Benchmarking

BMK.1 Executive Summary

Benchmarking assists MPI in achieving its corporate values and attaining optimum performance across all areas. For this General Rate Application (GRA), MPI organizes its benchmarking results under two main sections:

1. Canadian Vehicle Rates Comparisons and Average Private Passenger Vehicle (PPV) Written Premiums; and
2. Serving Manitobans.

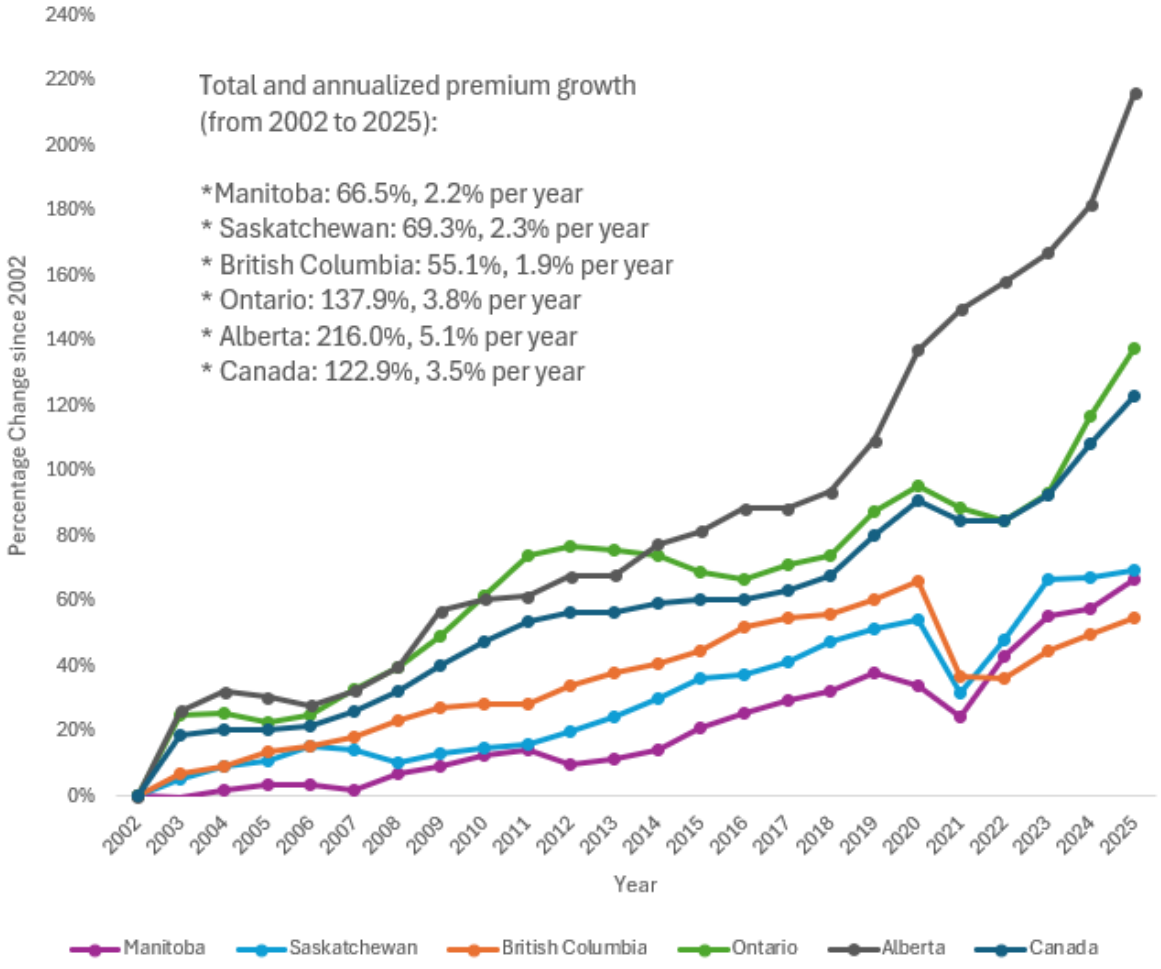
Section *BMK.2 Canadian Vehicle Insurance Rates Comparisons and Average Premium Growth* includes a comparison of MPI's premiums with two other Crown insurers – the Insurance Corporation of British Columbia (ICBC) and Saskatchewan Government Insurance (SGI) – using updated profile rates, effective April 1, 2026. Additionally, it highlights that MPI's premium growth rate from 2002 to 2025 (2.2%) remains consistently below the national average (3.5%), based on Statistics Canada data.

Section *BMK.3 Serving Manitobans* assesses and benchmarks overall customer experience and satisfaction. MPI receives feedback directly from customers to gauge its performance in achieving excellence in service. MPI aims to position itself as a strong corporate citizen by offering quality products and services. Overall, the benchmarking results indicate that MPI is performing above its threshold.

BMK.2 Canadian Vehicle Insurance Rates Comparisons and Average Premium Growth

BMK.2.1 Passenger Vehicle Insurance Rates Comparison

MPI relies on third parties to compare vehicle insurance premiums. As was done in last years' GRA, MPI utilized 30 profiles designed for the "Canadian Private Passenger Vehicle Insurance Rate Comparisons" report to compare three Crown insurers: MPI, SGI and ICBC. The detailed by-profile and by-city comparison can be found in *Benchmarking Appendix 1 – Vehicle Rates Comparison*. The premiums for these Crown insurers for the 30 profiles have been updated using their respective rates effective April 1, 2026.



MPI continues to exclude the private insurer market from benchmarking considerations due to the continued data access challenges and methodological limitations that were identified and detailed in the 2026 GRA.

BMK.2.2 Average Premium Growth Rate

According to Statistics Canada,[1] from 2002 to 2025, the premium growth rate in Manitoba is consistently lower when compared to the growth rates of other Canadian auto insurers and to the national average (currently, 2.2% per year for Manitoba versus 3.5% for Canada).

Figure BMK- 1 Passenger Vehicle Average Premium Growth (Statistics Canada) 2002 to 2025

BMK.3 Serving Manitobans

MPI receives feedback from customers on the service it provides to the public. In achieving excellence in customer service, MPI aims to position itself as a strong corporate citizen by offering quality products and services. Overall, the benchmarking results indicate that MPI is performing above its threshold.

BMK.3.1 Customer Service Measures

Surveys collect the Customer Service Measures that assess overall customer experience and satisfaction. Recent users of MPI services, across various lines of business, are randomly selected and interviewed for this purpose.

To put customer needs at the center of how it delivers services, MPI is redesigning the overall customer experience. As part of this redesign, MPI engaged Forrester Research Inc. (Forrester) to provide customer experience metrics tailored to its business model.

Forrester uses proprietary customer experience metrics developed with more than 700 brands across 16 industries and has historical data going back more than a decade. Its Customer Experience Index (CX Index™) score offers competitive benchmarking to the Canadian auto and home insurance market.

The Forrester CX Index™ score provides an overall measure of customer quality and loyalty. The quality of the customer experience is measured based on the following attributes, related to the customer's most recent transaction:

Effectiveness (the experience delivers value to customers).
Ease (it is not difficult to get value from the experience).
Emotion (customers feel good about their experience).

The loyalty portion of the metric is based on the likelihood of customers to follow advice, to engage with MPI, and to speak positively about MPI to others. The overall CX Index™ score ranges from zero to 100 and is considered excellent if in the 80-100 range, good in the 70-79 range, okay in the 60-69 range, poor in the 50-59 range, and very poor if less than 50.

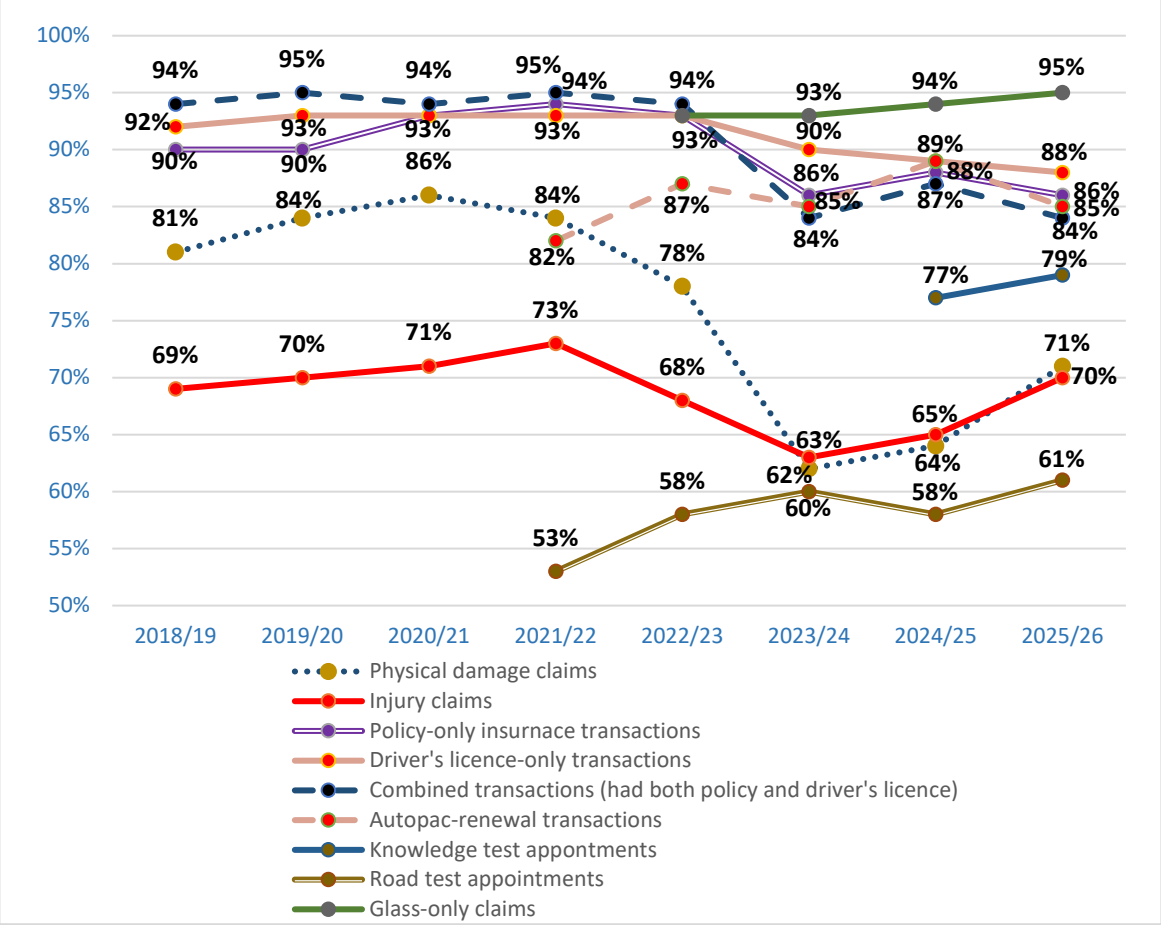
At a minimum desired level, MPI aims to provide customers a 'good' experience: a target CX Index™ score of 70 or greater. As a stretch goal, MPI strives to deliver an 'excellent' experience: a CX Index™ score of 80 or greater. By setting a minimum target of 70 or greater, MPI wants customers to have a good or better experience, which is ahead of the industry overall.

Through its Customer Experience Program (i.e., regular customer surveying), MPI will track key components of the CX Index™ throughout the year.

Based on survey data gathered in March 2026 and analyzed by Forrester, MPI scored 74.4, in the good range on the CX Index™ [cf. 2024/25: 73.2]. As noted, MPI's expectation is to score in the good range or above (i.e., 70.0 or greater).

MPI will continue to monitor customer experience through regular surveying and will update the CX Index™ accordingly.

Customer satisfaction tracking surveys are used to support the Customer Experience Program. Customers with recent experience are deemed satisfied with the overall level of service they received if they provided a rating of 6 or 7 in response to the question "*Using a 7-point scale, where 1 means VERY DISSATISFIED and 7 means VERY SATISFIED, how would you rate your OVERALL satisfaction with (claim or transaction)?*"



The following overall satisfaction results are based on tracking surveys in 2025/26:

- Physical damage claims: 71% [2024/25: 64%]
- Injury claims: 70% [2024/25: 65%]
- Policy-only insurance transactions: 86% [2024/25: 88%]

- Driver's licence-only transactions: 88% [2024/25: 89%]
- Combined transactions (had both policy and driver's licence): 84% [2024/25: 87%]
- Autopac-renewal transactions: 85% [2024/25: 89%]
- Knowledge-test appointments: 79% [2024/25: 77%]
- Road-test appointments: 61% [2024/25: 58%]
- Glass-only claims: 95% [2024/25: 94%]

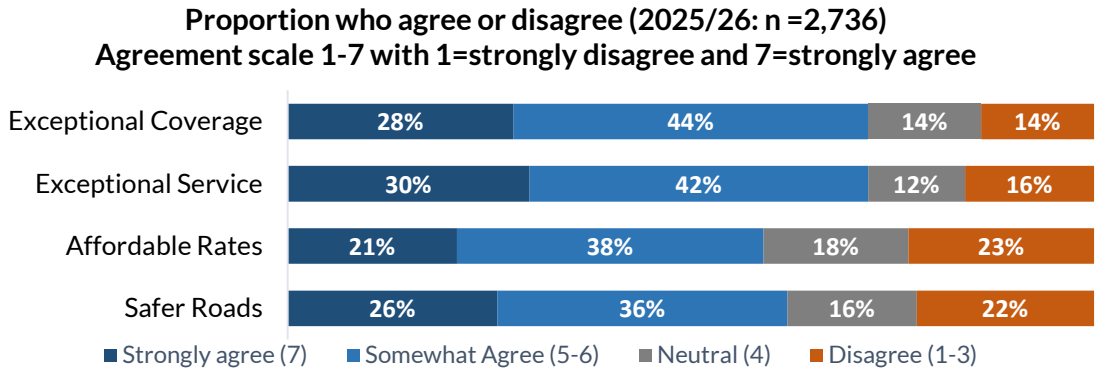
Tracking overall satisfaction is an industry standard and best practice to monitor what is going well and what needs attention in any organization. It also provides a metric to measure if customers are realizing process improvements.

Figure BMK- 2 Customer Experience Tracking: Overall Satisfaction

MPI is focused on improving the experience among customers overall and on making improvements for customers having the most difficult journeys. Customer feedback and root cause analysis has identified several key factors that will have positive impacts on customers' experience, including timeliness of the interaction, overall communication processes, information effectiveness, and accessibility. Continuous improvement initiatives are underway to introduce operational efficiencies. For example, in claims processing, MPI will introduce initiatives to reduce cycle time, increase communication efficiency and provide better information to customers throughout their interactions with MPI.

BMK.3.2 Mission Statement and Corporate Values

Additional survey questions that collect general customer feedback on various aspects of MPI and its role as the provincial vehicle insurer assess the Mission Statement and Corporate Values benchmarking measures. These questions were asked in the annual CX survey (March 2026).



BMK.3.2.1 Mission Statement

MPI's mission: *Exceptional coverage and service, affordable rates and safer roads through public auto insurance.*

The survey results show that most customers generally agree (i.e., provide a rating of 5-7 out of 7) that MPI:

- **Provides exceptional coverage.**
    - 72% agree including 28% who strongly agree (7) and 44% who somewhat agree (5-6). [2024/25: 74% agree including 28% who strongly agree (7) and 46% who somewhat agree (5-6).]
- **Provides exceptional service.**
    - 72% agree including 30% who strongly agree (7) and 42% who somewhat agree (5-6). [2024/25: 72% agree including 28% who strongly agree (7) and 44% who somewhat agree (5-6).]
- **Provides affordable Autopac rates.**
    - 59% agree including 21% who strongly agree (7) and 38% who somewhat agree (5-6). [2024/25: 61% agree including 21% who strongly agree (7) and 40% who somewhat agree (5-6).]
- **Contributes to safer roads for Manitobans.**
    - 61% agree including 26% who strongly agree (7) and 36% who somewhat agree (5-6). [2024/25: 63% agree including 26% who strongly agree (7) and 37% who somewhat agree (5-6).]

Figure BMK- 3 Mission Statement

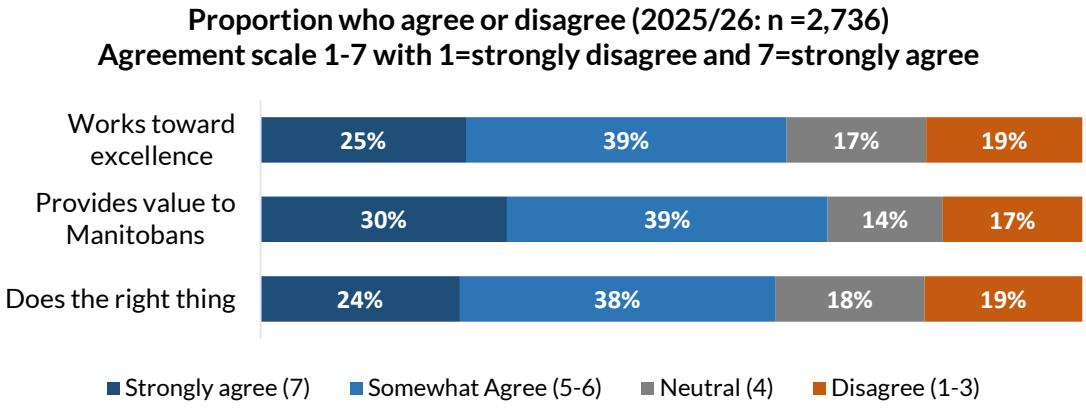
BMK.3.2.2 Corporate Values

In 2019, MPI developed new Corporate Values. Measures related to the values are summarized below.

Striving for Excellence: "We provide exceptional coverage and service. We adapt to meet evolving customer and industry needs, focusing on continuous improvement."

Providing Value to Manitobans: "We maintain affordable rates and ensure accessible coverage. As a public auto insurer, fiscal responsibility is at the forefront of everything we do."

Doing What's Right: "We act with integrity and accountability. We strive to be open and transparent."



The survey asked customers to rate those values statements. The results show that most customers generally agree (i.e., provide a rating of 5-7 out of 7) that MPI:

- **Works towards excellence.**
    - 64% agree including 25% who strongly agree (7) and 39% who somewhat agree (5-6). [2024/25: 64% agree including 23% who strongly agree (7) and 41% who somewhat agree (5-6).]

- **Provides value to Manitobans.**
    - 69% agree including 30% who strongly agree (7) and 39% who somewhat agree (5-6). [2024/25: 70% agree including 29% who strongly agree (7) and 41% who somewhat agree (5-6).]

- **Does the right thing.**
    - 62% agree including 24% who strongly agree (7) and 38% who somewhat agree (5-6). [2024/25: 63% agree including 24% who strongly agree (7) and 39% who somewhat agree (5-6).]

BMK Appendix 1:
Vehicle Rates Comparison

Updated Crown Insurer Rate Comparison Based on 2022 Profiles and April 1, 2026 Premiums

Contents

BMK Appendix 1: **1**
Vehicle Rates Comparison **1**
1.1. Summary 3
1.2. Profiles 3
1.3. Approach 4
1.4. Limitations 4

Appendix 1a: Customer Profiles

Appendix 1b: Cross Jurisdictional Rates

Appendix 1c: Rate Comparison by City

1.1. Summary

This appendix provides an updated benchmarking of private passenger vehicle insurance premiums among Canada's three Crown insurers: Manitoba Public Insurance (MPI), Saskatchewan Government Insurance (SGI), and the Insurance Corporation of British Columbia (ICBC). The comparison is based on the same set of 30 standardized customer profiles originally developed by Ernst & Young in its October 2022 report ("October 2022 Report"). For the current filing, MPI has refreshed the premiums for these profiles using rates effective April 1, 2026.

Consistent with the approach adopted in the prior year's GRA, this report does not include comparisons with private insurance markets. As discussed in detail in last year's filing, MPI discontinued the use of private-market comparisons due to material methodological limitations and ongoing data constraints. Those considerations remain unchanged for the current year.

Accordingly, the analysis continues to focus exclusively on Crown corporations, where direct rate information is available and can be updated with reliability. Additional limitations arising from the narrower scope of this year's analysis are described in *Section 1.4, Limitations of this Report*.

1.2. Profiles

MPI uses the same set of 30 customer profiles selected in the October 2022 Report. The profiles varied based on the following criteria:

- Number of drivers
- Driver(s) gender
- Driver(s) age
- Driver(s) marital status
- Driver(s) employment status (employed, student, retired, unemployed)
- Driver(s) license held
- Driver(s) history of automobile insurance claims
- Driver(s) history of automobile convictions
- Distance of commute to work/school
- Annual kilometers driven
- Vehicle Year, Make, Model

Twenty-seven of the profiles consider automobile insurance, while the remaining three profiles consider motorcycle insurance. *Appendix 1a – Customer Profiles* contains a complete description of the 30 customer profiles and the rating assumptions applied.

1.3. Approach

Profile premiums for the three Crown insurers—ICBC, SGI, and MPI—have been updated using each insurer's approved rate schedules effective April 1, 2026. For MPI, the calculated profile premiums continue to include the Driver License premium component.

This targeted approach enables premiums to be recalculated directly from each Crown insurer's official rate structure, supporting a high degree of accuracy and facilitating consistent comparisons across the three jurisdictions.

All customer profiles are assumed to reflect personal-use policies only, with no business or commercial use. Where applicable, profiles are rated with $2 million in Third Party Liability coverage and include both Collision and Comprehensive coverage with $500 deductibles.

Detailed premium results by customer profile for the Crown corporations are provided in *Appendix 1b – Crown Corporation Rate Comparison*. A summary of these comparisons, organized by city within each Crown jurisdiction, is presented in *Appendix 1c – Rate Comparison by City*.

1.4. Limitations

In addition to the limitations identified in the October 2022 Report, MPI's approach to updating customer profile premiums for the Crown insurers is subject to the following limitations:

- **Scope of Comparison**: The analysis remains limited to a comparison among the three Crown insurers—MPI, SGI, and ICBC—and does not extend to private passenger automobile insurance markets in other provinces. As a result, the findings reflect a narrower benchmarking perspective than a full Canadian market comparison.

- **Product Variations**: Automobile insurance products differ by province, including among Crown insurers. While the selected profiles are designed to align on key parameters such as coverage limits, coverage mix, and deductibles, the resulting

premium comparisons do not fully reflect differences in underlying benefits, policy provisions, or contractual terms offered by each insurer.

- **Differences in Pricing Assumptions**: Insurers may apply different pricing assumptions for optional coverages across jurisdictions. These may include variations in profitability targets, commission structures, expense allocation methodologies, and underwriting objectives. Consequently, premiums for similar coverages may not be strictly comparable, as they are influenced by insurer-specific strategic and financial considerations.

- **Static Profile Set**: The customer profiles used in the analysis have not been modified from those originally developed in 2022. Over time, this reduces their representativeness of current market conditions and vehicle composition. For example, profiles referencing 2012 model-year vehicles now reflect vehicles that are more than a decade old, which may limit their current relevance.

- **Lack of New Vehicle Representation**: The profile set has not been expanded to include newer vehicle models or emerging trends such as increased adoption of advanced safety features or electric vehicles. This constrains the ability of the analysis to fully capture shifts in the modern vehicle fleet and associated rating considerations.

- **Suitability of Profile Selection**: The original set of 30 customer profiles was constructed to represent a broad range of driving characteristics and coverage scenarios. However, the profiles may not encompass the full diversity of rating variables, vehicle types, or regional usage patterns present in today's automobile insurance environment.

Appendix 1a - Customer Profiles

Profile	Vehicle Type	Gender	Age	Occupation	Marital Status	Years Licensed	License Type	Vehicle(s)	Claims and Convictions (No. of Months Ago)	Commute	Annual KMs

Information Technology

IT.1 Overview

The Manitoba Public Insurance (MPI) Information Technology (IT) chapter continues to present a structured view of the Corporation's IT activities, aligned to strategy, governance, risk management, and delivery of technology initiatives. Similar to prior filings, the chapter outlines key areas including IT benchmarking, strategy and roadmap, risk management, and portfolio oversight.

Unchanged from Prior Filing

MPI maintains a structured approach to IT planning and delivery, supported by its Management Framework, and governance processes, which collectively ensure alignment between technology investments and corporate priorities.

The IT function continues to focus on:

- Managing IT risk as a business risk through formal governance and oversight processes.
- Aligning with business needs, corporate priorities and organizational readiness.
- Maintaining transparency through structured reporting and appendices.

Updated for 2027 GRA

The most notable organizational change since the previous filing is the creation of the Enterprise Project Management Office (EPMO) on April 20, 2026. This was accomplished by bringing together Major Programs and the Project Management Office (PMO) under a single structure within the Customer & Product Value division. This change supports a more integrated enterprise delivery model, designed to

enhance strategic alignment, clarify governance and decision-making authority, and strengthen oversight of Major Programs and projects across the portfolio.

MPI has transitioned from large, multi-year transformations to more targeted initiatives, typically delivered within 12 to 24 months. This approach enhances predictability, better aligns work with organizational capacity, and promotes more disciplined execution across the portfolio.

Key elements of this model include:

- Clear business ownership, well-defined scope, and supporting business cases and project charters.
- Annual planning and funding cycles, with dedicated budgets for each program or project.
- Structured change management and governance aligned with the level of risk and complexity.

Collectively, these elements strengthen alignment between delivery commitments, strategic priorities, and available capacity, while improving flexibility, accountability, and long-term sustainability across the portfolio.

It also enables:

- Stronger alignment to strategic priorities and organizational capacity.
- Greater adaptability as needs and conditions evolve.
- Improved accountability and sustainability for ongoing modernization.

This evolution underscores MPI's continued focus on disciplined delivery, strengthened enterprise governance, and value-driven investment decisions through the EPMO model outlined in section *IT.7.*

IT.2 IT Benchmarking

IT Benchmarking is an external assessment that compares MPI's IT performance, costs, capabilities, and maturity against peer organizations and leading industry practices to identify strengths, gaps, and opportunities for improvement.

Unchanged from Prior Filing

MPI remains committed to conducting the annual external benchmarking exercise to assess IT performance and maturity, and to inform improvement initiatives.

Updated for 2027 GRA

In alignment with Public Utilities Board (PUB) Order 156/25, Directive 22, MPI is in the process of actioning the recommendations identified in the Gartner assessment, please see *IT Appendix 2 – IT Summit Report*, page 8, for details on each of the recommendations outlined below.

i) Plan Product and Application Lifecycle

This recommendation focuses on establishing a more disciplined approach to managing products and applications from initial planning through implementation, ongoing support, modernization, and eventual retirement.

This work is currently in the Foundation phase. MPI's current target is to complete the Operationalize phase by the end of fiscal year 2026/27. See pages 4 and 5 of *IT Appendix 2 – IT Summit Report*.

ii) Manage Vendors

This recommendation focuses on strengthening how MPI selects, governs, monitors, and manages third-party vendors to improve performance, accountability, risk oversight, and value from vendor relationships.

This recommendation has been implemented. See pages 5 and 6 of *IT Appendix 2 – IT Summit Report*.

iii) Foster the Data Ecosystem

This recommendation focuses on strengthening how MPI governs, integrates, manages, and uses data across the organization so that data is treated as a strategic business asset that supports decision-making, operations, and future innovation.

This recommendation is currently in the initial phase and will be a multi-year engagement to evolve towards managing data as a business asset. For more details, please refer to pages 6 and 7 of the *IT Appendix 2 – IT Summit Report*.

Gartner Benchmarking Plan Fiscal Year 2026/27

MPI's Gartner benchmarking activities for fiscal year 2026/27 constitute the second year of an engagement to assess MPI's information and technology functions, benchmark performance against industry peers, and identify opportunities for improvement.

- Assessment timing: Benchmarking and maturity assessments for fiscal year 2025/26 commenced in May 2026, with financial analysis and findings to follow.
- Reporting timeline: Gartner's final report is expected in August 2026.
- PUB review: Detailed recommendations will be submitted to the PUB and made available for review in connection with the October 2026 hearings respecting the 2025/26 benchmark findings.

For more details, please refer to page 8 of the *IT Appendix 2 – IT Summit Report*.

IT.3 IT Risk Management

MPI maintains a structured IT Governance, Risk, and Compliance (IT GRC) capability to identify, assess, and mitigate risks associated with technology systems, operations, and initiatives.

MPI continues to manage IT risk as a business risk through:

- Formal governance structures;
- Ongoing risk assessment and monitoring; and
- Integration with Enterprise Risk Management practices.

IT.3.1 Security Capability Management

MPI maintains a strong focus on cybersecurity and the protection of its systems, data, and customers.

MPI's IT security posture is continuously assessed through internal controls, external assessments, and adherence to established cybersecurity frameworks and standards, being consistent with best practices.

While MPI does not publicly disclose detailed security ratings or sensitive control information that could compromise its security posture, the following improvements have been implemented since the last filing:

- **[REDACTED]**;
- **[REDACTED]**;
- **[REDACTED]**;
- **[REDACTED]**.

MPI looks to maintain a proactive and resilient security posture while balancing transparency with the need to protect sensitive information.

IT.3.2 IT Risk Registry

MPI maintains an IT Risk Registry that identifies and tracks the most material IT risks facing the organization.

Details of the IT Risk Registry and what has changed since the last filing are provided in *Appendix 3 - IT Risk Registry - CONFIDENTIAL*, for which MPI is seeking confidential treatment.

IT.4 Labour Updates

IT.4.1 Areas of Focus

For FY2026/27, the IT division's areas of focus for both staff and consultants reflect a balanced emphasis on workforce capability (People), operational maturity (Process), and IT solution delivery (Technology).

- **People:** Focus areas include leadership development, professional growth, and role-based training to strengthen capability across the division. Examples include leadership courses, technical and certification-based training in areas such as cybersecurity, cloud, service management, data, and artificial intelligence, as well as structured learning paths, conference participation, and staff development planning.

- **Process:** Focus areas include improving consistency, governance, intake and decision practices, documentation, and service delivery workflows. Examples include process improvements in service management, requirements and testing practices, transition of completed

projects to operational support, financial and reporting processes, data governance processes, and clearer accountability and decision structures.

- **Technology:**

The Technology stream is structured and prioritized across four categories, in accordance with the Corporation's strategic standards:

  - **Priority 1 - Business-as-Usual Activities:** Sustaining stable, secure, and reliable day-to-day services, including lifecycle support, maintenance, and foundational operational work that underpins all other deliveries.
  - **Priority 2 - Major Programs:** Advancing larger, longer-term initiatives such as Special Risk Extension (SRE), Bodily Injury Claims Management (BI3), and Enterprise Resource Planning (ERP).-related work that delivers significant capability change and requires sustained cross-functional coordination.
  - **Priority 3 - Corporate Initiatives:** Enabling broader business priorities through technology changes and delivery support, including digital service enhancements, legislative and compliance-driven changes, and roadmap-aligned business capabilities.
  - **Priority 4 - Operational Priorities:** Delivering focused improvements that reduce risk, strengthen resilience, address technical debt, and modernize tools and platforms; examples include backup modernization, **[REDACTED]** **[REDACTED]** **[REDACTED]** , cloud and infrastructure hardening,

integration remediation, data and analytics enablement, and selected artificial intelligence and automation initiatives.

IT.4.2 IT Personnel Costs

A summary of IT personnel information in support of these objectives, including a comparison of staffing levels over the three prior General Rate Applications, as well as forecasted future staffing levels by employee and consultant, is provided in *Appendix 4 – External Labour Status Update*.

IT.4.3 Skill Gaps and Third-Party Dependencies

Background

In FY 2024/25, MPI completed an evaluation of digital skills across the IT Division using the Skills Framework for the Information Age (SFIA). SFIA is a globally recognized tool for defining and measuring IT capabilities.

SFIA assessments were implemented using an electronic assessment tool. All IT Division staff were asked to complete a self-assessment, rating themselves across 121 defined skills using SFIA's seven-level scale. These levels measured an individual's experience through dimensions such as autonomy, influence, and complexity of work. These assessments applied a consistent, role-specific lens to assess workforce capabilities and pinpoint IT skills gaps requiring targeted development.

A total of 96% of IT staff completed their assessments; demonstrating strong engagement and providing a robust foundation for workforce planning and capability development. The next phase involved mapping self-assessments to SFIA-recommended role profiles to identify skill gaps. This process directly informed

targeted learning and development plans, to ensure MPI's IT workforce was aligned with current and future operational needs.

2025/26 Update

Staff successfully executed on their individual development plans, with strong support from IT division leadership. Teams were encouraged to dedicate up to two weeks annually to structured learning, reinforcing a culture of continuous development and capability growth.

Outcomes

- **Empowered Staff**: Enabled employees to showcase the full range of their capabilities, including experience that may extend beyond their current roles.
- **Promoted Lifelong Learning**: Supported a culture of continuous development—linked to higher engagement, job satisfaction, and productivity.
- **Ensured Fairness and Objectivity**: Applied the globally recognized SFIA framework to assess all employees consistently against the same set of skills and levels.
- **Responded to Employee Feedback**: Demonstrated follow-through on "Be Heard" requests to support professional growth and learning opportunities.
- **Modernized the Workforce**: Aligned internal capabilities with the demands of a rapidly evolving technology landscape.
- **Drove Strategic Alignment**: Helped close gaps between current skills and those required to meet organizational goals.
- **Maximized Internal Talent**: Prioritized development of in-house expertise over external sourcing—delivering long-term cost efficiency and resilience.

In summary, the SFIA framework was successfully established across the IT Division, to support standardized skills and stronger capabilities, and to meet current and future needs.

Third-Party Dependencies

MPI continues to use the following types of Third-Party Dependencies:

- Vendors that provide services.
  - MPI continues to advance its cloud strategy in partnership with Microsoft and Kyndryl.
    - Microsoft's Azure platform remains the foundation of MPI's cloud infrastructure, supporting the modernization of MPI's digital environment.
    - Kyndryl currently manages the cloud environment, and maintains the remaining legacy systems hosted in their datacenters.
    - Kyndryl will continue to deliver these services under the existing agreement until its scheduled conclusion in January 2027. Planning is underway to assess future service needs and identify the most suitable partner to support MPI's next phase of digital operations.
- Consultants providing operational support.
  - MPI engages consultants to provide specialized expertise and to supplement internal capacity during periods of increased demand. These professionals are deployed in key roles such as, but not limited to, quality assurance analysts, developers, business analysts, data architects and cybersecurity specialists.

- This approach ensures MPI can remain agile, access critical skills on demand, and maintain continuity in delivering technology services while effectively managing workforce scalability.

- Vendors providing application and service support.
  - MPI maintains contractual relationships with over 75 software vendors to support a wide range of applications and provide services —from full Software as a Service (SaaS) solutions to basic licensing agreements. These partnerships are essential to sustaining MPI's digital operations and service delivery.
  - All third-party vendor engagements are managed through MPI's Strategic Procurement and Vendor Management team. Standardized procurement processes, including Flextrack, Request for Standing Offer (RFSO), and Request for Proposal (RFP) are used to ensure transparency, consistency, and alignment with organizational needs.

IT.5 IT Strategy and 5-Year Rolling Roadmap

MPI's IT Strategy and 5-Year Rolling Roadmap is being developed as a structured, phased approach to guide technology modernization, manage technology debt, and align investment decisions with corporate priorities, risk, and organizational capacity. The work begins by clarifying MPI's strategic intent and establishing a five-year view of technology direction, priorities, and sequencing. It is intended to provide a practical roadmap for modernization that supports operational stability, risk reduction, and responsible stewardship of resources.

The roadmap approach is grounded in business needs and technology risk. For major business services, MPI is identifying the technologies that are most critical to delivery, assessing the associated risks, and evaluating practical treatment options

such as retaining, replacing, rehosting, or retiring technology over time. These options are then used to support executive decision-making, prioritize work, and sequence initiatives within the roadmap based on value, urgency, interdependencies, and capacity for change. Following finalization of the roadmap, MPI intends to use this direction to inform a more formal workforce plan aligned to long-term skill requirements, internal capability development, and the strategic use of external resources.

For more details, please see the *IT Appendix 2 - IT Summit Presentation.*

IT.6 Enterprise Project Management Office (EPMO)

IT.6.1 EPMO Executive Summary

MPI established the Enterprise Project Management Office (EPMO) on April 20, 2026, to provide enterprise-wide oversight of Major Programs and the Project Management Office (PMO). The EPMO is designed to strengthen how the organization prioritizes, governs, and delivers its project portfolio by improving alignment to corporate strategy, enhancing accountability, and enabling more disciplined investment decisions across the enterprise.

By consolidating Major Programs and the Project Management Office within the Customer & Product Value division under the EPMO, MPI is advancing a more integrated enterprise delivery model. This structure is intended to improve consistency, transparency, and oversight across the portfolio, while strengthening strategic alignment, clarifying governance and decision rights, enhancing risk and resource management, and supporting a more coordinated approach to modernization—including managing technology debt, stabilizing legacy systems, and driving value-based investment decisions.

IT.6.2 Corporate Planning and Governance (CP&G) Status Update

In September 2025, Lean Portfolio Management processes were replaced by the Corporate Planning & Governance (CP&G) committee and the Strategy-to-Execution (S2E) pipeline.

As part of MPI's Multi-Year Corporate Strategic Plan, CP&G introduces a disciplined approach to prioritizing, governing, and monitoring the broader portfolio, ensuring investments align with strategic objectives, organizational capacity, and expected business value. Individual business cases are developed and presented for approval as they mature, supporting informed decision-making, appropriate challenge and oversight, and responsible stewardship of project investments across the enterprise.

CP&G serves as the gatekeeper for the strategic plan and roadmap, rigorously evaluating proposed initiatives and providing ongoing governance for approved projects. The committee also approves funding in advance of each fiscal year and is accountable for ongoing budget oversight, including change and decision requests.

The Strategy-to-Execution (S2E) pipeline supports the transition from strategy to delivery by providing the processes and tools needed for business sponsors and delivery teams to navigate each stage gate. This ensures appropriate visibility, oversight, and decision-making at key points throughout the lifecycle.

IT.6.2.1 Funding Approach

In 2026/27, MPI is applying an annual funding approach for the EPMO that aligns investment decisions with demonstrated delivery capacity and enterprise priorities. Under this model, annual funding is established through dedicated envelopes of $15 million for Major Programs and $5 million for smaller projects, providing a disciplined

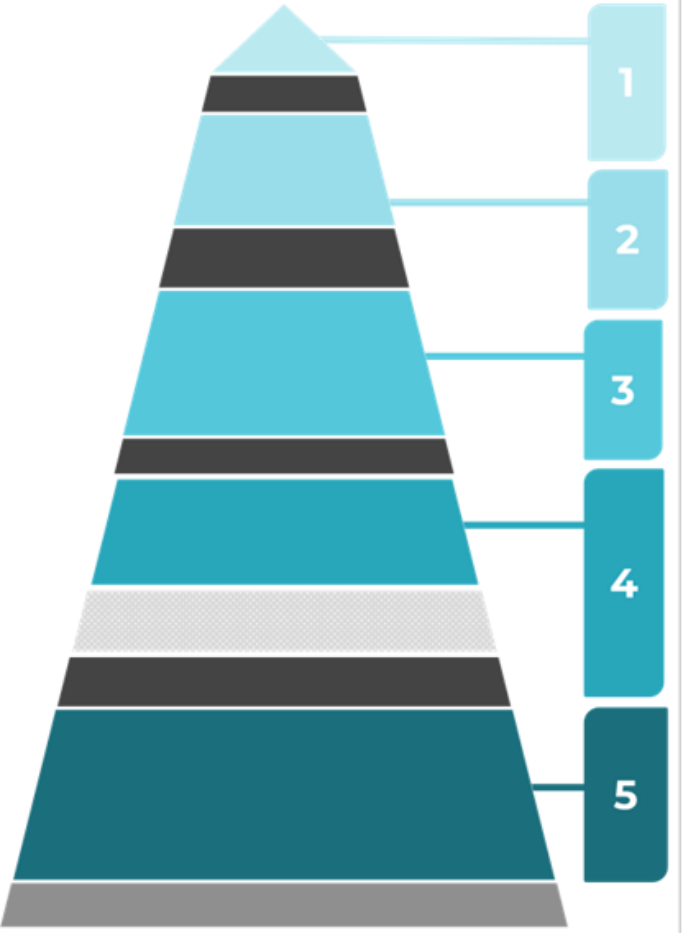
foundation for portfolio planning, prioritization, and oversight. While planning and funding are structured through a more traditional waterfall approach, delivery is intended to remain agile and responsive to evolving needs and priorities. As maturity in the use of waterfall, agile, and hybrid methods continues to advance, MPI is strengthening how progress is measured, how emerging delivery risks are identified, and how leadership determines when corrective action, re-scoping, or a pause in work is warranted to protect value, capacity, and delivery confidence.

Funding will be released through established governance and approval processes, with scope, schedule, and budget changes managed through formal change control to maintain alignment with approved annual limits. This approach is intended to improve near-term cost confidence, support more effective investment decisions, and ensure additional executive review where funding requirements exceed approved thresholds.

Within this framework, Major Programs are prioritized through the Strategy to Execution Pipeline, while smaller and less complex initiatives are managed through the former PMO processes. Given their scale, complexity, and investment profile, Major Programs require enhanced governance, financial discipline, and resource planning.

To support this model, MPI has shifted away from large, multi-year transformations toward more focused programs with delivery horizons generally ranging from 12 to 24 months. Each initiative is expected to have clear business sponsorship, defined scope, and structured annual funding, supported by formal business cases, project charters, and governance processes aligned to the significance of risks and issues. This approach is intended to improve predictability, align delivery with organizational capacity, and strengthen flexibility, accountability, and long-term sustainability across the portfolio.

IT.6.2.2 Phase Gating



Over the past year, MPI has enhanced enterprise visibility and coordination across projects and Major Programs through the use of the Integrated Corporate Portfolio (ICP). As a single source of truth for in-flight and planned work, the ICP has been used to identify interdependencies, highlight delivery risks, and support planning and governance decisions across initiatives regardless of funding source, size, or delivery method. This has strengthened alignment to corporate strategy, organizational capacity, and enterprise priorities.

This integrated view has also enabled more proactive risk mitigation. For example, during quarterly Program Increment planning, teams leverage the ICP to identify, sequence, and address cross-project dependencies, resource constraints, and timing conflicts before they materially impact delivery. This approach supports more informed trade-off decisions and allows for earlier intervention when delivery risks begin to emerge.

Building on that foundation, MPI established the enterprise phase-gating process across all projects including Major Programs to strengthen how projects and programs are planned, prioritized, and advanced from concept through completion. The process establishes clear decision points between phases so leadership can achieve alignment, confirm readiness, and determine whether initiatives should proceed, be adjusted, paused, or concluded.

Figure IT-1 illustrates the five-stage gating lifecycle introduced in 2025, which guides initiatives through defined activities, governance reviews, and approval checkpoints. Together, the ICP and enterprise phase-gating model provide a more structured and transparent approach to portfolio oversight by improving strategic alignment, delivery readiness, accountability, and decision-making across the project lifecycle.

Figure IT- 1 Five-Stage Phase Gating Process

	Who	What
Ideation	**SPM** Primary Sponsor + PDM	**Clearly identify and articulate the problem or opportunity** that the Primary Sponsor wants to raise to CPG for prioritization.
CPG - Gate 1	**Primary Sponsor** leads 'pitch'	Endorsement "Go Further" (y/n?)
Solution Options & Estimation	**PDM** Primary Sponsor, SPM, Business Architecture, Enterprise Architecture, Value Assurance (CCE + CX)	**Complete pre-scoping** to be able to clarify the problem, directional benefits, explore options, assess feasibility and trade-offs, to **provide findings and a recommendation to CPG**.
CPG - Gate 2	PDM + Primary Sponsor (*SME if required)	Option(s) Selected
Solution Design & Business Casing	**PDM** +All Stage 2 +Project Accounting *additional SMEs as needed	**Develop the high-level solution design to support CPG approved option**, incl. high level requirements, **+ producing a business case (or project charter if no CPF is required)**
CPG – Gate 3	PDM + Primary Sponsor (*SME if required)	**Approval of Business Case** (or Project Charter if no-CPF)
Planning & Procurement	**Planning (PM) + Procurement (V.M.)** All Stage 3 +Legal	**(V.M.) Requirements, RFP & Evaluation** • If applicable, define Procurement Strategy (+ Evaluation Criteria • Complete RFP + Evaluation process **(PM) Complete Planning work** (+ Schedule) to inform Baselines
***RFP Review / Approval**	**Primary Sponsor** PM + Legal + Procurement	RFP Selection, Award Approval
CPG – Gate 4	**PM** Primary Sponsor + Value Assurance	**Approval of Project Baselines** (refined estimates post-RFP outcome, and Schedule from PMO)
Delivery & Implementation	***Assigned Delivery Lead** (team / method may vary by project type) EPMO, IT, PDM / PO + Primary Sponsor, P.A. + V.A.	**Complete all required activities to deliver and implement the project** to achieve committed outcomes
Post-Closure	**Value Assurance**	Benefit Realization performance reporting

*Bold = Responsible for key deliverable / output of stage

As part of the new EPMO structure, Major Programs will adopt this enterprise phase-gating process, with Major Programs and the PMO working collaboratively to implement, refine, and operationalize this process across the portfolio. This joint approach will help ensure the phase-gating is applied consistently while also being adapted appropriately to support the scale and complexity of major initiatives.

IT.6.3 PMO Projects Overview

IT.6.3.1 Closed Projects in FY 2025/26

The following table lists corporately funded projects that were completed in the 2025/26 fiscal year and the associated key drivers and advantages.

Area	Project	Key Drivers and Advantages
Customer Experience and Safety	Taxi Telematics Pilot	Enhanced road safety awareness and real data for decision making.
	License Status Lookup	Direct customer retrieval of license details; minimized manual processing and site visits.
	Queue Management	Optimized service efficiency, better wait-time transparency, and increased customer flow.
Fraud, Risk, and Resilience	Stolen Vehicles and VIN Identification (Pilot)	Assessed enhanced capabilities in fraud detection and investigative efficiency.

Area	Project	Key Drivers and Advantages
	[REDACTED]	[REDACTED].
	[REDACTED].	[REDACTED].
Enterprise Enablement and Sustainability	Cloud Migration	Upgraded infrastructure offering scalability, robustness, and security.
	Capital Modelling Service	Advanced actuarial and financial decision-making capabilities.
	Content Architecture	Increased accessibility, clarity, and user-friendliness of digital content through training.
	Contact Centre as a Service (CCaaS)	Updated contact centre operations to support scalability and dependability.
	GRC Tool Implementation	Unified governance, risk, and compliance management system.
	Print Management Software Replacement	Ensuring print capabilities continue to support customer communication.
	Digital Culture Improvements	Provided equivalent audio and visual capabilities in MPI meeting.

IT.6.3.2 Carry-Over Projects to FY 2026/27

The following table lists projects that were FY 2025/26 Carry-Over Corporate Initiatives.

1. Foundational Set up for Enterprise Data Platform Phase 1 and 2

Description	Multi phased initiative to enhance data management capabilities.
Key Drivers:	The foundational set up will enable a scalable, flexible environment that not only addresses current gaps, such as missing data elements and insufficient quality controls, but also creates a pathway for future, enterprise-wide adoption.
Current status:	The next steps for these capabilities are under assessment.

2. **[REDACTED]**

Description	**[REDACTED]**.
Key Drivers:	**[REDACTED]**.
Current status:	**[REDACTED]**.

3. Business Continuity Management

Description	In 2023 MPI sole-sourced a business continuity management system from the company Continuity2. That agreement came to an end in March 2025, requiring MPI to go to market for a replacement solution. After no appropriate bids came forward MPI worked with and received permission from the Manitoba Government on a sole-source Order-in-Council (OIC) to renew with the existing vendor Continuity2.
Key Drivers:	This initiative is critical to maintaining MPI's enterprise business continuity capability, including the ability to assess business impacts, support continuity planning, manage operational risk, and contact employees during a crisis or emergency.
Current status:	The project is targeting closure at the end of June 2026.

IT.6.4 Major Programs

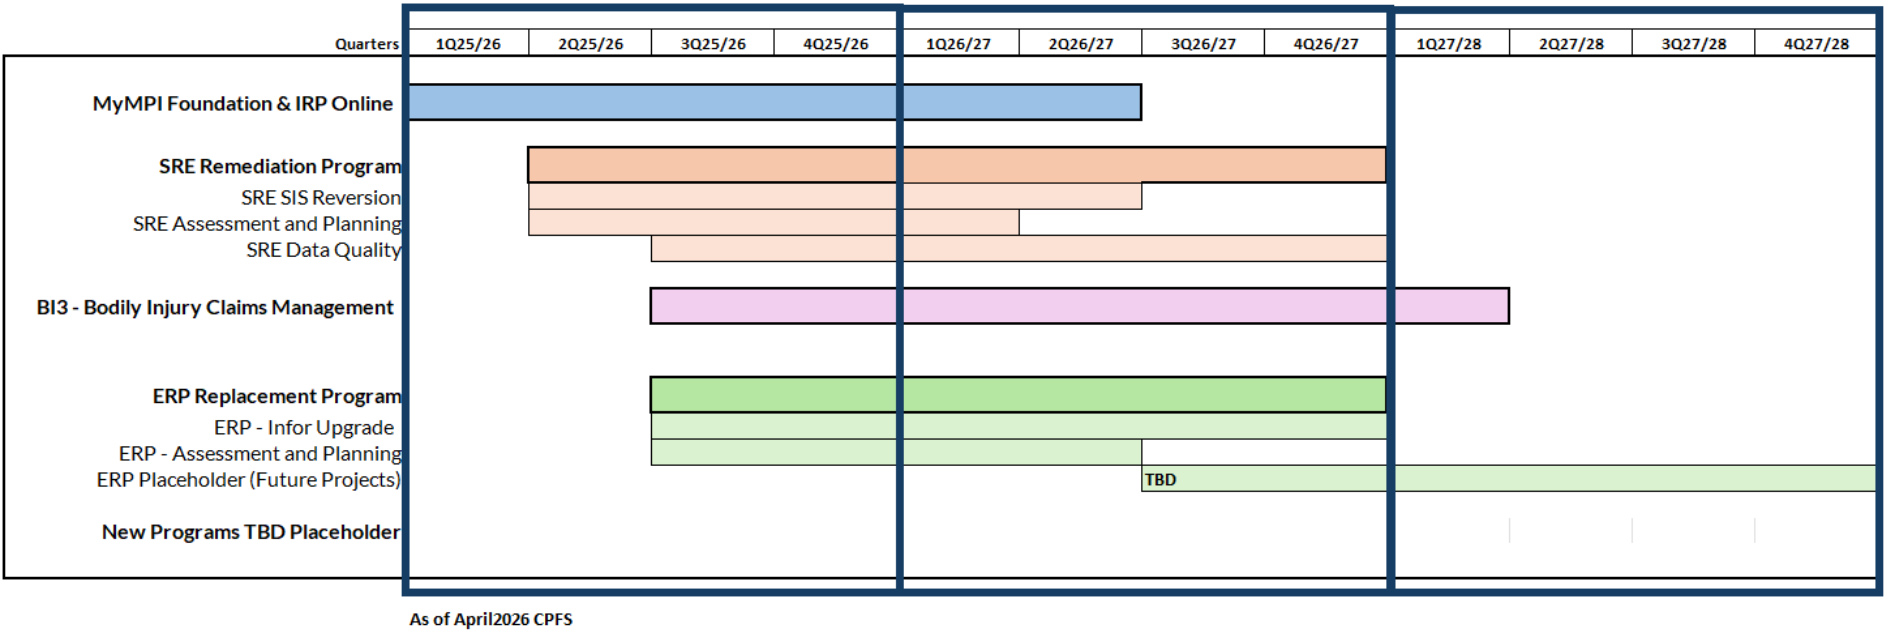
IT.6.4.1 Major Programs Definition

As outlined in the previous filing, Major Programs oversees large initiatives exceeding $3M, providing the governance and budget oversight required for these complex efforts. A Major Program is defined as a technology program with a total expected cost greater than $3M.

This threshold serves as an appropriate marker for a Major Program, as it identifies initiatives of sufficient financial scale, enterprise impact, and delivery complexity to warrant enhanced governance, executive visibility, and more rigorous oversight. It establishes a clear and consistent basis for differentiating major strategic investments from standard projects, while ensuring governance efforts are focused on initiatives with the highest organizational risk and value.

Major Programs will also typically:

1. significantly impact business operations / processes (e.g., changes to underwriter workflow);
2. substantially impact the customer and / or partner experience (e.g., Accessing International Registration Plan (IRP) through MyMPI);
3. involve a relatively high degree of enterprise "risk" and "complexity" (i.e., due to cost overruns, scope creep, and change resistance); and/or
4. be a part of a series of interrelated projects that, in total, exceed $3M and that key stakeholders are likely to view in aggregate.



Major Programs are aligned to and prioritized against other initiatives within the ICP.

IT.6.4.2 Major Programs Projects Overview (3-Year Focus)

Under the newly established EPMO, Major Programs is aligned with MPI's Multi-Year Corporate Strategic Plan and provides a structured approach to advancing the organization's highest-priority modernization initiatives. Business cases for individual projects are developed and submitted for approval as they mature, supporting disciplined investment decisions and enabling ongoing oversight.

Figure IT-2 provides a three-year view of the principal Major Programs currently underway or supported by approved lean business cases.

Figure IT- 2 3-Year Project Overview

Aligned to prior year's filing, the current active Major Programs are:

1) MyMPI Foundation and International Registration Plan (IRP) Online;
2) Special Risk Extension (SRE) Remediation;
3) Bodily Injury Claims Management (BI3); and
4) Enterprise Resource Planning (ERP) Replacement.

More detailed descriptions of each of the initiatives are included in the following table with contract status information current as of **May 20, 2026.**

1. MyMPI Foundation & IRP Online

Description	This project aims to establish a new customer portal called MyMPI. The first customers using the portal will be IRP customers. The foundational services, such as login and authentication, can then be built upon in future projects to bring more online functionality to customers. IRP Online will allow IRP customers to renew and amend fleets & vehicles, pay outstanding invoices and view/print documents online.
Key Drivers	• Remediates R2 Deferred work that resulted in workarounds and duplicate entries for the Prorate Office. • Enables "out of the box" online transactions for customers through recently deployed software for DVA (Driver Vehicle Administration). • Provides foundation for future online services with first smaller pilot customer group of IRP customers.

Delivery approach	Three phased deployments — MPI Registration (March 14, 2026 - complete), Registration Event Sync (May 12, 2026 - complete), and MyMPI Foundation & IRP Online (August 14, 2026 - target to complete).
Status	Change request approved in April 2026 with revised go-live of **August 2026**; • First deployment completed successfully on **March 14, 2026.** • Second deployment completed successfully on **May 12, 2026** with no post-release incidents. • Functional development for the portal completed **April 7, 2026**; non-functional remediation and User Acceptance Testing underway and targeted for completion on **August 14, 2026**.

2. SRE Remediation Program

Description	Addresses issues from Nova Release 1 for Special Risk Extension. Includes data quality improvements. Assessment and Planning initiative focused on confirming path forward. The overarching program of "SRE Remediation" contains multiple projects with discrete business cases: a) Specialty Insurance Services (SIS) Reversion, b) Assessment & Planning, and c) Data Quality.
Key Drivers	• Moves policies from Duck Creek to SIS (prior legacy system) to stabilize.

	• Stabilize SRE line of business. • Determine path forward.

2a. Specialty Insurance Services (SIS) Reversion Project

Description	Revert expiring Duck Creek policies back to the legacy SIS system.
Status	**96% of policies renewed** in SIS (5,843 of 6,262); remaining **283 policies** scheduled for renewal by **June 2026**. 136 policies identified as short-term/lapsed/cancelled. Three-month extension approved for renewal backlog.

2b. Assessment and Planning

Description	Assess the current state, define the target state, and determine the appropriate technology approach.
Status	Project paused since end of January. Executive direction received; change request being drafted for project **close-out**.

2c. Duck Creek Data Quality

Description	Correct data variances across Duck Creek's Policy, Billing, and Insights modules to ensure data is consistent throughout Duck Creek.

Status	All earnings engine discrepancies resolved with ongoing monitoring. Change request approved to extend the project through **December 2026** for data extraction and migration activities.

3. BI3 Upgrade (FINEOS Cloud Migration)

Description	The FINEOS case management solution has been an on-premises solution in use by the Bodily Injury Case Management team since 2010 to administer and manage bodily injury claim. FINEOS previously announced that they are changing their licensing model from providing and supporting on-premises solutions and moving to a SaaS (Software as a Service) cloud subscription model.
Key Drivers	• MPI is currently on the last available on-premises version of FINEOS software. • Upgrading to the cloud will allow MPI to use the latest version of software and will shift the responsibility for future upgrades to FINEOS and reduce MPI effort and eliminate infrastructure upgrade costs.
Status	Mobilization phase complete; integration vendor has been onboarded and build is in progress. FINEOS completed impact analysis of the target instance and project is underway.

4. Enterprise Resource Planning (ERP) Replacement Program

Description	The ERP Replacement Program covers multiple related ERP projects. **[REDACTED]**

	[REDACTED]. The Assessment & Planning project will define the current and target state for both People & Culture and Finance and procure an ERP solution.
Key Drivers	• Keeping ERP system in mainstream support. • Addressing MPI's long term ERP business needs through evaluating and selecting an aligned solution.

4a. Infor Upgrade

Description	[REDACTED].
Status	Project is currently in testing phase and on track for **November 2026 go-live**.

4b. Assessment & Planning

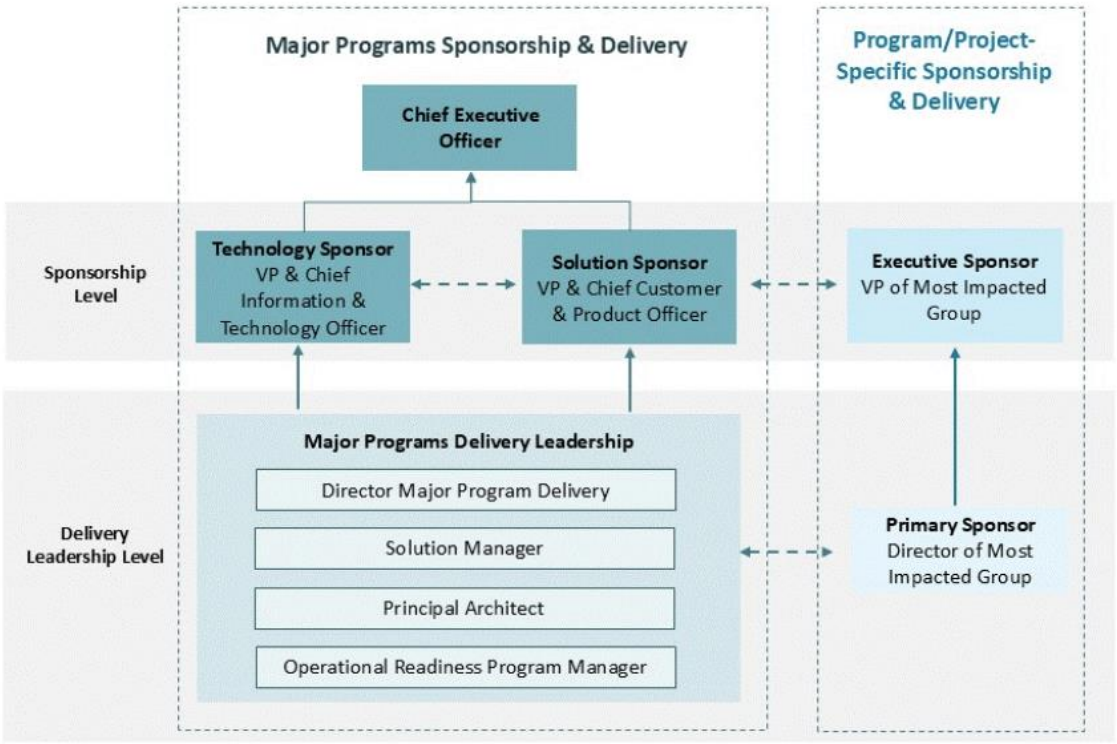
Description	Define current and target state for People & Culture (Human Resources) and Finance functions, then procure a long-term ERP replacement.
Status	Phase 1 (pre-advisor work) complete. Phase 2 underway — Info-tech advisor onboarded April 27, 2026; kickoff completed on May 19, 2026, interviews/surveys. started May 25, 2026 with onsite strategy session planned for June

	2026. Current-state process mapping is underway with ~32% complete for Finance areas and ~46% complete for HR areas.

IT.6.5 Major Programs Governance

IT.6.5.1 Overview of Governance Principles

Major Programs governance has been shaped by leading practices and lessons from prior delivery experience. The resulting model is grounded in a set of core principles intended to strengthen accountability, improve decision-making, and ensure proper governance.



At the core of the model is a business-led approach: sponsorship for Major Programs rests with the business areas most affected by the change, with corresponding accountability for outcomes, investment, and value realization. Governance is structured to remain adaptable to the nature and impact of each initiative, while maintaining clear decision rights and alignment between sponsorship, funding, and delivery accountability.

Major Programs are managed as part of an integrated enterprise portfolio to support strategic alignment, reduce duplication, and improve coordination across related initiatives. A tiered governance structure is used to focus executive attention on the highest-impact decisions while enabling timely resolution at the appropriate level. Consistent with this approach, the governance model is intended to evolve over time through ongoing review and continuous improvement.

The Major Programs governance framework establishes the structure through which organizational leaders oversee IT-enabled business modernization initiatives managed by the Enterprise Project Management Office (EPMO). As illustrated in *Figure IT-3*, the framework reinforces a business-led approach that is intended to

ensure the perspectives of impacted stakeholders are considered in program oversight and decision-making. The governance recommendations supporting this model were approved by the Board of Directors in May 2025.

Figure IT- 3 Major Programs Governance Model

IT.6.5.2 Governance Improvements

The governance of Major Programs is intended to ensure effective risk management and decision-making throughout the implementation of large, complex programs. The framework is designed to provide a clear and structured approach for identifying risks, assumptions, actions, issues, dependencies, and decisions, and for escalating them to the appropriate governance bodies with the right level of visibility, accountability, and timely resolution.

Since implementation in May 2025, targeted improvements have been made to strengthen this model, including clearer sponsor expectations, more structured governance forums, better tools for tracking risks and dependencies, and more consistent communication across stakeholders. These improvements reinforce clarity of decision-making accountabilities across the governance structure and support more disciplined, transparent program oversight.

Improvements have been made across four key areas: increased business sponsor engagement and role clarity, enhanced forums, improved processes and toolsets, and refined communication and continuous engagement.

MPI has also carried out extensive rollout and awareness efforts to build understanding of the new framework and clarify stakeholder accountabilities, recognizing that these processes will take time to fully mature as teams continue to adopt the new ways of working.

IT.6.5.3 Governance Vendor Oversight

The Governance Vendor oversight contract that previously governed Nova concluded on March 31, 2026. An annual summary report was presented to the Technology Committee of the Board of Directors on May 20, 2026.

The report is included as part of this filing at *Appendix 5 - Major Programs Independent Governance & Risk Advisory Services Annual Summary Report Final.*

Key Lessons Learned and recommendations from that Governance Vendor oversight program have been leveraged to shape the improvements made to the Major Programs area.

Recognizing the value of governance vendor oversight, for FY 2026/27, MPI identified a need for an expanded Governance Vendor engagement for Major

Programs. MPI Request for Proposal (RFP) 3437 for Major Programs Governance and Risk Advisory Services closed on December 23, 2025, and was subsequently extended to January 5, 2026. MNP, the incumbent vendor, was selected as the successful proponent, and a new Master Services Agreement (MSA) and Statement of Work (SOW) were fully executed effective April 1, 2026. Under this agreement, MNP will provide governance oversight services for a five-year term ending March 31, 2031, with one optional five-year renewal term.

Core areas of Focus:

- Provide governance assessment and evaluation of Major Program's current state, risks and issues and validation of action plans.
- Identify gaps, ensure team alignment, and facilitate development of mitigations through advisory services.
- Develop governance best practices to enable Major Programs and MPI leadership to address risks prior to risks becoming issues, provide actionable and concrete mitigation steps and proactive solutions.
- Measure internal control effectiveness.
- Provide guidance on conducting due diligence on potential and existing vendors.
- Establish systems for ongoing monitoring of vendor performance and risk levels.

This partnership enhances the overall governance framework, supports effective project delivery, and reinforces accountability and transparency throughout MPI's modernization efforts.

IT.6.5.4 Risk, Action, Assumption, Issue, Dependency, Decision (RAAIDD) Framework

RAAIDD stands for Risks, Actions, Assumptions, Issues, Dependencies and Decisions which are all key items to be effectively managed for delivery success. Implemented in fall 2024, the RAAIDD process has continued to mature as Major Programs has strengthened the supporting governance, visibility, and accountability mechanisms. This maturation has included executive reporting, clearer risk ownership, regular updates, and more defined escalation triggers to support consistent oversight and decision-making. The RAAIDD process, Key Risk Indicators (KRIs), and associated metrics are being continuously monitored to provide early visibility into emerging issues and to support timely risk identification and mitigation. Additional KRIs and metrics are also being evaluated to further strengthen project oversight.

Major Programs has established Key Risk Indicators (KRIs) to ensure forward-looking risk visibility is reported to senior leadership.

KRIs act as leading indicators that highlight emerging execution pressures and prompt early intervention—helping to prevent issues from escalating into unexpected, late-stage failures.

The following KRIs have been defined and are being reported:

- **Budget — Reforecast vs. Approved Spend Variance:** Tracks whether the current estimate-to-complete (actuals plus forecasts) is trending above the approved business case budget, providing early visibility into potential contingency drawdowns.
- **Schedule — Planned vs. Actual Complete Variance:** Measures divergence between approved schedule progress and actual progress, with a 20% risk

tolerance threshold that triggers mandatory mitigation planning or change request action.

The KRIs use a green / amber / red threshold model calibrated to drive timely, decision-quality information to leadership — enabling course correction while options remain available rather than reporting problems after the fact. This framework reinforces disciplined oversight and proactive risk management across the Major Programs portfolio.

IT.6.6 Major Programs Lessons Learned

Major Programs has established a structured lessons learned process to support continuous improvement across MPI. The lessons learned log consolidates insights from Nova Lessons Learned, MNP audit findings, Corporate Risk Focus items, and prior project and program experience to inform ongoing maturity and strengthen future delivery. Key themes emerging from the current lessons learned are summarized in the following table:

Key Themes	Best practice focus	Actions taken	Next step
Vendor Management	Strengthen contracts, reduce single source vendor dependency, acceptance criteria, performance scorecards, and RFP expectations.	Right-to-audit clauses, vendor scorecards, Key Performance Indicator (KPIs), milestone payment controls, acceptance criteria, deliverables tracking, periodic reviews, and updated	Further strengthen procurement and contract management through more explicit service level agreements, accountability measures, and incentives.

Key Themes	Best practice focus	Actions taken	Next step
		RFP requirements are in place.	
Requirements and Solution Management	Formalize requirements management, traceability, and business validation across the lifecycle.	MPI's requirements framework has been formally launched with traceability, Subject Matter Expert (SME) validation, testing integration, end-to-end testing, and clarified defect management.	Complete formal linkage between approved requirements, scope decisions, and project deliverables, including impact assessment for changes.
Resource Management	Improve workforce planning, role clarity, and enterprise capacity management.	Workforce planning methods, monthly planning meetings, a change heat map, consolidated planning tools, a capacity planning role, and SME engagement practices have been established.	Build a more centralized demand forecasting and quarterly capacity review process to identify future resource gaps earlier.
Risk Management	Strengthen program risk management through structured tracking, ownership, dashboards, leading	The RAAIDD framework is implemented in ADO (Azure DevOps), with dashboard reporting, assigned owners,	Continue enhancing reporting and mitigation effectiveness measures to strengthen early

Key Themes	Best practice focus	Actions taken	Next step
	indicators, and proactive escalation.	regular updates, and defined escalation thresholds.	identification and response.
Delivery and Planning	Standardize project delivery, readiness, cutover, and go/no-go decision-making.	Hybrid delivery and change frameworks are in use, with standard cutover templates, readiness checklists, and defined decision authorities.	Continue implementing the EPMO model and expand enterprise delivery standards, stage gates, and challenge functions.
Transition to Operations (TTO)	Strengthen knowledge transfer, operational readiness, and handoff to support teams.	Knowledge transition deliverables, readiness gates, service design package expectations, transition coordination, and supporting documentation structures are established.	Continue maturing the operating support model and formalize post-implementation feedback loops between projects and operations.
Governance and Leadership	Clarify sponsorship, decision rights, governance forums, and assurance mechanisms.	Executive sponsors and decision authorities are defined, the governance framework has been updated, and review and challenge	Continue refining governance including forum Terms of Reference (TOR) based on feedback and use.

Key Themes	Best practice focus	Actions taken	Next step
		mechanisms have been strengthened.	
Financial and Budget Management	Improve estimate quality, cost governance, and traceability of financial decisions.	Association for Advancement of Cost Engineering (AACE) estimation guidelines, finance challenge function, Chief Financial Officer (CFO) attestation, vendor estimate substantiation, traceable cost models, and formal reconciliation practices have been introduced.	This area is largely established and is now focused on wider adoption and continuous improvement.

Further details can be found in *Appendix 6 - Major Programs Lessons Learned May2026.*

IT.6.7 Major Programs Strategic Partner Updates

IT.6.7.1 Vendor Service Providers

MPI continues to advance Major Programs initiatives through a combination of internal leadership, specialized vendor services, and collaboration with core product vendors. These external partners provide targeted expertise, technology support, advisory services, and implementation capacity that help strengthen delivery, governance, and program outcomes. The table below summarizes the most current services provided, the vendor, engagement type and associated Major Program / Project name.

Services Provided	Vendor	Engagement Type	Major Program / Project
Software Development and Testing Services	Cigniti/Coforge	Software Development - Fixed Price Testing Services – Time and Materials	MyMPI Foundation & IRP Online
Technical training documentation and Consulting Assistance	Sapiens	Documentation – Fixed Price Consulting – Time and Materials	SRE Remediation – SIS Reversion
Software Upgrade Services	Infor	Time and Materials	ERP Replacement – Infor Upgrade
Infrastructure Build Services	Kyndryl	Time and Materials	ERP Replacement – Infor Upgrade
Software Product Components Migration Services	MHC Software	Fixed Price	ERP Replacement – Infor Upgrade
ERP Advisory Services	Info-Tech Research Group	Fixed Price	ERP Replacement – Assessment & Planning
Software Upgrade Services	Fineos	Time and Materials	BI3 Upgrade
Integration Services	Tata Consultancy Services (TCS)	Fixed Price	BI3 Upgrade

IT.6.7.2 Status of Key Vendor Engagements

This section addresses Public Utilities Board Order No. 156/25, Directive 18.d, by providing an update on the status of key vendor engagements originating from Project Nova, including their continued involvement, current contractual position, and anticipated contributions to future IT initiatives and modernization work.

Overview of Approach – Focus on Fiscal Responsibility, Realistic Capacity, and Long-Term Planning

MPI's approach to vendor engagements is guided by fiscal discipline, realistic delivery capacity, and long-term planning considerations. This approach is intended to support deliberate, evidence-based decisions regarding the continuation, reduction, or conclusion of vendor services, while ensuring that future commitments are aligned with organizational priorities, internal capability, contractual rights, and the value expected from modernization investments.

- **Early identification of decision points:** MPI is identifying renewal, non-renewal, and service-reduction decision points at an earlier stage to enable intentional choices about whether services should be renewed, scaled back, or concluded where continued engagement is no longer justified.
- **More commercially assertive contract management:** MPI is applying increased rigor to the exercise of contractual rights and options, rather than continuing vendor engagements solely for continuity or because of prior investment.
- **Targeted use of external legal expertise:** External legal support is engaged, as appropriate, to assist in the confident interpretation and application of contractual rights, obligations, and remedies.

- **Disciplined forward-looking decision-making:** Vendor proposals are being rigorously assessed against internal cost, capability, and resourcing considerations to ensure that MPI does not continue engagements where the anticipated value cannot be clearly justified.

Consistent with this approach, MPI has made several key engagement decisions intended to protect contractual flexibility, maintain service continuity where required, and avoid future commitments that do not represent prudent value; a summary of key vendor engagements originating from Project Nova is provided in *Appendix 7 – Nova Contracts Confidential*, including recent involvement, current contractual status, key decisions and expected future involvement.

PUB IT Summit
May 13, 2026
MANITOBA
PUBLIC INSURANCE

Agenda

- 8:30-9:30 – Introduction
- 9:30-9:45 - Break
- 9:45 – 10:45 - Technology Planning and Risk
- 10:45 – 11:45 - Major Programs Delivery
- 11:45 – 12:00 - Closing Remarks

Key Messages

Technology debt is being actively addressed through disciplined modernization, lifecycle management, and prioritized remediation.

Legacy systems are being stabilized responsibly while replacement strategies are developed and sequenced.

Risk is being managed deliberately, with strengthened governance, clearer decision rights, and independent oversight.

Fiscal stewardship remains a priority, with constrained capacity, explicit tradeoffs, and value-based investment decisions guiding execution.

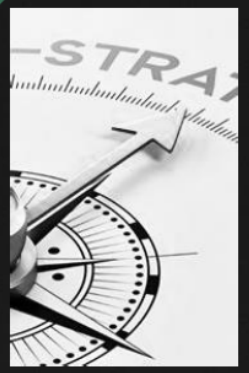
3

Break
MANITOBA
PUBLIC INSURANCE

Technology Planning and Risk

Addressing Public Utilities Board Order No. 156/25 Directive 18.c

MANITOBA PUBLIC INSURANCE



PUB Order 156/25, Directive 18

"The IT summit shall provide the following information and/or reporting:

(…)

c. an updated modernization review that provides improved visibility into MPI's plans to modernize its approximately 160 application systems, including a clear outline of modernization priorities, sequencing, interdependencies, and the strategy for funding and resourcing (both internal and external) and mapping to corresponding CPFS reported projects;"

Roadmap Timeline

APRIL 2026

- Outcome: Clear IT strategic intent
- Artifacts: Goals, behaviors, mission & values
- Decisions / Asks: Confirm strategic direction

MAY / JUNE 2026

- Outcome: Initial 5-year horizon view
- Artifacts: Executive roadmap package leveraging 6 R's
- Decisions / Asks: Endorse modernization approach & priorities

JULY 2026

- Outcome: Board-informed refinement
- Artifacts: Updated roadmap with Board input
- Decisions / Asks: Direction and guidance from Board Tech Committee

AUG / SEPT 2026

- Outcome: Working roadmap
- Artifacts: Initial rolling roadmap (change + tech debt focus)
- Decisions / Asks: Approve roadmap as baseline for planning

OCT 2026

- Outcome: External alignment and transparency
- Artifacts: Finalized roadmap for PUB & stakeholders
- Decisions / Asks: Acknowledge and support delivery path

NOV 2026 Onward

- Outcome: Workforce ready to execute the roadmap
- Artifacts: Workforce transition & upskilling themes
- Decisions / Asks: Support workforce evolution strategy

7

Next: Approach to Modernization

1. **Understand what matters most to the business**
   For each major business service (for example, Claims Management), identify the technologies that are essential to delivering that service.
2. **Assess and prioritize the risks tied to those technologies**
   Identify the key IT and business risks associated with the critical technologies, assess their relative impact and urgency, and evaluate practical treatment options using a standard set of approaches (such as retain, rehost, retire, etc.).
3. **Evaluate options and support executive decision-making**
   Assess how well each treatment option performs in both the current and future state, assign a clear fitness score, and present business-focused options to executives to inform decisions and obtain leadership direction.
4. **Plan work through IT Roadmap**
   Leverage the Architecture Vision and capture work to address supported option in the IT Roadmap for planning and execution.

Our Approach

01

Internal Staff - Our Foundation

MPI's IT department is built on internal ownership and institutional knowledge. Our people run our systems, carry our history, and lead our transformation. Accountability stays inside MPI — not with vendors.

02

External Labour - Strategic and Governed

Consultants are engaged for scarce legacy skills, specialist surge capacity, or time-bounded technical needs — never open-ended. All engagements carry knowledge transfer obligations and are visible in IT governance reporting.

03

A Formal Workforce Plan will Commence in Q4 and mature over time

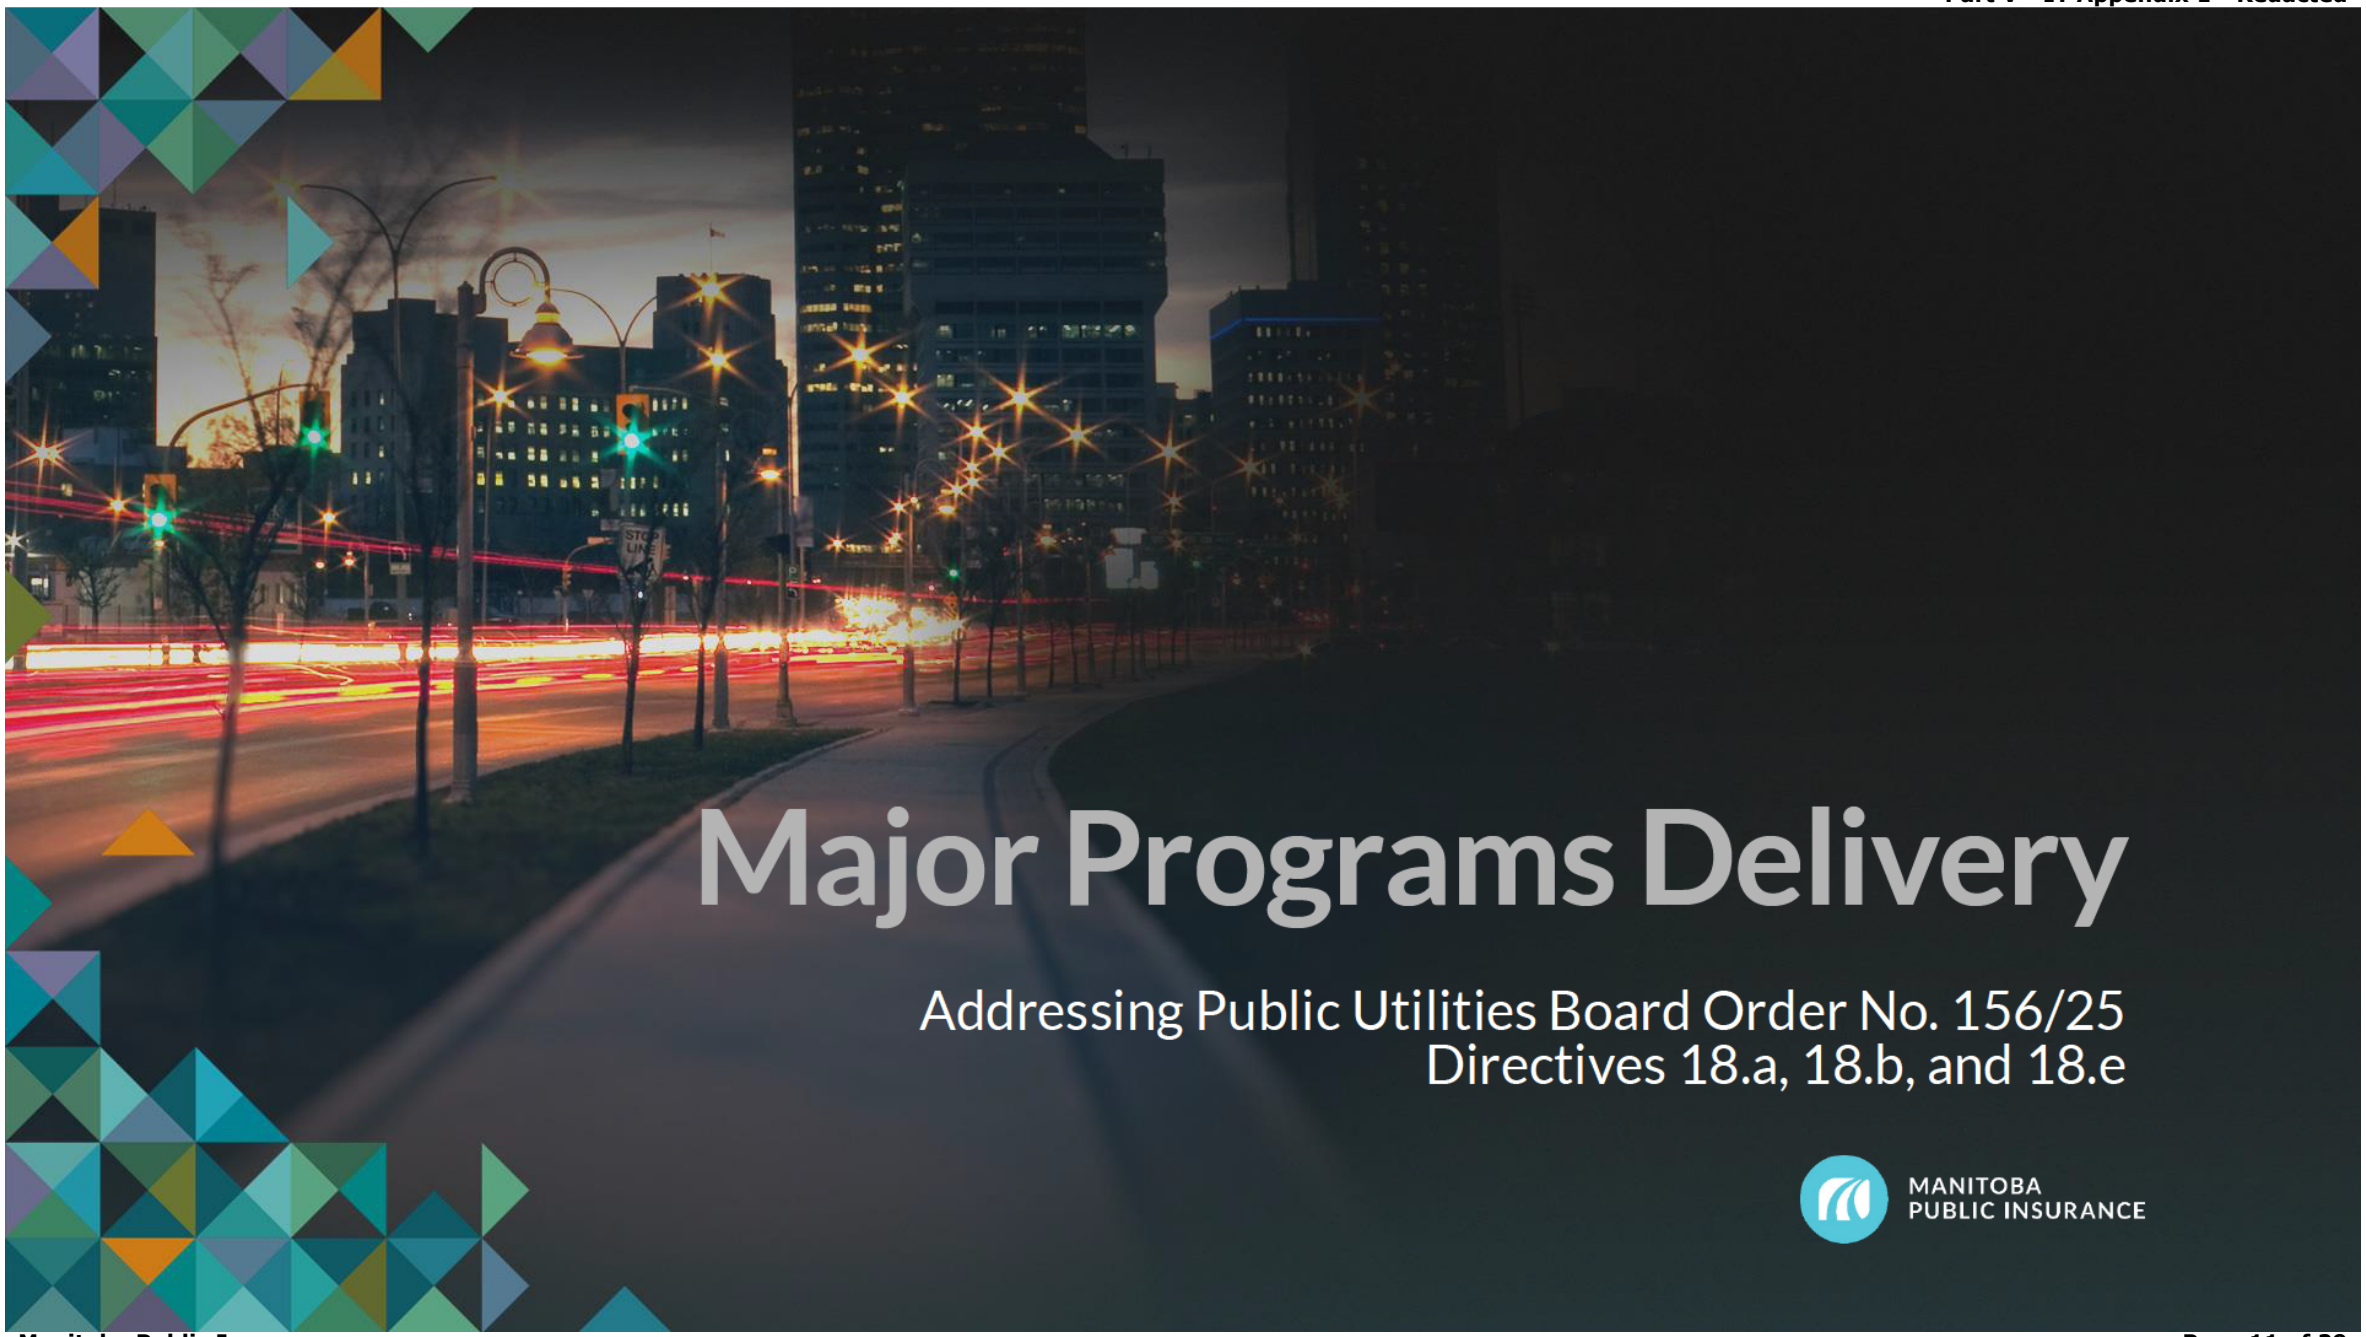
Following finalization of the IT Roadmap, MPI will begin developing a comprehensive Workforce Plan that evolves progressively—aligning long-term skill requirements with our technology direction and addressing internal hiring, targeted training investments, and the strategic use of external resources.

Long-Term Workforce Strategy

IT Roadmap finalization triggers a formal, integrated workforce plan.

Active Governance

Internal staff anchor all operations. External labour governed under defined conditions. IT governance reporting in place..



IT Roadmap Finalized

Completion of MPI's IT Roadmap establishes the definitive picture of technology direction, system priorities, and delivery sequencing.

Workforce Plan Development

Formal Workforce Plan maps long-term skill requirements to the IT Roadmap — addressing internal hiring, training investment, and strategic external use..

10

Major Programs Delivery

Addressing Public Utilities Board Order No. 156/25 Directives 18.a, 18.b, and 18.e

MANITOBA PUBLIC INSURANCE

PUB Order 156/25, Directive 18

"The IT summit shall provide the following information and/or reporting:

a. IT Benchmarking status, Value Assurance initiatives, Major Programs, and IT Strategy and inclusive of all IT Projects and Epics that are underway and planned within current fiscal year and the Rolling IT Roadmap;

b. a status update on the recommendations and actions contained in the IT reports at that point in time, including but not limited to the MNP governance report;

(…)

e. a review of MPI's framework for defining and governing Major Programs, including how smaller, interdependent initiatives that do not meet the $3million threshold will be managed, reported, and integrated into broader modernization programs;"

Major Programs Definition

A Major Program is defined as a technology program that exceeds $3M.

Major Programs will also typically:

1. Have a significant **impact to business operations / processes** (e.g., changes to underwriter workflow).
2. Have a substantial **impact to the customer and / or partner experience** (e.g., Accessing IRP through MyMPI).
3. Involve a relatively **high degree of enterprise "risk" and "complexity"** (i.e., due to cost overruns, scope creep, and change resistance) .
4. Be a part of a **series of interrelated projects that in total exceeds $3M** and is likely viewed in aggregate by key stakeholders.

Major Programs are aligned to and prioritized against initiatives within the Strategy to Execution Pipeline. Smaller, less complex projects are managed through the Project Management Office or via our Program Increment execution.

13

Major Programs Approach

Approach:

- Pursuing discrete, manageable programs / projects with 12-to-24-month time horizons (typically).
- Clear, accountable business sponsorship for better project alignment and communication.
- Focused projects with clear business cases and scope.
- Annual planning and budgeting cycles with discrete funding allocations per program / project and solid change management processes.
- Updated governance framework to appropriately handle different impact / severity levels of risks and issues.

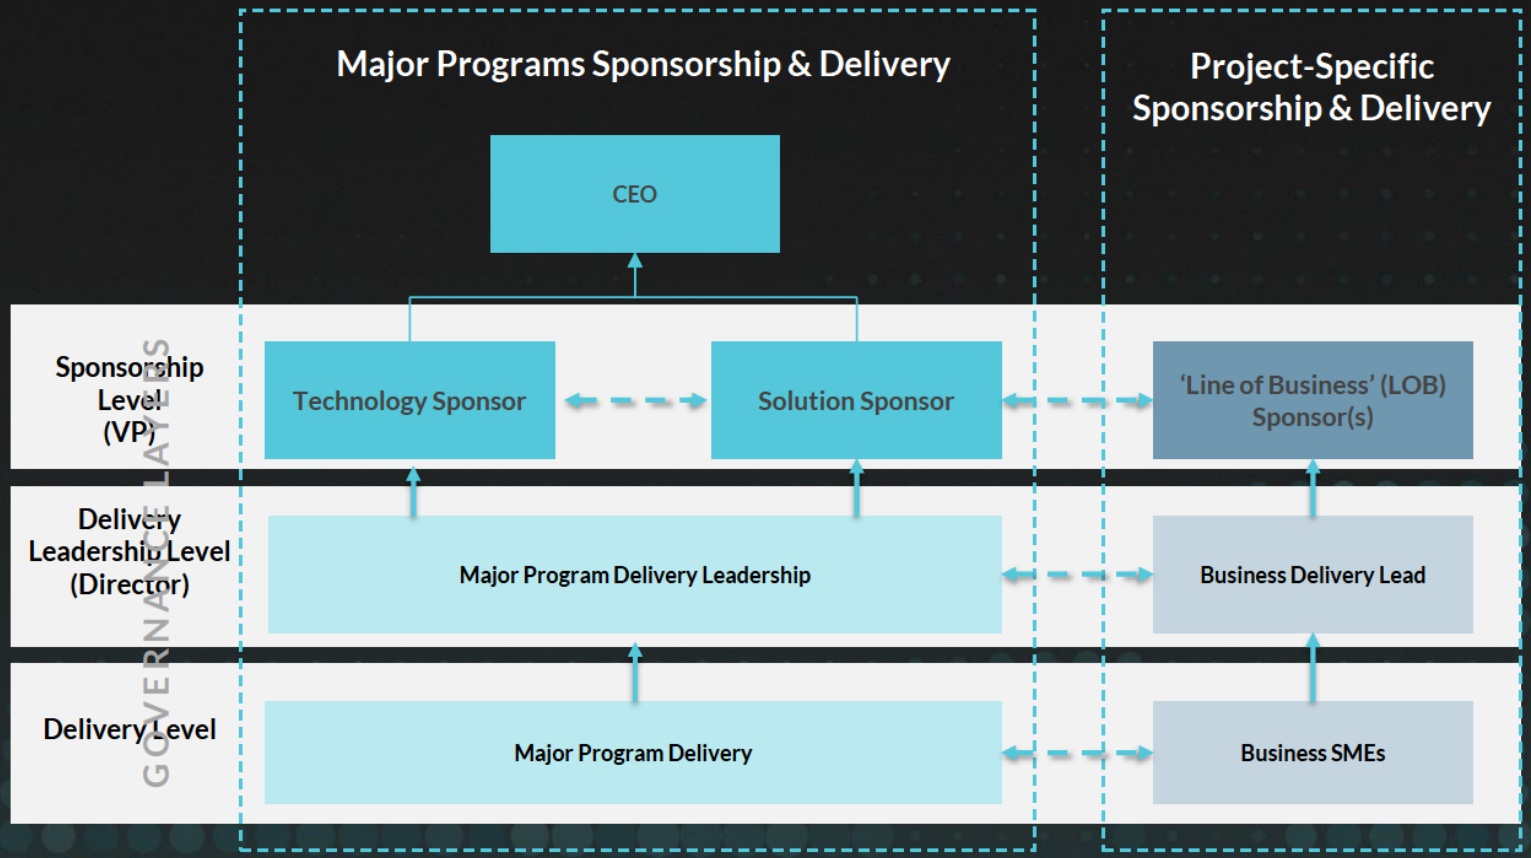
Strategic Benefits:

- Alignment with organizational capacity and priorities.
- Enhanced flexibility to adapt as needs evolve.
- Improved sustainability and accountability for long-term IT transformation.

14

Major Program Governance

MANITOBA PUBLIC INSURANCE



Governance Principles

As we considered enhancements to Major Programs governance based on leading practices and observed challenges, the following principles formed the basis for our decision-making.

