

An example of a restriction is the rate for pleasure insurance use must be lower than the rate for all purpose insurance use (by territory and vehicle type). A special rate adjustment would be made if the rate for pleasure insurance use is higher than the rate for all purpose insurance use.

For 2019/20, the following insurance uses received special adjustments affecting 425 vehicles:

- Farming All Purpose Truck; Territory 5 – rates increased to be equal to the territory 2 rates (418 vehicles)
- Fishing All Purpose Truck; Territory 5 – rates increased to be equal to the territory 2 rates (6 vehicles)
- All Purpose Motorhome; Territory 3 – rates increased to be $2.00 more than Pleasure (1 vehicle)

In response to Board Order 148/04, all 2019/20 rates are subject to a ± 20% cap from 2018/19 rates. Special adjustments are applied after applying the ± 20% cap.

RM.5.4 Final Impact of Rate Changes

Transition from Experience Rate Requirement Indicators to Applied For Rate Adjustments

The steps taken to transition from the experience rate requirement indicators to the applied for rate adjustments by major class are outlined below. A table showing the average rate, the change from the original rate model, and the total premium for each of the steps is provided as *Ratemaking Appendix 4*.

A. **Original Rate Model Before Changes –** This section shows the base scenario prior to any required changes and adjustments. It is based on the population of vehicles as of November 1, 2017, with the exception of the following seasonally used vehicles:

- Snowmobiles and snow vehicles as of January 1, 2018
- Motorhomes, motorcycles, mopeds, trailers and off road vehicles (except for snowmobiles and snow vehicles) as of August 1, 2017

B. **After Classification Changes and CLEAR Adjustments –** This section shows the impact of applying all classification changes and CLEAR adjustments, as presented in *RM.3*.

C. ***Balanced Indicated Adjustments –*** This section shows the impact of applying the balanced indicated changes as presented in *RM.4 Appendix 9 Table 16*. The balanced indicated changes are derived based on the major classes' required rates and the relativities by major class as discussed in *RM.4.3* and *RM.4.4* respectively. The balanced indicated changes include balancing back to the revenue requirements by major class.

D. ***Capped Indicated Adjustments –*** This section shows the impact of applying the capped indicated changes. The capped indicated changes are obtained after applying the experience adjustment rules, as presented in *RM.5.1*, to the

balanced indicated changes. Any shortfall or excess generated by these rules are not adjusted for in this section.

E. ***Balanced Capped Indicated Adjustments*** **–** This section shows the impact of applying the balanced capped indicated changes. The capped indicated changes are balanced back to recover any shortfall or excess generated as a result of applying the experience adjustment rules.

F. ***Applied for Adjustment (Final Rate Model)*** **–** This section shows the Rate Model output after all changes are applied. Apart from the classification changes, CLEAR adjustments and experience adjustments discussed above, the Rate Model applies the following business rules:

(i) The final rates are all rounded to even dollars. The impact of this is particularly noticeable (on a percentage basis) in groups where there are a large number of vehicles with low rates.

(ii) The rates are checked to ensure that rate reversals, such as pleasure truck rates being greater than all-purpose truck rates, do not occur.

(iii) Based on Board Order 148/04, all 2019/20 final rates are subject to a ±20% maximum change from 2018/19 final rates.

RM.6 SUMMARY AND DISTRIBUTION REPORTS

By major class, the proposed rate changes differ slightly from experience rate changes due to capping rules. A 15% increase/decrease cap is applied to experience-based indicators and all final rates are capped at a 20% increase/decrease.

Figure RM- 14 Major Class Summary Report

Line No.	Major Class	Vehicle Count	Current Average Rate	Proposed Average Rate	Proposed Rate Change	Experience Rate Change*
1	**Private Passenger**	801,726	$1,111	$1,138	2.4%	2.4%
2	**Commercial**	46,246	$780	$798	2.4%	2.6%

7	**Overall**	1,149,140	$855	$874	2.2%	2.2%
8	*Per Figure RM-12					

The following tables show the distribution of vehicles by dollar and percent changes after all adjustments. The proposed rate changes result in a rate decrease for 40.2% of vehicles, no change in rates for 7.5% of vehicles, and a rate increase for 52.3% of vehicles. 38.6% of vehicles experience a rate change of +/- $20 or less (including vehicles receiving a $0 change in rates) and 43.9% of vehicles experience a rate change of +/- 5% or less (including vehicles receiving no change in rates). More detailed tables can be found in *RM.6 Summary* and *RM.6 Dollar/Percentage Distribution*.