1	**Business Sponsorship** Concentrated Business Sponsorship is integral for any program that impacts core business processes, customer journeys and / or user experiences
2	**Project-Based Structure Adaptability** While the business ownership principle should remain consistent, project decision-making must adapt based on most impacted business areas
3	**Budget Accountability Aligned to Program Sponsorship Model** With program sponsorship comes budget accountability, as the owner of a program's outcomes should have influence over the investment and spend related to that program
4	**Holistic Portfolio Management** All major programs are managed as an enterprise-wide portfolio aligned with strategic objectives, with sponsors ensuring connectivity between related programs to prevent duplication and maximize synergies
5	**Tiered and Decision-Oriented Governance Structure** The governance structure enables swift decision-making and emphasizes strategic dialogue at the right levels, minimizing complexity and focusing executive involvement on high-impact areas
6	**Continuous Improvement** As governance is an ongoing process, a focus on continuous improvement is paramount to strive for optimal outcomes

Governance Model

Approved model established a standard framework for Major Programs Delivery while fostering project-specific business ownership.

17

Governance Improvements

- The Governance of the Major Programs is designed to ensure effective risk management and decision making for various items encountered during the implementation of a large complex program.
- The intent of the improved governance structure is to have a clearly outlined method by which to identify Risks, Assumptions, Actions, Issues, Dependencies and Decisions and flow them to the right decision-making bodies for the right level of visibility and awareness, to be addressed in a timely manner to enable the project to be executed successfully.
- Improvements are across four key areas:
  - Increased business sponsor engagement & role clarity
  - Enhanced forums
  - Improved processes and toolsets
  - Refined communication & continuous engagement

18

Governance Vendor Oversight

MPI has an expanded Governance Vendor engagement for Major Programs, which is focused on delivering services, expert advice and coaching that will result in measurable gains to enable MPI's success in delivering Major Programs on time and on budget.

Core areas of Focus:

- Governance assessment and evaluation of Major Program's current state, risks and issues and validation of action plans
- Advisory services to identify gaps, ensure team alignment, and facilitate development of mitigations
- Develop governance best practices to enable Major Programs and MPI leadership to address risks prior to risks becoming issues, provide actionable and concrete mitigation steps and proactive solutions
- Measuring internal control effectiveness
- Providing guidance on conducting due diligence on potential and existing vendors
- Establishing systems for ongoing monitoring of vendor performance and risk levels

Program Status Updates

MANITOBA PUBLIC INSURANCE

2026/27 Major Programs

1

MyMPI Foundation & IRP Online

International Registration Program online functionality and MyMPI Foundational online work.

2

SRE Remediation

SIS Reversion, Assessment & Planning and Data Quality.

3

BI3 Upgrade

Bodily Injury Claims Management system upgrade.

4

ERP Replacement

Upgrade current ERP – Infor Upgrade and Assessment and Planning for future ERP solution .

21

MYMPI Foundation & IRP Online

DESCRIPTION:

This project aims to establish a new customer portal called MyMPI. The first customers using the portal will be International Registration Plan (IRP) customers.

The foundational services, such as login and authentication, can then be built upon in future projects to bring more online functionality to customers.

IRP Online will allow IRP customers to renew and amend fleets & vehicles, pay outstanding invoices and view/print documents online.

KEY DRIVERS:

- Remediates R2 Deferred work that resulted in workarounds and duplicate entries for the Prorate Office.
- Enables "out of the box" online transactions for IRP customers through recently deployed software for DVA.
- Provides foundation for future online services with first smaller pilot customer group of IRP customers.

22

SRE Remediation

DESCRIPTION:

Addresses issues from Nova release for Special Risk Extension. Includes data quality improvements. Assessment and Planning initiative focused on confirming path forward.

The overarching program of "SRE Remediation" entails multiple projects with discrete business cases: SIS Reversion (In-progress), Assessment & Planning (In-progress) , Data Quality (planning), Implementation (TBC).

KEY DRIVERS:

- Moves policies from Duck Creek to SIS (prior legacy system) to stabilize.
- Stabilize SRE line of business.
- Determine path forward.

23

BI3 Upgrade

DESCRIPTION:

The FINEOS case management solution has been an on-prem solution in use by the Bodily Injury Case Management team since 2010 to administer and manage bodily injury claim.

FINEOS previously announced that they are changing their licensing model from providing and supporting on-prem solutions and moving to a SaaS (Software as a Service) cloud subscription model.

KEY DRIVERS:

- MPI is currently on the last available on-prem version of FINEOS software.
- Upgrading to the cloud will allow MPI to use the latest version of software and will shift the responsibility for future upgrades to FINEOS and reduce MPI effort and eliminate infrastructure upgrade costs.

24

ERP Replacement

DESCRIPTION:

The ERP Replacement Program covers multiple related ERP projects. The Infor Upgrade project will address short term support. [redacted]

The Assessment & Planning project will define the current and target state for both People & Culture and Finance and procure an ERP solution.

KEY DRIVERS:

- Keeping Enterprise Resource Planning (ERP) system in mainstream support.
- Addressing MPI's long term ERP business needs through evaluating and selecting an aligned solution.

25

Enabling Successful Execution

GOVERNANCE: Clear decision rights, business sponsor accountability, and independent oversight.

RESOURCE PLANNING: Regular reviews of staffing and external labor to match project needs.

SKILLS DEVELOPMENT: Targeted training and upskilling to close capability gaps.

OPERATIONAL READINESS: Dedicated teams for smooth transitions and knowledge transfer.

CONTINUOUS MONITORING: Ongoing tracking of risks, resource saturation, and project health.

Key Messages

Technology debt is being actively addressed through disciplined modernization, lifecycle management, and prioritized remediation.

Legacy systems are being stabilized responsibly while replacement strategies are developed and sequenced.

Risk is being managed deliberately, with strengthened governance, clearer decision rights, and independent oversight.

Fiscal stewardship remains a priority, with constrained capacity, explicit tradeoffs, and value-based investment decisions guiding execution.

Executive Summary

Purpose

This report provides the Public Utilities Board (PUB) with a consolidated view of the current state of Information & Technology (IT) at Manitoba Public Insurance (MPI) and addresses Public Utilities Board (PUB) Order No. 156/25 directives, while providing MPI's progress on key IT risks and the forward plan for fiscal years 2026/27 and beyond. The focus is on technology risk reduction, fiscal discipline, governance maturity, and delivery confidence.

The PUB Directive is provided below for reference:

"18. MPI shall hold an IT summit to take place no later than May 2026 to review progress on IT projects and on the development and implementation of the Rolling IT Roadmap. The IT summit shall provide the following information and/or reporting:

a. *IT Benchmarking status, Value Assurance initiatives, Major Programs, and IT Strategy and inclusive of all IT Projects and Epics that are underway and planned within current fiscal year and the Rolling IT Roadmap;*
b. *a status update on the recommendations and actions contained in the IT reports at that point in time, including but not limited to the MNP governance report;*
c. *an updated modernization review that provides improved visibility into MPI's plans to modernize its approximately 160 application systems, including a clear outline of modernization priorities, sequencing, interdependencies, and the strategy for funding and resourcing (both internal and external) and mapping to corresponding CPFS reported projects;*
d. *an update on the status of key vendor engagements originating from Project Nova, outlining their continued involvement, contractual position, and anticipated contribution to future IT initiatives and modernization work;*
e. *a review of MPI's framework for defining and governing Major Programs, including how smaller, interdependent initiatives that do not meet the $3million threshold will be managed, reported, and integrated into broader modernization programs;*
f. *a plan to address the apparent uncertainty in MPI's staffing mix and consultant forecasting providing greater clarity and consistency in how internal and external resources are planned and reported aligned to the updated IT Strategy."*

Key Messages

- **Technology debt is being actively addressed** through disciplined modernization, lifecycle management, and prioritized remediation.
- **Legacy systems are being stabilized responsibly** while replacement strategies are developed and sequenced.
- **Risk is being managed deliberately**, with strengthened governance, clearer decision rights, and independent oversight.
- **Fiscal stewardship remains a priority**, with constrained capacity, explicit tradeoffs, and value-based investment decisions guiding execution.

IT Benchmarking

MPI continues to address PUB Order 156/25, Directive 18, through structured IT benchmarking, transparent reporting, and action against external recommendations. Part a) of the PUB Directive is outlined below.

"The IT summit shall provide the following information and/or reporting:

a. IT Benchmarking status, Value Assurance initiatives, Major Programs, and IT Strategy and inclusive of all IT Projects and Epics that are underway and planned within current fiscal year and the Rolling IT Roadmap;"

Gartner Recommendations Fiscal Year 2025/26

Each year, MPI partners with Gartner to assess its information and technology functions, benchmark them against industry peers, and identify gaps and opportunities for improvement.

For 2025/26, three key priority areas were identified, as noted in Figure 1 below:

1. Strengthening product and application lifecycle management planning
2. Enhancing vendor management capabilities
3. Advancing the data ecosystem

Figure 1 – Gartner Recommendations

Plan Product and Application Lifecycle

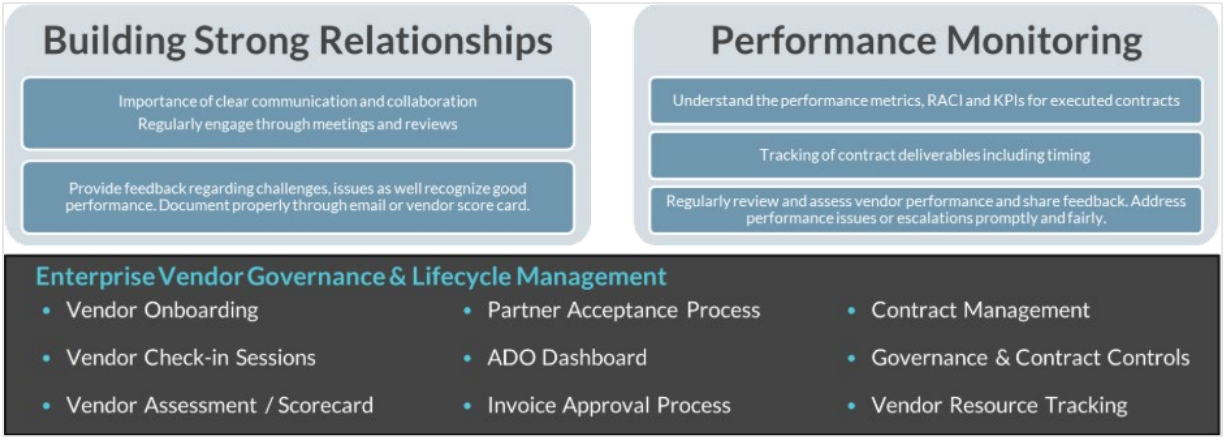
Today, MPI does not have a single, enterprise-wide way to manage the full lifecycle of its applications. As a result, lifecycle decisions are often reactive, triggered by vendor end of support notices or operational incidents rather than proactive, risk informed planning. This limits executive visibility into application health, increases technical debt, and exposes the organization to unsupported technology risk. It also makes it harder to plan capacity and investments in a disciplined way, because lifecycle risk is not consistently built into portfolio and funding decisions. As a result, Gartner's recommendation is to strengthen MPI's product and application lifecycle, with a focus on strategic alignment, modernization, and governance.

To address this, MPI is establishing an enterprise Application Lifecycle Management (ALM) framework that introduces clear lifecycle stages, defined decision points, and explicit business and IT ownership for every production application. Lifecycle planning will be integrated directly into portfolio management, road mapping, risk management, and funding processes, supported by a consistent governance cadence with standardized reporting and prioritization. This approach enables more disciplined modernization, upgrade, and retirement decisions, improves predictability for resourcing and investment, and reduces operational and compliance risk. Guiding Principles such as joint ownership, maintaining vendor-supported versions, the 18-month end-of-support rule, risk-based decision pathways, and managed exceptions ensure that lifecycle decisions remain consistent, transparent, and defensible.

Figure 2 illustrates the guiding principles that underpin MPI's ALM framework:

Figure 2 – ALM Guiding Principles

Implementation will occur through a deliberate three-phase approach. The Foundation phase establishes the ALM framework, governance model, ownership standards, and alignment with existing portfolio and risk processes. The Operationalize phase validates and baselines the application inventory, applies lifecycle and risk assessments across the portfolio, and activates regular governance and reporting. In the Sustain and Mature phase, ALM becomes embedded into annual planning and investment cycles, with continuous improvement of metrics, governance, and enterprise adoption. Success is defined by ALM becoming part of how MPI plans, prioritizes, and manages technology, reducing risk and technical debt over time while supporting informed, accountable executive decision-making.



Manage Vendors

Given the scale and complexity of external engagements, structured vendor management is critical to maintaining accountability, fiscal responsibility, and consistent execution. Without clear governance and oversight, vendor relationships can introduce delivery risk, cost overruns, and misalignment with corporate priorities. After review and analysis, Gartner recommended that MPI mature its vendor engagement capabilities to strengthen program and portfolio management outcomes.

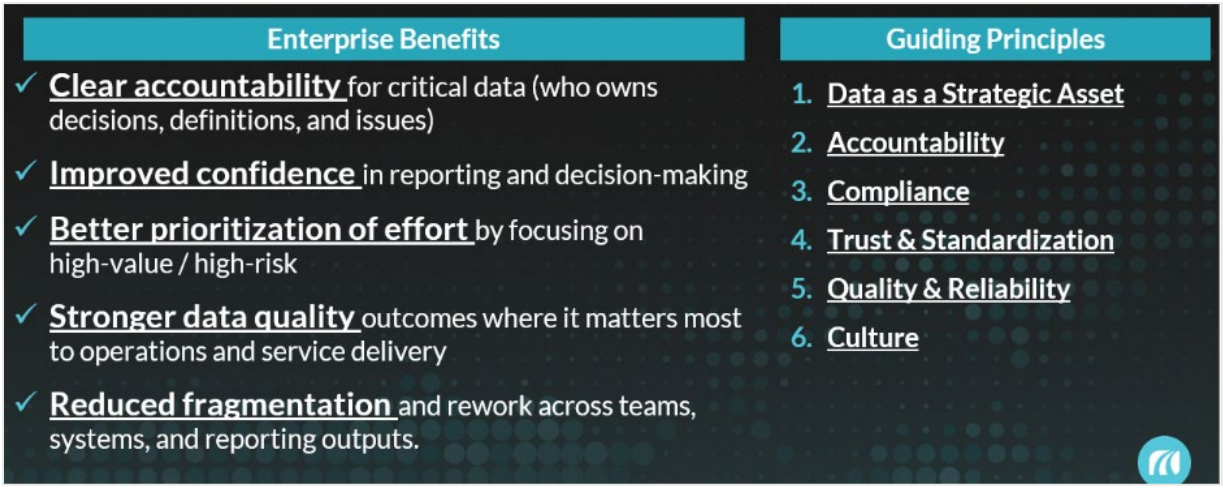
MPI's approach to vendor management now focuses on two key areas, building strong relationships and performance management, ensuring disciplined control over risk, cost, and delivery outcomes across the full vendor lifecycle. This framework ensures vendors are engaged intentionally,

managed transparently, and held to clear performance and contractual expectations. Figure 3 illustrates MPI's approach and provides additional detail.

Figure 3 – Key areas of Vendor Management

MPI manages and governs vendors through an enterprise lifecycle that includes structured onboarding, regular check-in and scorecard performance assessments, formal acceptance of deliverables, disciplined invoice approval, and ongoing contract and risk management. Governance and controls are applied consistently, supported by clear communication, documented expectations, and auditable processes.

Foster the Data Ecosystem



Gartner's final recommendation is to advance MPI's data ecosystem by establishing comprehensive data fabric architecture, enhancing data governance, and integrating practices. Gartner assessed MPI's data management maturity level at 1.5 out of 5.

Public sector data directly underpins service delivery and outcomes, everything from regulatory compliance, operational decision making, and emerging uses such as analytics and artificial intelligence. As data is reused, shared, and embedded in automated processes across MPI, expectations around accountability, transparency, and risk management continue to rise. Formal governance is required to ensure responsibility for data decisions is clear, high quality persists, and confidence in reporting and decision making is strong. Data governance provides the structure needed to clarify ownership, manage risk, and enable consistent, responsible use of data across the organization.

MPI's data governance approach treats data as a strategic enterprise asset, supported by clear accountability, compliance with standards and legislation, trusted and standardized definitions, and a strong focus on quality and reliability. This framework improves confidence in reporting, reduces fragmentation and rework, and ensures effort is focused on the data that matters most to operations and service delivery. Governance is not about adding bureaucracy, but about enabling better decisions by aligning ownership, definitions and controls, and reinforcing a culture of

stewardship and data literacy across the enterprise. Figure 4 below summarizes the benefits and guiding principles of MPI data governance approach,

Figure 4 – MPI data governance Approach

Implementation follows a phased path. The initial phase establishes the governance policy, executive oversight, and foundational operating structures. The next phase pilots enterprise data portfolios, activates data quality and cataloging practices, delivers training, and introduces governance reporting and scorecards. The final phase scales and integrates governance practices across the organization with continuous improvement.

In parallel, MPI is establishing a modern enterprise data platform, Microsoft Fabric, to address fragmented data, limited scalability, and reliance of on-premises infrastructure. This integrated platform strengthens security and governance, improves reliability and efficiency, and positions MPI to support advanced analytics and responsible use of artificial intelligence as data needs continue to grow.

Gartner Benchmarking Plan Fiscal Year 2026/27

MPI will once again partner with Gartner to assess its information and technology functions, benchmark them against industry peers, and identify gaps and opportunities for improvement for fiscal year 2026/27.

Benchmarking and maturity assessments will commence in May 2026, followed by financial analysis and findings, culminating in a final report in August 2026.

Detailed recommendations will be submitted to the PUB and made available for review during hearings scheduled for October 2026. Figure 5 below depicts the timeline for the benchmarking exercise this year.

Figure 5 – IT Benchmarking Timeline

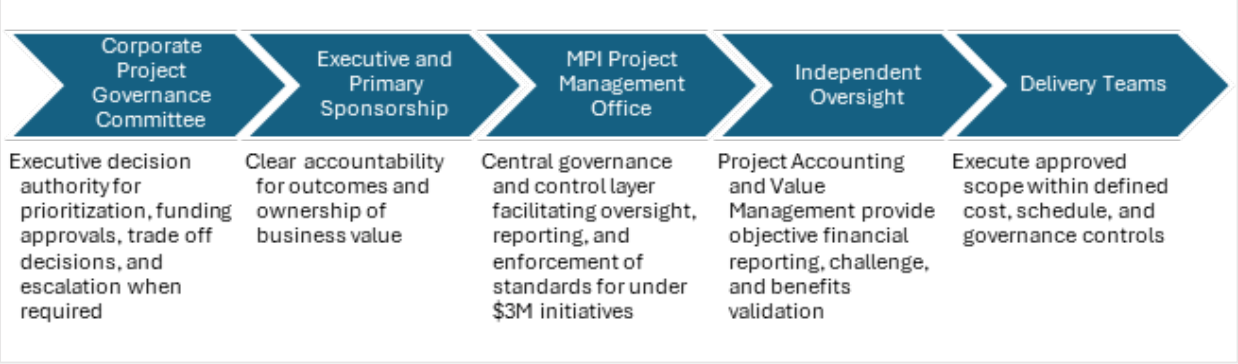
Project & Major Programs

PUB Directive 18, parts a), b), and e) read as follows:

"The IT summit shall provide the following information and/or reporting:

a. *IT Benchmarking status, Value Assurance initiatives, Major Programs, and IT Strategy and inclusive of all IT Projects and Epics that are underway and planned within current fiscal year and the Rolling IT Roadmap;*
b. *a status update on the recommendations and actions contained in the IT reports at that point in time, including but not limited to the MNP governance report;*

(…)



e. *a review of MPI's framework for defining and governing Major Programs, including how smaller, interdependent initiatives that do not meet the $3 million threshold will be managed, reported, and integrated into broader modernization programs;"*

On April 20, 2026, MPI announced an evolution to a new Enterprise Project Management Office (EPMO) structure, consolidating Major Programs and PMO functions under a single, enterprise-wide delivery model and moving the function from IT into the Customer & Product Value division. This change strengthens alignment between corporate strategy and execution, improves governance and portfolio visibility, and supports more consistent, predictable delivery of initiatives across the organization. Overall, the EPMO positions MPI to better manage risk, optimize resources, and deliver measurable value to customers and business.

Project Management Governance

MPI has implemented layered governance, depicted on Figure 6 below, to ensure accountability, independent oversight, financial discipline, and value realization across the program, while avoiding concentration of risk in any single role.

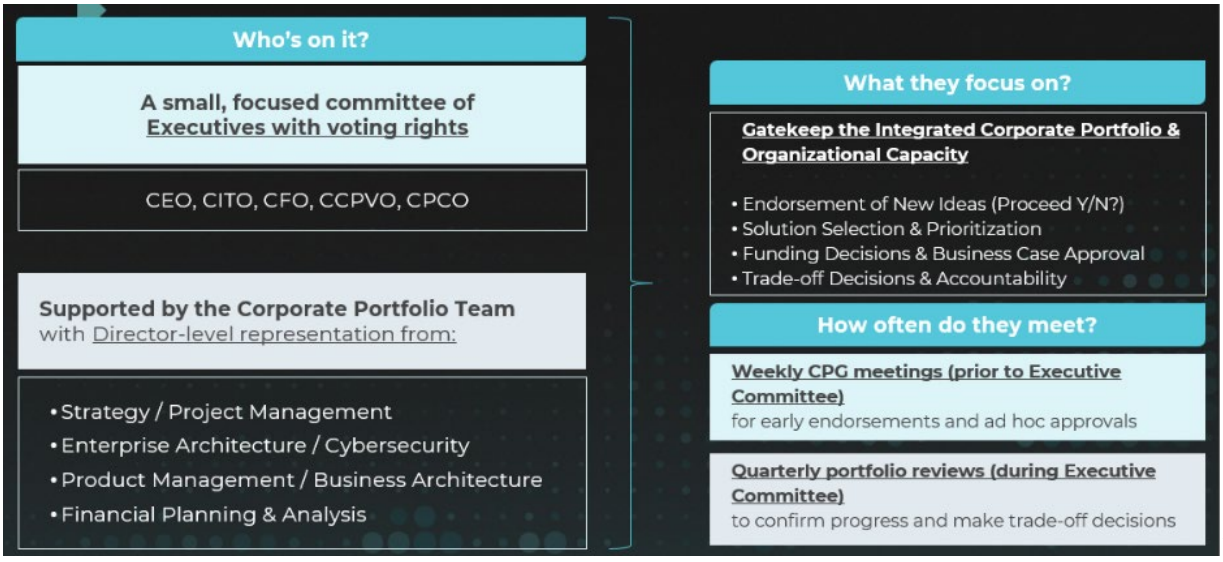


Figure 6 – Project Management Governance

MPI's project governance framework for initiatives under three million dollars is designed to ensure accountability, risk management, and fiscal discipline are applied consistently as work progresses in size and complexity. Even at smaller investment levels, technology and business initiatives carry delivery, financial, and operational risk. Without clear decision authority and independent oversight, those risks can accumulate and become harder to correct. This governance model exists to surface issues early, protect capital, and ensure that investment decisions remain aligned with corporate priorities and risk tolerance.

Governance for these initiatives is facilitated through MPI's Project Management Office, which provides a consistent control and oversight layer across the portfolio. Executive and primary sponsors retain accountability for outcomes and business value, while delivery teams operate within clear governance expectations. The Corporate Project Governance Committee provides executive decision authority for prioritization, funding approvals, and trade off decisions when required, supported by evidence-based analysis from the corporate portfolio function. Independent project accounting and value management provide additional challenge and validation, ensuring that financial reporting and benefits realization remain objective, transparent, and auditable. Figure 7 below provides additional detail on Corporate Project Governance Committee.

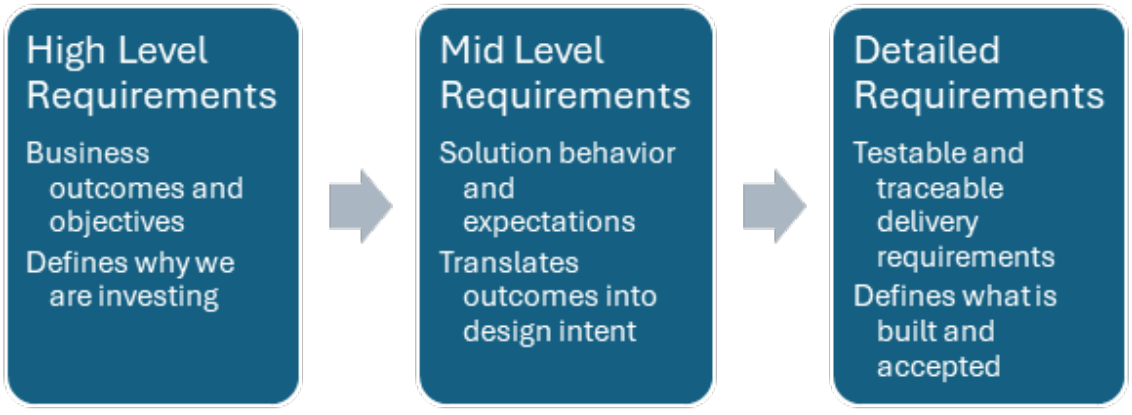
Figure 7 - Corporate Project Governance Committee composition

[1]

Financial controls are deliberately structured to increase rigor as risk and spend grow. Projects are constrained by fiscal year funding boundaries, with formal change approval required for any extension beyond approved allocations. Independent project accounting monitors actuals and

[1] Chief Executive Officer (CEO), Chief Information Technology Officer (CITO), Chief Financial Officer (CFO), Chief Customer and Product Value Officer (CCPVO); and, Chief People & Culture Officer (CPCO).

forecasts and has authority to escalate concerns. As initiatives approach the $3-million-dollar threshold, governance automatically escalates to Major Program oversight, triggering stronger controls, reporting, and executive visibility. Together, these layered defenses ensure early detection of risk, enforced escalation, disciplined decision making, and confidence that no initiative can silently grow beyond its approved scope, cost, or risk profile.



Requirements Management

MPI established an enterprise Requirements Management Framework to address a recurring source of delivery risk: unclear, inconsistent, and weakly governed requirements, particularly in complex and multi-year initiatives. Historically, differing approaches to defining and managing requirements led to scope growth, misalignment between business intent and delivered solutions, rework, and reduced confidence in value realization. As initiatives scale and extend over time, these risks compound, making it harder to control cost, preserve strategic intent, and hold clear ownership for outcomes.

The Requirements Management Framework provides a consistent, enterprise-wide approach that clarifies ownership, standardizes artefacts, and establishes full traceability from approved business outcomes through to delivered capabilities. It is designed to protect executive intent and investment by ensuring there is a single source of truth for what was agreed, what changed, and why. Rather than adding a new layer of governance, the framework integrates directly into existing structures, strengthening scope control, change discipline, and decision making while reducing late-stage surprises and disputes.

The framework organizes requirements into three clear levels, depicted in Figure 8 below.

Figure 8 – Requirements Management Levels

High-level requirements define business outcomes and objectives, preserving strategic intent over the life of an initiative. Mid-level requirements translate those outcomes into solution behaviour, supporting disciplined design and preventing misinterpretation or over-engineering. Detailed

requirements capture testable, delivery-level expectations that enable objective validation and acceptance. Together, this structure ensures that every delivered feature can be traced back to an approved business need, strengthening accountability, cost control, and confidence that investment decisions result in intended outcomes.

Corporate Initiatives

Completed Initiatives for Fiscal Year 2025/26

Across Fiscal Year 2025/26, MPI completed a focused set of corporate, non-Major Program initiatives that delivered tangible value for Manitobans while demonstrating disciplined execution and responsible stewardship of public funds. These initiatives reflect deliberate prioritization of smaller investments that addressed customer needs, strengthened risk and control environments, and modernized foundational capabilities without overextending organizational capacity or increasing delivery risk.

Collectively, the completed work improved customer access to services, strengthened fraud prevention, cyber readiness, and identity controls, and modernized critical platforms and shared services. While modest in scale individually, these initiatives played an important role in advancing service quality, resilience, and sustainability as part of a balanced and well-governed corporate portfolio.

Customer Experience & Safety

- **Taxi Telematics Pilot**
  Concluded a pilot to improve road safety awareness and provide data to support transportation and safety decision-making.
- **Licence Status Lookup**
  Enabled customers to directly retrieve driver licence status online, reducing manual processing, service centre visits, and turnaround time.
- **Queue Management**
  Improved service centre flow and wait time transparency, optimizing customer movement and overall service efficiency.

Fraud, Risk & Resilience

- **Stolen Vehicles and VIN Identification Pilot**
  Enhanced investigative capabilities for improving identification and tracking of stolen vehicles, supporting fraud detection and enforcement.
- [redacted]
- [redacted]

Enterprise Enablement & Sustainability

- **Cloud Migration**
  Modernized core infrastructure to improve scalability, reliability, and security, providing a foundation for future technology initiatives.
- **Capital Modelling Software**
  Advanced actuarial and financial modelling capabilities to better support enterprise decision-making and long-term financial planning.
- **Content Architecture**
  Improved the structure, clarity, and accessibility of digital content through training and common standards.
- **Contact Centre as a Service (CCaaS)**
  Updated contact centre operations to support scalable, reliable service delivery and improved operational resilience.
- **GRC Tool Implementation**
  Implemented an integrated governance, risk, and compliance solution to strengthen enterprise oversight and risk management.
- **Print Management Software Replacement**
  Replaced aging print management capabilities to ensure reliable customer communications.
- **Digital Culture Improvements**
  Standardized audio and visual capabilities across meeting rooms to support hybrid work and consistent employee experience.

Carry-Over and Planned Initiatives for Fiscal Year 2026/27

Corporate Initiatives planned for Fiscal Year 2026/27 are the result of a structured, executive-led annual planning process designed to translate strategic priorities into a realistic and deliverable portfolio. Proposed initiatives were assessed alongside carry-over work from prior years to establish a complete view of enterprise demand before new commitments were approved.

Through formal feasibility assessment, initiatives were evaluated based on delivery complexity, dependencies, timing, and available capacity. This ensured that sequencing and trade-offs were intentional, transparent, and grounded in enterprise-wide readiness rather than assessed in isolation. Corporate Initiatives continue to be governed as part of an integrated portfolio alongside Major Programs, with clear alignment to modernization objectives and appropriate governance proportional to risk and scale.

Carry-Over Corporate Initiatives Entering FY 2026/27

- **Legislative and Regulatory Efforts – Road Safety Collision Dashboard**
  Delivered a public dashboard to improve access to road safety data, with minor back-end enhancements continuing.

- **Changes to Deductible Products**
  Implemented product changes affecting deductibles, with follow-up system corrections underway.
- [redacted]
- **Business Continuity Management**
  Planned and procured a replacement solution to maintain enterprise business continuity capabilities.
- **Enterprise Data Domain Modeling – MyMPI Foundation and IRP Online**
  Enhanced enterprise data models to support foundational online customer services.
- **Foundational Setup for Enterprise Data Platform – Phases 1 and 2**
  Advanced core data platform capabilities to strengthen enterprise data management.
- **Driver Z Registration by Appointment Window**
  Reduced in-person lineup pressures through scheduled registration windows and improved operational tools.

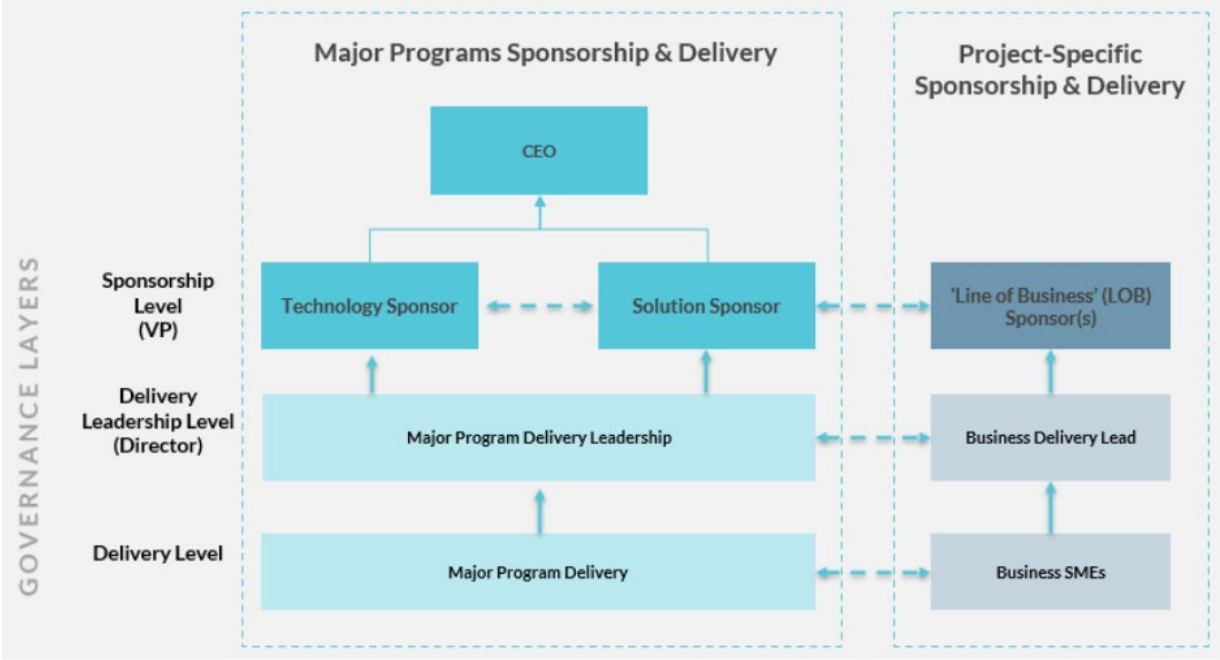
New Corporate Initiatives Approved for FY 2026/27

- **Credit Card Review**
  Introduce a review of credit card transactions to identify options to better manage operating costs while preserving customer choice.
- **Legislative and Regulatory Efforts – DVA Fees**
  Adjust driver and vehicle service fees to align with legislative requirements.
- **New Policy Wording**
  Review and modernized policy language to improve clarity and manage coverage risk for Special Risk Extension.
- **Product Migration and Retirement**
  Assess low-volume products for opportunities to retire or migrate to simplify offerings and reduce complexity.
- **Document Capture Upgrade**
  Address performance and reliability risks in document capture technology affecting service standards.
- **Contact Centre as a Service – Agent Assist and Low-Touch Enhancements**
  Implement targeted enhancements to support frontline efficiency and improve call handling.
- **Digital First Notice of Loss Solution**
  Migrate online claims reporting to a modern platform to improve integration and functionality.

- **E-Signature for Brokers Rollout and Transaction Expansion**
  Expand electronic signature capabilities to enable additional online transactions.
- **IFRS 18**
  Implement required changes to comply with new financial statement presentation standards.
- **Legislative and Regulatory Efforts – New Impaired Driving Countermeasures**
  Prepare systems and processes to support upcoming impaired driving legislative changes.
- **Application Modernization – DLS Enterprise Server Upgrade**
  Upgrade core infrastructure supporting driver licensing services to remain in mainstream support.

Major Programs Delivery

MPI defines a Major Program as a technology initiative exceeding $3 million dollars in cost and involving material operational, customer, or enterprise risk, recognizing that these characteristics require a distinct delivery and governance model. Major Programs typically span multiple interrelated projects, carry heightened complexity, and demand stronger control over sponsorship, funding, and decision making. This definition establishes a clear boundary between routine project delivery and initiatives that require enhanced oversight to protect outcomes, capital, and organizational capacity.



In response to lessons learned from prior large-scale initiatives, MPI strengthened its Major Programs governance framework by grounding it in clear principles and role clarity. Concentrated business sponsorship aligned budget accountability, and tiered, decision-focused forums form the foundation of the model. Refer to Figure 9 below for additional details on the Governance Principles.

Figure 9 - Governance Principles

1	**Business Sponsorship** Concentrated Business Sponsorship is integral for any program that impacts core business processes, customer journeys and / or user experiences
2	**Project-Based Structure Adaptability** While the business ownership principle should remain consistent, project decision-making must adapt based on most impacted business areas
3	**Budget Accountability Aligned to Program Sponsorship Model** With program sponsorship comes budget accountability, as the owner of a program's outcomes should have influence over the investment and spend related to that program
4	**Holistic Portfolio Management** All major programs are managed as an enterprise-wide portfolio aligned with strategic objectives, with sponsors ensuring connectivity between related programs to prevent duplication and maximize synergies
5	**Tiered and Decision-Oriented Governance Structure** The governance structure enables swift decision-making and emphasizes strategic dialogue at the right levels, minimizing complexity and focusing executive involvement on high-impact areas
6	**Continuous Improvement** As governance is an ongoing process, a focus on continuous improvement is paramount to strive for optimal outcomes

MPI introduced Governance improvements to ensure risks, assumptions, issues, dependencies, and decisions are identified early and escalated to the appropriate level for timely resolution. This structure is designed to support disciplined decision making, reduce ambiguity, and ensure executive attention is focused on where impact and risk are greatest. Figure 10 below depicts the Governance Model with layers for Major Programs:

Figure 10 - Governance Model

As part of continuous improvement, independent governance oversight continues to play a central role in this model. The independent governance support provides objective assessment of program health, validation of risk mitigation plans, and independent challenges where delivery assumptions, technical fit, or readiness require scrutiny. This approach strengthens MPI's ability to identify emerging risks, validate delivery confidence, and protect against repeat failure.

Within this strengthened framework, MPI is advancing a focused portfolio of Major Programs aligned to strategic drivers such as customer digital services, operational stability, and reduction of technology debt.

Major Programs Portfolio

- **MyMPI Foundation and IRP Online**
  Establishes a new customer portal, MyMPI, beginning with International Registration Plan services. The program provides secure login and authentication capabilities and enables IRP customers to complete renewals, amendments, payments, and document access online. It

remediates prior workarounds, stabilizes operations, and creates a scalable foundation for future digital customer services.

- **SRE Remediation**
  Addresses significant operational and technical issues arising from the Nova release for Special Risk Extension. This program includes reverting expiring policies from Duck Creek back to the legacy SIS system to stabilize operations, correcting data quality issues across Duck Creek modules, and conducting assessment and planning to determine an appropriate long-term solution. The focus is stabilizing the SRE line of business while identifying an appropriate path forward.
- **BI3 Upgrade**
  Transitions MPI's Bodily Injury case management system from an on-premises deployment to the FINEOS cloud platform. This program mitigates end-of-support risk, provides access to current software versions, and shifts responsibility for infrastructure and future upgrades to the vendor, reducing operational effort and long-term technical debt.
- **ERP Replacement**
  Covers a set of related initiatives to maintain ERP system support in the short term while preparing for a longer-term replacement. [redacted]

Technology Planning and Risk Management

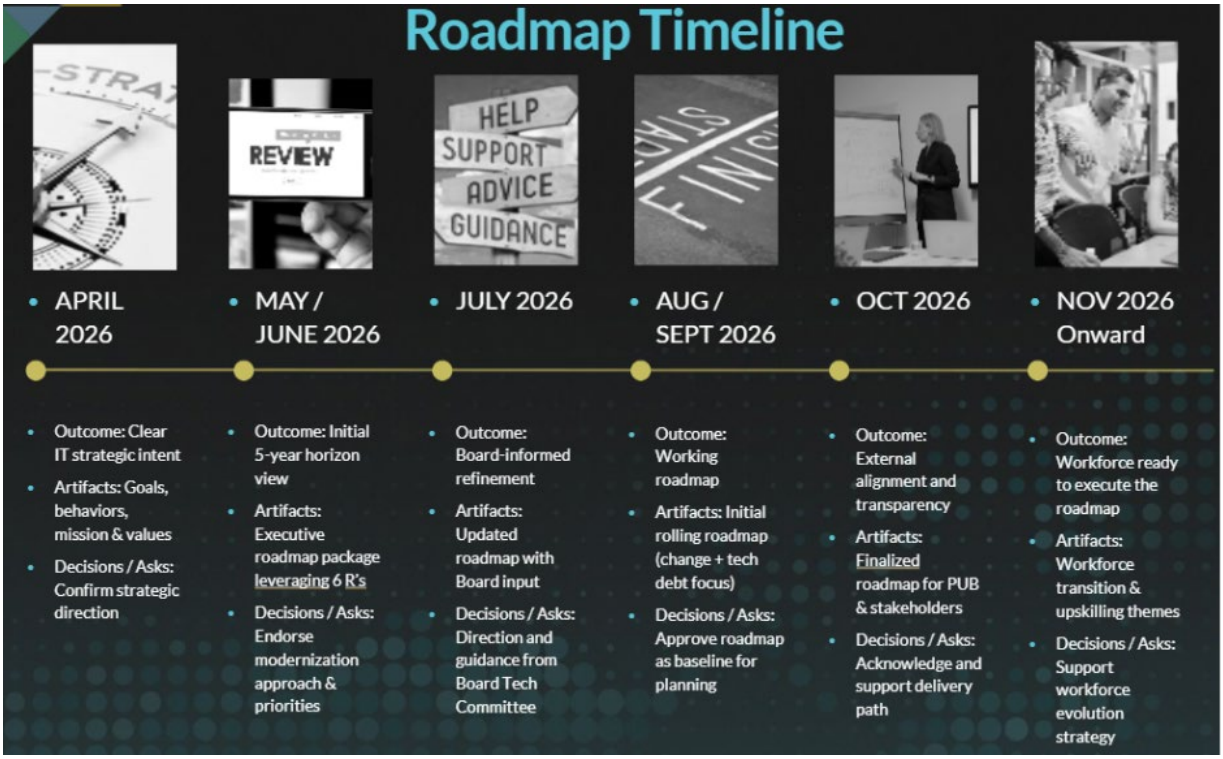
Directive 18, part c) reads as follows:

"The IT summit shall provide the following information and/or reporting:

(…)

c. an updated modernization review that provides improved visibility into MPI's plans to modernize its approximately 160 application systems, including a clear outline of modernization priorities, sequencing, interdependencies, and the strategy for funding and resourcing (both internal and external) and mapping to corresponding CPFS reported projects;"

MPI's application management and modernization strategy starts with defining the IT 2030 vision—our "north star"—along with clear objectives and measurable outcomes.



By the end of 2026, IT will develop and share a rolling five-year plan with stakeholders. This plan will include:

- A disciplined approach to measuring and managing technical debt, supported by ongoing monitoring and reporting
- Continued investment in people, leadership, and future-focused risk and technology skills
- Further development of consistent, measurable delivery and operational practices
- Stabilization of legacy platforms

- Progress on modernization, guided by Gartner's "6 Rs" framework

Figure 11 below provides a timeline, as follows:

Figure 11 – Roadmap Timeline

MPI's Modernization Strategy

MPI has adopted a deliberate, risk-informed approach to technology modernization that balances near-term stability with longer-term transformation. Rather than treating modernization as a single initiative, technology debt and risk are addressed through a combination of targeted projects and ongoing operational work, each scaled and governed according to impact, urgency, and risk exposure. This approach, illustrated in Figure 12 below, prioritizes service continuity and risk reduction while avoiding reactive or technology-led decision-making.

Figure 12 – MPI's Approach to Technology Modernization

Targeted modernization projects are used where risks are material; customer-facing impacts are significant, or platforms are no longer fit for purpose. In parallel, a steady stream of operational modernization work is undertaken to keep systems supported and stable, including upgrades and remediation activities required to maintain software in mainstream support. This separation ensures larger, more complex risks receive focused oversight while routine, but necessary improvements are handled efficiently as part of normal operations.

Modernization decisions are grounded in business context rather than technology conditions alone. Critical business services are identified first, followed by assessment of the technologies that enable them and the operational and risk implications associated with those technologies. Standard treatment options are evaluated following Gartner's 6R's of application modernization (rehost (lift & shift), replatform (lift, tinker & shift), refactor/rearchitect, rebuild/repurchase (replace), retire, retain), and fitness is assessed across both current and future states to support clear, business-focused recommendations. This enables informed executive decisions that balance risk, value, and organizational readiness.

Approved modernization work is then sequenced through the IT Roadmap, aligning effort with business priorities and the organization's capacity to absorb change. Tradeoffs are made explicitly, not implicitly, ensuring modernization activity remains coordinated, transparent, and achievable. Collectively, this demonstrates a mature modernization discipline focused on reducing risk, sustaining reliable services, and advancing the technology environment in a planned and defensible manner.

Initiatives to Address Modernization

Completed Initiatives 2025/26

- Contact Centre Platform Modernization (Project 3336 – Contact Center as a Service)
  Modernized the contact centre platform to ensure customers continue to receive timely and reliable support when contacting MPI by phone.
- Print Management Software Upgrade (Project 3377)
  Enhanced print management capabilities to ensure customers receive clear and timely physical correspondence, when required.

In-Progress Initiatives 2026/27

- Document Composition Software Upgrade (Project 3450 – Doc 1 Upgrade)
  Upgrading document composition capabilities to deliver accurate, timely, and well-formatted customer communications.
- Informatica SaaS Migration (Project 3393)
  Migrating to a modern SaaS platform to ensure continued reliability of critical overnight and batch data processing that supports customer transactions and services.
- Document Capture Modernization (Project 3459 – Tungsten Kofax to Tungsten TotalAgility)
  Modernizing document capture technology to improve performance and reliability, reducing delays in processing customer documents.
- Driver Licensing System Enterprise Server Upgrade (Project 3407)
  Upgrading core technology supporting the Driver Licensing System to enhance system reliability, availability, and security for customers accessing licensing services.

Operational Modernization Activities 2026/27

- Workflow Management Platform Upgrade (BizFlow)
- Business Objects Upgrade
- Active Directory Upgrade
- Axway Upgrade
- Sybase Adaptive Server Enterprise (ASE) Upgrade
- Assessment of stabilization requirements for AOL and CARS platforms

Key Vendor Engagements

Part d) of PUB Directive 18 reads as follows:

"The IT summit shall provide the following information and/or reporting:

(…)

d. an update on the status of key vendor engagements originating from Project Nova, outlining their continued involvement, contractual position, and anticipated contribution to future IT initiatives and modernization work;"

MPI has adopted a disciplined and commercially assertive approach to managing key vendor engagements originating from Project Nova, grounded in fiscal responsibility, realistic delivery capacity, and long-term planning. Rather than allowing engagements to continue by default, decision points are identified early, so renewal, non-renewal, or service reduction options can be assessed deliberately. This ensures vendor relationships remain aligned to MPI's objectives and do not continue solely due to momentum or prior investment.

Vendor decisions are guided by rigorous commercial and contractual scrutiny. MPI actively exercises its contractual rights and, where appropriate, engages external legal expertise to ensure agreements are interpreted and enforced in a way that protects organizational interests. Proposals from vendors are carefully stress-tested against internal capability, cost assumptions, delivery timelines, and execution risk. This enables MPI to distinguish between options that are technically feasible and those that represent prudent and defensible use of public funds.

As a result, MPI has taken clear and measured actions on key engagements, including decisions not to renew or to transition services where continued involvement could not be justified on value, risk, or capacity grounds. This approach reflects lessons learned from prior experience and reinforces that vendor strategy is driven by evidence and accountability rather than sunk cost or urgency.

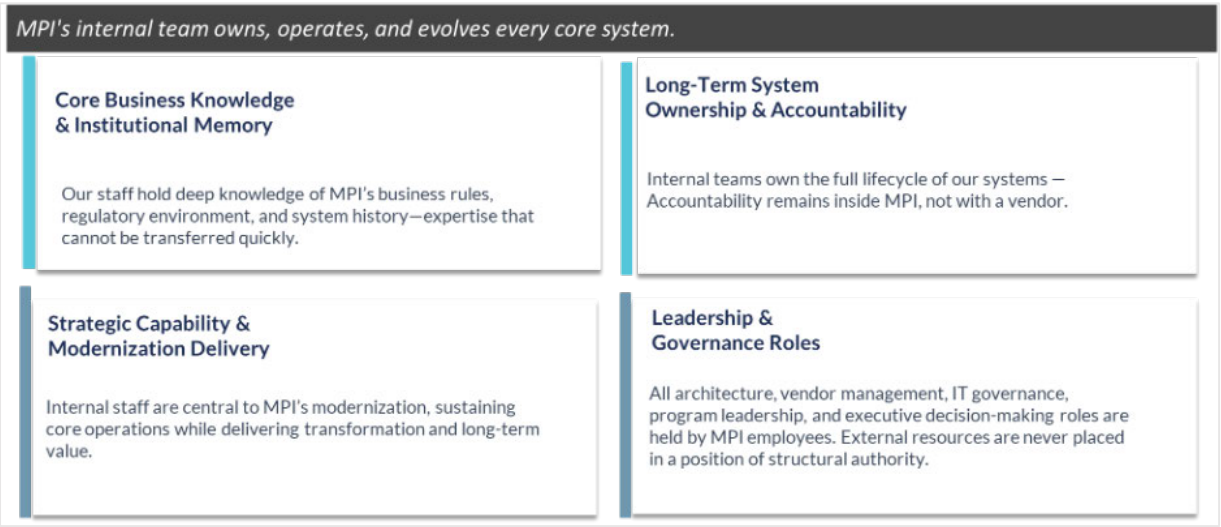
Collectively, this demonstrates a strengthened model for vendor oversight that emphasizes proactive decision-making, commercial discipline, and stewardship of public resources. By aligning vendor involvement to realistic delivery capacity and validated value, MPI has improved its ability to manage external dependencies, reduce risk exposure, and support sustainable delivery going forward.

Below is a summary of the key vendor engagement decisions originating from Project Nova:

- **Infosys:** To meet advance notice requirements, MPI made an early decision not to renew the high-cost support and maintenance arrangement and preserve its contractual position, transitioning support to i3 Verticals at a significantly lower ongoing cost while maintaining service continuity.
- **Duck Creek:** MPI undertook a rigorous assessment of available options, including careful review of vendor cost assumptions, internal delivery capacity, and proposed timelines, and concluded that reinitiating a large-scale implementation would not represent prudent value, particularly considering execution risk and the scale of further investment required.

IT Capacity & Capability Management

Part f) of PUB Directive 18 reads as follows:



"The IT summit shall provide the following information and/or reporting:

(…)

f. a plan to address the apparent uncertainty in MPI's staffing mix and consultant forecasting providing greater clarity and consistency in how internal and external resources are planned and reported aligned to the updated IT Strategy."

MPI's approach to IT capacity and capability management, depicted in figure 13 below, is grounded in an internal-first delivery model that places ownership, accountability, and long-term stewardship squarely within the organization. MPI employees own and operate core systems, hold institutional knowledge of business rules and regulatory context, and lead both day-to-day operations and modernization efforts. This model preserves accountability inside the organization, ensures governance decisions remain with MPI, and protects long-term system sustainability rather than transferring risk or control to external parties.

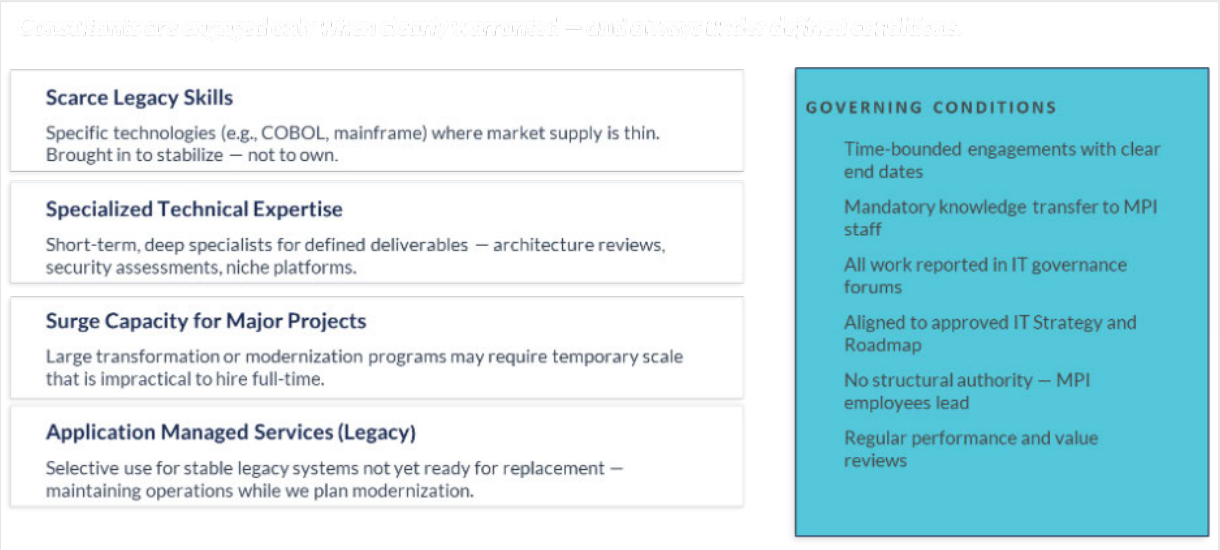


Figure 13 - Capacity and Capability Management

External labour is used selectively and deliberately, not as a default delivery mechanism. Consultants and vendors are engaged only where there are clear skill gaps, short-term surges in demand, or timebound specialist needs that cannot reasonably be met internally. All external engagements are governed under defined conditions, including fixed time horizons, explicit knowledge transfer requirements, and visibility through established IT governance forums. External resources do not hold structural authority or decision rights, and their work is directed and

overseen by MPI leadership to ensure alignment with business objectives and delivery standards. Please refer to figure 14 below for additional information.

Figure 14 – External Labour Governance

Governance and planning discipline are central to how MPI manages capacity across operations and transformation. External labour is treated as a tactical enabler rather than a substitute for internal capability, and performance is regularly reviewed to ensure value is being delivered as intended. In parallel, MPI continues to invest in internal skills and capability development to strengthen long-term delivery capacity and reduce reliance on external resources over time.

The IT Roadmap serves as the trigger for developing a formal, long-term Workforce Plan. Once technology priorities, sequencing, and platform direction are finalized, MPI will map required skills against existing capability to inform targeted hiring, training, and strategic external use. This ensures workforce decisions are anchored in an approved technology direction rather than short-term pressures. Taken together, this approach demonstrates a sustainable operating model that aligns capacity, capability, and governance to support both reliable operations and continued modernization.

Closing

This report demonstrates that MPI is taking deliberate, disciplined action to strengthen its Information and Technology environment in response to the Public Utilities Board's directives. Across lifecycle management, governance, modernization, vendor oversight, and capacity planning, MPI is moving from reactive decision-making toward structured, risk informed execution. Technological risk is being addressed transparently; investments are being prioritized within constrained capacity, and governance has been strengthened to ensure accountability, independent oversight, and defensible decisions at every level.

Taken together, the actions outlined in this report reflect a mature and responsible approach to managing technology in a complex public sector environment. MPI has established the foundations necessary to sustain reliable operations while advancing modernization in a measured and controlled manner. With clear decision rights, strengthened oversight, and alignment between strategy, capacity, and execution, MPI is positioned to continue reducing risk, managing public funds responsibly, and delivering technology outcomes with confidence and accountability going forward.

Appendix 3: IT Risk Registry

The IT Risk Registry includes the Information Technology risks and mitigation strategies in FY 2026/27.

#	Risk Description	Potential Impacts	Mitigation Strategies
1	Changes in Senior Leadership	Knowledge gaps, significant impacts to corporate memory and the culture of an organization.	• Conduct succession planning at all levels to minimize the impacts of change in leadership. • Empower the teams, cascading the decision-making process to the next level down.
2	Difficulty in attracting knowledgeable SMEs as Full Time Employees.	Limited capacity for delivery, impacting BAU/Project activities and timelines.	• Develop attractive compensation to attract and retain talents.
3	Failure in identifying the root causes of issues / problems.	Misaligned deliverables resulting in poor technological solutions that do not meet business needs.	• Leverage the regularly cadenced delivery planning event (a.k.a. Program Increment planning) activities to prioritize initiatives based on business needs and risks to the Corporation. • Review and revamp requirements gathering to address business needs.
4	Lack in-house technical capability / expertise	Limited capability to meet objectives, deliver quality solutions and impact timelines/SLAs.	• Upskill resourcing based on skills gap assessment. • Augment staffing through Flextrack and System Integrators.
5	Aging applications or technologies	Inability to meet business objectives by requiring work arounds or exceptions to deliver value to the business, potentially	• Stabilize and modernize aging / legacy applications and supported infrastructure to meet operational objectives.

		resulting in insecure solutions or higher support costs.	
6	**[REDACTED]**	**[REDACTED]**.	• **[REDACTED]**.

Risks Added in 2027 (Not Present in 2026)

- None.

Risks Removed from Registry:

- Lack of Resource Capacity, and Organizational capacity impacted by demand for Major Programs: Both risks have been addressed through capacity management and proactive planning activities through corporate portfolio governance.
- Access revalidation controls: MPI has enhanced the access revalidation controls for business applications which will be conducted annually to ensure only authorized users have access.

Risks with Updated Mitigations

- **Lack of In-House Technical Capability**
  - *FY 2024/25:* Includes training aligned to staff roles.
  - *FY 2025/26:* Focuses on skills gap assessments and training needs.
  - *FY 2026/27:* Focuses on training needs to upskill resources.
- **Aging Applications or Technologies**
  - *FY 2024/25:* Mentions support for Nova's modernized software.
  - *FY 2025/26:* General modernization of legacy applications and infrastructure.

- *FY 2026/27:* Focus on stabilizing core technology and look to modernization where appropriate.

Appendix 4:
External Labour Measures and Metrics – Status Update
(2026 GRA, MPI Exhibit #09, PUB (MPI) 1-95, IT Appendix 11)

TABLE NAME(s): *Figure IT App 4–1 IT Personnel* / *Figure IT App 4–2 IT Personnel Costs*

REFERENCE: *Figure IT App 4-1: IT Personnel* & *Figure IT App 4-2 IT Personnel Costs*

DESCRIPTION: *Figure IT App 4-1* below contains a five-year historical summary and a three-year forecast for both internal resources and consultants that have worked and are expected to work within the Information Technology (IT) area. *Figure IT App 4-2* below provides a five-year overview with the actual spend for 2024/25 and 2025/26, the budgeted spend for 2026/27 and the forecasted spend on internal and external resources for the next two years (2027/28 and 2028/29).

Figure IT App 4-1 **IT Personnel – Updated chart previously submitted in 2026 GRA Part V IT Appendix 2, Figure IT App 11-1**

Line No.	FTE Adjustments	2021/22 (A)	2022/23 (A)	2023/24 (A)	2024/25 (A)	2025/26 (A)	2026/27(B)	2027/28(F)	2028/29(F)
1	Internal FTE	296.5	320.6	319.6	290.5	261.0	268.5	268.5	268.5
2	Corporate Re-Organization(s)	-	-	-	-	-	-	-	-
4	Net New Positions	-	-	-	-	-	-	-	-
5	Divisional Reductions	-	-	-	-	-	-	-	-
6	Internal IT Normal Operations FTE Total (1)	296.5	320.6	319.6	290.5	261.0	268.5	268.5	268.5
7	Internal EPMO - Major Programs FTE (2)					-	-	5.0	5.0
8	Internal EPMO - PMO FTE (2)					14.0	25.0	14.0	14.0
9	Consultants (3)(4)	93.5	114.0	102.0	36.0	34.9	39.4	18.4	18.1
10	**Total**	**390.0**	**434.6**	**421.6**	**326.5**	**309.9**	**332.9**	**305.9**	**305.6**

12 (1) Internal FTE includes IT Normal Operations and excludes Initiatives. Historical actuals represent IT Operations and PMO teams.

13 (2) Internal EPMO - Previously within IT Division, moved to Customer & Product Value in 2025/26 (PMO) and 2026/27 (Major Programs). Major Programs leadership FTE were reorganized under normal operations in 2025/26 and are updated in budget effective 2027/28.

14 (3) Consultant counts are Basic FTE equivalents for Normal Operations and Initiatives. Calculated: Basic consultant expenses at $125/hr rate, 8 hrs/day, 252 days/yr By comparison, forecasts in Figure EXP App 18-7 are calculated as Corporate FTE equivalent (not Basic).

(4) 2027/28 forward represents normal operations consultant count only. As noted in App 4-2 forecasted initiative consultants for 2027/28 beyond is not available. 2027/28 initiative budget is a placeholder and not allocated by nature of expense, accordingly forecasted consultant count based on implied dollar is nil as the forecasted dollar is an unallocated placeholder only (refer to EXP Expenses chapter)

Figure IT App 4-2 **IT Personnel Costs - Updated chart previously submitted in *2026 GRA Part V IT Appendix 11, Figure IT App 11-2***

Line No.	Year	2024/25 (A)	2025/26 (A)	2026/27 (B)	2027/28(F)	2028/29(F)
1	*(C$000s except where noted)*					
2	**Internal FTE Costs ($) - Normal Ops**	22,564	19,757	23,290	23,292	24,195
3	**Internal FTE Costs ($) - Initiative**	1,433	608	756	3,333	3,377
4	**Consultant Costs ($) - Normal Ops**	5,363	4,118	7,183	4,633	4,554
5	**Consultant Costs ($) - Initiative** [1]	3,893	4,669	2,754	-	-
6	**Total ($)** [2]	**33,253**	**29,152**	**33,983**	**31,258**	**32,126**

7 (1) Forecasted initiative consultants for 2027/28 beyond is not available. 2027/28 initiative budget is a placeholder and not allocated by nature of expense, accordingly forecasted consultant count based on implied dollar is nil as the forecasted dollar is an unallocated placeholder only (refer to EXP Expenses chapter)

(2) Includes both IT normal operations and EPMO IT work personnel as summarized in App 4-1

TABLE NAME(s): *Figure IT App 4-3 IT Personnel – Internal (FTE)* / *Figure IT App 4-4 IT Personnel – Consultants (FTE)* / *Figure IT App 4-5 IT Personnel – Internal Costs* / *Figure IT App 4-6 IT Personnel - Consultant Costs*

Disclaimer

The work produced by MNP LLP ("MNP") was planned and conducted to identify key risks facing Major Programs. MNP's summary of observations and recommendations do not constitute commercial legal advice, and MNP accepts no liability in relation to legal advice. Rather, MNP sought to identify business risks that the program's management should take into consideration in making their decisions and taking action.

Our work relied on documentation made available to us and relied on information collected through interviews with management. We did not independently verify the accuracy and completeness of information provided. Someone with greater access to information and resources could obtain different results.

MNP's work was not designed to identify and cannot necessarily be expected to disclose defalcations, fraud, and other irregularities. As a result, this report does not necessarily include all those matters, which a more extensive or special examination might develop. With additional information, timelines, and resources, the results and conclusions could differ.

In no circumstances shall MNP be responsible for any loss or damage, of whatsoever nature, arising from informational material to MNP's work being withheld or concealed from MNP, or misrepresented to MNP, by management and employees of the Program or any other person of whom MNP may make inquiries.

This report is intended solely for the information and use of Manitoba Public Insurance. This report should not be distributed to other parties without MNP's written consent. Any use that any other party makes of this report, and any reliance or decisions made based on it, are the responsibility of such party.

Annual Summary Report – Final

1. Introduction

1.1 Background

The Manitoba Public Insurance Corporation ("MPI" or the "Corporation") is executing a broad portfolio of business and technology modernization initiatives to renew legacy systems and strengthen its operational and service delivery capabilities, referred to as "Major Programs". The Corporation pivoted away from Project Nova's prior multi-release model to focus instead on delivering several major MPI initiatives, each with a minimum expected cost of $3 million. These initiatives span multiple domains, including digital services, core platforms, enterprise applications, and enabling technologies.

To manage delivery complexity and interdependencies, MPI has adopted a Major Programs approach, overseeing multiple, concurrently delivered modernization projects under a common governance, delivery, and risk management framework. Key initiatives currently operating within Major Programs include, but are not limited to, MyMPI and IRP Online, BI3, ERP Replacement (Infor Upgrade and Assessment & Planning), and other related digital and enterprise enablement efforts.

To provide an independent and objective opinion on Major Programs current risk environment, MNP was engaged as the Independent Risk Advisor ("IRA") to help MPI and to report specifically to the Technology Committee. This review was conducted using an Agile Governance and Risk Advisory Approach (see Appendix A).

1.2 Engagement Objective

The objective of the IRA service is to provide continuous monitoring and oversight of the Major Programs implementations. MNP's role as the IRA is to support program success by providing a third-party independent and continuous risk assessment of Major Programs, providing transparency, and supporting accountability. MNP's role supports the Executive Steering Committee ("ESC"), senior management and the individual project teams by assisting in the identification of key risks facing Major Programs and by assessing the effectiveness of risk treatment activities implemented by MPI to help increase the likelihood of Major Programs' success. Since the engagement's inception, to-date, MNP reviewed program control processes, and continually works with MPI management to confirm that Major Programs risks are being identified, mitigated, and monitored.

1.3 Engagement Scope and Sprint Objectives

The work contained in this annual summary report covers the key MNP deliverables from January 1, 2025, to March 31, 2026. The deliverables are supported and contextualized by the engagement objective and scope.

As further outlined in the Agile Governance and Risk Advisory Methodology (Appendix A), the scope and objectives of each sprint are tailored to address the highest-priority risks and business conditions present within MPI's Major Programs. These key risks are identified by MNP and validated with the Executive Steering Committee, PMO, functional leads, and the Technology Committee to ensure alignment with governance priorities. Furthermore, identified risks and recommendations are assessed against the Thresholds of Success, which serve as a proxy for MPI's core success criteria (see Section 2.1 for additional context).

Annual Summary Report – Final

The primary objective of each sprint is to provide timely, risk-focused insight to the Technology Committee to enable informed oversight and early management action before issues escalate into material problems. Accordingly, sprint scope is intentionally flexible and is refined based on prevailing conditions, risk backlogs, and lines of enquiry established during the preceding sprint prior to close-out.

To support completeness and consistent risk nomenclature, MNP's review is grounded in the Risk Assessment Framework outlined in Appendix B. Specifically, the engagement draws upon five assurance areas and their corresponding sub-assurance areas to structure the identification, assessment, and communication of risks across each sprint. As further outlined in Appendix B, the five assurance areas are Project Management, Governance & Decision-Making, Operational Readiness, Business Needs, and Vendor & Solution

2. Annual Summary of Observations

2.1 Thresholds of Success

To inform Major Programs Thresholds of Success (ToS) and to help prioritize the sequence of the proposed engagement sprint plans, several workshops were conducted to gather input from the PMO, Technical stream leads and Executive Steering Committee stakeholders. Consolidated ToS results were confirmed by the Technology Committee on December 19, 2023, and are outlined in the table below.

Thresholds of Success		Description
	Delivery of Future State Capabilities	1. The modernized environment meets the diverse needs of users, customers, and stakeholders by ensuring operational efficiency, meeting business requirements, disabling legacy systems, and aligning to security and privacy standards.
	Data and Reporting	2. The enterprise is equipped with the necessary tools, information, consistent data, and reporting to meet the insurance needs of Manitobans and relevant external stakeholders.
	Business Readiness	3. The enterprise has the capacity, infrastructure, and other supportive conditions to leverage the capabilities Major Programs delivers to meet diverse business needs.
	Benefits Realization	4. The outcomes of Major Programs are clearly demonstratable to Manitobans that the investment made sense.
	Interoperability	5. Platforms delivered by Major Programs seamlessly integrate with existing and new systems and can scale and adapt appropriately.
	Workarounds and Tech Debt	6. Major Programs provides a working solution with agreed workarounds and alleviates reliance on legacy systems and technical debt.
	Stakeholder Engagement	7. Customers, staff, and partners were adequately engaged throughout Major Programs lifecycle and adopt Major Programs future state in alignment with their expectations.

Moving forward, the Thresholds of Success above will be considered for revision during the preliminary phases of the next engagement in 2026, to ensure that conditions of success remain current and valid,

align to MPI's business and IT priorities. This would include a confirmation on whether the Thresholds of Success remain valid for the current goals of Major Programs, and a refreshment of Thresholds of Success which no longer represent MPI leadership's vision of success, to facilitate the delivery of MNP's IRA services in accordance with critical success metrics that will drive the solution of Major Programs.

2.2 Sprint 4 Observations

The scope of Sprint 4 included an independent review of Nova's cost estimation and validation mechanisms to examine the reasonableness of cost estimates. Although, the timeframe of this sprint was prior to the cancellation of Nova and pivot to Major Programs. To support this review, several key risk themes were identified during Sprint 4, as follows: an internal Nova cost estimate led by MPI, rationale provided for proposed vendor costs, existing financial tracking mechanisms for Nova, the examination of cost assumptions leveraged in the Integrated Program Plan (IPP), and verifying the processes used by the Solutions Management vendor to establish accuracy, completeness, and overall quality of the IPP (see Appendix C.1).

As a result of the Sprint 4 review, five observations were identified for MPI to consider addressing to minimize adverse effects on the program:

1. Limited CFO involvement in model estimate validation: Nova's cost estimation methodology did not include defined roles of the CFO's office for validating key cost drivers, such as the use of cost comparatives/benchmarks or obtaining an attestation from the CFO.
2. Inconclusive financial model leading to a scope limitation: Due to the strategic decision to discontinue the Nova program and shift focus to Major Programs, along with upcoming R1 remediation efforts, MPI decided not to finalize the current financial model. These changes were not factored into the analysis. Additionally, the reviewed models lacked sufficient detail and source data for assumptions, cost inputs, direct costs, and indirect costs.
3. Inconclusive vendor estimates and validation processes: MPI utilized a "deterministic" costing approach based on the AACE cost estimation methodology. Despite MNP's request of additional information details for vendors cost estimates, limited new information was provided within the December 18 and March 6 cost models. Since 2022, 56 contract change requests were identified totaling approximately $71M, driven by operational software costs, schedule drift, and augmented resource capacity and capability.
4. MPI delivery capacity limitations for parallel work assumptions: Both the December and March cost estimates assume parallel delivery, without a supporting feasibility analysis. The feasibility of parallel delivery is at risk due to the additional effort required for R1 remediation and R3 parallel delivery assumptions for key IPP modules.
5. Underutilized contract controls: Although "right to audit" clauses were included in key Nova contracts, these controls were not exercised to verify cost estimates or assess vendor performance against contractual obligations.

Please refer to Section 3.1 of this document for a summary of the recommendations provided against the Sprint 4 observations above.

Annual Summary Report – Final

2.3 Sprint 5 Observations

The scope of Sprint 5 included a project Health Check, informed by the risk assessment and lines of inquiry, to MPI's MyMPI Foundation and IRP Online. The objective was to confirm whether the project is on track to deliver expected outcomes per the revalidated business case and benefit realization plan, assess risks and issues against timeline, scope, and budget constraints and commitments, and to provide recommendations, if required, to allow PMO to take immediate corrective action. This was reviewed through the lens of MNP's IT Project Health Check Assessment Framework, where 5 key areas were selected to guide the assessment: resource management, transition & handover, requirements management, risk management, and stakeholder engagement. The assurance areas are listed in the order of priority for Sprint 5 (see Appendix C.2).

As a result of the Sprint 5 review, four observations were identified for MPI to consider addressing to minimize adverse effects on the program:

6. Project performance reporting: Current project reporting mechanisms can be improved to more clearly communicate progress against business case outcomes, using traceable evidence in a format that primary stakeholders can easily understand.
7. Incomplete cutover readiness criteria and artifacts: Limited cutover readiness documentation has been provided. Outstanding artifacts include approved criteria, accountabilities and artifacts for cutover, implementation task list, final program control log, and benefits realization plans. Per management, completion is anticipated in early 2026.
8. In-progress business requirement validation: Business requirement validation is underway as the consolidated signed-off documentation is expected for March 2026. While there is evidence that the conceptual design business requirements have been validated by designated business owners, the completed detailed requirements documentation indicates that functional requirements validation is in progress. This poses a risk to project timelines, scope, and the ability to meet stakeholder expectations.
9. Forward-looking budget attestation: While MPI has demonstrated the existence of historical project cost variance analyses, there are opportunities to strengthen the forward-looking assessment of budget health. Specifically, there is no attestation for cost estimation and future budget validation.

Please refer to Section 3.2 of this document for a summary of the recommendations provided against the Sprint 5 observations above.

2.4 Sprint 6 Observations

The scope of Sprint 6 included an independent review of key Major Programs risks related to the SRE solution's technical capabilities, reasonableness of [REDACTED] reimplementation proposal, and IRP cutover readiness. The objective was to assess whether [REDACTED] proposed SRE reimplementation approach and associated technical capability assessments provide a sufficient basis to mitigate previously identified solution gaps and delivery risks, and whether IRP cutover readiness can be reasonably confirmed based on available evidence.

The review was informed by a point-in-time risk assessment and conducted using MNP's Independent Review Approach, leveraging industry standard frameworks and leading practices. Three assurance areas

Annual Summary Report – Final

were prioritized for Sprint 6: Independent Review of the Technical Capability Assessment, Independent Review of the SRE Reimplementation Proposal, and IRP Online Cutover Readiness. The assurance areas are listed in the order of priority for Sprint 6 (see Appendix C.3).

As a result of the Sprint 6 review, four observations were identified for MPI to consider addressing to reduce the risk of repeating prior solution outcomes, strengthen confidence in the proposed SRE future state, and confirm IRP cutover readiness.

10. [REDACTED]

11. [REDACTED]

12. [REDACTED]

13. [REDACTED]

Please refer to Section 3.3 of this document for a summary of the recommendations provided against the Sprint 6 observations above.

3. Annual Summary of Recommendations

The following are the recommendations provided by MNP, as part of Sprints 4, 5 and 6 for MPI to consider addressing to minimize the likelihood and impact of identified risks facing the Corporation.

3.1 Sprint 4 Recommendations

1. Finance as a challenge function: To help ensure greater accuracy over future estimates, MPI should define in greater detail the finance function's role in the cost estimation process, including their roles and responsibilities in validating key cost drivers, providing cost comparisons and providing a CFO attestation.

   Persons of Interests: Finance Corporate Function

2. Updated financial model: To ensure that cost estimates are current, MPI should update the financial model and improve traceability of source data to reflect the strategic shift to discontinue Nova, as well as to account for latest cost estimates, including R1 remediation efforts.

   Persons of Interests: PMO & Finance Corporate Function

Annual Summary Report – Final

3. Vendor estimate validation: To better understand the reasonableness of vendor estimates, MPI should require vendors to substantiate their cost estimates on a risk basis, including substantiation of cost estimate supporting evidence, artifacts and assumptions used.

   Persons of Interests: PMO

4. Parallel work feasibility analysis: To identify potential risks and ensure viability of future delivery schedules, MPI should conduct a feasibility analysis of parallel work resource requirements against expected resource capacity.

   Persons of Interests: PMO

5. Contract control execution: To help ensure that vendors are fulfilling their contractual obligations, periodically exercise applicable contract controls, as deemed appropriate by executive management.

   Persons of Interests: Executive Management

3.2 Sprint 5 Recommendations

6. Project Performance Reporting: Revise reporting mechanisms to ensure project progress is communicated through evidence-based reporting. Reports should be traceable, justified with detailed results, and easily understood by primary stakeholders.

   Persons of Interests: PMO

7. Cutover readiness: Develop a cutover plan with clearly defined criteria, ownership accountabilities, and timelines. The plan should be iteratively refined in collaboration with primary stakeholders and include budgets, milestones, and all required artifacts leading to go-live.

   Persons of Interests: PMO

8. Requirement validation: Accelerate documentation of functional requirements using traceability tools and interim sign-off milestones, demonstrating approval from primary stakeholders (e.g., system users, IRP Customers, IRP Consultants, etc.).

   Persons of Interests: PMO & Enterprise Architecture Corporate Function

9. Budget attestation: As part of the finance second line of defence, introduce a formal attestation process for future budget estimates, including validation of assumptions, contingencies and cost estimates.

   Persons of Interests: Executive Management & Finance Corporate Function

3.3 Sprint 6 Recommendations

10. Future-State Proposal and Roadmap Accountability: Require [REDACTED] to provide a complete, future-state proposal with a defined remediation roadmap, delivery controls, proofs of concept, and transparent cost and timeline assumptions before proceeding.

    Persons of Interests: Executive Leadership & Enterprise Architecture Corporate Function

11. Proofs of Concept for Key Solution Gaps: Obtain proofs of concept from [REDACTED] for the four identified future-state solution gaps to validate platform capability, configuration sustainability, and remediation feasibility.

    Persons of Interests: Executive Leadership & Enterprise Architecture Corporate Function

Annual Summary Report – Final

12. Independent Validation of Technical Fit: Perform an independent validation of [REDACTED] claimed technical fit to reconcile vendor self-assessment with MPI-identified capability and operational risks.

    Persons of Interests: Executive Leadership & Enterprise Architecture Corporate Function

13. Cutover Readiness Criteria and Decision Framework: Define and approve clear IRP cutover readiness criteria, accountabilities, and decision authorities, and complete the collection and validation of required readiness evidence, including resolution of [REDACTED] dependencies.

    Persons of Interests: PMO

4. Management Action Plans & Key Takeaways

4.1 Management Action Plans

In response to the observed risks and provided recommendations as an outcome of each Sprint, MPI provided a response through Management Action Plans (MAPs) for each iteration.

Prioritization of the sprint 6 recommendations and the outstanding items in the management action plans outlined below should be determined by MPI Management. This decision should be based on an assessment of the risks' potential impact, with a focus on addressing the most critical issues that could affect a successful go-live of Major Programs.

4.1.1 Sprint 3 Management Action Plan

The table below outlines the status of outstanding items in response to MNP's Sprint 3 risk observations, as well as a brief synopsis of management's responses to each observation.

Observation	Response Status	Key Artifacts Received
1. Unvalidated Cost Estimates	Cost estimation controls designed	• Approved Business Case(s) with embedded links to cost models • Documented assumptions and scope limitations within Business Case documentation • RAAIDD log entries evidencing ongoing updates to assumptions, risks, and cost impacts • Management commitment and process for AACE estimating practices and Finance challenge controls applied to Major Programs
2. Continued Uncertainty in the Nova budget	Program discontinued; controls no longer applicable	• Formal decision documentation confirming discontinuation of Project Nova • Sprint 6 management response confirming closure of the observation following Nova close-out • No additional remediation artifacts identified as the risk context no longer exists
3. Lack of Provided Leading Practices by the Solution Management Vendor	Vendor services discontinued; lessons applied	• Executive escalation correspondence with the Solution Management vendor (Dec 2024 – Jan 2025) • Documentation confirming termination of Nova and associated vendor services • Management commitment to embed leading-practice requirements in future RFP and SOW evaluation criteria

Annual Summary Report – Final

Observation	Response Status	Key Artifacts Received
		• Sprint 6 look-back documentation confirming no further follow-up actions were required and lessons learned were captured

4.1.2 Sprint 4 Management Action Plan

The table below outlines the status of management's response related to MNP's Sprint 4 recommendations, as well as a brief synopsis of artifacts received for each recommendation.

Observation	Response Status	Key Artifacts Received
4. Limited CFO involvement in model estimate validation	Finance challenge controls designed	• Finance Controls / Appendix documenting Finance's challenge and approval role • Process for digital attestation of monthly CPFS confirming Finance review (Sprint 6 look-back) • Business Case approval records evidencing Finance review prior to approval
5. Inconclusive financial model leading to a scope limitation	Progressive cost model refinement	• Approved Business Case(s) with links to supporting financial models • CR/DR documentation evidencing budget re-baselining as scope and estimates mature
6. Inconclusive vendor estimates and validation processes	Vendor estimate validation enhanced	• Process for vendor cost breakdowns submitted in support of estimates • Management commitment to establish SOWs with strengthened acceptance criteria and audit rights • RAAIDD entries tracking assumptions, risks, and cost changes
7. MPI delivery capacity limitations for parallel work assumptions	Enterprise capacity planning implemented	• Enterprise / Corporate Change Heat Map identifying capacity constraints and change collisions • Major Programs RAAIDD log capturing cross-program and sequencing risks
8. Underutilized contract controls	Contract controls designed	• Right-to-Audit clauses included and enforced in new SOWs • Management commitment for milestone-linked payment controls and escalation mechanisms

4.1.3 Sprint 5 Management Action Plan

The table below outlines the status of management's response related to MNP's Sprint 5 recommendations, as well as a brief synopsis of artifacts received for each recommendation.

Observation	Response Status	Key Artifacts Received
9. Project performance reporting	Evidence based reporting enhanced	• PMO KPIs and KRIs used for health and performance reporting • Integrated Project Plan (IPP) consolidating scope across delivery streams • Azure DevOps (ADO) dashboards supporting delivery progress and risk tracking • Enhanced RAAIDD framework aligned to project health reporting and governance forums

Annual Summary Report – Final

Observation	Response Status	Key Artifacts Received
10.Incomplete cutover readiness criteria and artifacts	Cutover readiness controls implemented	• IRP Online Deployment 1 cutover artifacts • Release readiness criteria covering technical, delivery, transition-to-production, and operational readiness • Deployment-specific cutover materials and formal approval checkpoints • Draft cutover and readiness artifacts for IRP Online Deployments 2 and 3
11.In-progress business requirement validation	Requirements governance formalized	• Business Requirements process documentation provided to and reviewed by MNP • Validated requirements artifacts • Traceability across Epics, Features, and User Stories maintained in Azure DevOps
12.Forward-looking budget attestation	Budget attestation controls implemented	• Process for finance review and approval of budget estimates prior to Business Case approval • CR/DR governance approvals supporting budget changes and re-forecasting

4.1.4 Sprint 6 Management Action Plan

Sprint 6 risk observations and the management responses are in-progress and will be re-examined during future sprints. Specifically, these items have been added to the risk backlog for review of items post March 2026. Management's response and any outstanding artifacts will be considered during the scoping of subsequent sprints

4.2 Summary of Key Takeaways & Lessons Learned

Below are highlights of key takeaways and lessons learned throughout this past year from the IRA process including insights gained, challenges faced, and successful strategies employed:

1. MPI management and supporting corporate function stakeholders have been responsive and have prioritized attending meetings and sharing information with the MNP team.
2. Considering Major Program's complex risk environment with continuous real time changes to information and management priorities, opportunities to streamline and minimize additional engagement burden during reporting were observed. More specifically, fact validation and management response cycles could be streamlined to focus on point in time risks and recommendations.
3. MNP received feedback on the burden associated with developing Management Action Plans for in-progress Major Programs deliverables. In response, engagement working protocols are being refined to reinforce the following delivery principles:
    - Early fact validation to reduce the accumulation of sub-observations and enable timely, real-time validation with management.
    - Real-time action planning to minimize Management Action Plan effort by allowing management to begin formulating responses as risks and issues are identified.
    - Fit-for-purpose documentation to align the level of detail and evidence with the maturity of in-flight deliverables, reducing rework while maintaining assurance rigor.

5. List of Presentations

The table below outlines the presentations MNP has conducted as part of the governance and risk advisory services from January 1, 2025 up to March 17, 2026.

Ref	Presentation	Purpose	Audience	Date Presented
1	Sprint 3 Results and Sprint 4 Interim Presentation	Sprint 3 results and Sprint 4 interim presentation	Technology Committee	Jan. 29, 2025
2	MNP Sprint 4 Presentation	Sprint 4 Results Presentation	Technology Committee	Apr. 9, 2025
3	PUB IT Summit	Sprint 3 and 4 Summary at the IT Summit	Public Utilities Board	May 12, 2025
4	MNP Sprint 5 Plan	Sprint 5 Plan Presentation	Technology Committee	Jun. 18, 2025
5	MNP Sprint 5 Interim Presentation	Sprint 5 Interim Presentation	Technology Committee	Aug. 6, 2025
6	Sprint 5 Health Check	Sprint 5 Health Check Plan and Preliminary Observations	Technology Committee	Sep. 24, 2025
7	MNP PUB Submission	MNP PUB Submission Sprint 3 and 4 Summary	Public Utilities Board	Oct. 24, 2025
8	Sprint 5 Health Check Results and Sprint 6 Update	Sprint 5 Health Check results and Sprint 6 Updates Presentation	Technology Committee	Dec. 10, 2025
9	Sprint 6 Results	Sprint 6 Results Presentation	Technology Committee	Mar. 17, 2026

Annual Summary Report – Final

Appendix A: Agile Governance and Risk Advisory Approach

[REDACTED]

Annual Summary Report – Final

Appendix B: Risk Assessment Framework

[REDACTED]

Appendix C: Lines of Enquiry

This section outlines the Lines of Enquiry used for each of the Sprints conducted within the scope of the Summary Report.

C.1 Sprint 4 Lines of Enquiry

Risk Theme	Risk Description	Lines of Enquiry[1]
Cost Estimation and Validation Mechanisms Independent review of Nova's cost estimation and validation mechanisms to examine the reasonableness of cost estimates resulting from Nova Discovery	There is a risk that cost estimates received during R3 Discovery have not been validated by MPI's relevant corporate functions, estimates are not supported by sufficient evidence, and that MPI does not have a baseline estimate of which to compare vendor estimates to.	MPI-Led Nova Cost Estimation
		Rationale for Proposed Vendor Costs
		Financial Tracking Mechanisms
		Examine assumptions used in the IPP
		Verify processes used by the Solution Management Vendor to establish accuracy, completeness, and overall quality of the IPP

C.2 Sprint 5 Lines of Enquiry

Risk Theme	Risk Description	Lines of Enquiry
Resource Management	There is a risk that MyMPI and IRP Online may fail to align resource capacity to demand, and may not meet the budget, timeline, and scope commitments outlined in the business case.	Based on the PMO's self-reporting artifacts, MPI can demonstrate its progress toward aligning their resource capacity with resource demand, and delivering MyMPI and IRP Online on time, within budget, and aligned with the business case outcomes, capabilities, and functionalities.
Transition & Handover	There is a risk that MPI has not defined its cutover readiness criteria or completed key cutover activities required to demonstrate go-live readiness.	MPI has defined cutover readiness criteria, validated by both primary and secondary stakeholders, and supported by approved project artifacts that confirm go-live readiness.
Requirements Management	There is a risk that functional and non-functional requirements for MyMPI and IRP Online are not sufficiently gathered, defined, and validated by primary stakeholders.	MPI has clearly defined functional and non-functional requirements, as evidenced by an approved business requirements document validated by primary stakeholders to ensure alignment with the target state vision and stakeholder expectations.

[1] Cost estimation mechanisms and process attributes were the focus area for this Sprint.

Annual Summary Report – Final

Risk Theme	Risk Description	Lines of Enquiry
Risk Management	There is a risk that MPI is not consistently identifying, mitigating, and monitoring risks across key management levels for MyMPI and IRP Online.	The project's risk register (RAAIDD) and associated mitigation strategies are aligned with governance and committee decision records, demonstrating comprehensive risk identification and treatment across operational, tactical, and strategic management layers.
Stakeholder Engagement	There is a risk that primary and secondary stakeholders are not periodically engaged to provide input or challenge decisions related to MyMPI and IRP Online.	Records of decisions and decision logs indicate that MPI periodically engages primary and secondary stakeholders to gather input and challenge key aspects of MyMPI and IRP Online.

C.3 Sprint 6 Lines of Enquiry

Risk Theme	Risk Description	Lines of Enquiry
Independent Review of Technical Capability Assessment [REDACTED]	[REDACTED]. This risk arises because we were informed that the assessment was not originally designed or executed for contractual decision-making. And may contain insufficiently supported evidence, undocumented assumptions, and incomplete analysis for the intended purpose	Review the appropriateness and relevance of the report's audience and purpose of the analysis. Review MPI's rationale for selecting the framework to perform the vendor solution capability assessment. Validate MPI's enterprise architecture ratings and evidence-based rationale outlined within the capability assessment. Confirm whether MPI challenge functions have validated the vendors' technical capabilities alignment with business requirements. Validate that any identified capability gaps are evidence-based and are vetted by MPI challenge functions.
Cutover Readiness Alignment Independent review of Major Programs' cutover readiness alignment in advance of MyMPI Foundation and IRP Online go-live.	There is a risk that insufficient clarity and alignment regarding organizational readiness criteria and the allocation of roles and responsibilities during cutover may result in governance gaps, ineffective coordination, and delays in achieving a controlled and successful transition.	Assess completeness of readiness criteria against industry leading practices. Assess whether cutover roles/responsibilities and required evidence for sign-off are defined, against industry leading practices. Assess whether cutover risks are identified and mitigated.

Annual Summary Report – Final

Risk Theme	Risk Description	Lines of Enquiry
Independent Review of the SRE Reimplementation Proposal [REDACTED]	[REDACTED].	Validate the evidence supporting MPI's rationale for an SRE reimplementation.
		[REDACTED].
		Confirm whether MPI challenge functions have identified and mitigated reimplementation risks.

Value Assurance: Benefit Realization Management (BRM)

The Power of BRM

A disciplined way to ensure our projects deliver the value the business expects – and that those benefits endure!

2

Why this matters?

As Manitoba's public auto insurer, we are accountable to all Manitobans to deliver value and not just projects.

3

What is a Benefit?

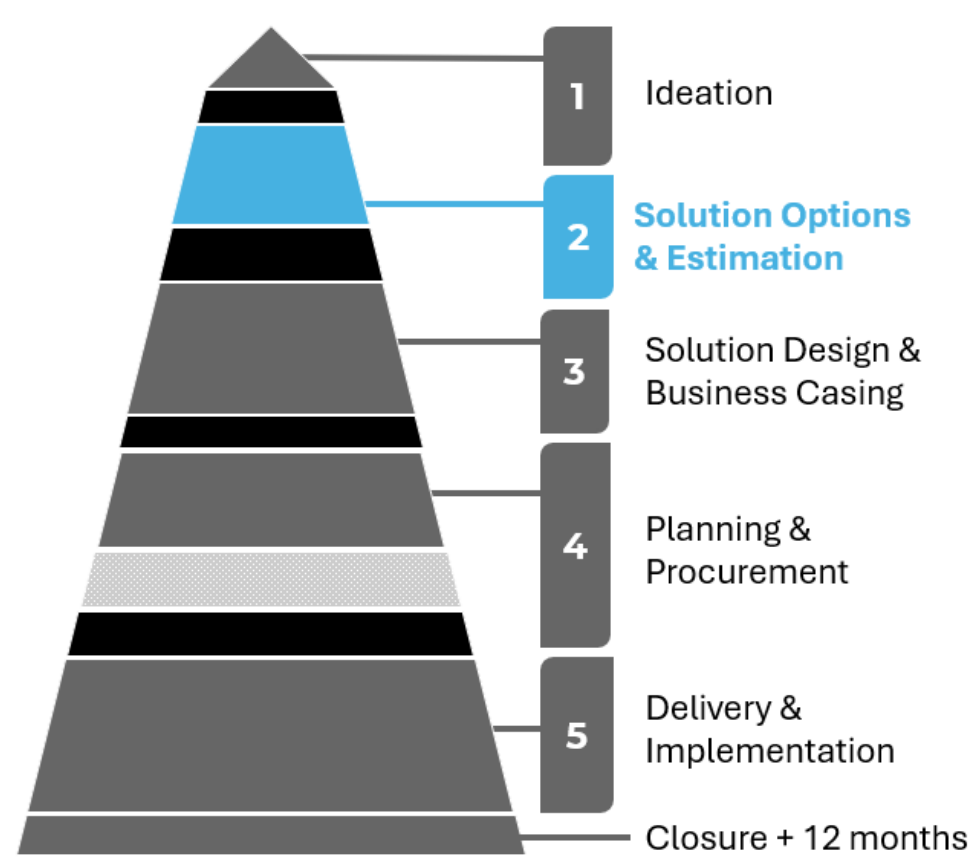
A benefit is a measurable improvement that delivers value resulting from a change initiative or project.

In BRM, a benefit must:

- Support and contribute to strategic goals.
- Represent a business outcome, not a system feature or technical output.
- Be clearly defined, owned, and measurable within 12 months of project closure.
- Be expressed as a SMART improvement (e.g., increased accuracy, reduced processing time, improved customer experience).
- Be sustained beyond project delivery and tracked for the 12-month period after the project closes.

How BRM strengthens our commitment to Manitobans

Supports exceptional coverage and service
BRM ensures project benefits are clearly defined and owned, so improvements to customer experience, service delivery, and operational performance are achieved and sustained.



Protects affordability and delivers value
By tracking benefits for 12 months after project completion, BRM verifies that the value promised truly materializes, helping keep rates affordable and coverage accessible.

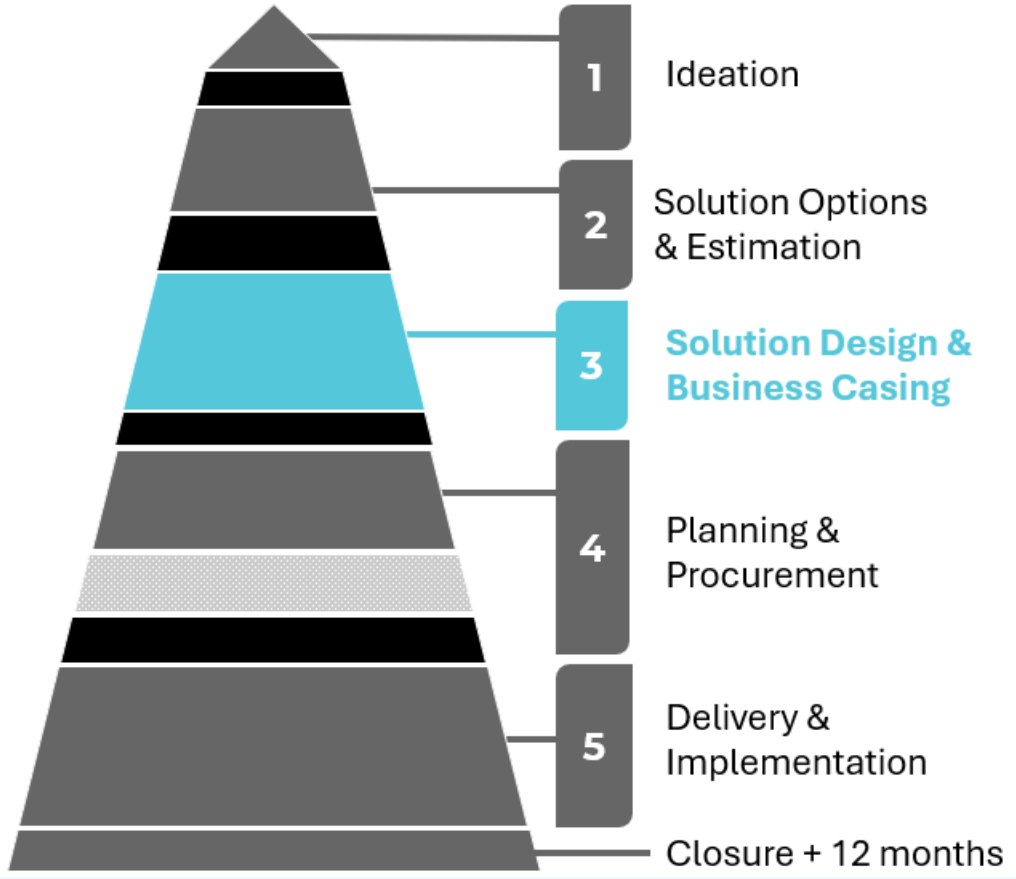
Builds trust through integrity and accountability
BRM brings transparency to how project benefits are identified, approved, monitored, and measured. This reinforces our commitment to “doing what’s right” and acting in the best interest of Manitobans.

Strengthens road safety outcomes
When projects are tied to clear, measurable benefits, we can ensure initiatives that impact road safety deliver the intended improvements for drivers, pedestrians, and communities across the province.

Empowers our people and partners
BRM defines clear ownership and responsibilities, enabling employees, leaders, and partners to collaborate effectively and confidently on delivering meaningful outcomes.

BRM alignment to S2E
Stage 2 – Identify

6



Stage 2 – SMART *directional* Benefit Elicitation
Anchoring Solutions to Expected Benefits

How it happens:

- Value Assurance (VA) is notified of all Gate 1 approvals through a post approval kick-off meeting and a meeting with the Primary Sponsor(s) is scheduled.
- VA elicits SMART *directional* Benefits from the Primary Sponsor(s).
- SMART *directional* benefits are documented and communicated to solutions team.

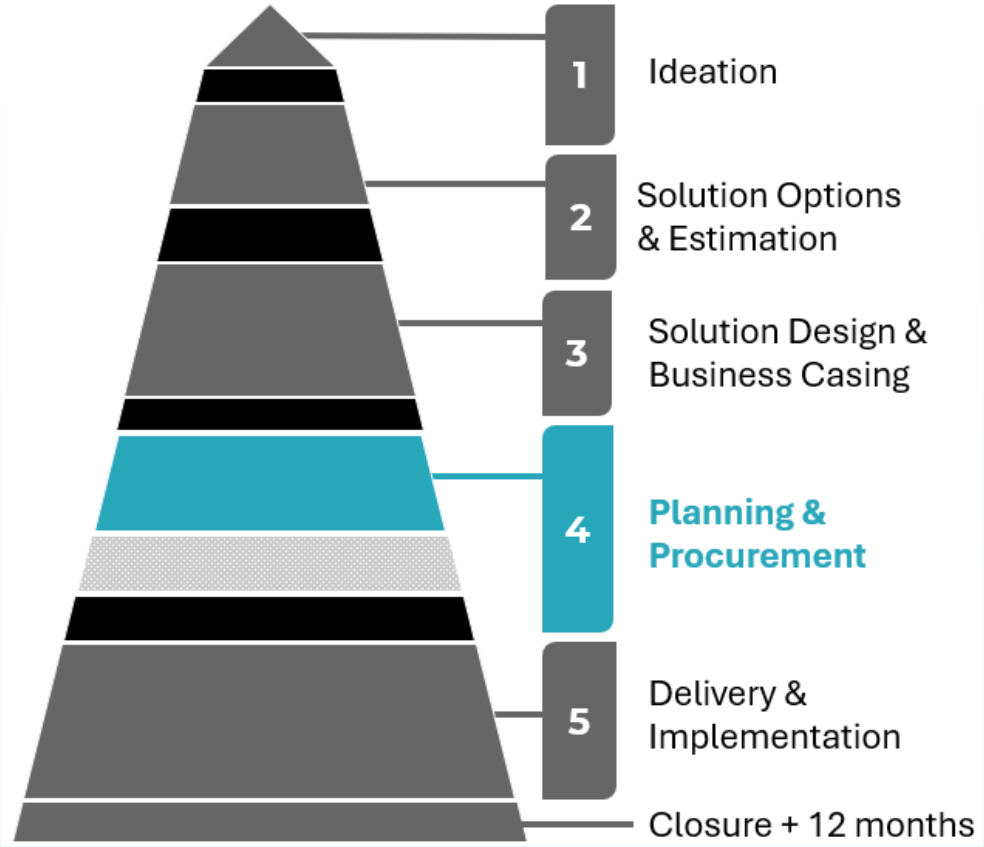
Benefits lead. Solutions follow.

BRM alignment to S2E
Stage 3 – Quantify, Value & Appraise

8

Stage 3 – Quantify, Value & Appraise

How it happens:



- Value Assurance (VA) is notified of a Gate 2 approval for PMO projects over $500K and all Major Programs projects, regardless of $ amount.
- Value Assurance Specialist (VAS) is assigned.
- Previously defined SMART *directional* benefits are refined with the Business Sponsor based on solutioning decisions.
- Business case is populated with the refined benefits.
- Benefits Register is updated with the business case benefits.
- Investment Appraisal is prepared (when requested).

Refined Benefits. Stronger Cases. Better Decisions.

9

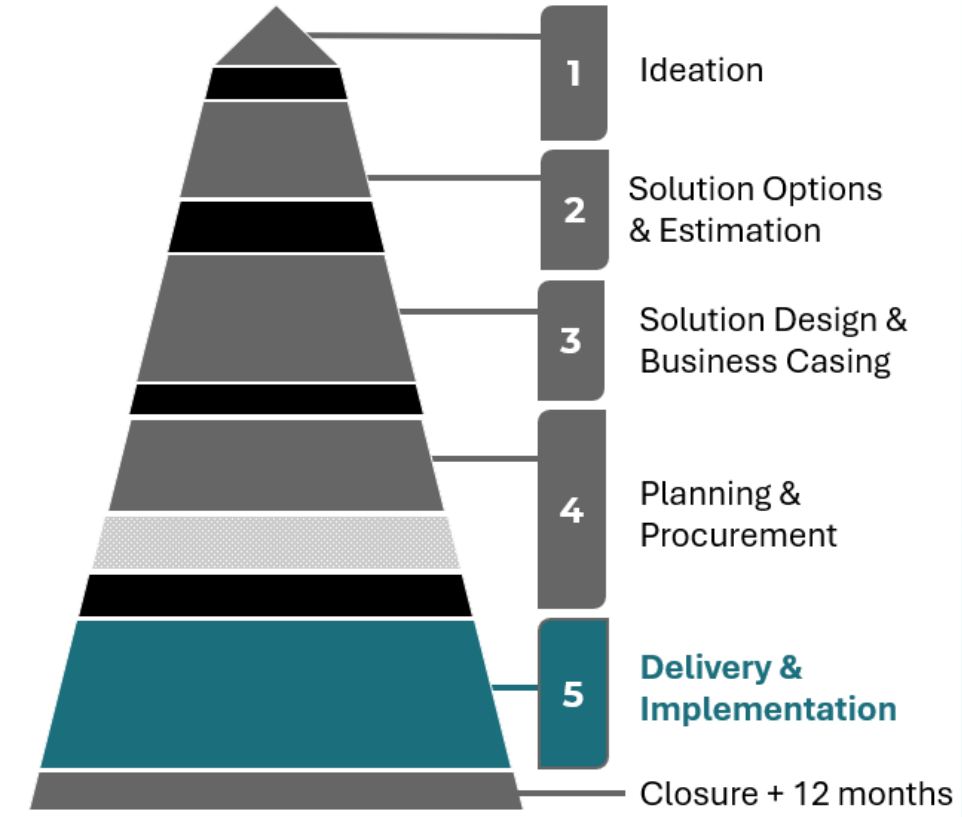
BRM alignment to S2E

Stage 4 – Analyze & Plan

10

Stage 4 - Analyze & Plan

How it happens:



- Value Assurance (VA) is notified of a Gate 3 approval *(for PMO projects over $500K and all Major Programs projects, regardless of $ amount).*
- Benefit Owners are assigned by Primary Sponsor.
- Measurements, baselines/targets & data needs are defined
- Risks to benefits are documented.
- Benefit profile is drafted.
- BRM Plan is drafted & approved.
- Value Assurance Specialist (VAS) meets with Project Delivery Leads to walk through the approved BRM Plan.

Clear Plans. Aligned Teams.
Delivered Benefits.

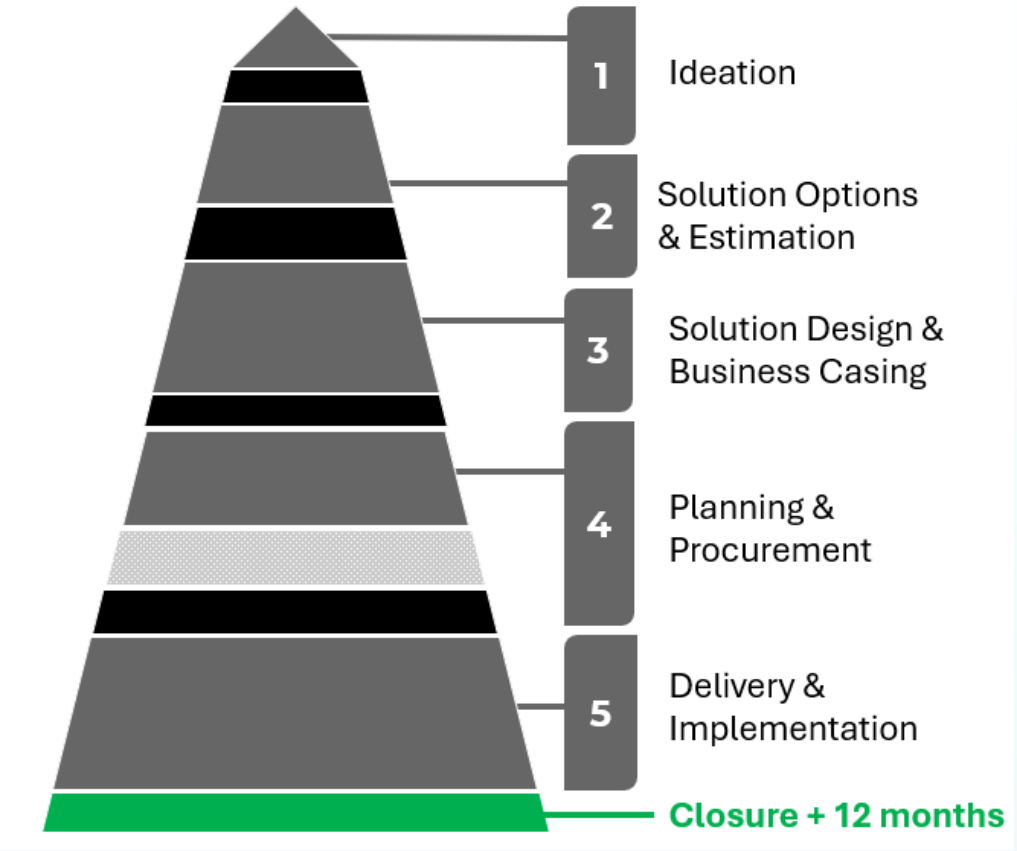
11

BRM alignment to S2E

Stage 5 – Realize & Deliver

12

Stage 5
Realize & Deliver



How it happens:

- Scheduled monthly check-ins with Project Delivery.
- Benefit impact evaluations are conducted before any change or decision is taken forward for approval.
- BRM Plans are updated to reflect benefit related impacts from decisions made and the revised BRM Plan are approved.
- Value Assurance Specialist (VAS) meets with Project Delivery Leads to walk through the revised BRM Plan.

Decisions are grounded, not guessed.

BRM alignment to S2E

Closure + 12 months – Transition & Sustain

14

Project Closure + 12 months
Transition & Sustain

How it happens:

- Ongoing costs and BRM transition to Operations.
- Benefit Owners measure results according to agreed schedule.
- Value Assurance Specialist (VAS) analyzes measurements received.
- VAS kicks off and coordinates mitigation process (if benefits are at risk or off track).
- VAS prepares quarterly benefit realization report.
- Manager, Project Accounting & Value Assurance presents. quarterly report in Corporate Project Financial Summary review meeting.
- VAS prepares the final Benefit Realization Assessment (12-month post-project close).

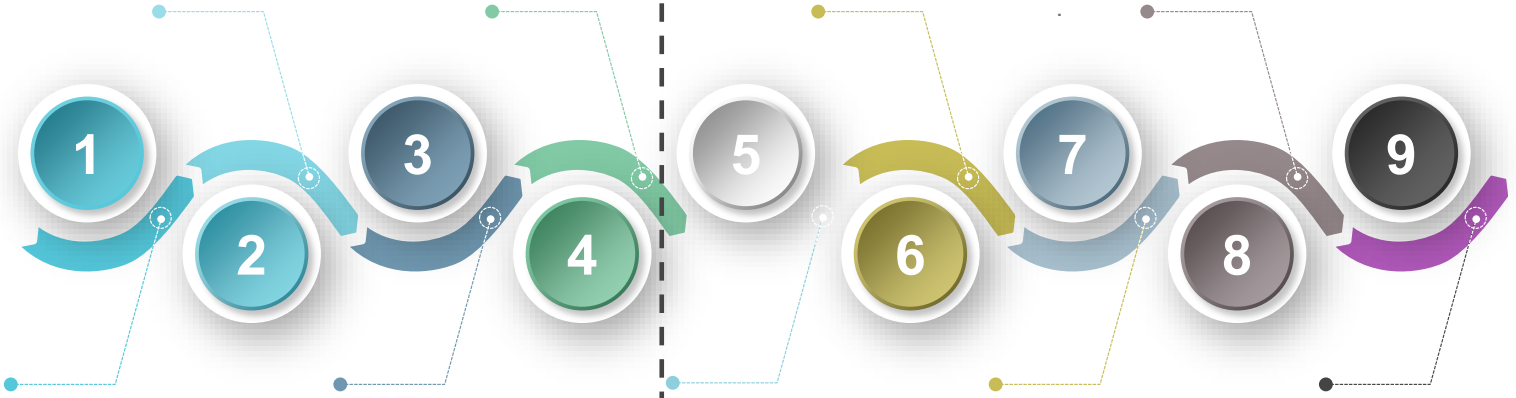
Benefits Measured. Risks Managed. Value Secured

Value Assurance Benefit Reporting

2 - ~3 weeks post Business Case Approved

- BRM Plan Approved
- Expected Benefits communicated to Delivery Team

4 – Project Closed



Benefit Measuring Begins

6 – 2nd Quarter end post-project close

Benefit Status Reported in Quarterly CPFS meeting

8 – 4th Quarter end post-project close

Benefit Status Reported in Quarterly CPFS meeting

1 - Business Case Drafting

SMART Benefits defined and documented in business case

3 – Project Delivery

Protect Benefits through regular meetings with Delivery Leads and review of all project CR/DRs

5 - 1st Quarter end post-project close

Benefit Status Reported in Quarterly CPFS meeting

7 – 3rd Quarter end post-project close

Benefit Status Reported in Quarterly CPFS meeting

9 – One year post project close

Benefit Realization Final Assessment Report

Acronym Definitions:
BRM Plan – Benefit Realization Management Plan
CR – Change Request
DR – Decision Request
CPFS – Corporate Project Financial Summary

Purpose of this Report

- This report contains the findings and recommendations resulting from the analysis conducted as part of the Gartner / Manitoba Public Insurance (MPI) Annual IT Benchmark for FY 2025/26
- The report contains an executive summary of the findings and recommendations, substantiation of the findings and recommendations
- A summary of the benchmarks completed to date is provided below:

Year	Fiscal Time Period for Analysis	Financial Analysis	Maturity Assessment	Benchmark Delivery Timeline
FY 2018/19	Mar 1 2018 - Feb 28 2019	Yes	Yes	Delivered July 9th 2020
FY 2019/20	Mar 1 2019 - Mar 31 2020	Yes	Yes	Delivered July 4th 2021
FY 2020/21	Apr 1 2020 - Mar 31 2021	Yes	No (scores were carried forward from prior FY)	Delivered Jul 22nd 2022
FY 2021/22	Apr 1 2021 - Mar 31 2022	Yes	Yes	Delivered May 2024
FY 2022/23	Apr 1 2022 – Mar 31 2023	Yes	Yes	Delivered July 2024
FY 2024/25	Apr 1 2024 – Mar 31 2025	Yes	Yes	Delivered September 2025
FY 2025/26	**Apr 1 2025 – Mar 31 2026**	**Yes**	**Yes**	**Delivered September 2026**

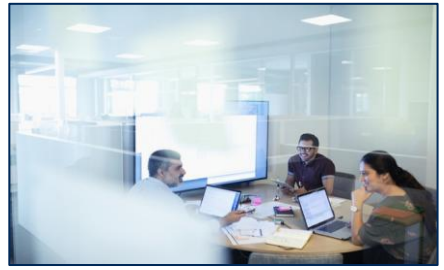
Benchmarking Approach – the analysis contained in this report was developed in collaboration with MPI IT Management

Development Process

Benchmarking of IT Spending and Staffing → **IT Maturity Assessments** → **IT Management Interviews** → **Validation of Results with MPI**

Spending and Staffing Data Collection and Analysis

Gartner benchmarking draws upon a deep repository of IT spending to identify fact-based, optimization opportunities. For MPI, Gartner conducted an analysis of spending and staffing levels, comparing results with peer organizations.



IT Score Surveys

Gartner IT Score Surveys assess specific IT domains, by evaluating best practice activities performed in each function, and assigning a maturity level based on responses. For MPI, Gartner assessed the maturity of MPI's technical domains through proprietary IT Score Surveys.

IT Management Interviews

Gartner's interviews helped understand the context behind MPI's current capabilities, identify business challenges, uncover pain points, and pin-point critical success factors.

Workshops with MPI IT Management to Validate Results and Recommendations

IT assessment results were validated with MPI's IT leadership team. Recommendations are driven from the analysis and are intended to be actionable.

RESTRICTED
© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

2. Executive Summary

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

An Information Technology Benchmark was independently performed by Gartner for MPI

The objectives of the IT benchmark are to:

- Establish a baseline of IT spending and staffing based on 2025/26 fiscal year data
- Compare IT spending and staffing levels with insurance and public sector peers
- Communicate the level of maturity of key IT domains relative to peers
- Identify variances for areas that may have a potential for optimization
- Create a foundation for a continual change / improvement program

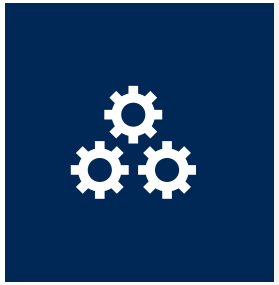
Note:

The IT spending and staffing benchmark includes all IT spending across the enterprise, both OpEx and CapEx. With the closing of Program Nova, starting with the FY2025/26 analysis, Gartner has moved to a single view of IT spend, including all major transformation initiatives. IT spend is reported as one aggregate figure, consistent with how other peer organizations are evaluated. There is no longer a distinction between “with” or “without” Program Nova.

Successful Outcome:

The benchmarking report provides a fact-based assessment for communicating IT performance within MPI and contributes to informing future budget, staffing and investment decisions.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.



Gartner's view of MPI's current state was informed by three distinct workstreams

Work Streams

Spending and Staffing Benchmark

- Peer groups were selected based on characteristics such as industry, size and geography
- Enterprise-level benchmarks for IT spending and staffing were developed using 2025/26 fiscal year data provided by MPI
- Comparisons were made to the averages, of two distinct peer groups for insurance organizations and public sector organizations

IT Maturity Assessments

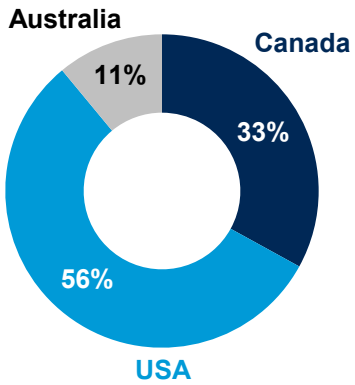
- IT domains included: Applications, Data & Analytics, Enterprise Architecture, Infrastructure & Operations, Program & Portfolio Management, Security & Risk Management, Sourcing & Procurement, Strategy & Execution and Vendor Management
- Domain maturities were evaluated leveraging survey results and maturity levels were calculated and compared with peers
- Validation workshops were conducted with MPI to review capability maturity results and were modified as required to reflect the current reality

Stakeholder Interviews

- Nine interviews were conducted with key IT personnel (one for each in-scope domain)
- The interviews were conducted to build a contextualized view towards MPI's strategy, processes, culture and past initiatives and were not used as part of the maturity assessment

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Gartner's IT Spending and Staffing Benchmark compares MPI with Insurance Industry & Public Sector peers

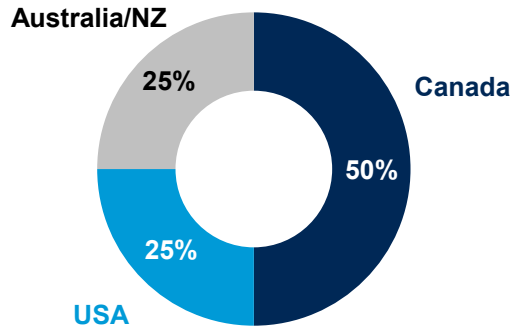


9 Insurance Industry Peers

- Organizations focused on property and casualty insurance
- Similar revenue, operating expense and number of employees
- Benchmark data is from 2024 and 2025

8 Public Sector Peers

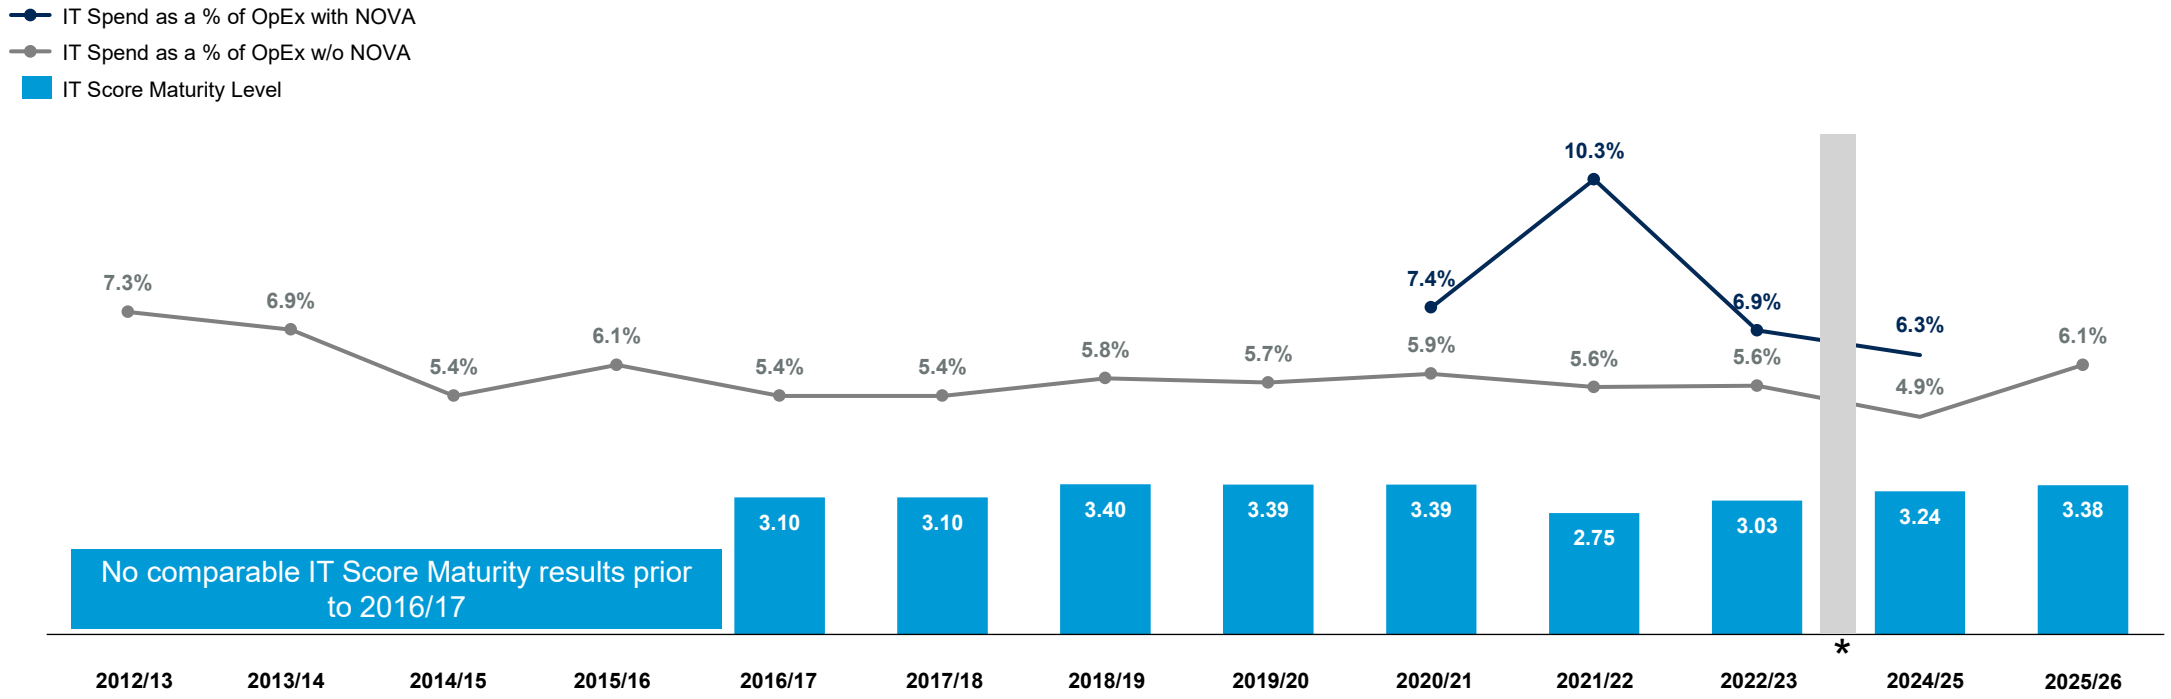
- Public sector peers operating at the Federal, State, Provincial and local levels
- Average # of employees is higher due to the nature of operations (pure public sector); similar level of operating expenses
- Benchmark data is from 2024 and 2025



Geographic Distribution - Insurance

Peer Group Profile

Metric	MPI		Insurance Industry		Public Sector Industry	
	2024/25	2025/26	Current Average	Last Year's Average	Current Average	Last Year's Average
Number of Peers			9	8	8	12
Total Revenue	$1.71 B	$1.81 B	$2.13 B	$2.04 B	N/A	N/A
Total Operating Expense	$1.78 B	$1.89 B	$1.99 B	$1.82 B	$1.76 B	$1.65 B
Total Number of Employees	1,988	1,998	1,946	1,879	3,857	6,088
Total Number of IT Employees (Including Contractors)	380	330	329	311	295	361
Total IT Operating and Capital Expenditure	$112.3 M	$116.0 M	$109.9 M	$89.0 M	$114.7 M	$112.9 M



Geographic Distribution – Public Sector

RESTRICTED

MPI's Overall IT Spending as a percentage of total operating expenses decreased slightly in FY 2025-26, while overall capability maturity improved

IT Spending as a Percentage of Enterprise Operating Expense and IT Score Maturity Levels

Note:

1. Program Nova costs were not included in IT budget submissions prior to FY20/21
2. FY24/25 was the last year Program Nova was reported separately. With the closing of Nova, starting FY25/26, Gartner moved to a single view of IT spend, including all major transformation initiatives. IT spend is now reported as one aggregate figure, consistent with how other peer organizations are evaluated, no longer separated "with" or "without" Program Nova.

* No benchmarking assessment was conducted in FY23/24, so data is not available. MPI conducted the benchmarking assessment in FY24/25 to stay current.

RESTRICTED
10 © 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

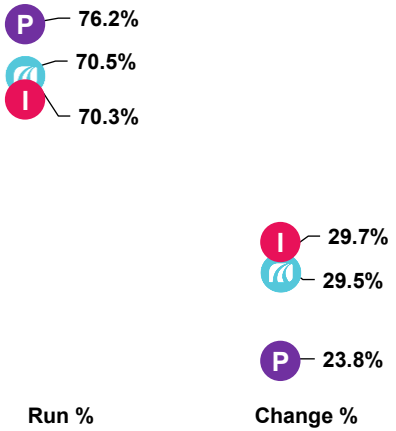
MPI's spending on IT is slightly higher than insurance peers, level of investment in growth and transformation is similar; MPI's spending is materially lower than public sector peer organizations

MPI's IT Spending as a percentage of Total Operating Expense is slightly higher than insurance industry peers. IT spend is materially lower than the public sector peers.

IT Spending as a Percentage of Total Operating Expense

IT Staffing as a percentage of total enterprise employees is comparable to insurance peers. IT staffing is significantly higher than public sector peers, largely due to the high volume of employees in the public sector organizations

IT Staffing as a Percentage of Enterprise Employees



IT Spending per enterprise employee is slightly higher than insurance industry peers. It is significantly higher than public sector peers, again, largely due to the high volume of employees in the public sector organizations

IT Spending per Enterprise Employee

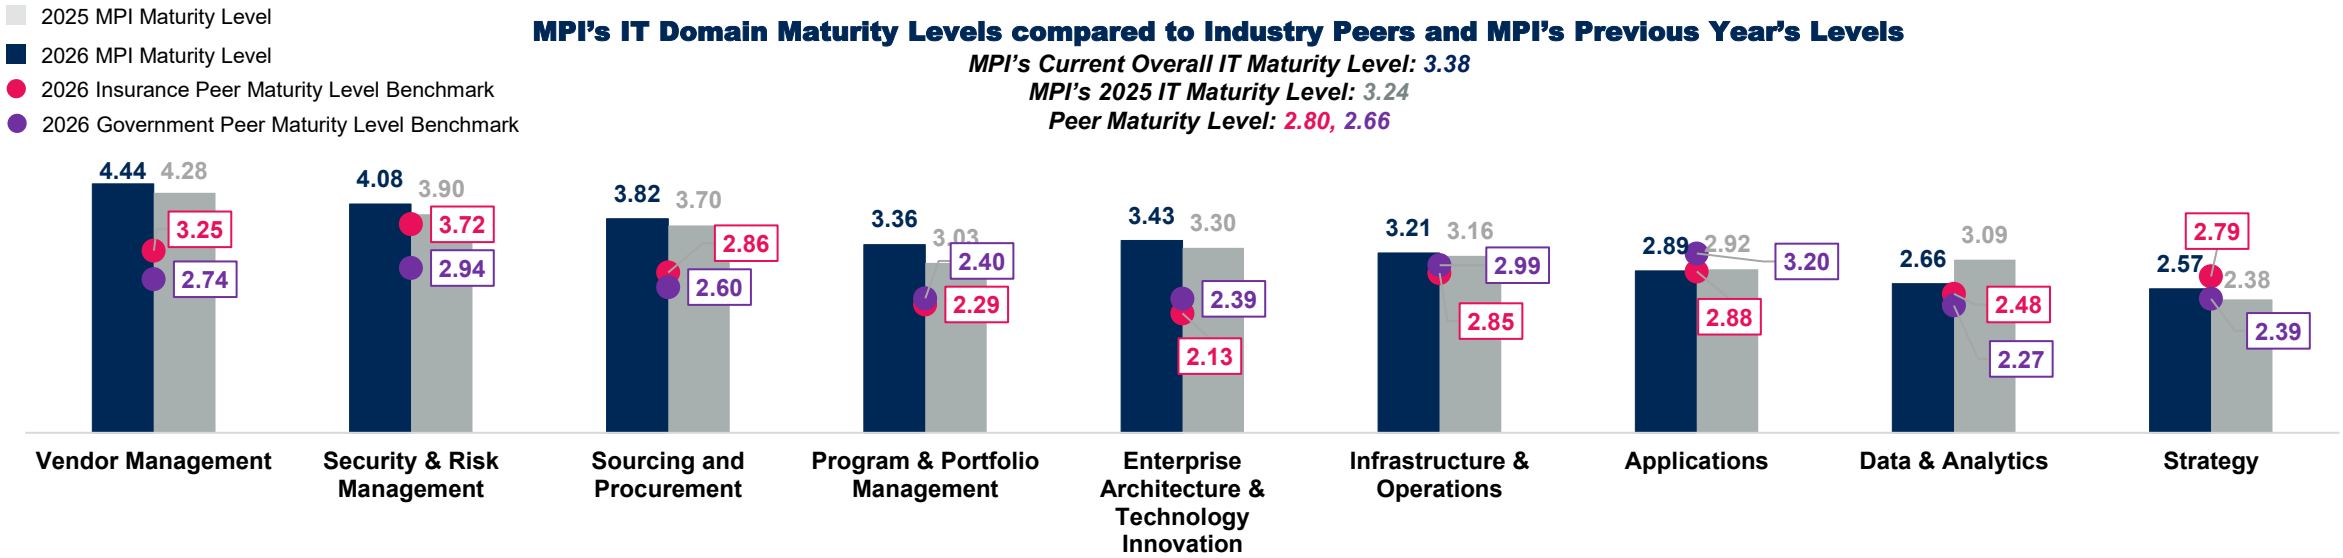
MPI's IT spending allocation to Growth & Transformation (or "change" the business) is comparable to insurance industry peers, and slightly more than public sector peers. Growth & Transformation spending is aimed at improving efficiency and supporting growth

Percentage Spending on Run vs Change

MPI
I Insurance Peer Group Average
P Public Sector Peer Group Average

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

MPI's IT investments have resulted in maturing IT capabilities, effectively equipping the organization to respond to evolving business needs; over the last year, maturity improvements have been made in 7 of 9 domains

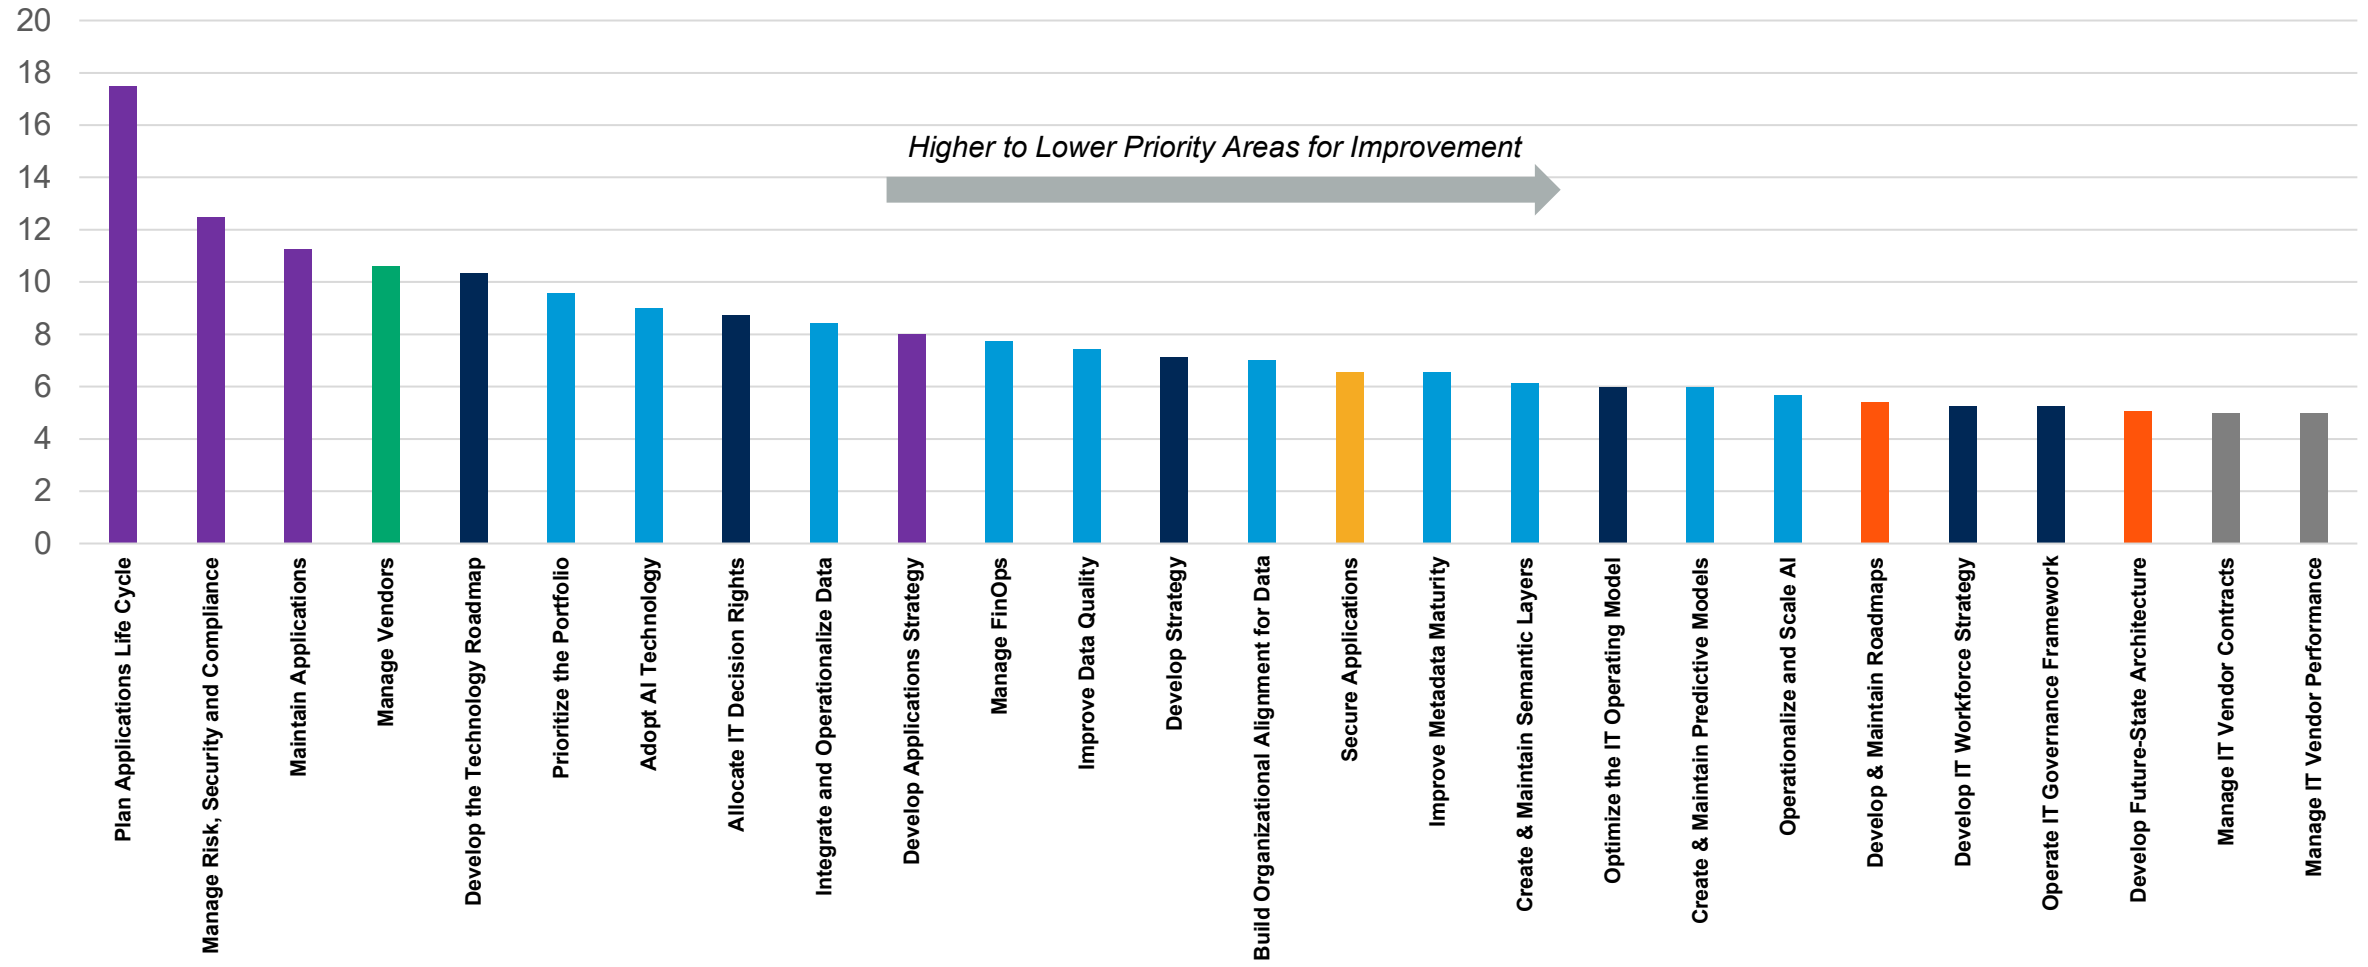


***MPI's** overall IT maturity improved year-over-year, and outperforms Insurance and Government peer benchmarks in 7 of 9 IT domains*

***Vendor Management** remains the most mature function; **Program and Portfolio Management** saw the largest improvement year-over-year*

***Data & Analytics** maturity decreased year-over-year, primarily due to declines in managing the function, analytics content, and delays in delivering the Enterprise Data Platform; MPI already has several initiatives in place to address data governance, quality & availability.*

MPI's IT Domain Maturity Levels compared to Industry Peers and MPI's Previous Year's Levels



MPI's Current Overall IT Maturity Level: 3.38
MPI's 2025 IT Maturity Level: 3.24
Peer Maturity Level: 2.80, 2.66

1. *Maturity scores are assessed on a scale from 1-5, with the score of 5 representing Gartner's best practices for the IT domain.*
2. *IT Score has been updated by Gartner Research to reflect best practices and changes in the industry for Applications. Due to the new structure of the survey completed in June 2026, previous year's [illegible] "apples to apples" comparison.*

Improvement Opportunities: Activity Priority Index (API)

Top 25 activities for improvement across IT Domains (based on which are the least mature and of greatest importance to MPI)

Legend

- Applications
- Data & Analytics
- Enterprise Architecture
- Infrastructure & Operations
- Program & Portfolio Mgmt.
- Security & Risk Mgmt.
- Sourcing & Procurement .
- Strategy
- Vendor Management

Based on the FY 2025/26 analysis, Gartner is recommending that MPI focus improvements efforts in the following three areas:

1. **Plan Applications Lifecycle (Apps):** Strengthen product and application lifecycle planning, with a focus on strategic alignment, modernization, and governance

2. **Manage Vendors (PPM):** Mature vendor engagement to strengthen program & portfolio management outcomes

3. **Develop Technology Roadmap (Strategy & Execution):** Develop and institutionalize an enterprise technology roadmap aligned to business strategy and architecture

2024/25 Recommendations Update: ***MPI has made progress on last year's recommendations focused on Planning the Applications Lifecycle, Managing Vendors within the context of PPM, and Fostering the Data Ecosystem (see pages 61-64 for additional details). The 2025/26 recommendations address updated opportunities based on current maturity / importance levels and build on the progress made to date.***

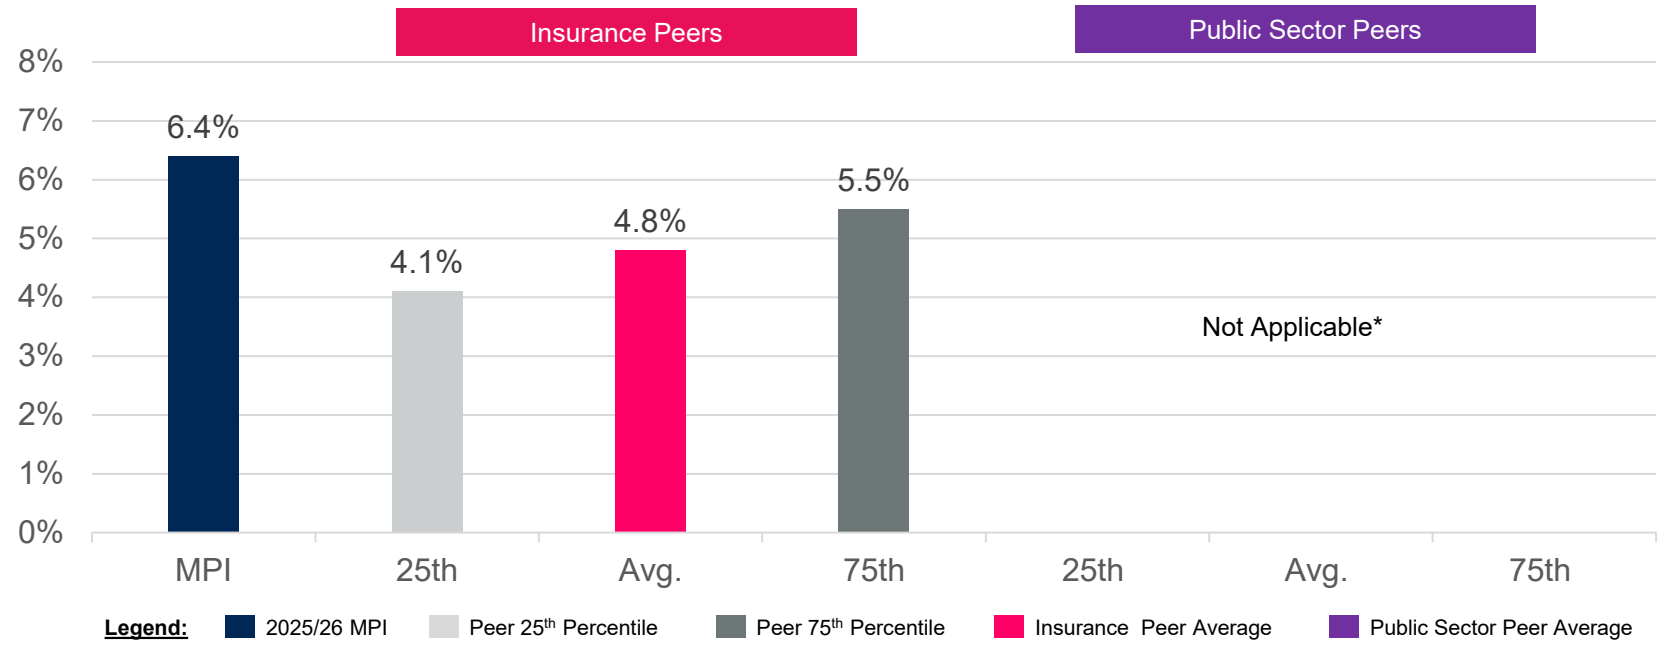
Historical Trend on IT Spending and IT Score Maturity Levels

IT Spending as a Percentage of Enterprise Operating Expense and IT Score Maturity Levels

Observations:

- 2025/26 IT spend as a percentage of enterprise operating expense is slightly lower (6.1% vs 6.3%) year-over-year
- Being above or below peers is not necessarily good or bad. The “right” level of IT spend is the level that will deliver the necessary IT solutions that will enable MPI to deliver on its business objectives, in a cost-effective manner. Investing an additional dollar in IT makes sense if it can reduce operational costs elsewhere in the business.
- MPI’s overall IT maturity level improved slightly year-over-year

Metrics (MPI incl. NOVA)	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	2022/23	2024/25	2025/26
Operating Expense	$1.13 B	$1.23 B	$1.26 B	$1.15 B	$1.37 B	$1.29 B	$1.42 B	$1.35 B	$1.20 B	$1.34 B	$1.54 B	$1.78 B	$1.89 B
IT Expense	$82.3 M	$85.0 M	$68.7 M	$70.7 M	$74.8 M	$69.7M	$82.5 M	$77.4 M	$70.2 M	$138.5 M	$143.1 M	$112.3 M	$116.0 M
IT Spending as Percentage of OPEX	7.30%	6.90%	5.40%	6.10%	5.40%	5.40%	5.80%	5.70%	7.44%	10.30%	6.88%	6.32%	6.14%
IT Score Maturity Level	-	-	-	-	3.1	3.1	3.4	3.39	3.39	2.75	3.03	3.24	3.38



Note:
1. Program Nova costs were not included in IT budget submissions prior to FY20/21
2. FY24/25 was the last year Program Nova was reported separately. With the closing of Nova, starting FY25/26, Gartner moved to a single view of IT spend, including all major transformation initiatives. IT spend is now reported as one aggregate figure, consistent with how other peer organizations are evaluated, no longer separated “with” or “without” Program Nova.
3. No benchmarking assessment was conducted in FY23/24, so data is not available. MPI conducted the benchmarking assessment in FY24/25 to stay current.

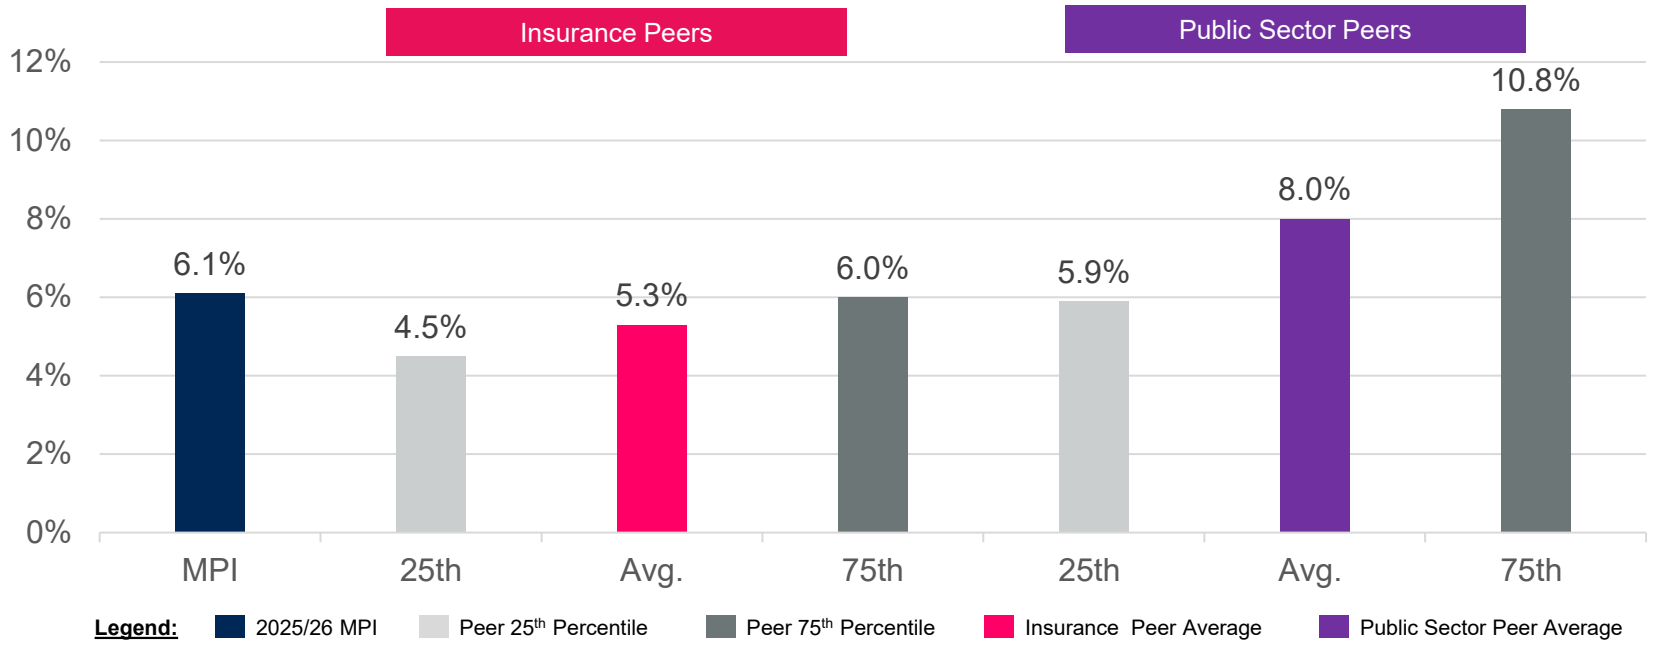
September 4, 2026

IT Spending as % of Revenue

Enterprise IT Spending Metrics

Observations:

- MPI's IT spend as a percentage of revenue is slightly higher compared to the insurance industry peer group average



Metric	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
IT Spend as a % of Revenue	5.1%	5.7%	9.6%	9.4%	6.6%	6.4%	4.8%	n/a*

* Public sector organizations generally do not report revenue, Gartner does not collect it, hence does not calculate this metric.

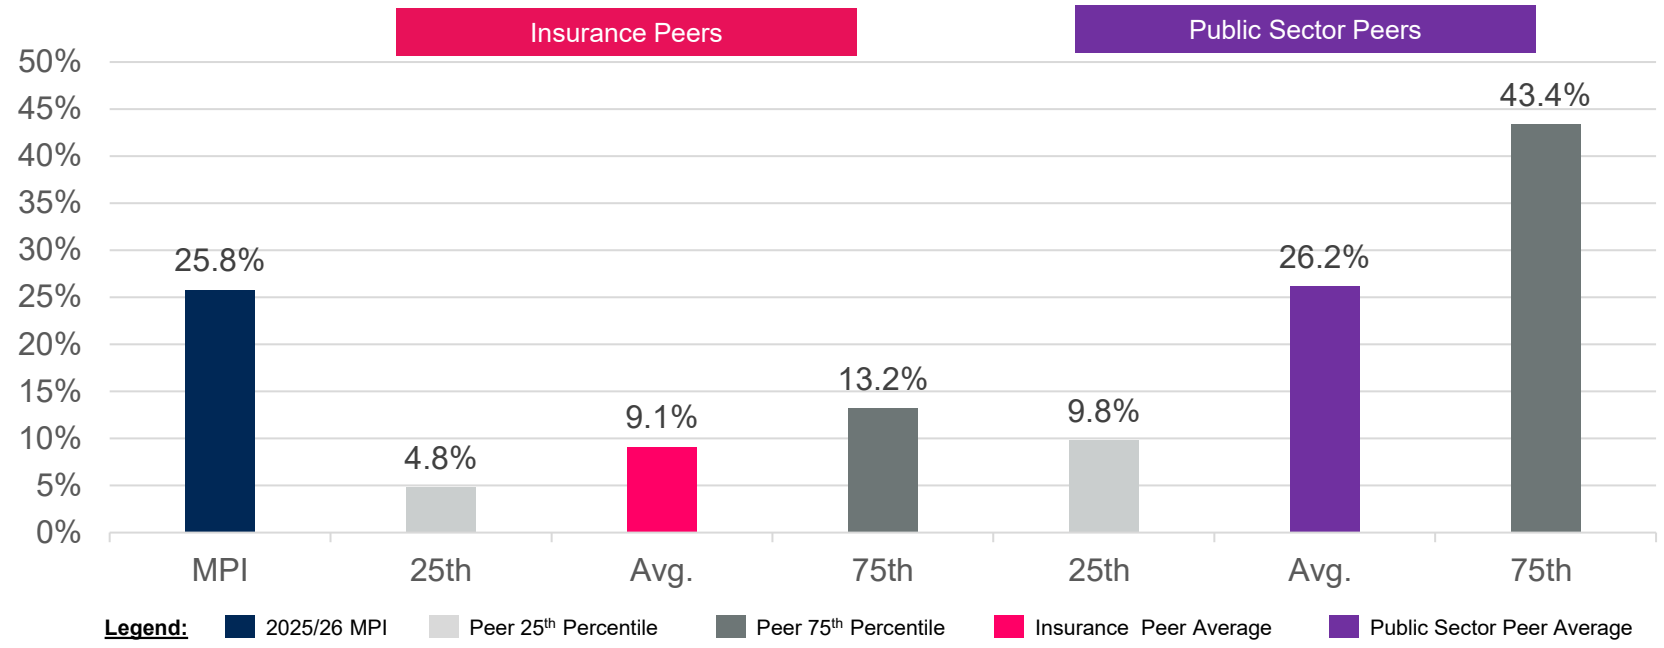
© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

IT Spending as % of Total Operating Expenses

Enterprise IT Spending Metrics

Observations:

- MPI's IT spend as a percentage of total operating expense is slightly higher compared to the insurance industry peer group average (6.1% versus 5.3%)
- However, MPI's IT spend as a percentage of total operating expense is lower compared to the public sector group average (6.1% versus 8.0%)



Metric	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
IT Spend as % of Total Operating Expenses	5.7%	7.4%	10.3%	9.3%	6.3%	6.1%	5.3%	8.0%

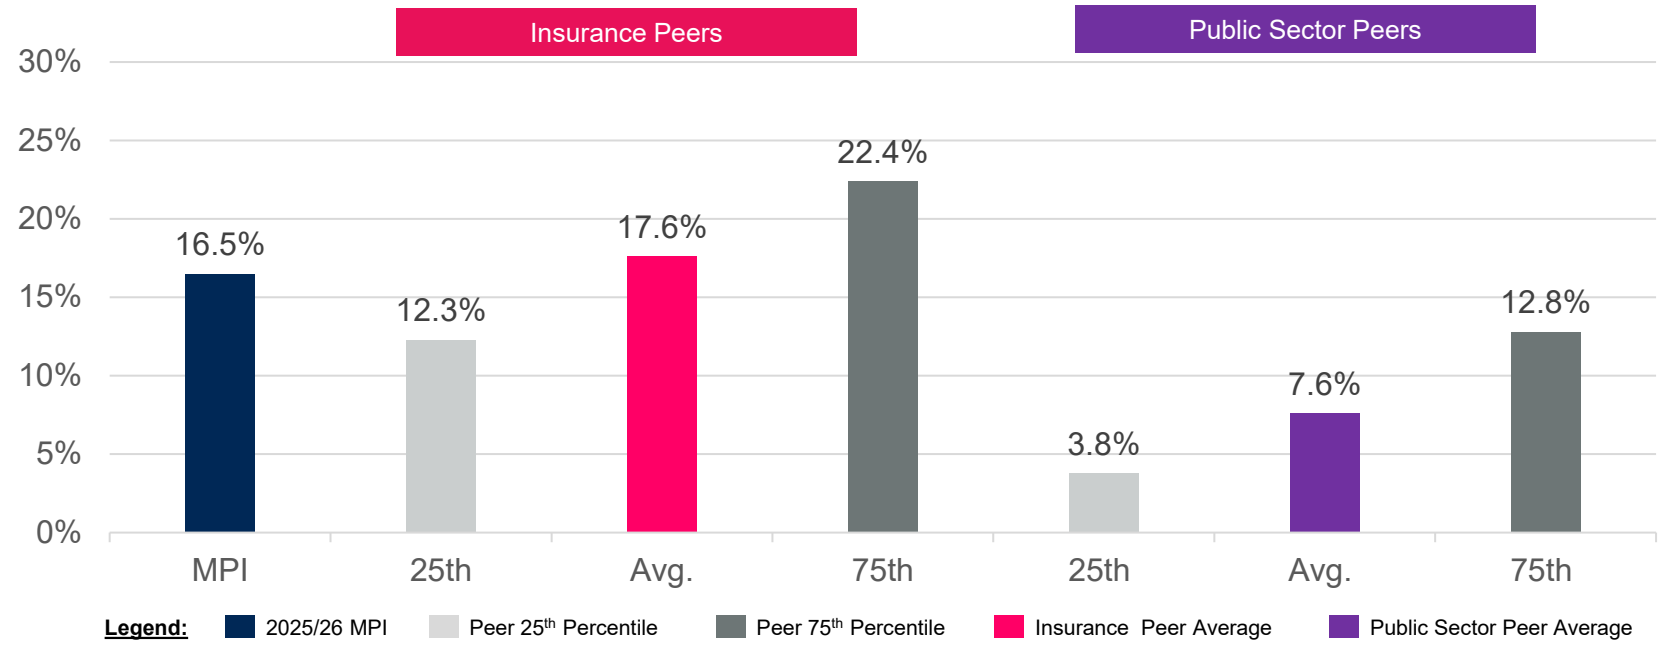
RESTRICTED

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

IT Capital as % of Total IT Spend

Enterprise IT Spending Metrics

Observations:



- MPI's allocation to capital (25.8% of IT spend) is higher than the Insurance peer group average (9.1%) and is comparable with the Public Sector peer group average (26.2%)

Metric	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
IT Capital as % of Total IT Spend	21.8%	22.5%	44.8%	33.6%	25.7%	25.8%	9.1%	26.2%

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

IT FTEs as % of Total Organizational Employees

Enterprise IT Spending Metrics

Observations:

- MPI's IT FTEs as a percentage of total organizational employees is comparable with the insurance industry peer group average (16.5%% versus 17.6%)
- While MPI's staffing level is much higher than the than the public sector peer group average (16.5% versus 7.6%), it is less relevant due to the high number of employees in the public sector peer group organizations

	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
IT FTEs as a % of Employees	18.4%	22.8%	24.9%	24.6%	19.1%	16.5%	17.6%	7.6%

Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

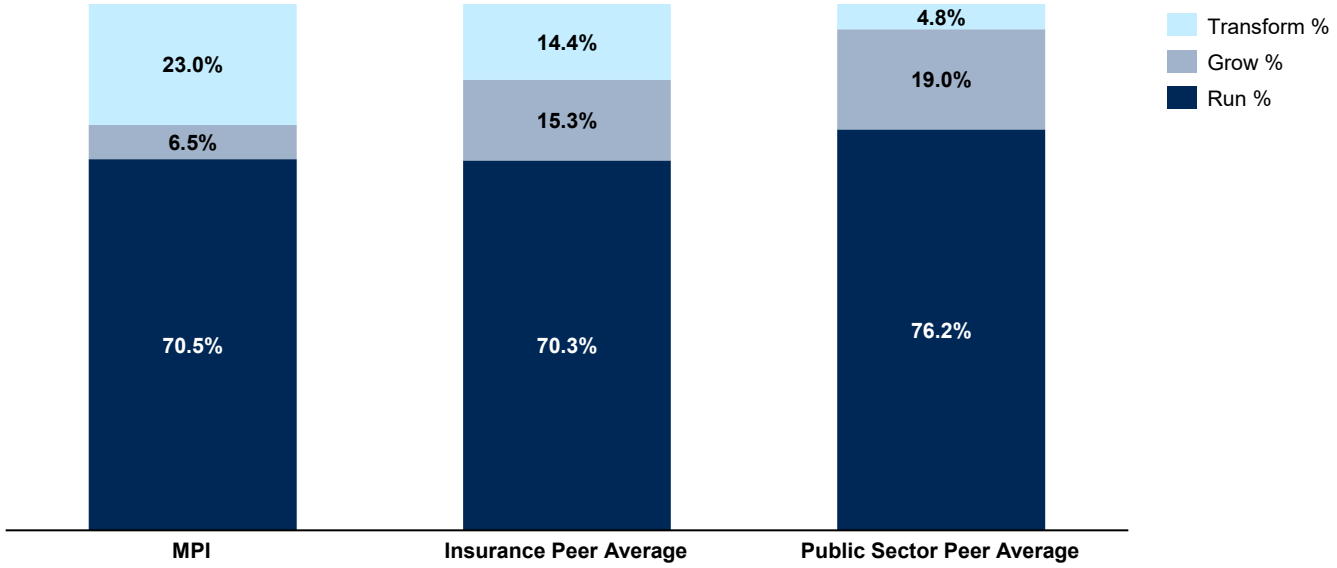
IT Spending per Employee

Enterprise IT Spending Metrics

Observations:

- MPI's IT spend per organizational employee is slightly higher than the insurance sector peer average, and about 2x of its public sector peers. Again, this is less relevant due to the high number of employees in the public sector peer group organizations

	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Spending per Employee	$40,946	$38,974	$73,698	$72,047	$56,509	$58,038	$53,607	$28,993



Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

September 4, 2026

‘Run’ vs ‘Change’ Spending Distribution

Run, Grow & Transform Spending

Observations:

- MPI’s 29.5% allocation to “Change” initiatives is comparable with the insurance industry peer average (29.7%), and higher than the public sector peer group average (23.8%)

	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Run	64.7%	52.9%	16.5%	44.4%	72.1%	70.5%	70.3%	76.2%
Change (Grow + Transform)	35.3%	47.1%	83.5%	55.6%	27.9%	29.5%	29.7%	23.8%

Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

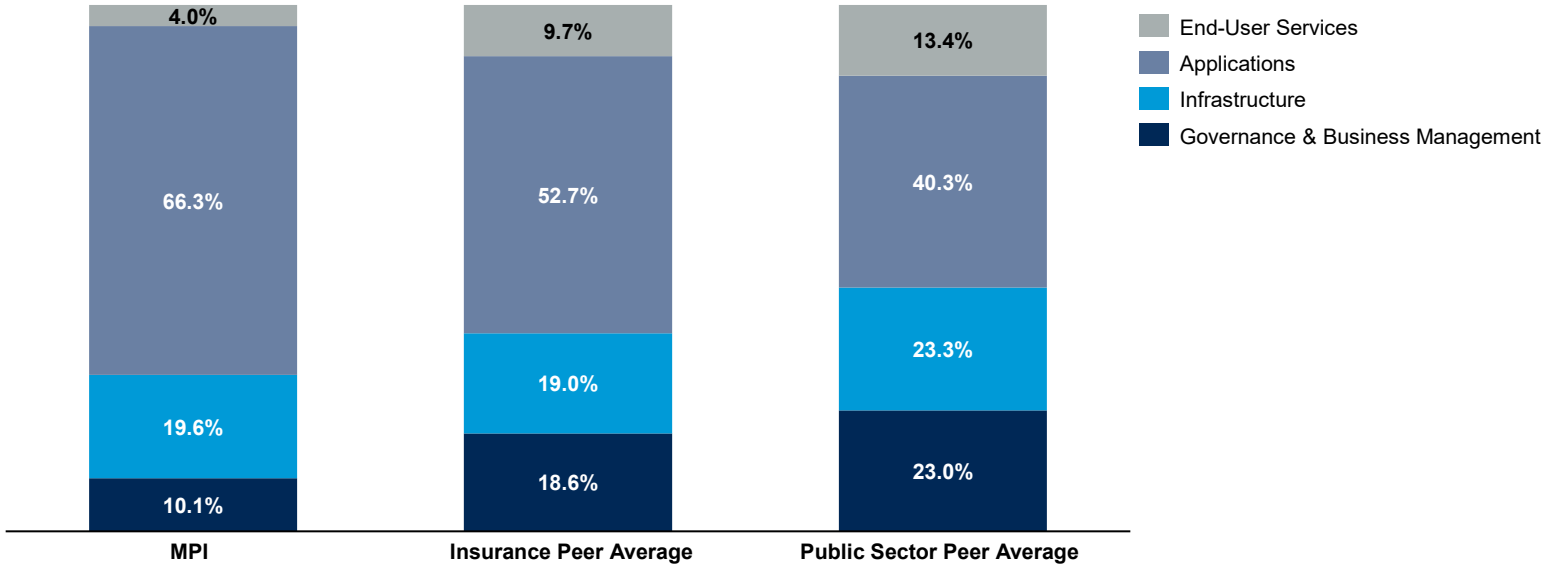
© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Asset Category Spending Distribution – High Level View

IT Spending by Asset Categories

Observations:

- MPI's spending allocation on Personnel (25.3%) is much lower than both the Insurance industry (50.2%) and Public Sector (52.8%) peers.
- MPI's spending allocation on External Services (33.0%) continues to be much higher than both the Insurance industry (20.6%) and Public Sector (7.2%) peers.
- Organizations that outsource more will typically have lower Personnel costs, this is the case with MPI
- MPI's allocation to software (38.1%) is materially higher than both the insurance industry peers (23.1%) and public sector peers (28.7%).



Spending Distribution	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Personnel	52.4%	39.4%	36.3%	39.3%	24.9%	25.3%	50.2%	52.8%
Hardware	6.4%	2.3%	2.7%	2.5%	4.4%	3.6%	6.1%	11.3%
Software	19.7%	28.6%	17.7%	17.9%	37.2%	38.1%	23.1%	28.7%
External Services	21.5%	29.8%	43.3%	40.3%	33.6%	33.0%	20.6%	7.2%

Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

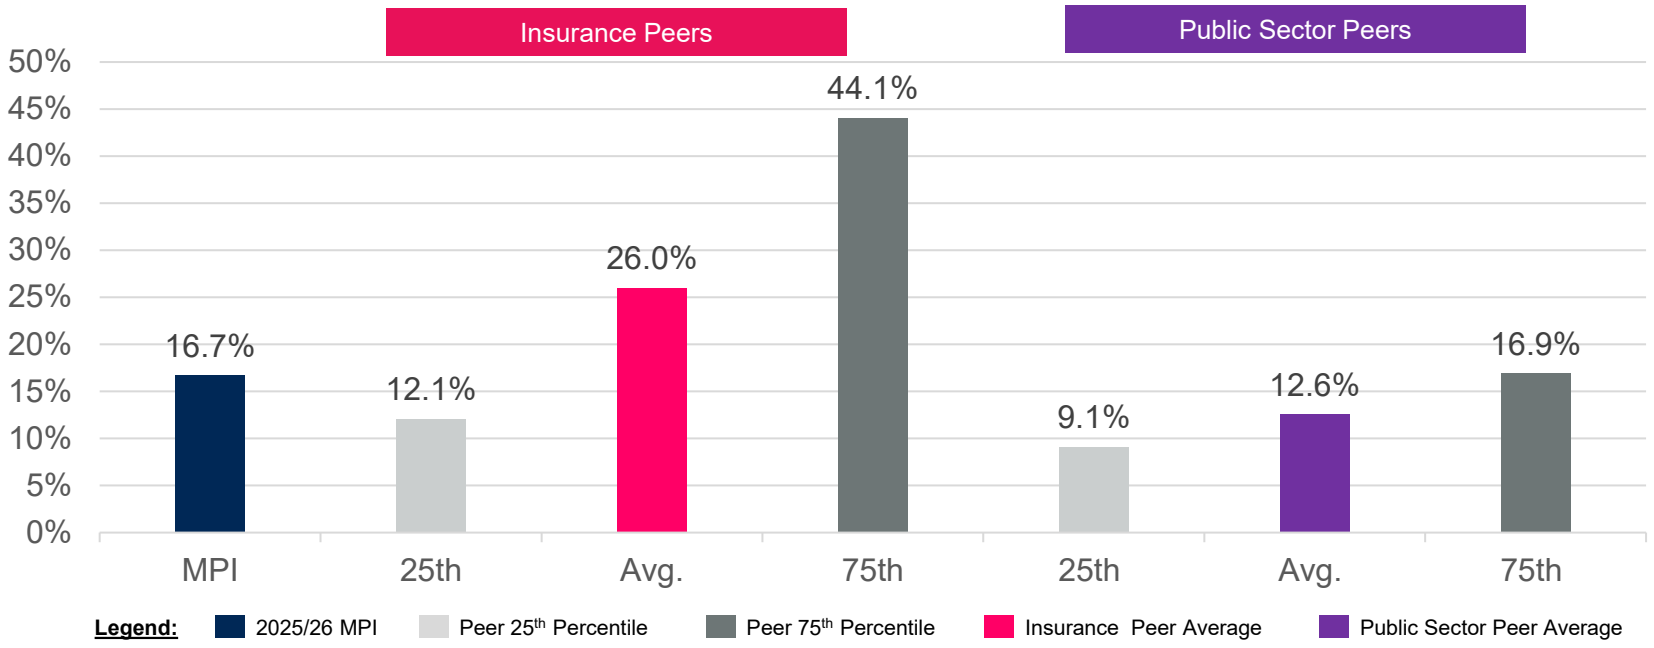
IT Functional Spending Distribution – High Level View

IT Spending by Functional Group

Observations:

- MPI's Applications spending is significantly higher (66.3% of IT Spend) than insurance industry (52.7%) and public sector (40.3%) peers.
- MPI's Infrastructure spending is comparable with both insurance industry and public sector peers.
- MPI's spending on Governance and End-User Services is about half of its insurance industry and public sector peers.

Spending Distribution	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Governance & Business Management	14.0%	12.0%	15.1%	12.1%	20.7%	10.1%	18.6%	23.0%
Infrastructure	25.3%	18.0%	9.8%	13.3%	15.1%	19.6%	19.0%	23.3%
Applications	52.9%	63.0%	70.2%	69.6%	58.2%	66.3%	52.7%	40.3%
End-User Services	7.8%	7.0%	4.9%	5.1%	6.0%	4.0%	9.7%	13.4%



Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

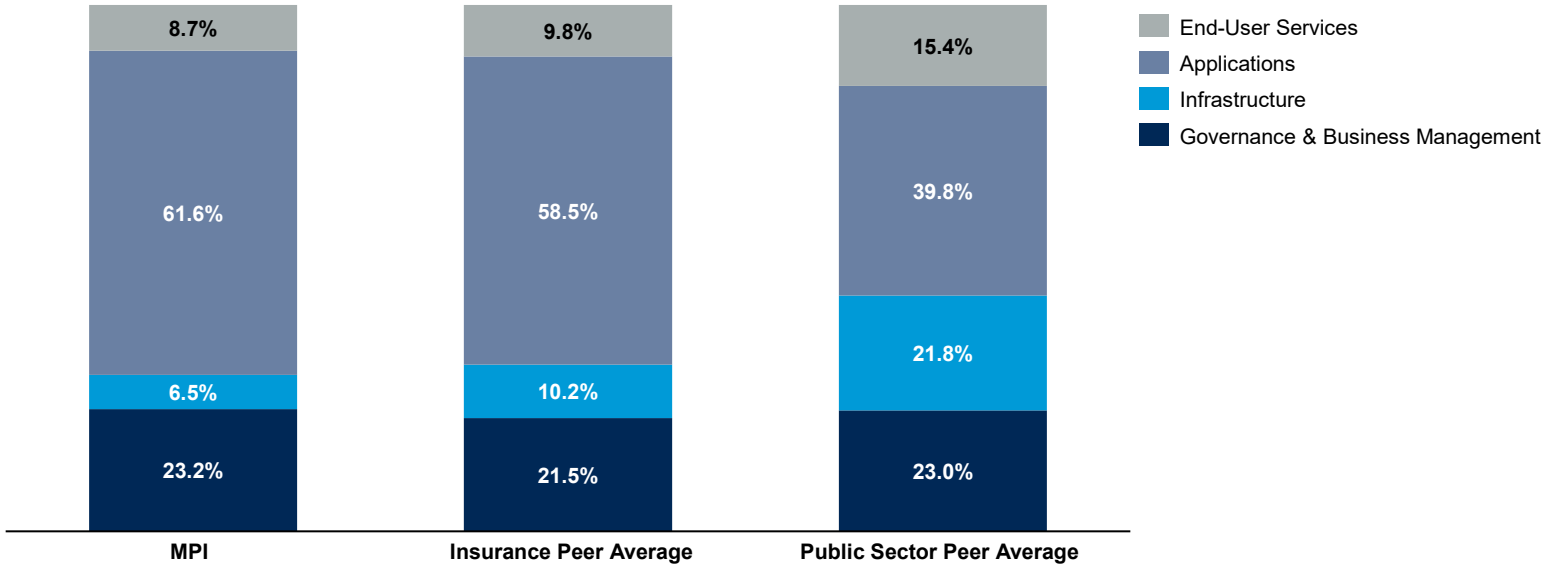
September 4, 2026

IT Staffing Distribution – Use of Contractors

Enterprise IT Staffing Metrics

Observations:

- With Program Nova coming to a close, MPI's use of contractors has reduced year-over-year
- In 2025/26 MPI used a lower proportion of contractors relative to insurance industry peers, and slightly higher than public sector peers



Use of Contractors	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
IT Employees which are Contractors	17.6%	15.9%	23.1%	23.3%	27.9%	16.7%	26.0%	12.6%

September 4, 2026

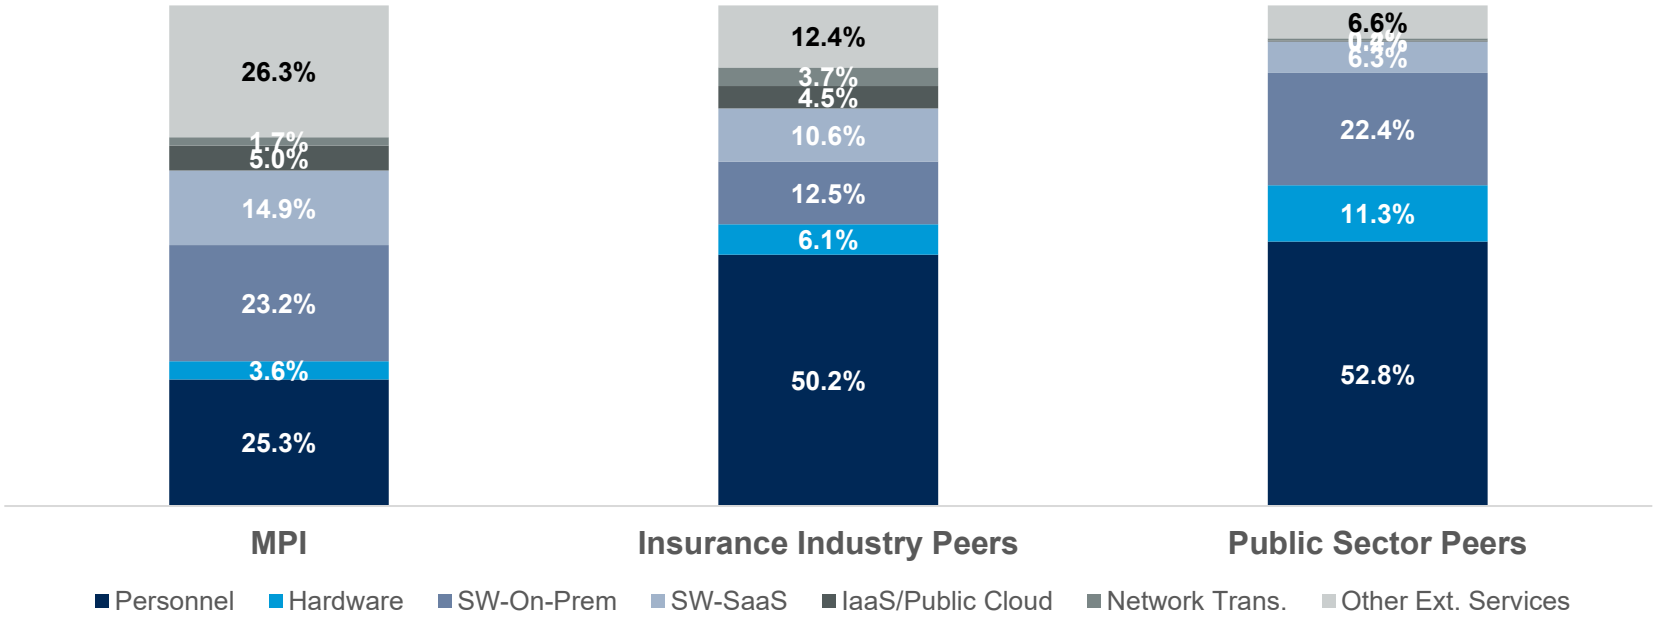
IT Functional Staffing Distribution – High Level View

Enterprise IT Staffing Metrics

Observations:

- Applications staffing allocation is comparable with insurance industry peers and higher than public sector peers
- Infrastructure staffing allocation is lower than both peer groups, reflecting a partially outsourced model
- End-user Services staffing allocation is lower than public sector peers, and similar to insurance industry peers
- Governance staffing allocation is comparable with both peer groups

Spending Distribution	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Governance & Business Management	20.9%	23.1%	21.3%	17.8%	12.4%	23.2%	21.5%	23.0%
Infrastructure	7.0%	5.6%	6.8%	6.4%	6.5%	6.5%	10.2%	21.8%
Applications	61.5%	61.9%	60.7%	65.3%	67.7%	61.6%	58.5%	39.8%
End-User Services	10.6%	9.4%	11.1%	10.6%	13.4%	8.7%	9.8%	15.4%



Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

September 4, 2026

Asset Category Spending Distribution – Detailed View

Enterprise IT Spending Metrics

Observations:

- MPI's spending allocation to Other External Services is significantly higher than both sets of peers, reflecting an outsourced delivery model
- Given the higher use of Other External Services, MPI's spending allocation to Personnel is significantly lower than both sets of peers
- MPI's spending allocation to SaaS is higher than both sets of peers
- MPI's allocation to On-Prem Software is higher than insurance industry peers, and comparable to public sector peers

Group	Spending Distribution	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Personnel	**Personnel**	52.4%	39.4%	36.3%	39.3%	24.9%	25.3%	50.2%	52.8%
Hardware	**Hardware**	6.4%	2.2%	2.7%	2.5%	4.4%	3.6%	6.1%	11.3%
Software	**Software (On-Prem)**	12.4%	17.2%	7.0%	8.2%	14.9%	23.2%	12.5%	22.4%
	SaaS	7.3%	11.3%	10.6%	9.6%	22.3%	14.9%	10.6%	6.3%

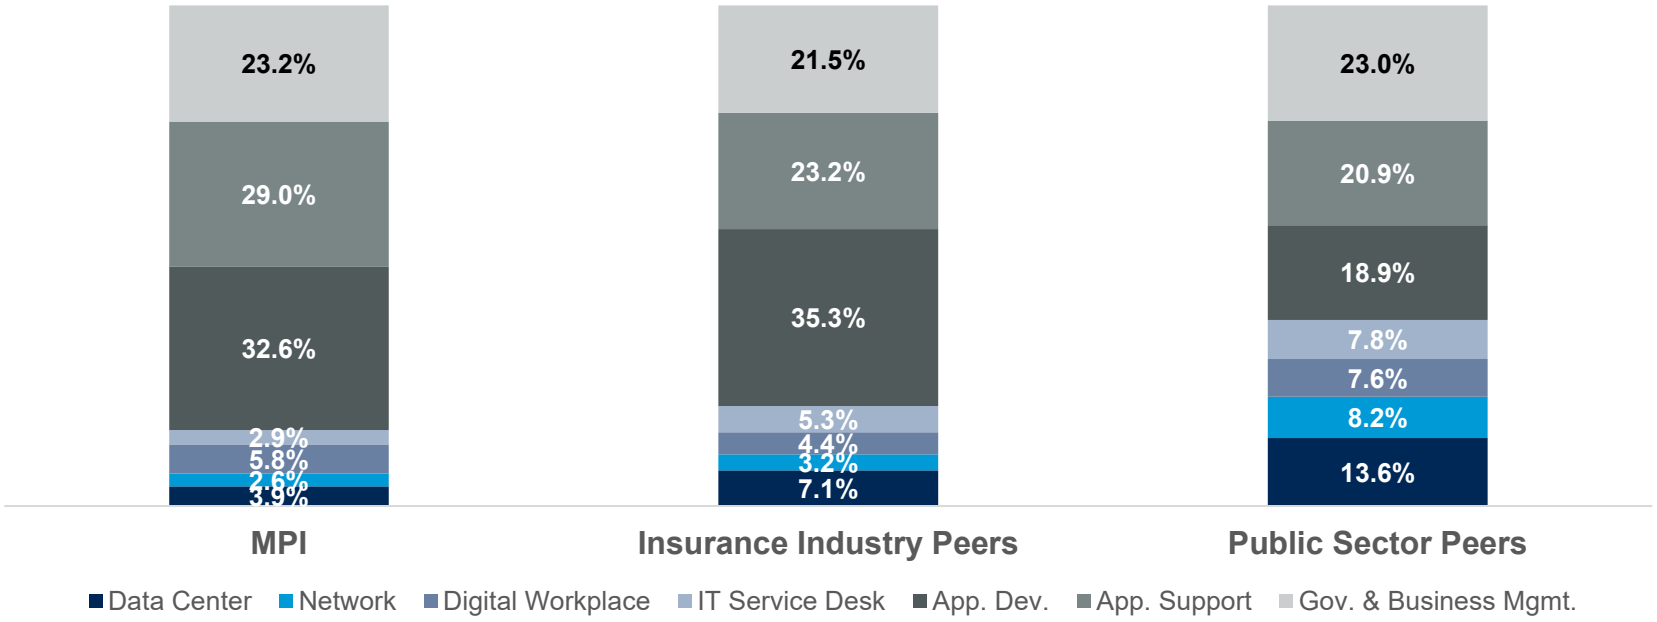
IT Functional Spending Distribution – Detailed View

Enterprise IT Spending Metrics

Observations:

- MPI's spending allocation on Application Support is higher than insurance industry and public sector peers, reflecting ongoing support of a large set of legacy applications. Allocation to Application Development is also higher.
- MPI's spending allocations to Data and Voice Network, Digital Workplace and IT Service Desk are lower than both sets of peers.
- MPI's spending allocation to Governance & Business Management is significantly lower than both peer groups.



Group	Spending Distribution	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Infrastructure	Data Center	17.8%	10.2%	7.6%	8.9%	13.6%	16.4%	11.4%	14.6%
	Data and Voice Network	7.5%	3.9%	2.2%	4.4%	1.5%	3.3%	7.6%	8.7%
End-User Services	Digital Workplace	5.6%	3.1%	2.7%	3.8%	4.1%	2.0%	6.4%	8.4%
	IT Service Desk	2.2%	2.4%	2.2%	1.3%	1.8%	2.0%	3.3%	5.0%
Applications	Application Development	52.9%	70.0%	70.2%	44.8%	31.9%	31.6%	26.4%	19.2%
	Application Support	-	-	-	24.7%	26.3%	34.5%	26.4%	21.1%
Governance & Business Management	Governance & Business Management	14.0%	10.3%	15.1%	12.1%	20.7%	10.2%	18.5%	23.0%

IT Functional Staffing Distribution – Detailed View

Enterprise IT Staffing Metrics

Observations:

- MPI staffing allocation to Data Center is lower than both peer groups.
- MPI's Application Development staffing allocation is slightly lower than insurance industry peers, and higher than Public Sector Peers. Allocation to Application Support is higher than both peer groups.
- Governance and Business Management staffing allocation is similar to both insurance industry and public sector peers.

Group	Spending Distribution	MPI (2019/20)	MPI (2020/21)	MPI (2021/22)	MPI (2022/23)	MPI (2024/25)	MPI (2025/26)	Insurance Peer Average	Public Sector Peer Average
Infrastructure	Data Center	3.3%	2.4%	3.1%	3.2%	3.4%	3.9%	7.1%	13.6%
	Data and Voice Network	3.7%	3.2%	3.7%	3.2%	3.4%	2.6%	3.2%	8.2%
End-User Services	Digital Workplace	4.9%	4.0%	0.0%	6.4%	8.6%	5.8%	4.4%	7.6%
	IT Service Desk	5.7%	5.5%	11.1%	4.2%	5.5%	2.9%	5.3%	7.8%
Applications	Application Development	61.5%	61.9%	60.7%	50.9%	38.4%	32.6%	35.3%	18.9%
	Application Support	-	-	-	14.3%	27.8%	29.0%	23.2%	20.9%
Governance & Business Management	Governance & Business Management	20.9%	23.1%	21.3%	17.8%	12.9%	23.2%	21.5%	23.0%

Note: 2023/24 IT maturity and spend assessment was not assessed due to unavailability of MPI data

3.2 IT Maturity Assessment Findings

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

IT Maturity Level Methodology

- Maturity assessment results were collected via surveys using Gartner's proprietary IT Score Assessment Tool. MPI respondents for surveys were selected from MPI's IT management team, based on ownership and expertise in the particular domain. IT Maturity surveys evaluated 9 IT Domains, which are comprised of 48 Functions and 206 Activities.

- Maturity levels are measured on a scale ranging from Level 1 (Lowest) to Level 5 (Highest), and depict how advanced MPI's development in a domain, function or activity is relative to Gartner's Best Practice Research. These maturity level descriptions are dependent on the specific domain being assessed and may be subject to yearly updates to reflect modern best practices.
- Maturity level results were compared to a peer group which was selected based on survey responses from insurance companies (with revenues of $1B - 3B USD) and government organizations (with revenues of $500m – 3B USD).
- For reporting simplification, only domain and functional level have been presented.
- Requirement to meet Gartner's defined level of maturity, and subsequently the IT survey questions evolve each year to reflect the changing industry standards as it pertains to IT service delivery worldwide. As a result, the changes in IT maturity scores year-over-year, may be a result of: 1) Changes in the levels of MPI's IT Service Delivery or 2) Evolving criteria required to meet a particular level of maturity as defined by Gartner.
- Recommendations were developed based on the assessment of the IT Domains, Functions and Activities. Gartner's recommendations were guided by the level of importance to the organization, current maturity level and other factors such as MPI's organizational objectives, industry trends and insights uncovered through interview discussions.
- The IT Score Assessment Tool asks participants to answer a series of questions with "yes," "no," or "don't know.". A "yes" response indicates that a particular practice is both established and performed consistently, at least 80% of the time. This guidance may introduce subjectivity in year-over-year scenarios, especially when different individuals or new leadership complete the survey.