Notes:

[a] From the Rate Model; based on the population of vehicles as at November 1, 2017; premiums reflect the approved 2018/19 rates

[b] = ((1 + [5]) ^ (4/12) * (1 + [6]) * (1 + [7]))- 1; trended from November 1, 2017 to March 1, 2020

[c] Selected based on historical volume growth for HTA and non-HTA vehicles; See Part V(i), Revenues

[d] = [2] * [4]; Overall = Sum of major classes

[e] = ((1 + [10]) ^ (4/12) * (1 + [11]) * (1 + [12]))- 1; trended from November 1, 2017 to March 1, 2020; Overall = [13] / [3] - 1

[f] Selected based on historical drift for each major class; 2018/19 Selected Drift for the Public major class adjusted to reflect VFH vehicles eligibility for DSR discounts

[g] = [3] * (1 + [9]); Overall = [14] / [8]

[h] = [8] * [13]; Overall = Sum of major classes

[i] = ((1 + 2.40%) ^ (4/12) * (1 + 2.39%) * (1 + 2.54%)) - 1; See Part V(i), Revenues

[j] = ([18] / [17]) - 1

[k] = Sum [1] / Sum [2] for HTA Units

[l] = Sum [14] / Sum [8] for HTA Units

[m] = (1 + [15]) / (1 + [16])

[n] = (1 + [9]) * [19] - 1 for HTA Units; [9] for non-HTA Units; Overall = [21] / [3] - 1

[o] = [3] * (1 + [20]); Overall = [22] / [8]

[p] = [8] * [21]; Overall = Sum of major classes

Appendix 8: SUMMARY OF METHODOLOGY AND ASSUMPTION CHANGES

There were no significant methodology or assumption changes made in the 2019 GRA (from the 2018 GRA).

[2], [3], [11] & [12]: From Volume 2, Claims Incurred, Appendix 1:

Proportion of first Fiscal Year losses by Quarter:

	Q1	Q2	Q3	Q4
Paid	6.60%	21.30%	31.60%	40.50%
Reported	14.00%	22.00%	32.00%	32.00%

Proportion of second Fiscal Year losses by Quarter:

	Q1	Q2	Q3	Q4
Paid	37.90%	25.50%	19.75%	16.85%

Losses for all other Fiscal Years assumed uniformly distributed within the year

[4] & [5]: Indexed to the benefit level in the year payment is made

[6]: C * [2] + (1 - C) * [3]; C = Percent of Accident Year losses attributable to the same Rating Year:

	Q1	Q2	Q3	Q4
First FY	11.50%	28.00%	47.60%	63.50%
Second FY	71.50%	67.00%	64.00%	64.00%
After		60.00%		

[7]: {C * [2] * (1 + [4])} + {(1 - C) * [3] * (1 + [5])}; C = Percent of Accident Year losses attributable to the same Rating Year per [6] above

[8]: Based on the interest rate of the marketable bonds portfolio as at September 1, 2019

[9]: Discount from the middle of the period to the end of Rating Year 2019/20

[10] = [7] * [9]

[13]: C * [11] + (1 - C) * [12]; C = Percent of Accident Year losses attributable to the same Rating Year:

	Q1	Q2	Q3	Q4
First FY	14.00%	35.00%	59.00%	73.00%
After		60.00%

Total	469,244	502,411	482,512		99.44%	479,833	469,244	502,411	482,701

Notes:

[2], [3], [8] & [9]: From Volume 2, Claims Incurred, Appendix 5:

Proportion of first Fiscal Year losses by Quarter:

	Q1	Q2	Q3	Q4
Paid	12.10%	23.25%	28.10%	36.55%
Reported	20.50%	21.00%	25.75%	32.75%

Proportion of second Fiscal Year losses by Quarter:

	Q1	Q2	Q3	Q4
Paid	77.00%	14.65%	5.70%	2.65%

Losses for all other Fiscal Years assumed uniformly distributed within the year

[4]: C * [2] + (1 - C) * [3]; C = Percent of Accident Year losses attributable to the same Rating Year:

	Q1	Q2	Q3	Q4
First FY	12.25%	31.25%	54.75%	77.00%
Second FY	88.25%	81.00%	75.00%	72.30%
After		60.50%		

[5]: Based on the interest rate of the marketable bonds portfolio as at September 1, 2019

[6]: Discount from the middle of the period to the end of Rating Year 2019/20

[7] = [4] * [6]

[10]: C * [8] + (1 - C) * [9]; C = Percent of Accident Year losses attributable to the same Rating Year:

	Q1	Q2	Q3	Q4
First FY	16.50%	44.00%	69.00%	88.50%
After		60.50%