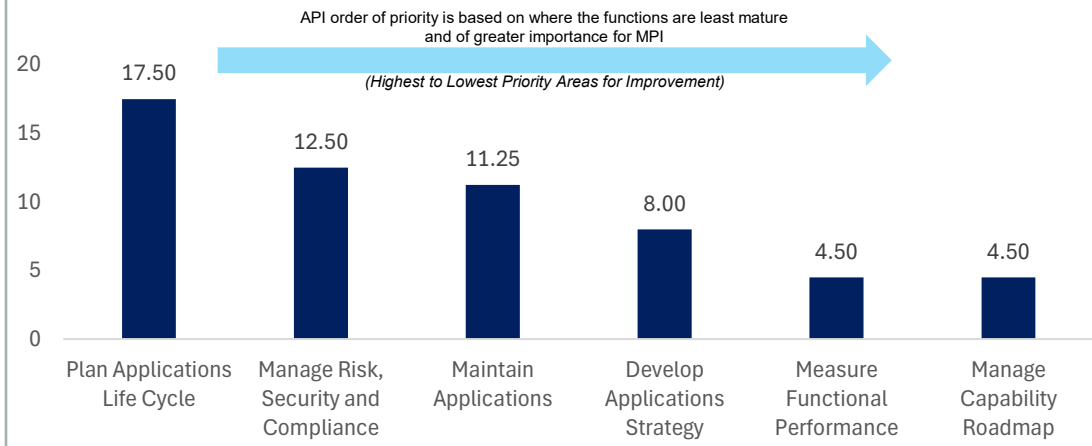
September 4, 2026



Applications

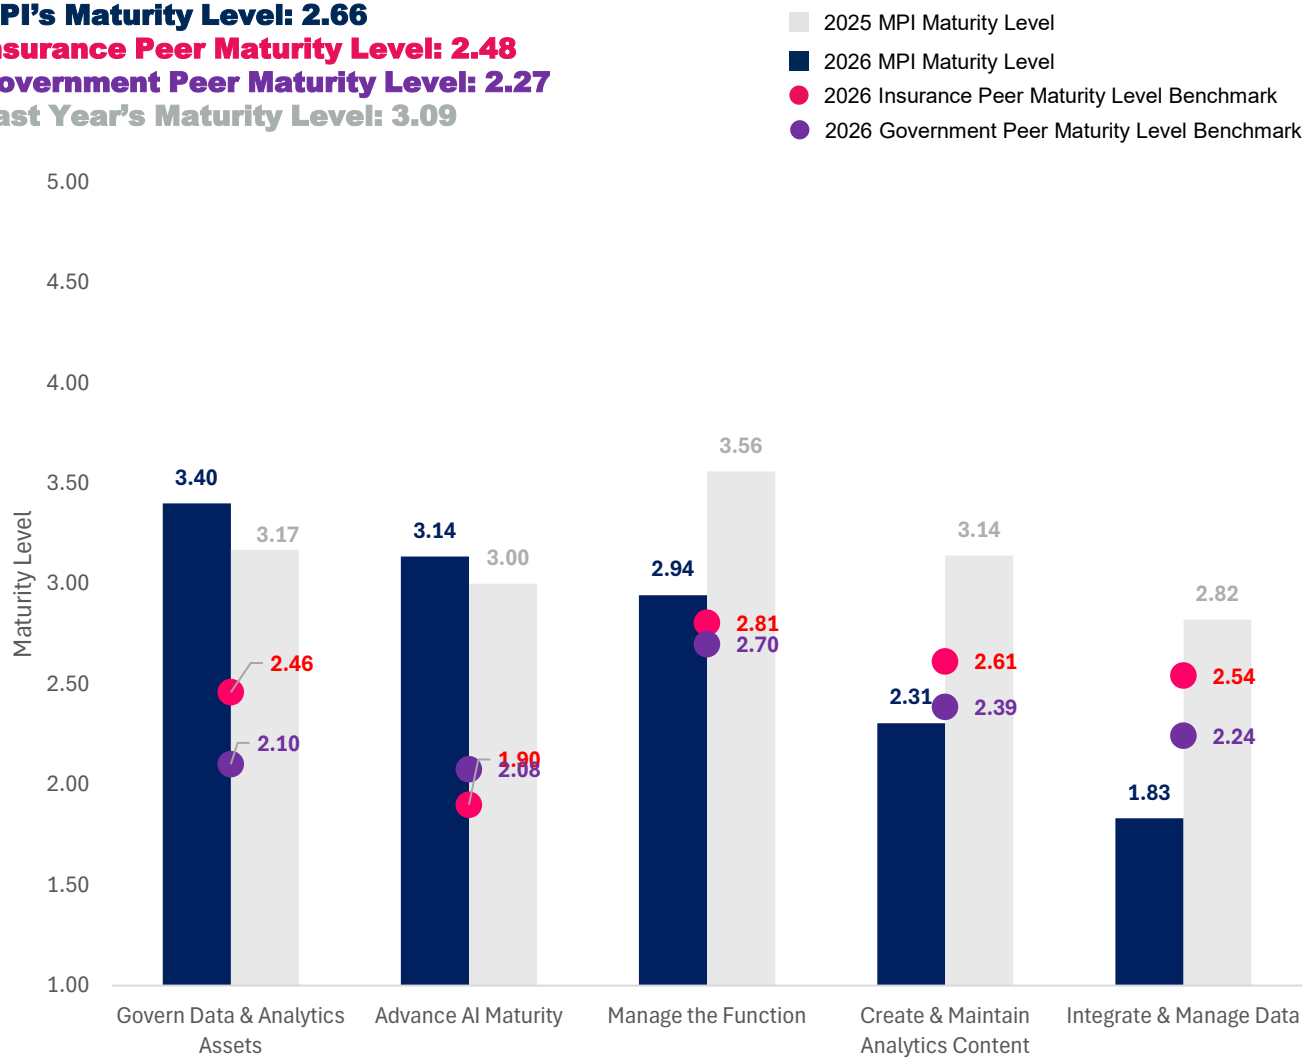
Applications Maturity Levels

MPI's Maturity Level: 2.89
Insurance Peer Maturity Level: 2.88
Government Peer Maturity Level: 3.20
Last Year's Maturity Level: 2.92

Applications Activity Priority Index (API)

Observations:

- Overall maturity level has slightly decreased (2.89) compared to last year (2.92).
- Overall maturity is slightly higher than the insurance peer benchmark (2.88) and lower than the government peer benchmark (3.20).
- Overall maturity is lower than the peer benchmark for most functional objectives, with the exception of "Partner with Stakeholders".



Note: The IT Score maturity model for Applications has been updated by Gartner Research to reflect best practices and changes in the industry. Due to the new structure, year over year maturity comparisons are not available. All peer data is based on the updated maturity model.

Data and Analytics

Data and Analytics Maturity Levels

MPI's Maturity Level: 2.66
Insurance Peer Maturity Level: 2.48
Government Peer Maturity Level: 2.27
Last Year's Maturity Level: 3.09

Data and Analytics Activity Priority Index (API)

Observations:

- Overall maturity level has decreased to 2.66 in 2025/26, down from 3.09. Maturity progressed in "Advance the AI" (from 3.00 to 3.14) and "Govern Data & Analytics Assets" (from 3.17 to 3.40). MPI already has several initiatives in place to address data governance, quality & availability.
- MPI's maturity level (2.66) is above both the Insurance Peer Benchmark (2.48) and the Government Peer Benchmark (2.27).
- Across many functional objectives, MPI outperforms its peers by a significant margin, with the largest gap seen in "Govern Data & Analytics Assets".

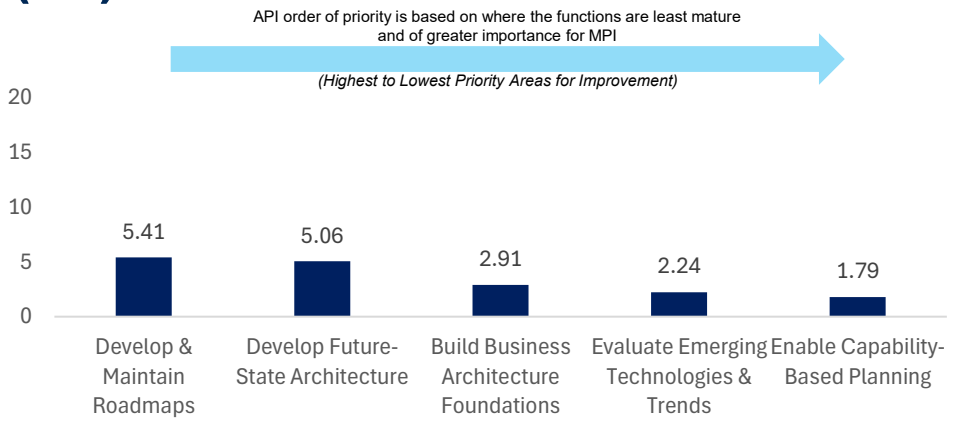
September 4, 2026



Enterprise Architecture (EA)

Enterprise Architecture Maturity Levels

MPI's Maturity Level: 3.43
Insurance Peer Maturity Level: 2.13
Government Peer Maturity Level: 2.39
Last Year's Maturity Level: 3.30

Enterprise Architecture Activity Priority Index (API)

Observations:

- Overall MPI's maturity has increased (3.43) from the previous year's level (3.30).
- Maturity for MPI in 2026 (3.43) is higher than both the insurance peer benchmark (2.13) and the government peer benchmark (2.39) across most functional levels, with the largest gap seen in "Establish EA Framework and Tools".
- The largest improvement year-over-year was seen in "Establish EA Frameworks and Tools".

RESTRICTED

Infrastructure and Operations

Infrastructure and Operations Maturity Levels

MPI's Maturity Level: 3.21
Insurance Peer Maturity Level: 2.85
Government Peer Maturity Level: 2.99
Last Year's Maturity Level: 3.16

Infrastructure and Operations Activity Priority Index (API)

Observations:

- MPI's maturity has increased to 3.21 compared to last year's level (3.16). Largest increase in maturity is in the "Manage the Function of I&O" objective.
- Overall maturity for MPI (3.21) in 2025/26 is slightly above both the insurance peer benchmark (2.85) and the government peer benchmark (2.99).
- Compared with peers, MPI's two strongest areas area "Transition & Operate IT Services" and "Evaluate, Plan & Design".

RESTRICTED

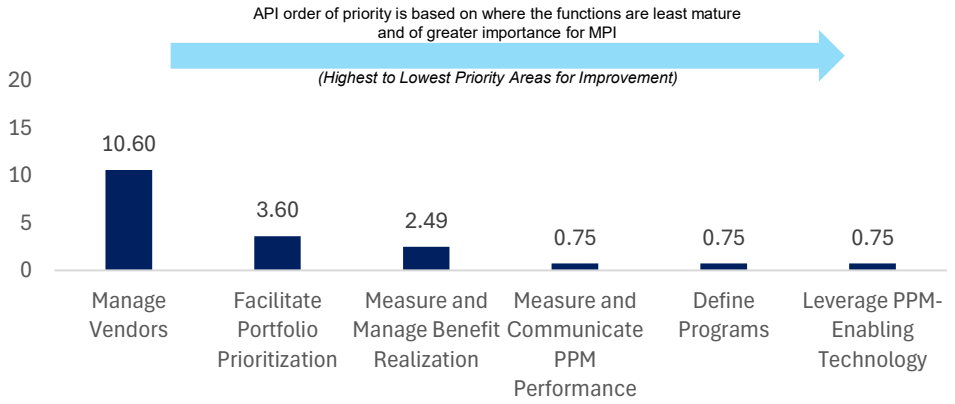
September 4, 2026



Program and Portfolio Management

Program and Portfolio Management

MPI's Maturity Level: 3.36
Insurance Peer Maturity Level: 2.29
Government Peer Maturity Level: 2.40
Last Year's Maturity Level: 3.03

Program and Portfolio Management Activity Priority Index (API)

Observations:

- Overall maturity level has increased to 3.36 in 2025/26, up from 3.03. Substantial maturity progress was made across most functional objectives, especially in "Manage Frameworks and Standards" (from 3.23 to 3.57) and "Drive Transformation Initiatives" (from 3.17 to 3.59).
- MPI's maturity level (3.36) is above both the Insurance Peer Benchmark (2.29) and the Government Peer Benchmark (2.40). In every functional objective, MPI outperforms its peers, the largest positive gap is seen in "Manage Frameworks and Standards".

RESTRICTED

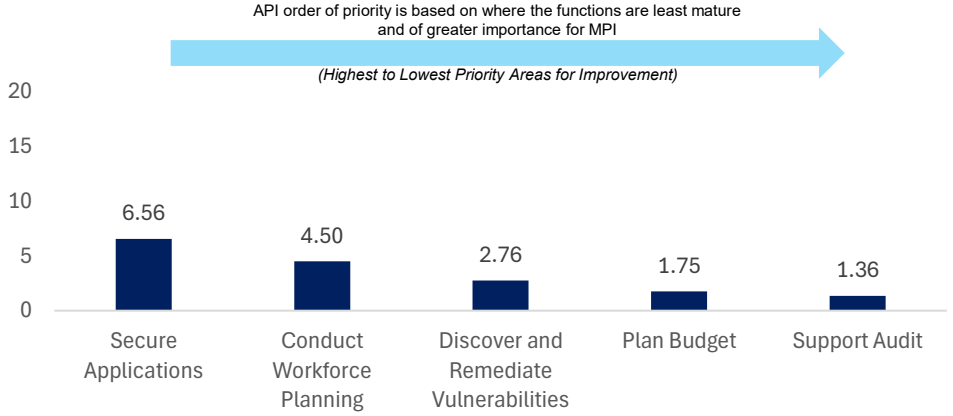
September 4, 2026



Security and Risk Management

Security and Risk Management Maturity Levels

MPI's Maturity Level: 4.08
Insurance Peer Maturity Level: 3.72
Government Peer Maturity Level: 2.94
Last Year's Maturity Level: 3.90

Security and Risk Management Activity Priority Index (API)

Observations:

- MPI's maturity has increased compared to last year's level (3.90). Overall maturity for MPI in 2025/26 (4.08) is higher than both the insurance peer benchmark (3.72) and the government peer benchmark (2.94).
- MPI remains above peer benchmarks in all areas except "Manage People and Workforce Strategy," where the insurance peer benchmark (3.54) slightly exceeds MPI's maturity (3.46).

RESTRICTED

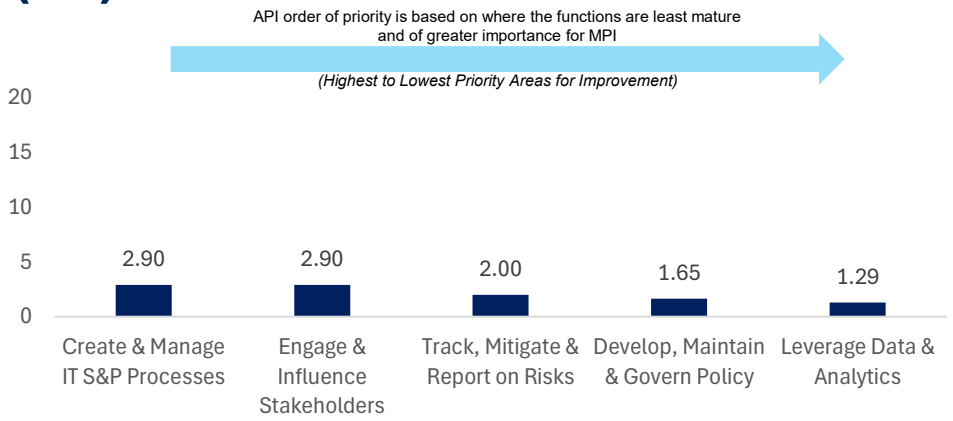
September 4, 2026



Sourcing and Procurement

Sourcing and Procurement Maturity Levels

MPI's Maturity Level: 3.82
Insurance Peer Maturity Level: 2.86
Government Peer Maturity Level: 2.60
Last Year's Maturity Level: 3.70

Sourcing and Procurement Activity Priority Index (API)

Observations:

- MPI's maturity (3.82) has increased slightly compared to previous level (3.70). Overall maturity for MPI in 2025/26 is higher than both the insurance peer benchmark (2.86) and the government peer benchmark (2.60).
- MPI is more mature across all functional objectives, with the largest differences observed in "Manage the Function" and "Partner with Stakeholders".
- Highest maturity level for MPI within Sourcing and Procurement is in "Manage the Function" (4.25), while the lowest is in "Partner With Stakeholders" (3.50).

RESTRICTED

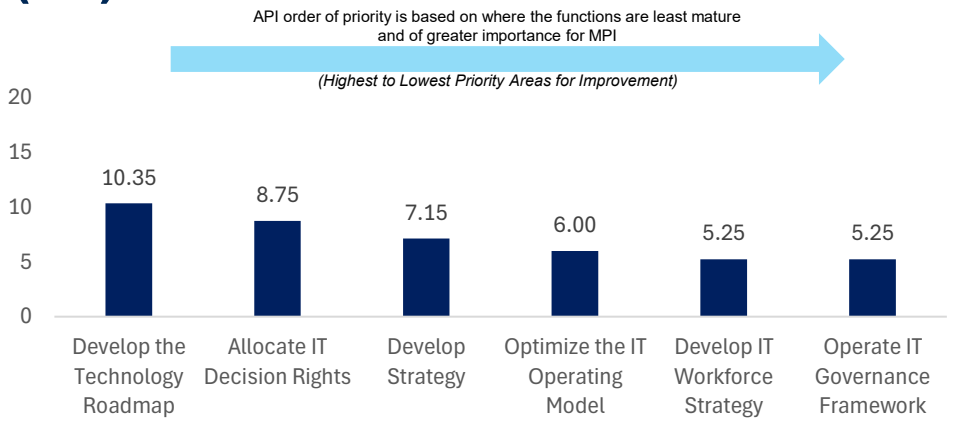
September 4, 2026



Strategy and Execution

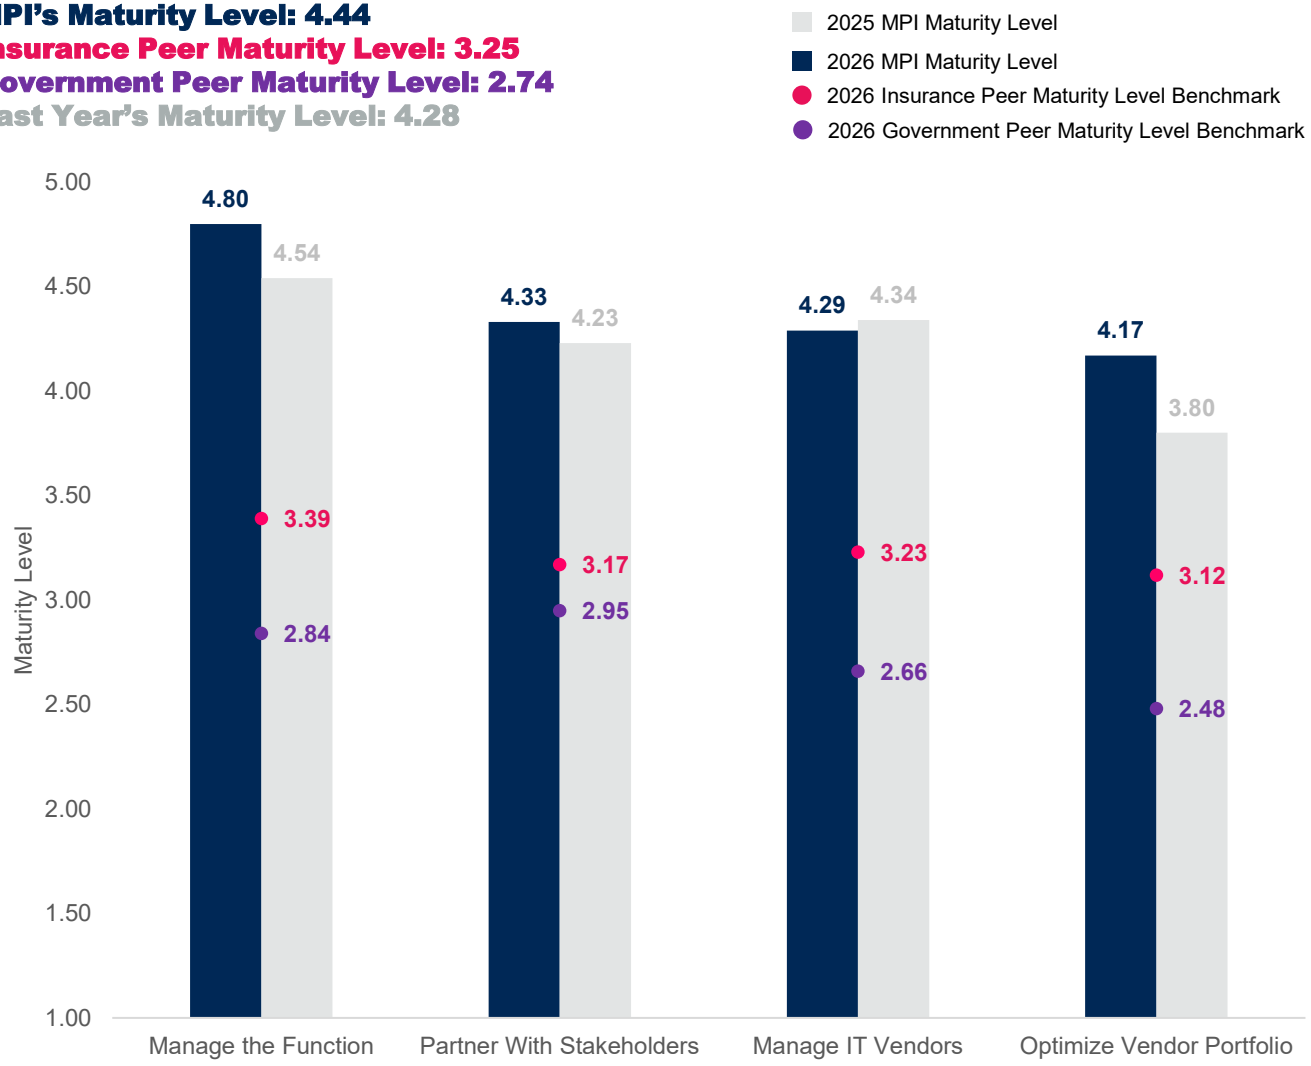
Strategy and Execution Maturity Levels

MPI's Maturity Level: 2.57
Insurance Peer Maturity Level: 2.79
Government Peer Maturity Level: 2.39
Last Year's Maturity Level: 2.38

Strategy and Execution Activity Priority Index (API)

Observations:

- Overall maturity (2.57) has increased from the previous year's level (2.38).
- Overall maturity is lower than the peer benchmark for insurance (2.79) and higher than government peers (2.39).
- MPI's maturity is below the peer benchmarks across most functions, with the most pronounced difference in "Develop and Manage Talent".
- Most significant improvement at the functional objective level, compared to previous year's maturity, was "Manage IT Governance" and "Manage Performance".



RESTRICTED

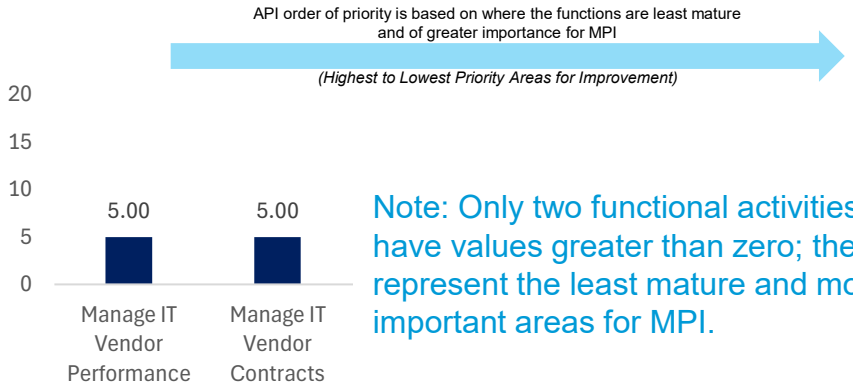
September 4, 2026



Vendor Management

Vendor Management Maturity Levels

MPI's Maturity Level: 4.44
Insurance Peer Maturity Level: 3.25
Government Peer Maturity Level: 2.74
Last Year's Maturity Level: 4.28

Vendor Management Activity Priority Index (API)

Note: Only two functional activities have values greater than zero; these represent the least mature and most important areas for MPI.

Observations:

- MPI's maturity (4.44) has slightly increased compared to last year's level (4.28).
- Overall maturity for MPI in 2025/26 (4.44) is significantly higher than both the insurance peer benchmark (3.25) and the government peer benchmark (2.74).
- MPI's maturity levels exceed peer benchmarks in all areas, with the largest differences observed in "Partner With Stakeholders" and "Manage the Function".

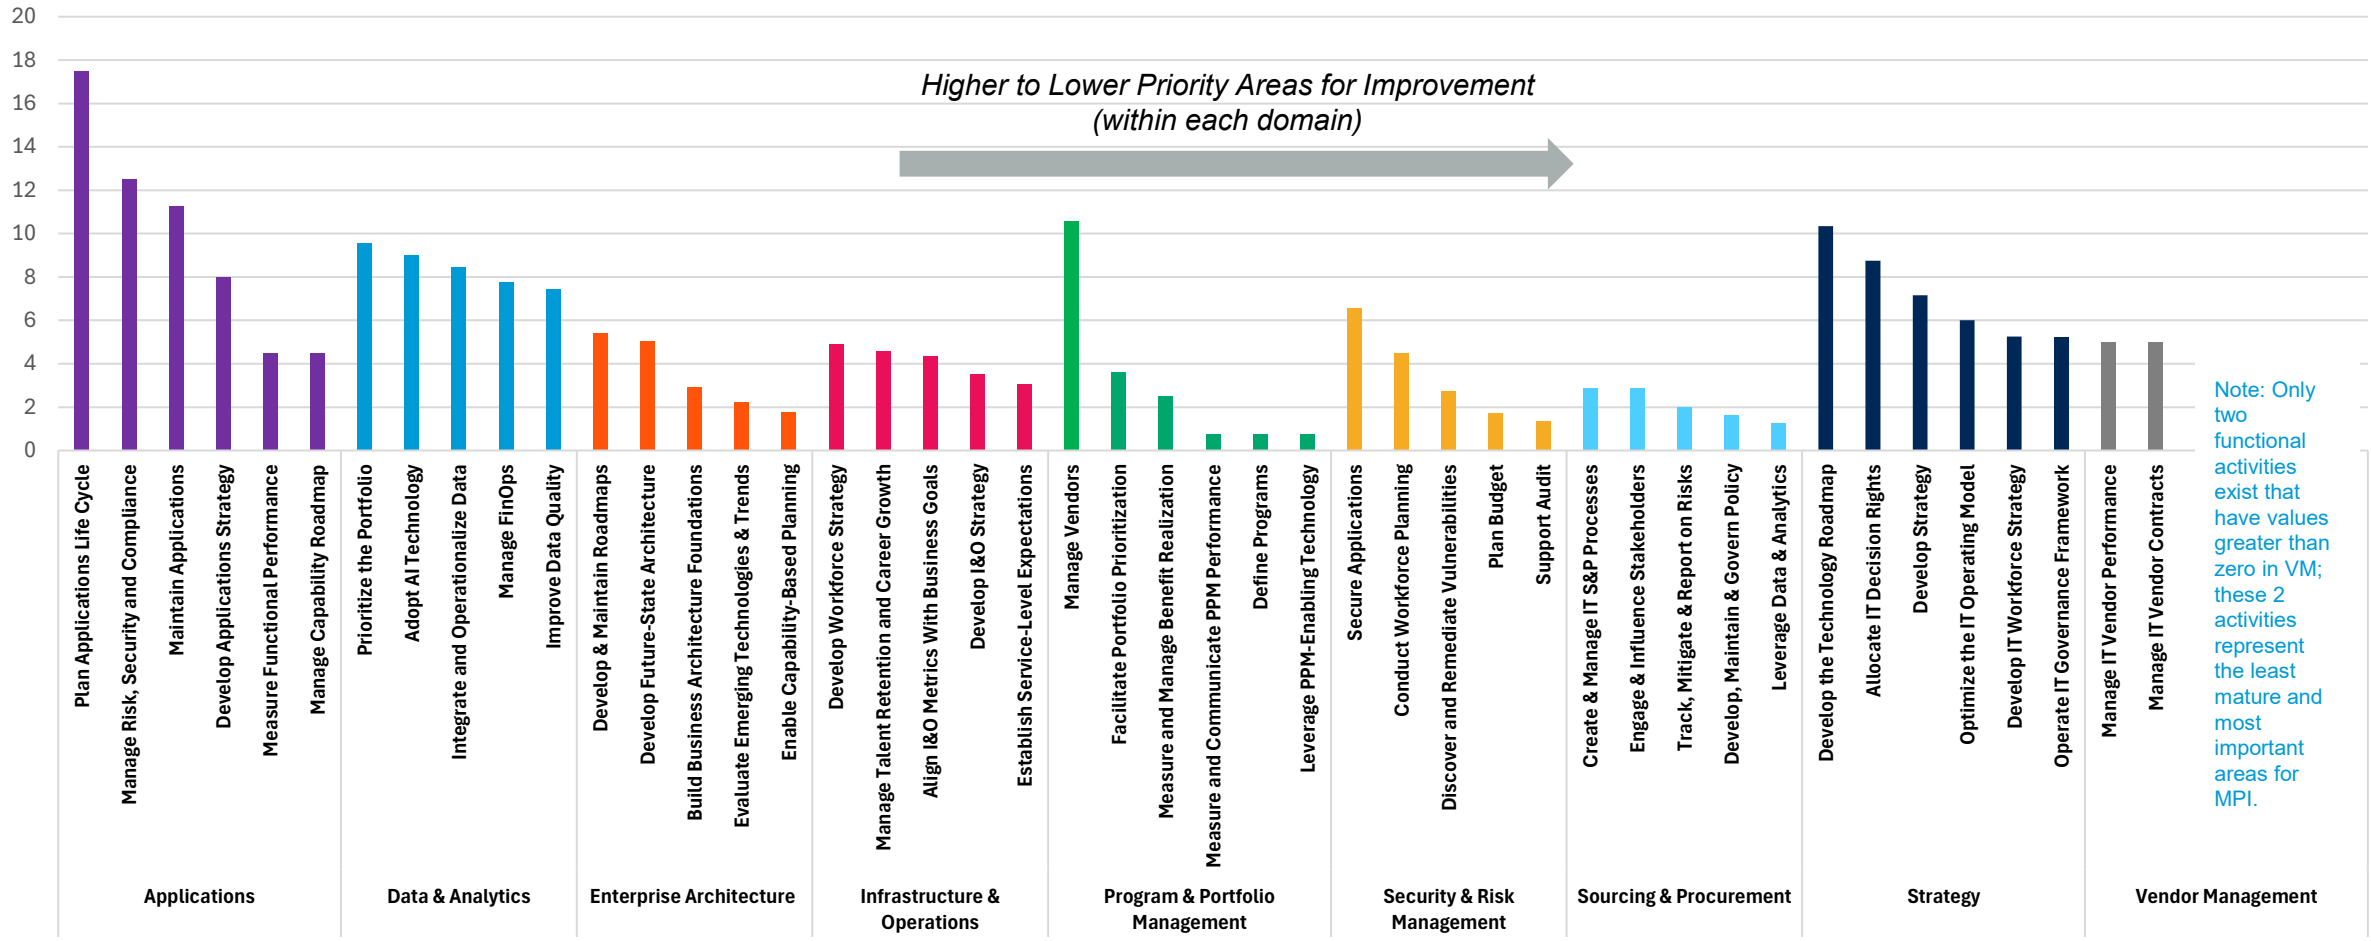
Summary of Changes in Level of IT Maturity

Largest Increases in Maturity

IT Domain	Activity Level	2024/25 MPI Maturity Level	2025/26 MPI Maturity Level	YoY Maturity Difference
CIO	Manage IT Risk	3.00	5.00	2.00
PPM	Equip Stakeholders to Manage Initiatives	2.00	4.00	2.00
Arch	Manage Principles, Standards & Patterns	3.17	5.00	1.83
CIO	Act on Metrics for Improvement	1.50	3.00	1.50
VM	Manage Data & Analytics	3.00	4.50	1.50
D&A	Manage AI Risk	3.00	4.33	1.33
SRM	Develop Strategy	2.17	3.50	1.33
SRM	Develop Skills	3.67	5.00	1.33
I&O	Develop I&O Strategy	1.50	2.75	1.25
CIO	Scope Strategy & Vision	2.33	3.50	1.17
CIO	Sustain and Evolve IT Culture	1.00	2.17	1.17

Largest Decreases in Maturity



IT Domain	Activity Level	2024/25 MPI Maturity Level	2025/26 MPI Maturity Level	YoY Maturity Difference
DA	Build Organizational Alignment for Data	4.60	1.50	-3.10
DA	Create & Maintain Semantic Layers	4.00	1.75	-2.25
DA	Manage FinOps	3.00	1.00	-2.00
IO	Build a Business Case	5.00	3.50	-1.50
CIO	Communicate Strategy	3.67	2.50	-1.17
CIO	Optimize the IT Operating Model	2.00	1.00	-1.00
CIO	Hone IT Delivery Capability	3.00	2.00	-1.00
DA	Prioritize the Portfolio	3.00	2.00	-1.00
SRM	Drive Ownership and Accountability	5.00	4.00	-1.00
SRM	Support Audit	4.00	3.00	-1.00
DA	Monitor Portfolio Health	3.85	3.00	-0.85

Gartner

3.3 IT Management Interview Findings

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Strategy and Execution

Findings

- IT leadership team is viewed as a significant organizational strength, with strong director-level capability and a balanced mix of institutional knowledge and external expertise.
- The organization is shifting from a technology-led mindset to a more pragmatic, business-outcome-driven approach.
- Delivery responsibilities for major programs are moving outside of IT into the Enterprise PMO (EPMO), requiring new operating and governance models.
- Foundational modernization efforts are underway, including enterprise architecture, technology principles, software development lifecycle (SDLC) maturity, cybersecurity, and delivery excellence.
- Data and analytics has emerged as a strategic priority with strong alignment to future business transformation objectives.
- Greater collaboration across strategy, business architecture, and IT is improving alignment between technology investments and enterprise priorities.
- In addition to staff surveys following incident resolution and fulfillment of IT requests, IT plans to establish an internal customer service baseline through employee surveys to better measure stakeholder satisfaction / service effectiveness and understand opportunities for improvement.
- Budget pressures are expected due to higher renewal and maintenance costs as well as new cybersecurity investments and tooling requirements.
- Scope and impact of additional cybersecurity tooling investments require further definition and financial planning.
- Cybersecurity has been established as a strategic focus area, including assessment against updated NIST standards.
- Delivery Excellence has been identified as a priority initiative to improve software delivery performance and execution consistency.
- Data and analytics will remain a core investment and transformation priority.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Applications

Findings

- Applications organization supports operational systems, integration, automation, and back-office functions including HR and Finance.
- Team consists of approximately 66 resources, including 15 integration specialists and 30 application support staff.
- Capacity planning framework distinguishes "Run" versus "Build" activities to improve resource alignment and demand management.
- Current allocation is roughly 60-70% Run activities and 30-40% Build activities.
- Application Lifecycle Management (ALM) identified as a top investment priority based on Gartner benchmark findings.
- Refinement of software development and delivery methodologies to improve predictability, consistency, and delivery outcomes.
- Continued focus on reducing technical debt and advancing application management practices.
- Modernization efforts include expanding AI capabilities, integration standards, and process automation.
- Lack of consistent definitions for "Ready" and "Done" creates inefficiencies and delivery variability.
- Team recognized for strong technical skills, deep application knowledge, and a collaborative culture.
- Job descriptions updated to better align with current market realities.
- Heavy reliance on individual subject matter experts presents knowledge retention and succession risks.
- Cross-training initiatives are being pursued to reduce key-person dependencies and improve resiliency.
- Current team capacity is not fully meeting business demand.
- Integration strategy is focused on domain standardization and API-based architectures.
- MuleSoft framework established to standardize API development and integration practices.
- Dedicated automation team identifies and automates manual business processes across the enterprise.
- AI efforts are currently in the proof-of-concept stage, with pilots conducted over the past 3-6 months.
- AI adoption remains in the early stages, with focus on controlled experimentation and governance before scaling.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Infrastructure & Operations

Findings

- Infrastructure and Operations (I&O) is a shared discipline between Technology Operations and Digital Services.
- Traditional IT service management (ITIL, end user compute) falls under Digital Services.
- Platform services, infrastructure services, data networks, security operations, platform administration, and identity access management fall under Technology Operations (Tech Ops).
- Platform services include identity/access management, transition to operations, test environment coordination.
- Some business intelligence/reporting (e.g., Power BI as a platform) is included in Tech Ops.
- I&O strives to be accessible to business partners, sometimes via intermediaries like enterprise architecture or enterprise solutions.
- Not a “black box”; Tech Ops engages directly with business, especially for higher stack platforms like contact center as a service (telephony).
- Technology Operations aims to be accessible to the business but does not expect every stakeholder to interact directly with deep technical specialists.
- The team has the right level of collaboration with business partners.
- Direct engagement occurs when Technology Operations owns and delivers the product or service.
- I&O priorities are to address both enterprise and technical risks, ensure ongoing compliance with operational and security audit requirements, and continue effective budget management.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Data & Analytics

Findings

- Three-pronged structure under the director:
  - ❑ Two departments (including Data Services).
  - ❑ One direct report: Data Governance Lead (recently established role).
- Data Governance Lead coordinates with others; previously, governance was handled within departments.
- Data Services Team divided into:
  - ❑ Operational Database/DBAs: Works with infrastructure and application teams to manage database infrastructure.
  - ❑ Data Reporting: Supports report writing (infrastructure, data warehousing, adding attributes, resolving data issues). Reporting is decentralized; business areas and IT both write reports.
- Data Services ensures the “data foundation” is available, focusing on data trust, understanding, and access, not on specific technologies.
- Data Science & AI team focuses on AI models and data transformation.
- Data ownership and stewardship are not well understood across the organization; confusion exists between roles (e.g., owner vs. steward, data vs. information vs. records).
- Data Services acts as custodian/steward, not owner; business should own data and make decisions about its use.
- There is a need to educate on data governance, quality, ownership, stewardship, and ethical use of AI.
- Recent production issues have exposed gaps in process and accountability (e.g., unclear communication paths during system discrepancies). Some processes are being invented “on the fly.” Maturity assessment scores reflect these gaps.
- Customer service mindset and partnership with business are becoming more emphasized.
- Leadership is now focusing on building blocks of customer service, communication, and inclusion.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Enterprise Architecture

Findings

- Enterprise Architecture (EA) is organized across three complementary disciplines: business architecture, enterprise architecture, and systems/data architecture.
- Enterprise Architecture includes dedicated security architecture capabilities to strengthen technology and risk management alignment.
- Systems architects are aligned to application domains, while data architects maintain accountability for enterprise data oversight and governance.
- Architecture ownership is distributed across business portfolios, enabling deeper understanding of business priorities and technology needs.
- Strong partnerships have been established across business functions through ongoing engagement with directors, managers, and executive leaders.
- The architecture team actively supports business transformation initiatives while ensuring alignment to enterprise standards and strategic objectives.
- EA is viewed as a trusted advisor that helps shape solutions, rationalize requests, and improve decision quality rather than acting solely as a gatekeeper.
- New governance group established this year to:
  - ❑ Build inroads and support between teams.
  - ❑ Provide escalation avenue for resource or response issues.
  - ❑ Not an architecture review board, but general governance of architecture practice.
  - ❑ Ensures alignment on top priorities, organizational change, and target operating models.
- Main priority: Realize the newly created technology roadmap (presented July 2026).
  - ❑ Develop architectural patterns and plans to execute roadmap initiatives.
- Operational objectives:
  - ❑ Establish strong master data management (MDM) strategy and composable architecture.
  - ❑ Build a robust data model to support centralized data management.
- Stabilize legacy platforms:
  - ❑ Plans for upgrade, replacement, or other remediation.
  - ❑ Focus on upgrading OS/platforms to mainstream support.
  - ❑ Use stabilized platforms and centralized data for composable architecture.

RESTRICTED

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Security & Risk Management

Findings

- The security and risk management organizational structure has remained unchanged over the past year.
- The GRC function has six people and owns cybersecurity practices, IT risk, compliance, policies, standards, and risk tracking.
- Security architecture is embedded within enterprise architecture and provides design guidance, principles, and patterns.
- AI-enabled threats are a concern, especially account harvesting and deepfakes.
- Incidents have generally been contained effectively.
- The security function is viewed as a business partner rather than a blocker.
- Primary responsibilities include: cybersecurity practices, IT governance, risk, and compliance, risk management program implementation, risk tracking across the organization, compliance assessments, governance guidance, selection of cybersecurity and risk frameworks, development of cybersecurity policies and standards, and collaboration with IT leaders on policy and standards management.
- Security architecture is a separate function. It sits within the enterprise architecture group. The team provides guidance on: security architecture, security principles, security patterns, and related architectural standards and direction.
- The team focuses on enabling business objectives while clearly communicating required controls, potential exposures, and risk implications.
- Security decisions are framed as business risk conversations, allowing leaders to make informed choices based on risk appetite, exposure, and potential impact.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Program & Portfolio Management

Findings

- EPMO was recently established through the integration of Major Programs and Core PMO functions to create a more unified portfolio management capability.
- Significant effort is underway to balance rigorous governance for large strategic programs with increased discipline and consistency across the broader project portfolio.
- A common project delivery framework is being developed, including standardized methodologies, templates, approval processes, change requests, and decision governance.
- Formal stage-gate processes are being expanded across the enterprise portfolio to strengthen investment oversight and delivery accountability.
- Portfolio management maturity continues to evolve, with a focus on improving forecasting, resource planning, financial oversight, and portfolio visibility.
- Strong stakeholder willingness to engage and escalate issues creates a positive foundation for governance effectiveness.
- The organization benefits from capable, proactive team members but requires additional time and maturity to fully institutionalize best practices.
- Difficulty attracting experienced in-house project management talent presents a challenge to workforce sustainability.
- Critical governance, risk management, financial analysis, and reporting capabilities remain highly dependent on external resources.
- Current emphasis on regulatory and operational commitments limits capacity available for transformational initiatives.
- Lessons from the Nova program highlight risks associated with inadequate requirements traceability, executive turnover, resource instability, vendor management challenges, and overly ambitious transformation scope.
- Success of governance modernization depends on sustained executive sponsorship and stakeholder engagement.

RESTRICTED

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Sourcing & Procurement

Findings

- The Sourcing & Procurement function remains operationally stable, with no material organizational changes over the past year.
- The team is focused on increasing procurement agility while maintaining governance and process discipline.
- Contract management modernization is a key priority, with a shortlist of solutions under evaluation, including ServiceNow.
- Enhanced vendor scorecard reporting has increased executive visibility into supplier performance and accountability.
- Strong cross-functional collaboration with IT and Enterprise Architecture is improving sourcing decisions and technology alignment.
- Early architecture involvement is helping identify existing capabilities and avoid unnecessary technology purchase.
- Business stakeholders often engage procurement late in the sourcing lifecycle, creating compressed timelines and delivery pressure.
- Incomplete or poorly defined business requirements continue to delay procurement activities and RFP development.
- The organization is actively evaluating additional testing of vendors to strengthen delivery capabilities.
- Dedicated roles span sourcing, purchasing, contract advisory, and vendor management disciplines, providing broad procurement coverage.
- Greater engagement with Product Managers is improving understanding of technology needs and sourcing requirements.

RESTRICTED
53 © 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Vendor Management

Findings

- Vendor Management has maintained operational stability over the past year, with no significant structural changes to the function.
- Executive visibility into vendor performance has increased through enhanced vendor scorecard reporting to the Executive Steering Committee.
- Vendor Management is focused on streamlining procurement and contracting processes to reduce cycle times and improve business responsiveness.
- Efforts are underway to increase stakeholder self-sufficiency and reduce legal involvement in lower-risk procurement activities.
- Strong collaboration between Vendor Management, IT, Enterprise Architecture, and Product Management is improving technology governance and vendor selection decisions.
- The organization is actively diversifying its vendor ecosystem and evaluating additional testing partners.
- Vendor Management team demonstrates strong capabilities in multitasking, prioritization, and process execution.
- Collaboration with Enterprise Architecture is helping reduce duplicate technology purchases and improve solution rationalization.
- Greater architectural involvement in RFP reviews is increasing alignment with existing technology investments and standards.
- Recent hiring activity on the buyer side is strengthening procurement capacity and capability.
- A new contract management solution is targeted for contracting this year, with implementation expected to begin this year or early next year.

4. Detailed Recommendations

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

Based on the FY 2025/26 analysis, Gartner is recommending that MPI focus improvements efforts in the following three areas:

1. **Plan Applications Lifecycle (Apps):** Strengthen product and application lifecycle planning, with a focus on strategic alignment, modernization, and governance

2. **Manage Vendors (PPM):** Mature vendor engagement to strengthen program & portfolio management outcomes

3. **Develop Technology Roadmap (Strategy & Execution):** Develop and institutionalize an enterprise technology roadmap aligned to business strategy and architecture

2024/25 Recommendations Update: ***MPI has made progress on last year's recommendations focused on Planning the Applications Lifecycle, Managing Vendors within the context of PPM, and Fostering the Data Ecosystem (see pages 61-64 for additional details). The 2025/26 recommendations address updated opportunities based on current maturity / importance levels and build on the progress made to date.***

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

1 Strengthen product and application lifecycle planning, with a focus on strategic alignment, modernization, and governance

Domain	Applications					
Benefit	Cost Optimization	Service Alignment	Employee Productivity	User Experience	Agility	Risk Mitigation
Complexity	Low		Medium		High	

Description / Rationale
MPI is establishing an enterprise Application Lifecycle Management framework with clear lifecycle stages, defined decision points, and explicit business and IT ownership for every production application. Integrating ALM into portfolio, roadmap, risk and funding processes will enable proactive modernization, upgrade and retirement decisions; improve visibility into application health and technical debt; and reduce unsupported technology, operational and compliance risk. Standard governance, reporting and managed exceptions will help ensure lifecycle decisions are consistent, transparent and aligned with business priorities.

Next Steps	Activities	Deliverables / Outcomes
Application Inventory with Life Cycle Dates is Maintained	▪ Establish a centralized, authoritative inventory for all production applications. ▪ Maintain lifecycle dates, vendor support milestones, ownership, criticality, risk and modernization status. ▪ Map applications to business capabilities and identify dependencies, redundancy and consolidation opportunities. ▪ Assess business, technical, cost, security and operational fitness to guide lifecycle decisions. ▪ Track end-of-support events, unsupported versions, technical debt and managed exceptions. ▪ Define inventory standards, ownership, update triggers and recurring review requirements. ▪ Develop multiyear application roadmaps that forecast upgrades, modernization, retirement and funding needs. ▪ Integrate lifecycle data into portfolio, risk, capacity and investment decisions.	▪ Application Inventory Status Report ▪ Application/Business Capabilities Redundancy Status Report ▪ Application Life Cycle Events Report ▪ Application Lifecycle Roadmap (5+ Year)
Clear Ownership Exists for Life Cycle Planning and Prioritization	▪ Assign named business and IT lifecycle owners for every production application. ▪ Define lifecycle accountabilities, decision rights, approval thresholds and escalation paths through an ALM RACI. ▪ Establish expected application lifespans and planning assumptions by application category. ▪ Maintain five-year or longer lifecycle and capability roadmaps for critical, complex and high-cost applications. ▪ Map vendor releases, end-of-support dates, operating system changes and database upgrades into schedules and funding forecasts. ▪ Maintain and prioritize an application technical debt inventory, separating sustaining needs from feature enhancements.	▪ ALM Roles and Responsibilities Matrix ▪ Application Roadmap with Scheduled Life Cycle Events ▪ Ballpark Budget Estimates for Predictable Upgrades

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

2 Mature vendor engagement to strengthen program & portfolio management outcomes

Domain	**Program and Portfolio Management**					
Benefit	Cost Optimization	Service Alignment	Employee Productivity	User Experience	Agility	Risk Mitigation
Complexity	Low		Medium		High	

Description / Rationale

Structured vendor management is critical for MPI to maintain accountability, manage cost, reduce delivery risk and ensure vendor relationships remain aligned to business priorities. By segmenting vendors based on strategic importance and risk profile, MPI can apply the right level of governance, oversight and engagement across the vendor lifecycle. Within Program and Portfolio Management, this approach enables disciplined control over vendor performance, contractual obligations, risk exposure and portfolio outcomes.

Next Steps	Activities	Deliverables / Outcomes
Triage Effort in Managing Vendors Based on Strategic Importance	▪ Define clear vendor segments using strategic criteria such as business criticality, spend, risk exposure, relationship potential and dependency. ▪ Align each segment to documented business outcomes and leadership expectations for cost, service, delivery, innovation and risk mitigation. ▪ Secure cross-functional consensus from IT, business, sourcing, finance, legal and risk stakeholders on vendor tier assignments. ▪ Score and classify vendors with structured tools, then validate results with informed business judgment and a “customer of choice” reciprocity check for strategic vendors. ▪ Tailor management activities, governance cadence and resource allocation by tier; assign dedicated managers and SMART goals for high-value relationships. ▪ Monitor segment placement continuously and formally reassess annually or when business conditions, vendor performance or risk profiles shift.	▪ Vendor Segmentation Model ▪ Strategic Vendor Tiering Criteria ▪ Stakeholder Alignment Decisions ▪ Vendor Manager Goals ▪ Annual Segmentation Refresh
Triage Effort in Managing Vendor Relations Based on Risk Profile	▪ Define vendor risk governance boundaries, decision criteria, escalation triggers and required controls. ▪ Segment vendors by business criticality, risk exposure, dependency and relationship potential. ▪ Assess risk across financial, security, operational, compliance, contractual and strategic domains. ▪ Use a structured front door to assign governance, approval paths and review cadence by risk tier. ▪ Tailor oversight activities, performance reviews and executive engagement based on risk profile. ▪ Assign dedicated ownership for strategic and high-risk vendors, with distributed accountability for tactical vendors. ▪ Map vendor data, contracts, obligations, tools and governance gaps to improve enterprise visibility. ▪ Communicate expectations, risk thresholds, remediation requirements and consequences to vendors. ▪ Apply a criticality matrix to escalate issues that materially affect delivery, cost, risk or business outcomes. ▪ Reassess vendor risk annually and when major business, contract, performance or security events occur.	▪ Vendor Risk Segmentation Model ▪ Vendor Risk Register ▪ Vendor Intake Process Map ▪ Vendor Management Playbooks ▪ Process and Workflow Maps ▪ Governance and Decision-Rights Matrix ▪ Vendor Risk Dashboard

RESTRICTED
58 © 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

3 Develop and institutionalize an enterprise technology roadmap aligned to business strategy and architecture

Mgmt Domain	Strategy & Execution					
Benefit	Cost Optimization	Service Alignment	Employee Productivity	User Experience	Agility	Risk Mitigation
Complexity	Low		Medium		High	

Description / Rationale
MPI has a strong foundation for technology planning but would benefit from a more structured approach to application portfolio management and roadmap governance. By rationalizing the application portfolio and implementing a regular roadmap review process, MPI can better align technology investments with business priorities, reduce complexity, address technical debt, and improve modernization decisions. There is an opportunity for MPI to formalize and strengthen roadmap governance and planning processes.

Next Steps	Activities	Deliverables / Outcomes
Perform Application Portfolio Rationalization	▪ Define portfolio rationalization objectives and success measures. ▪ Create an enterprise application inventory. ▪ Prioritize business domains and applications for assessment. ▪ Assess application value, risk, and technical fitness. ▪ Identify retire, consolidate, replace, and modernize opportunities. ▪ Develop and approve a rationalization roadmap. ▪ Execute initiatives and track business outcomes.	▪ Comprehensive Application Portfolio Assessment ▪ Application Rationalization & Modernization Roadmap ▪ Approved Retire / Consolidate / Modernize Recommendations ▪ Reduced Costs, Complexity, and Technical Debt
Update the I&T Roadmap as Often as Needed	▪ Conduct semi-annual roadmap reviews and refreshes. ▪ Leverage application portfolio rationalization and technical debt assessments to inform roadmap updates. ▪ Track roadmap execution through KPIs and milestone reporting. ▪ Incorporate changing business priorities, regulatory requirements, and emerging technologies into planning cycles.	▪ Roadmap Performance Dashboard ▪ Quarterly/Annual Roadmap Updates ▪ Application Rationalization & Modernization Plan

RESTRICTED

5. Appendix

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

2024/25 Recommendations Progress

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

The recommendations from the 2024/25 IT Assessment, and associated status, are listed below (1 of 3):

	Recommendation	Status
1	**Plan Product & Application Lifecycle: Strengthen product and application lifecycle planning, with a focus on strategic alignment, modernization, and governance**	**On Track / In Progress** ▪ MPI is establishing an enterprise Application Lifecycle Management (ALM) framework that introduces clear lifecycle stages, defined decision points, and explicit business and IT ownership for every production application. Lifecycle planning will be integrated directly into portfolio management, road mapping, risk management, and funding processes, supported by a consistent governance cadence with standardized reporting and prioritization. This approach will enable more disciplined modernization, upgrade, and retirement decisions, improve predictability for resourcing and investment, and reduce operational and compliance risk. Guiding Principles such as joint ownership, maintaining vendor supported versions, the 18-month end-of-support rule, risk-based decision pathways, and managed exceptions ensure that lifecycle decisions will remain consistent, transparent, and defensible.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

The recommendations from the 2024/25 IT Assessment, and associated status, are listed below (2 of 3):

	Recommendation	Status
2	**Manage Vendors: Mature vendor engagement to strengthen program & portfolio management outcomes**	**On Track / In Progress** ▪ MPI's approach to vendor management now focuses on two key areas, building strong relationships and performance management, ensuring disciplined control over risk, cost, and delivery outcomes across the full vendor lifecycle. This framework ensures vendors are engaged intentionally, managed transparently, and held to clear performance and contractual expectations. MPI manages and governs vendors through an enterprise lifecycle that includes structured onboarding, regular check-in and scorecard performance assessments, formal acceptance of deliverables, disciplined invoice approval, and ongoing contract and risk management. Governance and controls are applied consistently, supported by clear communication, documented expectations, and auditable processes.

© 2026 Gartner, Inc. and/or its affiliates. All rights reserved.

The recommendations from the 2024/25 IT Assessment, and associated status, are listed below (3 of 3):

	Recommendation	Status
3	**Foster the Data Ecosystem: Advance data ecosystem through establishing comprehensive data fabric architecture, enhancing data governance and integration practices**	**Late / In Progress** ▪ MPI's data governance approach treats data as a strategic enterprise asset, supported by clear accountability, compliance with standards and legislation, trusted and standardized definitions, and a strong focus on quality and reliability. This framework improves confidence in reporting, reduces fragmentation and rework, and ensures effort is focused on the data that matters most to operations and service delivery. Governance is not about adding bureaucracy, but about enabling better decisions by aligning ownership, definitions and controls, and reinforcing a culture of stewardship and data literacy across the enterprise. Implementation has followed a phased path. The initial phase establishes the governance policy, executive oversight, and foundational operating structures. The next phase pilots enterprise data portfolios, activates data quality and cataloging practices, delivers training, and introduces governance reporting and scorecards. The final phase scales and integrates governance practices across the organization with continuous improvement. MPI is establishing a modern Enterprise Data Platform to address fragmented data and improve scalability, data quality, governance, analytics, and AI capabilities. Delivery of the platform has taken longer than originally planned and contributed to the decline in the Data & Analytics maturity assessment this year. The MVP release is planned for Fall 2026, with the first business solution targeted by the end of Q4 FY2026/27.

Claims Forecasting

CF.1 Executive Summary

CF.1.1 Overview

The purpose of the Claims Forecasting chapter is to provide loss trending analysis along with loss cost projections which are used for both ratemaking and financial forecasting. As discussed in *Part VII Rate Indication Chapter*, accident years (AY) 2027 and 2028 (spanning from April 1 to March 31) are used for determining the indicated rates for 2027/28 rating year (RY). This is because the 2027/28 rating year corresponds to a two-year accident period, i.e. the coverage applies to accidents occurring between April 1, 2027 and March 31, 2029. As shown in *Part VIII Net Incurred Claims Chapter*, a five-fiscal-year forecast of 2026/27 through 2030/31 is used to project the financial position of Manitoba Public Insurance (MPI). The accident year losses for those fiscal years' forecasts are provided in this chapter.

In this General Rate Application (GRA), MPI continues to use the two-step forecasting methodology. The first step is the **loss trending procedure** where claim frequency, claim severity, and loss cost trends are selected, as outlined in *CF.4*. The second step is utilizing the **loss cost projection methodology** where MPI brings historical loss costs to the current accident year cost level by applying past trends selected in the first step. MPI then applies accident year weighting, prior to applying selected future trends, as outlined in *CF.5*.

As for the other minimum filing requirements related to claims forecasting, please refer to *Appendix 5* for a breakdown of the number of individual claims and their severity by Major Class, *Appendix 6* for the key assumptions underlying the Extension Claims Incurred Forecasts (e.g., by annual rate of change for exposures

and loss costs), *Appendix 7* for the projected frequency, severity and loss cost trends by accident year from the last five GRA's, and *Appendix 9* for Collision losses, claim counts, frequency and severity by month for each of the last ten accident years.

CF.1.2 Total Basic 2027/28 Rating Year

The figure below shows the projected ultimate loss for the 2027/28 rating year, which are derived from the claims forecast for the accident years 2027/28 and 2028/29, as outlined in this chapter.

Figure CF-1 Total Basic 2027/28 Rating Year Projected Ultimate Loss

Line No.	Coverage	(1) Projected Ultimate Loss 2027/28 AY	(2) Projected Ultimate Loss 2028/29 AY	(3) Projected Ultimate Loss 2027/28 RY
1	**Accident Benefits - Weekly Indemnity**	$129,423,181	$136,257,839	$132,192,098

13	(1) & (2) From CF.6 through CF.16			
14	(3) Weights as outlined in *Part VII Rate Indication Chapter Appendix 3 Table 1 - Column (3) & (4)*			

CF.1.3 Enhancements from Last GRA

MPI continues to enhance its claims forecasting analysis by reviewing existing forecasting methodologies and assumptions and adapting these to improve accuracy while adhering to industry best practices.

Forecasts for Theft have been separated into Attempted & Partial Theft and Entire Theft. The former accounts for partial theft and damages occurring from attempted theft, while the latter accounts for the theft of entire vehicles. This split was performed to increase granularity and improve upon trend results.

Similarly, forecasts for the former Accident Benefits – Other (Indexed) have been separated into sub-coverages: Personal Care Assistance, Travel, and Other (Indexed). Accident Benefits – Personal Care Assistance provides coverage for personal care costs related to injuries arising from an automobile accident; Accident Benefits – Travel provides coverage for travel expenses associated with medical treatment for injuries arising from an automobile accident; and Accident Benefits –

Other (Indexed) provides coverage for all other medical and rehabilitation expenses of an injured claimant arising from an automobile accident. For more information on this subject and the Termination Rate Project, please refer to *Part VIII External Actuary Review EAR Attachment B – Appointed Actuary Report March 2026.*

As directed by the Public Utilities Board (PUB) in Order No. 156/25 issued December 19, 2025, MPI sought to employ a more evidence-based Work from Home (WFH) forecasting approach in the 2027 GRA. To achieve this, changes in mobility during the pandemic are modeled with a mobility parameter derived from Google's COVID-19 Community Mobility Reports, while a new normal level parameter is used to adjust for lingering effects in the post-pandemic period. This method replaces the 2026 GRA mobility parameter which took values 4, 3, 2, 1 for respective accident years 2020, 2021, 2022, and 2023, and 0 for all other accident years. For further details, please refer to section *CF.2.2*.

CF.1.4 Comparison to 2026 GRA

Below is a comparison by coverage of the 2027/28 rating year to last year's GRA forecast.

Figure CF-3 Comparison with 2026 GRA Forecast (2027/28 Rating Year) Projected Ultimate Losses

Line No.	Coverage	2027/28 Rating Year Projected Ultimate Loss 2026 GRA	2027 GRA	$ Difference	% Difference
1	**Accident Benefits - Weekly Indemnity**	$108,985,651	$132,192,098	$23,206,447	21.29%
2	**Accident Benefits - Personal Care Assistance**	N/A	$39,214,262	N/A	N/A

7	**Bodily Injury**	$8,807,594	$10,757,368	$1,949,774	22.14%
8	**Collision**	$693,196,892	$728,755,608	$35,558,716	5.13%
9	**Comprehensive**	$188,371,473	$176,953,005	($11,418,468)	-6.06%
10	**Property Damage (Third Party Loss of Use)**	$10,744,972	$11,994,214	$1,249,242	11.63%
11	**Property Damage (Third Party Deductible Transfer)**	$32,053,915	$35,514,164	$3,460,249	10.80%
12	**Property Damage (Other)**	$28,946,060	$29,739,899	$793,839	2.74%
13	**PIPP Enhancements**	$6,856,309	N/A	N/A	N/A
14	**Basic Total**	**$1,196,682,944**	**$1,255,998,647**	**$59,315,703**	**4.96%**

15 2026 GRA assumes the same split between accident years as outlined in
16 *Part VII Rate Indication Chapter Appendix 3 Table 1 - Column (3) & (4)*
17 Weights for PIPP Enhancements are the same as what was used in 2026 GRA

Figure CF-4 Comparison with 2026 GRA (2027/28 Rating Year) Projected Ultimate Loss Costs

Line No.	Coverage	2027/28 Rating Year Projected Ultimate Loss Cost 2026 GRA	2027 GRA	$ Difference	% Difference
1	**Accident Benefits - Weekly Indemnity**	$106.08	$128.91	$22.83	21.52%
2	**Accident Benefits - Personal Care Assistance**	N/A	$38.24	N/A	N/A
3	**Accident Benefits - Travel**	N/A	$2.05	N/A	N/A
4	**Accident Benefits - Other**	N/A	$44.65	N/A	N/A
5	**Accident Benefits - Other (Indexed)**	$73.10	N/A	N/A	N/A
6	**Accident Benefits - Other (Non-Indexed)**	$42.44	$41.91	($0.53)	-1.24%
7	**Bodily Injury**	$8.57	$10.49	$1.92	22.37%
8	**Collision**	$674.93	$710.89	$35.96	5.33%
9	**Comprehensive**	$182.98	$172.30	($10.69)	-5.84%
10	**Property Damage (Third Party Loss of Use)**	$10.47	$11.70	$1.24	11.82%
11	**Property Damage (Third Party Deductible Transfer)**	$31.22	$34.65	$3.43	11.00%
12	**Property Damage (Other)**	$28.19	$29.02	$0.83	2.93%
13	**PIPP Enhancements**	$6.67	N/A	N/A	N/A
14	**Basic Total**	**$1,164.64**	**$1,224.81**	**$60.16**	**5.17%**

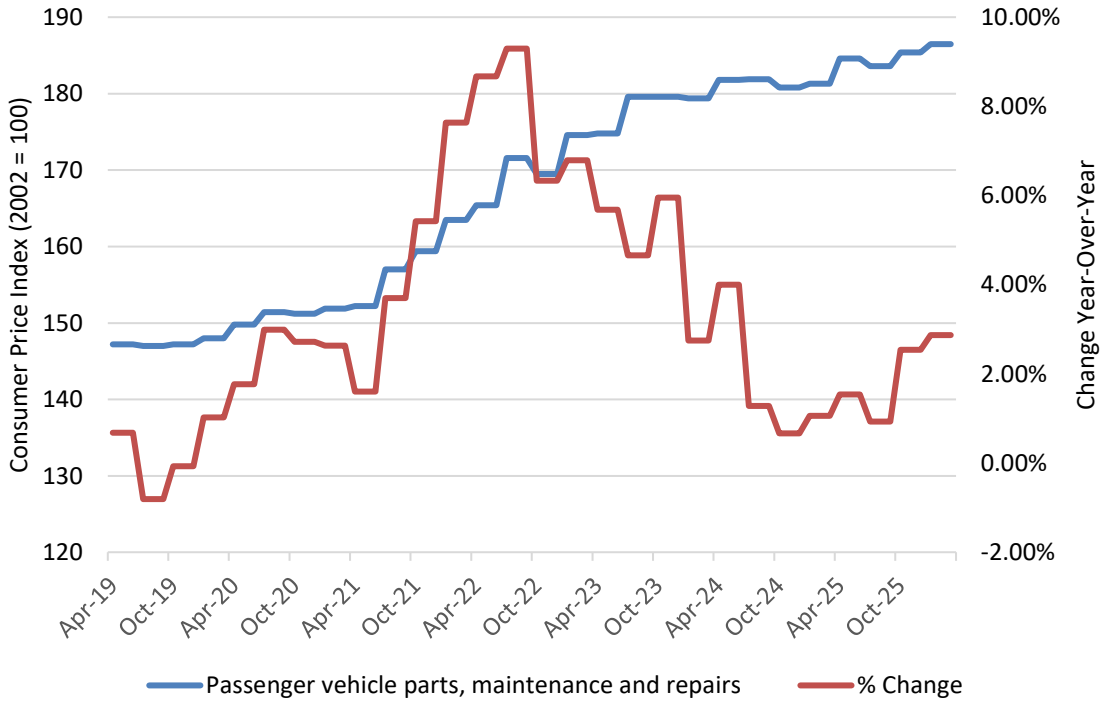
15 2026 GRA assumes the same split between accident years as outlined in
16 *Part VII Rate Indication Chapter Appendix 3 Table 1 - Column (3) & (4)*
17 Weights for PIPP Enhancements are the same as what was used in 2026 GRA

Relative to the prior forecast, projected losses are higher for PIPP, Collision, and Property Damage. The increase is primarily driven by a flatter frequency outlook across these coverages relative to the declining frequency assumed in the 2026 GRA.

MPI forecasts an increase in exposure for 2027 GRA over the previous GRA forecast. Exposure forecasts are based on volume growth factors from total units for earned year earned units, including *The Highway Traffic Act* (HTA), ORV, and trailers units. The assumed total units volume is 1.86% higher in both 2027 accident year and 2028 accident year. For more information on the exposure forecasts see *Part VIII Revenue Chapter REV.2.1*.

CF.2 Key Considerations

CF.2.1 Inflation



In addition to MPI-specific loss experience, MPI reviews recent inflation rates published by Statistics Canada for vehicle repair costs and health care costs to help quantify the impact of the recent macro-economic conditions on claims costs.

Supply chain issues, pent-up consumer demand, and labour shortage following the COVID-19 pandemic resulted in a rapid increase to Manitoba CPI between 2021 and 2023 accident years. Consequently, Manitoba has experienced a rapid increase in auto parts prices and other vehicle repair costs since June 2021. The chart below shows passenger vehicle parts, maintenance, and repair cost inflation for Manitoba[1]. The vehicle parts, maintenance and repairs inflation peaked at 9.30% in July 2022, putting significant cost pressure on vehicle repair severity, but gradually subsided

[1] https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1810000401

thereafter and returned to pre-pandemic levels around July 2024. Inflation has risen since October 2025, increasing to 2.87% in March 2026.

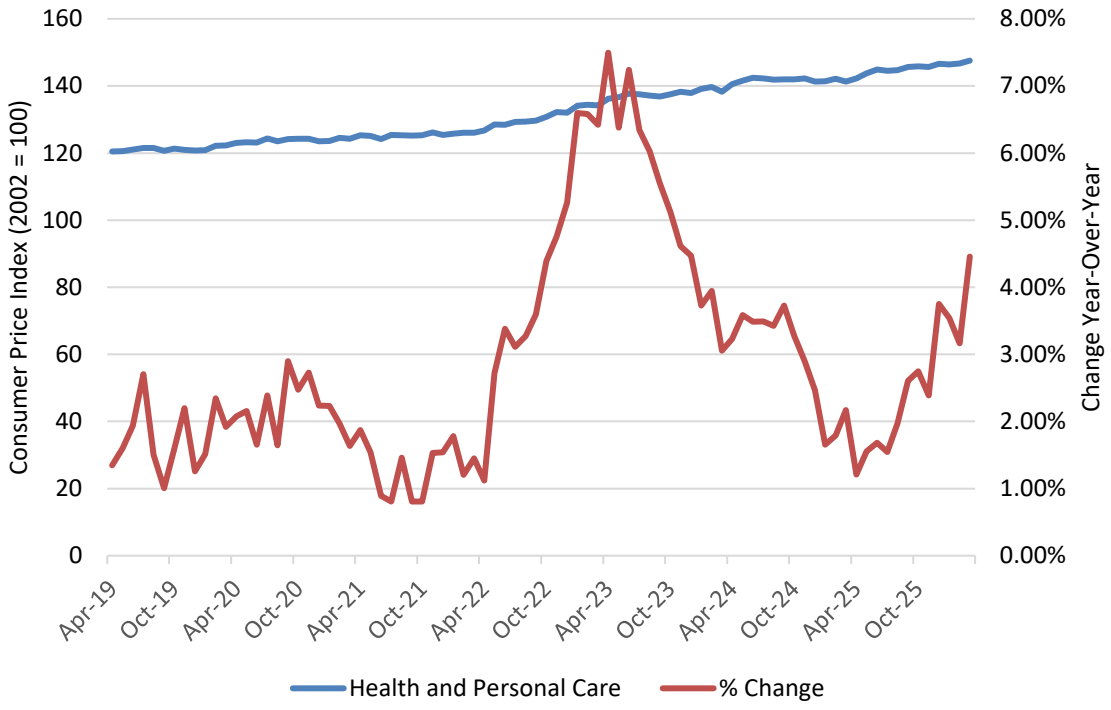


Figure CF-5 Passenger Vehicle Parts, Maintenance and Repairs (Manitoba)

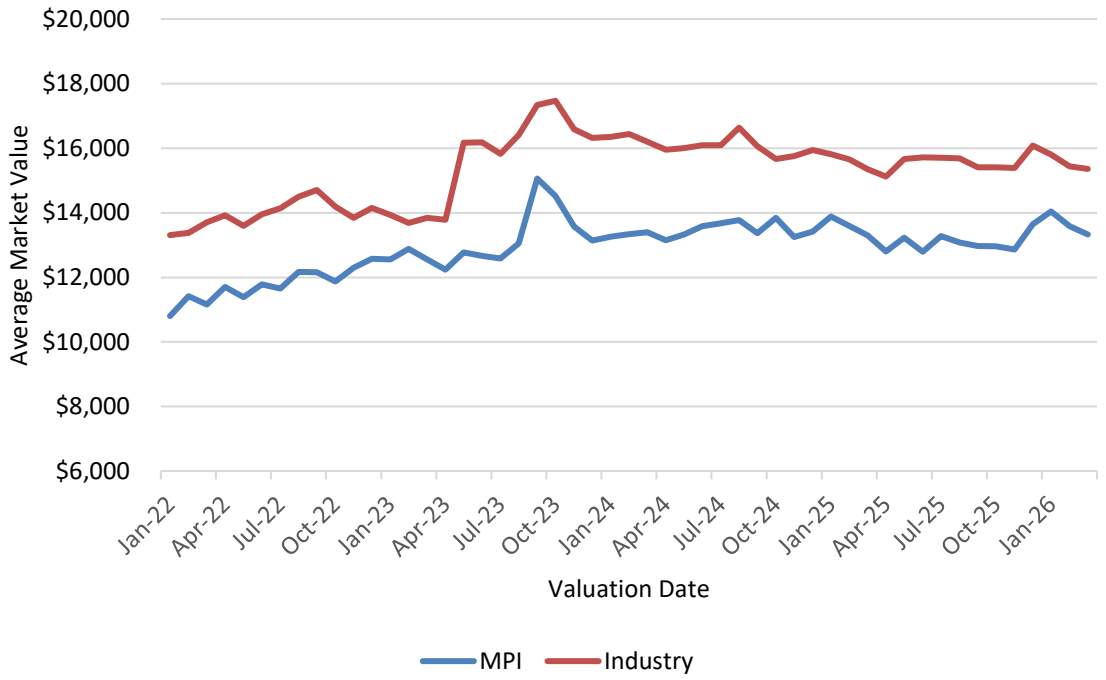
The chart below shows health care costs for Manitoba[2]. Health Care inflation rate peaked at 7.50% in April 2023 but began gradually subsiding thereafter. Inflation has begun rising again, reaching 4.46% between March 2025 and March 2026. Elevated health care inflation impacts the costs associated with medical supplies, prescription drugs, treatments, and associated expenses for Accident Benefits. Health care costs are generally believed to be a lagging indicator of claims costs, similar to wage growth for Weekly Indemnity claims.



[2] Statistics Canada. Table 18-10-0004-01 Consumer Price Index, monthly, not seasonally adjusted (https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1810000401)

Figure CF-6 Health Care Costs (Manitoba)

The current economic environment remains uncertain. Following recent increases in overall inflation, it remains difficult for economists to forecast. Some key cost components of auto insurance such as the value of used vehicles, labour costs and wage growth are directly linked to macro-economic conditions and the supply and demand of goods and services. The current level of economic uncertainty, particularly in relation to ongoing tariff disputes between Canada and USA, and geopolitical instability affecting fuel prices and supply chains, makes insurance claims forecasting extremely challenging.

Figure CF-7 MPI vs Industry Total Loss Valuations

Total loss severity has experienced some corrections since Fall of 2023, which had a record high average vehicle actual cash value (ACV). Based on MPI experience and industry data in the past 12 months, there is strong evidence of ACV stabilizing. In selecting future trends, MPI takes the position of a long-term average view rather than attempting to forecast yearly increases or decreases. MPI believes pre-COVID long-term average trend is a best estimate of future trend, which is 3.00% for total loss severity.

CF.2.2 Mobility

The COVID-19 pandemic has had a significant impact on MPI's claim frequency experience. Pandemic-related WFH arrangements caused drastic reductions in mobility in accident years 2020, 2021, and 2022, resulting in sharp declines in claims for Collision, Property Damage, and PIPP coverages. In this GRA, MPI quantifies the

effect of pandemic-era changes in mobility by using data from Google's COVID-19 Community Mobility Reports to derive a mobility parameter.

Mobility has since increased, though driving patterns may differ from the pre-pandemic period. In particular, the prevalence of remote and hybrid work arrangements since the end of the pandemic may result in different commuting behaviours and levels of traffic congestion. In this GRA, MPI uses a new normal level parameter in accident years 2023, 2024, and 2025 to account for the effect of lasting changes in driving patterns on claim frequency.

The mobility parameter takes values of -29.78, -22.16, and -16.48 for respective accident years 2020, 2021, and 2022, and 0 for all other years. The new normal parameter takes a value of 1 for accident years 2023, 2024, and 2025, and 0 for all other years. The mobility parameter and new normal parameter are only used in models where they are found to be jointly statistically significant. For more details on the derivation of these parameters and a discussion of mobility data sources reviewed by MPI, please refer to *Attachment A - Mobility Data Report.*

CF.2.3 Compulsory and Extension Revision Project

As outlined in the *2021 GRA Part III Basic Autopac Coverage Chapter BAC.4*, effective April 1, 2021, MPI updated aspects of Basic and Extension insurance product coverages that had remained unchanged for the past 20 years. These changes were a part of the Compulsory and Extension Revision Project (CERP) and included the following:

- increasing Basic deductibles from $500 to $750.
- increasing Basic Third-Party Liability (TPL) minimum coverage from $200,000 to $500,000 to provide more protection for Manitoba motorists.

- increasing the Maximum Insured Value (MIV) limit from $50,000 to $70,000 for all vehicles insured by Basic, to reflect the rising value of new vehicles; and
- related amendments to align the updated deductibles and coverage limits across all Basic and Extension products.

These changes directly affected losses when policies were renewed on April 1, 2021, and onwards. With staggered renewals, approximately half of the policies in 2021 accident year were under the new product changes. As such, MPI selected a cut-off point of October 1, 2021, to adjust historical losses. Any losses that occurred before October 1, 2021 were adjusted on a post-CERP cost basis.

The list below summarizes adjustments made to historical losses that occurred prior to October 1, 2021, to bring them to the same post-CERP costs basis;

- Collision – adjusted loss cost to reflect the higher deductible and reduction in claims frequency due to claims valued between $500 and $750 being eliminated from Basic,
- Comprehensive – adjusted loss cost to account for the reduction in losses from the higher deductible and reduction in claim frequency due to claims valued between $500 and $750 being eliminated from Basic,
- Collision & Comprehensive – adjusted loss cost to account for the increased MIV,
- Bodily Injury & Property Damage (Other) – increased claim severity from the increased TPL limits,
- Property Damage (Third Party Deductible Transfer) – increased transfer amount due to the increased deductible level.

The detailed analysis of CERP adjustments can be found in *Appendix 8 – Adjustments from Product Changes (Tables 1, 4 and 5)*.

CF.2.4 Labour Costs and Wage Growth

The minimum wage in Manitoba increased from $15.80 per hour in October 2024 to $16.00 per hour in October 2025. This represents an increase of 1.27%. The minimum wage in Manitoba is expected to increase to $16.40 per hour in October 2026. This represents an increase of 2.50%, according to the Government of Manitoba's media release dated April 1, 2026.

One of the main contributors to physical damage claims cost is vehicle repair cost, which is directly affected by labour cost. As the minimum wage increases, so does the cost to settle claims involving vehicle damage.

Changes in labour costs and wages also affect Accident Benefits such as caregiver costs and Weekly Indemnity benefits.

CF.2.5 Weather Events

Weather events in Manitoba can have a significant impact on the claims cost for MPI. Severe snowstorms can cause slippery road conditions, reduce visibility, and increase the risk of collisions, especially during winter months when snow accumulation is higher than usual. MPI found a strong correlation between the number of vehicle accidents and historical amount of snowfall. Fluctuations in historical experience is attributable to weather events such as the severity and frequency of snowstorms, and was a key reason why MPI introduced accident year weighting in 2024 GRA claims forecasting.

Hailstorms are common in summer months and occasionally develop to catastrophe levels. Two significant hailstorms occurred in 2023 which were the bulk of $165.1

million in catastrophe claims for the Basic line of business in 2023 accident year (which represented 91.72% of the overall loss), as shown in *Part VIII External Actuary Review EAR Attachment B – Appointed Actuary Report March 2026*. MPI is expecting to recover $107.4 million of these losses for Basic through its catastrophe treaty. To recognize the variability of catastrophic losses, MPI applies a loading for catastrophic (CAT) claims to smooth the effect of catastrophes in projecting loss costs. Only the losses net of expected reinsurance recoveries are included in deriving the CAT loading factor.

For detailed analysis on the treatment of catastrophic losses, see *CF.13.1*.

CF.2.6 Basic Deductible Change

MPI increased Basic deductible from $750 to $1,000 effective April 1, 2026, as outlined in *2026 GRA Part IX Basic Deductible Change Chapter*.

This change directly affects losses when policies renewed on April 1, 2026, and onwards. With staggered renewals, approximately half of the policies in the 2026 accident year are expected to be at the new deductible level. As such, MPI selects a cut-off point of October 1, 2026, to adjust future losses. Any losses expected to occur after October 1, 2026, are adjusted for settlement at the new deductible level, while any losses occurring before October 1, 2026, will be settled at $750 deductible. For further details, please refer to *CF.5.4*.

CF.3 Data

This section outlines the data sources and data considerations that apply to all the by-coverage loss trend selections and claims forecasts.

CF.3.1 Ultimate Losses

CF.3.1.1 Loss Trending

For loss trending purposes, i.e., selection of trend rates, MPI reviewed accident year ultimate loss data as of December 31, 2025, for accident years 2012 to 2025 for Bodily Injury and Personal Injury Protection Plan (PIPP) coverages, as discussed in section *CF.4.4*. For all other coverages, MPI reviewed accident year ultimate loss data as of March 31, 2026, for accident years 2012 to 2025, as discussed in section *CF.4.4*.

Details of loss development assumptions used to estimate historical accident year ultimate losses are provided in the Appointed Actuary Report (AAR) as of December 31, 2025 (*Part VIII External Actuary Review EAR Attachment A – Appointed Actuary Report Dec 2025*). This chapter of the application describes how the historical accident years' ultimate losses are used for loss trending purposes.

Property Damage loss trends are reviewed and selected by sub-coverage: Third Party Loss of Use, Third Party Deductible Transfer, and Other. Property Damage sub-coverage claims are impacted by different underlying factors such as vehicle repair delays or customer driving behavior and are of different magnitudes. MPI believes an assessment of Property Damage on sub-coverage level results in more refined loss trends. Losses for Property Damage sub-coverages are extracted from the internal claims database. MPI relies on incurred loss triangles and selects an appropriate loss development factor at each development period using Chain Ladder methods to determine ultimate losses per sub-coverage. Comparison between ultimate losses for Property Damage from March 2026 AAR and ultimate losses used for loss trending purposes can be found in *Appendix 1r – Development Appendices (Table 2)*.

Comprehensive loss trends are reviewed and selected by peril: Attempted & Partial Theft, Entire Theft, Fire, Glass, Hail, Vandalism and Other. Comprehensive perils are impacted by different underlying factors which are masked when combined. MPI believes an assessment of Comprehensive coverage by peril will result in more accurate loss trends. Incurred losses, excluding catastrophes, for Comprehensive perils are extracted from MPI's internal claims database. MPI relies on incurred loss triangles and selects an appropriate loss development factor at each development period using Chain Ladder methods to determine ultimate losses per sub-coverage. Comprehensive catastrophe losses are included separately as discussed in section *CF.13.1*. Comparison between ultimate losses for Comprehensive from March 2026 AAR and ultimate losses used for loss trending purposes can be found in *Appendix 1r – Development Appendices (Table 1)*.

MPI presents the selection of loss development factors and the resulting ultimate loss amounts for each sub-coverage and peril in *Appendix 1 – Development Appendices (Tables 3 and 4)*.

CF.3.1.2 Loss Cost Projections

For forecasting purposes, i.e., applying selected trend rates to recent accident year's ultimate loss costs, MPI uses accident year ultimate loss data as per AAR as of March 31, 2026 (*Part VIII External Actuary Review EAR Attachment B – Appointed Actuary Report March 2026*) for all coverages except Property Damage and Comprehensive.

The AAR does not provide Property Damage data split by sub-coverages (Third Party Loss of Use, Third Party Deductible Transfer and Other) and does not provide Comprehensive coverage split by peril. The derivation of ultimate losses used for these coverages as discussed in section *CF.3.1.1* is for the experience as of March 31, 2026.

MPI presents the selection of loss development factors and the resulting ultimate loss amounts for each sub-coverage and peril in *Appendix 1 – Development Appendices (Tables 3 and 4)*.

CF.3.2 Ultimate Claim Counts

For loss trending purposes, i.e., to calculate historical loss frequency and loss severity of the experience periods, MPI uses accident year ultimate claim counts as of December 31, 2025, for Bodily Injury and PIPP coverages. For Collision, Comprehensive, and Property Damage coverages, MPI uses accident year ultimate counts as of March 31, 2026.

Details of loss development assumptions used to estimate historical accident year ultimate reported claims are provided in the Appointed Actuary Reports (AAR) as of December 31, 2025 (*Part VIII External Actuary Review EAR Attachment A – Appointed Actuary Report Dec 2025*) and March 31, 2026 (*Part VIII External Actuary Review EAR Attachment B – Appointed Actuary Report March 2026*) for all coverages except Property Damage and Comprehensive.

Property Damage loss trends are reviewed and selected by sub-coverage: Third Party Loss of Use, Third Party Deductible Transfer, and Other. Comprehensive loss trends are reviewed and selected by peril: Attempted & Partial Theft, Entire Theft, Fire, Glass, Hail, Vandalism and Other. Reported claim counts by coverage and by accident year are extracted from the internal claim database. Claims with incurred amounts equal to zero are excluded from reported claim counts.

MPI relies on reported claim count triangles and selects an appropriate claim count development factor at each development period using Chain Ladder methods to determine ultimate claim counts.

MPI presents the selection of claim count development factors and the resulting ultimate claim counts by coverage in *Appendix 1 – Development Appendices (Tables 1 and 2)*.

CF.3.3 Exposure Data and Exposure Growth (Volume Growth)

Both loss trending analysis and claims forecasts rely on historical and forecasted exposure counts (i.e., vehicle units). Exposure forecasts in sections *CF.5.7* through *CF.17* are based on volume growth factors under *The Highway Traffic Act* (HTA) for policy year earned units. For more information on the exposure forecasts see *Part VIII Revenue Chapter REV.2.1*.

CF.3.4 Overview of the Experience Period

Ultimate losses, ultimate claim counts, earned exposures, ultimate claim frequency, and ultimate claim severity used for loss trend selections are presented by accident year and by coverage in *Appendix 2 - Historical Earned Exposures and Claim Statistics*. MPI includes a comparison to the prior year's view (as of September 30, 2024) of ultimate losses in *Appendix 2 – Historical Earned Exposures and Claim Statistics* to highlight the changes in the underlying claim experience.

CF.4 Loss Trending Procedure

CF.4.1 Introduction

MPI's loss trending procedure adheres to actuarial standards of practice and industry best practices. The loss trending procedure is summarized as follows, MPI:

- relies on regression analysis to derive appropriate loss trend rates. Regression models are designed to use observed data to measure the relationship between one or more independent variables (such as time) and a dependent variable (such as frequency or severity) assuming some functional relationship between the variables.
- assumes a logarithmic relationship between variables instead of relying on a simple linear regression.
- expands on independent variables considered in regression models, which may include time and other explanatory variables as appropriate to each model.
- fully discloses results of statistical tests used to assess parameter estimates and performance of the regression models selected for trending procedure.
- uses a two-step process in loss trending, i.e., past trends and future trends. The data in the experience period under consideration is adjusted to reflect observed changes in cost conditions that have taken place, referred to as past trend. The data is further adjusted to reflect future changes in cost conditions that are expected to occur between the end of the experience period and the period when the new premiums will be in effect, referred to as future trend.
- relies on regression analysis to determine past trend rates applicable to the cost level changes occurring during the experience period. MPI fits regression models with multiple starting periods. Past trends are required to trend the relevant experience period to the current accident year's cost

level, (i.e., 2025 accident year in this GRA) and selected accident year weights are then applied to derive a weighted average loss cost, prior to applying future trends.

- uses the selected past trends based on regression analysis as the starting point of future trend review, MPI then assesses additional information available that provides guidance on future cost levels and actuarial judgement is applied when selecting the most appropriate future trend rate for the forecast period.

CF.4.2 Model Considerations

To derive estimates of appropriate loss trend rates, MPI considers the observed trend patterns based on estimates of ultimate claim frequency, severity and loss cost by accident year and the results of the regression analysis. In using regression, MPI reflects the parameters that could have an impact on the trends such as time, seasonality and mobility changes.

The identification of the underlying trend patterns over the experience period is challenging because of statistical fluctuation of data points, changes in the underlying exposure, internal events such as product changes and external events such as abnormal weather.

The initial step of MPI's process is to plot and visually inspect the historical data for each coverage. MPI takes note of unusual data points, obvious changes in patterns' directions, sustained shifts, and if these changes are or are not coincident with historical product changes or claims management actions.

MPI models the data in several diverse ways to accurately identify the underlying trends:

- With and without certain data points, to improve the understanding of the sensitivity of the calculated loss trends to the inclusion or exclusion of those points. The data point may be considered an outlier that distorts the measured trend, beginning of a level change or beginning of a change in trend rate.
- Over longer and shorter time periods, as a means of increasing reliability and stability of data being analyzed and to assess changes in the trend patterns that may have occurred.
- Including and excluding different variables, to understand which variables are most significant in capturing the underlying trend experience.
- Excluding data points that are subject to heightened uncertainty.

MPI considers the results of statistical tests in selecting the appropriate regression model:

- R^2 and adjusted R^2 statistics represent how well the fitted model explains the modeled variable in a regression model. Typically, these statistics are measured between 0 and 1, where 1 means that the fitted model fully explains the modeled variable. MPI refers to values 0.8 and greater as good fit, values between 0.4 and 0.8 as moderate fit, and values less than 0.4 as poor fit.
- P-value statistics, which indicate whether the variable used in regression is statistically significant. The statistics are measured between 0 and 1. MPI considers p-values less than 0.05 to be significant, i.e., the results are not likely due to chance.

CF.4.3 Trending Methodologies

MPI selects frequency-severity loss trending methodology unless loss cost models generate better fit statistics or more reliable results due to lack of quality underlying

frequency and severity data. MPI evaluates the appropriateness of using models fitted directly to loss costs by considering the following:

- Credibility of data available for frequency and severity analysis. For low frequency and high severity coverages, in most cases insufficient volume of claims and/or volatility in size of claims are major model constraints that lead to poorly fitted models.
- Inherent relationship between frequency and severity patterns. Changes in coverages and benefits, mix of exposures, management actions, or unusual events may result in offsetting impacts on frequency and severity. Fitting trend models to loss costs directly in these circumstances may sometimes lead to more reliable trends.
- Lack of reliable trending data. Loss cost models are more suitable than frequency-severity models in cases where claim count data is not available or not reliable.

Based on the above considerations, in this GRA, MPI selects loss cost trending models for Accident Benefits – Other (Non-Indexed) coverage and Comprehensive Other.

Accident Benefits – Other (Non-Indexed) is a long tail, low frequency, and high severity coverage. Trend fitted directly to loss cost data is selected to improve model fit and to minimize the judgement required to select the best fit frequency and severity models. However, the loss cost model does not eliminate the randomness inherent in the underlying experience of this coverage.

For Comprehensive Other, movements in frequency and severity are offsetting leading to better fit statistics on the regression models fitted directly to loss costs.

CF.4.4 Time Period

In this GRA, MPI presents and considers claims experience by accident year, spanning 14 years from April 1, 2012, to March 31, 2026.

For Bodily Injury and PIPP coverages, MPI relies on ultimate losses and ultimate claim counts based on experience as of December 31, 2025, projected to March 31, 2026. Directive 14.5 of Order 156/25 (later varied under Order 30/26), directed MPI to determine a solution for the 2027 GRA that enabled completion of the trend analysis using year end valuation data, but without materially delaying the filing schedule. For Collision, Comprehensive, and Property Damage coverages, MPI used ultimate losses and ultimate claim counts based on experience as of March 31, 2026. Given the short-tailed nature of these coverages, MPI considered the more recent valuation date to provide a more current view of experience, including winter and other weather-related impacts reflected in the additional three months of data (see section *CF.3*).

MPI considers the regression models fitted to different time periods as described in section *CF.4.2*. Regression models which have more parameters than the number of data points are not suitable for trend considerations. For example, if time, mobility, and new normal are the selected parameters, regression models with five or more data points are displayed. Fitted model parameters and statistical measures can be found in *Appendix 3 – Loss Trend Analysis Appendices*.

CF.4.5 Mobility

COVID-19 stay-at-home orders and other travel restrictions issued during the pandemic resulted in a drastic decline in mobility in 2020, 2021, and 2022. MPI posits that the prevalence of remote and hybrid work arrangements in the post-pandemic period has had a continued effect on commuting and driving patterns.

The selected loss trends are intended to measure the rate of change in loss experience isolated from the pandemic-era impact of WFH, while accounting for lingering post-pandemic changes in mobility.

Through regression testing, MPI found severity was unaffected by pandemic-related changes in mobility. In the case of frequency, MPI observes a significant decrease for multiple coverages.

Derivation of the adjustment applied to historical data to account for COVID-19 mobility impacts is discussed in sections *CF.2.2* and *CF.5.3*. In the by-coverage discussion that follows (sections *CF.5.7* to *CF.16*), MPI states whether the mobility and new normal parameters are jointly statistically significant based on the measured p-values and, if appropriate, includes the mobility and new normal parameters in the regression model used as a basis for trend selections.

CF.4.6 Model Parameter

MPI uses a model parameter to isolate and remove the impact of a sustained level change within the trend rate or a change in the slope of the trend following shift in claims costs. MPI determines whether the model parameter is statistically significant based on measured p-values and, if appropriate, includes the model parameter in the regression model used as a basis for trend selections. The addition of a model parameter is warranted for Collision, Property Damage (Other) as well as Entire Theft, Fire, Hail, and Vandalism perils of the Comprehensive coverage severity models due to changes in macro-economic conditions in recent years.

CF.4.7 Theft Parameter

To adjust the temporary distortion in claim frequency driven by elevated catalytic converter theft, MPI applied an explicit theft adjustment parameter over the

affected period. The parameter was set to zero for the baseline accident years of 2012–2018, increased to 1, 2, 6, 4, and 1 over the accident years 2019 through 2023, respectively, and returned to zero for 2024–2025 accident years. These adjustments were calibrated based on the observed catalytic converter theft experience and are intended to remove the impact of elevated catalytic converter theft experience from the underlying frequency trends.

Manitoba's *Scrap Metal Act*[3] regulates the salvage market by replacing anonymous cash payouts with mandatory photo identification, vehicle tracking, and traceable payments as of July 18, 2022. By requiring scrap yards to log every transaction and share that data with police, the law eliminated the regulatory loopholes previously used to bypass local city rules. Without an untraceable avenue to liquidate unverified parts, the financial incentive for illicit trade disappeared, resulting in a documented decline in catalytic converter thefts across the province.

CF.4.8 Other Variables

Through regression testing, MPI reviewed several macro-economic and weather variables to gain a better understanding of its relationship to claim frequency and severity. Some of the variables tested proved to be associated with frequency or severity. However, due to lack of a reliable forecast for those variables, MPI does not explicitly model any macro-economic variables or weather variables as parameters in deriving and selecting past trends.

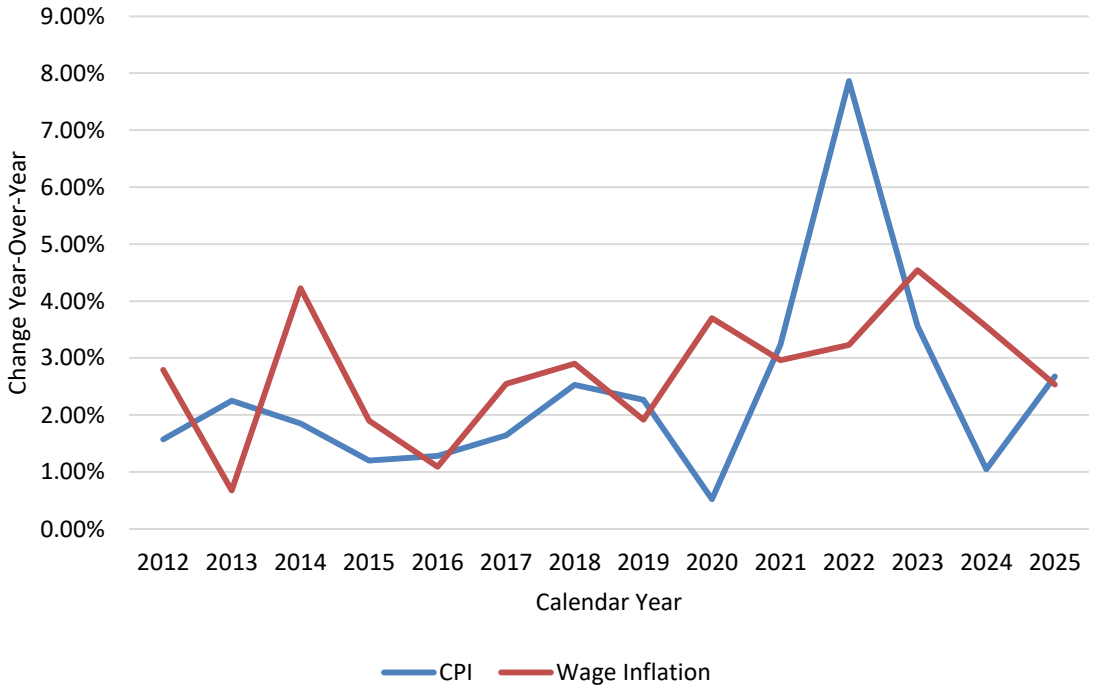
CF.4.9 Adjustment for Product Changes

The purpose of adjustments or level change parameter is to isolate and remove the impact that product change had on the level of claims costs so that the underlying

[3] https://web2.gov.mb.ca/bills/42-4/b009e.php

claim cost trend can be identified. The regression models MPI uses to analyze severity, frequency and loss cost trend patterns allow the inclusion of level change parameters to reflect the effect that the product change had on claim counts and amounts. That is, the product change adjustment identifies a sustained shift up or down in severity, frequency or loss cost, coincident with the implementation of the product change.

MPI includes adjustments for key product changes which are outlined in *Appendix 8 – Adjustments from Product Changes*.



CF.4.10 PIPP Treatment of Indexation

PIPP benefits provided by MPI are indexed annually, in accordance with *The Manitoba Public Insurance Corporation Act (Division 9)*[4], based on 1-year lagged Manitoba CPI.

Weekly Indemnity severity is mainly driven by wage growth, e.g., how much claimants earned prior to the date of loss. Manitoba CPI and wage growth in recent years are not comparable, as illustrated in *Figure CF-9* below. Similar observations can be made to the other key cost components of PIPP benefits, such as health care costs, which do not appear to be directly correlated with general CPI changes. Refer to *CF.2.1* for details on inflation.

[4] https://web2.gov.mb.ca/laws/statutes/ccsm/_pdf.php?cap=p215

Figure CF-9 Manitoba CPI Compared to Wage Inflation

For 2012 to 2019 calendar years, the average difference between Manitoba CPI[5] and wage inflation[6] was 0.43%, meaning Manitoba CPI served as a reasonable proxy to growth in wages. From 2020 onwards, MPI observed a disconnect between Manitoba CPI and wage inflation. Given distortions in 2020 due to pandemic-related economic shocks, meaning Manitoba CPI no longer serves as a reasonable proxy for wage growth.

MPI uses ultimate severity data based on the benefit amount paid in the initial year of a loss (determined by the pre-accident wage and the associated PIPP rules) for the trending analysis. AAR exhibits used as a source for past loss trending

[5] Statistics Canada. Table 18-10-0004-01 Consumer Price Index, monthly, not seasonally adjusted (https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1810000401)

[6] Statistics Canada. Table 14-10-0222-01 Employment, average hourly and weekly earnings (including overtime), and average weekly hours for the industrial aggregate excluding unclassified businesses, monthly, seasonally adjusted (https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1410022201)

procedures do not contain ultimate losses at initial year of loss, and additional adjustments are therefore required to derive these values. The adjusted ultimate losses are then modelled in the regression analysis, and the adjusted data is considered to fully capture the changes of benefits incurred from one year to another, i.e., severity trend. Manitoba CPI is not required to derive severity trend rates as historical wage growth is fully reflected in the regression model when indexation effect is removed from the ultimate losses.

The above treatment to PIPP ultimate losses was introduced in 2024 GRA and the adjustment process remains unchanged in this GRA.

CF.4.11 Future Trends

In selecting future trend rates, MPI adjusts selected past trend rates if there is evidence of new patterns emerging. If there is no such evidence, MPI selects future trend rates equal to past trend rates. Examples of information available in assisting future trend review are:

- Future known cost increases, e.g., wage increases as per Light Vehicle Accreditation Agreement (LVAA);
- Recent changes in loss experience, either MPI specific experience, and/or Canadian & US industry experience shared by MPI's claims vendors;
- Forecasted changes in macro-economic factors, such as CPI, which have a strong relationship to claim severity; and
- Planned initiatives aimed at claim cost reduction.

For coverages where selected future trend rates deviate from past trends, calculations of future trends and/or the basis of any actuarial judgment are disclosed in section *CF.5.7* to section *CF.16*.

CF.5 Loss Cost Projection Methodology

CF.5.1 Introduction

Loss trend analysis is a valuable tool for MPI to estimate future cost of claims. By applying selected loss trend rates to historical loss costs, MPI projects loss costs into the future and adjusts future rate levels accordingly.

In forecasting future loss costs, appropriate historical experience must be selected. In 2024 GRA, MPI introduced accident year weighting; the approach remains in this GRA, using a 20% weight for each of the most recent five accident years, as directed by the Public Utilities Board (PUB) in Order No. 145/23 issued December 18, 2023.

Using Collision coverage as an example, this section walks through the calculations used to derive forecasted ultimate loss costs. Detailed calculations for each coverage are made available in *Appendix 4 – Loss Cost Projection Appendices*.

CF.5.2 Trend Rates

Past and future trend rates were selected for both claim frequency and claim severity. A loss cost trend was derived as a product of the selected claim frequency trend and claim severity trend. This loss cost trend was applied to historical loss costs to bring historical years to the same cost level.

The figure below shows selected past and future trend rates for Collision.

Figure CF-10 Collision Loss Trend Selections

Line No.	(1) Accident Year	(2) Selected Frequency Trend	(3) Selected Severity Trend	(4) Loss Cost Trend

12	(4) = [1.0 + (2)] x [1.0 + (3)] - 1.0			

CF.5.3 Mobility Adjustments

A mobility parameter and a new normal parameter were tested in the claim frequency regression model and included when they were jointly statistically significant (p-value < 0.05). The mobility parameter takes values of -29.78, -22.16, and -16.48 for respective accident years 2020, 2021, and 2022, and 0 for all other years. The new normal parameter takes a value of 1 for accident years 2023, 2024, and 2025, and 0 for all other years prior. The mobility parameter and new normal parameters, when included, were used to adjust the loss cost of accident years 2020 through 2025, bringing them to the same mobility levels observed pre-pandemic.

To derive the indicated Mobility adjustment factor in column (2) of the figure below, the following calculations are done for accident year 2020.

Mobility Coefficient = 0.0094 from Appendix 3g (Table 2)

Mobility Parameter = -29.784 from Appendix 3g (Table 1)

New Normal Coefficient = -0.1553 from Appendix 3g (Table 2)

New Normal Parameter = 0 from Appendix 3g (Table 1)

2020 AY = 1 / exp ((Mobility x 0.0094) + (New Normal x -0.1553))

2020 AY = 1 / exp ((-29.784 x 0.0094) + (0 x -0.1553))

2020 AY = 1.3246

Figure CF-11 Collision Mobility Adjustments

17 from *Appendix 3g*
18 (3) = (2) / 1.1680

CF.5.4 Adjustments for Product Changes

As outlined in *CF.2.3*, some coverages were impacted by CERP changes. Adjustments were made and a CERP Adjustment Factor was calculated to bring all historical years' losses to the new product cost level. The same adjustments that were applied in loss trending were used for loss cost projection. Each coverage that has a CERP adjustment factor applied is provided with a figure outlining the calculations in *Appendix 8 – Adjustments from Product Changes*.

The impact of CERP Maximum Insured Value change from $50,000 to $70,000 is reflected in loss cost projections for Collision and Comprehensive perils, disclosed in *Appendix 4 – Loss Cost Projections Appendices*. The analysis for the calculation of the impact to loss cost can be found in *Appendix 8 – Adjustments from Product Changes*.

As outlined in *CF.2.6*, MPI has also recently increased the Basic deductible from $750 to $1,000. To calculate the projected impact of this change, MPI conducted a loss elimination ratio analysis for the affected products. This analysis looked at historical claims severity and determined the amount the claim would have been reduced with this change.

The first step in this analysis is to determine the impact of the deductible change using historical incurred claims data trended to the 2025 accident year, as shown in the table below.

Figure CF-12 Historical Impact of Changes to Deductible on Collision

Line No.	(1) Accident Year	(2) Past Trend	(3) Past Trend Factor	(4) Reported Losses	(5) Trended Loss	(6) Trended Loss with $750 Deductible	(7) Trended Loss with $1,000 Deductible	(8) Trended $1,000 Adjustment Factor

15 (1) April 1 to March 31
16 (2) See *CF12.1*
17 (3) = (3Next Row) x (1 + (2))
18 (4) From *Appendix 8g - Table 1*
19 (5) = (3) x (4)
20 (6) Restated (5) Assuming a $750 Deductible
21 (7) Restated (5) Assuming a $1,000 Deductible
22 (8) = (7) / (6)

As the increase in the Basic deductible from $750 to $1,000 reduces each affected Basic forecasted claim by up to $250, MPI recognizes that the severity trend applicable to claims settled at a $1,000 deductible may differ from the severity trend calculated at the prior $750 deductible level. MPI uses the historical data in *Figure CF-12* to trend the losses for 2021-2025 to future accident years. This data is used to project the adjustment factor for a $1,000 deductible applicable to each forecasted year, as shown in the table below.

Figure CF-13 Future Impact of Changes to Deductible on Collision

Line No.	(1) Accident Year	(2) Future Trend	(3) Trended Loss with $750 Deductible	(4) Trended Loss with $1,000 Deductible	(5) Trended $1,000 Adjustment Factor	(6) Selected $1,000 Adjustment Factor

2	**2027**	5.80%	$632,908,558	$610,193,072	0.9641	0.9641
3	**2028**	5.70%	$658,152,350	$635,427,041	0.9655	0.9655
4	**2029**	5.70%	$684,400,053	$661,665,426	0.9668	0.9668
5	**2030**	5.70%	$711,691,576	$688,948,222	0.9680	0.9680
6	(1) April 1 to March 31					
7	(2) See *CF12.1*					
8	(3) Average Losses with $750 Deductible for Accident Years 2021-2025 Trended to (1)					
9	(4) Average Losses with $1,000 Deductible for Accident Years 2021-2025 Trended to (1)					
10	(5) = (4) / (5)					
11	(6) See *CF2.6*					

Since Basic policies renew throughout the year, MPI assumes the $1,000 deductible will affect claims occurring on or after October 1, 2026. For the 2026 accident year, the adjustment factor is therefore calculated as a simple average of 1.0000, representing claims settled at the prior $750 deductible, and 0.9627, representing claims settled at the new $1,000 deductible.

For subsequent accident years, the applicable adjustment is based on the trended $1,000 deductible adjusted factors shown in *Figure CF-13*. MPI applies the selected $1,000 deductible adjustment factor in column (6) of the loss cost projection for each affected coverage.

The selected adjustment factors for the $1,000 deductible, along with the supporting calculations for each affected coverage, are provided in *Appendix 8 – Adjustments from Product Changes (Tables 2 and 3)*.

CF.5.5 Accident Year Weighting

After adjusting all historical years to the same cost level as the most recent accident year (i.e., 2025 in this GRA), an equal weight of 20% was applied to the most recent five accident years.

Calculations up to this step determine a weighted-average trended ultimate adjusted loss cost. From this step onwards, future trend rates and future adjustments are applied as shown in *CF.5.6*.

CF.5.6 Projected Ultimate Loss Cost

To summarize, once weighted-average trended ultimate adjusted loss cost is derived from *Figure CF-14*, three calculation steps are followed to derive projected ultimate loss cost for the forecast years:

- a factor is applied to account for future trend from *Figure CF-10*;
- any necessary CERP MIV adjustments from *Appendix 8g – Table 4*;
- a factor is applied to account for the increased deductible from *Figure CF-13*.

A forecasted ultimate loss cost for each accident year is shown in column (7) of the figure below.

Figure CF-15 Collision Projected Ultimate Loss Cost

CF.5.7 Application to Coverage-Level Forecasts

The preceding sections describe how MPI derives the projected ultimate loss cost, using Collision as an example. After historical loss costs are restated to a common

cost level, MPI applies selected accident year weights, future trend factors, applicable CERP and MIV adjustments, and the $1,000 deductible adjustment to arrive at the forecasted ultimate loss cost shown in ***Error! Reference source not found.***. The following sections apply this same framework to each coverage and provide the supporting loss trend selections and loss cost projections used to derive the Total Basic forecast.

CF.6 Accident Benefits - Weekly Indemnity

Weekly Indemnity provides coverage for loss of wages resulting from the inability of the injury claimant to work following an automobile accident.

CF.6.1 Accident Benefits – Weekly Indemnity Loss Trending

The figure below compares 2026 GRA (referred to as prior) and 2027 GRA (referred to as current) loss trend selections.

Figure CF-16 Accident Benefits - Weekly Indemnity Trend Selection Comparison

Line No.	Accident Year		Prior Selections Frequency	Prior Selections Severity	Prior Selections Loss Cost	Current Selections Frequency	Current Selections Severity	Current Selections Loss Cost
1	Past Trends	2012-2024	-1.69%	2.68%	0.94%	0.00%	3.71%	3.71%
2		2025						
3	Future Trends	2026						
4		2027	-1.69%	2.68%	0.94%			
5		2028				0.00%	3.71%	3.71%
6		2029						
7		2030						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency and severity trends to be the same as past trends, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, the parameters of mobility and

new normal were found to be statistically significant and were included in the final model. These parameters improve the model by isolating the impact of pandemic-era mobility reductions and the continuing effect of post-pandemic driving patterns, allowing the underlying frequency trend to be estimated more reliably. Because time was not included as a parameter in the regression model, the underlying selected frequency trend is 0.00%. For severity, time was found to be statistically significant and was included in the final model. Based on these statistically significant model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3a – Loss Trend Analysis Appendices*.

CF.6.2 Accident Benefits – Weekly Indemnity Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4a – Loss Cost Projection Appendices*.

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In

this GRA, MPI selects future frequency and severity trends to be the same as past trends, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, the parameters of mobility and new normal were found to be statistically significant and were included in the final model. These parameters improve the model by isolating the impact of pandemic-era mobility reductions and the continuing effect of post-pandemic driving patterns, allowing the underlying frequency trend to be estimated more reliably. Because time was not included as a parameter in the regression model, the underlying selected frequency trend is 0.00%. For severity, time was found to be statistically significant and was included in the final model. Based on these statistically significant model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3b – Loss Trend Analysis Appendices*.

CF.7.2 Accident Benefits – Personal Care Assistance Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4b – Loss Cost Projection Appendices*.

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency and severity trends to be the same as past

trends, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, the parameters of time, mobility and new normal were all found to be statistically significant and were included in the final model. The mobility and new normal parameters improve the model by isolating the impact of pandemic-era mobility reductions and the continuing effect of post-pandemic driving patterns, allowing the underlying frequency trend to be estimated more reliably. For severity, MPI judgmentally selected a model without any trend, as this was considered the most appropriate and supportable assumption in light of the recent volatility in the observed data. MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3c – Loss Trend Analysis Appendices*[7].

CF.8.2 Accident Benefits – Travel Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4c – Loss Cost Projection Appendices*.

[7] **An error was identified in the claim count data used in the trend analysis. The trending period was intended to be, a full accident year of claim counts however a 9-month prorated amount was used instead for 2026. This inconsistency affected the fitted loss trend, resulting in a change in the loss trend from -7.75% to -7.28%. The overall impact of the error to projected 2027 RY loss cost is +$0.08; the corresponding impact to ultimate losses is +$82,023.**

Figure CF-21 Accident Benefits - Travel - Ultimate Losses

9		**2030**					5.70%	5.70%

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. MPI selected future frequency trend to be the same as past frequency trend as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, the parameters of time, mobility and new normal were found to be all statistically significant and included in the final model. For severity, time and the model parameter were found to be statistically significant and included in the final model. MPI selected past and future severity trends that differ as below.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trend are presented in *Appendix 3g – Loss Trend Analysis Appendices*.

MPI does not include any adjustments to Collision severity data to account for CERP MIV changes. MPI assessed the impact of MIV changes and deemed them not significant for the purpose of trends. MPI includes a CERP MIV adjustment in loss cost projection, which is derived as per *Appendix 8g – Adjustments from Product Changes (Table 4)*.

MPI estimates future severity trend by reviewing individual cost component of repairs and total loss claims using MPI's closed claims up to March 2026. Future severity is impacted by supply and demand of used vehicles, salvage values, parts prices, labour rates, increases in labour hours and parts count required to deal with increasing complexities of vehicle repairs especially on newer vehicle models. The detailed breakdown of historical Collision repairable losses by cost component is shown in the figures below.

Figure CF-29 Collision Repairs Severity Component by Type

17 Line 11 = Weighted average of Line 7, Line 8, Line 9 and Line 10. Weights are provided in column (6)

MPI highlights the following assumptions for future Collision repairs severity trends:

- Future growth in average labour rate per hour is based on the rate stipulated in the LVAA effective June 2025.
- Future growth in the average cost of parts, average labour hours and average parts count per claim are based on the historical year-on-year averages.
- Based on the LVAA agreement the cost of paint is set to increase by 7.00% in 2026 and 2027 years. MPI assumes the cost of paint will increase by 5.00% thereafter. Other types of materials are expected to increase at the same rate as labour rate per hour. MPI assumes 90%/10% split between paint and non-paint materials.
- No change is expected in the tax rate.

The figure below shows the derivation of the overall future Collision severity.

Figure CF-32 Collision Severity Future Trend

Line No.		2026	2027	2028	2029	2030

5	**Combined Severity Trend**	**5.90%**	**5.80%**	**5.70%**	**5.70%**	**5.70%**
6	Line 3 = Derived based on ultimate incurred losses in 2025 accident year					
7	Line 4 = 1.0 - Line 3					
8	Line 5 = [Line 1 x Line 3 + Line 2 x Line 4] Rounded to 10 basis points					

While MPI recognizes the elevated trend in total loss severity over 2020 to 2023, MPI is of the view that hyperinflation has passed, and future trends are not likely to stay at the pandemic level in the forecast period.

CF.2.1 provides the rationale for MPI's approach in selecting future trend assumptions that are correlated with general economic conditions.

The future Collision severity trend is derived as a weighted average of the growth forecasted in repair severity and the growth expected in total loss severity.

CF.12.2 Collision Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4g – Loss Cost Projection Appendices*.

CF.13 Comprehensive

Comprehensive coverage provides coverage for damages to the vehicle of the insured other than Collision (e.g., hail, fire, glass, theft, vandalism, etc.).

In this GRA, to improve the accuracy of the claims forecast, MPI calculates trends and loss cost projections for Comprehensive coverage by key perils: Attempted & Partial Theft, Entire Theft, Fire, Glass, Hail, Vandalism and Other. By-peril analysis is done for non-catastrophe claims (attritional claims), and catastrophe claims are loaded on the total Comprehensive losses as discussed in section *CF.13.1* below.

CF.13.1 Treatment of CAT Claims

MPI recognizes that Comprehensive coverage is subject to catastrophic and non-catastrophic losses. These losses result in extreme volatility in historical frequency distorting the overall Comprehensive trend. MPI removes all historical catastrophe claims from Comprehensive ultimate incurred claims and ultimate claim counts in the trend analysis. MPI then applies a catastrophe adjustment in forecasting overall Comprehensive losses to account for expected future catastrophe events. This treatment intends to smooth the effect of catastrophes on Comprehensive losses.

The figure below shows the derivation of ultimate losses excluding catastrophe used in Comprehensive severity trend analysis.

Figure CF-34 Removal of CAT Claims from Comprehensive Ultimate Losses as of March 2026

Line No.	(1) Accident Year	(2) Ultimate Loss Including CAT	(3) Ultimate CAT Loss	(4) Ultimate Attritional Loss

15 (1) April 1 to March 31
16 (2) From March 2026 Valuation
17 (3) From March 2026 Valuation
18 (4) From March 2026 Valuation

Details of assumptions used to estimate historical accident year ultimate catastrophe and attritional losses are provided in the March 2026 AAR.

Figure CF-35 below shows the derivation of ultimate losses excluding catastrophes as of March 2026 and the derivation of the catastrophe adjustment factor.

In 2023, Manitoba experienced several spring and summer hail events leading up to severe hailstorms in July and August. Losses from the hailstorms were classified as catastrophic and reached the reinsurance annual aggregate deductible of $50

million. The catastrophe adjustment factor in the figure below is calculated excluding reinsurance recoveries.

21 (6) = [(2) - (4)] / (5)
22 (7) 9-year Average of Hail Adjustment Factors in (6) for 2017 year to 2025 year, rounded to 2 decimal points.

MPI derives the catastrophe adjustment factors by dividing ultimate losses including catastrophes over ultimate losses excluding catastrophes for each accident year on a net basis.

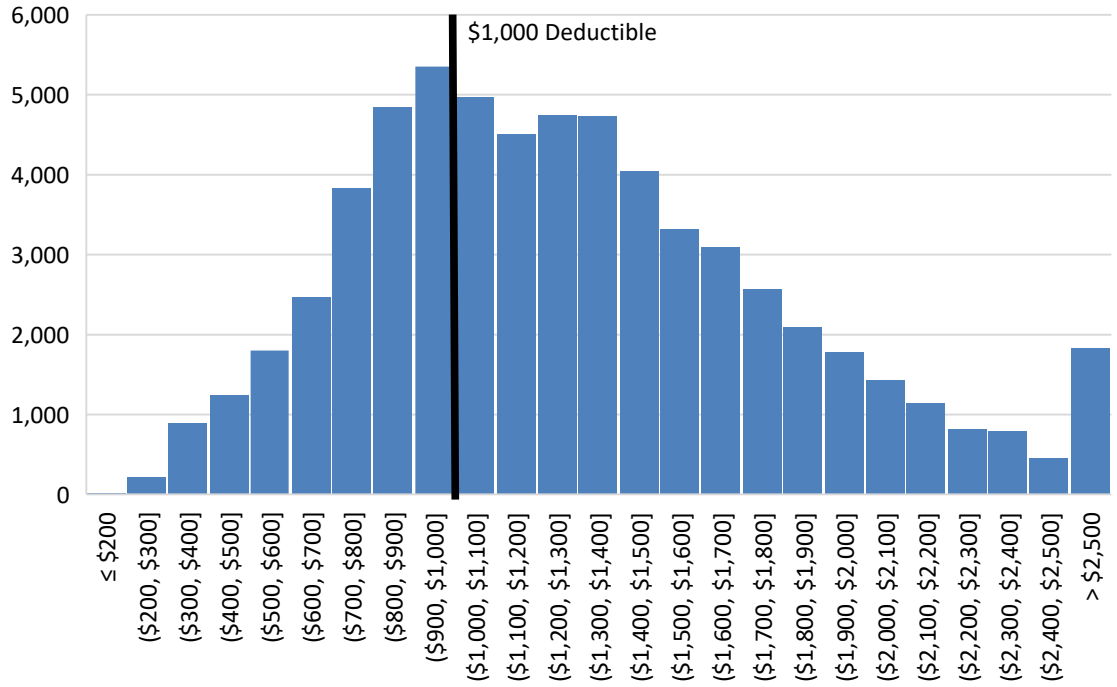
The average repair cost of claims was reduced after MPI adopted Paintless Dent Repair (PDR) in 2017. MPI believes the future cost of catastrophe claims is better represented by the experience of 2017 and thereafter.

MPI selects its catastrophe adjustment factor based on the average of catastrophe adjustment factors of 2017 to 2025 accident years, rounded to four decimal points. The catastrophe adjustment factor is applied to combined projected loss costs calculated in sections *CF.13.3* to *CF.13.9* below. Results with and without catastrophe adjustment factor combined for Comprehensive coverage can be found in section *CF.13.10* below.

CF.13.2 Glass Claims Analysis

In recent years, MPI has experienced an increase in Advanced Driver Assistance Systems (ADAS) calibrations. These calibrations are generally performed on windshield replacement where a camera or sensor in the vehicle needs to be recalibrated to ensure it is functioning properly. The current average cost of ADAS calibration is approximately $232 per claim.

The number of ADAS calibrations increased from approximately 3,040 claims in 2020 fiscal year to 18,997 claims in 2025 fiscal year, which increased the overall cost of glass-only claims. As the number of glass replacement claims requiring calibration increases, more glass-only claims exceed the $1,000 Basic deductible putting pressure on both Basic frequency and severity.



MPI recognizes that historical increases in Basic glass-only claims will not continue at the same rate in the future. Eventually, most of the glass-only claims will exceed the Basic deductible and the frequency and severity trends will stabilize.

MPI has analyzed the historical distribution of ground-up[8] paid glass claims to determine the development of future glass-only frequency and severity trends. Although glass-only claims are possible for both Collision and Comprehensive, based on MPI's historical experience, Collision coverage has incurred very few glass-only claims in the last 14 years. As the result, MPI applies the results of the glass claims analysis in determining future trends for Comprehensive coverage only in section *CF.13.6*.

Based on glass invoice data from fiscal years 2012 to 2025, the overall growth in ground-up glass claims has been relatively stable. Basic glass-only claims, however, increased at a faster rate in recent years because more glass replacement claims exceeded the $750 deductible and therefore became payable under Basic. As the proportion of claims exceeding the deductible has increased, the growth in Basic glass-only claims has begun to move closer to the growth observed in ground-up glass claims. This indicates that the impact of claims newly crossing the deductible threshold is becoming less significant than it was in prior years. MPI notes that, under the $1,000 deductible, glass-only replacement claims are generally expected to exceed the deductible; glass repair claims are not expected to reach the Basic layer.

[8] Total value of the claim i.e., gross of deductible Basic and Extension combined.

Figure CF-36 Distribution of Glass-only Replacement Claims based on 2025 Fiscal Year Invoices

As of the 2025 fiscal year, about two-thirds of glass-only claims exceed the $1,000 deductible, which can be seen in the above *Figure CF-36.* Because of this, MPI expects slower growth in Basic glass-only claim frequency over the forecast period.

The derivation of future frequency trend for Comprehensive glass-only claims can be found in the figure below.

Figure CF-37 Deviation of Future Frequency for Basic Comprehensive Glass-only Claims

Line No.	(1) Fiscal Year	(2) Paid Claim Count	(3) Claim Count Trend	(4) Impact of Claims Initiatives	(5) Total Projected Claim Count	(6) Basic Projected Claim Count	(7) Year Over Year % Growth	(8) Selected Future Frequency Trend
1	**2025**	62,971			62,971	54,581		
2	**2026**	62,971	4.05%	-3,617	61,903	55,130	1.01%	-0.50%
3	**2027**	62,971	4.05%	-5,652	58,756	53,248	-3.41%	-4.85%
4	**2028**	62,971	4.05%	0	61,134	56,266	5.67%	4.09%
5	**2029**	62,971	4.05%	0	63,608	59,362	5.50%	3.93%
6	**2030**	62,971	4.05%	0	66,182	62,484	5.26%	3.69%

7 (1) April 1 to March 31
8 (2) Ground-up count of paid claims based on the invoices for 2025 fiscal year
9 (3) Trend from log-linear regression model fitted to 12 years of group-up claim counts
10 (4) Estimated impact of glass-repair first initiatives
11 (5) = (5PriorRow) x [1.0 + (3)] + (4)
12 (6) Restated (5) Assuming a $750 Deductible
13 (7) = (6) / (6PriorRow) - 1.0
14 (8) = [1.0 + (7)] / [1.0 + earned units forecast per rating year from *CF.3.3*] - 1.0

MPI derives a claim count trend of 4.05% based on the ground-up invoice data for glass replacement claims spanning 2012 to 2025 fiscal years. MPI applies this trend to ground-up claims to derive a forecasted claim count for 2026 to 2030 years. MPI applies $1,000 deductible to the claim amounts to determine how many claims will reach Basic deductible level. The future Basic frequency is derived based on the year-on-year growth of the claim counts in Basic layer and the change in forecasted Basic exposure.

MPI includes impact from the initiatives planned to be introduced over the forecasted years aimed at reducing the number of glass replacement claims by considering these for repair eligibility first. Please refer to *2026 GRA Part VII Claims Forecasting Chapter Appendix 9 - Glass Repair First Policy* for further details.

The derivation of future severity trend for Comprehensive glass-only claims can be found in the figure below.

Figure CF-38 Derivation of Future Severity for Basic Comprehensive Glass-only Claims

Line No.	(1) Fiscal Year	(2) Paid Average Severity	(3) Severity Trend	(4) Increase in ADAS Costs	(5) Total Projected Average Severity	(6) Basic Projected Average Severity	(7) Year Over Year % Growth	(8) Selected Future Severity Trend

6	**2030**	$1,304	5.50%	$0	$1,713	$1,030	8.61%	8.61%

7 (1) April 1 to March 31
8 (2) Ground-up severity of paid claims based on the invoices for 2025 fiscal year
9 (3) Judgement based trend for group-up claim severity
10 (4) Increase to ADAS costs based on latest proposed LVAA
11 (5) = (5PriorRow) x [1.0 + (3)] + (4)
12 (6) Restated (5) Assuming a $750 Deductible
13 (7) = (6) / (6PriorRow) - 1.0
14 (8) = (7)

MPI continues to use the severity trend derived in the 2026 GRA from the ground-up invoice data for glass replacement claims spanning 2012 to 2024 fiscal years. Following the 2025 accident year the increases in the cost of glass claims are expected to start stabilizing.

MPI applies the severity trend to derive the forecasted average severity for 2026 to 2030 years on the ground-up basis before applying $750 deductible to the claim amounts, to determine how many claims will reach Basic product. The future Basic severity is derived based on the year-on-year growth of the average claim severity in Basic layer.

CF.13.3 Comprehensive Attempted & Partial Theft

Comprehensive Attempted & Partial Theft, previously included in Comprehensive Theft in the 2026 GRA, provides coverage to the insured for partial theft, as well as for damages to their vehicle caused by partial or attempted theft.

CF.13.3.1 Comprehensive Attempted & Partial Theft Loss Trending

The figure below compares 2026 GRA (referred to as prior) and 2027 GRA (referred to as current) loss trend selections.

Figure CF-39 Comprehensive Attempted & Partial Theft Trend Selection Comparison

Line No.	Accident Year		Prior Selections			Current Selections		
			Frequency	Severity	Loss Cost	Frequency	Severity	Loss Cost
1	Past Trends	2012-2024	N/A	N/A	N/A	-3.14%	11.88%	8.36%
2		2025						
3	Future Trends	2026						
4		2027	N/A	N/A	N/A			
5		2028				-3.14%	11.88%	8.36%
6		2029						
7		2030						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency and severity trends to be the same as past trends, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, time and theft parameters were found to be statistically significant and were included in the final model. The theft parameter was included to isolate the period of elevated theft of catalytic convertors during the 2019-2023 accident years, allowing the underlying frequency trend to be estimated more reliably. For severity, time was found to be statistically significant and included in the final model. Based on these statistically significant

model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3h – Loss Trend Analysis Appendices*.

CF.13.3.2 Comprehensive Attempted & Partial Theft Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4h – Loss Cost Projection Appendices*.

Figure CF-40 Comprehensive Attempted & Partial Theft - Ultimate Losses

(3) From *Appendix 4h - Table 3*
(4) = (2) x (3)

CF.13.4 Comprehensive Entire Theft

Comprehensive Entire Theft, previously included in Comprehensive Theft in the 2026 GRA, provides coverage to the insured for theft of an entire vehicle.

CF.13.4.1 Comprehensive Entire Theft Loss Trending

The figure below compares 2026 GRA (referred to as prior) and 2027 GRA (referred to as current) loss trend selections.

Figure CF-41 Comprehensive Entire Theft Trend Selection Comparison

Line No.	Accident Year		Prior Selections			Current Selections		
			Frequency	Severity	Loss Cost	Frequency	Severity	Loss Cost
1	Past Trends	2012-2020	N/A	N/A	N/A	4.82%	3.28%	8.26%
2		2021-2023					12.97%	18.42%
3		2024					3.28%	8.26%
4		2025					3.28%	8.26%
5	Future Trends	2026	N/A	N/A	N/A	0.00%	3.28%	3.28%
6		2027						
7		2028						
8		2029						
9		2030						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. The future severity trend is selected to be the same as the past severity trend apart from accident years 2021-2023 during which there was a period of higher-than-normal inflation. For frequency, time was found to be statistically significant and included in the final model. For severity, time and the model parameter were found to be statistically significant and included in the final model. The model parameter was included to isolate the effects of hyperinflation during the accident years 2021-2023 and reliably estimate the underlying severity trend. Based on these statistically significant model results and the absence of credible evidence

supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

The selected frequency trend differs from that used in the prior analysis to reflect emerging industry experience. As noted in the Équité Association's 2025 Auto Theft Trend Report (February 2026)[9], auto theft activity peaked in 2022–2023 and has since declined significantly, including an 18% reduction in 2025 and broad-based decreases across all regions.

The report further indicates that these reductions are associated with the effectiveness of national anti-theft initiatives, supporting the view that recent elevated frequency levels are not expected to persist.

Therefore, the selected frequency trend reflects a lower expected level of growth in claim frequency relative to the recent historical period.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3i – Loss Trend Analysis Appendices*.

CF.13.4.2 Comprehensive Entire Theft Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected

9		2030						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects the future frequency trend to be the same as the past frequency trend. The future severity trend is chosen to be the same as the past severity trend with the exception of accident years 2021-2023, which saw a period of higher-than-normal inflation. For frequency, time was found to be statistically significant and was included in the final model. For severity, time and the model parameter were found to be statistically significant and were included in the final model. The model parameter was included to isolate the effects of hyperinflation during the accident years 2021-2023 and reliably estimate the underlying severity trend. Based on these statistically significant model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models. Due to the anomalous 2025 Manitoba wildfire season, MPI excluded 2025 AY experience from Comprehensive Fire loss trending.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical

representation of the selected fitted trends are presented in *Appendix 3j – Loss Trend Analysis Appendices*.

CF.13.5.2 Comprehensive Fire Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4j – Loss Cost Projection Appendices*.

7		**2028**				0.00%	0.00%	0.00%
8		**2029**						
9		**2030**						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency trend to be the same as past frequency trend, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. The future severity trend is chosen to be the same as the past severity trend with the exception of accident years 2021-2023 which saw a period of higher-than-normal inflation. For frequency, only a flat parameter was found to be statistically significant and included in the final model. Given that this parameter remains constant over the modelling period, it does not provide explanatory variation and primarily captures the baseline level of severity. Accordingly, it is not interpreted as a key driver of trend changes. For severity, the model parameter was found to be statistically significant and included in the final model. The model parameter was included to isolate the effects of hyperinflation during the accident years 2021-2023 and reliably estimate the underlying severity trend. MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3I – Loss Trend Analysis Appendices*.

CF.13.7.2 Comprehensive Hail Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4I – Loss Cost Projection Appendices*.

7		2029						
8		2030						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency and severity trends to be the same as past trends, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, the parameters of mobility and new normal were found to be statistically significant and were included in the final model. These parameters improve the model by isolating the effects of pandemic-era mobility restrictions and the continuing effects of post-pandemic driving patterns, allowing the underlying frequency trends to be estimated more reliably. For severity, the rental days parameter was found to be statistically significant and was included in the final model. The rental days parameter isolates the effects of

changes in the average number of rental days from the underlying severity trend. Because neither the severity nor frequency trends depend on time, trend selections for both are 0.00%. Based on these statistically significant model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

By nature of its coverage, Third Party Loss of Use claim amount is a product of the total number of rental days and the daily rental rate of the vehicle. To reduce the variability of historical severity experience, MPI restates historical severity to the current average daily rental rate.

The figure below captures derivation of the rental rate adjustment factor to be applied to the historical Third Party Loss of Use severity.

Figure CF-56 Property Damage (Third Party Loss of Use) Adjustment for Rental Rates as of March 2026

Line No.	(1) Accident Year	(2) Paid Third Party Loss of Use Loss	(3) Total Rental Days	(4) Total Invoices	(5) Average Rental Rate per Day	(6) Average Rental Days per Invoice	(7) Rental Rate Adjustment Factor

15 (1) April 1 to March 31
16 (2) As of March 31, 2026
17 (3) As of March 31, 2026
18 (4) As of March 31, 2026
19 (5) = (2) / (3)
20 (6) = (3) / (4)
21 (7) = $56.34 / (5)

MPI extracts Third Party Loss of Use information from paid invoices, such as total amount paid, total rental days and total number of invoices. Average rental rate per day and average number of rental days are then derived by invoice. The rental rate adjustment factor is calculated by bringing historical average rental rate per day to the current average of $56.34.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical

representation of the selected fitted trends are presented in *Appendix 3o – Loss Trend Analysis Appendices*.[10]

CF.14.2 Property Damage (Third Party Loss of Use) Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4o – Loss Cost Projection Appendices*.

Figure CF-57 Property Damage (Third Party Loss of Use) - Ultimate Losses

2		2025						
3	Future Trends	2026						
4		2027	-3.06%	0.44%	-2.64%			
5		2028				0.00%	0.00%	0.00%
6		2029						
7		2030						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency and severity trends to be the same as past trends, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. For frequency, the parameters of mobility and new normal were found to be statistically significant and were included in the final model. These parameters improve the model by isolating the effects of pandemic-era mobility restrictions and the continuing effects of post-pandemic driving

patterns, allowing the underlying frequency trends to be estimated more reliably. Because time was not included as a parameter in the regression model, the underlying selected frequency trend is 0.00%. For severity, only a flat parameter was found to be statistically significant and was included in the final model. Given that this parameter remains constant over the modelling period, it does not provide explanatory variation and primarily captures the baseline level of severity. Accordingly, it is not interpreted as a key driver of trend changes. Based on these statistically significant model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3p – Loss Trend Analysis Appendices*.

CF.15.2 Property Damage (Third Party Deductible Transfer) Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4p – Loss Cost Projection Appendices*.

CF.16 Property Damage (Other)

Property Damage (Other) provides third-party liability protection to the insured against a claim for Property Damage arising out of the operation of a vehicle.

CF.16.1 Property Damage (Other) Loss Trending

The figure below compares 2026 GRA (referred to as prior) and 2027 GRA (referred to as current) loss trend selections.

Figure CF-60 Property Damage (Other) Trend Selection Comparison

Line No.	Accident Year		Prior Selections Frequency	Prior Selections Severity	Prior Selections Loss Cost	Current Selections Frequency	Current Selections Severity	Current Selections Loss Cost
1	**Past Trends**	**2012-2020**		3.56%	0.91%		3.57%	3.57%
2		**2021-2023**	-2.56%	16.86%	13.87%	0.00%	13.53%	13.53%
3		**2024**		3.56%	0.91%		3.57%	3.57%
4		**2025**					3.57%	3.57%
5	**Future Trends**	**2026**						
6		**2027**	-2.56%	3.56%	0.91%			
7		**2028**				0.00%	3.57%	3.57%
8		**2029**						
9		**2030**						

MPI selects the past trend from the model with the best fit statistics among the alternatives considered, based on the observed data and the statistical measures. In this GRA, MPI selects future frequency trend to be the same as past frequency trend, as there is no credible evidence to suggest future experience is likely to deviate significantly from the past. The future severity trend is chosen to be the same as the past severity trend with the exception of accident years 2021-2023 which saw a period of higher-than-normal inflation. For frequency, the parameters of mobility and new normal were found to be statistically significant and were included in the final model. These parameters improve the model by isolating the effects of pandemic-era mobility restrictions and the continuing effects of post-pandemic driving patterns, allowing the underlying frequency trends to be estimated more reliably. Because time was not included as a parameter in the regression model, the underlying selected frequency trend is 0.00%. For severity, time and the model parameter were found to be statistically significant and included in the final model. The model parameter was included to isolate the effects of hyperinflation during the accident years 2021-2023 and reliably estimate the underlying severity trend. Based on these statistically significant model results and the absence of credible evidence supporting a different future trend, MPI selects past and future loss cost trends based on selected frequency and severity models.

Observed frequency, observed severity, observed loss cost, fitted model parameters and statistical measures over various experience periods including graphical representation of the selected fitted trends are presented in *Appendix 3q – Loss Trend Analysis Appendices*.

CF.16.2 Property Damage (Other) Loss Cost Projection

The figures below display the ultimate loss costs, earned exposures and ultimate losses for forecasted years. The methodology used to calculate these figures is

provided in *CF.5*. The detailed calculations including the application of selected past and future trends, adjustments made to historical experience and selected experience period and accident year weights are disclosed in *Appendix 4q – Loss Cost Projection Appendices*.

(3) Highway Traffic Act (HTA) Earned Year Units

A comparison to last year's GRA ultimate loss cost and ultimate losses is displayed in the figures below.

Figure CF-63 Total Basic - Ultimate Losses - Comparison to 2026 GRA

Line No.	2026 GRA - Forecast Accident Year	Ultimate Loss Cost	Ultimate Losses	Ultimate Loss Cost $ Difference	Ultimate Loss Cost % Difference	Ultimate Loss $ Difference	Ultimate Loss % Difference
1	**2026**	$1,126.34	$1,129,728,136	$34.04	3.02%	$35,164,356	3.11%
2	**2027**	$1,146.03	$1,169,241,543	$52.85	4.61%	$52,491,633	4.49%
3	**2028**	$1,189.09	$1,234,051,225	$73.60	6.19%	$72,185,288	5.85%
4	**2029**	$1,235.54	$1,304,321,087	$94.89	7.68%	$92,827,997	7.12%

The total estimate of losses for the 2027/28 rating year has increased by $59.3 million over the 2026 GRA estimate. By-coverage changes, both positive and negative, are detailed below:

- $23.2 million increase from Accident Benefits – Weekly Indemnity,
- $5.1 million increase from Accident Benefits – Other (Indexed),
- $0.6 million reduction from Accident Benefits – Other (Non-Indexed),
- $1.9 million increase from Bodily Injury,
- $35.6 million increase from Collision,
- $11.4 million reduction from Comprehensive,

- $1.2 million increase from Property Damage (Third Party Loss of Use),
- $3.5 million increase from Property Damage (Third Party Deductible Transfer),
- $0.8 million increase from Property Damage (Other),

Mobility Data Report

MDR.1 Executive Summary

MDR.1.1 Introduction

In Order No. 156/25 issued December 19, 2025, the Public Utilities Board directed MPI to determine a more evidence-based work from home (WFH) forecasting approach in the 2027 GRA. The purpose of this Mobility Data Report (MDR) is to discuss the various third-party data sources MPI investigated to determine a suitable mobility parameter for the 2027 GRA. Specifically, MPI sought out reliable data aligning with loss trending observations to derive a mobility parameter that is significant in MPI's regression models.

The data sources reviewed by MPI included federal government agencies, market research firms, and data analytics services. The data themselves are metrics related to vehicle activity and mobility, such as vehicle kilometres, fuel sales, traffic counts, and changes in the number of visits to workplaces. The goal is to use metrics that accurately reflect the impact of mobility changes on claim frequency for Collision and other key coverages.

MDR.1.2 Overview of Mobility Metrics

MDR.1.2.1 Vehicle Kilometres Travelled (VKT)

MPI reviewed Vehicle Kilometres Travelled (VKT) data provided by, or derived from, Statistics Canada, Transport Canada, Natural Resources Canada, IBISWorld, and StreetLight. Overall, the VKT data presented quality and credibility concerns, including a lack of recent survey data and limited disclosure of estimation methodologies. In addition, most VKT data is reported on a calendar-year basis,

which does not align well with MPI's accident-year (AY) modeling framework. As a result, MPI did not use VKT data to derive a mobility parameter for the 2027 GRA.

MDR.1.2.2 Traffic Counts

MPI reviewed traffic count data from permanent count stations operated by the City of Winnipeg. MPI is concerned with the accuracy of this data as there are few permanent traffic counters in Winnipeg, and some were missing data for significant periods of time during the December 2019 to 2025 collection period. MPI notes that one of the mobility sources investigated, StreetLight, incorporated these traffic counts as part of its VKT model validation process. MPI did not use Winnipeg traffic counts to derive a mobility parameter for the 2027 GRA because of the limited number of count stations, periods of missing data, and Winnipeg-only scope reduced the reliability and representativeness of the data.

MDR.1.2.3 Fuel Sales

MPI reviewed fuel sales survey data collected by Statistics Canada from provincial and territorial ministries of Finance. While the data offers a complete record of fuel sales in Manitoba, it is not clear to what extent different vehicle types account for fuel usage. Additionally, net fuel sales exclude sales for which road-use taxes are refunded, and interpretation may be further complicated by tax policy changes. Fuel sales also fail to account for zero-emission and hybrid vehicles. MPI did not select fuel sales as the basis for the mobility parameter because these limitations make it difficult to isolate changes in driving activity from changes in fuel efficiency, vehicle mix, fuel type, and tax treatment.

MDR.1.2.4 Google Mobility

MPI reviewed Google's COVID-19 Community Mobility Reports (Google Mobility), which provided Manitoba-specific data on changes in workplace visits from 2020 to

2022. Google Mobility data provides a targeted measure of WFH-related changes in mobility during the pandemic, which aligns with MPI's objective of measuring changes in commuting activity that affect claim frequency. Changes in workplace visits are a reasonable proxy for reductions in traffic volume during commuting hours, which is a key driver of frequency for Collision and related coverages. MPI deemed this method reasonable because it is Manitoba-specific, directly reflects pandemic-era changes in workplace-related travel, and is applied only to the accident years for which the data is available and most relevant. Accordingly, MPI used Google Mobility data as part of its blended mobility approach to derive a mobility parameter for accident years 2020, 2021, and 2022.

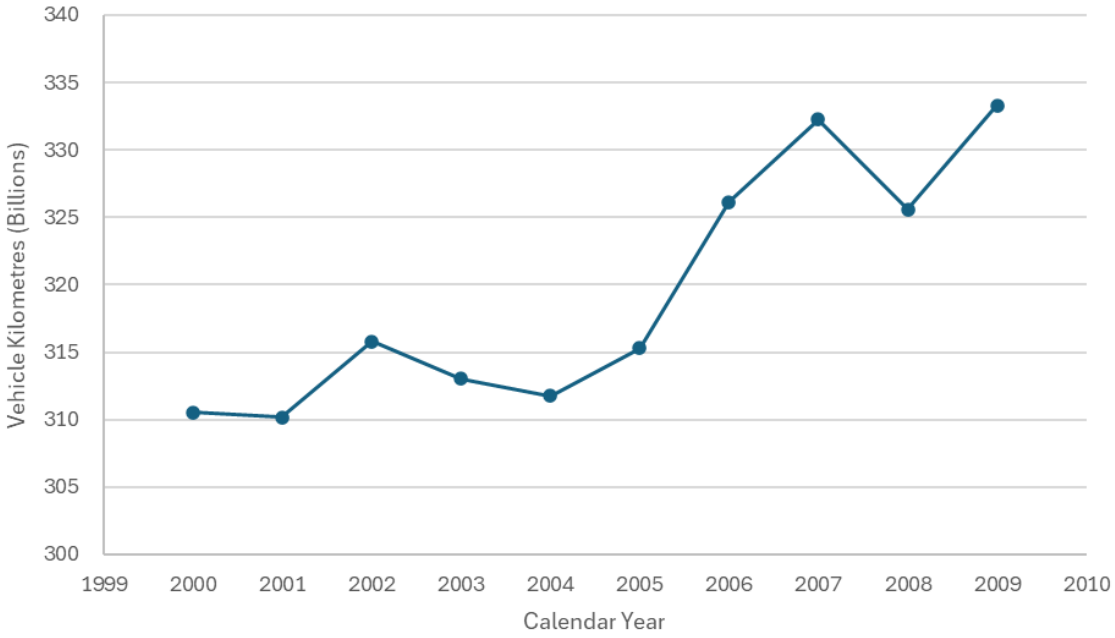
MDR.1.2.5 New Normal

MPI reviewed other data from Statistics Canada concerning transit ridership and commuting levels. These data sources suggest that mobility has not fully returned to pre-pandemic patterns, with the percentage of workers working from home appearing to level off at a new normal level. MPI also reviewed Oliver Wyman loss trending reports prepared for insurance regulators in Alberta and Ontario, which similarly recognize the lasting impact of hybrid and remote work arrangements on commuting and driving behaviour. Accordingly, MPI deemed it reasonable to include a new normal parameter for accident years 2023, 2024, and 2025. The mobility parameter (derived from Google mobility data) and the new normal parameter are used together to model the impact of mobility changes on frequency for collision-related coverages in accident years 2020 through 2025.

MDR.2 Data Sources

This section outlines the data sources that MPI considered in the development of its mobility parameter for the 2027 GRA. High level background information and a discussion of whether MPI used the data in the 2027 GRA is provided for each data source.

MDR.2.1 Statistics Canada – Vehicle Kilometers Travelled



MDR.2.1.1 Data Background

Statistics Canada administered the annual *Canadian Vehicle Survey* (CVS) from 2000 to 2009. The CVS was a voluntary survey conducted on quarterly samples of vehicles taken from provincial and territorial registration lists. The registered owners of the sampled vehicles provided odometer readings, trip logs, and information about the general usage of their vehicles.

Statistics Canada produced estimates of the total VKTs for all road vehicles from the CVS responses, excluding certain vehicle categories such as buses, motorcycles, and construction equipment. While it was active, the CVS was the most comprehensive source of VKT data available in Canada, and its results could subset by vehicle type and province. *Figure MDR-1* shows VKTs for Canada from 2000 to 2009.[1]

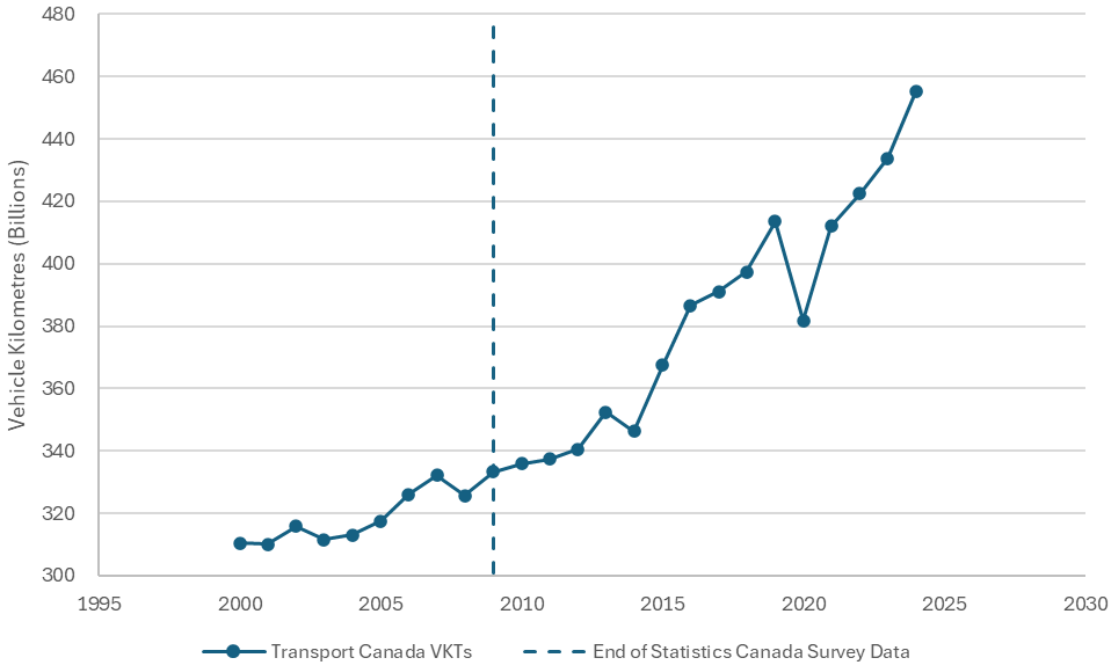
[1] Statistics Canada. Tables 53-223-X, "Canadian Vehicle Survey" (https://www150.statcan.gc.ca/n1/en/catalogue/53-223-X)

Figure MDR-1 Statistics Canada - Total VKT (Canada)

MDR.2.1.2 Use in 2027 GRA

Statistics Canada VKT data was not used to derive a mobility parameter for the 2027 GRA. Since Statistics Canada discontinued the CVS in 2009, its data is insufficient for MPI's mobility analysis. However, the 2009 CVS is the basis for more recent VKT estimates produced by Transport Canada and IBISWorld.

MDR.2.2 Transport Canada – VKT (Canada)



MDR.2.2.1 Data Background

Transport Canada publishes its annual *Transportation in Canada* report to provide the public with insights on transportation trends in Canada. The *Addendum Table S6* accompanying each annual report contains 10 years of VKT data, with the latest

2024 table providing VKT data up to 2023.[2] MPI further obtained the 2024 VKT data point by request. Transport Canada acquires its VKT data from the Statistics Canada CVS for years 2000-2009 and estimates VKTs for years 2010-onward.

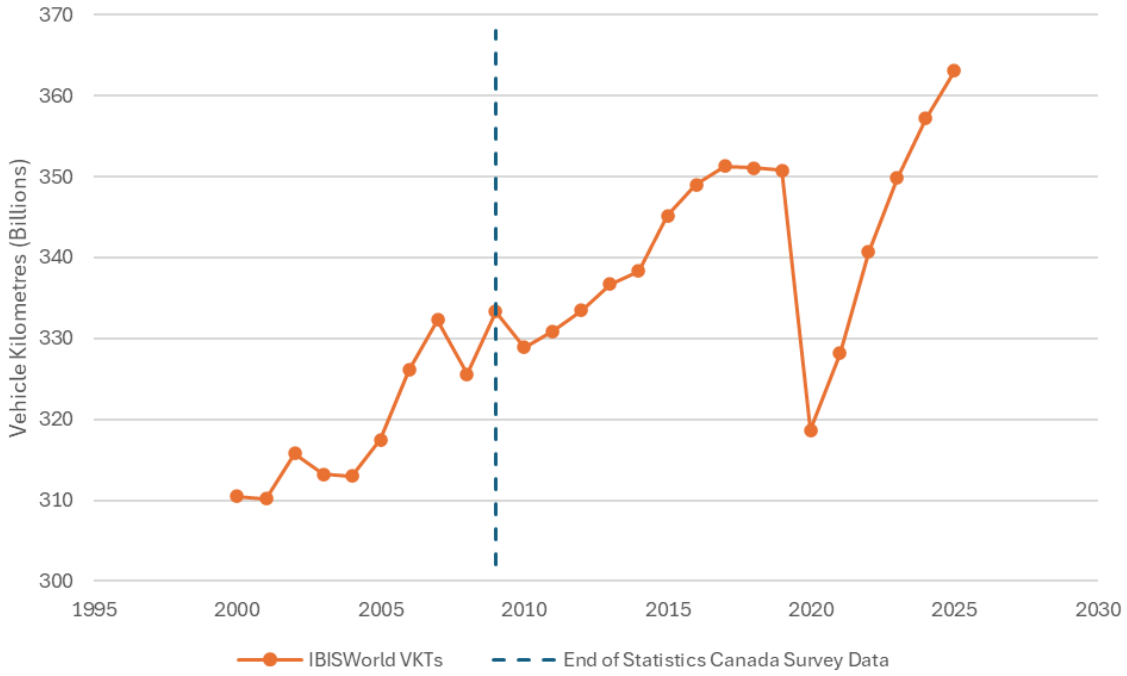
When contacted, Transport Canada disclosed to MPI that it estimates VKTs by using the 2009 CVS data as a foundation and then applying a year-over-year national VKT growth rate. The estimated VKT growth rate is derived from inputs including nominal GDP, fuel sales, and CPI, among others. Transport Canada advised that they cannot provide Manitoba-specific VKT data.

Figure MDR-2 Transport Canada – Total VKT (Canada)

[2] Transport Canada. Transportation in Canada Addendum Tables, Table S6 (https://tdih-cdit.tc.canada.ca/en/addendum-tables)

MDR.2.2.2 Use in 2027 GRA

Transport Canada VKT data was not used to derive a mobility parameter for the 2027 GRA. While the data provides a useful national measure of VKT, it has several limitations for MPI's mobility analysis. The 2024 and 2025 data points are not yet published; the 2024 VKT was obtained only by request to Transport Canada, and the 2025 VKT has not yet been estimated. In addition, the data is not supported by recent VKT surveys, Manitoba-specific estimates are not available, and VKTs are estimated on a calendar-year basis, which does not align with MPI's April-March accident year.



MDR.2.3 IBISWorld – VKT (Canada)

MDR.2.3.1 Data Background

IBISWorld is a market research firm that offers another publicly available estimate of total Canadian VKTs. Like Transport Canada, its VKT data is sourced from the Statistics Canada CVS for years 2000-2009, though IBISWorld's source of VKTs for years 2010-onward is unclear. IBISWorld has published VKT data up to and including 2025.[3]

[3] IBISWorld. Business Environment Profiles – Canada. Total vehicle-kilometres (https://www.ibisworld.com/canada/bed/total-vehicle-kilometres/15045/)

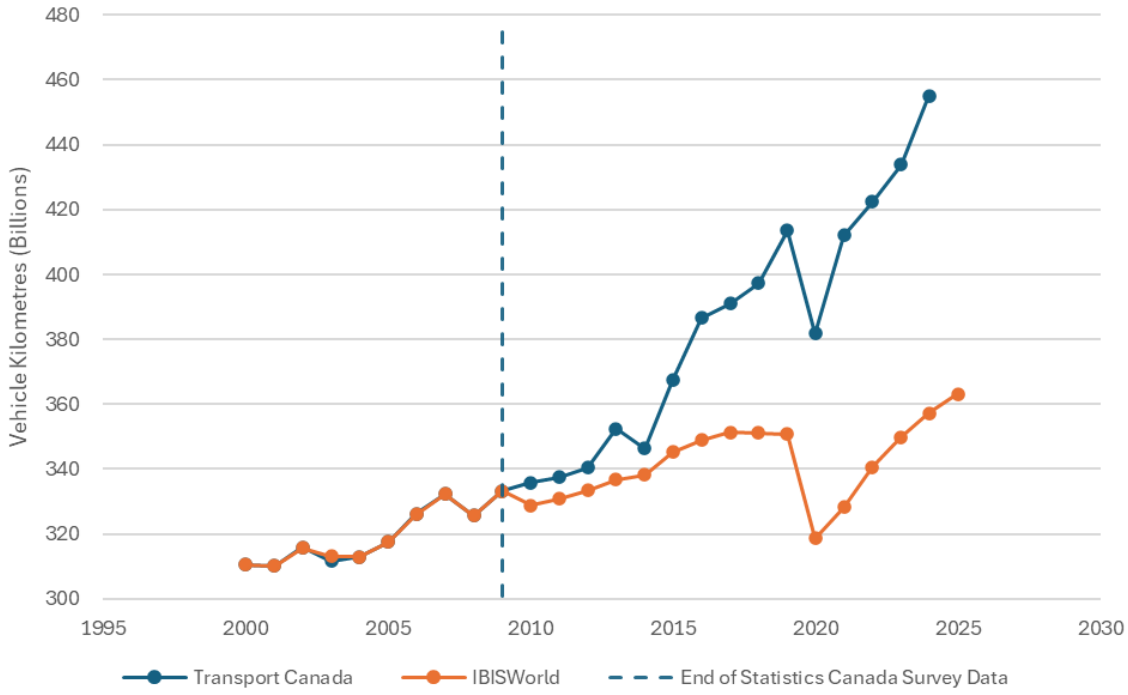


Figure MDR-3 IBISWorld – Total VKT (Canada)

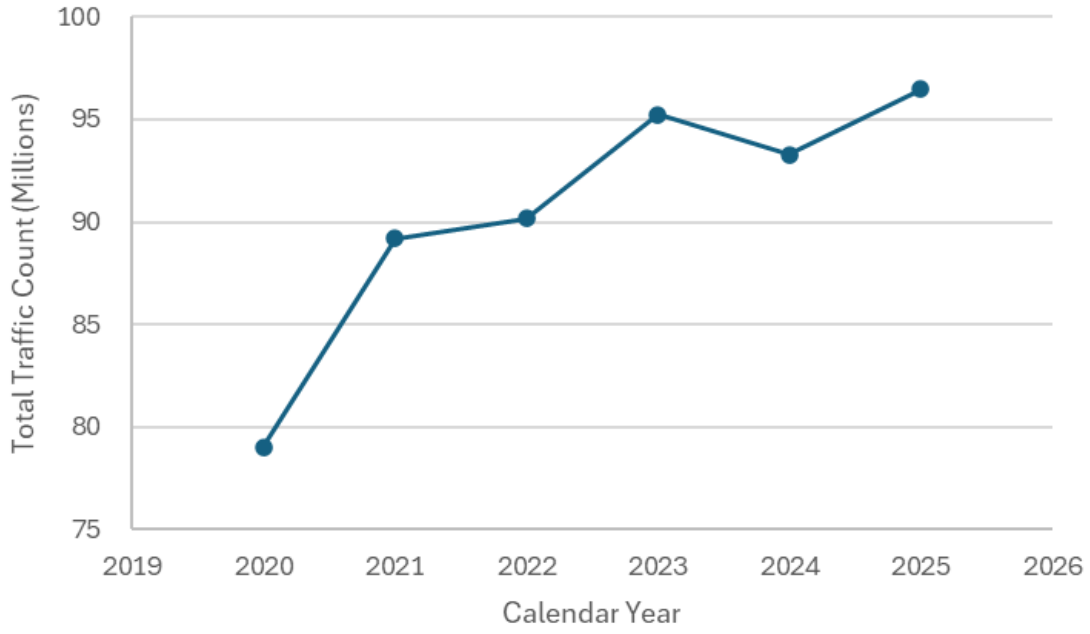
MDR.2.3.2 Use in 2027 GRA

IBISWorld VKT data was not used to derive a mobility parameter for the 2027 GRA. MPI has concerns with the reliability of the data, as the source of VKTs for 2010-onward is not known. The IBISWorld data also diverges significantly from Transport Canada data after the end of the CVS data in 2009, as shown in *Figure MDR-4*. The 2024 Transport Canada VKT is 27% higher than the 2024 IBISWorld VKT, a difference of nearly 100 billion VKT. While IBISWorld data is available through 2025, it was not selected because it resulted in a poor fit to MPI's frequency experience in the regression models.

Figure MDR-4 Transport Canada vs. IBISWorld – Total VKT (Canada)



MDR.2.4 City of Winnipeg - Traffic Counts

MDR.2.4.1 Data Background

The City of Winnipeg has operated permanent traffic count stations since December 2019. Traffic counts are recorded by sensors in 15-minute intervals across eight locations within the city. The resulting dataset is free, open, local, and updated regularly.[4]

[4] (https://data.winnipeg.ca/Transportation-Planning-Traffic-Management/Permanent-Count-Station-Traffic-Counts/46sc-6jrs/about_data)

Figure MDR-5 City of Winnipeg - Traffic Counts

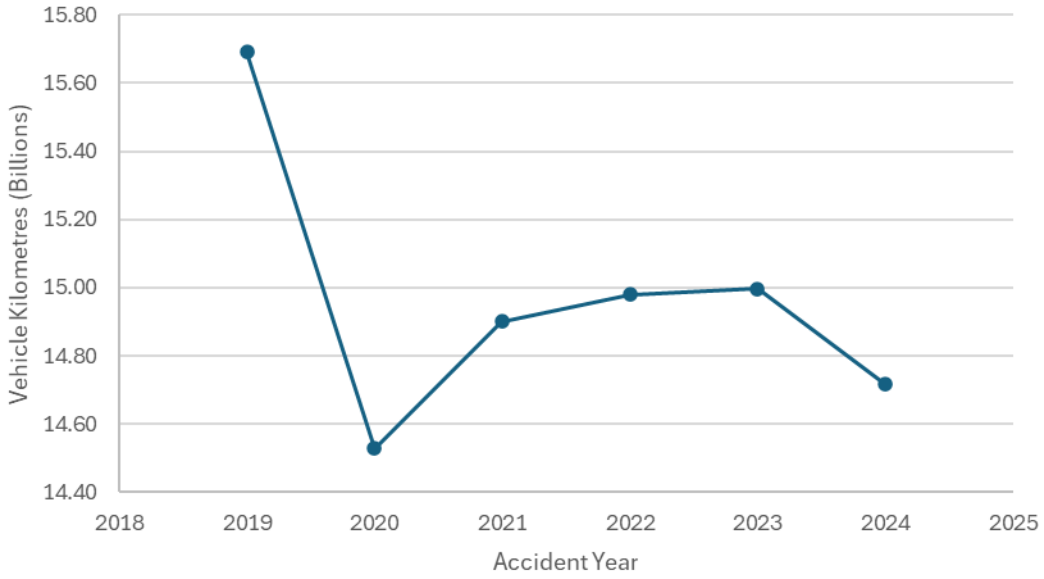
MDR.2.4.2 Use in 2027 GRA

The Winnipeg traffic count data was not used to derive a mobility parameter for the 2027 GRA. MPI questions the reliability of the data due to the small number of count stations, as well as count stations appearing to be offline for a period of time. As shown in *Figure MDR-6*, some trackers were missing data for over one hundred days across all years. Additionally, the restriction of traffic counts to Winnipeg may not reflect traffic volume in Manitoba more broadly.

Figure MDR-6 Winnipeg Count Stations - Total Days of Missing Data (All Years)

Count Station Site	Total Days of Missing Data
Disraeli Bridge	117.97
Henderson And 55M S Of Frasers Grove	184.88
Inkster And 130W Of Wyatt	13.40
Lagimodiere And 80M N Of Burmac	13.61
Marion And 260M E Of Dupuy	84.30
McPhillips And 190m South Of Leila	12.84
Nichol And St.Marys	73.04
Pembina And 280 N Of Adamar	13.95

MDR.2.5 StreetLight – VKT (Manitoba)



MDR.2.5.1 Data Source and Background

StreetLight is a Big Data analytics service specializing in transportation analytics. StreetLight estimates traffic volume metrics by leveraging GPS data sourced from TomTom, a major GPS services provider. StreetLight's methodology involves training its model on data from TomTom to generate traffic volume metrics; these estimates are validated against traffic counts from permanent count stations operated by municipalities and provinces, such as City of Winnipeg permanent count stations.[5]

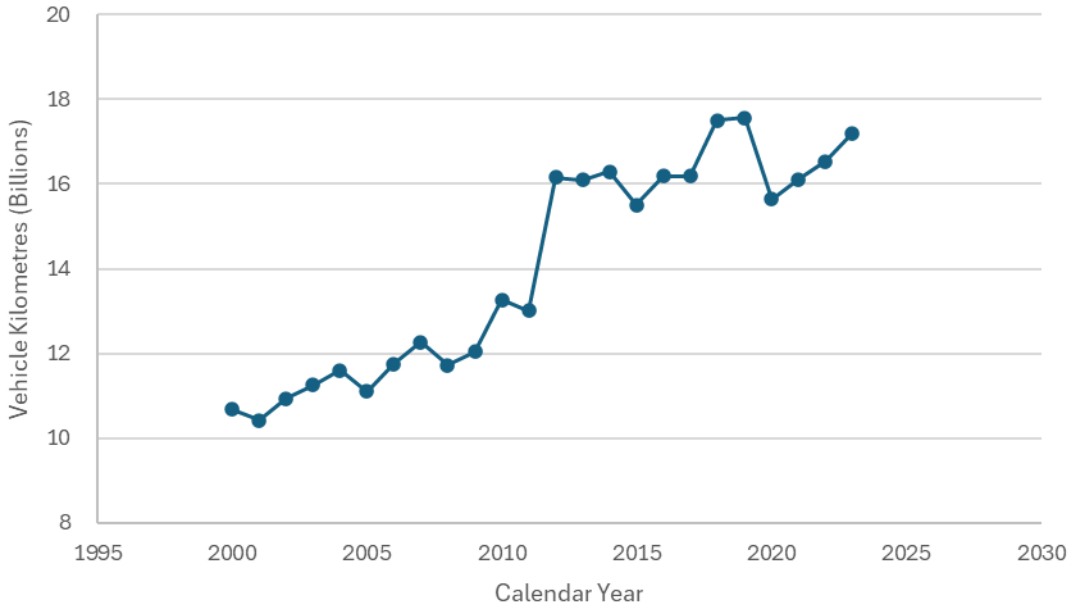
StreetLight provided MPI with Manitoba VKT estimates for accident years 2019-2024, as shown in *Figure MDR-7*. Note that the StreetLight VKT model for Manitoba is only validated against traffic count data from Winnipeg.

[5] StreetLight. Canada All Vehicles Aggregated GPS Volume Methodology and Validation White Paper (https://learn.streetlightdata.com/canada-agps-vehicle-volume)

Figure MDR-7 StreetLight – Total VKT (Manitoba)

MDR.2.5.2 Use in 2027 GRA

StreetLight's VKT data was not used to derive a mobility parameter for the 2027 GRA. In addition to lacking a VKT value for AY 2025, the StreetLight data was not directionally aligned with MPI's 2024 Collision frequency experience. Specifically, after considering the increase in earned exposures between 2020 and 2024, the 2024 StreetLight VKT estimate[6] remains lower than the 2020 estimate, which is inconsistent with MPI's observed increase in Collision claim frequency over the same period. MPI would expect Collision claim frequency to decline as average VKT per vehicle decreases.



[6] VKT per earned exposure (average amount driven per vehicle).

MDR.2.6 Natural Resources Canada – VKT (Manitoba)

MDR.2.6.1 Data Source and Background

Natural Resources Canada (NRCan) maintains the *National Energy Use Database* (NEUD) to provide insights on emissions in various sectors, including transportation. The NEUD draws upon data sources such as Statistics Canada, Environment and Climate Change Canada, and independent market research firms. NEUD summary tables contain Manitoba-specific data on the estimated average distance travelled by different vehicle types per year.[7] MPI calculated the total Manitoba VKTs from these summary table values to assess whether NRCan data would be suitable for the mobility analysis, as shown in *Figure MDR-8.*

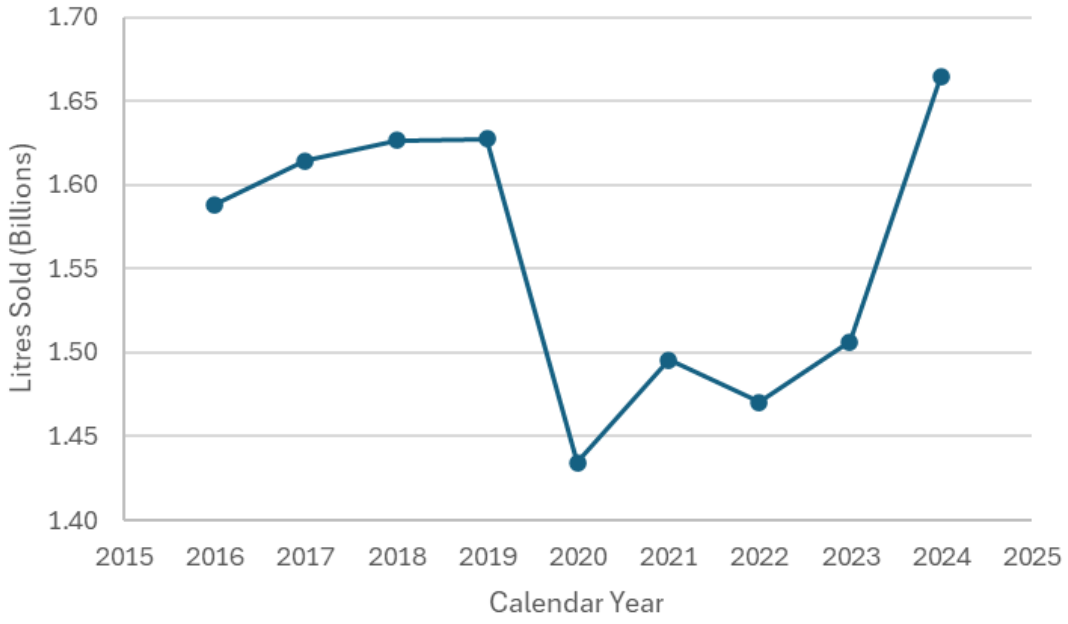
Figure MDR-8 Natural Resources Canada – Total VKT (Manitoba)

[7] Natural Resources Canada. NEUD, CEUD, Transportation Sector. Tables 21, 31, 32, 37 (https://oee.nrcan.gc.ca/corporate/statistics/neud/dpa/menus/trends/comprehensive/trends_tran_mb.cfm)

MDR.2.6.2 Use in 2027 GRA

NRCan data was not used to derive a mobility parameter for the 2027 GRA. While the Manitoba-specific nature of the data is a useful feature, the data was not available for 2024 or 2025. In addition, although NRCan indicates that the data is drawn from the NEUD, the specific source of the tables used by MPI (to generate the figure above) is not explicitly stated. As with other VKT data sources, NRCan data is reported on a calendar-year basis and does not align with MPI's April-March accident year.

MDR.2.7 Statistics Canada - Fuel Sales



MDR.2.7.1 Data Background

Statistics Canada has administered the annual *Gasoline and Other Petroleum Fuels Sold* (GOPFS) survey since 1999. The survey collects data from provincial and territorial ministries of Finance concerning the total annual litres of gasoline, diesel fuels, and liquefied petroleum gas sold for which road taxes were paid. The GOPFS survey is in fact a census; response from ministries of Finance is mandatory and the survey captures all relevant fuel sales.

Statistics Canada presents the survey data in tables, which can be organized by province and by fuel type.[8] *Figure MDR-9* shows Net Sales of Gasoline in Manitoba, representing total sales of all road grades of gasoline, less sales for which road-use taxes were refunded. Note that this includes sales for off-road activities, mining, and construction, and the extent to which different vehicle types are accounted for by total sales - or excluded from net sales due to tax refunds - is unknown.

[8] Statistics Canada. Table 23-10-0066-01, Sales of fuel used for road motor vehicles, annual (x 1,000) (https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=2310006601)

Figure MDR-9 Net Sales of Gasoline (Manitoba)

MDR.2.7.2 Use in 2027 GRA

The GOPFS survey data was not used to derive a mobility parameter for the 2027 GRA. While the survey provides taxable fuel sales data, fuel sales are an imperfect proxy for driving activity. The data does not clearly identify the vehicle types associated with fuel usage, does not account for the increasing adoption of hybrid and zero-emission vehicles, and may be affected by changes in vehicle fuel efficiency over time. Changes in fuel tax policy may also complicate the interpretation of net sales with respect to mobility.

MDR.2.8 Google Mobility

MDR.2.8.1 Data Background

From February 2020 to October 2022, Google produced daily COVID-19 Community Mobility Reports (Google Mobility) to provide the public with insights into changes in movement patterns resulting from the pandemic. These reports

leverage user location data collected by Google to identify visiting trends for various location types, including workplaces.[9]

Google Mobility data records daily percentage changes in visits as compared to the median value during the pre-pandemic baseline period of January 3, 2020, to February 6, 2020, for the corresponding day of the week. These daily mobility measurements were reported from February 2020 to October 2022, spanning AY 2020, AY 2021, and half of AY 2022. MPI used this data to calculate the average daily percentage change in Manitoba workplace visits (from baseline) for each respective accident year, as shown in *Figure MDR-10*.

Figure MDR-10 Average Daily Percentage Change from Baseline in MB Workplace Visits

Line No.	Accident Year	Average Percentage Change From Baseline
1	**2020**	-29.78
2	**2021**	-22.16
3	**2022**	-16.48

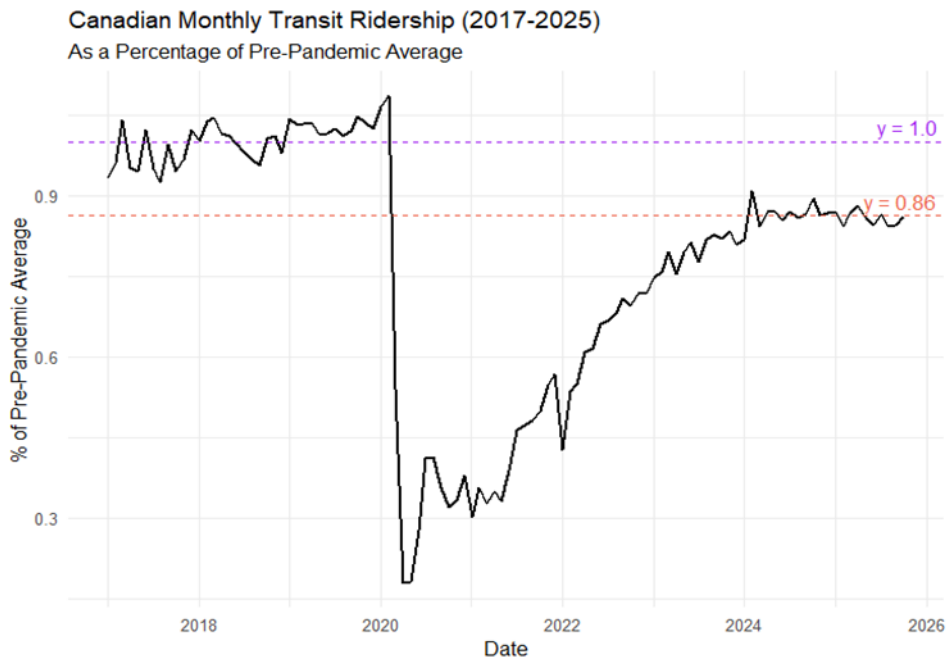
Google Mobility data has several useful qualities. The Google Mobility reports for Manitoba show that user data is collected from cities and municipalities across the province, providing diverse representation of Manitoba. The workplace-specific measurements also allow for a more direct comparison of pandemic-era WFH trends and frequency experience than other metrics, such as VKT or fuel sales. The primary limitations of the Google Mobility data are the brief baseline period and the discontinuation of the daily reports as of October 2022.

[9] https://www.google.com/covid19/mobility/

MDR.2.8.2 Use in 2027 GRA

MPI uses the 2020, 2021, and 2022 accident year-average percentage changes from baseline (as shown in *Figure MDR-10)* as values for the mobility parameter in the 2027 GRA. For all other accident years, the mobility parameter takes a value of 0. The mobility parameter is used in conjunction with a new normal parameter (section *MDR.2.9.4*) for MPI's mobility modeling approach in the 2027 GRA.

MDR.2.9 Other - New Normal



In its review of additional data sources, MPI found indications that mobility may be settling at a new normal level rather than returning to pre-pandemic levels. This section discusses those sources and their implications for MPI's mobility modeling approach in the 2027 GRA.

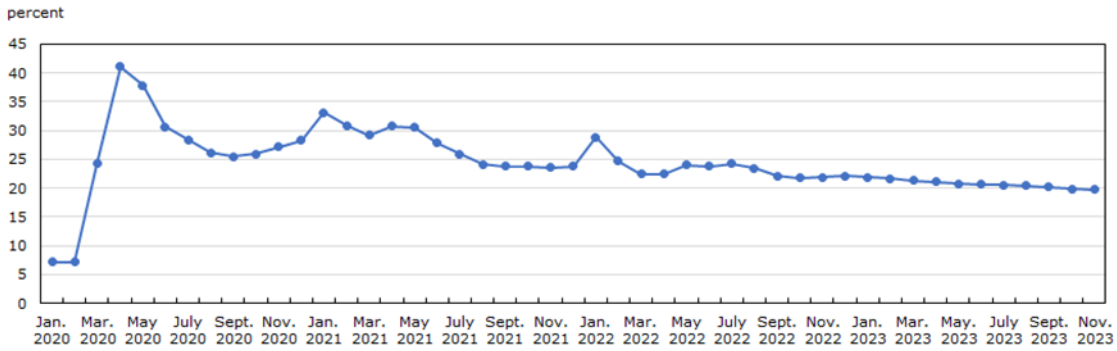
MDR.2.9.1 Statistics Canada – Transit Ridership

Statistics Canada has conducted the *Monthly Passenger Bus and Urban Transit Survey* (MBUS) since 2017. The MBUS collects passenger trip data from transit companies which cumulatively represent the majority of Canadian transit activity. MPI used MBUS data to produce *Figure MDR-11*, which shows that Canadian transit ridership had recovered from a low in 2020 to approximately 86% of its pre-pandemic average in 2024, where ridership levels appear to plateau.[10]

[10] Statistics Canada. Passenger bus and urban transit statistics, by the North American Industry Classification System (NAICS) (https://open.canada.ca/data/en/dataset/76997b31-a655-4fd3-9b14-ed57e9d187e5)

Figure MDR-11 Canadian Monthly Transit Ridership

This data indicates that transit user mobility – which may resemble driver mobility - is settling at a new normal level.



MDR.2.9.2 Statistics Canada – WFH Rates

A 2024 publication from Statistics Canada using *Labour Force Survey* data shows that the percentage of Canadians working from home declined from a peak of 40% in April 2020 to 20% by November 2023 (*Figure MDR-12*), and that the decline in the WFH rate appears to be slowing.[11] A comparison of the November 2023 WFH rate of 20% to the pre-pandemic 2016 WFH rate of 7.1% suggests that commuting rates may be settling at a new normal level.

[11] Statistics Canada. Catalogue 11-631-X2024001, Research to Insights: Working from home in Canada (https://www150.statcan.gc.ca/n1/en/catalogue/11-631-X2024001)

Figure MDR-12 Statistics Canada - WFH Rate

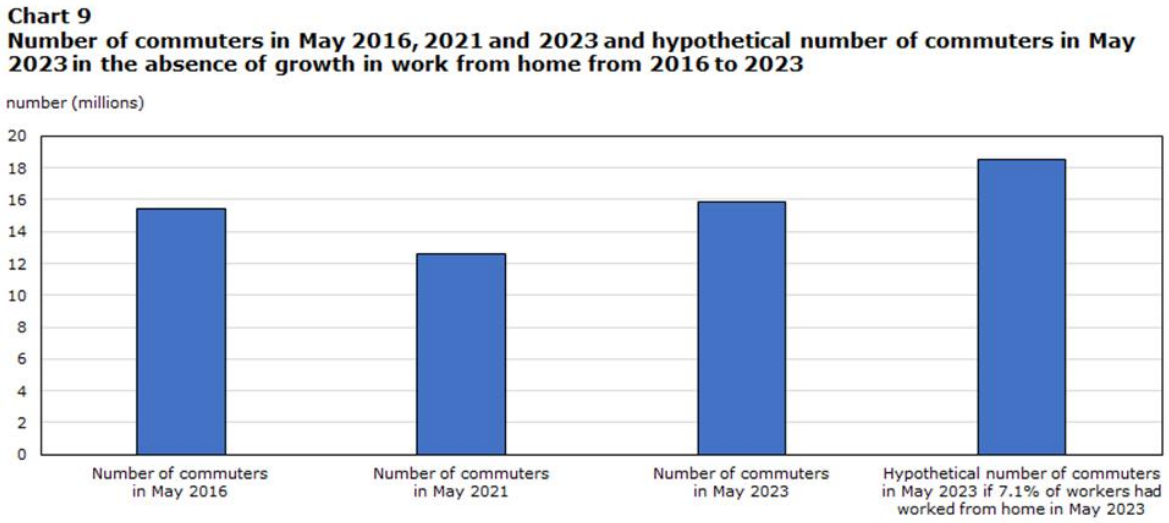


Chart 1
Percentage of workers working most of their hours from home during the Labour Force Survey reference week, January 2020 to November 2023

Notes: Workers aged 15 to 69 who are not full-time members of the Armed Forces and who worked during the reference week. The sample includes employees and self-employed individuals. Numbers for January and February 2020 are based on the 2016 Census of Population and refer to workers usually working most of the time from home. Numbers for March 2020 and those for 2023 (except May, August and November) are interpolations. Numbers for January to April 2022 are modelled estimates based on Morissette, Hardy and Zolkiewski (2022).
Sources: Statistics Canada, 2016 Census of Population and Labour Force Survey.

This publication also compares the number of commuters in May 2023 with the hypothetical number of commuters in May 2023, supposing that only 7.1% worked from home (*Figure MDR-13*), i.e., had the WFR rate remained the same as in 2016. The actual number of May 2023 commuters is only 86% of the hypothetical number, implying a higher WFH rate than in the pre-pandemic period.

Figure MDR-13 Number of Commuters Before, During, and After Pandemic

Sources: Statistics Canada, 2016 and 2021 Census of Population, and May 2023 Labour Force Survey.

MDR.2.9.3 Oliver Wyman – Industry Review

In the Ontario Private Passenger Vehicles Annual Review published July 2025, Oliver Wyman argues that the prevalence of hybrid and remote work arrangements since the end of the pandemic has changed commuting patterns as compared to the pre-pandemic period.[12] Oliver Wyman recommends the use of a new normal parameter to adjust for lasting changes to driving behaviours in the post-pandemic period. Oliver Wyman trends use six-month periods and suggest using the second half of 2022 as the start of the new normal period to align with the end of Google Mobility reports.

MDR.2.9.4 Implications for 2027 GRA

MPI uses a new normal parameter in its regression models for frequencies of collision-related coverages. Commuting and transit ridership data suggests that mobility is settling at a new level rather than returning to pre-pandemic levels. MPI

[12] Oliver Wyman. Draft Ontario Private Passenger Vehicles Annual Review. (https://www.fsrao.ca/media/28401/download)

notes that the World Health Organization's determination of the end of the pandemic in May 2023 approximately aligns with the beginning of MPI's 2023 accident year.[13]

MPI's approach to mobility modeling in the 2027 GRA combines the Google-derived mobility parameter, which accounts for the reduced traffic volume during the pandemic, with the new normal parameter, which adjusts for the post-pandemic period beginning accident year 2023. The mobility parameter takes values as described in section *MDR.2.8.2*, while the new normal parameter takes a value of 1 for accident years 2023 through 2025 and 0 for all other accident years. The mobility and new normal parameters are included in claim frequency regression models when they are found to be jointly statistically significant, as summarized in *Figure MDR-14*.

Figure MDR-14 MPI's Mobility Approach for 2027 GRA

Ratemaking Overview

Manitoba Public Insurance (MPI) developed this General Rate Application (GRA) in accordance with a rate setting framework that reflects the corporate mission, Accepted Actuarial Practice (AAP) in Canada, and directions from the Public Utilities Board (PUB). The application of this framework ensures that the overall rate indication is reasonable and appropriate.

RMO.1 Certificate of the Actuary

I, Cara Low, a Fellow of the Canadian Institute of Actuaries, certify that:

1. I have derived the indicated rate(s) in accordance with AAP in Canada, on behalf of MPI, for the Basic Autopac program (Basic) for rates effective April 1, 2027, for new and renewal business.

2. I have reviewed the data underlying this rate application for reasonableness and consistency, and I believe the data is reliable and sufficient for the determination of the indicated rate changes.

3. The indicated rate change based on a 0% profit provision was calculated to be 2.38% in accordance with AAP in Canada.

The chart below shows the projected 2027/28 average premium based on the calculated rate change of 2.38%. The impact from change in DSR discounts on the merit side of the DSR scale was estimated to be a 3.01% reduction in revenue. Vehicle premiums were increased by 5.56% to offset this revenue reduction; thereby leading to an overall rate change of 2.38%.

Figure RMO- 1 Projected 2027/28 Average Premium

Line No.	Major Class	Indicated Average Premium	Projected Average Premium w/ no Rate Change	Indicated Rate Change	Balanced Indicated Rate Change	Bal. Indicated Average Premium	Impact From DSR Changes	Offset to Vehicle Premium for DSR Impact	Average Premium after DSR Offset but before Application of DSR	Average Premium after DSR Offset and after Application of DSR
1		[a]	[b]	[c]	[d]	[e]	[f]	[g]	[h]	[i]
2	**Private Passenger**	$1,480	$1,446	2.37%	2.38%	$1,480	-3.25%	5.83%	$1,530	$1,480

13 [h] = [b] * (1 + [g])
14 [i] = [h] * (1 + [f])

Signature of Actuary Date Location

RMO.2 Corporate Mission

The following corporate mission identifies the framework within which MPI establishes Basic rates:

- Exceptional coverage and service, affordable rates and safer roads through efficient public auto insurance.

From a rate-setting perspective, this mission is supported by maintaining stable overall rates, using methodologies ground in actuarial principles, following accepted industry practice for risk classification, and applying these principles consistently.

The MPI rating approach is based on actuarial principles that:

- tie rates directly to expected costs;
- minimize cross-subsidization between customers;
- provide for rates that are responsive to changes in claim patterns;
- ensure all expected costs are fully reflected; and
- achieve a 'break-even' mandate on policies issued.

RMO.3 Rate Indication Approach

The goal of ratemaking is to set rates so that the collected premium along with investment income and other revenues cover all forecasted claims and expenses for the rating year. This is captured in the Canadian Institute of Actuaries (CIA) Standard of Practice (SOP) 2620.01, which states:

> *"The best estimate present value of cash flows relating to the revenue at the indicated rate should equal the best estimate present value of cash flows relating to the corresponding claim costs and expense costs, plus the present value of a provision for profit, over a specified period."*

In accordance with AAP in Canada, MPI applies the *loss cost* (or *pure premium*) methodology to determine the rate change required to achieve a break-even result for the rating year. Under this methodology, the required average premium is compared with the expected average premium in the absence of a rate change to derive the indicated rate change.

MPI derives an overall rate indication to determine the rate adequacy for the entire Basic line of business. The rate indication is then allocated to each of the six major classes: private passenger vehicles, commercial, public, motorcycles, trailers, and off-road vehicles.

The details of the overall rate indication as well as the rate indications by major class can be found in *Part VII Rate Indication Chapter*.

RMO.4 Risk Classification

The goal of ratemaking is not only to ensure that the collected premium is sufficient to cover all forecasted claims and expenses on an aggregate basis, but also at a risk classification level. This ensures the minimization of cross subsidization. MPI currently uses four risk classification groupings:

1. location;
2. use of the vehicle (within major class);
3. type of vehicle; and
4. driving record.

Balancing this simplicity is the need to ensure equity of rates paid. By utilizing different dimensions unique to the risk arising from location, use of the vehicle, type of vehicle and driving record, MPI ensures that different risks pay different rates, and that similar risks pay similar rates.

For the 2027/28 rate setting process, MPI has implemented Generalized Linear Models (GLMs) to enhance its risk classification framework. This approach is intended to support a more robust and data-informed assessment of rating relationships.

Detailed information on risk classification and GLMs can be found in *Part VII Risk Classification Chapter*.

RMO.5 Rate Modeling and Dislocation

MPI currently uses an in-house built Rate Model which analyzes the impact on the vehicle population resulting from rate and classification changes.

A description of the Rate Modeling including individual impact analysis is detailed in the *Part VII Dislocation Chapter*.

RMO.6 Application Rate Tables

The proposed Rate Tables can be found in *Part VII Application Rate Tables Chapter*.

RI.1 Overview of Methodology

This section provides an overview of the methodology used to determine the indicated rate change for the Basic program for the 2027/28 rating year[1]. MPI uses a loss cost methodology to determine the indicated rate change needed to break even for the rating year. Loss cost is the expected claims cost per unit insured. The methodology is completed in accordance with Accepted Actuarial Practice (AAP) in Canada.

The loss cost, loaded for expenses and reduced by other revenues, is adjusted downward for the time value of money to determine the average premium required. This approach is independent of the current premium structure. The required average premium is compared to a projected average premium without a rate change to determine the indicated rate change.

MPI derives an overall rate indication to determine the rate adequacy for the entire Basic line of business. The rate indication is then allocated to each of the six major classes: private passenger vehicles, commercial, public, motorcycles, trailers, and off-road vehicles.

Since the 2026 General Rate Application (GRA), MPI has made two changes to its ratemaking methodology: the implementation of Generalized Linear Models (GLMs) for risk classification, as well as the inclusion of initiative expenses in operating expenses. However, implementation of GLMs does not impact the rate indication on an overall or major class basis.

[1] Rating year is also referred to as policy year. The rates charged when policies are issued or renewed are dependent on the rating year for the policyholder at the time of issuance or renewal. The rates charged for rating year 2027/28 are referred to as 2027/28 rates.

In addition, MPI is proposing to expand its CLEAR rate groups from +45 to +50, with a +2-cap applied to existing policies. The impact of this expansion is difficult to determine, as it depends on the volume and mix of future new vehicle purchases and the extent to which those vehicles are assigned to the newly created rate groups. As a result, no impact has been included in the overall rate indication.

For details on the methodology, each relevant section of the GRA describes the approach in full.

RI.2 Required Average Premium

The required average premium is the amount that MPI must collect per vehicle to cover all expected associated costs. Contributors to the overall expected costs are divided into the following categories:

1. **Claims Costs** - all costs associated with settling claims on an individual claim basis including Allocated Loss Adjustment Expense (ALAE).

2. **Claims Expenses** – all expenses associated with settling claims on a general overall basis. These are Unallocated Loss Adjustment Expenses (ULAE). These expenses are split between fixed/non-proportional and variable/proportional expenses.

3. **Operating Expenses** – all non-claims related expenses which are split between fixed and variable. These expenses include:

    - Fixed: Operating Expense, Commission Flat Fee, Reinsurance, Anti-Theft Discount.
    - Variable: Commission and Premium Tax.

4. **Net Fleet Rebate** – this is the experience based premium adjustment (surcharge or rebate) applied to fleet policies.

5. **Offsets** - other income sources serve to reduce the overall expected costs, including:

    - Driver premiums;
    - Service fees; and
    - Other revenues.

Please note that, due to International Financial Reporting Standard (IFRS) 17, Road Safety/Loss Prevention and Regulatory/Appeal, previously split prior to the 2025 GRA, are now grouped within the IFRS 17 expense categories: Maintenance, Acquisition and Operating. Road Safety/Loss Prevention expenses are primarily categorized within the Operating Expense category, whereas Regulatory/Appeal expenses are split between Maintenance and Acquisition expenses.

RI.2.1 Claims Costs

MPI bases the claims costs used for ratemaking on the results of its claims forecasting process. In the 2026 GRA, the Basic deductible increased from $750 to $1,000, effective April 1, 2026. *Part VI Claims Forecasting Chapter* provides a detailed description of the underlying methodology, the adjustments made to account for the product change, and the results obtained from this process. ALAE claim specific expenses, such as legal fees, are included in the claims forecast.

Rating Year Claims Costs

MPI uses the ultimate claims incurred, on an accident year basis, to project the expected claims costs. Accident year claims are based on the year of loss, irrespective of the year of settlement of the claim or the rating year of the underlying policy. Since

the rates determined are applicable through the rating year, the accident year claims need to be transformed into rating year claims.

A 12-month rating cycle spans a 24-month coverage period, such that losses from a single rating year may fall across two accident years. Thus, rating year 2027/28 claim costs are derived from accident year 2027/28 and accident year 2028/29 costs.

A detailed description of the methodology used to convert the claims costs from an accident year basis to a rating year basis, including the derivation by coverage of the rating year 2027/28 claims costs, is presented in *RI Appendix 1 Table 2 – Rating Year 2027/28 Claims Costs*.

Discounting Claims Costs

In line with the AAP in Canada, MPI discounts the 2027/28 rating year claims costs using an appropriate investment return to reflect the time value of money.

MPI discounted the ultimate claim payments from the midpoint of each settlement quarter of the claims to the end of rating year 2027/28 (i.e., March 31, 2028) using a single naïve investment yield referred to as the new money yield (NMY).

The NMY is the weighted average yield of all asset classes held in the portfolio backing the claims liabilities, which is consistent with Public Utilities Board (PUB) Order 2/25. The NMY of 4.64% (gross of investment expenses) reflects the best estimate of the projected yield on newly invested assets as at the time when the average policy is written during the rating year 2027/28 (i.e., October 1, 2027). The NMY is the weighted average yield of all asset classes in the Basic Claims portfolio.

The NMY is reduced by 0.16% for investment expenses, resulting in a final discount rate of 4.48%.

Figure RI-1 New Money Yield Calculation

Line No.	Asset Class	Benchmark	Target	Weights	Benchmar	Duration
1	Asset Class	Benchmark	Target	Weights	Benchmar	Duration
2	Provincial Bonds	20% FTSE Mid-Term Provincial Bond Index / 80% FTSE Long-Term Provincial Bond Inde	35%	35.00%	4.49%	11.93

7	Commercial Mortgages	TDAM Commercial Mortgages Yield (March 2026)	5%	5.00%	5.02%	2.3
8	**Total**		**100%**	**100%**	4.64%	**8.55**
9	Investment Management Fees				0.16%	
10	Yield After Fees				4.48%	

RI Appendix 1 Table 2 – Rating Year 2027/28 Claims Costs presents the calculation of the discounted claims costs by coverage for rating year 2027/28.

Forecasted Earned Units

MPI used earned units as its measure of exposure. MPI projects earned units by rating year for the purpose of determining loss cost.

MPI projects exposure based on historical earned units by Major Class. This projection is first done on a fiscal year basis. To transform the fiscal year earned units to a rating year, MPI assumes uniform distribution of issuance of policies. Fiscal year earned units were adjusted to rating year earned units by taking the simple average of earnings from the two fiscal years.

Please refer to *Part VIII Revenues REV.2.1 – Volume Factor* on the forecasting methodology and historical results.

Total Loss Cost

RI Appendix 1 Table 1 – Rating Year 2027/28 Claims Costs Summary of All Coverages provides a summary of the claims costs for the 2027/28 rating year. The total loss cost is the total discounted claims costs including Allocated Loss Adjustment Expenses

(ALAE) for all coverages, divided by the corresponding total number of insured units. The table below summarizes the total discounted claims costs for the 2027/28 rating year (per *RI Appendix 1 Table 1 – Rating Year 2027/28 Claims Costs Summary of All Coverages*).

Figure RI-2 Rating Year 2027/28 Discounted Claims Costs

Line No.	Coverage	Discounted Claims Costs
1	***($000)***	
2	**Bodily Injury**	9,148
3	**Property Damage**	75,343
4	**Income Replacement Indemnity**	100,971
6	**Accident Benefits – Other (Indexed)**	69,470
8	**Accident Benefits – Other (Non-Indexed)**	39,206
10	**Collision**	721,989
11	**Comprehensive**	174,263
14	**Total Incurred Claims**	1,190,391

Based on the forecasted total number of insured units for the 2027/28 rating year of 1,385,741:

2027/28 Rating Year Total Loss Cost

= $1,190,390,950 / 1,385,741= $859.03 per unit

RI.2.2 Claims Expenses

Claims Expenses refers to Unallocated Loss Adjustment Expense (ULAE), which are the costs associated with the assessment and settlement of the claims that are not directly attributable to individual claims. There are two ULAE amounts that are included in determining the required average premium; non-proportional ULAE and proportional ULAE.

Non-proportional ULAE consists of fixed claims expenses which include costs incurred such as the Manitoba Health Levy and towing contract fees. The discounted

fixed claims expense for 2027/28 rating year is $45,396,627. This corresponds to an average per unit cost of $32.76, based on the forecasted total number of insured units for the 2027/28 rating year. Please refer to *RI Appendix 1 Table 4 - Rating Year 2027/28 Other Expenses and Income* for the derivation of the discounted fixed claims expense.

Proportional ULAE is proportional to the dollar amount of claims paid. Examples of proportional ULAE include salaries of the claims department, costs associated with the payments, and any other overhead costs that are solely related to claims settlement.

To determine the ULAE ratio, MPI calculated the forecasted paid-to-paid ULAE ratios for 2027 through 2030. MPI then applied the calculated paid-to-paid ULAE ratio in each of the four years to the proportion of claims for the 2027 rating year that would be paid in 2027, 2028, 2029 and 2030 to determine the implied ULAE ratio. Based on the implied ULAE ratio, MPI selected a ratio of 13.50%. Please refer to *RI Appendix 1 Table 3 – Rating Year 2027/28 Claims Expenses* for the derivation of the ULAE ratio and claims expense.

The discounted variable claims expense for the 2027/28 rating year is $160,702,778. This corresponds to an average per unit cost of $115.97, based on the forecasted total number of insured units for the 2027/28 rating year.

RI.2.3 Operating Expenses

In addition to the settlement of claims, the total premiums collected must also be sufficient to cover operating expenses, which are expenses that are non-claim related. These include both fixed and variable expenses. The following subsections discuss these costs on an undiscounted basis, reference the sources for the figures as appropriate, and provide a basis for which these costs are assumed to be incurred.

RI Appendix 1 Table 4 – Rating Year 2027/28 Other Expenses and Income summarizes the derivation of all operating expenses on a discounted basis for rating year 2027/28.

Fixed Expense: Operating Expenses

The fixed operating expenses for the 2027/28 rating year are $110,760,771, which corresponds to the average of the operating expenses for fiscal years 2027/28 and 2028/29 (see *Part VIII Financial Forecasting Model Chapter)*.

MPI allocated this cost as follows:

- **Front-end cost** – Two-thirds of the operating expenses (i.e., 2/3 * $110,760,771) were considered as front-end cost, i.e., the initial cost of writing/issuing the insurance policy. This cost was allocated uniformly over development year 2027/28 based on the assumption that policies are written uniformly throughout the year; and

- **Maintenance and servicing of policy** – The remaining one-third of the operating expenses (i.e., 1/3 * $110,760,771) was considered as the cost to maintain and service the insurance policy. This cost was allocated based on the portion of premium earned in the development quarter (for policies with rating year 2027/28) per the figure below:

Figure RI-3 Allocation by Development Quarter

Line No.	Development Year	Q1	Q2	Q3	Q4
1	**2027/28**	1/32	3/32	5/32	7/32
2	**2028/29**	7/32	5/32	3/32	1/32

As noted, in the 2027 GRA, MPI includes an estimate for initiative expenses within Operating Expenses. Accordingly, Operating Expenses comprise acquisition costs and

initiative expenses. Refer to *Part VIII EXP Appendices 5 and 17* for further details on Operating Expenses and Deferred Development costs.

Fixed Expense: Commission Flat Fee

Select transactions have fixed amounts paid to brokers per transaction. The commission flat fees for the 2027/28 rating year are $8,286,805, which corresponds to the commission flat fees for the 2027/28 fiscal year (*Part VIII Financial Forecasting Model Chapter*). MPI allocated this cost uniformly over the development year 2027/28.

Fixed Expense: Reinsurance

MPI has a Catastrophe Reinsurance Treaty (physical damage claims) with an upper coverage limit of $400 million, an annual aggregate deductible of $50 million, and a per-occurrence deductible of $3 million. MPI projected the reinsurance premium for the loss years 2027/28 and 2028/29, which is outlined in *Part VIII Financial Forecasting Model Chapter*.

MPI also has a Casualty Reinsurance Treaty (injury claims) that attaches at $20 million, with an upper limit of $50 million on any one occurrence. The same method, as described above for the Catastrophe Reinsurance Treaty, was applied to determine the reinsurance premium cost to include in the rate indication for rating year 2027/28.

The implicit assumption underlying the above projected costs are:

- MPI renews the treaties with the same reinsurance structure (such as retention and limits) as its current program;
- There are no reinstatements.

Further details on reinsurance can be found in *Part VIII Financial Forecasting Model Chapter*.

The projected costs of reinsurance for the 2027/28 rating year are $1,100,000 and $19,627,000 for casualty reinsurance and catastrophe reinsurance, respectively. These figures correspond to the average of the expected reinsurance ceded written premiums for fiscal years 2027/28 and 2028/29.

Fixed Expense: Anti-Theft Discount

The anti-theft discounts for the 2027/28 rating year are $456,927, which corresponds to the anti-theft discounts for the 2027/28 fiscal year (See *Part VIII Financial Forecasting Model Chapter*). MPI allocated this cost uniformly over development year 2027/28.

Variable Expense: Premium Tax

Premium taxes are paid at a rate of 3.0% of written premiums (both motor vehicle and driver premiums).

Variable Expense: Commission

Commissions paid to brokers as a variable amount are paid as a percentage of written premiums (for both motor vehicles and drivers).

For the 2027/28 rating year, the variable in-person stated commission rate is 3.49% (3.75% effective rate) of written vehicle premiums. The effective rate is used as MPI does not claw back these commissions if customers cancel their policies mid-year. Overall, MPI applied a variable commission rate of 3.75% of written vehicle premiums.

For commissions on written driver premiums, MPI applies a commission rate of 2.48%, these commissions are not paid for certain transactions (e.g., when MPI Service Centres issue a new driver's license).

RI.2.4 Fleet Rebate

Any corporate or individual customer who registers 10 or more vehicles and meets the required minimum number of insured days are considered fleet customers. Under the current fleet program, MPI makes a retrospective premium adjustment to every fleet, based on their own loss ratios. MPI treats the rebates/surcharge as an operational expense of the Basic line of business and adds this as a cost to the overall rate indication. The details regarding the rebate/surcharge scale can be found in *Part VII Risk Classification Chapter.*

The fleet rebate for the 2027/28 rating year is $30,416,385, which corresponds to the fleet rebate for the 2028/29 fiscal year. MPI allocated this cost uniformly over development year 2028/29. For more information on the forecasted Fleet Rebate, please refer to *Part VIII Revenues 2.3 Net Fleet Rebates.*

Discounting Non-Claims Costs

Like the discounting of claims costs, MPI discounted non-claims costs from the midpoint of the development quarter/year to the end of rating year 2027/28 (i.e., March 31, 2028). The table below summarizes the undiscounted and discounted non-claims costs for the 2027/28 rating year (per *RI Appendix 1 Table 4 – Rating Year 2027/28 Other Expenses and Income*), as well as the discounted costs per unit based on the forecasted total number of insured units of 1,385,741.

Figure RI-4 Rating Year 2027/28 Non-Claims Costs

Line No.	Description	Undiscounted Costs ($000)	Discounted Costs	Disc Costs/ Insured Unit
1	**Commission Flat Fees**	8,287	8,471	6.11
2	**Operating Expenses**	110,760	112,407	81.12
3	**Fleet Rebate**	30,416	29,759	21.48
4	**Anti-Theft Discount**	457	467	0.34
5	**Reinsurance – Casualty**	1,100	1,100	0.79
6	**Reinsurance - Catastrophe**	19,627	19,633	14.17

RI.2.5 Costs Offsets – Other Income Sources

Apart from vehicle premiums, MPI receives income from two other sources[2]. This income offsets some of the costs incurred, thus lowering the required rate. The following subsections discuss these income sources on an undiscounted basis, reference the sources for the figures as appropriate, and provide a basis for which these costs are assumed to be incurred. *RI Appendix 1 Table 4 – Rating Year 2027/28 Other Expenses and Income* summarizes the derivation of these income sources on a discounted basis for rating year 2027/28.

Driver Premium

The driver premiums for the 2027/28 rating year are projected to be $73,217,564, which corresponds to the written driver premium for fiscal year 2027/28 (See *Part VIII Financial Forecasting Model and Revenue Chapter*). MPI allocated this cost uniformly over development year 2027/28.

Service Fees and Other Revenues

The service fees and other revenues for the 2027/28 rating year are $38,226,571, which corresponds to the average of the service fees and other revenues for fiscal years 2027/28 and 2028/29 (See *Part VIII Financial Forecasting Model and Revenue Chapter*).

[2] Investment income earned on the RSR is not considered a cost offset for determining the breakeven required rates. The investment income earned on the RSR is added back to RSR capital.

MPI allocated this income based on the portion of premium earned in the development quarter (for policies with rating year 2027/28) per the figure below:

Figure RI-5 Allocation by Development Quarter

Line No.	Development Year	Q1	Q2	Q3	Q4
1	**2027/28**	1/32	3/32	5/32	7/32
2	**2028/29**	7/32	5/32	3/32	1/32

Discounting Other Income Sources

Similar to the discounting of claims costs, MPI discounted other income sources from the midpoint of the development quarter/year to the end of rating year 2027/28 (i.e., March 31, 2028). The figure below summarizes the undiscounted and discounted other income sources for the 2027/28 rating year (per *RI Appendix 1 Table 4 – Rating Year 2027/28 Other Expenses and Income*), as well as the discounted costs per unit based on the forecasted total number of insured units of 1,385,741.

In addition, MPI pays Commissions and Tax for the Driver Premiums. The commissions and premium tax rates for driver premiums are 2.48% and 3.00%, respectively. For rating year 2027/28, this is a revenue reduction of $4,008,691.

Figure RI-6 Rating Year 2027/28 Other Income Sources

Line No.	Description	Undiscounted Costs ($000)	Discounted Costs	Disc Costs/ Insured Unit
1	**Driver Premium**	73,218	74,845	54.01
2	**Service Fees and Other Revenues**	38,227	38,233	27.59
3	**Comm & Prem Tax (Drivers)**	-4,009	-4,098	-2.96

RI.2.6 Calculation of Average Required Premium

MPI calculated the overall required premium per unit for the 2027/28 rating year by equating for the Premium, “P”:

P = Claims Costs + Claims Expenses + Fixed Expenses + Variable Expenses – Additional Revenue

Where, Variable Expenses = (Commission Rate + Premium Tax) * P

Solving for "P", it results in the following:

$$P = \frac{Claims\ Costs + Claims\ Expenses + Fixed\ Expenses - Additional\ Revenue}{1 - Commision\ Rate - Premium\ Tax}$$

Note that, in comparison to the 2026 GRA, additional revenue is now subtracted from claims costs prior to the application of variable expenses; this is to recognize the reduction in commission and premium tax expenses associated with the reduction in required premium collected. *Figure RI 7* below shows the derivation of the required premium net of additional revenue for the 2027/28 rating year.

Figure RI-7 Calculation of Average Required Premium for Rating Year 2027/28

Line No.	Description	Calculation	Overall
1	**Claims Cost per Unit**	(a)	859.03
2	**Fixed Claims Expense (Non Proportional)**	(b)	32.76
3	**Variable Claims Expense (Proportional)**	(c) = (a) x 13.5%	115.97
4	**Fixed Operating Expense**	(d)	102.53
5	**Fleet Rebate**	(e)	21.48
6	**Additional Revenue**	(f)	(78.64)
7	**Total Before Variable Expenses**	(g) = Σ(a,f)	1,053.12
8	**Vehicle Commission**	(h)	3.75%
9	**Vehicle Premium Tax**	(i)	3.00%
10	**Required Premium per Unit**	(j) = (g)/(1-Σ(h,i))	1,129.35

Fixed operating expenses include:

- Operating expenses
- Commission flat fees

- Reinsurance costs (casualty and catastrophe)
- Anti-theft discount

MPI requires an overall rate of $1,129.35 if premiums for the 2027/28 rating year are all received on March 31, 2028 (i.e., end of rating year 2027/28). However, MPI receives premiums for the 2027/28 rating year from April 1, 2027 to March 31, 2028.

Like the discounting of costs, the revenue stream resulting from vehicle premiums must recognize the time value of money. MPI discounts vehicle premiums received from when they are received to the end of rating year 2027/28 (i.e., March 31, 2028).

MPI has determined that the overall required premium, based on discounted net cash flows, is $1,129.35 as at March 31, 2028. MPI assumes that premiums will be received uniformly throughout the 2027/28 fiscal year as policies are renewed and new policies are issued. Based on this assumption, cash flows are discounted to the midpoint of the rating year using the New Money Yield. This results in a discount factor of 0.9783 to reflect investment income expected to be earned on premiums received during the year. As a result, the overall required rate to be charged is $1,104.79.

The factor of 0.9783 is derived as follows assuming that MPI will receive premiums uniformly over the 2027/28 fiscal year.

Figure RI-8 Derivation of Adjustment Factor

Line No.	2027/28 Fiscal Quarter	Weight	Factor
1	**1**	25%	1.0391 = 1.0448 ^ 10.5/12
2	**2**	25%	1.0278 = 1.0448 ^ 7.5/12
3	**3**	25%	1.0166 = 1.0448 ^ 4.5/12
4	**4**	25%	1.0055 = 1.0448 ^ 1.5/12
5		Weighted Factor:	1.0222
6		Reciprocal of Weighted Factor:	0.9783 = 1 / 1.0222

RI.3 Projected Average Premium

Even without any rate change, MPI expects the 2026/27 average premium to change as the composition of vehicle population changes over time. Newer and more expensive vehicles entering the fleet are subject, on average, to higher rate groups, thus increasing the overall average rate. Conversely, older vehicles placed in lower rate groups will result in a decrease in the overall average rate. In addition, drivers move within the DSR scale over time. This movement results in a natural drift in the premiums, as the DSR discounts vary between the DSR levels. MPI estimates this DSR drift based on the historical transition of drivers through the DSR scale. The total impact of these changes is the premium trend.

The estimated overall premium trend for rating year 2025/26 was 3.06% as determined per the rate model. For rating years 2026/27 and 2027/28, the projected annual overall vehicle drift is estimated to be 3.07%. MPI selected a higher trend than in prior years, reflecting recent increases driven primarily by new policies with higher average premiums than retained policies. This is further compounded by rate group expansion, which does not fully capture new policies entering at higher rate groups unconstrained by the +2 cap.

MPI calculated the 2027/28 average premium without rate change by projecting the 2026/27 average premium at November 1, 2025 forward to March 31, 2028 (i.e., the

average written between April 1, 2027 and March 31, 2028 is October 1, 2027). This required a projection period of 29 months from November 1, 2025. As such, the appropriate vehicle drift factor is:

$$(1.0306)^{5/12} \times 1.0307 \times 1.0307 = 1.0757$$

This drift factor is adjusted to account for the change in distribution of vehicles by major class. That is calculated by the ratio of the average premium after premium trend using the forecasted earned units for the rating year 2027/28 and the average premium after premium trend using the number of vehicles at November 1, 2025.

$$(1088.37 / 1102.13) - 1 = -0.0125$$

This adjustment offsets the vehicle drift factor to get a final drift trend of:

$$(1.0757 * (1-0.0125)) -1 = 0.0623$$

Please refer to *RI.5*, *Figure RI-11* Premium Trend by Major Class and Overall, for a detailed calculation on the overall premium trend.

The rate model does not account for the addition of the new Driver Safety Rating (DSR) level that was introduced by MPI in the 2025 GRA (DSR level +20), given that the population of vehicles is based on the population at November 1, 2025. To account for this, MPI forecasted an additional decrease in revenue from the additional movements not captured in the rate model (e.g., policies moving from DSR +19 to DSR +20). The estimated additional impact is a decrease of 0.85% to the average vehicle premium.

Furthermore, MPI proposes to change the rate group scale from zero (0) to forty-five (45) to zero (0) to fifty (50). Vehicles will be limited to an increase of two rate groups

per rating year. The impact of this expansion is difficult to determine, as it depends on the volume and mix of future new vehicle purchases and the extent to which those vehicles are assigned to the newly created rate groups.

Taking these projected impacts into account, MPI then calculated the 2027/28 average premium without rate change as follows:

2027/28 Average Premium Without Rate Change

= 2026/27 Average Premium x Premium Trend x Additional DSR Impact

= $1024.56 x 1.0623 *(1- .0085) = 1079.14

The 2026/27 average premium of $1024.56 used in the calculation above is based on the total premiums and total units from the vehicle population as of November 1, 2025.

RI.4 Overall Required Rate Change

MPI determined the overall required 2027/28 rate change by comparing the 2027/28 projected average premium, without rate change, to the 2027/28 required average premium.

MPI then calculated the overall indicated rate change as:

2027/28 Indicated Rate Change:

= (2027/28 Required Average Premium / 2027/28 Average Premium Without Rate Change) - 1

= ($1,104.79 / $1,079.14) – 1 = **2.38%**

The overall rate change is a combination of an increase to the base vehicle premium as well as any changes to discounts applied to the vehicle premium. In the 2027 GRA, in compliance with the PUB Order 156/25, Directive 10, MPI is again applying for changes to vehicle premium discounts available through the DSR. The impact to revenue due to changing the DSR discounts is estimated to be a decrease of 3.01%. As such, the base vehicle premium would need to increase by 5.56% to achieve the overall required rate of 2.38%. For further details please refer to *Part VII RC Appendix 6 - Driver Safety Rating Actuarial Review* and *RI.5 Allocation of Rate change to Major Classes Figure RI-13*.

RI.5 Allocation of Rate Change to Major Classes

Projected Ultimate Losses by Major Class

The first step is to allocate the forecasted ultimate losses to each major class based on the projected ultimate claims for each major class.

Each coverage was developed based on the implied development factors taken from the Appointed Actuary's Report as of March 31, 2026 as presented in External Actuary Review – *Part VIII External Actuary Review EAR Attachment B*.

The coverages were also trended based on frequency and severity trends determined from regression analysis. Please refer to *Chapter VI Claims Forecasting Chapter* for more information on the loss trending procedure.

To account for the change in Basic Deductible, MPI adjusted historical claims for Collision, Comprehensive, and Property Damage (Third-Party Deductible). The adjustment was determined based on a loss elimination ratio analysis for the affected coverages by major class. This analysis looked at historical claim severity and recalculates the change in severity given the new deductible.

The adjusted historical loss costs were trended forward to March 31, 2026, the most recent accident year (2025/26). A weighted average of the trended historical loss costs was then determined.

- For Collision, Comprehensive, Accident Benefits – Other, Income Replacement Indemnity and Property Damage, MPI used weights based on the past five accident years.
- For Bodily Injury Coverage, MPI used data from the last ten accident years to account for the large volatility in claims.

The weighted average loss cost was then trended forward using a future trend. Please refer to *Part VI Claims Forecasting Chapter* for more information on the loss trending procedure.

RI Appendix 1 Table 5 – Major Classes Loss Costs shows calculations of the indicated loss cost by coverage for each major class.

MPI then adjusted the losses by coverage for each major class as documented below before allocating the overall ultimate losses by coverage for each major class.

Loss Transfer Between Classes

MPI allocates collision claims on a first party basis (i.e., 100% of losses are allocated to the vehicle incurring the loss), except for motorcycles. As per PUB Order 156/06, for motorcycle collision claims, MPI allocates 100% of motorcycle claims costs from single vehicle claims and 50% of motorcycle claims costs from multi-vehicle claims to motorcycles. It allocates the balance of the motorcycle loss costs to all other units under *The Highway Traffic Act* (Manitoba). Based on the analysis, for the 2027 General Rate Application, the Collision loss cost for the Motorcycle major class was

unchanged at 23.50%, with the impact then allocated equally on a per unit basis to major classes 1, 2, and 3.

The figure below presents the reduction in the Collision claims costs for the Motorcycle major class for the 5 most recent years based on the revised claims costs allocation. The percentage decrease has been lower than in historical years, with 2023/24 being the lowest. This is primarily due to lower multi-vehicle accidents compared to all other years. Given the fluctuations in the % decrease, MPI left this factor (23.50%) unchanged.

Figure RI-9 Collision Claims Costs for the Motorcycle Major Class

Line No.	Accident Year	Current Allocation		Revised Allocation		$	%
		SV Incident	MV Incident	SV Incident	MV Incident	Decrease	Decrease
1	(1)	(2)	(3)	(4)	(5)	(6)	(7)
2	21/22	871,269	802,232	871,269	401,116	401,116	23.97%
3	22/23	781,347	665,296	781,347	332,648	332,648	22.99%
4	23/24	1,174,987	634,158	1,174,987	317,079	317,079	17.53%
5	24/25	1,001,891	932,965	1,001,891	466,483	466,483	24.11%
6	25/26	1,153,584	873,527	1,153,584	436,764	436,764	21.55%
7	All Years	4,983,077	3,908,178	4,983,077	1,954,089	1,954,089	21.98%
8	SV – Single Vehicle; MV – Multiple Vehicle						
9	(5) = 50% of (3)						
10	(6) = [(2) + (3)] - [(4) + (5)]						
11	(7) = (6) / [(2) + (3)]						

MPI allocates all comprehensive claims on a first party basis. There is no exception since Basic for motorcycles does not include this coverage.

MPI allocates Personal Injury Protection Plan (PIPP) costs in accordance with PUB Order 97/05 and with the modifications as set out in PUB Order 122/10, which established the following loss allocation rules:

a) in any accident involving only MPI-insured vehicles (one or more) and no other injured party, total PIPP costs are to be allocated equally (per vehicle) across the rating categories to which those vehicles belong; and

b) in any accident involving one or more MPI-insured vehicles and (i) one or more unidentified hit-and-run offenders, or (ii) another injured party or parties (including cyclists, pedestrians, occupant(s) of out-of-province vehicles, and wildlife/livestock), 50% of total PIPP costs are to be allocated equally (per MPI-insured vehicle) across the rating categories to which the MPI-insured vehicles belong, and 50% of total PIPP costs are to be effectively allocated across all vehicle rating categories.

Further to consideration (b), and pursuant to PUB Order 122/10, MPI expanded PUB Order 97/05, Directive 1(b), to include single-vehicle accidents involving wildlife or livestock. For accidents of this nature, 50% of total PIPP costs are allocated to the major class of the single vehicle, with the remaining 50% allocated to the pool class. Historically, the reduction in PIPP costs for these accidents was identified by filtering claims using the "accident detail text" field and searching for animal-related terms. However, this approach may also capture at-fault collision claims that merely reference animals, even when wildlife was not the primary cause of the accident. For the 2027 GRA, MPI refined the analysis by using the "Peril" identifier in its database, which provides a more reliable basis for identifying these claims. Figure RI-10 below shows the reduction of PIPP costs allocated to the major classes.

Figure RI-10 Reduction of PIPP Costs

Line No.	Major Class	Reduction
1	**Private Passenger**	1.38%
2	**Commercial**	0.13%
3	**Public**	0.25%
4	**Motorcycle**	5.75%
5	**Overall**	**1.63%**

The figure below summarizes the above considerations and presents the calculation of the total loss cost of the major classes.

Figure RI-11 Rating Year 2027/28 Total by Major Class

*Accident Benefits - Other and Income Replacement Indemnity adjusted for wildlife/livestock costs reduction per Board Order 122/10.

*Collision adjusted for cost allocation per Board Order 156/06.

Determination of Major Class Rate Indications

For each major class – Private Passenger, Commercial, Public, Motorcycles, Trailers, and Off-Road Vehicles (ORVs) (or major class 1, 2, 3, 4, 5, and 6 respectively) – MPI employed the same approach to calculating the required rate change as it did for the overall. MPI made the following additional considerations in the calculation of the required rates of the major classes.

- Consistent with last year, based on the HTA Power Unit Basis approach, Trailers and ORVs major classes were allocated 0% of the standard allocation of operating expenses.
- The overall non-claims costs were allocated to the respective major classes as follows:
    - Claims expenses were allocated based on claims costs;
    - Operating expenses, commission flat fees, anti-theft discount, reinsurance and fleet rebates were allocated on a per unit basis to applicable major classes;
    - Premium taxes and commissions on vehicles are 3.00% and 3.75% respectively of the required premium for the major classes.
- The overall other income sources were allocated to the respective major classes as follows:
    - Driver premiums and service fees were allocated on a per unit basis to applicable major classes.
    - Premium taxes and commissions on drivers are 3.00% and 2.48% respectively of the driver premiums as applicable to the major classes.

Figure RI-12 Rating Year 2027/28 Non-Claims Costs by Major Class

Line No.										
1				Applicablility to Major Classes

5	**Operating Expenses**	110,760	112,407	Yes	Yes	Yes	Yes			109.48
6	**Fleet Rebate**	30,416	29,759	Yes	Yes	Yes				29.63
7	**Anti-Theft Discount**	457	467	Yes						0.50
8	**Reinsurance – Casualty**	1,100	1,100	Yes	Yes	Yes	Yes			1.07
9	**Reinsurance - Catastrophe**	19,627	19,633	Yes	Yes	Yes		Yes		15.48
10			**Projected Units**	935,526	53,775	14,920	22,557	263,927	95,037	
11			**Total Applicable Expenses per Unit**	164.41	163.91	163.91	118.80	15.48	-	164.41

Like the overall projected average premium in RI.3, the current average premium for each major class needs to be trended to account for change in the vehicle population. *Figure RI-12* below shows the calculation for premium trend by major class and overall.

Figure RI-13 Premium Trend by Major Class and Overall

Line No.	Description	Overall	Major Class: Private Passenger	Commercial	Public	Motorcycle	Trailer	Off Road Vehicle

[6] Selected based on discounted historical drift for each major class; Overall is the average wieghted by [1] * ((1 + [4]) ^ (5 / 12)) * (1 + [5])
[7] = ((1 + [4]) ^ (5/12) * (1 + [5]) * (1 + [6])) - 1)
[8] = Forecasted Earned units for the 2027/28 rating year
[9] = [3] * (1+[7])
[10] = [9]; Overall weighted based on number of Forecasted Vehicles
[11] = [10]/[9] -1
[12] = (1+[7])*(1+[11]) -1
[13] = [1+[12])^(12/(5+12+12)) -1

Finally, the required premium and projected average premium is used to determine the rate indication by major class. The indicated rate change for each major class was credibility weighted depending on the number of insured units in the

class. In doing so, the methodology assigns a measure of reliability to the major class experience on its own and then balances that with the overall experience. The indicated rate change for each major class was assigned a credibility of $\frac{N}{N+K}$. Here, N is the number of insured units in the class and K is a constant. The constant, K, is equal to 6,000, and was judgmentally chosen in order that the largest major class – Private Passenger – was at least 99% credible. The complement of credibility, $1 - \frac{N}{N+K}$, was assigned to the overall indicated rate change.

The required rates for the major classes, after credibility weighting, were balanced back to the overall revenue requirements as calculated in *RI.4*.

Figure RI-13 summarizes the calculation of the indicated and balanced indicated rate change by major classes.

Figure RI-14 Rating Year 2027/28 Major Classification Required Rate Changes – Breakeven Rates

Line No.	Description	Overall	Private Passenger	Commercial	Public	Motorcycle	Trailer	Off Road Vehicle

As mentioned previously, MPI is adjusting its DSR discounts, moving them closer to their actuarially indicated discounts. Please see *RC Appendix 6 – Driver Safety Rating Actuarial Review* for further details. Therefore, for Major Classes where rates are affected by DSR discounts (Private Passenger, Commercial, Public, and Motorcycle), the required rates were adjusted for premium decreases resulting from vehicles in these major classes having larger discounts. The adjusted required rate changes then reflect the average changes to the 2027/28 rates for the respective major classes. The combination of both the changes to the 2027/28 rates and the premium decreases from increased DSR discounts results in the (full credibility) required rate changes for the respective major classes. For major classes not affected by DSR discounts (Trailers and ORVs), no adjustment is made to the required rate changes.

The following figure shows the allocation of the premium decrease from changes to the vehicle discount percentages and the adjustments to the required rate changes for the major classes affected.

Figure RI-15 Required Rate Changes by Major Class Adjusted for DSR Discount Changes

RI.7 Comparison to Prior GRA

The comparison between the 2027/28 indicated rate change and the 2026/27 Board-ordered rate change is presented in *Figure RI-17*. It is important to note that the two calculations are not directly comparable due to a methodological difference in the treatment of additional revenue within the rating algorithm. In the 2027 GRA, additional revenue is deducted prior to the application of variable operating expenses, resulting in lower variable expense provisions. In contrast, under the 2026 GRA Board Order, variable operating expenses were calculated without this adjustment.

In addition, the 2026 GRA reflects the 2026/27 rating year, whereas the 2027 GRA relates to the 2027/28 rating year. To ensure a consistent basis of comparison, MPI has adjusted the 2026 claims cost per unit to align with the 1.77% rate change approved in the Board Order.

Figure RI-18 Overall Rate Indication in Comparison to 2026 GRA Board Order

Line No.	Major Class	2026 GRA Adj. for 1.77% Target	2027 GRA
1	**Projected Units**	1,359,974	1,385,741

Risk Classification

RC.1 Risk Classification Overview

Standard insurance industry practice uses a classification system to assign individual insurance risk, which is the vehicle unit, into groups sharing similar risk characteristics. A risk classification system is designed based on statistical, operational, social, and legal criteria. Statistically, a classification system must be stable and allow history to reflect expected costs. Operationally, a classification must be practical and easily identifiable. For example, insurance use can be easily determined since it relates to how the vehicle will be primarily used. Social and legal considerations include factors such as evolving legislation and social norms around fairness.

Insurance companies need a risk classification system because a meaningful statistical measure of risk cannot be derived on a per vehicle unit basis. By grouping vehicles with similar expected risks, insurers can accurately measure the collective risk, associated costs, and appropriate premium rates. This group-based approach ensures that the premiums collected cover the costs incurred by the entire group.

For Basic universal compulsory automobile insurance (Basic), the vehicle classification system closely follows standard industry practice. The classifications used are prescribed by regulation under *The Manitoba Public Insurance Corporation Act*, in particular, Manitoba Regulation 49/2019, the *Automobile Insurance Plan Regulation*. Manitoba Public Insurance (MPI) groups vehicle units together using the following classifications:

- territory;
- insurance use;
- rate group;
- DSR level (merit eligible vehicles only);
- gross vehicle weight (trucks in Commercial and Public major classes only); and
- body style and engine displacement (Motorcycles major class only).

MPI uses different factors to decide how much to charge for different groups of vehicles. This helps make sure everyone pays a fair amount. In insurance, there exists the concept of relativities. This means comparing one group to the entire population to see how risky they are. For example, if a group costs twice as much to insure, their relativity is 2. Using relativities helps make sure that groups with more risk pay more than groups with less risk.

RC.2 Rating Territories

Manitoba is divided into the following four geographical rating territories, with a fifth rating territory, "commuter", added and applicable to individuals who live in Territory 2 (specific cities and municipalities outside Winnipeg) but regularly drive into Territory 1 (Winnipeg and specific surrounding municipalities) for work, school, or other business purpose.

Each of these rating territories have distinctive rates that reflect differences in patterns of loss experience. This means motorists pay premiums connected to the risk associated with insuring a vehicle in a particular geographic area of the province.

There are no proposed changes to the rating territories or their boundaries for 2027/28. The definitions of the rating territories are provided in *Appendix 7 - Territories.*

RC.3 Insurance Uses

Motorists are required to insure their vehicles in various insurance use categories. These categories take into consideration the varying degrees of risk associated with the different purposes for which these vehicles are used. Insurance uses with high claims costs are rated higher than insurance uses experiencing lower claims costs.

Insurance use definitions are in *RC Appendix 8 - Insurance Use Definitions by Name* and insurance uses by major class are located in *RC Appendix 9 - Major Insurance Classes*.

RC.4 Relativities – Territorial and Insurance Use

To determine the relativities for the rating variables applicable to the respective major classes, MPI performed the following three steps for each major class. MPI assumed that the territory distribution for each major class is distinct and independent. For each of the major classes, MPI:

1. determined the actual or **raw relativities**;
2. determined the **current relativities**; and
3. used the raw and current relativities to determine the **new relativities**.

In each of the above three steps, MPI adjusted the relativities so that the weighted average relativity for each rating variable within the major class balances to one.

To determine the actual or raw relativities, MPI first arranged the claims costs and earned units by applicable rating variables. Total claims costs for all coverages are presented in *RC Appendix 3 Table 6 – Reported Loss and ALAE with Hail and Actual Serious Losses (Adjusted for Product Change Impact).* To enhance accuracy and mitigate year-to-year variations, MPI utilized data from the five most recent insurance years, spanning 2021/22 to 2025/26. Claims costs associated with Serious Loss Incidents were then removed and replaced with serious loss loading.

With respect to serious loss loadings, MPI followed the same methodology directed by the Public Utilities Board (PUB) in the 2023 GRA, by combining MPI's methodology and Directive 11.3. The credibility of $\frac{N}{N+K}$ is to be assigned, where N is the ten-year earned units for the use and territory. The constant, K, is equal to 60,000. The credibility assigned to the average of the actual serious losses for the last ten years (i.e., MPI's methodology) for each use and territory is subject to a minimum credibility of 10%. The complement of credibility, $1-\frac{N}{N+K}$ is to be assigned to the alternative serious losses based on collision claim counts (i.e., Directive 11.3).

RC Appendix 3 Table 10 - Reported Loss and ALAE without Hail and with Credibility-Weighted Serious Loss Loading presents the adjusted claims costs. *RC Appendix 3 Table 12 - Earned Units* presents the earned units. *RC Appendix 3 Table 13 - Raw Loss Cost without Hail and with Credibility-Weighted Serious Loss Loading (Adjusted for 2026 Product Change Impact)* presents the loss costs, which are the adjusted claims costs per earned unit.

Using the loss costs and earned units as discussed above, as well as the generalized linear modelling techniques, MPI then calculated the raw relativities for the rating

variables applicable to the major class. Please refer to *Appendix 2a – GLM Major Class Relativities* for further details.

To determine the current relativities, MPI used a similar approach to the above. However, instead of using the loss costs and earned units to determine the relativities, MPI used the current average premiums (adjusted by removing the operating expenses), and total units derived from the population of vehicles per the rate model. The current average premiums reflect the approved 2026/27 rates (2026 GRA). Current relativities must be determined since current average premiums are not based strictly on a relativity approach.[1]

MPI determined the new relativities based on a credibility weighted average of the raw relativities and current relativities. In doing so, the methodology mitigates large fluctuations that can occur in the raw relativities, a result of the individual groupings not being large enough to be statistically reliable. For each raw relativity, a credibility of $\frac{N}{N+K}$ was assigned. Here, N represents the 5-year earned units used to determine the raw relativity and K is a constant. The constant, K, is again equal to 60,000, and was judgmentally chosen so that the largest insurance use – All Purpose Passenger Vehicle – was at least 95% credible. The complement of credibility, $1-\frac{N}{N+K}$, was assigned to the corresponding current relativity.

The credibility assigned to each raw relativity was subjected to a minimum credibility of 10% (i.e., if $\frac{N}{N+K}$ <10%, the raw relativity was assigned a credibility of 10%) and the remaining 90% was assigned to the current relativity. Assigning a

[1] This is due to various factors including balancing to the overall and major classes' rate requirements, capping of rate changes, changes in the composition of vehicles (especially for smaller vehicle groups), reclassification of vehicles, etc.

minimum credibility ensures that the new relativities for smaller groups partially reflect their historical claims costs.

RC Appendix 4 - New Relativity Calculation presents the derived raw and current relativities, the credibility assigned to each and the new relativities for all major classes.

MPI then used the new relativities to determine the indicated rates for all distinct vehicle groups based on the following formula:

$$(RR_C - E_C) \times \prod RV_{C,\,I} + E_C$$

For major class *C*; *C* = 1, 2, 3, 4, 5, and 6;

RR_C is the required rate

E_C is the per unit operating expense

$RV_{C,I}$ is the relativity for the rating variable applicable to the vehicle group; *I* represents the number of distinct rating variables[2]

MPI assumed that the relativities interact multiplicatively, the common approach in the insurance industry.

[2] For example, for all vehicles in the Private Passenger major class, I = 2 since only the territory and insurance use relativities (for the major class) are applicable.

There is no targeted initiative[3] for the 2027/28 rating year. As such, the per unit operating expense exclusive of all targeted initiatives, E_C, is equal to $109.48 for C = 1, 2, 3, and 4, and $0.00 for C = 5 and 6 (like the per unit operating expense, E_C), presented in *Figure RI-12*.

DR Appendix 2 Table 2 - Indicated Rate Calculation presents the indicated rates for all distinct vehicle groups using the above formula.

MPI balanced back the indicated rates to the revenue requirements by major class as calculated in *RI.13*. It then compared the balanced indicated rates to the current average rates to determine the balanced indicated rate changes.

RC.5 Vehicle Rating Factors

MPI uses vehicle rating factors, reflecting the characteristics of a vehicle, to group together vehicles with similar risks. Vehicle rating factors include rate group, gross vehicle weight, engine displacement, seating capacity, and body style. The following sections discuss the changes made to the rate groups for the different vehicle types, as well as the associated rate line changes.

RC.6 Passenger Vehicles and Light Rated Trucks

MPI uses the Canadian Loss Experience Automobile Rating (CLEAR) system to assign rate groups to specific passenger vehicles (cars, passenger vans and sport utility vehicles) and light trucks. The CLEAR system, produced by the Insurance Bureau of Canada (IBC), uses actual loss experience data from across Canada to determine relative loss cost indices for specific vehicle descriptions (make, model and model year). These indices consider the varying costs of collision,

[3] Target initiatives are expenses directly associated to a particular risk class. For example, in the 2016 GRA, MPI had one target initiative, which is the Winnipeg Police Theft Deterrence Initiative targeted at all vehicles in Territories 1 and 5 for major classes 1, 2 and 3.

comprehensive, and injury claims associated with these vehicle descriptions. IBC uses the expected claims costs for each vehicle description to establish CLEAR rate groups. As mentioned, CLEAR rate groups are one of the vehicle rating factors that MPI uses to establish premiums for passenger vehicles and light trucks.

The CLEAR system provides incentives, in the form of lower premiums, to consumers who purchase vehicles that are safer, less susceptible to damage and/or more resistant to theft. Increased consumer demand for vehicles with new safety features, such as electronic stability control and accident-avoidance systems, encourage manufacturers to include them in their vehicles. Therefore, along with being a method to achieve equity in the vehicle rating system, the system may also be viewed as a loss prevention initiative.

IBC annually updates CLEAR rate groups to account for changes in claims costs for vehicles. CLEAR recommendations are generally adjusted according to three factors:

- actual experience for new vehicles is developed;
- loss costs change as vehicles age; and
- new trends emerge such as higher theft rates for a particular make and model.

CLEAR provides separate rate group recommendations for collision, comprehensive and injury coverages. Since the Basic product combines these coverages, MPI must also combine the CLEAR recommendations to obtain the applicable Manitoba rate group.

For collision and comprehensive coverages, the CLEAR recommendations range from rate groups 1 to 99. These CLEAR recommendations are weighed together to obtain the MPI collision and comprehensive combined rate group.

The weighting allocation by MPI in 2026/27 assigned 80% to the CLEAR collision recommendation and 20% to the CLEAR comprehensive recommendation, based upon the ratio of collision to comprehensive claims costs in Manitoba. For 2027/28, MPI evaluated and adjusted the weighting allocation to 79% for collision and 21% for comprehensive.

For injury coverage, starting in the 2015/16 insurance year, IBC began providing two separate recommendations: one for Ontario and one for Alberta/Atlantic provinces. The Ontario table uses injury rate groups ranging from 0 to 50, while the Alberta/Atlantic table uses injury rate groups ranging from 1 to 15.

As Manitoba injury relativities between rate groups are relatively flat (i.e., the relativities do not vary significantly across rate groups), MPI decided to use the recommendation for Alberta/Atlantic provinces due to the smaller injury rate group range. Further, MPI converted the IBC 1 to 15 range to a Manitoba 1 to 5 range.

The matrix below compares the IBC injury rate groups for the Alberta/Atlantic provinces with the MPI injury rate groups for the 2015/16 to 2027/28 insurance years.

Figure RC- 1 Injury Rate Group Table

Line No.	2015 IBC Rate Group	2015 MPI Rate Group	2016 IBC Rate Group	2016 MPI Rate Group	2017 IBC Rate Group	2017 MPI Rate Group	2018 to 2027 IBC Rate Group	2018 to 2027 MPI Rate Group
1	7	1	6 & 7	1	6 & 7	1	1 - 6	1
2	8	2	8	2	8	2	7	2
3	9	3	9	3	9	3	8 - 9	3
4	10	4	10	4	10	4	10	4
5	11	5	11 & 12	5	11 & 12	5	11 - 15	5
6	Note: The most recent IBC Injury Rating goes from rate groups 1 to 15							

The MPI injury rate group is adjusted down by 2 rate groups and then added to the MPI collision and comprehensive combined rate group to obtain the final MPI rate group applicable in Manitoba.

Rate group adjustments are then applied to passenger vehicles and light trucks to update the existing 2026/27 MPI rate groups to the revised 2027/28 MPI rate groups. These adjustments are applied as follows:

- if the 2026/27 rate group is higher than the 2027/28 rate group, the 2026/27 rate group is adjusted down to the 2027/28 rate group, and
- if the 2026/27 rate group is lower than the 2027/28 rate group, the 2026/27 rate group is adjusted up to the 2027/28 rate group, up to a maximum of two rate groups.

For 2027/28, MPI is proposing to expand the rate groups from 46 (rate groups 0 to 45) to 51 rate groups (rate groups 0 to 50), meaning MPI will be adding rate groups 46, 47, 48, 49 and 50. Further details are discussed in *RC.8*.

MPI assigns new vehicle descriptions to specific rate groups as they enter the local market. These rate groups are based on CLEAR recommendations as they become available.

Rate groups assigned to passenger vehicles for 2027/28 are contained in *RC Part 07 03 RC 03 Part 1A Passenger 2007 to 2027* and *RC Part 07 03 RC 03 Part 1C Passenger 2006 and Prior*. The change in rate group from 2026/27 (rate groups 0 – 45) is contained in *RC Part 07 03 RC 03 Part 1B Passenger Changes 2007 to 2027* and *RC Part 07 03 RC 03 Part 1D Passenger Changes 2006 and Prior*.

The rate groups assigned to light trucks for 2027/28 are contained in *RC Part 07 03 RC 03 Part 2A Light Truck 2007 to 2027* and *RC Part 07 03 RC 03 Part 2C Light Truck 2006 and Prior*. The change in rate group from 2026/27 (rate groups 0 – 45) is contained in *RC Part 07 03 RC 03 Part 2B Light Truck Changes 2007 to 2027* and *RC Part 07 03 RC 03 Part 2D Light Truck Changes 2006 and Prior*.

MPI uses the 'Heavy Trucks Rated as Light Trucks' Rate Group Table, contained in *Part 07 03 RC 03 Part 3 Heavy Trucks and Part 4 Miscellaneous*, to rate farm and fishing trucks with a gross vehicle weight (GVW) in excess of 4,540 kg and with a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility vehicle. MPI determines the rate groups in this table by utilizing the current heavy-rated-as-light truck population from the rate model. It applies the most current CLEAR rated recommendations to this population of vehicles and then averages them for each model year. This establishes a rate group table based on a realistic representation of the annual mix of vehicles in the heavy-rated-as-light truck population.

RC.6.1 Heavy Trucks

Heavy trucks are trucks with a GVW of more than 4,540 kg (except heavy-rated-as-light trucks).

There are three broad classes of heavy trucks with different physical damage coverages:

1. Trucks (excluding farm and fishing trucks) that weigh between 4,541 kg and 16,330 kg GVW, carrying physical damage coverage;

2. Trucks (excluding farm and fishing trucks) that weigh more than 16,330 kg GVW, not carrying physical damage coverage; and

3. Farm and fishing trucks with body styles other than chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility vehicle, carrying physical damage coverage.

As in previous years, MPI adjusts heavy truck rate groups down one rate group per model year. This allows for the assignment of the newest model year vehicles to the highest rate group while vintaging the remaining model year vehicles.

The rate groups for the Heavy Truck for the years 2026/27 and 2025/26 are as follows:

Figure RC- 2 Heavy Truck Rate Group

Line No.	Model Year	2027/28	2026/27
1	2028 and later	17	
2	2027	16	17
3	2026	15	16
4	2025	14	15
5	2024	13	14
6	2023	12	13
7	2022	11	12
8	2021	10	11
9	2020	9	10
10	2019	8	9
11	2018	7	8
12	2017	6	7
13	2016	5	6
14	2015	4	5
15	2014	3	4
16	2013	2	3
17	2012	1	2
18	2011 and prior	1	1

RC.6.2 Buses

MPI assigns buses to rate groups based on their owner-declared values. In 2021/22, the maximum declared value increased from $50,000 to $70,000. To accommodate this change, MPI expanded the range of available rate groups by adding groups 14 to 17 to the existing range of 0 to 13.

The rate groups assigned to buses are shown in part 4 of *Part 07 03 RC 03 Part 3 Heavy Trucks and Part 4 Miscellaneous* .

RC.6.3 Motorcycles and Mopeds

MPI also assigns motorcycles and mopeds to rate groups based on owner declared values. In 2021/22, the maximum declared value increased from $50,000 to $70,000, prompting MPI to expand the rate group range by introducing rate groups 10 and 11 to supplement the existing range of 0 to 9. In 2026 GRA, MPI increased

the Basic deductible from $750 to $1,000. As a result, rate group 0, previously assigned to vehicles with a declared value between $0 and $1,000, will be discontinued (except for Antique vehicles). The lower range for rate group 1 has been adjusted accordingly, now covering declared values from $0 to $1,500.

The rate groups assigned to motorcycles and mopeds are shown in part 4 of *Part 07 03 RC 03 Part 3 Heavy Trucks and Part 4 Miscellaneous*.

RC.6.4 Motorhomes

MPI assigns motorhomes to rate groups based on their owner-declared values. In 2021/22, the maximum declared value increased from $50,000 to $70,000. To reflect this change, MPI expanded the available rate group range by adding groups 11 to 14 to the existing range of 0 to 10.

The rate groups assigned to motorhomes are shown in part 4 of *Part 07 03 RC 03 Part 3 Heavy Trucks and Part 4 Miscellaneous*.

RC.6.5 Trailers (Excluding Semi-Trailers)

MPI classifies trailers into two categories based on declared value: those valued at $2,500 or less, and those valued over $2,500. Trailers with a declared value above $2,500 are assigned to rate groups based on their owner-declared value. In 2021/22, the maximum declared value increased from $50,000 to $70,000. To accommodate this change, MPI expanded the rate group range by adding groups 14 to 17 to the existing range of 1 to 13.

The rate groups assigned to trailers are shown in part 4 of *Part 07 03 RC 03 Part 3 Heavy Trucks and Part 4 Miscellaneous*.

RC.6.6 Other Vehicle Rating Factors

In addition to rate groups, MPI also rates some vehicle types using additional vehicle rating factors. Trucks use GVW ranges, buses use seating capacity ranges, and motorcycles use engine displacement ranges as well as body styles. These additional vehicle rating factors account for differences in risk characteristics attributable to these factors.

There are no changes to these other vehicle rating factors for 2027/28.

MPI classifies trucks into three different GVW categories:

- 4,540 kg or less
- 4,541 to 16,330 kg
- 16,331 kg or more

MPI classifies buses by seating capacity:

- 20 seats or less
- 21 to 35 seats
- 36 to 50 seats
- 51 seats or more

MPI classifies motorcycles into three different engine size categories:

- 500 cc or less
- 501 to 1,000 cc
- 1,001 cc or more

MPI also classifies motorcycles based on their body styles. IBC identifies 17 different body styles for motorcycles. For rating purposes, MPI groups these body styles into one of 5 body style rating categories. The grouping of body styles into body style rating categories are as follows:

1. Motorscooter Rating Category: includes Motorscooter and 3-Wheel Scooter body styles;
2. Other Rating Category: includes the Cruiser, Dual Purpose, Motard, Enduro, Other and Standard body styles;
3. Sport Rating Category: includes the Sport and Naked Sport body styles;
4. Sport Touring Rating Category: includes the Sport Touring and Adventure body styles; and
5. Touring Rating Category: includes the Touring, Trike, 3-Wheel Motorcycle and Standard Sidecar body styles.

The motorcycle body style definitions can be found in *Appendix 5 – Motorcycle Body Style Definitions*.

IBC periodically changes the body styles for existing models. MPI monitors these changes and updates body styles on an annual basis to match any IBC changes.

As established in 2007/08, motorcycles with a Sport Rating, 1994 and older, and with a horsepower to weight ratio of 0.355 or lower will continue to be reclassified as Other Rating.

RC.7 Rate Group Assignment Impacts

For 2027/28, MPI applied rate group changes to passenger vehicles, light trucks, heavy-rated-as-light trucks, heavy trucks, motorcycles, mopeds, motorhomes, trailers and buses.

Passenger Vehicle and Light Trucks (including Heavy-Rated-as-Light Trucks)

MPI uses the CLEAR system for assigning rate groups to passenger vehicles and light trucks (including heavy-rated-as-light trucks). The rate groups into which vehicles are assigned reflect factors such as: vehicle make, model, model year, gross vehicle weight, engine size, declared value and CLEAR. These factors have a bearing on the cost of claims for particular types of vehicles. Generally, vehicles in higher rate groups pay higher rates than vehicles in lower rate groups to reflect higher expected claims costs.

To evaluate the impact of updated CLEAR-based rate group assignments, MPI re-rates all applicable vehicles using the updated rate groups and the existing premium structure. This approach isolates the effect of rate group changes by holding premiums constant, enabling MPI to assess changes in overall revenue purely attributable to the updated rate group mapping.

Changes to rate group assignments from updated CLEAR rate groups result in changes to overall revenues. Offset adjustments are applied to ensure revenue neutrality. MPI calculates two offsets for CLEAR rated vehicles: one for passenger vehicles (0.700%), and one for light trucks (1.001%). For each respective vehicle type, MPI calculates the offset based on the percentage change in revenue and then applies it equally to the rates for all rate groups. MPI applies rate group offsets to all insurance uses for passenger vehicles and light trucks, except for those which are flat rated (i.e., one rate applies to all rate groups).

For 2027/28, the effects of CLEAR rate group reassignments to passenger vehicles and light trucks (including heavy-rated-as-light trucks) are as follows, based on the indicated rate (AAP):

- 48.20% (439,466 vehicles) receive lower rates;

- 0.06% (571 vehicles) remain unchanged; and
- 51.74% (471,690 vehicles) receive higher rates.

Of those increasing:

- 32.13% (151,563 vehicles) increase by less than $10;
- 6.33% (29,845 vehicles) increase by $10 to $19;
- 1.67% (7,888 vehicles) increase by $20 to $29;
- 0.61% (2,858 vehicles) increase by $30 to $39;
- 1.51% (7,140 vehicles) increase by $40 to $49;
- 2.43% (11,449 vehicles) increase by $50 to $59;
- 1.60% (7,543 vehicles) increase by $60 to $69;
- 1.43% (6,745 vehicles) increase by $70 to $79;
- 3.18% (15,017 vehicles) increase by $80 to $89;
- 6.79% (32,006 vehicles) increase by $90 to $99;
- 20.87% (98,461 vehicles) increase by $100 to $149;
- 13.15% (62,030 vehicles) increase by $150 to $199;
- 7.07% (33,369 vehicles) increase by $200 to $249;
- 0.77% (3,646 vehicles) increase by $250 to $299; and
- 0.45% (2,130 vehicles) increase by $300 or more.

Heavy Truck Rate Groups

As in previous years, MPI adjusts heavy truck rate groups down one rate group per model year. This adjustment allows for the assignment of the newest model year vehicles to the highest rate group while vintaging the remaining model year vehicles.

The annual vintaging of the heavy truck rate groups results in a change in revenue. MPI applied a rate group offset adjustment of 4.510% to ensure revenue neutrality.

MPI flat rates certain heavy trucks that do not carry physical damage coverage under Basic. These trucks are therefore unaffected by rate group changes and the offset adjustment.

For 2027/28, rate group changes for heavy trucks with physical damage coverage based on the indicated rate (AAP) resulted in:

- 37.50% (11,747 vehicles) decrease in rate;
- 0 vehicles remain unchanged; and
- 62.50% (19,580 vehicles) increase in rate.

Of those increasing:

- 0.04% (8 vehicles) increase by less than $20;
- 70.28% (13,760 vehicles) increase by $20 to $29;
- 26.00% (5,091 vehicles) increase by $30 to $39;
- 0.76% (148 vehicles) increase by $40 to $49;
- 2.11% (413 vehicles) increase by $50 to $59; and
- 0.82% (160 vehicles) increase by $70 to $79.

MPI determined rate group assignment offset adjustments for these vehicle types concurrently with rate line relativity offset adjustments to ensure revenue neutrality.

RC.8 Rate Line Relativities

While the individual rate group assigned is an important factor in the premium required, an equally important factor is how rate groups relate to one another and to the underlying costs of providing Basic coverage. The relationship between rate groups is defined by a rate line relativity, which is individually determined for

different vehicle types. Rate line relativity adjustments are applied to passenger vehicles, light trucks, heavy trucks, motorcycles, motorhomes, buses, and trailers. These adjustments modify the relative difference between rates charged across the rate group spectrum.

RC.8.1 Rate Line Relativity Analytical Process

The analytical process consists of the following steps:

1. For each coverage (collision, comprehensive, Personal Injury Protection Plan (PIPP), TPL – BI, TPL- Property Damage), claims are examined for differences across rate groups. Historically, it has been shown that physical damage coverages increase by rate group, while the PIPP coverages do not have a consistent increasing relationship by rate group.

2. Generalized Linear Models (GLMs) are used to develop combined physical damage relativities (collision, comprehensive, TPL BI, and TPL property damage), with dedicated models using a Tweedie distribution specified for each vehicle type to directly model physical damage loss costs.

3. Curve fitting for vehicle rate group relativities is integrated directly within the GLM process. In general, the fitted relativities are then used to produce the expected average physical damage costs by rate group. Please refer to *Appendix 2b - GLM Rate Line Relativities* for further details.

4. Average costs for PIPP coverages and for operating expenses are then added to the selected physical damage costs. The outcome is a set of indicated relativities relating to the average total cost per rate group.

5. The indicated relativities are then credibility weighted with the current relativities.

As mentioned, MPI is proposing to expand the CLEAR rated vehicle types (Passenger Vehicles and Light Trucks) from 46 rate groups (0 to 45) to 51 rate groups (0 to 50). The relativities for the additional rate groups were determined by reassigning the historical rate groups and adjusting the cap to rate group 50. MPI then ran the generalized linear models on the historical loss cost experience, with the adjusted rate groups, to determine the actual relatives for the expanded rate groups.

MPI added one rate group, introducing rate group 41 in the 2025 GRA, and again expanded the rate group to 45 with a maximum movement of +2 in the 2026 GRA. To further enhance fairness and equitable rates, MPI is proposing to expand the rate groups by adding 5 new rate groups i.e. 46 to 50, with the maximum rate group movement of +2.

It is important to note that the associated premium impact will arise exclusively from new business. For the existing in-force portfolio (as of November 1, 2025), the highest assigned rate group is 43. Under the proposed maximum upward movement of +2 rate groups, these vehicles would be capped at rate group 45. In contrast, newly written policies will be eligible for assignment across the full expanded rate group range, up to the maximum of 50, thereby generating the incremental premium.

MPI may consider further rate group expansion in future GRAs.

Rate line relativities for passenger vehicles, light trucks, heavy trucks, motorcycles, motorhomes, trailers, and buses can be found in *Appendix 2 – Rate Line Relativities*.

Further details on GLM model results, including statistical measures such as goodness-of-fit and significance of predictors, are presented *Appendix 2c – GLM Relativity Model Results.*

RC.8.2 Rate Line Relativities Impacts

Passenger Vehicles and Light Trucks

All insurance uses for passenger vehicles, light trucks, and heavy-rated-as-light trucks, excluding Police/Emergency trucks (which are flat rated), receive rate line adjustments. MPI applied a rate line offset adjustment of 3.155% to passenger vehicles and 0.727% to light trucks to ensure revenue neutrality.

For 2027/28, due to rate line adjustments based on the indicated rate:

- 47.81% (435,876 vehicles) receive a rate decrease;
- 1.82% (16,617 vehicles) remain unchanged; and
- 50.37% (459,234 vehicles) receive a rate increase.

Of those receiving an increase:

- 26.57% (122,003 vehicles) increase by less than $10;
- 38.93% (178,802 vehicles) increase between $10 and $19;
- 23.23% (106,673 vehicles) increase between $20 to $29;
- 8.27% (38,001 vehicles) increase between $30 to $39;
- 2.86% (13,151 vehicles) increase between $40 to $49;
- 0.06% (279 vehicles) increase between $50 to $59;
- 0.04% (183 vehicles) increase between $60 to $69;
- 0.02% (103 vehicles) increase between $70 to $79;
- Less than 0.01% (18 vehicles) increase between $80 to $89;
- Less than 0.01% (9 vehicles) increase between $90 to $99; and

- Less than 0.01% (12 vehicles) increase between $100 to $149.

Heavy Trucks

MPI applies rate line differentials to all heavy truck insurance uses that are not flat rated. MPI applied a rate line offset adjustment of -1.052% to ensure revenue neutrality.

For 2027/28, of the heavy trucks receiving rate line relativity changes based on the indicated rate:

- 35.49% (11,118 vehicles) decrease in rate;
- 43.93 % (13,762 vehicles) remain unchanged; and
- 20.58% (6,447 vehicles) increase in rate.

Of those increasing:

- 55.68% (3,590 vehicles) increase by less than $10;
- 27.59% (1,779 vehicles) increase between $10 to $19;
- 13.93% (898 vehicles) increase between $20 to $29;
- 2.05% (132 vehicles) increase between $30 to $39;
- 0.56% (36 vehicles) increase between $40 to $49; and
- 0.19% (12 vehicles) increase between $50 to $59.

Motorcycles and Mopeds

Unlike other vehicle types, a significant portion of motorcycle claims costs are injury related, which do not vary greatly relative to the value of the motorcycle. As a result, the rate line for motorcycles is much flatter in comparison to other types of vehicles.

MPI applies rate line relativity adjustments to all vehicles in the motorcycle major class, which includes motorcycles and mopeds. MPI applied a rate line offset adjustment of 0.012% to ensure revenue neutrality. The offset adjustment also accounts for any additional revenue resulting from these vehicles moving to higher rate groups.

For 2027/28, based on the indicated rate, and as a result of rate line adjustments:

- 3.98% (852 vehicles) decrease in rate;
- 51.62% (11,039 vehicles) remain unchanged; and
- 44.40% (9,496 vehicles) increase in rate.

Of those increasing:

- 100% (9,496 vehicles) increase by less than $10; and

Motorhomes

MPI applies rate line relativity adjustments to motorhome insurance uses. MPI applied a rate line offset adjustment of -8.481% to ensure revenue neutrality. The offset adjustment also accounts for any additional revenue resulting from vehicles moving to higher rate groups.

For 2027/28, based on the indicated rate, and as a result of rate line changes:

- 64.42% (2,926 vehicles) decrease in rate;
- 1.74% (79 vehicles) remain unchanged; and
- 33.84% (1,537 vehicles) increase in rate.

Of those receiving rate increases:

- 13.01% (200 vehicles) increase by less than $10;
- 8.59% (132 vehicles) increase between $10 to $19;
- 1.63% (25 vehicles) increase between $20 to $29;
- 0.33% (5 vehicles) increase between $30 to $39;
- 1.37% (21 vehicles) increase between $40 to $49;
- 1.43% (22 vehicles) increase between $50 to $59;
- 0.85% (13 vehicles) increase between $60 to $69;
- 0.39% (6 vehicles) increase between $70 to $79.
- 0.85% (13 vehicles) increase between $80 to $89;
- 24.01% (369 vehicles) increase between $90 to $99;
- 36.50% (561 vehicles) increase between $100 to $149.
- 7.81% (120 vehicles) increase by $150 to $199; and
- 3.25% (50 vehicles) increase by $200 to $249.

Trailers

MPI applies rate line adjustments to trailers. MPI applied a rate line offset adjustment of 6.780% to ensure revenue neutrality. The offset adjustment also accounts for any additional revenue resulting from vehicles moving to higher rate groups.

For 2027/28, based on the indicated rate, and as a result of rate line changes:

- 33.28% (81,491 vehicles) decrease in rate;
- 44.20% (108,247 vehicles) remain unchanged; and
- 22.52% (55,157 vehicles) increase in rate.

Of those receiving rate increases:

- 17.61% (9,711 vehicles) increase by less than $10;

- 69.24% (38,191 vehicles) increase between $10 to $19;
- 11.48% (6,331 vehicles) increase between $20 to $29; and
- 1.68% (924 vehicles) increase between $30 to $39;

Buses

All insurance uses for buses, excluding Transit Buses in Territory 1 (which are flat rated), receive rate line relativity adjustments. MPI applied a rate line offset adjustment of -2.294% to buses to ensure revenue neutrality. The offset adjustment also accounts for any additional revenue resulting from vehicles moving to higher rate groups.

For 2027/28, based on the indicated rate, due to rate line adjustments:

- 54.75% (2,333 vehicles) receive a rate decrease;
- 0.35% (15 vehicles) remain unchanged; and
- 44.90% (1,913 vehicles) receive a rate increase.

Of those receiving an increase:

- 4.50% (86 vehicles) increase by less than $10;
- 5.44% (104 vehicles) increase between $10 to $19;
- 55.25% (1,057 vehicles) increase between $20 to $29;
- 1.62% (31 vehicles) increase between $30 to $39;
- 20.49% (392 vehicles) increase between $40 to $49;
- 8.57% (164 vehicles) increase between $50 to $59;
- 2.82% (54 vehicles) increase between $60 to $99
- 0.47% (9 vehicles) increase between $100 to $149; and
- 0.84% (16 vehicles) increase by $150 to $199.

RC.8.3 Combined Effect of Vehicle Rate Group and Rate Line Changes

To ensure revenue neutrality, combined offset adjustments are applied to offset changes in total revenue resulting from both rate group and rate line relativity changes. MPI determines these combined offset adjustments for each respective vehicle type. *Appendix 1 - Offsets* lists the Rate Group, Rate Line and Combined Offsets.

For 2027/28, as a result of combined rate group and rate line changes (for those vehicles receiving either one or both adjustments):

- 45.77% (557,498 vehicles) decrease in rate;
- 10.77% (131,190 vehicles) are unchanged; and
- 43.46% (529,451 vehicles) increase in rate.

Of those increasing:

- 14.23% (75,356 vehicles) increase by less than $10;
- 17.07% (90,392 vehicles) increase between $10 and $19;
- 10.09% (53,430 vehicles) increase between $20 and $29;
- 5.17% (27,347 vehicles) increase between $30 and $39;
- 3.40% (17,991 vehicles) increase between $40 to $49;
- 1.88% (9,928 vehicles) increase between $50 to $59;
- 1.98% (10,474 vehicles) increases between $60 to $69;
- 5.98% (31,685 vehicles) increase between $70 to $79;
- 4.54% (24,028 vehicles) increase between $80 to $89;
- 4.53% (24,005 vehicles) increase between $90 to $99;
- 16.23% (85,922 vehicles) increase between $100 to $149;
- 10.66% (56,414 vehicles) increase between $150 to $199;

- 3.34% (17,677 vehicles) increase between $200 to $249;
- 0.53% (2,821 vehicles) increase between $250 to $299; and
- 0.37% (1,981 vehicles) increase $300 or greater.

On a percentage increase basis, of those increasing:

- 45.83% (242,640 vehicles) increase by less than 5 percent;
- 50.94% (269,704 vehicles) increase between 5 and 10 percent; and
- 3.23% (17,107 vehicles) increase between 10 and 15 percent.

RC.9 Driver Record Classification System

The driving record component of the classification plan is designed to adjust rates based on the driving convictions and claims history of the customer. Customers with a prior history of claims or poor driving records present a higher risk and consequently pay higher rates.

The driving record portion of the vehicle classification plan has 2 components:

- Driver Safety Rating
- Fleet Safety Program

RC.9.1 Driver Safety Rating (DSR)

Effective March 1, 2010, MPI implemented the DSR program as a method of classifying driver risk. The DSR program is prescribed by regulation under *The Manitoba Public Insurance Corporation Act* and replaced the previous "bonus/malus" plan.

The goals of the DSR program are to:

- Strengthen the ability to reward the safest drivers;
- Encourage poor drivers to improve their driving behavior; and
- Enhance the overall driver understanding that driving behaviour can affect how much they pay for auto insurance.

The current DSR scale runs from a maximum of +20 merits to -20 demerits, with a neutral "0" point between the two. MPI has expanded the DSR scale to +20 levels, incrementally adding one level every year, which started in 2022/23. For more details, please refer to *Appendix 6 – Driver Safety Rating Actuarial Review.*

Each year, at the driver's renewal date, they either move up or down the scale based on their driving history during the last year. Drivers in the DSR merit zone move up the scale by one level whenever they complete a full year of driving without any at-fault claims or eligible traffic convictions.

As an incentive to improve, drivers in the DSR demerit zone can move up faster if they maintain a valid driver's license for a minimum of 335 days and demonstrate a change in driving behavior. For example, a driver with 20 DSR demerits moves up seven levels if they go a full year without any at-fault claims or eligible traffic convictions. If the driver continues to drive incident free, they can return to the DSR 0 level within five years. The following table shows the upward movement for a full year of incident free driving.

Figure RC- 3 DSR Movement Tables

Line No.	DSR Level	Movement with clean year with active licence	DSR Level	Movement with clean year with active licence
1	1 to 19 merits	1 level up	-10	4 levels up
2	0	1 level up	-11	4 levels up
3	-1	1 level up	-12	5 levels up
4	-2	2 levels up	-13	5 levels up
5	-3	3 levels up	-14	5 levels up
6	-4	3 levels up	-15	5 levels up
7	-5	3 levels up	-16	6 levels up
8	-6	3 levels up	-17	6 levels up
9	-7	3 levels up	-18	6 levels up
10	-8	4 levels up	-19	7 levels up
11	-9	4 levels up	-20	7 levels up

Drivers move down the scale if they have had one or more eligible traffic convictions or at-fault claims. For traffic convictions, the number of levels they move down depends on the severity of the violation (2 to 15 levels down). An at-fault claim moves a driver five levels down the DSR scale.

MPI proposes no changes in the 2027 GRA to the way drivers move along the DSR scale.

Full details of the DSR program can be found in the *Driver Safety Rating System Regulation*[4].

In order to receive a DSR vehicle premium discount, the customer must insure the vehicle in one of the following use categories:

- Accessible Vehicle-for-Hire (VFH) - (all time bands)
- All Purpose Moped

[4] https://web2.gov.mb.ca/laws/regs/current/_pdf-regs.php?reg=13/2009.

- All Purpose Motorcycle - (all body style rating categories)
- All Purpose Motorhome
- All Purpose Passenger Vehicle
- All Purpose Truck
- Artisan Truck (GVW less than 16,331 kg)
- Collector Passenger Vehicle
- Collector Truck
- Common Carrier Local Passenger Vehicle
- Common Carrier Passenger Vehicle within 161 km in Manitoba
- Common Carrier Truck within 161 km in Manitoba
- Common Carrier Truck Local within city or municipality
- Farm or Fishing All Purpose Truck (GVW less than 4,541 kg or a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility vehicle)
- Farm Passenger Vehicle
- Limousine VFH - (all time bands)
- Passenger VFH (Passenger Vehicle) - (all time bands)
- Passenger VFH (Truck 4,499 kg or less GVW) - (all time bands)
- Pleasure Moped
- Pleasure Motorcycle - (all body style rating categories)
- Pleasure Motorhome
- Pleasure Passenger Vehicle
- Pleasure Truck
- Taxicab VFH – (all time bands)

RC.9.2 Driver Premiums

A Basic insurance premium is charged on every Manitoba driver's licence. For more details on Driver Premium, including its purpose and use, please refer to *2026 GRA COM Appendix 2.*

In terms of DSR, drivers on the merit side of the scale pay a lower Driver Premium than drivers on the demerit side of the DSR scale.

Driver Premiums for the DSR demerit levels followed the phased-in approach presented to the PUB in April 2009, which was completed by the 2013 GRA. From the 2013 GRA to the 2017 GRA, Driver Premiums remained unchanged. In the 2018 GRA, the PUB approved increases to Driver Premiums on the demerit side of the DSR scale. In the 2025 GRA, the PUB approved the increase of $10 to the base Driver Premium (applicable across all DSR levels).

In the 2027 GRA, MPI proposes no changes to Driver Premiums.

The following figure shows Driver Premiums since the implementation of DSR:

Figure RC- 4 Driver Premiums Approved Since Implementation of DSR

Line No.	DSR Level	2010/11	2011/12	2012/13	2013/14 to 2017/18	2018/19 to 2024/25*	2025/26	2026/27	Proposed 2027/28

42 (*) DSR 16 was introduced in 2022/23; DSR 17 was introduced in 2023/24; DSR 18 was introduced in 2024/25

43 DSR 19 was introduced in 2025/26

44 DSR 20 was introduced in 2026/27

RC.9.3 Vehicle Premium Discount

The Vehicle Premium Discount (VPD) is an additional reward that MPI gives to registered owners of vehicles who have DSRs on the merit side of the scale. In the 2027 GRA, MPI is complying with PUB Order 156/25 (Directive 10) by moving the vehicle premium discounts further toward actuarially indicated percentages. For a detailed discussion on the indicated discounts please refer to *Appendix 6 - Driver Safety Rating Actuarial Review*.

The Figure below shows the current and proposed VPDs by DSR level:

Figure RC- 5 Vehicle Premium Discount

		Vehicle Premium Discount		
Line No.	DSR Level	Current 2026/27	Proposed 2027/28	Proposed less Current
1	20	53%	57%	4%

21	0	0%	0%	0%
22	-1 to -20	0%	0%	0%

RC.9.4 Fleet Rebates and Surcharges

The fleet rebate/surcharge program offered by MPI applies where an owner has 10 or more vehicles registered on the first day of any customer month, and the number of days the fleet vehicles are insured meets or exceeds the minimum number of days. All vehicles can be included in a fleet except:

- Insurance exempt vehicles
- VFH (all time bands)
- Motorcycles and Mopeds
- Trailers
- Vehicles with Personal Injury Protection Plan coverage only
- Off-road vehicles
- Vehicles under a Lay-up policy or a Rental Car Insurance policy

MPI determines fleet rebates and surcharges using the loss ratio of the fleet. The loss ratio is the ratio between the applicable losses allocated to the fleet customer, and the fleet premiums paid by the fleet customer. Except for comprehensive claims, which are fully included in the calculation of the loss ratio, MPI includes claims according to the degree of responsibility. For example, if MPI holds the fleet vehicle 50% responsible for a claim, it assesses only 50% of the cost of the claim to the fleet (including all costs for which the fleet driver is responsible). The maximum amount used for any one loss is $25,000.

MPI may adjust fleet assessments based on increases or decreases to claims amounts not included in the fleet assessment of the previous year.

Fleet rebates and surcharges vary, depending on the loss ratio. The current fleet rebate scale ranges from a 1% rebate (69% loss ratio) to a maximum 33% rebate

(37% or lower loss ratio). The fleet surcharge scale ranges from a 1% surcharge (80% loss ratio) to a maximum 50% surcharge (129% or more loss ratio).

Relativities Comparison

1. Appendix 2a: GLM for Major Class Relativities

This appendix provides an overview and technical description of the Generalized Linear Model (GLM) used for the major class relativities as described in *RC.4 Relativities – Territorial and Insurance Use*, ensuring transparency and a clear understanding of the methodologies and models used.

1. Model Overview

Manitoba Public Insurance (MPI) fully implemented GLMs to determine major class relativities for the 2027 General Rate Application (GRA). This appendix focuses on the GLM developed to determine the territory and insurance use relativities used to determine the Major Class 1 to 4 experience adjustments.

2. Objective

The objective of this model is to estimate loss costs for total losses, with serious losses removed, a serious loss loading applied, and adjustments for product changes as shown in *RC Appendix 3 Table 11 – Reported Loss and ALAE without Hail and with Credibility-Weighted Serious Loss Loading (Adjusted for Product Change impact)*. The model primarily aims to generate territory and insurance use relativities that will be used for determining the experience adjustments. The data used and the application of the resulting relativities is presented in *RC.4 Relativities – Territorial and Insurance Use*.

3. Data Description

3.1 Data Sources

- **Claims Database**: Detailed records of claims, including loss amounts and dates.
- **Policy Database**: Policy details such as territory and insurance use

The data used in the GLM is the same data as *RC Appendix 3 Table 11 - Reported Loss and ALAE without Hail and with Credibility-Weighted Serious Loss Loading (Adjusted for Product Change Impact)* for the adjusted claim costs and *RC Appendix 3 Table 12 - Earned Units* for the earned units.

3.2 Variables

The model variables incorporated into the GLM align with those used in prior GRAs, supporting consistency and facilitating comparison.

These variables include:

- **Territory:** Divided into four geographical rating territories plus an additional commuter territory.
- **Insurance Use:** Defined by the primary use of the vehicle.
- **Gross Vehicle Weight (GVW) (**Major Class 2 and 3 only)**:** Includes three classes defined by the weight of the vehicle plus an additional "No Code" weight class used for vehicles in Major Class 2 and 3 that are not differentiated by GVW.
- **Engine Displacement** (Major Class 4 only)**:** Defined by three engine size categories.

- **Body Style** (Major Class 4 only)**:** Defined by vehicle type and the primary body style of the vehicle.

For further detail see the relevant sections in the Risk Classification chapter.

In addition to the rating factors listed above, the GLM also incorporates accident year for exposure and claims data.

3.3 Data Preprocessing

MPI implemented the Compulsory and Extension Review Project (CERP), which expanded Basic coverage levels for policies purchased on or after April 1, 2021. As part of that initiative, loss cost data was adjusted for product changes related to Basic deductibles, Basic third-party liability (TPL), and Basic maximum insured value (MIV).

In the 2026 GRA, MPI increased its Basic Deductible from $750 to $1,000 for policies purchased on or after April 1, 2026. Likewise, loss cost data was further adjusted for the impact of Basic deductible changes.

For the 2027 GRA, MPI has also adjusted all non-PIPP loss costs to reflect the product change impact which was applied retroactively across the dataset to align modeled results with the coverage level proposed for the rating year. Specifically:

- For claims incurred prior to April 1, 2021, losses were adjusted from the deductible levels in effect at that time;

- For claims incurred between April 1, 2021 and March 31, 2026, losses were adjusted from the deductible implemented under CERP;

- All losses were normalized to reflect the impact of the$1,000 Basic deductible, regardless of the actual deductible in effect when the claim occurred.

This adjustment ensures that the GLM's predicted loss costs are consistent with the deductible level expected to be in place during the 2027/28 rating year.

4. Model Specification

Response Variable: The response variable for the model is the adjusted loss cost.

Explanatory Variables:

- Territory
- Insurance Use
- Accident Year
- GVW (Major Class 2 and 3 only)
- Engine Displacement and Body Style (Major Class 4 only)

Link Function: Log link function is used.

Distribution: Assumed distribution of the response variable is Tweedie, given its suitability for modeling insurance claim data that includes a mix of zero and non-zero values.

5. Model Fitting

Model Fitting Approach

MPI used Emblem to develop its GLM model, a purpose-built actuarial software for implementing GLM.

The model was fitted using maximum likelihood estimation (MLE). MLE is a standard statistical method that derives the set of parameters that best fit the observed data. The fitting process is iterative, meaning parameters are iteratively updated to improve the fit the convergence criteria is achieved.

Convergence Criterion

A convergence criterion of less than 0.01% was selected. This means successive iterations yield in a reduction of deviance by less than 0.01%.

6. Model Results

The parameter estimate details after fitting on the dataset are presented in *Appendix 2c - GLM Relativity Model Results*. The resulting Exp(Value) is the exponentiation of the coefficient value, representing the multiplicative effect on the response variable, the predicted loss cost.

With GLM, each categorical variable has a base level against which the other levels are compared. The Exp(Value) for the base level itself does not appear in the parameter estimates table; instead, all other levels are interpreted relative to this base. The base level itself carries an implicit Exp(value) of 1.000, since it is the benchmark against which all other levels are measured. For example, the Exp (value) of 1.15 for particular group is estimated to have a loss cost 15% higher than the base group, all else being equal.

6.1 Evaluating Coefficient Significance

The transparency of GLMs allows MPI to utilize various tools for model assessment and refinement. A key tool is the standard error (%), which provides insight into the significance and reliability of each variable's coefficient.

The standard error (%) values presented in *Appendix 2c - GLM Relativity Model Results Figure 22 to 25*can be classified into three categories:

- **Greater than 75%:** A high standard error % indicates a less reliable estimate. A high standard error compared to the estimated coefficient suggests that the estimates may result from random chance, rendering these variables statistically insignificant. Consequently, they do not meaningfully enhance the model's predictive power. Where possible, a potential refinement strategy could be to combine levels, creating broader and more stable categories.
- **50% to 75%:** The coefficients in this category require the use of other diagnostic tests and judgement to determine their value to the model.
- **Less than 50%:** A low standard error % indicates a statistically significant coefficient estimate. These variables are reliable predictors in the model.

Each variable or curve included in the model will have a standard error (%) to help determine its significance. Please refer to *Appendix 2c - GLM Relativities Model Results* for output results from MPI's GLM models.

Major Class 1

- **Accident Year (Parameter Numbers 2 through 5):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Vehicle Insurance Use (Parameter Numbers 6 through 19):** The model's standard errors (%) indicate that All Purpose Motorhome, Disabled Persons/Private/Business Bus, Fishing All Purpose Truck 4540 kg or less, and Passenger Vehicle-for-Hire (Truck 4,499 kg or less GVW), have coefficients that are not statistically credible. This is attributable to the very low exposure volumes for these categories.

- **Rating Territory (Parameter Numbers 20 through 23):** The high standard errors (%) for territories 3, 4 and 5 and estimated values close to the base level suggest limited predictive contribution.

Major Class 2

- **Accident Year (Parameter Numbers 2 through 5):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Vehicle Insurance Use (Parameter Numbers 6 through 26):** Many of these parameters have large standard errors, with standard error (%) exceeding 75%, reflecting low exposure and high variability. Insurance use types such as Dealer Moped, Dealer Motorcycle, Driveway Within Manitoba, and others contribute little credible information to the model. In some cases, such as Farming All Purpose Truck 4,541 kg or more, the high standard error reflects a coefficient very close to zero rather than low exposure, indicating that this use type does not have a meaningfully different loss cost profile from the base.

- **Rating Territory (Parameter Numbers 27 through 30):** The standard errors (%) for Rating Territory 1, 4, and 5 suggest their coefficients are statistically

significant. In contrast, territory 3 is not statistically significant with a high standard error.

- **GVW (Parameter Numbers 31 through 32):** To be consistent with the approach used in prior GLM models, MPI grouped 'No Code' with GVW 3, i.e., vehicles with gross vehicle weight >16,630 kg. This approach is standard practice to enhance parameter stability and reduce volatility. The model's standard error(%) for each level of this variable is low, that is, less than 50% and therefore have statistically significant coefficients.

Major Class 3

- **Accident Year (Parameter Numbers 2 through 5):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Vehicle Insurance Use (Parameter Numbers 6 through 19):** The model's standard errors (%) indicate that U-Drive Bus may require judgment or further investigation through other diagnostic tests to determine its value to the model. Charter Bus Local and U-Drive Motorhome, however, both have standard errors (%) above 75%, suggesting their coefficient estimates are not statistically significant. The standard errors (%) for all other uses indicate statistically significant coefficients.

- **Rating Territory (Parameter Numbers 20 through 22):** The model's standard errors (%) indicate that the rating territory coefficient estimates are statistically significant with a standard error (%) below 50%.

- **GVW (Parameter Numbers 20 through 22):** The model's standard errors (%) indicate that other than GVW 3, i.e., vehicles with gross vehicle weight

>16,630 kg, the GVW coefficient estimates are not statistically significant due to their high standard errors (%) above 75%.

Major Class 4

- **Body Style (Parameter Numbers 2 through 5):** The coefficient estimates for MOTSC & MOPED body style show high standard errors (%) above 75% and suggest they are not statistically significant and do not meaningfully contribute to the predictive power of the model.

- **Accident Year (Parameter Numbers 6 through 9):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Rating Territory (Parameter Numbers 10 through 13):** The standard error (%) for Rating Territory 1 and 3 suggest their coefficients are statistically significant. In contrast, territory 4 and 5 are not statistically significant with a high standard error, suggesting it does not significantly differ from the base level.

- **Engine Displacement (Parameter Numbers 14 through 15):** Each level of this variable has a standard error (%) below 50% suggesting each coefficient estimate is statistically significant.

- **Vehicle Insurance Use (Parameter Number 16):** The model's standard error (%) indicates that the coefficient estimate for All Purpose is statistically significant and contributes meaningfully to the model.

6.2 Intrinsic Aliasing

In GLMs, intrinsic aliasing arises when two variables are highly collinear, meaning one can be nearly or entirely predicted by the other, leading to redundant or unstable parameter estimates.

Major Class 2

The following insurance uses all correspond exclusively to the *No Code* level of GVW:

- Common Carrier Passenger Vehicle < 161 km in Manitoba
- Common Carrier Passenger Vehicle > 161 km in Manitoba
- Common Carrier Vehicle Local
- Dealer (all uses except Motorcycle)
- Dealer Moped
- Dealer Motorcycle
- Dealer Trailer
- Driveway > 161 km Outside Manitoba
- Driveway Within Manitoba
- Repairer

Because the Vehicle Insurance Use and GVW variables represent the same effect for these cases, their inclusion introduces intrinsic aliasing. To maintain model stability, MPI grouped the 'No Code' with the base level GVW 3 so that the exponentiated coefficient (Exp(Value)) of the aliased parameter is 1.000 — effectively treating it as a base level. MPI will monitor the effectiveness of this solution and may develop a more robust approach for future model iterations.

Major Class 3

The following insurance uses all correspond exclusively to GVW 1, 2 and 3:

- Police/Emergency Truck
- U-Drive Truck

Because the Vehicle Insurance Use and GVW variables represent the same effect for these cases, their inclusion introduces intrinsic aliasing. MPI acknowledges this is a simplifying assumption within the current model framework and plans to develop a more robust and data-driven approach in future model iterations.

7. Conclusion

This appendix presents the analysis underlying territory and classification relativities for Major Class 1 to 4 vehicles.

Appendix 2b:
GLM for Rate Line Relativities

This appendix provides an overview and technical description of the Generalized Linear Model (GLM) used for the rate line relativities as described in *RC.8 Rate Line Relativities*, ensuring transparency and a clear understanding of the methodologies and models used.

1. Model Overview

Manitoba Public Insurance fully implemented GLMs to determine rate line relativities for the 2027 General Rate Application (GRA). This appendix focuses on the GLM developed for rate line relativities for the list of vehicle types listed in *RC.8 Rate Line Relativities*.

2. Objective

The objective of this model is to estimate loss costs for non-Personal Injury Protection Plan (non-PIPP) claims. While the model generates loss cost predictions, the primary output used from this GLM is the vehicle rate group relativities, which are used for determining the rate line relativities.

3. Data Description

3.1 Data Sources

- **Claims Database**: Detailed records of claims, including loss amounts and dates.
- **Policy Database**: Policy details such as vehicle insurance use, vehicle rate group, territory, and Driver Safety Rating (DSR).

- **External Data**: Data from external sources include Canadian Loss Experience Automobile Rating (CLEAR) rate groups by coverage, which are used to determine the MPI vehicle rate groups.

3.2 Variables

These variables include:

- **Territory:** Divided into four geographical rating territories plus an additional commuter territory.

- **Insurance Use:** Defined by the primary use of the vehicle.

    - For heavy trucks, gross vehicle weight (GVW) is factored in as an additional differentiating criterion for selected use categories.

- **Vehicle Rate Group:**

    - For passenger vehicle and light truck, rate group is categorized based on a weighting of the CLEAR system. Preprocessing of this variable to support the proposed rate group expansion is described in *3.3 Data Preprocessing* of this appendix.

    - For bus, motorhome, motorcycle and trailer, rate group is categorized based on the declared value of the vehicle.

    - For heavy truck, rate group is categorized based on vehicle model year.

- **DSR level** (merit eligible vehicles only)**:** A merit-demerit system that adjusts premiums based on the driver's history of traffic convictions and at-fault claims.

- **Engine Displacement** (Motorcycle vehicle type only)**:** Categorized based on the engine size of the vehicle.

- **Body Style** (Motorcycle vehicle type only)**:** Defined by the vehicle type and primary body style of the vehicle.

For further details, refer to the relevant sections in *Part VII Risk Classification Chapter*.

In addition to the rating factors listed above, the GLM also incorporates accident year for exposure and claims data.

3.3 Data Preprocessing

Product Change Impact

MPI implemented the Compulsory and Extension Review Project (CERP), which expanded Basic coverage levels for policies purchased on or after April 1, 2021. As part of that initiative, loss cost data was adjusted for product changes related to Basic deductibles, Basic third-party liability (TPL), and Basic maximum insured value (MIV).

In the 2026 GRA, MPI increased its Basic Deductible from $750 to $1,000 for policies purchased on or after April 1, 2026. Likewise, loss cost data was further adjusted for the impact of Basic deductible changes.

For the 2027 GRA, MPI has also adjusted all non-PIPP loss costs to reflect the product change impacts, which was applied retroactively across the dataset to align modeled results with the coverage level proposed for the rating year. Specifically:

- For claims incurred prior to April 1, 2021, losses were adjusted from the deductible levels in effect at that time;

- For claims incurred between April 1, 2021 and December 31, 2025, losses were adjusted from the deductible implemented under CERP;

- All losses were normalized to reflect the impact of the $1,000 Basic deductible, regardless of the actual deductible in effect when the claim occurred.

This adjustment ensures that the GLM predicted loss costs are consistent with the deductible level expected to be in place during the 2027/28 rating year.

Vehicle Rate Group Reassignment

In addition to the adjustments to loss cost data, specific preprocessing was performed on the vehicle rate group variable to support the proposed expansion of rate groups. Historically, the analysis relied on the vehicle rate group assigned at policy inception, with values capped at 40 during the experience period.

To enable modeling under the expanded structure, historical vehicle rate groups were re-assigned based on the policy year, assigning a rate group based on the then-current CLEAR mapping, capped at a maximum rate group of 50, following the rate group expansion to 45 in the 2026 GRA. This ensured consistency between the historical experience data and the proposed rate group structure, enabling MPI to estimate relativities across the full range of proposed rate groups.

4. Model Specification

Response Variable: The response variable for the model is the non-PIPP loss cost.

Explanatory Variables:

- Territory
- Insurance Use
- Vehicle Rate Group
- Driver Safety Rating (DSR) (merit eligible vehicles only)
- Engine Displacement and Body Style (Motorcycle vehicle type only)
- Accident Year

Link Function: Log link function is used.

Distribution: Assumed distribution of the response variable is Tweedie, given its suitability for modeling insurance claim data that includes a mix of zero and non-zero values.

4.1 Offsets for DSR Discounts

For the 2027 GRA, DSR is modeled directly as an explanatory variable, following the same approach taken in 2026 GRA. This approach reflects the timing reality that proposed DSR discounts are typically finalized after the rate line relativity analysis. All DSR levels, both positive and negative, are treated as distinct categories without

curve fitting. This approach simplifies the modeling process while maintaining alignment with the current structure of MPI's risk classification framework.

5. Model Fitting

Model Fitting Approach

MPI used Emblem to develop its GLM model, a purpose-built actuarial software for implementing GLM.

The model was fitted using maximum likelihood estimation (MLE). MLE is a standard statistical method that derives the set of parameters that best fit the observed data. The fitting process is iterative, meaning parameters are iteratively updated to improve the fit the convergence criteria is achieved.

Convergence Criterion

A convergence criterion of less than 0.01% was selected. This means successive iterations yield in a reduction of deviance by less than 0.01%.

6. Model Validation

In keeping with the historical analyses, no data partitioning or holdout validation was performed for this model. Model validation focused on reviewing model output.

Model performance is assessed through:

- Inspection of fitted parameter estimates and standard errors, as presented in *7. Model results*;

- Graphical representation of vehicle rate group relativities, including standard error bands, to assess the stability and trend of the modeled values.

7. Model Results

The parameter estimate details after fitting on the dataset are presented in *Appendix 2c - GLM Relativity Model Results*. The resulting Exp(Value) is the exponentiation of the coefficient value, representing the multiplicative effect on the response variable, the predicted loss cost.

With GLM, each categorical variable has a base level against which the other levels are compared. The Exp(Value) for the base level itself does not appear in the parameter estimates table; instead, all other levels are interpreted relative to this base. The base level itself carries an implicit Exp(value) of 1.000, since it is the benchmark against which all other levels are measured. For example, the Exp (value) of 1.15 for particular group is estimated to have a loss cost 15% higher than the base group, all else being equal.

7.1 Evaluating Coefficient Significance

The transparency of GLMs allows MPI to utilize various tools for model assessment and refinement. A key tool is the standard error (%), which provides insight into the significance and reliability of each variable's coefficient.

While the vehicle rate group is the only variable from this model currently used for pricing, the inclusion and assessment of other variables is essential. These additional predictors allow the GLM to isolate the effect of rate groups while controlling for other risk factors. Evaluating their significance helps ensure model robustness and supports future refinement or expansion of GLM-based pricing.

The standard error (%) values presented in *Figure RC App 2c* can be classified into three categories:

- **Greater than 75%:** A high standard error % indicates a less reliable estimate. A high standard error compared to the estimated coefficient suggests that the estimates may result from random chance, rendering these variables statistically insignificant. Consequently, they do not meaningfully enhance the model's predictive power. A potential refinement strategy is to combine levels, creating broader and more stable categories.
- **50% to 75%:** The coefficients in this category require the use of other diagnostic tests and judgement to determine their value to the model.
- **Less than 50%:** A low standard error % indicates a statistically significant coefficient estimate. These variables are reliable predictors in the model.

Each variable or curve included in the model will have a standard error (%) to help determine its significance. Please refer to *Appendix 2c - GLM Relativities Model Results* for output results from MPI's GLM models.

Passenger Vehicle

- **Vehicle Insurance Use (Parameter Numbers 2 through 5):** The Farming All Purpose coefficient warrants further investigation due to its high standard error value, as it may not significantly contribute to the model's predictive accuracy.
- **Rating Territory (Parameter Numbers 6 through 9):** The standard errors (%) for Rating Territory 2, 3 and 4 suggest their coefficients are statistically significant. In contrast, territory 5 is not statistically significant with a high

standard error and a marginal predicted coefficient, suggesting it does not significantly differ from the base level.

- **DSR (Parameter Numbers 10 through 49):** While the model outputs a fitted relativity for each DSR level, these values are not used directly to set DSR discounts. Instead, a separate DSR analysis is conducted to develop the discount table that applies in practice. Please refer to *RC Appendix 6 – Driver Safety Rating Actuarial Review.*

  Some DSR levels, such as 16 and 17, exhibit high standard errors (%) (both greater than 75%), indicating limited credibility or minimal deviation from the base level. For example, DSR 16 has a predicted value of 0.9797 and DSR 17 has a value of 1.0260—both marginally different from the base of 1.0000. This suggests these levels do not meaningfully improve model fit and may not be statistically distinguishable from DSR 15.

  The inclusion of all DSR levels in the model allows the GLM to isolate vehicle rate group relativities net of any DSR effects.

- **Accident Year (Parameter Numbers 50 through 53):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Rate Group Curve (Parameter Numbers 54 through 55):** To avoid overfitting and to ensure a stable relationship for rating, MPI fits curves of appropriate power to the data. A power two curve is fit for the vehicle rate group. This curve is monotonically increasing and statistically significant.

Light Truck

- **Vehicle Insurance Use (Parameter Numbers 2 through 6):** These coefficients represent the effect of different vehicle insurance use codes on the loss cost. The model's standard errors (%) indicate that other than Collector Truck and Pleasure Truck, the vehicle insurance use coefficient estimates are not statistically significant due to their high standard errors (%) above 75%.

- **Rating Territory (Parameter Numbers 7 through 10):** The standard errors (%) for Rating Territory 1 and 5 suggest their coefficients are statistically significant. Conversely, territory 3 and 4 are not statistically significant with standard error (%) greater than 75%. This is further justified when looking at the EXP(Values) (predicted value) of Rating Territory 3 and 4. Territory 3 has a predicted value of 1.0126, which is marginally higher than the base at 1.0000. Territory 4 has a predicted value of 0.9366, which is marginally lower than the base at 1.0000.

- **DSR (Parameter Numbers 11 through 50):** The fitted DSR coefficients follow the expected decreasing pattern, while remaining statistically credible across the bulk of the range.
  Some DSR levels, such as 16, 17, 18 and 19, exhibit high standard errors (%) indicating limited credibility or minimal deviation from the base level. This suggests these levels do not meaningfully improve model fit and may not be statistically distinguishable from DSR 15.

- **Accident Year (Parameter Numbers 51 through 54):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Rate Group Curve (Parameter Numbers 55 through 56):** To be mindful of overfitting on variables with numerous levels, MPI fits a power two curve. This curve is monotonically increasing and statistically significant.

Motorhome

- **Rating Territory (Parameter Numbers 2 through 5):** The model's standard errors (%) indicate that other than Territory 1, the rating territory coefficient estimates are not statistically significant due to their high standard errors (%) above 75%.
- **Vehicle Insurance Use (Parameter Number 6):** The standard error (%) for Vehicle Insurance Use suggests their coefficients are not statistically significant and, therefore, do not contribute meaningfully to the predictive power of the model.
- **Accident Year (Parameter Numbers 7 through 13):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.
- **Rate Group Curve (Parameter Number 14):** To be mindful of overfitting on variables with numerous levels, MPI fits curves of appropriate power to the data. In the case of vehicle rate group number, a power one curve is fit. This fit is statistically significant and produces a curve that behaves in the way MPI expects for this variable, that is, the curve is monotonically increasing.

Heavy Truck

- **Rating Territory (Parameter Numbers 2 through 5):** The model's standard errors (%) indicate that the rating territory coefficient estimates are statistically significant with a standard error (%) below 50%.

- **Accident Year (Parameter Numbers 6 through 9):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Vehicle Insurance Use (Parameter Numbers 10 through 20):** Other than Medium Farm trucks, Other Truck and Tow Truck**,** the standard errors (%) for Vehicle Insurance Use suggest their coefficients are not statistically significant or, in the case of COMCA3 (Common Carrier Truck < 161 km in Manitoba) and Sand/Gravel Truck, may require the use of other diagnostic tests and judgement to determine its value to the model.

- **Rate Group Custom Factor (Parameter 21):** MPI rate groups for this vehicle type range from 1 to 17. To be consistent with the approach used in prior GLM models, the model has two groups. One group includes rate group 1, while the second group includes rate groups 2 through 17.

- **Rate Group Curve (Parameter Numbers 22 through 23):** To be mindful of overfitting variables with many levels, MPI fits curves of appropriate power to the data. For vehicle rate group number, a power two curve is fit for rate groups 2 through 17. While the power two term's standard error indicates it is less credible than the power one term, its inclusion improves the overprediction of loss costs for the highest rate groups and preserves the monotonically increasing shape.

Bus

- **Rating Territory (Parameter Numbers 2 through 4):** The model's standard errors (%) indicate that the rating territory coefficient estimates are statistically significant with a standard error (%) below 50%.

- **Accident Year (Parameter Numbers 5 through 13):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.
- **Vehicle Insurance Use (Parameter Numbers 14 through 17):** The model's standard errors (%) indicate that the vehicle insurance use coefficient estimates are statistically significant.
- **Rate Group Curve (Parameter Number 18):** To be mindful of overfitting on variables with numerous levels, MPI fits curves of appropriate power to the data. In the case of vehicle rate group number, a power one curve is fit for rate groups 0 to 17. This fit is statistically significant and produces a curve that behaves in the way MPI expects for this variable, that is, the curve is monotonically increasing.

Motorcycle and Moped

- **Rating Territory (Parameter Numbers 2 through 5):** The standard errors (%) for Rating Territory suggest that only Rating Territory 1's coefficient is a statistically significant predictor of loss cost for Motorcycle and Moped.
- **Vehicle Insurance Use (Parameter Number 6):** The standard error (%) for the All-Purpose category under Vehicle Insurance Use indicates that the coefficient may require the use of other diagnostic tests and judgement to determine its value to the model. Although the fitted relativity for All-Purpose is above the base level, the standard error suggests limited credibility. This is primarily due to a relatively low volume of exposure in the historical data, increasing the potential for random variation to influence the result rather than a meaningful cost signal.
- **Accident Year (Parameter Numbers 7 through 10):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.

- **Body Style (Parameter Numbers 11 through 14):** Other than the Sport and Touring body style, the other levels have high standard errors (%) and are therefore not statistically significant.

- **Engine Displacement (Parameter Numbers 15 through 16):** The model's standard errors (%) indicate that the engine displacement coefficient estimates are statistically significant with a standard error (%) below 50%.

- **DSR (Parameters 17 through 56):** The model indicates that the only statistically significant DSR levels are DSR level -20, -13, -12, -8, -4 to 1, 3, 4, 6 and 18. All other DSR level standard errors (%) are above 50%, indicating their coefficient estimates are statistically insignificant or may require the use of other statistical diagnostics to determine their value to the model.

- **Rate Group Curve (Parameter Numbers 57 through 58):** To be mindful of overfitting variables with many levels, MPI fits curves of appropriate power to the data. For vehicle rate group number, a power two curve is fit for rate groups 1 through 11. While the power two term's standard error indicates it is less credible than the power one term, its inclusion corrects the overprediction of loss costs for the highest rate groups and preserves the monotonically increasing shape.

Trailers

- **Rating Territory (Parameter Numbers 2 through 4):** The standard errors (%) for Rating Territory suggest that only Rating Territory 1's coefficient is a statistically significant predictor of loss cost for Trailers.

- **Accident Year (Parameter Numbers 5 through 8):** Although not directly used in MPI's rating algorithm, Accident Year is included in the model as a temporal variable. This is done to capture any trend or development effects.
- **Rate Group Custom Factor (Parameter Number 9):** MPI rate groups for this vehicle type range from 0 to 17. To be consistent with the approach used in the Minimum Bias Procedure, the model has two groups. One group includes rate group 0, while the second group includes rate groups 1 through 17.

- **Rate Group Curve (Parameter Number 10 through 12):** To be mindful of overfitting on variables with numerous levels, MPI fits curves of appropriate power to the data. In the case of vehicle rate group number for trailers, a power two curve is fit to rate groups 1 through 5, and a power one curve is fit to rate groups 6 through 17. This fit is statistically significant and produces curves that behave in the way MPI expects for this variable, that is, the curve is monotonically increasing.

7.2 Rate Group Relativity Plots

To support transparency and interpretation of the GLM results, MPI presents two sets of plots related to vehicle rate group relativities for each vehicle type.

The Fitted Relativities by Rate Group with ±2 Standard Error Bands plot for each vehicle type in *RC Appendix 2c* displays the GLM-fitted vehicle rate group relativities, calculated at the base level of all other rating variables (e.g., base territory, base insurance use, and base DSR, etc.). This isolates the effect of vehicle rate group on loss costs, consistent with standard GLM interpretation.

Each relativity is accompanied by bands representing plus and minus two standard errors, offering a visual indicator of estimation precision. Wider intervals reflect

greater uncertainty typically arising from lower exposure volumes or less credible claims experience.

The Average Fitted vs. Observed Loss Costs by Rate Group plot for each vehicle type in *RC Appendix 2c* compares the average fitted loss cost and average observed loss cost within each rate group, based on all exposures in the dataset. These values reflect the full range of risk characteristics associated with each group and provide a practical view of how well the model aligns with actual experience.

Together, these figures provide insight into both the modeled structure and the alignment between predicted and observed experience across vehicle rate groups.

8. Conclusion

While the model estimates loss costs for non-PIPP claims, the primary focus is on extracting vehicle rate group relativities to derive rate line relativities. Further, as this is the first year of full GLM implementation, MPI did not materially change the model fit presented in the 2026 GRA.

Appendix 5:
Motorcycle Body Style Definitions

Body Style Rating Category	Body Style	Description of Body Style
Touring Rating	Touring	A motorcycle that is designed and marketed for long distance travel. It includes such things as a large engine, high amounts of storage, including top trunks and saddlebags, reverse gears, onboard air compressors, large fairings and windshields and includes amenities like cruise control, stereo audio entertainment systems, citizen band communication systems, and heated seats and grips.
	Trike	A motorcycle that is similar to a touring motorcycle but that is equipped with two wheels at the back and one at the front. The usual layout of a trike is for the power to be delivered to one or both rear wheels, while the front is used for steering.
	3-Wheel Motorcycle	A motorcycle that is designed with a "Y" shaped chassis featuring two wheels at the front and one at the rear.
	3-Wheeled Vehicle	A three-wheeled vehicle with two front wheels, one rear wheel, a steering wheel, and two side-by-side seats.
	Standard Sidecar	A motorcycle that has attached to it a one wheeled sidecar.

Sport Rating	Sport	A fast, light, sleek motorcycle that is designed for maximum performance and maneuverability. It is distinguishable from other motorcycles by its full fairing and the rider's tipped-forward seating position.
	Naked Sport	A motorcycle with a design that is reduced to its basic form and stripped down to its fundamental parts. The front wheel is visible from the rider's position and the emphasis of the design is on functionality, performance and ergonomics, rather than on body panels and exaggerated riding positions that are emphasized for sport bikes. These motorcycles may also be marketed as "naked" or "street" bikes.
Sport Touring Rating	Sport Touring	A motorcycle that is designed and marketed as a hybrid between a sport and a touring motorcycle, that allows long-distance riding with more emphasis on sport-like performance in both handling and speed than a touring motorcycle.
	Adventure	A motorcycle that is designed and marketed as a combination sport, touring and off-road motorcycle. This body style is designed with the features of an on-road motorcycle capable of cruising on paved roads but also includes big tires, large fuel tanks and comfortable seats as well as high ground clearance in order that rough terrain may be traversed without difficulty.

Motorscooter Rating	Motor scooter	A motorscooter is a motorcycle with a step-through frame that generally has smaller wheels than those of a standard motorcycle. A person can ride a scooter without straddling any part of it.
	3-Wheel Scooter	A scooter that is designed to include a second independent front wheel that is used to increase ride stability.
Other Rating	Cruiser	A motorcycle that is designed with a low seat height, wider rear tire, raked front forks, and forward controls with the foot pegs way out in front as opposed to being straight down. The design emphasizes comfort and appearance with a relaxed upright seating position, and often includes an abundance of chrome.
	Dual Purpose	A motorcycle for both highway and off-road use, its design includes fenders and tires suitable for some off-road uses coupled with street safety requirements such as mirrors and turn signal indicators. An off-road motorcycle that has been modified to meet the requirements to be registered under *The Drivers and Vehicles Act* is included in this body style.
	Motard	A motorcycle that combines the design of a motocross and an enduro motorcycle. It is fitted with road racing tires while keeping the other features synonymous with off-road machines. These motorcycles are designed and

	marketed to compete over a racecourse that mixes road racing on tarmac with off-road sections.
Enduro	A motocross motorcycle that may be registered under *The Drivers and Vehicles Act* that features high ground clearance and increased suspension combined with minimal rider comforts. It is differentiated from a motocross motorcycle by the presence of silencers, flywheel weights and the features necessary for the on-road portion of enduro racing.
Other	A motorcycle that can be registered under *The Drivers and Vehicles Act* and does not have a body style that is included in the rating categories of Touring, Sport, Sport Touring, Motorscooter, and Other.
Standard	A motorcycle that is designed with a small rake and trail, and generally does not include accessories such as a windshield, saddlebags, trunk, or audio entertainment system.

Appendix 6: Driver Safety Rating Actuarial Review

1. Introduction

This document presents the results of the actuarial examination of the current Driver Safety Rating (DSR) model in support of the 2027 General Rate Application (GRA). Actuarially indicated relativities and the corresponding premium discounts for DSR levels from DSR +1 to DSR +20 were derived using the Minimum Bias methodology.

At present, DSR relativities have not been incorporated into the Generalized Linear Model (GLM), as their inclusion could result in significant dislocations for indicated discounts driven by model-based changes. Notwithstanding, MPI is actively evaluating enhancements to its modeling framework, including the potential integration of DSR relativities within the GLM. Further analysis and validation will be required to ensure that any such transition is implemented in a controlled and appropriate manner.

This appendix is divided into the following sections:

- Section 2. Data and Methodology - discusses the data and methodology used to determine the discounts on a registered owner basis.
- Section 3. Results and Implications – reviews the results and implications of the actuarial examination.
- Section 4. Additional Analysis – reported collision losses where driver was not registered owner and distribution of exposures by DSR level.
- Section 5. Transition Plan – presents the updated plan for full transition to the actuarially indicated discounts.

For a discussion related to the Basic Insurance Model, please refer to *Part III Basic Insurance Model Chapter, BAC.5.2*

2. Data and Methodology

2.1 Data

In the 2022 GRA, MPI proposed a five-year transition plan to expand the DSR scale to +20 merit levels by introducing one additional level annually. From the 2022 through 2027 GRAs, MPI has progressively implemented this transition, which included the addition of one DSR level each year until the DSR scale reached +20 merit levels.

In the 2022 and 2023 GRAs, MPI relied on actual experience data for the DSR levels to determine actuarially indicated discounts. As part of the transition plan introduced in the 2022 GRA, one additional DSR level was incorporated annually, with initial assumptions applying the same discount from the highest observed level to the highest new level where sufficient experience was not yet available.

Beginning with the 2024 GRA, MPI transitioned to a simulated approach to support the full +20 DSR scale. Drivers were assigned to DSR levels based on their observed driving history, reflecting both claims experience and other indicators of driving behaviour used in determining DSR progression. Advancement beyond DSR +15 requires a minimum of one year of experience at each successive level. To ensure sufficient experience at the higher DSR levels (in the 2024 GRA), the simulation incorporated historical driving data back to 2011. This approach reflects the cumulative nature of DSR progression, whereby movement to higher merit levels is predicted on sustained favourable driving behaviour over multiple years. In other words, for the 2024 GRA, MPI simulated DSR movements beginning in 2011 to enable drivers to reach DSR +20. This ensured five full years of claims experience (2016–2020) during which DSR levels were no longer limited by the previous +15 cap.

MPI has continued to apply this simulated framework in subsequent GRAs. Specifically, five years of simulated experience were used in each filing, with underlying accident year periods updated annually (2017-2021 for the 2025 GRA, 2018-2022 for the 2026 GRA, and 2019–2023 for 2027 GRA).

The data includes both exposures and claims related information for merit-eligible passenger vehicles and light trucks, which together represent approximately 97% of total merit-eligible vehicles. Certain vehicle types and insurance uses are excluded, which is discussed in *Section 2.2*.

Reported losses include allocated loss adjustment expenses as at March 31, 2026. The most recent two accident years (2024 and 2025) have been excluded from the analysis as PIPP claims for these periods have not developed sufficiently to assess lifetime exposure. Full lifetime exposure is assessed at 24 months, when sufficient information becomes available for this determination.

2.2 Excluded Data

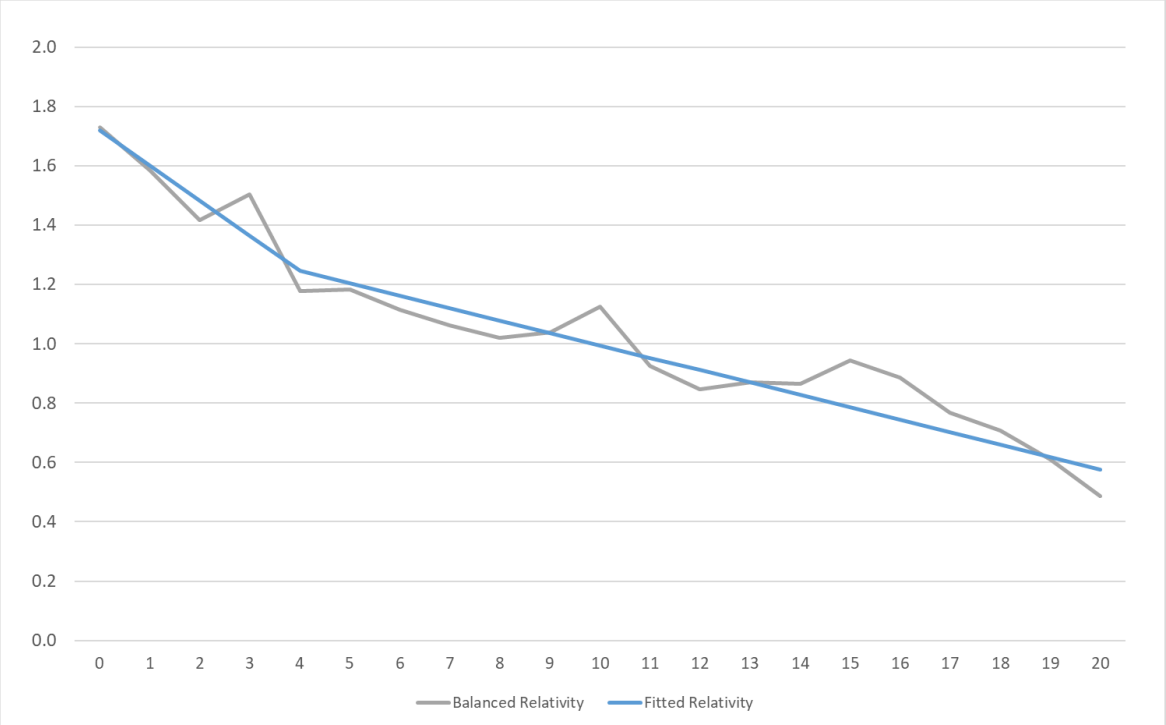
MPI did not use the data for merit-eligible motorcycles and merit-eligible motorhomes. These vehicle types are not considered 'typical' because they are insured by a small subset of Manitobans. Further, given their seasonal nature, these vehicle types do not reflect the same risk as vehicles that are used throughout the year. Finally, the riskiness of these vehicle types is different than the more general passenger vehicles and light trucks (e.g., there is a higher proportion of PIPP losses to total losses for motorcycles)[1].

[1] Please see response to CMMG (MPI) 1-14 and CMMG (MPI) 2-3 from 2023 GRA, which add further detail on this matter.

For merit-eligible passenger vehicles and light trucks, the actuarial examination focused on determining the discount for the non-seasonal vehicles only, i.e., excluding the seasonal vehicles specified above. To that extent, MPI only used the data for insurance uses in the Private Passenger major class and excluded the data for merit-eligible passenger vehicles and light trucks in the other major classes. This exclusion applies to the data for the following insurance uses:

- Accessible Vehicle-for-Hire
- Artisan Truck (Gross Vehicle Weight less than 16,331 kg)
- Common Carrier Local Passenger Vehicle
- Common Carrier Passenger Vehicle within 161 km in Manitoba
- Common Carrier Truck within 161 km in Manitoba
- Common Carrier Truck within city or municipality
- Limousine Vehicle-for-Hire
- Taxicab Vehicle-for-Hire

2.3 Methodology



Similar to the process for determining rate line relativities (see *Part VII Risk Classification Chapter RC.8 - Rate Line Relativities*), MPI organized the reported losses and earned units by territory, insurance use, rate group and the simulated registered owner DSR level to facilitate the process of minimum bias procedure[2] and determine the DSR level relativities.

The minimum bias procedure isolates the effect of DSR level on loss costs by adjusting for exposure correlations with other rating variables (i.e., territory, use and rate group). This procedure was used to determine DSR relativities for historical GRAs. In the 2027 GRA, MPI followed the same methodologyunder PUB Order 2/25

[2] Refer to https://www.casact.org/pubs/forum/02fforum/02ff591.pdf for a detailed discussion of the minimum bias procedure.

Directive 13, by fitting two contiguous straight-lines from DSR 0 to +20, with the point of slope change being DSR +4. The slope for the 2027 GRA was optimized to achieve the best possible goodness-of-fit to the observed data. This is measured by the weighted R-squared value of 93.6%, with weights based on driver units. *Figure RC App 6-1* below shows the fitted curves.

Figure RC App 6-1 DSR Level Relativities

MPI calculated the average loss costs for each DSR level using the fitted relativity:

*Average Loss Cost for DSR Level j = Fitted Relativity at DSR Level j * Average Loss Cost*

MPI then determined the average premium for each DSR level:

Average Premium for DSR Level j = (Average Loss Cost for DSR Level j + Average Fixed Expenses) / (1 – Commission – Premium Tax)

Finally, MPI determined the overall DSR level relativities for each DSR level:

Overall DSR Level Relativity for DSR Level j = Average Premium for DSR Level j / Overall Average Premium All DSR levels; where

Overall Average Premium for all DSR Levels = (Overall Average Loss Cost + Average Fixed Expenses) / (1 – Commission – Premium Tax)

Figure RC App 6-2 below presents the derivation of the overall DSR level relativities for DSR levels 0 to +20.

Figure RC App 6-2 Overall Relativities by DSR Level

Line No.	DSR	Fitted Relativity	Loss Cost	Fixed Expenses	Variable Expenses	Total Premium	Overall Relativity

24 Amounts for Private Passenger

25 Amounts for 'Colli, Comp, PD and BI' and 'PIPP' include claims costs and expenses

26 Amount for 'Other Loss Cost and Exp' includes the following:

27 Fixed expenses - operating expenses, regulatory/appeal, road safety, commission flat fees, fleet rebates,

28 anti-theft discount, reinsurance

29 Variable expenses - premium taxes and commissions on driver premiums

3. Results and Implications

Figure RC App 6-3 presents the indicated, PUB directed discounts for each DSR level from +1 to +20, along with the variance between them, based on the overall DSR level relativities shown in *Figure RC App 6-2*. MPI calculated indicated discounts by comparing each DSR level relativity to DSR level 0 (i.e., the base DSR level).

Figure RC App 6-3 Indicated and PUB Directed Discounts

Line No.	DSR	Overall Relativity	Indicated Discount (a)	PUB Directed Discount	Variance

21	**0**	1.7850	0.00%	0.00%	0.00%

Notes:

(a) 1 - Overall Relativity for the respective DSR level / Overall Relativity for DSR level 0

The DSR discount is applied at the vehicle level based on the DSR level of the registered owner.

MPI has not presented surcharges derived from the overall relativities in *Figure RC APP 6-3*, as these would not appropriately reflect the risk associated with negative DSR levels in situations where the driver and registered owner differ. In some circumstances, it is possible that the DSR level of the primary driver may be lower than the registered owner to allow for and benefit from a higher premium discount.

Conversely, it is also possible that the primary driver's DSR level is higher than the registered owner's, which would result in a higher premium.

Given reliance on the registered owner's DSR level to determine the discount and the limitations of the available data, it is not possible for a more accurate examination of the DSR surcharges based on the driver-level risk where the driver and the registered owner are not the same.

To comply with Directive 10 from PUB Order 156/25 (2026 GRA), MPI moved all DSR discounts one-half of their way to the actuarially indicated discounts, rounded down to the nearest whole percentage.

The table below shows the derivation from the indicated rate to the proposed discounts by DSR level:

Figure RC App 6- 4 Indicated to Proposed Discounts by DSR Level

Line No.	DSR	Overall Relativity	Rounded Discount	Current Discount	Proposed Discount	Estimated Net Premium Change
1	**20**	0.6732	62.00%	53.00%	57.00%	-3.43%
2	**19**	0.7139	60.00%	53.00%	56.00%	-1.18%
3	**18**	0.7546	58.00%	52.00%	54.00%	1.16%
4	**17**	0.7953	55.00%	50.00%	52.00%	1.34%
5	**16**	0.8360	53.00%	49.00%	51.00%	1.42%
6	**15**	0.8767	51.00%	47.00%	48.00%	3.57%
7	**14**	0.9174	49.00%	43.00%	45.00%	1.85%
8	**13**	0.9581	46.00%	41.00%	43.00%	1.98%
9	**12**	0.9988	44.00%	40.00%	42.00%	2.04%
10	**11**	1.0395	42.00%	37.00%	39.00%	2.21%
11	**10**	1.0802	39.00%	35.00%	37.00%	2.31%
12	**9**	1.1209	37.00%	33.00%	35.00%	2.41%
13	**8**	1.1616	35.00%	30.00%	32.00%	2.54%
14	**7**	1.2023	33.00%	29.00%	30.00%	4.07%
15	**6**	1.2430	30.00%	26.00%	28.00%	2.71%
16	**5**	1.2837	28.00%	22.00%	25.00%	1.50%
17	**4**	1.3244	26.00%	20.00%	22.00%	2.92%
18	**3**	1.4395	19.00%	15.00%	17.00%	3.07%
19	**2**	1.5547	13.00%	11.00%	11.00%	5.56%
20	**1**	1.6698	6.00%	5.00%	5.00%	5.56%
21	**0**	1.7850	0.00%	0.00%	0.00%	5.56%

The consequent deficiency in premiums caused by the higher proposed discounts is offset by a concurrent increase in the vehicle premiums, to maintain revenue neutrality. The estimated net premium change is the combined impact from the change in DSR discounts and the vehicle premium offset. The overall offset applied to vehicle premiums to balance the reduction in revenue from DSR discounts is 3.01%. Please refer to *Part VII Rate Indication Chapter RI.5* for further discussion on the adjustments made to each major class to off-balance the reduction in revenue from the PUB ordered DSR adjustments.

4. Additional Analysis

4.1 Reported Collision Losses Where Driver Does Not Equal Registered Owner

In 2022 GRA, MPI conducted an analysis and reported that, for collision losses where the driver could be identified, 33% of reported losses were attributable to claims involving drivers who were not the registered owners of the vehicles.

In 2027 GRA, the analysis was updated using data from the three most recent accident years (AY 2023–2025), as at March 31, 2026. As shown in *Figure RC App 6-5* below, for collision losses where the driver could be identified, 34% of reported losses were attributable to claims involving drivers who were not the registered owners of the vehicles, i.e., no material changes from the prior analysis.

Figure RC App 6-5 Reported Collision Losses Where Driver Does Not Equal Registered Owner

4.2 Number of Policy by DSR by Major Class

Figure RC App 6-6 below shows the distribution of exposures at each DSR level for each Major Class. The distribution is based on the 2027/28 rate model population, for most vehicles, as at November 1, 2025 (for more details on the 2027/28 rate model population, please refer to *DR.1)*, therefore, DSR +20 are not shown in the figure. Further, not all policies as at November 1, 2025 have gone through the 2025 renewal process (i.e., DSR +19 is understated).

5. Transition Plan

Absent exceptional circumstances, MPI will comply with the PUB Directive by transitioning to the actuarially indicated DSR discounts in the 2028 GRA, rounded down to the nearest whole number. To achieve the targeted overall rate change, offsets to vehicle premiums are again expected to compensate for the associated loss of revenue.

Appendix 7:
Risk Classification Territories

Territory 1

Territory 1 includes the City of Winnipeg, including the following areas and municipalities: East Kildonan, West Kildonan, St. Boniface, St. James-Assiniboia, Transcona, St. Vital, Headingley, Tuxedo, Charleswood, North Kildonan, Old Kildonan, Fort Garry, St. Norbert, East St. Paul, West St. Paul.

Territory 2

Territory 2 includes the cities of Brandon, Portage la Prairie, and the remainder of Manitoba south of the 53rd parallel that is, not included in Territory 1, including the following municipalities which border Territory 1: Springfield, Rockwood, Cartier, Tache, Rosser, Macdonald, St. Clements, Ritchot, St. Andrews, St. Francois Xavier.

Territory 3

Territory 3 includes all of Manitoba north of the 55th parallel; e.g., Thompson, Lynn Lake, Churchill, Gillam.

Territory 4

Territory 4 is the area of Manitoba between the 53rd and 55th parallels; e.g., The Pas, Flin Flon, Grand Rapids, Oxford House.

Commuter (Territory 5)

The Commuter group is applied to a vehicle where the registered owner's permanent address is in Territory 2, and the vehicle is used to drive to work or school, or part way to work or school, in Territory 1. The vehicle is used for this purpose more than four days a month. A commuter rate is charged provided the vehicle is insured for any of the following insurance uses:

- All Purpose Motorcycle
    - Motorscooter Rating
    - Other Rating
    - Sport Rating
    - Touring Rating
    - Sport Touring Rating
- All Purpose Motorhome
- All Purpose Passenger Vehicle
- All Purpose Truck
- Artisan Truck (up to 16,330 kg)
- Farming All Purpose Truck (up to 4,540 kg GVW) *
- Fishing All Purpose Truck (up to 4,540 kg GVW) *
- Other Truck (up to 16,330 kg)
- Passenger Vehicle-for-Hire (Passenger Vehicle)
- Passenger Vehicle-for-Hire (Truck 4,499 kg or less GVW)

* 4,540 kg GVW or less; or a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, sport utility or service truck, regardless of weight.

Appendix 8:
Risk Classification Insurance Use Definitions by Name

Insurance Use	Description
Accessible Vehicle-for-Hire	A vehicle for hire that is a passenger vehicle which is equipped with a wheelchair ramp or lift and operated for the transportation of persons who use a wheelchair or mobility aid, motorized or otherwise, and their escorts, but does not include vehicles owned or operated by or on behalf of a municipality to provide public transportation services. Eligible for vehicle premium discount.
All Purpose Moped	A moped as defined in *The Highway Traffic Act* (an engine displacement of 50 cc or less or an electric motor, neither of which is capable of attaining a speed greater than 50 km/hour) that is used for driving to or from or part way to or from work or school, or is used in connection with a business, trade, or occupation. Eligible for vehicle premium discount.
All Purpose Motorcycle (Refer to the motorcycle body style definitions in Appendix 5)	A motorcycle, as defined in *The Highway Traffic Act* (capable of attaining a speed of 50 km/hour or more) is used for driving to or from or part way to or from work or school, or is used in connection with a business, trade, or occupation. Eligible for vehicle premium discount.
All Purpose Motorhome	A motorhome as defined in *The Highway Traffic Act* used for driving to or from or part way to or from work or school, or used in connection with a business, trade, or occupation. Eligible for vehicle premium discount.
All Purpose Passenger Vehicle	A private passenger vehicle used for driving to or from or part way to or from work or school, or used in connection with a business, trade, or occupation (Excludes Common Carrier Local Passenger Vehicle).

Insurance Use	Description
	Eligible for vehicle premium discount.
All Purpose Trailer $2,500 or less	A trailer with a declared value of not more than $2,500. All uses allowed.
All Purpose Trailer $2,501 or more	A trailer with a declared value of more than $2,500. All uses allowed.
All Purpose Truck	A truck with a gross vehicle weight (GVW) of not more than 4,540 kg that (a) is driven to or from or part way to or from school or work; or (b) is used as an artisan truck (tradesperson, gardener, greenhouse operator, horticulturist) or as an Other Truck (no other specified insurance use) and has a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck, or sport utility; or (c) is used for business purposes other than specified in (b) above for no more than 1,609 km during a rating term. Eligible for vehicle premium discount.
Antique Vehicle	A vehicle not less than 30 years old. Can only be driven when taking it to be repaired or serviced; or taking it to or from or displaying it in a parade, procession, or rally authorized by the Registrar.
Artisan Truck	A truck with a GVW in excess of 4,540 kg or with a body style other than chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck, or sport utility that is used by a tradesperson, gardener, greenhouse operator or horticulturist for carrying tools, materials, and equipment used in their trade. Eligible for vehicle premium discount if GVW less than 16,331 kg.
Cement/Brick/Exploration Truck	A truck with a GVW of 10,891 kg or more used to carry cement, building blocks, bricks, or drilling/exploration/seismographic equipment.

Insurance Use	Description
Charter Bus – Local	A bus hired by a group on a flat fee basis for their collective transportation to, from, or to and from any locality, or a stretch limousine or other specialized passenger vehicle that is designed to conventionally seat 11 or more persons, including the driver, that is operated for the transportation for gain or compensation as a limousine service, including sightseeing tours.
Collector Passenger Vehicle	A private passenger vehicle that has a value of at least $5,000, is a model year at least 25 years less the current model year for private passenger vehicles, and (a) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (b) is not used for a business, trade or occupation. Eligible for vehicle premium discount.
Collector Truck	A truck with a GVW of 4,540 kg or less that has a value of at least $5,000, is a model year at least 25 years less the current model year for trucks, and (a) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (b) is not used for a business, trade or occupation. Eligible for vehicle premium discount.
Common Carrier Bus – Over 161 km outside MB	A bus used for regular schedules and charters extra-provincially. Personal Injury Protection Plan only with coverage subject to non-residency restrictions.
Common Carrier Bus - Within MB	A bus used for regular schedules and charters within Manitoba.

Insurance Use	Description
Common Carrier Local Passenger Vehicle	A passenger vehicle used more than four days in one month or more than 1,609 km during a rating term by a courier or common carrier within a city or municipality, or for any other delivery purpose in connection with a business, trade or occupation, but does not include a public service vehicle. Eligible for vehicle premium discount.
Common Carrier Passenger Vehicle - Over 161 km in MB	A passenger vehicle registered as a public service vehicle used to carry the goods of others, over 161 km in Manitoba only.
Common Carrier Passenger Vehicle - Within 161 km in MB	A passenger vehicle registered as a public service vehicle used to carry the goods of others, within 161 km in Manitoba only. Eligible for vehicle premium discount.
Common Carrier Truck (Local – Within City or Municipality)	A truck used to carry the goods of more than one contractee within city or municipal limits. Eligible for vehicle premium discount.
Common Carrier Truck - Over 161 km in MB	A truck registered as a public service vehicle used to carry the goods of others, over 161 km in Manitoba only.
Common Carrier Truck - Within 161 km in MB	A truck registered as a public service vehicle used to carry the goods of others, within 161 km in Manitoba only. Eligible for vehicle premium discount.
Common/Private/Contract Passenger Vehicle - Over 161 km outside MB	A passenger vehicle registered as a public service vehicle operating extra-provincially in excess of 161 km of the Manitoba border. Personal Injury Protection Plan only with coverage subject to non-residency restrictions.
Common/Private/Contract Truck - Over 161 km outside MB	A truck registered as a public service vehicle operating extra-provincially in excess of 161 km of the Manitoba border. Personal Injury Protection Plan only with coverage subject to non-residency restrictions.

Insurance Use	Description
Dealer All Uses Except Motorcycles	A passenger vehicle, truck, motorhome or bus owned or in the possession of a Dealer. Includes mopeds and trailers but excludes motorcycles.
Dealer Moped	A moped owned or in the possession of a Dealer. Excludes motorcycles.
Dealer Motorcycle	A motorcycle owned or in the possession of a Dealer.
Dealer Trailer	A trailer owned or in the possession of a Dealer.
Disabled Persons/Private/ Business Bus	A bus (excluding a charter bus, common carrier bus, transit bus, school bus or u-drive bus) used (a) for the transportation of disabled persons with or without gain or compensation; (b) for commercial wheelchair transportation to carry persons seated in a wheelchair or mobility aid, motorized or otherwise, and their escorts for gain or compensation; (c) a private bus; (d) in connection with a business, trade or occupation without direct compensation.
Driveaway Over 161 km outside Manitoba	A vehicle operated as a Driveaway extra-provincially in excess of 161 km of the Manitoba border. Personal Injury Protection Plan only with coverage subject to non-residency restrictions.
Driveaway Within Manitoba	A vehicle operated as a Driveaway within Manitoba.

Insurance Use	Description
Farm Passenger Vehicle	A private passenger vehicle that (a) is used by a person who lives on a farm; and (b) is used by a person engaged in farming operations for not less than 720 hours cumulative in each rating term or is retired from farming; and (c) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (d) is not used for a business, trade or occupation other than farming for more than four days in one month or more than 1,609 km during a rating term. Eligible for vehicle premium discount.
Farming All Purpose Truck	A truck registered to a farmer as defined in *The Highway Traffic Act* and used for farming operations. Eligible for vehicle premium discount if GVW is less than 4,541 kg or if a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility, regardless of weight.
Fishing All Purpose Truck	A truck used primarily for the purpose of commercial fishing. Eligible for vehicle premium discount if GVW is less than 4,541 kg or if a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility, regardless of weight.
Funeral Passenger Vehicle	A passenger vehicle or hearse with operations restricted to funeral use.
Limousine Vehicle-for-Hire	A vehicle for hire that is a passenger vehicle having an extended wheelbase or is designed by the manufacturer as a luxury or specialized passenger vehicle and is operated for hire by a limousine or private car service, including sightseeing tours, but is not equipped with a taximeter. Eligible for vehicle premium discount.

Insurance Use	Description
Logging Truck	A truck used to transport logs, pulpwood, shavings, rough lumber and ties.
Off-Road Vehicle All Purpose	A wheeled or tracked motorized vehicle designed or adapted for off-road use, not including a golf cart or agricultural, construction or landscaping equipment. Includes the following vehicle types – all-terrain vehicle, motorcycle, snow vehicle and snowmobile. Third party liability and underinsured motorist coverage only.
Other Truck	A truck used for a business for which there is no other specified insurance use and (a) has a GVW of 4,540 kg or less and is **not** one of the following body styles: chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility; or (b) has a GVW of 4,541 kg or more. Or a non-business truck with a GVW of 4,541 kg or more.
Passenger Vehicle-for-Hire (Passenger Vehicle)	A vehicle for hire that is a passenger vehicle and is not an accessible vehicle-for-hire, a limousine vehicle-for-hire or a taxicab vehicle-for-hire or a vehicle owned or operated by or on behalf of a municipality to provide public transportation services. Eligible for vehicle premium discount.
Passenger Vehicle-for-Hire (Truck with 4,499 kg or less GVW)	A vehicle for hire that is a truck with gross vehicle weight of 4,499 kg or less and a body style of chassis mounted camper, crew cab, crew cab service truck, extended cab, extended cab service truck, light delivery, light pickup, panel van, service truck or sport utility. Eligible for vehicle premium discount.
Petroleum/Chemical Truck	A truck used to transport gasoline, oil, propane or other petroleum or chemical products or used to transport explosives or radioactive material.

Insurance Use	Description
Pleasure Moped	A moped as defined in *The Highway Traffic Act* (an engine displacement of 50 cc or less or an electric motor neither of which is capable of attaining a speed greater than 50 km/hour) that (a) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (b) is not used in connection with a business, trade or occupation. Eligible for vehicle premium discount.
Pleasure Motorcycle (Refer to the motorcycle body style definitions in Appendix 5)	A motorcycle as defined in *The Highway Traffic Act* (capable of attaining a speed of 50 km/hour or more) that (a) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (b) is not used in connection with a business, trade or occupation. Eligible for vehicle premium discount.
Pleasure Motorhome	A motorhome as defined under *The Highway Traffic Act* that (a) is not driven to or from or part way to or from work or school, more than four days in one month or more than 1,609 km during a rating term; and (b) is not used for a business, trade or occupation. Eligible for vehicle premium discount.
Pleasure Passenger Vehicle	A private passenger vehicle that (a) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (b) is not used for a business, trade or occupation. Eligible for vehicle premium discount.
Pleasure Truck	A truck with a GVW of 4,540 kg or less that (a) is not driven to or from or part way to or from work or school more than four days in one month or more than 1,609 km during a rating term; and (b) is not used for a business, trade or occupation. Eligible for vehicle premium discount.

Insurance Use	Description
Police/Emergency Passenger Vehicle (includes Ambulance)	A passenger vehicle used by a police force, fire department or ambulance service or used as an authorized emergency vehicle as defined under *The Highway Traffic Act*.
Police/Emergency Truck	A truck used by a police force, fire department or ambulance service or used as an authorized emergency vehicle as defined under *The Highway Traffic Act*.
Repairer	A vehicle in the custody of a repairer for the purpose of testing or servicing.
Sand/Gravel Truck	A truck with a GVW of 10,891 or more used to transport sand, gravel, stone, asphalt or reduced minerals.
School Bus	A bus used by a school, hospital, institution or non-profit organization.
Taxicab Vehicle-for-Hire	A vehicle for hire that is a passenger vehicle equipped with a taximeter. Eligible for vehicle premium discount.
Tow Truck	A truck with body style tow, excluding such vehicles used extra-provincially.
Transit Bus	A public transit bus.
U-Drive Bus	A bus leased for 30 days or less or operated as a U-Drive.
U-Drive Moped	A moped leased for 30 days or less or operated as a U-Drive.
U-Drive Motorhome	A motorhome leased for 30 days or less or operated as a U-Drive.

Insurance Use	Description
U-Drive Passenger Vehicle	A passenger vehicle leased for 30 days or less or operated as a U-Drive. Includes a courtesy vehicle supplied by a body shop or garage for a rental fee.
U-Drive Truck	A truck leased for 30 days or less or operated as a U-Drive. Includes a courtesy truck supplied by a body shop or garage for a rental fee.

Appendix 9:
Risk Classification Major Insurance Classes

MAJOR CLASS: PRIVATE PASSENGER VEHICLES

- All Purpose Motorhome
- All Purpose Passenger Vehicle
- All Purpose Truck
- Antique Vehicle
- Collector Passenger Vehicle
- Collector Truck
- Disabled Persons/Private/Business Bus
- Farm Passenger Vehicle
- Farming All Purpose Truck - 4,540 kg or less
- Fishing All Purpose Truck - 4,540 kg or less
- Passenger Vehicle-for-Hire (Passenger Vehicle)
- Passenger Vehicle-for-Hire (Truck 4,499 kg or less GVW)
- Pleasure Motorhome
- Pleasure Passenger Vehicle
- Pleasure Truck

MAJOR CLASS: COMMERCIAL VEHICLES

- Artisan Truck
- Cement/Brick/Exploration Truck
- Common/Private/Contract Passenger Vehicle - Over 161 km outside Manitoba
- Common/Private/Contract Truck - Over 161 km outside Manitoba
- Common Carrier Local Passenger Vehicle
- Common Carrier Passenger Vehicle - Within 161 km in Manitoba

MAJOR CLASS: COMMERCIAL VEHICLES (*cont'd)*

- Common Carrier Passenger Vehicle - Over 161 km in Manitoba
- Common Carrier Truck (Local – Within city or municipality)
- Common Carrier Truck - Over 161 km in Manitoba
- Common Carrier Truck - Within 161 km in Manitoba
- Dealer All Uses - Except Motorcycle
- Dealer Moped
- Dealer Motorcycle
- Dealer Trailer
- Driveaway - Over 161 km outside Manitoba
- Driveaway - Within Manitoba
- Farming All Purpose Truck Over 4,540 kg
- Fishing All Purpose Truck Over 4,540 kg
- Logging Truck
- Other Truck
- Petroleum/Chemical Truck
- Repairer All Uses
- Sand/Gravel Truck
- Tow Truck

MAJOR CLASS: PUBLIC VEHICLES

- Accessible Vehicle-for-Hire
- Charter Bus – Local
- Common Carrier Bus Over 161 km outside Manitoba
- Common Carrier Bus Within Manitoba
- Funeral Passenger Vehicle
- Limousine Vehicle-for-Hire

MAJOR CLASS: PUBLIC VEHICLES *(cont'd)*

- Police/Emergency Passenger Vehicle (includes Ambulance)
- Police/Emergency Truck
- School Bus
- Taxi Vehicle-for-Hire
- Transit Bus
- U-Drive Bus
- U-Drive Moped
- U-Drive Motorhome
- U-Drive Passenger Vehicle
- U-Drive Truck

MAJOR CLASS: MOTORCYCLES

- All Purpose Moped
- All Purpose Motorcycle
  - Motorscooter Rating
  - Other Rating
  - Sport Rating
  - Sport Touring Rating
  - Touring Rating
- Pleasure Moped
- Pleasure Motorcycle
  - Motorscooter Rating
  - Other Rating
  - Sport Rating
  - Sport Touring Rating
  - Touring Rating

MAJOR CLASS: TRAILERS

- All Purpose Trailer – Value up to $2,500
- All Purpose Trailer – Value $2,501 – $70,000

MAJOR CLASS: OFF-ROAD VEHICLES

- Off-Road Vehicle – All-Terrain Vehicle
- Off-Road Vehicle – Motorcycle
- Off-Road Vehicle – Snow Vehicle
- Off-Road Vehicle – Snowmobile

Dislocation Reports

DR.1 Rate Model Overview

Manitoba Public Insurance (MPI) simulates the impacts of adjustments to vehicle premiums using a rate model. The model analyzes the combined impact on premiums resulting from base rate, relativity and classification changes (such as changes to rate group assignment). The 2027/28 rate modeling process considered the impact on a vehicle population of 1,323,135 vehicles.

The rate model uses the population of vehicles in Manitoba at a point in time. MPI selected this period (consistent with prior GRAs) to capture the greatest number of registered vehicles. With the exception of the following seasonally used vehicles, MPI used the population of registered vehicles in Manitoba as it stood on November 1, 2025:

- Snowmobiles and snow vehicles as of January 1, 2026; and
- Motorhomes, motorcycles, mopeds, trailers and off-road vehicles (except for snowmobiles and snow vehicles) as of August 1, 2025.

The dislocation analysis is performed on the static population of registered vehicles as of November 1, 2025. As a result, it does not reflect the impact of Driver Safety Rating (DSR) Scale merit levels added after this date, specifically DSR +20, which was introduced in the 2026 General Rate Application (GRA). Consequently, the dislocation analysis does not capture the effects of vehicles moving into this new level and receiving the associated increase in vehicle premium discounts.

For the Basic line of business, MPI uses the following four rating classifications:

1. rating territories;
2. insurance uses;
3. vehicle rating factors; and
4. driving records.

The impact of any changes to rates or risk classification relativities change is determined by applying them both to the rate model. MPI applies rate group assignment and rate line changes to the rate model one at a time to ensure revenue neutrality. For the 2027/28 rating year, MPI applied the following changes:

- rate group changes for Canadian Loss Experience Automobile Rating (CLEAR) rated passenger vehicles and light trucks (refer to *Part VII Risk Classification Chapter, section RC.6* for further details on how rate groups are assigned to CLEAR rated vehicles);
- rate group changes for heavy trucks and heavy-rated–as-light trucks;
- rate group changes for motorcycles, mopeds, motorhomes, trailers and buses; and
- rate line changes for passenger vehicles, light trucks, heavy trucks, motorcycles, mopeds, motorhomes, trailers, and buses.

Rate group changes refer to changes based on the vehicle's specification (make, model year, declared value, etc.). Rate line changes refer to modifications in the relative differences between the established rate groups; determined from MPI's Generalized Linear Model techniques presented in *Part VII RC Appendix 2b - GLM Rate Line Relativities.*

In the 2026 GRA, MPI proposes expanding CLEAR rate groups from +45 to +50, with a +2 cap applied to existing vehicles. Unlike previous expansions, MPI has not estimated the associated revenue impact. Due to the +2 cap and the current mix of business, the highest effective rate group in the model remains +45. As a result, the financial impact of the expansion is uncertain, as it depends on future new vehicle purchases and their assignment to the new rate groups. Accordingly, no impact has been included in the overall rate indication.

For further information on the rate group classification and rate line relativity changes for 2027/28 and their impact on the vehicle population in the rate model, refer to *Part VII Risk Classification Chapter*. After MPI applies all classification and relativity changes, it applies experience adjustments to produce the overall revenue change. Experience adjustments represent the revenue changes required for each individual classification group (e.g., All Purpose Passenger Vehicles in Territory 1).

MPI adjusts rates to maintain relative ranking rules between vehicle classifications and to ensure compliance with the capping of rate changes as per rules approved by the Public Utilities Board.

DR.2 Experience Adjustments

DR Appendix 1 – 2027 Experience Rate Adjustments presents the experience rate adjustments applied to each risk classification.

DR.2.1 Rules

1. If the indicated increase or decrease is 10% or less, set the initial estimate of the experience adjustment as the amount of the indicator.

2. If the indicated increase or decrease is greater than 10%, set the initial estimate of the experience adjustment as 10%, plus one-third the difference between the indicated increase or decrease and 10%, to a maximum of an additional 5%.

3. From adjustment (2) above, if the indicated decrease is 25% or more, the initial estimate of the experience adjustment is capped at 15%. Similarly, if the indicated increase is 25% or more, the adjustment is capped at 15%.

4. Since adjustment (3) above limits the maximum experience adjustment to 15%, the rate adjustment is balanced to arrive at the same overall revenue as if the indicated increase or decrease had been applied. The 15% maximum increase or decrease still applies.

The above rules apply with exceptions for the Motorcycles major class. The above rules do not apply to the U-drive Moped insurance use in Territories 2, 3, and 4. A detailed explanation of the exceptions made to the above rules is below.

DR.2.2 Exceptions

For the Motorcycles major class, MPI made the following modifications:

- Mopeds and motorcycles with a Motorscooter body style and an engine displacement less than or equal to 500 cc's were rated together. The initial estimates of the experience adjustments, by territory and use (all purpose and pleasure), are based on the weighted averages of the indicated changes. The rules above continue to apply. This maintains the synchronization of rates for these vehicles as in last year's rate application.

- The initial estimates of the experience adjustments for motorcycles in the middle engine displacement (ED) range (between 500 to 1000 cc's) and high-ED range (greater than 1000 cc's) were adjusted as follows:

    - If there are more motorcycles in the middle ED range than the high ED range (by territory, use, and body style) and the initial estimates of the experience adjustment for the high ED range is lower, then adjust the estimate for the high ED range to be equal to the estimate for the middle ED range.

    - If there are more motorcycles in the high ED range than the middle ED range (by territory, use, and body style) and the initial estimates of the experience adjustment for the middle ED range is higher, then adjust the estimate for the middle ED range to be equal to the estimate for the high ED range.

- This ensures that the rates for motorcycles in the high ED range will continue to be higher than the corresponding rates for motorcycles in the middle ED range.

For the U-Drive Moped insurance use in territories 2, 3, and 4, MPI did not calculate the indicated rate adjustments due to a lack of experience. Consistent with last year, MPI set the rates for this insurance use, by territory and rate group, equal to the rates for the All-Purpose Moped insurance use.

DR.2.3 Special Adjustments and Capping

MPI uses relative ranking rules to ensure that less restrictive rating categories have higher rates than more restrictive ones, resulting in special rate adjustments. MPI

makes these adjustments to the rates after it completes all classification and experience adjustments.

An example of a restriction is where the rate for pleasure insurance use must be lower than the rate for all purpose insurance use (by territory and vehicle type). In that situation, MPI would make a special rate adjustment if the rate for pleasure insurance use were higher than the rate for all purpose insurance use.

For 2027/28, the following insurance uses received special adjustments affecting 35,154 vehicles:

- Pleasure Truck 4540 kg or less; Territory 1 – rates decreased to be $2.00 less than All Purpose Truck rates (20,290 vehicles);
- Farming All Purpose Truck 4540 kg or less; Territory 3 – rates decreased to be $1.00 less than All Purpose Truck rates (7 vehicles);
- Farming All Purpose Truck 4540 kg or less; Territory 4 – rates decreased to be $1.00 less than All Purpose Truck rates (119 vehicles);
- All Purpose Motorhome, Territory 4 – rates increased to be $2.00 more than to the Pleasure Motorhome (4 vehicles);
- Farming All Purpose Truck 4540 kg or less; Territory 5 – rates increased to be equal to the Territory 2 rates (461 vehicles);
- Fishing All Purpose Truck 4540 kg or less; Territory 5 – rates increased to be equal to the Territory 2 rates (10 vehicles); and
- All Purpose Truck 4540 kg or less; Territory 5 – rates increased to be equal to the Territory 2 rates (14,263 vehicles).

In response to PUB Order 148/04, all 2027/28 rates are subject to a ± 20% cap from 2026/27 rates. MPI makes special adjustments after applying the ± 20% cap.

The following example illustrates how the cap is applied in practice.

For a specific premium for a given Territory, Insurance Use, Vehicle Type, Rate Group, and any other applicable vehicle rating factor (e.g., Engine Displacement, Gross Vehicle Weight, etc.), the premium is determined based on the rate group adjustments, rate line adjustments, offsets (as described in *Part VII Risk Classification Chapter*) and experience adjustments.

Once the uncapped premium is calculated, it is subject to a ± 20% cap constraint relative to the prior year's approved rate for the same combination of rating factors. If the uncapped premium exceeds this cap range, it is adjusted accordingly before any required special adjustments are applied to maintain relative ordering.

- **Vehicle Type:** Motorhome
- **Insurance Use:** All Purpose
- **Territory:** 1
- **Rate Group:** 14
    - 2026/27 Approved Rate for the same factors: $ 2449.00
    - 2027/28 Indicated Rate (Pre-Cap): $2950.00 (+20.46%)
    - ±20% Cap Applied: Maximum allowable rate = $2449.00 × 1.20 = $2938.80
    - 2027/28 Capped Rate: $2939.00 (rounded)

- Special Adjustments: None – relative ordering was maintained

Final Filed Rate: $2939.00

DR.3 Final Impact of Rate Changes

The steps taken to transition from the experience rate requirement indicators to the adjusted rate indication by major class are outlined below. *Appendix 2 Table 3 – Transition from Rate Requirement Indicators to Final Rate Adjustment* provides a table showing the average rate, the change from the original rate model, and the total premium for each of the steps.

A. ***Original Rate Model Before Changes*** – This section shows the base scenario prior to any required changes and adjustments. It is based on the population of vehicles as of November 1, 2025, except for the following seasonally used vehicles:

- Snowmobiles and snow vehicles as of January 1, 2026
- Motorhomes, motorcycles, mopeds, trailers and off-road vehicles (except for snowmobiles and snow vehicles) as of August 1, 2025

B. ***After Classification Changes and CLEAR Adjustments*** – This section shows the impact of applying all classification changes and CLEAR adjustments, including rate line changes, as presented in *Part VII Risk Classification Chapter*.

C. ***Balanced Indicated Adjustments*** – This section shows the impact of applying the balanced indicated changes as presented in *Appendix 2 Table 2 – Indicated Rate Calculation*. The balanced indicated changes are derived based on the required rates for the major classes and the relativities by major class as discussed in

Part VII Rate Indication and *Part VII Risk Classification Chapters*, respectively. The balanced indicated changes include balancing back to the revenue requirements by major class.

D. ***Capped Indicated Adjustments*** **–** This section shows the impact of applying the capped indicated changes. The capped indicated changes are obtained after applying the experience adjustment rules to the balanced indicated changes. Any shortfall or excess generated by these rules are not adjusted for in this section.

E. ***Balanced Capped Indicated Adjustments*** **–** This section shows the impact of applying the balanced capped indicated changes. The capped indicated changes are balanced back to recover any shortfall or excess generated because of applying the experience adjustment rules.

F. ***Final Indicated Adjustment (Final Rate Model)*** **–** This section shows the Rate Model output after all changes are applied. Apart from the classification changes, CLEAR adjustments and experience adjustments discussed above, the Rate Model applies the following business rules:

- The final rates are all rounded to even dollars. The impact of this is particularly noticeable (on a percentage basis) in groups with numerous low rate vehicles.
- The rates are checked to ensure that rate reversals, such as pleasure truck rates being greater than all-purpose truck rates, do not occur.
- Based on PUB Order 148/04, all 2027/28 final rates are subject to a ±20% maximum change from 2026/27 final rates.

DR.4 Summary and Distribution Reports

By major class, the proposed rate changes differ slightly from experience rate changes due to capping rules. MPI applies a 15% increase/decrease cap to experience-based indicators and all final rates are capped at a 20% increase/decrease.

Figure DR-1 presents the expected premium impact on the in-force policy population. The observed 3.1% impact reflects the application of the proposed 2027 rates, incorporating changes to the vehicle discount percentages using the proposed 2027 DSR scale.

The 3.1% reflects the impact on the rate model population of vehicles (i.e., the population as of November 1, 2025). As discussed in RI.3, the use of a static population will not capture the additional movements for policies moving from DSR +19 to DSR +20. As a result, MPI expects an additional decrease of – 0.7%[1] in premium revenue by rating year 2027/28 because of changes to the distribution of vehicles by DSR level. The total impact of both the 3.1% and -0.7% is the applied for overall rate change of 2.38% for rating year 2027/28.

[1] Using the DSR simulation model discussed in Revenues REV 2.2 with changes to the vehicle discount yields an overall DSR upgrade factor of -4.6%. The -1.3% is the calculated additional impact from DSR simulation and the rate model due to forecasted movements that are not captured by the rate model.

Figure DR-1 Major Class Summary Report

Line No.	Major Class	Vehicle Count	Current Average Rate	Proposed Average Rate Without DSR Change	Proposed Average Rate With DSR Change	Proposed Rate Change Without DSR Change	Proposed Rate Change With DSR Change	Balanced Applied For Rate Change*
1	**Private Passenger**	905,945	$1,352	$1,430	$1,394	5.7%	3.0%	5.8%
2	**Commercial**	52,202	$1,030	$1,063	$1,062	3.2%	3.1%	3.2%
3	**Public**	14,071	$2,694	$2,865	$2,854	6.4%	5.9%	3.1%
4	**Motorcycles**	21,387	$841	$906	$879	7.7%	4.5%	8.2%
5	**Trailers**	244,895	$81	$80	$80	-1.2%	-1.2%	-2.2%
6	**Off-Road Vehicles**	84,635	$5	$6	$6	20.0%	20.0%	37.0%
7	**Overall**	1,323,135	$1,024	$1,081	$1,056	5.6%	3.1%	5.6%
8	*Per Figure RMO-1							

Figure DR-2 and *Figure DR-3* show the distribution of vehicles by dollar and percentage changes, after all adjustments. The proposed rate changes result in a rate decrease for 37.55% of all vehicles, no change in rates for 6.03% of all vehicles and a rate increase for 56.42% of all vehicles.

Additionally, 38.9% of vehicles will experience a rate change of +/- $20 or less (including vehicles receiving a $0 change in rates) and 41.4% of vehicles will experience a rate change of +/- 5% or less (including vehicles receiving no change in rates). More detailed figures can be found in *Figure DR-4*, *Figure DR-5* and *Figure DR-6*.

Please note, *Figure DR-4* illustrates a total premium change of 3.1%. This figure compares the proposed 2027 premiums, which includes the adjustments in DSR discounts. As previously mentioned, MPI anticipates an additional -0.7% in premium revenue from the additional movements in DSR levels that is not captured within the rate model. The combined effect of the rate group expansion and the additional impact from DSR discounts results in an overall rate indication of 2.38%, calculated as follows: (1+3.1%) × (1−0.7%) −1 =2.38%.

Figure DR-2 Dollar Distribution Table

Line No.	$ Change	# of Vehicles	% of Vehicles
1	**Decrease $300 or more**	810	0.1%

Application Rate Tables

ART.1 Premiums for Miscellaneous Permits

Manitoba Public Insurance (MPI) proposes no changes to premium tables for Miscellaneous Permits. *Figure ART-1* below shows the proposed 2027/28 premiums, which are consistent with the 2026/2027 premiums. The table below does not include the $9 registration fee that is additional to the insurance premiums.

Figure ART- 1 2027/28 Premiums for Miscellaneous Permits

Line No.	Insurance Use	Purpose	Premium
1	**1. Interim Registration Permit[1]**	7-Day Permit	$29
2		(issued by Dealers)	
3	**2. Temporary Registration**	1 to 5 Days	$29
4	**(30 day maximum)[2]**	Each Additional Day	$5

[1] A permit issued by a Dealer to the purchaser or lessee of a motor vehicle permitting it to be operated for a period of up to seven days.

[2] Provides insurance and registration for 1 to 30 days, for the purpose of moving a vehicle into, out of, within or through Manitoba. Available to Manitoba and non-Manitoba residents.

ART.2 Driver Licence Premiums and Vehicle Premium Discounts

Figure ART.2 below shows the proposed 2027/28 Driver License Premiums and Vehicle Premium Discounts.

In the 2027 GRA, MPI proposes no changes to Driver License Premiums. MPI is, however, proposing changes to vehicle premium discounts. Please see the *Part VII Risk Classification Chapter* for more information on Driver License Premiums and Vehicle Premium Discounts.

24	Temporary Registration Replacement	$15*
25	Transfer	$15*
26	Vehicle Class Change	$15*
27	Change of Insurance Use from or to a collector vehicle	$15
28	*MPI collects and transfers $6 on behalf of the Government pursuant to the Charges for Licences, Registrations,	
29	Permits and Other Services Regulation, M.R. 42/2006. The remaining revenue is retained by MPI	
30	pursuant to the Automobile Insurance Plan Regulation, M.R. 49/2019.	
31		
32	** Plate Use Charge is remitted to the Government	
33		
34	Document replacement charges/fees are waived if the replacement documents are issued electronically	

ART.4 Fleet Rebates and Surcharges

Figure ART-4 shows the 2027/28 Fleet Rebates and Surcharges, along with the Fleet Rebate Scale. For 2027/28, MPI proposes no changes to Fleet Rebates or Surcharges.

Please see the *Risk Classification Chapter* for more information on Fleet Rebates and Surcharges.

APF-3 Autopac Statement of Changes in Equity: +2.38% Basic Rate Change 24

Pro Formas

In accordance with the Minimum Filing Requirements (MFRs), Manitoba Public Insurance (MPI) provides its forecasted Basic regulatory pro forma statements (*PF.1, PF.2, PF.3*) illustrating the impact of a 2026/27 Basic rate change of +2.38% (i.e., the overall rate indication calculated in accordance with Accepted Actuarial Practice).

Building on the 2026 GRA, the base forecast in the 2027 GRA reflects multi-year indicated rate change requirements for Basic. MPI presents its base forecast with anticipated future rate adjustments on a net trend basis. The impacts and details of these expected changes are detailed in *Part VIII: Financial Forecasting - Revenues*.

The pro forma statements (*PF.4 through PF.7*) contain comparatives of actual, budgeted, and forecasted statements of operations between the 2026 and 2027 GRAs. Accompanying these variances are explanations related to any significant differences (within the statement as a separate column). These comparatives and variance explanations align to the detail found in *Part VI Claims Forecasting, Part VIII Revenues, and Expenses, and Part IX Investments Management*.

In addition, variance explanations are included to bridge the overall differences between the 2026 and 2027 GRA forecasts, with comparisons provided between the 2026 GRA and the 2026 GRA compliance filing forecasts, as well as between the compliance filing and the 2027 GRA forecasts.

This Chapter also includes the base financial forecast for the Extension line of business, shown in *EPF.1* and *EPF.3* to comply with minimum filing requirements.

In addition to the previously mentioned pro formas, forecast financial statements for Autopac—encompassing both Basic and Extension—are submitted under *APF.1, APF.2, and APF.3* in accordance with IFRS 17: Insurance Contracts accounting standards.

During the fiscal year 2025/26, MPI transferred $72.0 million in excess capital from its Extension reserves to the Basic Rate Stabilization Reserve (RSR). This lowered the

minimum capital test (MCT) target ratio of the Extension reserve to 200% MCT for 2025/26. Transfers of excess capital from Extension to the RSR are expected to occur throughout the forecast and are therefore included within the pro forma statements.

Financial Forecasting Model

FFM.1 Purpose

The Financial Forecasting Model (FFM) is a proprietary model that applies various assumptions and forecasting techniques to establish a financial vision. Manitoba Public Insurance (MPI) uses the FFM results to prepare the pro forma financial statements and Minimum Capital Test (MCT) schedules for submission in the annual General Rate Application (GRA) with the Public Utilities Board (PUB).

The FFM provides results based on past, current, and projected financial conditions. Its general output is a one-year history and five years of forecasted data.

This chapter identifies all reporting and functional updates (defined below) to the FFM along with any process/control changes as compared to the last GRA.

FFM.2 Scope

As it pertains to the FFM, MPI defines a functional update to mean any adjustment to an automated calculation because of a forecasting assumption change, within the FFM or to an FFM output. Changes in forecasting assumptions or independent calculations not within the FFM (e.g., claims outputs from the claims discount rate model), and which do not require an update, are not considered an FFM update, and are not identified in this chapter.

All forecasting assumption changes are described in the applicable parts of the GRA and are not part of the FFM chapter.

FFM.3 Financial Forecasting Model Updates

MPI divides its financial forecasting model updates into three categories:

1. reporting updates,
2. functional updates, and

3. model checks and balances.

Reporting updates, detailed in *FFM.3.1*, imply a change in the presentation of the financial statement or similar report, despite no change in the underlying assumptions, calculations, or functionality of the FFM. These implied changes do not impact the calculated FFM results.

Functional updates, detailed in *FFM.3.2*, imply a change in the actual formulaic calculation in the FFM, which change may influence an FFM output or financial result.

Updates to model checks and balances are detailed in *FFM.3.3*, any FFM changes are meant to provide assurance and controls to ensure the results are accurate and free of calculation errors.

FFM.3.1 Reporting Updates

Reporting updates capture all changes in the presentation of the final financial statements. They have no underlying changes in financial calculation. When financial statement changes occur, MPI assesses the impacts of the reporting updates by comparing financial results and impacts pre and post change.

There was one reporting update for the 2027 GRA, as described below:

FFM.3.1.1 Basic Pro Forma Statements (PF-1)

For the 2027 GRA, MPI revised the Statement of Operations for Basic (PF-1) to include a new line item titled "Prior Year Initiative Expenses included for Rate Setting". Further details regarding this line item are provided in *EXP Appendix 23.*

This line item is included for ratemaking purposes only and is not compliant with IFRS, similar to the Board-ordered line item "Initiatives expenses excluded for Rate Setting".

FFM.3.2 Functional Updates

Functional updates result in changes in FFM calculation or functionality, which may result in a monetary impact or change in financial result. When a functional update is required, the forecasting team assesses the FFM impact and determines the best approach for building the change into the model. The forecasting team may make the change internally or, if the functional change is complex, externally, using a modelling provider. For the 2027 GRA, there are no functional updates to report.

FFM.3.3 Model checks and balances

As updates are made to the FFM, the forecasting team regularly reviews the control sheet to confirm that no issues are present. For the 2027 GRA, no new controls were introduced to the model.

FFM.4 Test Application and Validation of Results

MPI conducts appropriate internal and external testing of the component parts of the FFM. The nature and extent of testing varies depending on the scope of changes and level of monetary impact.

When functional changes are implemented, MPI performs both unit and system testing to ensure changes function as expected (unit testing) and that they have been accurately incorporated into the financial statement results (system testing). For the 2027 GRA, no testing or validation were required given no functional updates were introduced.

FFM.5 Process Changes

While a financial forecast is not a guarantee of what will happen, MPI continues to provide the best estimate of its future financial outlook. To help ensure the best estimates are valid, reasonable, and accurately reflected, additional controls and process changes are implemented as required.

FFM.5.1 Business Unit Approval and Signoff

Like with prior GRAs, all inputs and outputs in the present FFM are validated with applicable business owners to ensure accuracy.

The forecasting team uses an application to collect eSignatures from relevant business units to document the review and approval of key FFM inputs. This review, conducted by all relevant Directors or Vice Presidents, ensures that the FFM forecast updates align with the most up-to-date source information and that the information provided has been accurately input into the FFM.

The FFM changes are then peer reviewed to ensure completeness and accuracy of model outputs. This process ensures that inputs align with expected outputs.

As a final check, the main FFM outputs (being the Pro forma financial statements and forecasted MCT), are reviewed and validated by the Director, Financial Planning and Analysis and the Vice President & Chief Financial Officer, through an additional automated workflow process.

FFM.5.2 Limitation of use

As indicated in prior GRAs, the FFM contributes to the production of a best estimate financial forecast that is internally referred to as the 'Base Scenario' with support to produce alternate scenarios upon request.

FFM.6 Upcoming Financial Forecast Model Updates

FFM updates may be required for a variety of reasons including, operational, strategic, regulatory, or legislative. Planning for and timing change depends on available resources as well as the natural cadence and synchronization of business workflows.

While MPI seeks to account for and accurately model all known updates, there may be instances where updates are not fully known, or anticipatory changes are not

certain enough to be included in the FFM. At this time, no updates to the FFM are planned. If any adjustments are required during fiscal 2026/27, MPI will bring these forward as part of the 2028 GRA submission.

Appendix 1: Rebalancing

Rebalancing

Rebalancing is a major component of the financial model and ensures that the asset classes stay within the minimum and maximum ranges defined in the Investment Policy Statement. This section discusses the rebalancing assumptions in the model for:

- Basic Claims portfolio supporting the claims liabilities; and
- Rate Stabilization Reserve (RSR) and Employee Future Benefits (EFB).

Basic Claims Portfolio supporting Basic Claims Liabilities Rebalancing

The Basic claims portfolio rebalancing rules are as follows:

- The dollar amount of the total Basic Claims portfolio is rebalanced to match the present value of Basic claims liabilities[1] on an annual basis.
- The dollar duration (hedge ratio) of 100% +/- 5% is maintained between Basic Claims fixed income assets (including government bonds, corporate bonds, short-term bonds, mortgages and non-marketable bonds) and the Basic Claims liabilities. Dollar duration matching occurs in the first quarter of each fiscal year based on the claim duration at the previous FYE.
- Rebalancing to ensure dollar matching occurs within the financial model only once a year and only if the dollar difference between Basic claims assets and

[1] The net of Liability for Incurred Claims (LIC) + Risk Adjustment – Assets for Incurred Claims (Assets for Incurred Claims or reinsurance)

Basic claims liabilities exceeds +/- $20 million. Any transfers would be funded by the RSR portfolio.

Figure FFM App 1-1 Basic Claims Portfolio Asset Allocation

Line No.	Basic Claims Asset Allocation	Minimum	Target	Max
1	**Fixed Income**			
2	**Provincial Bonds**	0.0%	35.0%	45.0%
3	**Corporate Bonds**	18.0%	28.0%	38.0%
4	**MUSH**	0.0%	18.0%	28.0%
5	**Real Return Bonds**	0.0%	4.0%	10.0%
6	**Commercial Mortgages**	0.0%	5.0%	8.0%
7	**Total Fixed Income**		**90.0%**	
7	**Public Equities**			
8	**Canadian Equities**		0.0%	
9	**Global Equities**		0.0%	
10	**Global Low Volatility**		0.0%	
11	**Total Equities**		**0.0%**	
12	**Alternatives**			
13	**Canadian Real Estate**	0.0%	10.0%	15.0%
14	**Infrastructure**		0.0%	
15	**Total Alternatives**		**10.0%**	

Rebalancing

In order to ensure dollar matching is maintained within the financial model, any surplus (or deficit) between the Basic claims fixed income portfolio and Basic claims liabilities is transferred to (or funded from) the liquid asset classes within the RSR portfolio. The allocation ratios are shown in the figure below.

Figure FFM App 1-2 Allocation Ratio

Line No.	Description	Target Weight	Allocation Ratio
1	**Basic Line of Business Portfolio**		
2	**Provincial Bonds**	35.0%	55.6%
3	**Corporate Bonds**	28.0%	44.4%
4	**Total**	**63.0%**	**100.0%**
5	**RSR Asset Classes**		
6	**Provincial Bonds**	22.0%	44.0%
7	**Canadian Equities**	12.0%	24.0%
8	**Global Equities**	8.0%	16.0%
9	**Global Low Volatility**	8.0%	16.0%
10	**Total**	**50.0%**	**100.0%**

To illustrate, using a hypothetical $100M shortfall in Q1 between the Basic claims fixed income portfolio and the Basic claims liabilities, the model will transfer $44M, $24M, $16M, and $16M from the provincial bonds, Canadian equity, global equity, and global low volatility asset classes in the RSR portfolio, respectively. This money will be invested in provincial and corporate bonds within the Basic claims portfolio in a 55.6%/44.4% ratio.

RSR and EFB Rebalancing Assumptions

The next two figures show the RSR and EFB asset allocations.

Figure FFM App 1-3 RSR Asset Allocation

Line No.	Description	Minimum	Target	Max
1	**Fixed Income**			
2	**Provincial Bonds**	12.0%	22.0%	32.0%
3	**Corporate Bonds**	0.0%	0.0%	0.0%
4	**MUSH Bonds**	0.0%	0.0%	0.0%
5	**Private Debt**	13.0%	23.0%	33.0%
6	**Total Fixed Income**	**30.0%**	**45.0%**	**60.0%**
7	**Public Equities**			
8	**Canadian Large Cap**	3.0%	6.0%	9.0%
9	**Canadian Small Cap**	3.0%	6.0%	9.0%
10	**Global Equities**	5.0%	8.0%	11.0%
11	**Global Low Volatility**	5.0%	8.0%	11.0%
12	**Total Equities**	**20.0%**	**28.0%**	**36.0%**
13	**Alternatives**			
14	**Canadian Real Estate**	11.0%	16.0%	21.0%
15	**Infrastructure**	6.0%	11.0%	16.0%
16	**Total Alternatives**	**20.0%**	**27.0%**	**34.0%**

Figure FFM App 1-4 Employee Future Benefits Asset Allocation

Line No.	Description	Minimum	Target	Max
1	**Fixed Income**			
2	**Corporate Bonds**	11.0%	16.0%	21.0%
3	**Private Debt**	12.0%	17.0%	22.0%
4	**Total Fixed Income**	**25.0%**	**33.0%**	**41.0%**
5	**Public Equities**			
6	**Canadian Large Cap**	4.0%	7.0%	10.0%
7	**Canadian Small Cap**	4.0%	7.0%	10.0%
8	**Global Equities**	5.0%	10.0%	15.0%
9	**Global Low Volatility**	5.0%	10.0%	15.0%
10	**Total Equities**	**23.0%**	**34.0%**	**45.0%**
11	**Alternatives**			
12	**Canadian Real Estate**	5.0%	10.0%	15.0%
13	**Infrastructure**	13.0%	23.0%	33.0%
14	**Total Alternatives**	**23.0%**	**33.0%**	**43.0%**

The rebalancing rules for the RSR and EFB portfolios are summarized below.

1. **Marketable Bonds (Provincial and Corporate Bonds)**

   If provincial and corporate bonds remain outside their tolerance ranges for two consecutive quarters, the asset class will be adjusted to the target weight in the following quarter. Inflows or outflows required for rebalancing will come from the equity portfolio.

2. **Equities**

   For Canadian equities, global equities, and low-volatility global equities, when the asset class remains outside the maximum or minimum allocation limit for two consecutive quarters, then the asset class will be adjusted to the target weight in the following quarter. Inflows or outflows required for rebalancing will come from marketable bonds.

3. **Illiquid Asset Classes (MUSH, Private Debt, Real Estate, Infrastructure)**

   MUSH, mortgages, private debt, real estate, and infrastructure are illiquid and are not automatically rebalanced in the model (as a result of asset class modeling constraints). However, transfers from Extension to RSR are modeled to rebalance all asset classes (independent of illiquidity) to target. The forecasted MUSH and real estate values do not fall outside of their respective minimum/maximum ranges during the five-year forecast period. Private debt within the RSR portfolio is within the minimum/maximum ranges during the five-year forecast period.

Net Incurred Claims

This chapter covers the methodology used to transform the forecasted ultimate losses from an accident year basis to a fiscal year basis for financial reporting under International Financial Reporting Standard (IFRS) 17. This includes direct losses and reinsurance recoveries, which are shown in multiple line items on the proformas as follows:

- **Incurred Claims,** or the Insurance Service Expenses pertaining to loss and loss adjustment expenses, including associated changes to the risk adjustment;
- **Finance Expense from Insurance Contracts**, or the effect of unwinding and change in discount as it pertains to loss and loss adjustment expenses.
- **Recovered Claims from Reinsurance Contracts,** the reinsurance counterpart to Insurance Service Expenses; and
- **Finance Income from Reinsurance Contracts**, the reinsurance counterpart to Finance Expense from Insurance Contracts.

Forecasted ultimate losses will be used in this chapter but not discussed in detail as this is covered in *Part VI Claims Forecasting & Loss Trend Analysis*. Instead, the primary focus will be on the assumptions and methodologies used to transform the accident year forecasted ultimate losses to a fiscal year basis.

NIC.1 Direct Claims Forecast

NIC.1.1 Liabilities for Incurred Claims

Under IFRS 17, Liability for Incurred Claims (LIC) is the obligation to pay claims that have already been incurred regardless of whether the claim has been reported. It is comprised of the estimate of claim liabilities related to past service, and a risk adjustment to account for uncertainty about the amount and timing of the cashflows arising from non-financial risk.

The LIC is estimated by projecting the fulfilment cash flows and includes:

- An unbiased probability-weighted estimate of future cash flows;
- An adjustment to reflect the time value of money; and
- A risk adjustment.

The measurement of LIC plays a vital part in this chapter, as the calculation of Incurred Claims and Finance Expense relies on changes to the LIC.

NIC.1.2 Accident Year Ultimate Forecast

Ultimate losses for prior accident years are obtained from the March 2026 Appointed Actuary Report, while the ultimate losses for accident years 2026/2027 and forward are obtained from the claims forecast. *Figure NIC-1* shows the Basic ultimate loss estimates for the 2027 General Rate Application (GRA) as well as a comparison to those in the 2026 GRA. An explanation of the variances between the two GRA forecasts can be found in *Part VI Claims Forecasting & Loss Trend Analysis (CF.16)*.

Figure NIC-1 Ultimate Loss Forecast

Line No.	Accident Year	2027 GRA Forecast Ultimate Loss & ALAE	2026 GRA Forecast Ultimate Loss & ALAE	Variance to Forecast
1	*($000)*	(1)	(2)	(3) = (2) - (1)
2	**2026**	$1,164,892	$1,129,728	$35,164
3	**2027**	$1,221,733	$1,169,242	$52,492
4	**2028**	$1,306,237	$1,234,051	$72,185
5	**2029**	$1,397,149	$1,304,321	$92,828
6	**2030**	$1,494,985		

NIC.1.3 Unallocated Loss Adjustment Expenses

The Unallocated Loss Adjustment Expense (ULAE) ratio, set at 14.0% for the 2025/26 forecast year and 13.0% thereafter in the 2026 General Rate Application (GRA), has been revised to reflect future expectation of the paid ULAE to paid claims ratio. The forecast shows initially a modest increase in paid ULAE relative to paid claims resulting in an increase in the ULAE ratio from 13% to 14% in forecast year 2028/29. Thereafter the ratio decreases to 13% and then 12% in the 2029/30 and 2030/31 forecast years respectively. For details on the derivation of these forecasted ratios, refer to *Part VIII NIC Appendix 4 – Calculation of Forecasted ULAE Ratios*.

Figure NIC-2 Forecasted ULAE Ratios

Line No.	Forecast Year	2027 GRA Selected ULAE Ratio	2026 GRA Selected ULAE Ratio
1	(1)	(2)	(3)
2	**2026/27**	13.0%	13.0%
3	**2027/28**	13.0%	13.0%
4	**2028/29**	14.0%	13.0%
5	**2029/30**	13.0%	13.0%
6	**2030/31**	12.0%	

NIC.1.4 Discounting

NIC.1.4.1 Payment Patterns

Before discounting, cashflows must be determined by applying payment patterns to the forecasted accident year ultimate loss and LAE estimates. This exercise determines the expected claim payments by fiscal year. The payment patterns applied were obtained from the March 31, 2026, Appointed Actuary Report; see *Part VIII EAR Attachment B – Appointed Actuary Report Mar 2026*.

NIC.1.4.2 Future Inflation

Next, inflation is applied to indexed lines; PIPP Weekly Indemnity, PIPP Personal Care, PIPP Travel Benefits and PIPP Accident Benefit Other Indexed. The inflation assumption of 2.7% for 2026 is based on the 12-month average of Manitoba CPI as of March 31, 2026 from Statistics Canada. The Manitoba CPI forecast is used in the calculation of projected indexation rates, and is applied on a 1-year lag, as indexation of benefits is based on the prior year's inflation. Note that the future inflation assumption is floored at 2.0% when the bank's forecast falls below 2.0%. The future inflation assumptions are shown in *Figure NIC-3*.

Figure NIC-3 Manitoba CPI Forecast

Line No.	Source	2026	2027	2028	2029	2030
1	**Royal Bank of Canada (RBC)**	2.8%	2.0%

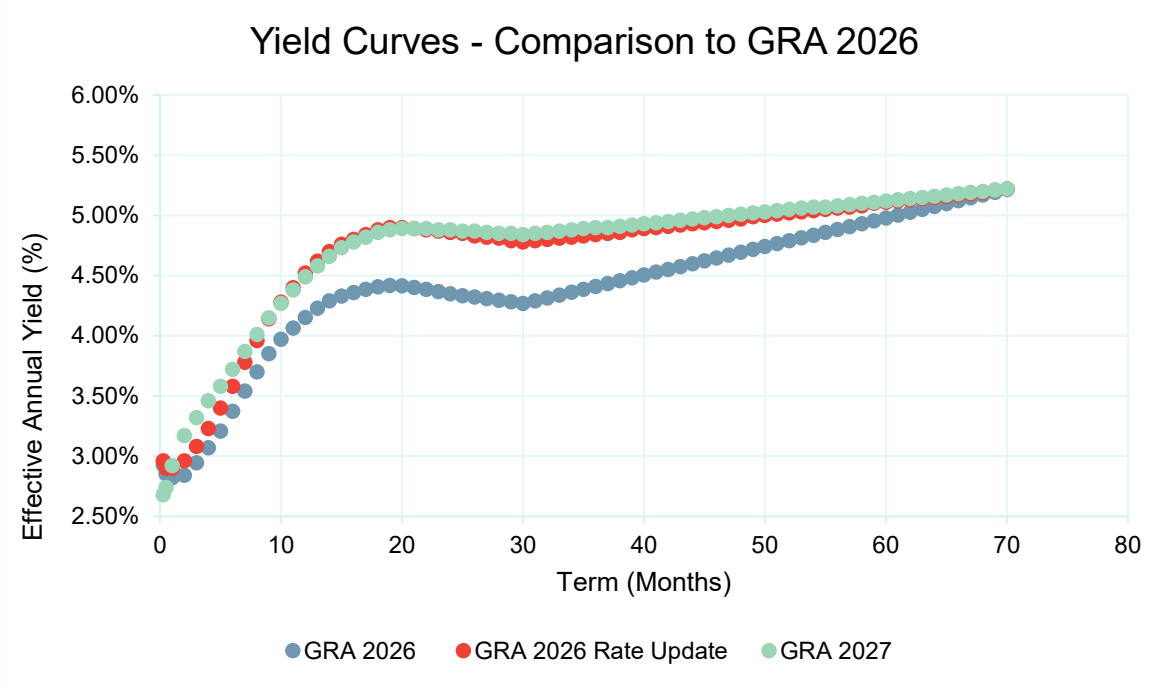
NIC.1.4.3 Yield Curve

Future cashflows are discounted using a yield curve with discount rates at each tenor being expressed as spot rates. Addenda Capital provides MPI with a yield curve that is based on the top-down approach. This approach uses a reference portfolio and removes items that are not aligned with the characteristics of the insurance liability such as credit risk.



The reference portfolio is based on the composition of MPI's fixed income portfolio from the Basic line asset portfolio where the reference curve is a blended curve using weights from federal bonds, provincial bonds, municipal bonds, corporate bonds, and commercial mortgages. As there is no explicit curve for commercial mortgages, they are accounted for by placing higher weights to corporate (BBB) bonds as a proxy for the increased credit risk. While real estate is part of the Basic asset portfolio, it is not included when deriving the reference portfolio as real estate is not a fixed income instrument.

The yield curve used in the analysis is as of March 31, 2026, and is provided in *NIC Appendix 1 – IFRS 17 Discount Curve, Annual*. Spot rates are provided by Addenda based on a semi-annual compounded basis and are subsequently converted to effective annual rates. This yield curve is applied to cashflows calculated using quarterly payment patterns, thus interpolation is required to produce an appropriate quarterly discount yield curve. The quarterly interpolated yield curve is provided in *NIC Appendix 2 – IFRS 17 Discount Curve, Interpolated Quarterly*. The same yield curve is applied consistently throughout the forecast period.

The annual discount yield curve is consistent with the naïve yield used for forecasting investment income, see *Part IX Investments Chapter.*

A comparison of the yield curves from the 2026 GRA, 2026 GRA Rate Update, and 2027 GRA is shown in the graph below.

Figure NIC-4 Comparison of Yield Curves

Additional information can be found in Section 12 of *Attachment B – Appointed Actuary Report as at March 31, 2026.*

NIC 1.4.4 Present Value of Future Cashflows

The forecasted present value of future cashflows for each year is shown in *Figure NIC-5*.

Figure NIC-5 Forecast Opening and Closing Present Values

Line No.	Fiscal Year	Opening Present Value (Loss & LAE)	Closing Present Value (Loss & LAE)
1	*($000)*	(1)	(2)
2	**2025/26**	$2,074,896	$1,994,686
3	**2026/27**	$1,994,686	$2,052,568
4	**2027/28**	$2,052,568	$2,154,809
5	**2028/29**	$2,154,809	$2,278,648
6	**2029/30**	$2,278,648	$2,380,132
7	**2030/31**	$2,380,132	$2,487,282

NIC.1.5 Risk Adjustment

MPI's risk adjustment, or the provision for non-financial risk on fulfillment cash flows, as of March 31, 2026, is $95.07 million. The risk adjustment percentages were determined using the quantile method and selecting the 90th percentile. The percentages used in the March 31, 2026 Appointed Actuary Report were applied to the forecast and are shown in *Figure NIC-6*. More information on the risk adjustments can be found in *Part VIII EAR Attachment B – Appointed Actuary Report Mar 2026*.

In *Figure NIC-6,* the risk adjustment percentages include a diversification credit that accounts for the correlation between coverages. The Basic (Combined) risk adjustment is calculated by summing the risk adjustments across all coverages and

dividing by total outstanding liabilities. As a result, the combined ratio changes from last year even though the underlying coverage-level risk adjustments remain unchanged.

Figure NIC-6 Risk Adjustment by Coverage

Line No.	Coverage	2027 GRA Risk Adjustment %	2026 GRA Risk Adjustment %
1	TPL-BI	4.42%	4.42%
2	TPL-PD	3.86%	3.86%
3	Collision	7.64%	7.64%
4	Comprehensive - excluding CAT	6.43%	6.43%
5	Comprehensive - CAT	9.40%	9.40%
6	ABWI	2.72%	2.72%
7	ABO (Indexed)	6.36%	6.36%
8	ABO (non-indexed)	6.94%	6.94%
9	**Basic (Combined)**	**4.80%**	**4.86%**

The forecast risk adjustment balances are shown in *Figure NIC-7*:

Figure NIC-7 Forecast Risk Adjustment Balances

Line No.	Fiscal Year	Opening Risk Adjustment	Closing Risk Adjustment
1	*($000)*	(1)	(2)
2	**2025/26**	$100,197	$95,070
3	**2026/27**	$95,070	$97,025
4	**2027/28**	$97,025	$101,788
5	**2028/29**	$101,788	$107,824
6	**2029/30**	$107,824	$112,787
7	**2030/31**	$112,787	$118,041

NIC.1.6 Incurred Claims

Incurred Claims are Insurance Service Expenses arising from changes to the LIC, excluding financial components such as changes to the yield curve, as well as changes to the risk adjustment.

MPI's Incurred Claims for fiscal year (FY) 2025/26 and the forecast years are shown in *Figure NIC-8*:

Figure NIC-8 Incurred Claims

Line No.	Fiscal Year	Incurred Claims Before Risk Adjustment	Change in Risk Adjustment	Non-Proportional ULAE	Incurred Claims
1	*($000)*	(1)	(2)	(3)	(4) = (1) + (2) + (3)
2	**2025/26**	$1,001,279	($5,127)	$38,302	$1,034,455
3	**2026/27**	$1,064,086	$1,954	$41,740	$1,107,781
4	**2027/28**	$1,145,236	$4,763	$44,071	$1,194,070
5	**2028/29**	$1,237,982	$6,037	$46,694	$1,290,712
6	**2029/30**	$1,295,398	$4,963	$49,148	$1,349,509
7	**2030/31**	$1,386,270	$5,255	$51,775	$1,443,299

Non-Proportional or Fixed ULAE, column (3), is comprised of claims-related expenses that are not measured proportionally to claims liabilities and are not included in the LIC. The most significant factor to Non-Proportional ULAE relates to the Manitoba Health Levy, where the methodology used for forecasting costs is based on an existing agreement between MPI and Manitoba Health. A more detailed breakdown of the forecast is found in *Appendix 3 – Non-Proportional ULAE*. Note that the Non-Proportional ULAE in *Figure NIC-8* includes clearing account totals whereas they are excluded from *Appendix 3 – Non-Proportional ULAE.*

NIC.1.7 Finance Expenses from Insurance Contracts

Finance Expenses from Insurance Contracts, or Insurance Finance Expenses (IFE) reflect changes in the time value of money and the effect of changes relating to financial risk; such changes include the Unwinding of Discount and Change of Discount. MPI's IFE for 2025/26 and the forecast years are shown in *NIC-9*.

Figure NIC-9 Finance Expense for Insurance Contracts

Line No.	Fiscal Year	Unwinding of Discount	Change of Discount	Finance Expense
1	*($000)*	(1)	(2)	(3) = (1) + (2)
2	**2025/26**	$91,551	($89,918)	$1,634
3	**2026/27**	$96,777	$0	$96,777
4	**2027/28**	$100,374	$0	$100,374
5	**2028/29**	$105,799	$0	$105,799
6	**2029/30**	$111,844	$0	$111,844
7	**2030/31**	$117,203	$0	$117,203

The Unwinding of Discount effect experiences growth consistent with forecasted ultimate losses. Change of Discount, on the other hand, is correlated with shifts in the yield curve over time. MPI is assuming no future shifts in the yield curve, thus there is no Change of Discount in the forecast years.

NIC.1.8 Relationship of LIC to Incurred Claims

As mentioned in the previous sections, Incurred Claims and Finance Expenses are representative of changes to the LIC. Changes to LIC can be split into three categories:

1. Incurred Claims represents an increase in LIC due to the recognition of losses, plus changes to the Risk Adjustment;

2. Finance Expenses represent increases in LIC due to discounting; and

3. Cash outflow is the reduction in LIC caused by the payment of the liabilities.

The relationship between these effects and the LIC is illustrated below in *Figure NIC-10*, where the closing LIC is equal to the sum of the four preceding columns.

Figure NIC-10 Relationship of LIC Relating to Incurred Claims

Line No.	Fiscal Year	Opening LIC	Incurred Claims Excl. Non-Proportional ULAE	Finance Expense	Cash Outflow	Closing LIC
1	*($000)*	(1)	(2)	(3)	(4)	(5) = (1) + (2) + (3) + (4)

5	**2029/30**	$2,386,472	$1,300,360	$111,844	($1,305,758)	$2,492,918
6	**2030/31**	$2,492,918	$1,391,525	$117,203	($1,396,322)	$2,605,324

Note that Non-Proportional ULAE is excluded above as it is measured separately.

NIC.2 Ceded Claims Forecast

NIC.2.1 Assets for Incurred Claims

Under IFRS 17, Assets for Incurred Claims (AIC) is the reinsurance counterpart to LIC. It is the asset which represents the present value of future cashflows for reinsurance contracts held, plus an associated risk adjustment. While there are no forecast ceded losses in future accident years, MPI expects to receive future recoveries on losses that have already occurred, and as such, AIC is expected to decrease as anticipated recoveries are received from reinsurers.

NIC.2.2 Accident Year Ultimate Forecast

There are no expected ceded amounts in the forecast accident years.

NIC.2.3 Unallocated Loss Adjustment Expense

MPI does cede certain ULAE to reinsurers, including costs such as adjuster salaries and hail scanner expenses so long as those costs are directly attributable to the catastrophe event. However, as no recoveries are forecasted, the forecasted ULAE recoveries are nil.

NIC.2.4 Discounting

Discounting for AIC follows the same process as that of LIC; the same inflation forecast (where applicable), yield curve, and payment patterns are applied to expected future cashflows. The forecasted present value of future cashflows for each year is shown in *Figure NIC-11*.

Figure NIC-11 Forecast Opening and Closing Present Values - Ceded

Line No.	Fiscal Year	Opening Present Value (Ceded Loss)	Closing Present Value (Ceded Loss)
1	*($000)*	(1)	(2)
2	**2025/26**	$31,066	$24,598
3	**2026/27**	$24,598	$11,840
4	**2027/28**	$11,840	$10,193
5	**2028/29**	$10,193	$9,405
6	**2029/30**	$9,405	$8,182
7	**2030/31**	$8,182	$6,777

NIC.2.5 Risk Adjustment

Risk adjustment on AIC represents the amount of risk transferred to reinsurers. MPI applies the same risk adjustment percentages to AIC as it does to LIC (see *Figure NIC-6*). The resulting risk adjustment balances are shown below in *Figure NIC-12*.

Figure NIC-12 Risk Adjustment Balances – Ceded

Line No.	Fiscal Year	Opening Risk Adjustment	Closing Risk Adjustment
1	*($000)*	(1)	(2)
2	**2025/26**	$2,654	$1,914
3	**2026/27**	$1,914	$722
4	**2027/28**	$722	$578
5	**2028/29**	$578	$515
6	**2029/30**	$515	$409
7	**2030/31**	$409	$285

NIC.2.6 Recovered Claims from Reinsurance Contracts

Recovered Claims from Reinsurance Contracts is made up of revenues directly related to changes in AIC, excluding financial risk components, plus the change in risk adjustment. As MPI does not forecast new ceded losses, no future reinsurance recoveries are expected. However, as there were reinsurance recoveries for past claims, those will run off in the forecast period, resulting in a decrease to AIC and the risk adjustment (i.e., outstanding balance decreases as reinsurance recoveries are received). This appears as an expense in the pro formas for the forecast years. See *Figure NIC-13* for the Forecast Recovered Claims from Reinsurance Contracts.

Figure NIC-13 Recovered Claims from Reinsurance Contracts

Line No.	Fiscal Year	Recovered Claims Excl. Risk Adjustment	Change in Risk Adjustment	Recovered Claims
1	*($000)*	(1)	(2)	(3) = (1) + (2)
2	2025/26	$17,197	($740)	$16,458
3	2026/27	($0)	($1,192)	($1,192)
4	2027/28	($0)	($144)	($144)
5	2028/29	($0)	($63)	($63)
6	2029/30	$0	($106)	($106)
7	2030/31	($0)	($123)	($123)

NIC.2.7 Finance Income from Reinsurance Contracts

Finance Income from Reinsurance Contracts reflects changes in the AIC due to changes in discounting and includes the Unwinding of Discount and Change of Discount. MPI's projected Finance Income from Reinsurance Contracts is shown below in *Figure NIC-14*.

Figure NIC-14 Finance Income from Reinsurance Contracts

Line No.	Fiscal Year	Unwinding of Discount	Change of Discount	Finance Income
1	*($000)*	(1)	(2)	(3) = (1) + (2)
2	2025/26	$581	($212)	$369
3	2026/27	$625	$0	$625
4	2027/28	$465	$0	$465
5	2028/29	$425	$0	$425
6	2029/30	$388	$0	$388
7	2030/31	$341	$0	$341

NIC.2.8 Relationship of AIC to Recovered Claims

The relationships outlined in section *NIC.1.8* also hold true for Recovered Claims from Reinsurance Contracts, Finance Income from Reinsurance Contracts, and AIC,

and are illustrated below in *Figure NIC-15*, where we can see the closing AIC is equal to the sum of the four preceding columns.

Figure NIC-15 Bridging Recovered Claims, Finance Income, and AIC

Line No.	Fiscal Year	Opening AIC	Recovered Claims	Finance Income	Cash Inflow	Closing AIC
1	*($000)*	(1)	(2)	(3)	(4)	(5) = (1) + (2) + (3) + (4)
2	**2026/27**	$26,513	($1,192)	$625	($13,382)	$12,563
3	**2027/28**	$12,563	($144)	$465	($2,112)	$10,771
4	**2028/29**	$10,771	($63)	$425	($1,213)	$9,920
5	**2029/30**	$9,920	($106)	$388	($1,612)	$8,591
6	**2030/31**	$8,591	($123)	$341	($1,747)	$7,062

NIC.3 Net Incurred Claims

For presentational purposes, the items outlined above are aggregated below in the manner that comparable items would have been displayed in previous years. The term Net Incurred Claims is used to represent the net result of the outlined effects.

Figure NIC-16 Net Incurred Claims

Line No.	Fiscal Year	2025/26	2026/27	2027/28	2028/29	2029/30	2030/31

NIC.4 Forecast Comparison

The table below outlines the comparison between the Net Incurred Claims forecast between the 2026 GRA Rate Update and the 2027 GRA.

Figure NIC-17 Net Incurred Claims Comparison

Line No.	Net Incurred Claims	2025/26	2026/27	2027/28	2028/29	2029/30
1	2026 GRA Rate Update	$1,083,007	$1,190,592	$1,242,926	$1,309,817	$1,381,416
2	2027 GRA	$1,019,262	$1,205,125	$1,294,123	$1,396,150	$1,461,071
3	**Change**	**($63,745)**	**$14,533**	**$51,197**	**$86,333**	**$79,655**
4						
5	**Breakdown of Change**	**2025/26**	**2026/27**	**2027/28**	**2028/29**	**2029/30**
6	Incurred Claims Excl. RA	($4,235)	$12,153	$45,639	$77,359	$69,021
7	Change of Risk Adjustment	($2,270)	$596	$2,897	$3,604	$2,284
8	Unwinding	$509	$1,084	$2,832	$5,534	$8,610
9	Change of Discount	($39,562)	$0	$0	$0	$0
10	Reinsurance	($18,187)	$701	($170)	($164)	($260)
	Total	**($63,745)**	**$14,533**	**$51,197**	**$86,332**	**$79,655**

The most significant differences between the forecasts appear in the Incurred Claims Excluding Risk Adjustment (RA) line. In the forecast years, this line is primarily influenced by changes in the ultimate loss forecast. For further details on these changes, refer to *Part VI Claims Forecasting & Loss Trend Analysis (CF.16).*

In the 2025/26 actual year an additional material decrease is attributed to the Change of Discount, primarily due to an upward shift in the yield curve. For the forecast years, the impact from the Change of Discount is $0, as the current forecast assumes a constant yield curve throughout the forecast period.

Note that the Reinsurance line includes both Recovered Claims from Reinsurance Contracts (including risk adjustment) and Finance Income from Reinsurance Contracts.

IFRS 17 Discount Curve, Annual

Based on Spot Rates (Zero Rates)
Bottom Up Liquid = Risk Free + 90% Provincial Spread
Bottom Up = Risk Free + 50bps + 70% IG Bond Spread (50% A, 50% BBB)

Observable Period End	30
Unobservable Period End	70
Ultimate RFR	3.65%
Ultimate Liquidity Premium (liquid)	0.70%
Ultimate Liquidity Premium (illiquid)	1.50%

Applicable beyond the observable period, after 30 years

Revenues

This chapter summarizes the methodologies Manitoba Public Insurance (MPI) uses to forecast motor vehicle and driver premiums, reinsurance premiums, service fees, and other forms of revenue applicable to Basic Universal Compulsory Automobile Insurance (Basic).

As mentioned in *Part II - Legal Application Chapter* of the 2027 General Rate Application (GRA), MPI submits to the Public Utilities Board (PUB) tables and schedules based on an overall indicated premium rate increase of 2.38% for Basic. As with the 2026 GRA, MPI applied net trend as a rate indication assumption for future years to reflect the premium rate increase required to offset net trends as follows: 2028/29 + 2.28%, 2029/30 +2.40% and 2030/31 +2.53%. Please refer to section *REV 2.5* for further information on the calculation of the multi-year rate change.

REV.1 Multi-Year Statements

Please refer to Figure 1, below, for a total Insurance and Non-Insurance Revenue forecast:

REV.2 Motor Vehicle Premium

Motor vehicle premium represents the amounts MPI collects from registered owners for Basic insurance for their registered motor vehicles.

Forecasting Methodology

MPI calculates the forecasted motor vehicle written premiums utilizing the following assumptions:

Current Year's Written Premium Forecast =
Previous Year's Written Premium
x (1+ Volume Factor)
x (1+ Upgrade Factor)
x (1+ Rate Change)
- Net Fleet Rebates
- Anti-Theft Discounts

MPI bases the motor vehicle earned premium forecast on the written premium forecast and the historical relationship between premiums written and earned. For a review of the Extension line of business premium assumptions please see *REV Appendix 2 - Extension Line of Business.*

Figure REV-2 below summarizes the motor vehicle premium forecast by component:

Figure REV-2 Revenue from Basic Motor Vehicle Premiums: 2027/28 +2.38% Rate Change

For a review of historical rate changes for the Extension line of business please see *REV Appendix 2 – Extension Line of Business.*

REV.2.1 Volume Factor

The volume factor represents the growth rate in Basic earned vehicle units over a given insurance year. An earned unit represents the portion of the earning period in which a vehicle is insured through Basic. For example, a private passenger vehicle insured for three months of the insurance year would be approximately 0.25 earned units (i.e., 3 months / 12 months = 0.25).

Earned units are classified as *The Highway Traffic Act* (HTA) vehicles (i.e., private passenger, commercial, public and motorcycles) and non-HTA vehicles (i.e., trailers and off-road vehicles).

Forecasting Methodology

In prior years, MPI forecasted motor vehicle premium only based only HTA units, as they represent 98% of total basic written premium. This year, MPI forecasts overall volume growth using historical total unit growth, including HTA, ORV and trailer units, to better reflect the complete vehicle premium data and capture growth patterns outside the HTA segment.

To estimate future trends, MPI applies a log-linear regression model. This approach supports the inclusion of additional explanatory variables and allows for a longer historical period to be incorporated, resulting in improved statistical fit and more stable trend projections.

MPI forecasts volume growth using Earned Year Earned Units (EY-EU). MPI believes forecasting based on the EY-EU allows it to adjust historical EY-EU more appropriately to be in line with the new fiscal year end change that occurred in the 2020/21 fiscal year. To transform the EY-EU to Policy Year (PY)-EY, MPI assumes

uniform distribution of the issuance of policies, by taking the simple average of two accident years.

Historical Results

The figures below show the historical volume growth for total earned units from 2025/26 and prior. According to Stats Canada[1], Manitoba has experienced a decline in population in recent years, primarily due to a lower immigration level. Therefore, MPI selected a lower trend of 1.42% for Private Passenger vehicles based on 2012-2025. For Commercial vehicles, MPI selected 2.00% based on 2022-2025, for Public vehicles, 2.16% based on 2012-2025 including a factor for mobility and new normal, and for Motorcycles, 3.64%, based on 2012-2025.

Current Year Forecast

Based on the selected trend rates, MPI forecasts total HTA units to grow by 1.51% for the year 2026/27 to 2029/30, and a growth of 1.52% for 2030/31. *Figure REV-6* to *Figure REV-8* below shows the selected growth rates by major class.

Figure REV-6 Forecasted HTA Units Growth – 2026/27 to 2030/31

6	**2030/31**	1,066,071	1.52%	385,198	2.87%	1,451,269	1.87%

Figure REV-6 to *Figure REV-8* above reflects the unit growth based on the 12-month earned year from April 1 to March 31.

Overall, unit volumes continue to increase but the pace of growth is expected to be moderate compared to prior years. MPI continues to monitor the movement in earned units to keep its GRA forecasts up to date.

To transform the EY-EU to Policy Year (PY)-EY, MPI assumes uniform distribution of the issuance of policies, by taking the simple average of two accident years. In *Figure REV-9* below, MPI shows unit growth based on policy year.

Figure REV-9 Forecasted Earned Units Growth by Policy Year - 2025 to 2030

		Total (HTA)		Total (Non-HTA)		Total Units

6	**2030**	1,074,173	1.52%	390,726	2.87%	1,464,838	1.87%

Comparison to Prior Year Forecast

The following figures show the projected HTA volume factors along with a comparison to the forecast from the previous year. With the exception of Commercial vehicles, all of the trends are based on long-term models. This change has resulted in a lower growth for HTA units and a higher growth for non-HTA earned units as compared to last year.

Figure REV-10 HTA Earned Units Forecast

REV.2.2 Upgrade Factor

The upgrade factor measures the changes in the average vehicle premium that occur from sources other than rate changes. MPI uses two upgrade factors for forecasting purposes: (i) vehicle upgrade; and (ii) Driver Safety Rating (DSR) upgrade.

The vehicle upgrade factor measures the impact on vehicle insurance premiums from changes in the distribution of the vehicle population. Such distributional changes can occur for rate groups, vehicle types, body styles, insurance uses and territories.

The DSR upgrade factor measures the impact on vehicle insurance premiums from changes in the average DSR level of registered vehicle owners. The vehicle merit discount level is a direct function of the DSR level of the registered owner.

Figure REV-13 Upgrade Factor Forecast

Line No.	Year	2026/27	2027/28	2028/29	2029/30	2030/31
1	**Upgrade Factor**	4.36%	2.64%	2.99%	2.91%	2.80%

Forecasting Methodology

Vehicle Upgrade: MPI forecasts the vehicle upgrade factor in consideration of the following:

- historical vehicle upgrade factors;
- changes in the rate setting methodology (e.g., rate line); and
- changes in trends in the vehicle population (e.g., more vehicles moving to all purpose).

DSR Upgrade: MPI forecasts the DSR upgrade factor based on a simulation of all drivers and vehicle owners in the DSR model. Section *REV.3 Driver Premiums* describes this model.

MPI estimates the actual upgrade factors using the Rate Model Method. The Rate Model Method takes a snapshot of the vehicle fleet at the same point in time from the current year and the previous year. MPI then calculates the average premium for

both vehicle populations using the approved rates of the most recent year (i.e., 2026/27). The percentage change in the average premium of the vehicle fleet of the current year relative to the vehicle fleet of the previous year is the total upgrade (i.e., vehicle upgrade and DSR upgrade) of the vehicle fleet for that year.

To calculate the vehicle upgrade, MPI repeats the above procedure, but with all vehicles held at their base rates (i.e., no vehicle merit discount). This calculation eliminates the impact of changes in the average DSR level. The DSR upgrade factor reflects the multiplicative difference between total upgrade and vehicle upgrade. Unlike prior years, MPI calculates the upgrade factor using the entire rate model population for 2027 GRA, instead of just HTA units. This change is to ensure consistency with the overall rate change, which includes both HTA and Non-HTA rate changes.

Historical Results

The figure below summarizes the recent historical trends in the overall upgrade, the vehicle upgrade, and the DSR upgrade for both HTA and Non-HTA vehicles.

Figure REV-14 Historical Upgrade Factors

Line No.	Insurance Year	Vehicle Upgrade	DSR Upgrade	Total Upgrade
1	**2021/22**	1.55%	0.02%	1.57%
2	**2022/23**	1.82%	0.02%	1.84%
3	**2023/24**	2.63%	-0.31%	2.31%
4	**2024/25**	3.32%	-0.49%	2.82%
5	**2025/26**	5.07%	-0.80%	4.23%
6		**Statistics**		
7	**3 Year Avg**	3.68%	-0.53%	3.12%
8	**5 Year Avg**	2.88%	-0.31%	2.56%

The vehicle upgrade factor for 2021/22 was the lowest factor reported over the five-year period. The primary driver for this was the effect of the COVID-19

Pandemic, which affected how Manitobans insured their vehicles. Changes in their work arrangements (i.e., working from home) resulted in a significant shift in the declared insurance use, with many opting to change it from all-purpose to pleasure (higher rated to lower rated insurance use).

The impact from the rate model for the most recent year implicitly captures the change in discounts from using the approved 2026/27 discounts to determine the average premiums. However, the intent of the DSR component is to capture the natural movements in DSR levels before any changes to the discount amounts; any impact to revenue due to changes in discounts are captured in the rate change as an offset.

The Forecast of this Year and Comparison to the Previous Year

The figure below compares the forecasts of this year and last year:

Figure REV-15 Upgrade Forecast Comparison

Line No.		Vehicle Upgrade			DSR Upgrade		
1	Year	This Year	Last Year	Difference	This Year	Last Year	Difference
2	**2025/26(a)**	4.12%	3.37%	0.75%	-0.80%	0.04%	-0.84%
3	**2026/27**	4.46%	5.71%	-1.25%	-0.10%	0.05%	-0.15%
4	**2027/28**	2.84%	2.54%	0.31%	-0.20%	0.15%	-0.35%
5	**2028/29**	2.84%	2.54%	0.31%	0.14%	0.11%	0.04%
6	**2029/30**	2.84%	2.54%	0.31%	0.06%	0.04%	0.03%
7	**2030/31**	2.84%	n/a	n/a	-0.05%	n/a	n/a

MPI forecasts the DSR upgrade factor based on the DSR simulation model (described in section *REV.2.2*).

For vehicle upgrade, MPI selected an average of 5 years, excluding COVID-impacted years (i.e., 2020/21 and 2021/22) and rate group expansion impacts of 2.84%. Please note the higher vehicle upgrade for the 2025/26 and 2026/27 insurance year is due to an additional assumption for rate group expansion. In the 2025 GRA, MPI

expanded its CLEAR rated rate groups from 40 to 41. In the 2026 GRA, MPI expanded its CLEAR rated rate groups from 41 to 45. The additional revenue from the rate group expansion is flowed through as additional revenue to MPI.

REV.2.3 Net Fleet Rebates

MPI considers customers to own a fleet if they have 10 or more vehicles registered on the first day of any given customer month. MPI determines fleet premiums on a retrospective basis (on the actual loss experience of the fleet in the policy year). The loss experience is the ratio between all losses paid by MPI and fleet premiums. MPI includes claims according to the degree of responsibility, apart from comprehensive claims, which it fully includes in the loss ratio calculation. The current maximum amount MPI uses for any individual loss is $25,000.

At the end of their experience period, fleet owners receive either a rebate, a surcharge, or no change in premiums from the base premiums paid at the start of the policy year.

Rebates and surcharges vary depending on the loss ratio. For the 2027/28 policy year, the maximum rebate is 33% of fleet premiums and the maximum surcharge is 50% of fleet premiums. These percentages reflect the fleet program's target break-even loss ratio of 70% to 79%, where the rebate and surcharge percentage is 0%.

Historical Results

The figure below shows the historical results for the fleet program under the current fleet scale.

Since MPI rates fleets on a retrospective basis, MPI does not calculate net fleet rebates until after the policy year. For example, fiscal year 2024/25 (shown in the figure below) represents the net fleet premiums from the 2023/24 policy year.

The figure below also reflects the share of the expected fleet rebates belonging to Basic, to be paid out for the years 2026/27 and onward.

Figure REV-16 Net Fleet Rebates Attributed to Basic Only

Line No.	Current Fleet Scale - Total				
	Fiscal Year	**Rebates**	**Surcharges**	**Net Rebates**	**Total Premiums**
1	***($000)***				
2	**2021/22**	$23,338	$1,489	$21,849	$83,827
3	**2022/23**	$22,169	$2,630	$19,539	$88,469
4	**2023/24**	$21,701	$2,774	$18,928	$89,143
5	**2024/25**	$24,391	$3,274	$21,118	$100,913
6	**2025/26**	$26,679	$3,500	$23,178	$110,251
7	**Average Percentage Increases / Decreases**				
8	**3 year**	6.55%	10.14%	6.07%	7.74%
9	**5 year**	3.74%	16.74%	2.85%	6.39%
10	**Forecast - Basic Only**				
11	**Fiscal Year**	**Rebates**	**Surcharges**	**Net Rebates**	**Total Premiums**
12	***($000)***				
13	**2026/27**	$29,170	$3,823	$25,347	$120,774
14	**2027/28**	$31,954	$4,188	$27,766	$132,301
15	**2028/29**	$35,004	$4,587	$30,416	$144,928
16	**2029/30**	$38,345	$5,025	$33,319	$158,761
17	**2020/31**	$42,004	$5,505	$36,500	$173,913

Please note that for the 2023/24 and 2024/25 fiscal year, MPI adjusted the data to account for the strike in 2023. The strike caused some fleet customer assessments, normally completed in the 2023/24 fiscal year, to be processed in the 2024/25 fiscal year.

Forecasting Methodology

MPI calculated the expected growth in fleet exposures, the premium trend, rebate

as a percentage of premium, and surcharge as a percentage of expected premium, based on historical data. The trends selected are used to forecast expected premium and the percentages are selected to forecast how much premium will be paid out as a rebate and how much will be collected as a surcharge. The amounts rebated by MPI to fleet customers always exceeds the surcharge amounts.

REV.2.4 Anti-Theft Discounts

Prior to 2019/20, MPI provided vehicle owners with a $40 discount if they installed an approved aftermarket theft deterrent system (i.e., immobilizer) in their vehicles. Since its implementation in 2006/07, the Immobilizer Incentive Program resulted in over 200,000 immobilizer installations. By 2019/20, this successful program had outgrown its usefulness and, as a result, MPI decided to discontinue it. Despite its discontinuation, customers enrolled in this program prior to 2019/20 will continue to receive the $40 discount.

Forecasting Methodology

To predict the amount of anti-theft discounts in future periods MPI forecasts the premium earned with anti-theft devices. MPI creates the premium earned forecast by reviewing the historical attrition rates of vehicles by model year. The attrition rate measures how the number of vehicles in a given model year changes as these vehicles age. The forecast assumes no new installations will occur in future periods.

Historical Results and Forecast Details

The figure below shows the anti-theft discount forecast for this year, along with a comparison to the forecast from the previous year.

6	**2029/30**	(333)	(335)	2

REV.2.5 Total Motor Vehicle Premium

Sections *REV.2.1* through *REV.2.4* provide details of the forecasts for each of the components of written motor vehicle premium.

Written Motor Vehicle Premiums

The figure below compares total written vehicle premium forecasts from the current and prior GRA:

Figure REV-18 Motor Vehicle Premiums Written

Line No.	Fiscal Year	This Year	Last Year	Difference	Percentage Difference
1	*($000)*				
2	**2025/26**	1,294,205(a)	1,288,277	5,928	0.46%
3	**2026/27**	1,404,491	1,416,101	(11,610)	-0.82%
4	**2027/28**	1,502,795	1,492,376	10,419	0.70%
5	**2028/29**	1,611,921	1,577,023	34,898	2.21%
6	**2029/30**	1,729,807	1,668,139	61,668	3.70%
7	**2030/31**	1,856,662	n/a	-	-

Actual written premiums in 2025/26 were $5.9 million higher than forecast in the 2026 GRA, driven by a higher upgrade factor than originally projected. The 2026/27 forecast is $11.6 million lower than the 2026 GRA forecast, reflecting the impacts of a lower upgrade factor and a lower approved rate change. The remaining variances

in 2027/28 onwards are due to the application of multi-year rate changes, as well as higher projected volume impacts. The application of 2.38% for 2027/28 is the required rate change under AAP. Please see *Part VIII Pro Formas Chapter* for further details on premium variances.

The multi-year rate change is the net trend determined based on the expected loss cost trend compared to the expected trend in average premiums. The net trend is the estimation of the required rate change, assuming expenses increase proportionally with claims trends.

Please see the table below on how the net trend is calculated.

Figure REV-19 Net Trend Calculation

Line No.	Loss Cost Trend	Accident Year Loss Cost	Rating Year Loss Cost	Premium Trend	Net Trend
1	**2028/29**	1.0532	1.0534	1.0299	1.0228
2	**2029/30**	1.0536	1.0538	1.0291	1.0240
3	**2030/31**	1.0540	1.0540	1.0280	1.0253
4	**2031/32**	1.0540			

The accident year loss cost trend is the implied trend for total forecasted Basic loss costs. Please refer to *Part VI Claims Forecast Appendix 4 Tables 3 and Tables 5* for the loss cost projections. MPI adjusted the accident year loss cost trend to a rating year loss cost trend by assuming an average of two accident years. The premium trend assumption is determined based on the upgrade factor, please refer to *Figure REV-13*. Finally, the net trend is equal to the rating year loss cost divided by the upgrade factor.

Earned Vehicle Premiums

MPI forecasts the earned motor vehicle premium as follows:

Earned Premium in the Current Year =
Beginning of Year Unearned Premium Balance + Premiums Written in the Year – Expected Unearned Premiums During the Year

Figure REV-1 herein shows the resulting earned premiums based on the above formula. The '*Beginning of Year Unearned Premium Balance*' is the actual balance from the financial system at year end. The '*Current Year's Written Premium*' is based on the forecasted written premium from the previous section. The '*Unearned Premiums During the Year*' is the expected unearned premium balance at year end.

The figure below shows a comparison of the earned vehicle premium forecasts of the current and prior GRA:

Figure REV-20 Earned Motor Vehicle Premium

Line No.	Fiscal Year	This Year	Last Year	Difference	Percentage Difference
1	***($000)***				
2	**2025/26**	1,226,015(a)	1,223,185	2,830	0.23%
3	**2026/27**	1,350,237	1,352,820	(2,583)	-0.19%
4	**2027/28**	1,454,141	1,454,615	(474)	-0.03%
5	**2028/29**	1,557,911	1,535,117	22,793	1.48%
6	**2029/30**	1,671,461	1,623,031	48,431	2.98%
7	**2030/31**	1,793,877	n/a	-	-

The explanation for the Earned Motor Vehicle Premium forecast follows a similar pattern from the written premium forecast. Due to staggered renewals, MPI will earn approximately half of the impact of the 1.77% approved rate increase from the 2026 GRA in both 2026/27 and 2027/28.

REV.3 Driver Premiums

MPI charges a Basic insurance premium on every Manitoba driver's license to ensure that all drivers share the cost of accidents. On March 1, 2010, MPI implemented the DSR program as a method of classifying driver risk. The insurance premium charged on the license varies based on the risk of the driver as measured by the DSR scale. The DSR program is detailed in *Part VII Risk Classification Chapter*.

Forecasting Methodology

MPI forecasts driver premiums by simulating the movements of all drivers on the DSR scale. The forecast considers the following five components:

1. The number of earned driver units by DSR level;
2. The expected movement of drivers on the DSR scale, including drivers entering and exiting the system;
3. The number of earned units per driver by DSR level (i.e., the average portion of a year that a driver at a given DSR level keeps their license active);
4. The driver license premiums by DSR level; and
5. The percentage reduction in driver premiums from appeals.

Earned Driver Units

A driver unit represents one active driver license for a full year. Drivers can earn partial driver units if they enter or exit the system in the middle of a year, choose not to renew their license, receive a suspension, etc. The following figure shows the historical driver unit growth.

Figure REV-21 Historical Earned Driver Units

Line No.	Policy Year	Driver Units	Annual Change
1	**2017/18**	875,562	1.28%
2	**2018/19**	886,029	1.20%
3	**2019/20**	900,149	1.59%
4	**2020/21***	972,942	8.09%
5	**2021/22**	916,835	-5.77%
6	**2022/23**	931,993	1.65%
7	**2023/24**	952,581	2.21%
8	**2024/25**	977,419	2.61%
9	**2025/26****	987,672	1.05%
10	**Average (Excluding 2025/26)**		
11	**3-Year**	953,998	2.16%
12	**5-Year**	950,354	1.76%
13	**All-Years**	926,689	1.61%
14			
14	*2020/21 includes 13 months of data due to MPI's fiscal year end change		
15	**Estimated since 2025/26 is an incomplete policy year as there are only		
16	12 months of earned data.		

For the 2027 GRA, MPI selected a driver unit growth rate of 1.35%, somewhat lower than the growth in recent years. While year-over-year growth was elevated from 2022 to 2024, it moderated in 2025 based on Manitoba population statistics. Accordingly, MPI considers 1.35% to be appropriate, reflecting an expectation that driver unit growth will return to levels observed prior to 2022.

Figure REV-22 Earned Driver Unit Growth Forecast

Line No.	Policy Year	Earned Driver Units	Annual Change	Last Year's Forecast	Difference
1	**2025/26**	987,672	1.05%	1.47%	-0.42%
2	**2026/27**	1,001,005	1.35%	1.47%	-0.12%
3	**2027/28**	1,014,519	1.35%	1.47%	-0.12%
4	**2028/29**	1,028,215	1.35%	1.47%	-0.12%
5	**2029/30**	1,042,096	1.35%	n/a	n/a

Expected Driver Movement

MPI set the forecasted driver movements using the transition matrix for 2020/21 to 2024/25. Further, for driver movement into the newly introduced DSR level, MPI assumed that transition rate would be similar to that of DSR +18.

The figure below shows the forecasted probability of upward movement (i.e., input factor free driving year) by DSR level for 2027/28. The actual driver movement matrix includes all possible combinations of movements for drivers on the DSR scale.

Figure REV-23 Probability of Upward Movement on the DSR Scale by DSR Level

Line No.	DSR	This Year	Last Year	Difference
1	**15 to 20**	95.8%	95.8%	0.0%
2	**10 to 14**	92.3%	91.9%	0.4%
3	**0 to 9**	83.5%	82.4%	1.0%
4	**-1 to -10**	78.0%	77.4%	0.7%
5	**-11 to -20**	67.3%	67.1%	0.2%

Earned Driver Units per Driver

After predicting the movement of drivers by DSR level, MPI calculated the expected earned driver units per driver at each DSR level. This adjustment is required because driver premiums are only received for the portion of the year that the license is active. Also, the earned driver units per driver are not consistent by DSR level, as demerit drivers are much more likely to have a license for less than a full year.

The following figure shows the fitted earned driver units per driver used in the forecast for this year. MPI fit the earned driver units using the latest complete policy year (i.e., 2024/25).

Figure REV-24 Earned Driver Units per Driver by DSR Level

Line No.	DSR	This Year	Last Year	Difference
1	**15 to 18**	0.990	0.991	-0.001
2	**10 to 14**	0.989	0.990	-0.001
3	**0 to 9**	0.981	0.972	0.010
4	**-1 to -10**	0.962	0.954	0.008
5	**-11 to -20**	0.896	0.877	0.019

MPI multiplies the forecasted driver counts by the expected earned driver units per driver to produce the estimated earned driver units by DSR level. The figures below show the projected number and distribution of earned drivers by fiscal year over the forecast period. The detailed forecast of driver units for all DSR levels is provided in *REV Appendix 1 – Driver Premium Forecast by DSR Level.*

Figure REV-25 Policy Year Earned Driver Unit Forecast by DSR Level

Line No.	DSR	2025/26	2026/27	2027/28	2028/29	2029/30	2030/31

Driver License Premiums by DSR Level

The following figure shows the driver license premiums and vehicle premium discounts by DSR level for rating year 2027/28. There are no proposed changes to the current driver license premiums. MPI is proposing to adjust the vehicle premium

discounts by moving the current discounts one-half of the way towards their actuarially indicated discounts. Please refer to *Part VII Risk Classification RC Appendix 6 - Driver Safety Rating Actuarial Review* for a detailed analysis on the actuarially indicated discounts and proposed discounts for the 2027 GRA.

Figure REV-27 2027/28 Driver License Premiums and Vehicle Premium Discounts

DSR Upgrade

The forecasted DSR upgrade factors, discussed in section *REV.2.2*, are not part of the driver premium forecast. However, the calculation of the DSR upgrade is a direct output from the DSR simulation model, which is why this section shows the forecast details.

To calculate the forecasted DSR upgrade factors, MPI first forecasts the number of earned vehicle units per earned driver unit at each DSR level. The figure below shows the estimated vehicle units per driver used in the current year. MPI bases the forecast on the 2025/26 policy year data at 12 months. The detailed forecast of HTA vehicle units per driver for all DSR levels is provided in *Appendix 1 – Driver Premium Forecast by DSR Level*.

Figure REV-28 Earned Vehicle Units per Earned Driver Unit by DSR Level

Line No.	DSR	This Year	Last Year	Difference
1	**15 to 20**	1.273	1.253	0.020
2	**10 to 14**	1.087	1.082	0.005
3	**0 to 9**	0.615	0.616	-0.002
4	**-1 to -10**	0.723	0.723	0.000
5	**-11 to -20**	0.743	0.753	-0.010

MPI then multiplies the above figures by the forecasted number of earned drivers to produce a distribution of vehicles by DSR level. MPI calculates the average vehicle discount level based on this forecasted distribution. The DSR upgrade measures the year-to-year changes in the average vehicle discount level. The output from the model is discussed in section *REV.2.2 Upgrade Factor*.

Driver Premium Appeals

A driver can appeal additional driver premium on their license to the Rates Appeal Board through the rates appeal process. The figure below shows the reduction in driver premium from appeals for the DSR demerit levels over the past 3 policy years.

Figure REV-29 Driver Written Premium Appeal Reduction Percentage

Line No.	DSR Level	2022	2023	2024
1	0	0.00%	0.00%	0.00%
2	-1	0.50%	0.50%	0.00%
3	-2	1.00%	0.50%	0.50%
4	-3	1.00%	1.00%	1.00%
5	-4	0.50%	0.50%	0.50%
6	-5	1.56%	1.56%	1.78%
7	-6	0.40%	0.60%	0.40%
8	-7	0.46%	0.31%	0.92%
9	-8	0.88%	0.50%	0.63%
10	-9	1.44%	0.56%	1.56%
11	-10	0.70%	0.70%	1.30%
12	-11	1.17%	1.92%	1.92%
13	-12	2.00%	1.14%	2.36%
14	-13	0.94%	1.13%	2.19%
15	-14	2.94%	1.39%	3.22%
16	-15	3.20%	3.05%	3.25%
17	-16	2.77%	3.55%	3.09%
18	-17	1.96%	0.75%	2.17%
19	-18	3.96%	1.77%	4.88%
20	-19	3.00%	2.64%	5.32%
21	-20	3.07%	3.97%	4.30%

Based on the above historical information, MPI determined that an adjustment for appeals was necessary. MPI based the appeals reduction for the forecasted period using the 2025 policy year as its best estimate.

Forecast Results and Comparisons

MPI calculates the written driver premium forecast by multiplying the policy year projected earned driver units by the driver license premiums at each DSR level after adjustment for appeals. It calculates the earned driver premium based on the

written premium and the historical relationship between written and earned driver premiums.

The figures below compare the written and earned driver premium forecasts for the current year to the forecast of the previous year:

Figure REV-30 Driver Written Premium Forecast

Line No.	Fiscal Year	Written Premium This Year	Last Year	Difference
1	*($000)*			
2	**2025/26**	71,531(a)	71,660	(129)
3	**2026/27**	72,560	73,080	(520)
4	**2027/28**	73,218	75,048	(1,830)
5	**2028/29**	74,881	76,340	(1,459)
6	**2029/30**	75,817	77,605	(1,788)
7	**2030/31**	76,739	n/a	-

Figure REV-31 Driver Earned Premium Forecast

Line No.	Year	Earned Premium This Year	Last Year	Difference
1	*($000)*			
2	**2025/26**	65,997(a)	66,290	(294)
3	**2026/27**	72,171	72,374	(203)
4	**2027/28**	72,890	74,069	(1,179)
5	**2028/29**	74,051	75,697	(1,646)
6	**2029/30**	75,350	76,976	(1,626)
7	**2030/31**	76,279	n/a	-

There is a slight decrease in the forecast this year compared to last year due to a lower increase in MPI's growth assumption.

REV.4 Reinsurance Premium Ceded

The Basic Reinsurance Program is comprised of two main components:

- the **Catastrophe Program**, which protects MPI against major weather-related physical damage events such as hail, wind, flood, and fire; and
- the **Casualty Excess of Loss Program**, which protects MPI against the cost of serious bodily injury claims under the Personal Injury Protection Plan.

Catastrophe Program

As of April 1, 2026, MPI renewed its annual aggregate catastrophe reinsurance program, which is designed to protect against financial volatility from both single and multiple weather-related catastrophic events. Program costs have declined compared to the prior year. This is driven by a softening reinsurance market that led to reduced pricing across treaty layers, combined with increased MPI co-participation in the lower layer.

The allocation methodology for catastrophe treaty premiums remains unchanged from the prior year. Premiums are allocated across lines of business based on the average proportion of catastrophe losses over the past 10 accident years. See the figure below:

Figure REV-32 Percentage Allocation of Catastrophe Losses by Line of Business

Accident Year	Basic	Extension	Special Risk Extension	Grand Total
2015	91.80%	7.71%	0.49%	100.00%
2016	91.81%	7.52%	0.66%	100.00%
2018	92.34%	7.09%	0.57%	100.00%
2019	89.17%	9.11%	1.71%	100.00%
2020	92.30%	7.34%	0.36%	100.00%
2021	91.16%	8.72%	0.13%	100.00%
2022	91.41%	8.03%	0.56%	100.00%
2023	91.80%	8.13%	0.08%	100.00%
2024	91.74%	8.04%	0.22%	100.00%
2025	90.72%	7.46%	1.82%	100.00%
Grand Total	**91.76%**	**7.90%**	**0.34%**	**100.00%**
Average				
3-Year	91.42%	7.88%	0.70%	100.00%
5-Year	91.36%	8.07%	0.57%	100.00%
10-Year	91.42%	7.91%	0.67%	100.00%
Selected Catastrophe Treaty Premium Allocation By Layer:				
Layer 1	91.50%	8.00%	0.50%	100.00%
Layer 2 & 3	91.50%	8.50%	0.00%	100.00%

Consistent with the prior year, the allocation of the catastrophe treaty premium for Basic represents 91.50% of the total reinsurance premium.

The structure of the catastrophe reinsurance program remains largely unchanged, with an upper coverage limit of $400 million and an aggregate deductible of $50 million. However, the per-occurrence deductible has increased to $3 million (from $2 million). In addition, the program has been simplified from four layers to three, as the two lowest layers have been combined (previously $20M xs $50M and $80M xs $70M; now $100M xs $50M).

Looking ahead, and in consultation with MPI's reinsurance broker, premiums for 2027/28 and 2028/29 are projected to grow modestly—by 0.0% and 1.0% per year, respectively — reflecting expectations of a stabilizing or softening reinsurance market for catastrophe property coverage in Canada.

Figure REV-33 Basic Ceded Premiums – Catastrophe Program

Line No.	Reinsurance Category	Fiscal Year 2025/26A	2026/27	2027/28	2028/29	2029/30	2030/31

Casualty Program (Serious Bodily Injury Claims)

The Casualty treaty was renewed on April 1, 2026 for $1.1 million, consistent with the prior year. The market for high excess auto casualty in Canada is stable.

Figure REV-34 Basic Ceded Premiums – Casualty Program

Line No.	Reinsurance Category	Fiscal Year 2025/26A	2026/27	2027/28	2028/29	2029/30	2030/31
1	*($000)*						
2	**30M xs 20M**	1,097	1,100	1,100	1,100	1,100	1,100
3	**Total**	**1,097**	**1,100**	**1,100**	**1,100**	**1,100**	**1,100**

The Casualty Program exclusively covers the Basic line within the $30 million excess of the $20 million layer. As a result, the full cost of that layer is allocated to Basic.

In consultation with MPI's reinsurance broker, premiums for 2027/28 and beyond are projected to remain flat, with an assumed annual growth rate of 0%. This

forecast reflects expectations of a soft reinsurance market and the absence of significant loss activity.

Total Reinsurance Program – Catastrophe and Casualty

Figure REV-35 Total Ceded Premiums

Line No.	Fiscal Year	This Year	Last Year	Difference	Percentage Difference
1	*($000)*				
2	**2025/26**	27,462(a)	27,465	(3)	0.0%
3	**2026/27**	20,629	27,466	(6,837)	-24.9%
4	**2027/28**	20,629	27,466	(6,837)	-24.9%
5	**2028/29**	20,825	27,729	(6,904)	-24.9%
6	**2029/30**	21,023	27,996	(6,973)	-24.9%
7	**2030/31**	21,023	n/a	-	-

The 2026/27 Basic reinsurance renewal led to an overall decrease of approximately $6.8 million in earned reinsurance premiums compared to the forecast in the 2026 General Rate Application (GRA). This decrease was primarily driven by lower premiums for the Catastrophe treaty, reflecting a softening reinsurance market as well as increased MPI co-participation on the lower layer of the treaty.

REV.5 Service Fees and Other Revenue

Service fees represent charges for services related to the Basic insurance coverage offered by MPI. *Part VII Application Rate Tables Chapter, Figure ART-3 2027/28 Basic Autopac Service and Transaction Fees* outline these fees.

Service Fees and Other Revenue include revenue from quarterly and monthly pre-authorized payment plans, late payment fees, motor vehicle transaction fees (MVTF), dishonoured payment fees, pre-authorized default fees, and other fee-related items.

MPI does not apply for any change in Service Fee rates in the 2027 GRA and there are no new service fees within the forecast when compared against the 2026 GRA.

REV.5.1 Service Fees and Other Revenue

Services Fees and Other Revenue are presented in two different categories in the Statement of Operations:

1) Other Insurance Revenue

2) Service Fees and Other Income

Figure REV-36 Basic Other Revenue and Service Fee Forecast

Line No.	Service Fee Category	Fiscal Year 2025/26A	2026/27	2027/28	2028/29	2029/30	2030/31

14	CityPlace Rental Income	1,295	1,295	1,295	1,295	1,295	1,295
15	**Sub Total Service Fees and Other Income**	**11,032**	**10,547**	**10,601**	**10,657**	**10,712**	**10,763**
16	**Grand Total**	**40,759**	**37,167**	**37,947**	**39,618**	**41,427**	**43,362**

The "Other Insurance Revenue" category represents fees charged to policyholders for costs incurred under MPI's billing and payment plans, payment processing charges and transaction fees for the administration of policies.

The figure below provides an overview of the forecast for the 2027 GRA compared to the 2026 GRA.

Figure REV-37 Basic Other Insurance Revenue Forecast

Line No.	Fiscal Year	This year	Last Year	Difference
1	*($000)*			
3	**2025/26**	29,727(a)	26,838	2,889
4	**2026/27**	26,620	26,907	-287
5	**2027/28**	27,346	28,397	-1,051
6	**2028/29**	28,961	29,758	-797
7	**2029/30**	30,715	31,223	-508
8	**2030/31**	32,599		

The "Service Fees and Other Income" category includes fees charged to customers for products and services other than insurance products or services, CityPlace rental income, and incidental income from operations.

A summary of the forecasted Service Fees and Other income is provided in the table below.

Figure REV-38 Basic Service Fees and Other Income Forecast

Line No.	Fiscal Year	This year	Last Year	Difference
1	***($000)***			
3	**2025/26**	11,032(a)	9,753	1,279
4	**2026/27**	10,547	9,769	778
5	**2027/28**	10,601	9,807	794
6	**2028/29**	10,657	9,846	811
7	**2029/30**	10,712	9,886	826
8	**2030/31**	10,763		

There have been no significant changes to the forecasting methodology of Other Insurance Revenue or Service Fees and Other Income. Overall, the 2027 GRA forecast for 2026/27 onward is relatively consistent with the 2026 GRA forecast. The higher-than-forecast actuals for 2025/26 Other Insurance Revenue is a result of higher revenue from policy financing plans. For Service Fees and Other Income the primary contributor to the increase in 2025/26 revenue is higher-than-expected rental income from CityPlace.

Extension Line of Business

Ten-Year History of Extension Overall Average Rate: Level Change Indication

Figure REV App 2-1 below provides the ten-year history of the Overall Average Rate Level Change Indication for Extension:

Figure REV App 2-1 Extension Overall Average Rate Level Change

Line No.	Rating Year	Overall Profit Target [a]	Indicated Overall Rate Change	Selected Overall Rate Change
1	**2017**	25.00%	0.00%	0.03%
2	**2018**	32.10%	0.30%	0.03%
3	**2019**	27.85%	-6.49%	-6.37%
4	**2020**	28.29%	0.01%	0.27%
5	**2021 [b]**	15.48%	8.10%	8.20%
6	**2022**	20.83%	0.02%	0.32%
7	**2023**	21.70%	0.00%	-0.10%
8	**2024 [c]**	18.91%	10.39%	11.41%
9	**2025**	22.77%	1.88%	2.05%
10	**2026 [d]**	20.00%	16.20%	2.10%

11 Notes:
12 [a] For 2021/22 and after, the profit target is based on Underwriting Income; all prior years based on Net Income.
13 [b] Implementation of the product change resulted in increased Extension claims costs,
14 leading to an additional revenue requirement of 15.7%.
15 Excluding the product change, the overall rate change would have been -7.5%.
16 [c] The rate adjustment was due to not applying the full rate requirement for CERP in 2021/22, necessary to
17 maintain a 20% profitability target. An increased activity in Rental Vehicles and Third Party Liability
18 largely driven by the U.S. exposure, also contributed to the 10.3% increase .
19 [d] 2026/27 selected overall rate change is lower than indicated due to product change
20 (basic deductible change from $750 to $1,000); extension rates were kept rate neutral from basic $750

Please refer to *Figure REV App 2-2* for the actual and anticipated profit margins for 2026/27 through 2030/31.

Figure REV App 2-2
Forecasted underwriting profit margin* by fiscal year- Extension - 2025/26 - 2030/31

6	2031	2030/31	15.2%	n/a	n/a

*Underwriting profit margin is calculated as net income from operations, less net investment income, divided by revenue from premiums.

Key Assumption Areas Underlying the Extension Revenue Forecasts

MPI projects written premium revenue for its Extension line-of-business based on the combined effects of four factors:

- **Rate change** – Historical overall rate change for Extension is provided in *Figure EXP App 2-1*. In the 2026 GRA, MPI increased the Basic deductible from $750 to $1,000 and introduced a $750 deductible option under Extension. This change facilitates the transition of customers to the new $750 deductible while maintaining premium neutrality. However, maintaining premium neutrality requires a reduction in profitability in the short term. To gradually return to the previous profitability levels while preventing rate shock for customers, MPI continues to assume a 2% rate increase year on year in the subsequent years.

- **Volume growth** – Projected volume growth is determined at the product level, either based on historical volume growth or changes in penetration rate which, for products, can be linked to Basic eligible units (i.e., reduced deductible). *Figure REV App 2-3* below presents the historical overall volume growth for the last 10 years and the forecasted growth for the forecast period based on an aggregation of the projected volume growth by product. For the 2026/27 rating year MPI projected a higher volume growth primarily due to product changes. Note that overall volume growth cannot be applied directly to written premium revenue since the different product offerings from Extension may have significantly different rates. For example, a growth of 1% in an extension product with a low premium rate may lead to a much lower overall growth in premiums compared to a product with a high premium rate.

- **Upgrade** – Projected upgrade is determined at the sub-product level. For example, for the reduced deductible product, a separate upgrade is used for the $200, $300 and $500 deductible levels. The current methodology MPI employs is to use the latest indication (i.e., the indication for 2026/27) throughout the forecast years for most of its products. The only exception is Vehicle Protection where zero upgrade is selected to mitigate volatility. MPI has not tracked the historical overall upgrade effect on written premium revenue.

- **Product shift** – Projected product shift is determined at the sub-product level based on historical indications. Product shift represents changes in customer buying behavior for certain Extension products. For example, changes in deductible selections, such as customers moving from a $200 deductible to a $500 deductible, represent a shift in the product mix. For the 2026/27 and future rating years, MPI adjusted the product shift to account for product

changes. MPI has not tracked the historical overall product shift effect on written premium revenue.

Figure REV App 2-4 presents the historical and projected overall growth in written premium revenue for Extension and provides a breakdown of the growth by rate change and the other factors (i.e., the combined effect of volume growth, upgrade, and product shift as described above

Expenses

EXP.1 Executive Summary

Manitoba Public Insurance (MPI) has a responsibility to Manitobans to manage all operating expenses related to MPI's insurance and non-insurance business in a fiscally prudent manner. Despite continued challenges in the Canadian and world economies, MPI remains committed to a disciplined approach to ensuring expense impacts are mitigated as it relates to the universal compulsory automobile insurance (Basic) rate requirement.

This chapter provides the 2026/27 to 2030/31 corporate operating expense forecast with a focus on operating expenses for the Basic line of business.

EXP.2 Expense Overview

Corporate operating expenses include the costs to manage MPI's three insurance lines of business (LOBs): Basic, Extension, Special Risk Extension (SRE), and the non-insurance LOB – administration of *The Drivers and Vehicles Act* (DVA). Although the expense section in the 2027 GRA focuses on explaining expenses from a corporate perspective, MPI determines its 2027/28 rate requirement on the basis of total expenses allocated to Basic.

Costs associated with delivering the Basic insurance program to Manitoba motorists fall into three major categories:

1. incurred claims costs;
2. operating expenses (broken down into):
    a. insurance service expenses (maintenance and acquisition expenses)

b. operating expenses (non-insurance service expenses); and

1. commissions and premium taxes.

This chapter describes all MPI related costs except for Incurred Claims, which are discussed in *Part VIII Net Incurred Claims Chapter*, and specifically focuses on Basic's share of allocated expenses. Refer to *Appendix 22 – Budgeting Process Framework* and *Appendix 22a - 2027 29 Budget Process and Context* for details of MPI's budget process and context for 2027/28 Corporate operating expenses. The allocation of expenses aligns with the approved cost allocation methodology and is further detailed in section *EXP.3*.

At a high level, *Figure EXP-1* compares the prior year and current year forecasted expenses over the rating years (i.e., 2027/28 and 2028/29).

Figure EXP- 1 Expense Comparison – 2027 vs. 2026 GRA Rating Years

Basic Normal Operating Expense

Normal operating expenses include expenses incurred to manage the day-to-day operations of MPI. Overall, Basic Normal Operating Expenses for the 2027 GRA ratings years are approximately $~~35.3~~19.8 million higher (as per *Figure EXP-1* above) compared to 2026 GRA Basic rating year normal operating expenses. This impact can best be explained by the following two factors:

1. An approximate $~~12.2~~ 12.9 million related to higher corporate normal operating expenses ($18.7 million x ~~64.8~~69.0%)

2. An approximate $~~23.1~~6.9 million due to a change in the percentage allocated to Basic ($379.3 million x (~~64.8~~69.0% - ~~58.7~~67.1%)

Variance analysis between expense categories in 2027 GRA versus 2026 GRA are explained in *Appendix 6 – 2026 versus 2027 GRA Comparative* and *Appendix 3- Compound Annual Growth Rates Basic and Corporate total Expenses* and provide a historical and forecast summary of expense growth. Refer to *EXP 3* for details of Basic Cost Allocation methodology and *Figure EXP APP 6-1* for a summary of the percentage allocated to Basic.

Basic Initiative Expenses

Initiative expenses are operating expenses that occur as a result of a project. These costs are also budgeted at the corporate level but have project specific allocations. When compared to the 2026 GRA, initiative costs are lower mainly due to the revised forecasted implementation placeholder (refer to *Appendix 22- Budgeting Process Framework* section 2.8 Initiative Expenses for details) and lower forecasted licensing costs due to the accrual of an onerous contract as at March 31, 2026.

Collectively, the two groups above make up Total Basic allocated corporate expenses and are commonly referred to in this chapter as *Basic Operating Expenses*.

b. operating expenses (non-insurance service expenses); and

2. commissions and premium taxes.

This chapter describes all MPI related costs except for Incurred Claims, which are discussed in *Part VIII Net Incurred Claims Chapter*, and specifically focuses on Basic's share of allocated expenses. Refer to *Appendix 22 – Budgeting Process Framework* and *Appendix 22a - 2027 29 Budget Process and Context* for details of MPI's budget process and context for 2027/28 Corporate operating expenses. The allocation of expenses aligns with the approved cost allocation methodology and is further detailed in section *EXP.3*.

At a high level, *Figure EXP-1* compares the prior year and current year forecasted expenses over the rating years (i.e., 2027/28 and 2028/29).

Figure EXP- 2 Expense Comparison – 2027 vs. 2026 GRA Rating Years

Line No.		Chapter Section	2027 GRA Avg. of Rating Yrs	2026 GRA Avg. of Rating Yrs	Change (Dollars)	Change (Percent)

Basic Normal Operating Expense

Normal operating expenses include expenses incurred to manage the day-to-day operations of MPI. Overall, Basic Normal Operating Expenses for the 2027 GRA ratings years are approximately $19.8 million higher (as per *Figure EXP-1* above) compared to 2026 GRA Basic rating year normal operating expenses. This impact can best be explained by the following two factors:

1. An approximate $12.9 million related to higher corporate normal operating expenses ($18.7 million x 69.0%)

2. An approximate $6.9 million due to a change in the percentage allocated to Basic ($379.3 million x (69.0% - 67.1%)

Variance analysis between expense categories in 2027 GRA versus 2026 GRA are explained in *Appendix 6 – 2026 versus 2027 GRA Comparative* and *Appendix 3- Compound Annual Growth Rates Basic and Corporate total Expenses* and provide a historical and forecast summary of expense growth. Refer to *EXP 3* for details of Basic Cost Allocation methodology and *Figure EXP APP 6-1* for a summary of the percentage allocated to Basic.

Basic Initiative Expenses

Initiative expenses are operating expenses that occur as a result of a project. These costs are also budgeted at the corporate level but have project specific allocations. When compared to the 2026 GRA, initiative costs are lower mainly due to the revised forecasted implementation placeholder (refer to *Appendix 22- Budgeting Process Framework* section 2.8 Initiative Expenses for details) and lower forecasted licensing costs due to the accrual of an onerous contract as at March 31, 2026.

Collectively, the two groups above make up Total Basic allocated corporate expenses and are commonly referred to in this chapter as *Basic Operating Expenses*.

Basic Direct Expenses

Basic Direct Expenses are made up of commissions and premium taxes. Except for some commissions paid for transactional services (i.e., flat fees), these costs are directly or variably proportional to the actual/forecasted premiums collected. MPI pays compensation in the form of commissions and flat fees to brokers (approximately 300) across Manitoba for selling Basic insurance products. There are variable commissions related to the purchase of Basic insurance policies and flat fees which MPI pays for administering various types of transactions. Refer to *Appendix 21- Broker Commissions Paid and Written* for details of commissions paid and written to brokers. Premium taxes are taxes MPI pays on premiums collected, net of rebates paid out to ratepayers. Costs associated with Premium Taxes are related to the Basic LOB insurance policies. The Basic amount of premium taxes is calculated based on 3.0% of earned premiums net of any rebates paid.

The following *Figure EXP-2* summarizes historical and forecast Corporate and Basic Expenses along with total direct Basic expenses related to commissions and premium taxes.

34	Figures includes improvement initiative (ongoing and implementation) expenses.								
35	*2025/26A has been normalized for impairment of $15.1 million and onerous contract expenses of $37.3 million.								

A 10-year Corporate view by nature of expense is included in *Appendix 4- 10-Year Summary Corporate Normal and Corporate Total Operating Expenses*. A 10-year Basic view by nature of expenses is included in *Appendix 2- 10-Year Summary Basic Total Expenses by Category*. Compounded annual growth rates over the last five historical years through the outlook period are presented in *Appendix 3 – Compounded Annual Growth Rates - Basic and Corporate Normal Operations and Total Expenses*. The graph in *Figure EXP-4* below presents the five major corporate operating expense categories over a 10-year period - compensation, data processing, special services, merchant fees and initiative project placeholder (forecast period line item, which will fall predominantly into the data processing category). On average, these categories account for 83.2% (2026 GRA- 82.4%) of total corporate operating expenses over the 10-year period. The expenses have been normalized to exclude impairment in 2024/25 and both impairment and onerous contract expenses in 2025/26.

Figure EXP- 4 10-Year Summary of Total Corporate Operating Expenses - Normalized

*2024/25A normalized for Nova impairment of $60.8 million.

**2025/26A normalized for Nova impairment of $15.1 million and onerous contract expenses of $37.3 million.

Corporate Expenses over 10 years

Key Take Aways

- As noted in *Figure EXP App 3-3*, total corporate expense forecast has a compounded annual growth rate of 2.8% average over the 5-year forecast period.
- On average, 4 categories account for 83.2% (2026 GRA- 82.4%) of total corporate operating expenses over the 10-year period. This operating cost structure reflects MPI's existing service delivery model and related customer and partner service expectations, and offers limited flexibility for material cost down opportunities.
- Compensation is the largest expense category and remains a core driver of the increase across the period, with in-scope staff representing approximately 80% of FTE.
- Data processing is the second largest expense category and technology and data processing costs (which the project implementation placeholders will be predominantly allocated to) are a continued significant driver of expenditures for the Corporation.
- Some cost categories partially offset the increases, but not enough to prevent overall growth. Lower or stable costs in areas help moderate the increase, but overall expense growth is still driven upward by compensation.

EXP.2.1 Summary of Key Expense Drivers & Allocators

Figure EXP-5 outlines the key assumptions underlying the 2026 and 2027 GRA forecasts, along with the corresponding references. Further details regarding compensation assumptions and analysis are included in *Appendix 11-Compensation Analysis.*

Figure EXP- 5 Summary Table of Assumptions

EXP.2.2 2027 GRA vs. 2026 GRA Comparative Analyses

Variance analysis between expense categories in 2027 GRA versus 2026 GRA are explained in *Appendix 6 – 2026 versus 2027 GRA Comparative*.

EXP.3 Basic Expenses: Cost Allocation Methodology

The Corporation's integrated cost allocation methodology (ICAM) is based on a robust and regulator-approved framework.

The purpose of this methodology is to ultimately distribute / separate Corporate normal operating expenses into the four LOBS (i.e., Basic, Extension, SRE and DVA) through the use of various allocators. Subsequent to distributing corporate expenses into each LOB, the expenses are further segmented into the three expense line items shown on the Statement of Operations (Maintenance Expense, Acquisition Expense, and Operating Expense). Key allocation drivers embedded in the process include the following: FTE proportion of claims and operating staff; proportion of incurred claims costs for each LOB compared to total corporate incurred claims; Project Management Office (PMO) departmental allocation; and Weighted Customer Contact Center Call Ratio (WCCCCR). Refer to *Appendix 12 – Cost Allocators* for details of the 2026/27 budget forecast cost allocators for normal operations and initiative expenses.

Please refer to *EXP-4.1* for a summary of the key expense drivers and allocators used in the forecasts for previous and current years. While the underlying methodology remains unchanged, the percentage may vary year to year due to its dynamic nature and reliance on being updated annually for most recent fiscal year financial data.

Below are the steps of the cost allocation methodology. Steps 1 to 4 are part of the purification process. During the purification process all identifiable direct accounts and expenses are charged against the applicable LOB, all occupancy and benefit expenses are distributed to the various cost centers within MPI and subsequently assigned into LOB through application of various allocators. The steps cover both normal operating costs and initiative costs.

Normal Operating Costs:

Step 1 Corporate Benefits

Allocate corporate benefits costs to accounting units (AU) based on the percentage of salary costs to total corporate salary expense.

Step 2 Occupancy Costs

Occupancy costs are allocated to AU based on the percentage of square footage to total corporate square footage. Occupancy costs include all the routine expenses incurred at each building, including repairs and maintenance, security and other operational costs.

Step 3 Direct Costs

Directly attributable costs are charged to the insurance line of business or non-insurance category of business which directly benefits from the work performed in the department or particular cost expenditure.

Step 4 Full Time Equivalent (FTE) Adjustments

A percentage-based transfer of compensation and general office supplies from one department to another, based on the nature of the activities completed by the resources within the AU.

After Step 4, departments are ready to be allocated to the insurance (Basic, Extension and SRE) and non-insurance (DVA) lines of business.

Step 5 Allocate Departments to Lines of Business – Insurance and Non-Insurance

Once steps 1-4 have been completed and all costs are aggregated and purified, MPI performs the final step of the allocation of costs. The allocation process includes the use of multiple allocators to differentiate between the various types of expenses (i.e., acquisition, maintenance or operating) and LOBs.

1) Allocate to the lines of business - insurance or non-insurance.

   A) Some departments are deemed to be 100% insurance or non-insurance based on the services they provide.

   B) The WCCCCR for departments that benefit insurance or non-insurance.

   C) For service centers, percentages are derived from a study of FTEs and their support of insurance and non-insurance business.

2) Allocation to claims or operating.

   Allocators are used to determine how much of the department should be allocated to claims expenses (acquisition or maintenance) or operating expenses.

   A) Some departments are deemed to be 100% claims or operating expenses based on the services they provide.

   B) The service center study is used to determine all other normal operations allocation to claims or operating expenses.

3) Insurance line of business allocation to the IFRS 17 expense categories of acquisition, maintenance or operating expenses.

   Formula derived based on the percentage allocated to insurance line of business and the percentage allocated to claims or operating expenses.

Initiative Costs:

The allocation of initiative costs is based on a review of each project, and which line of business will benefit from the project. The allocation follows the same process as Step 5 above.

EXP.3.1 Allocated Basic Normal Operating Expenses

The following represents the percentage of Corporate Normal Operating Expenses allocated to Basic for the period from 2025/26 to 2030/31:

Figure EXP- 6 Corporate Normal Operating Expenses Allocation % to Basic

Line No.		2025/26A	2026/27BF	2027/28F	2028/29F	2029/30F	2030/31F
1	**% Basic**	65.8%	67.4%	67.8%	68.5%	68.2%	68.1%
2	**Increase / (Decrease)**		1.6%	0.4%	0.7%	(0.4%)	(0.1%)

As shown in the above figure, the allocation of corporate normal operating expenses to the Basic LOB is expected to remain relatively stable over the forecast period.

Appendix 5 –10-year Summary Basic Normal Operating Expenses shows the historical and forecasted year-over-year results for Basic Normal Operating Expenses. Compounded annual growth rates over the last five historical years through the outlook period are presented in *Appendix 3 – Compounded Annual Growth Rates - Basic and Corporate Normal Operations and Total Expenses*.

EXP.4 Corporate Project Funding Summary (CPFS) – Facilities and Technology Infrastructure

There are two types of CPFS expenditures incurred by MPI: facilities and infrastructure (which includes administrative expenditure on physical properties such as buildings and automobiles) and technology expenditure with the implementation of corporate initiatives. Under either, expenditure can be expensed

or capitalized, dependent upon International Financial Reporting Standards (IFRS) and MPI evaluation of criteria under IFRS for capitalization on an item-by-item basis.

When eligible for capitalization, MPI defers administrative expenditure as property and equipment on the balance sheet, and once the asset is in use, depreciates them over time in Corporate normal operating expenses. Facilities and infrastructure capital includes costs for the regular replacement of capital items such as furniture, fixtures and equipment and includes property and premises upgrades and expansions to ensure MPI meets customer demand. When eligible for capitalization, MPI defers technology expenditure as deferred development costs on the balance sheet, and once the asset is in use, amortizes them over time and includes them in Corporate normal operating expenses. Depreciation expense is associated with physical or tangible assets such as buildings, automobiles or equipment. Amortization expense is associated with intangible assets such as deferred development.

Non-capitalizable expenditures will be recognized as expenses in the period in which they are incurred. Expenses not eligible for capitalization represent real and necessary investments in the creation and realization of an asset.

Please see *Appendix 15 – Basic Corporate Expenditures (Expense, Deferred Development and Capital)*, *Appendix 16 – Basic Capital Expenditures - Project Costs Comparison*, *Appendix 17 – Basic's Deferred Development and Amortization Costs*, *Appendix 19- Corporate Project Expenses by Project (Confidential)* and *Appendix 25 – 10-Year Summary Basic Corporate Project Expenditures (Expense and Deferred Development)* for further details.

EXP.5 Conclusion

Operating expenses are crucial to MPI in evaluating its financial health and delivering on MPI's responsibility for managing expenses in a fiscally prudent manner. Refer to *Appendix 28 - Budgeting Framework KPI's* for KPI's evaluated by the Corporation.

MPI remains committed to effective management of operating expenses to achieve rate predictability and stability while providing the Basic insurance product at an affordable price.

Appendix 1: Summary of Basic Expenses by Category

Appendix 6
2026 GRA versus 2027 GRA Comparative

The following series of figures compare forecasted total corporate expenses from the 2026 General Rate Application (GRA) to actual and forecasted total corporate expenses from equivalent periods in the 2027 GRA. All figures provide the following three views:

1. A comparative of total corporate operating expenses;
2. A comparative of Basic's share of corporate operating expenses in dollars; and
3. A comparative of Basic's share of corporate operating expenses in percentage.

The lead figure, *Figure EXP App 6-1*, is summarized in three different views:

1. Expenses split between compensation, administrative and amortization/depreciation.
2. Expenses split between normal operating expenses, improvement initiative – implementation expenses, and improvement initiative – ongoing expenses; and
3. Expenses split as illustrated on the Statement of Operations (i.e., maintenance, acquisition and operating expenses).

Figures EXP App 6-2 to App 6-5 provide details between normal operating expenses and corporate improvement initiatives, ongoing and implementation expenses for each comparative year. The comparative years are 2025/26 through 2028/29 inclusive.

Explanations are provided for significant differences ($1 million or greater) between expense category amounts.

Basic expenses as a proportion of corporate are consistently around 65% to 67% in the forecast years. Fluctuations in Basic related expenses are primarily attributable to changes in corporate expenses, updates to the current applied allocation percentage used during the allocation process (based on most recent year to date actual results), and changes to the type of projects undertaken in the forecast.

2025/26 CORPORATE TOTAL Comparative Explanations:

Compensation - Salaries - $9.5 million increase compared to the 2026 GRA is a result of the following:

- $3.9 million increase under Salaries-Regular and Corporate Vacancy Provision predominantly due to required changes to the Vacancy Provision which were not reflected in the 2026 GRA (2025/26 budgeted vacancy provision at $6.0 million which was too high for actual FTE vacancy- in the 2026/27 budget cycle, $2.5 million of this provision was released to align vacancy to actual FTE vacancy).
- $2.8 million increase for Retirement Allowance Provision due to calculation changes from the original forecasted amount including changes to weekly rate, years of service and the actuarial factor.
- $1.8 million increase due to amounts paid under Vacation Payout.

Benefits – $3.1 million increase compared to the 2026 GRA is primarily due to the following:

- $2.0 million increase for Pension-Superannuation
- $730 thousand increase for Pension – CPP due to a higher contribution increase from CRA than previously anticipated
- $458 thousand increase for Health Spending Account due to increased utilization

Data Processing – $44.2 million increase compared to the 2026 GRA is primarily attributed to the following:

- *Normal Operations: $13.5 million increase*
    - $14.3 million increase due to Data Centre costs associated with a contract that was not budgeted for in the 2026 GRA, as that information was not available when the original forecast was prepared.

- $3.9 million decrease due to Cloud Service Environments as actual expenses were lower than anticipated when the forecast was created.
- $3.5 million increase for external labour costs due to the end of Project Nova and increased need for consultants for legacy support and reversion to previous processes.

- *Initiatives – Implementation: $3.8 million increase*
  - $15.1 million increase due to impairments related to Nova
  - $835 thousand increase due to cloud service environments
  - $2.9 million decrease due to Major Programs Overarching external labour transferring to Operations after Nova formal closure.
  - $330 thousand increase due to license fees
  - $9.4 million decrease for external labour costs due to less utilization than anticipated.
  - $124 thousand decrease in computer costs

- *Initiatives – Ongoing: $26.9 million increase*
  - $30.3 million increase for license fees primarily related to $37.1 million due to an onerous contract being fully expensed in 2025/26 at March 31, 2026, which was partially offset by a $5.0 million decrease in DVA related license fees and a $1.8 million decrease in Digital license fees.
  - $1.3 million decrease in Cloud Service Environments due to $1.6 million decrease due to less utilization offset by a $282 thousand increase due to onerous contract.
  - $2.1 million decrease in external labour primarily due to $1.9 million decrease due to the elimination of Transfer to Operations upon Nova

formal closure, in addition to the $185 thousand decrease for Microsoft conformance reviews

Special Services – $1.3 million decrease compared to the 2026 GRA is primarily due to the following:

- $1.1 million decrease due to the creation of Vendor Managed Services account for items previously paid under Special Services.
- $779 thousand decrease due to a credit received associated with an insurance recovery for the fire at the Gateway Service Centre.
- $507 thousand decrease for expenses associated with tax assessments and building appraisals.
- $769 thousand increase for Auction Fees due to sustained higher levels of inventory post labour-interruption and a new contract negotiated after the forecast was created.
- $333 thousand increase for expenses related to Auditor Fees and External Actuaries.

Road Safety (Safety / Loss Prevention) Program – $1.5 million decrease compared to the 2026 GRA is primarily due to the following:

- $516 thousand decrease for Speed Management Strategy due in part to two credits totaling $770 thousand for speed display devices.
- $492 thousand decrease for Vulnerable Road User Strategy which was delayed due to 2025 wildfires in First Nations communities.
- $181 thousand decrease for Summer Students Salaries as this account is no longer used to pay student salaries.
- Please see *Appendix 14 – Road Safety Program Costs* for further detail of total corporate and Basic allocated road safety costs, including costs associated with the programs and departmental costs.

Merchant Fees – $1.7 million increase compared to the 2026 GRA is primarily due to the following:

- Increasing expenses in this category are due to three primary factors; basic rate increase, increase in drivers and policies in force and a change in customer behaviour from cash/cheques to credit card usage.

2026/27 CORPORATE TOTAL Comparative Explanations:

Data Processing - $31.7 million decrease compared to the 2026 GRA is due to:

- *Normal Operations: $5.8 million increase*
  - $3.6 million higher for Data Centre costs. These costs were previously anticipated to be removed after migration to the cloud but a change from the original project direction has required ongoing data center expenses.
  - $1.9 million higher for licensing fees due to the increasing costs of technology contracts
- *Initiatives-Implementation: $13.3 million decrease*
  - $3.6 million decrease in external labour due to Major Programs Overarching transferring to Operations after Nova formal closure.
  - $4.0 million decrease comprised of a decrease of $3.4 million in external labour, a decrease of $975 thousand in license fees, a decrease of $254 thousand in computer costs and a decrease of $204 thousand in cloud service environments due to the change to an initiative placeholder budget account for the ePMO – non-Major Programs forecasted costs (see below).
  - $7.8 million decrease in Major Programs external labour due to shift in planned work, with a $12.7 million decrease in projects planned for 2026/27 offset by a $4.9 million increase due to projects planned for completion in 2025/26 being continued into 2026/27
  - $1.6 million increase in Fineos license fees
  - $355 thousand increase in data center costs
- *Initiatives-Ongoing: $24.2 million decrease*
  - $13.9 million decrease for License Fees related to decrease of $8.7 million due to onerous contract being fully expensed in 2025/26,

decrease of $3.4 million related to DVA licensing, and a $1.8 million decrease in Digital license fees.

- $2.3 million decrease comprised of a decrease of $2.0 million in estimated license fees and a decrease of $298 thousand in cloud service environments
- $3.0 million decrease in Cloud Service Environments due to $1.7 million decrease due to less utilization and a $1.3 million decrease due to onerous contract being fully expensed in 2025/26
- $5.0 million decrease in external labour due to a decrease of $4.6 million for the elimination of Transfer to Operations upon Nova formal closure, a decrease of $152 thousand for conformance reviews and a decrease of $205 thousand for Microsoft conformance reviews.

Amortization of Deferred Development – $1.5 million decrease compared to the 2026 GRA primarily due to a decrease of $1.6 million due to impairment of Nova, offset by a $71 thousand increase for the IRP asset due to a correction to transfer costs previously reported under Nova R3.

Initiative Project Management Office Placeholder – $4.0 million increase compared to the 2026 GRA is due to reclassification of expenses previously categorized by nature (predominantly as data processing) to now be classified in a separate line as an uncommitted placeholder:

- The 2026 GRA budget initially included the full $5.0 million based on projected project spend, with the amount allocated across various operating and capital line items. In the revised budget forecast, MPI adopted the new placeholder approach. Under this approach, committed spend for 2026/27 related to open business cases was forecast based on the underlying approved business cases, while the remaining uncommitted amount was held in a placeholder account in accordance

with *Appendix 22: Budgeting Process Framework, section 2.8, Initiative Expenses.*

Initiative Major Program Placeholder – $1.9 million increase compared to the 2026 GRA is due to reclassification of expenses previously categorized by nature (predominantly as data processing) to now be classified in a separate line as an uncommitted placeholder:

- Major Programs follow the same placeholder approach for non-committed spend. The revised budget forecast reflects committed spend for 2026/27 based on approved open business cases, while the remaining non-committed forecast was held in the Major Programs placeholder account based on the $15.0 million placeholder amount in accordance with *Appendix 22: Budgeting Process Framework, section 2.8, Initiative Expenses.*

2027/28 CORPORATE TOTAL Comparative Explanations:

Compensation – Salaries - $5.2 million increase compared to the 2026 GRA is related to:

- Normal Operations: $2.9 million increase due primarily to increase of $2.5 million for Salaries. This increase is due to position reclassifications which have increased the average salaries paid and the addition of 11 FTE into normal operations that were previously designated as students.
- Initiatives: $2.3 million increase due to revised forecast placeholder for initiative FTE salaries.

Data Processing - $23.6 million decrease compared to the 2026 GRA is due to:

- *Normal Operations: $19.2 million increase*
    - $13.6 million increase for License Fees due to the increasing costs of technology contracts and the addition of licensing from projects.
    - $6.6 million increase for Data Centre. These costs were previously anticipated to be removed after migration to the cloud but a change from the original project direction has required ongoing data center expenses.
- *Initiatives – Implementation: $16.4 million decrease*
    - Forecasted costs (predominantly categorized as data processing) have been zeroed out and replaced with uncommitted Project Placeholder budget (see below)

- *Initiatives – Ongoing: $26.4 million decrease*

    - $15.6 million decrease for License Fees related to decrease of $8.7 million due to onerous contract being fully expensed in 2025/26, decrease of $4.6 million related to DVA licensing inclusive of $1.5

million decrease due to transferring DVA licensing costs to Operations and a $2.3 million decrease in Digital license fees.

- $2.3 million decrease comprised of a decrease of $2.0 million in estimated license fees and a decrease of $299 thousand in cloud service environments
- $3.7 million decrease in Cloud Service Environments due to $2.2 million decrease due to less utilization and a $1.5 million decrease due to onerous contract being fully expensed in 2025/26
- $5.0 million decrease in external labour due to a decrease of $4.4 million for the elimination of Transfer to Operations upon Nova formal closure, a decrease of $132 thousand for conformance reviews and a decrease of $205 thousand for Microsoft conformance reviews.

Special Services – $3.8 million decrease compared to the 2026 GRA is due to:

- $2.8 million decrease due to the movement of expenses to the newly created account Vendor Managed Services, the consolidation of expenses to other categories and the removal of any precautionary expenses without prior approval.
- $665 thousand decrease to align with spending for People & Culture-related spending including Culture, IDEA, Employee Opinion Survey and the Performance Management Competency Model.

Amortization of Deferred Development – $2.0 million decrease compared to the 2026 GRA due to:

- $1.6 million decrease due to impairment of Nova.
- $266 thousand decrease due to the determination that the Major Programs BI Upgrade project did not meet the IAS 38 deferred development criteria.

- $286 thousand decrease due to the reclassification of the Major programs non-committed spend to the Major Programs placeholder expense account, offset by a $72 thousand increase for the IRP asset due to a correction to transfer costs previously reported under Nova R3.
- $141 thousand increase due to the increase in the Major Program MyMPI and IRP Online deferred project spend for 2026/27.

Initiative Project Management Office Placeholder – $5.0 million increase compared to the 2026 GRA is primarily due to the following:

- In the revised forecast, the previously allocated implementation budget has been removed from the project-specific implementation line, as those amounts were originally distributed across planned projects and categorized by nature of expense. Consistent with the rationale outlined in *Appendix 22*, those forecasted implementation amounts have instead been reclassified as an uncommitted placeholder, which results in a decrease to implementation expense and the introduction of a new uncommitted placeholder line. Refer to *Appendix 22 – Budgeting Process Framework section 2.8 Initiative Expenses* for details.

Initiative Major Program Placeholder – $10.5 million increase compared to the 2026 GRA is primarily due to the following:

- In the revised forecast, the previously allocated implementation budget has been removed from the project-specific implementation line, as those amounts were originally distributed across planned projects and categorized by nature of expense. Consistent with the rationale outlined in *Appendix 22*, those forecasted implementation amounts have instead been reclassified as an uncommitted placeholder, which results in a decrease to implementation expense and the introduction of a new uncommitted placeholder line. Refer to *Appendix 22 – Budgeting Process Framework section 2.8 Initiative Expenses* for details.

2028/29 CORPORATE TOTAL Comparative Explanations:

Compensation - Salaries - $5.1 million increase compared to the 2026 GRA is related to:

- Normal Operations: $2.2 million increase due primarily to:
  - $1.4 million increase for Salaries. This increase is due to position reclassifications which have increased the average salaries paid and the addition of 11 FTE into normal operations that were previously designated as students.
  - $709 thousand increase due to adjustment of Retirement Allowance and Retirement Pay-Out accounts based on adjustments to employee retirement activity.
- Initiatives: $2.9 million increase due to revised forecast placeholder for initiative FTE salaries.

Compensation – Benefits - $2.2 million increase compared to the 2026 GRA is related to:

- $2.3 million increase for Pension related expenses based on adjustment to Salary calculation
- $567 thousand decrease to Post-Retirement Extended Health Benefits due to adjustment for usage and anticipated future requirements.

Data Processing - $19.7 million decrease compared to the 2026 GRA is due to:

- *Normal Operations: $18.3 million increase*
  - $13.2 million increase for License Fees due to the increasing costs of technology contracts and the addition of licensing from projects
  - $6.2 million increase for Data Centre. These costs were previously anticipated to be removed after migration to the cloud but a change from the original project direction has required ongoing data center expenses.

- *Initiatives – Implementation: $11.2 million decrease*
    - Forecasted costs (predominantly categorized as data processing) have been zeroed out and replaced with uncommitted Project Placeholder budget (see below).
- *Initiatives – Ongoing: $26.9 million decrease*

    - $14.5 million decrease for License Fees related to decrease of $9.1 million due to onerous contract being fully expensed in 2025/26, decrease of $2.9 million related to DVA licensing inclusive of $1.6 million decrease due to transferring DVA licensing costs to Operations and a $2.5 million decrease in Digital license fees.
    - $2.4 million decrease comprised of a decrease of $2.1 million in estimated license fees and a decrease of $301 thousand in cloud service environments.
    - $3.9 million decrease in Cloud Service Environments due to $2.3 million decrease due to less utilization and a $1.6 million decrease due to onerous contract being fully expensed in 2025/26.
    - $6.0 million decrease in external labour due to a decrease of $5.8 million for the elimination of Transfer to Operations upon Nova formal closure and a decrease of $205 thousand for Microsoft conformance reviews.

Special Services – $3.9 million decrease compared to the 2026 GRA is due to:

- $2.9 million decrease due to the movement of expenses to the newly created account Vendor Managed Services, the consolidation of expenses to other categories and the removal of any precautionary expenses without prior approval.
- $678 thousand decrease to align with spending for People & Culture-related spending including Culture, IDEA, Employee Opinion Survey and the Performance Management Competency Model

Amortization of Deferred Development – $3.3 million decrease compared to the 2026 GRA due to a decrease of $1.6 million due to impairment of Nova, and $1.6 million decrease due to project reforecast for uncommitted placeholder (i.e. no longer forecasting amortization on projects yet to be business cased in accordance with *Appendix 22* placeholder budget approach)

Initiative Project Management Office Placeholder – $5.0 million increase compared to the 2026 GRA is primarily due to the following:

- In the revised forecast, the previously allocated implementation budget has been removed from the project-specific implementation line, as those amounts were originally distributed across planned projects and categorized by nature of expense. Consistent with the rationale outlined in *Appendix 22*, those forecasted implementation amounts have instead been reclassified as an uncommitted placeholder, which results in a decrease to implementation expense and the introduction of a new uncommitted placeholder line. Refer to *Appendix 22 – Budgeting Process Framework section 2.8 Initiative Expenses* for details.

Initiative Major Program Placeholder – $10.5 million increase compared to the 2026 GRA is primarily due to the following:

- In the revised forecast, the previously allocated implementation budget has been removed from the project-specific implementation line, as those amounts were originally distributed across planned projects and categorized by nature of expense. Consistent with the rationale outlined in *Appendix 22*, those forecasted implementation amounts have instead been reclassified as an uncommitted placeholder, which results in a decrease to implementation expense and the introduction of a new uncommitted placeholder line. Refer to *Appendix 22 – Budgeting Process Framework section 2.8 Initiative Expenses* for details.

Appendix 7:
Average Regular Salary by Classification

Figure EXP App 7-1 below displays an average annual regular salary per full time equivalent (FTE) employee, categorized into 4 general classifications: clerical, technical/professional, supervisor and management. The figure shows regular salaries as an approximate average of an FTE (per respective classification). Please note that regular salaries do not include overtime, banked vacation, accrued vacation or retirement allowance.

Calculation for the 5-year actual figure is derived by dividing the total annual salaries of all employees by the number of employees within each of the classifications. Calculating the average figure involved converting the salaries of part-time and hourly employees into FTE annual salaries. Calculation of historical values involves the use of point-in-time data. Calculation of the five years of forecast data (2026/27 through 2030/31) requires the application of step-in-scale and economic increases to the 2025/26 projected amounts.

10 Note: Regular salaries does not include overtime, banked vacation, accrued vacation, retirement allowance.

11 * Rating Years

As a result of negotiated increases under the Collective Bargaining Agreement and market adjustments, increases seen in the historical trend of average salaries do not always align with the Consumer Price Index. Please see *Part VIII Expense Chapter, Section EXP.3.1.2* for details regarding negotiated increases and salary growth rate forecasts.

Appendix 8:
Staffing Levels by Category (Normal Operations 2025/2026)

Figure EXP App 8-1 below shows the budget versus actual comparative for corporate staffing levels for each position category, by corporate division, for 2025/26. The nature of the calculation is based on actual FTEs as at last pay period for 2025/26. Actual FTE data aligns with monthly internal reporting as well as with the external annual report.

Appendix 9:
Staffing Levels by Category (Corporate 2025/26)

Figure EXP App 9-1 illustrates total corporate staffing levels by different categories. The first three schedules list staffing levels by normal operations, specialty programs and improvement initiatives. The last three schedules list staffing levels on a consolidated basis with a comparative to budgeted total for each position category by division.

Actual FTE data is consistent with monthly internal reporting and the external annual report.

Appendix 10:
Staffing Levels by Category (Corporate 2026/27)

Figure EXP App 10-1 below shows total corporate staffing levels budget by category. The first three schedules in the figure list staffing levels by normal operations, specialty programs and improvement initiatives. The final schedule lists staffing levels budget on a consolidated basis for the 2026/27 period.

Figure EXP App 10-1 Staffing Levels by Category

Appendix 11: Compensation Analysis

Description

Salaries represent all regular payments associated to MPI employees, as well as other salary related accounts, including retirement allowances, maternity and parental benefits, vacation payouts/buyouts, and banked vacation. Salaries are one of four categories within the Compensation expense category. They represent approximately 79% of all compensation costs as it relates to 2026/27BF.

Forecasting Assumptions

To derive the 2026/27 BF and outer forecast for salaries, MPI takes the current actual salaries at a point in time during the 2025/26 fiscal year and applies five key drivers to develop a forecast. These five drivers are:

1. Economic increases;
2. Step-in-scale (or merit) increases;
3. FTE staff count changes;
4. Provision for vacancy allowances; and
5. Other salary account changes.

Descriptions of these five key drivers are as follows:

1. **Economic Increases** – represents the contractual general wage increases as specified within the CBA as negotiated between MPI and the Manitoba Government Employees Union (MGEU). The current contract is for the period covering September 2022 to September 2026. Economic increases have been calculated based on an assumption of a 2% increase once the contract has been negotiated. Retention was included in the previous contractual general wage

increases but has been assumed at 0% for future negotiated contracts. Increases for out-of-scope staff follow the rates negotiated for in-scope staff.

- The negotiated and best estimate forecasted economic increases are:

Figure EXP App 11-1 Economic Increases Negotiated (In Scope Staff)

Line No.	Effective Date	Rate	Fiscal Year	Fiscal Year Impact
1	**September 16, 2018**	2.00%	2018/19	1.75%

11	* Forecasted as contract not negotiated			

Figure EXP App 11-2 Economic Increases (Out of Scope Staff)

Line No.	Effective Date	Rate	Fiscal Year	Fiscal Year Impact
1	**April 1, 2018**	1.50%	2018/19	1.50%
2	**April 1, 2019**	2.00%	2019/20	2.00%
3	**April 1, 2020**	2.00%	2020/21	2.00%
4	**April 1, 2021**	0.00%	2021/22	0.00%
5	**April 1, 2022**	2.25%	2022/23	2.25%
6	**April 1, 2023**	3.00%	2023/24	3.00%
7	**April 1, 2024**	3.00%	2024/25	3.00%
8	**April 1, 2025**	3.40%	2025/26	3.40%
9	**April 1, 2026**	3.60%	2026/27	3.60%
10	**April 1, 2027**	2.00%	2027/28	2.00%

2. **In Scope Step in Scale (merit) Increases –** the Collective Agreement specifies a pay plan. Each in-scope position aligns to a salary range which has 7 steps. The

incumbent of a position will be eligible for up to 6 annual 3.5% increases until they reach the maximum salary (step) for the specific position. Upon reaching the maximum salary, the incumbent will only be eligible to receive a general wage increase as provided above. The forecasted rate used in the 2027 GRA is 1.75% as it is assumed 50% of employees are at the top of scale and ineligible for further merit increases.

3. **Out of Scope Step in Scale (merit) Increases –** merit increment is based on the annual performance appraisal. Effective June 1st of each year, all out of scope employees are eligible for a merit increase based on performance. The forecasted rate used in the 2027 GRA is 2.25% based on historical amounts paid as approximately 65% of staff receive a merit increase of 3.5%.

4. **FTE Counts –** represents the equivalent number of employees working full time hours. An employee who works a full year is considered 1.0 FTE, whereas an employee who only works half the year would be considered 0.5 FTE.

   The figure below shows the five-year historical and five-year forecast of actual and budgeted staffing levels.

Figure EXP App 11-3 Normal Operations Staffing (FTEs)

Line No.	Fiscal Year	Actual	Budget	Over (Under) Variance
1	**2019/20A**	1,808.6	1,911.1	(102.5)
2	**2020/21A**	1,766.7	1,907.0	(140.3)
3	**2021/22A**	1,815.3	1,939.0	(123.7)

10	**2028/29F**	-	2,038.8	-
11	**2029/30F**	-	2,038.8	-
12	Note: Includes staff related to Specialty Programs			
13	* actual results impacted due to labor interruption			

The figure above summarizes staffing levels (for normal operations including specialty) actual to budget FTEs up to 2025/26 and presents the FTE budget for 2026/27 and the forecast thereafter. Actual FTE counts have remained consistently below budgeted levels.

For a detailed review of 2025/26 actual versus budgeted and 2026/27 budgeted staffing levels please refer to *Appendix 8 – Staffing Levels by Category (Normal Operations 2025/26)*, *Appendix 9 – Staffing Levels by Category (Corporate 2025/26)* and *Appendix 10 – Staffing Levels by Category (Corporate 2026/27)*.

5. **Other Salary Adjustments –** these include several salary related items, such as retirement payments/provisions, sick leave provision, vacation payouts/buyouts, and banked vacation. The largest component represents retirement payments, which is a function of the number of retirements in a particular year. This category also contains the Health and Well Being Flexible Spending account and an allowance for in-scope staff who work in downtown Winnipeg.

6. **Vacancy Allowance –** vacant positions arise from staff turnover related to job changes, retirements, resignations, eliminations, etc. This results in position vacancies in any given period. A vacancy will result in no salary expenditure, which reduces that expense. To accurately reflect budgeted and forecasted salary expenses, MPI accounts for cumulative non-remunerative vacancies via a vacancy allowance provision. Budgeted vacancy provision within regular salaries (to account for vacant staff role fluctuations throughout the year) remains unchanged at $3.5 million.

To illustrate the year-over-year forecasting methodology using all five salary expense drivers, *Figure EXP App 11-4* below describes the year-over-year changes in normal operating salaries in detail. The major increases are generally attributable to mandated in-scope economic and step-in-scale increases, as well as FTE changes.

6	**2024/25**	4,348	2,805	7,153	12,669	**19,822**	299.7	(2.46)
7	**2025/26**	5,523	3,202	8,725	679	**9,404**	10.5	4.26

The figures above provide a detailed analysis of the year-over-year changes as they relate to normal operations salary expenses for the period from 2020/21 to 2025/26.

Figure EXP App 11-5 illustrates the year–over-year salary dollar and percentage changes along with the corresponding dollar and percentage changes in average salary.

Figure EXP App 11-6 provides an analysis and composition of the factors which impacted the change in total normal operations salary expenses over the last 6 years. Annually, most of the increased growth is attributable to economic and step-in-scale increases with the remaining variance attributable to FTE and other changes. Based on staff position fulfillment during the labour interruption, MPI experienced a decrease in the active FTE composition by 249 in 2023/24, followed by an increase of 300 in 2024/25.

Figure EXP App 11-7 below, provides further details on the drivers of the overall dollar changes of normal operations salary expense in the form of a percentage. As illustrated, most of the year-over-year changes are attributed to the mandated economic increases and step-in-scale increases. For a detailed analysis on compensation (including benefits, overtime and Health & Education tax) please refer to *Figure EXP App 11-8 and Figure EXP App 11-9* below.

Figure EXP App 11-7 Compound Annual Salary Analysis – Percentage Change

Appendix 12: Cost Allocators

1. Normal Operations: Cost Allocators

The allocators applied to normal operations expenses are consistent and have been applied in accordance with the Integrated Cost Allocation Methodology (ICAM) principles and derived from the appropriate cost drivers as detailed in *EXP.4*.

Figure EXP App 12-1 Allocators for Corporate Normal Operations Expenses-2026/27BF

19	Project Management Office	051, 092, 407, 430		45.0%	27.8%	72.8%

2. Initiative Expenses: Cost Allocators

Allocators for these stand-alone initiatives have been selected based on the estimated nature of the project work and its anticipated beneficiaries, using established allocators such as the WCCCCR and incurred claims. This re-alignment ensures that initiative costs are attributed in a manner consistent with the core ICAM principles, while reflecting the scale and scope of current and planned project investments.

The selected allocators provide a logical cost allocation that remains transparent, defensible and aligned with the approved ICAM. To maintain methodological integrity and ensure allocators remain fit for the purpose, initiative expense allocators will be reviewed at the inception of each project to confirm their appropriateness based on the specific facts, circumstances, scale and scope of the actual project work.

Below is a summary of the selected allocators and the associated rationale. The table lists the initiatives projects for the fiscal year 2026/27BF.

Figure EXP App 12-2 Allocators for Initiatives Implementation Expenses-2026/27BF

	Basic				
Initiatives	Acquisition	Maintenance	Operating	Basic % Total	Explanation
MP-BI3-bodily injury claims			90.5%	90.5%	Basic & Extension-Net Claims Incurred 4-year rolling average-100% Operating until go live. After go live, 100% Maintenance.
MP-MyMPI & IRP Online			52.2%	52.2%	Based on $$ budgeted. IRP costs 100% DVA; Foundational based on WCCCCR & Basic & Extension-Net Claims Incurred 4-year rolling average-100% Operating until go live of Reg&Insrnc Services. After go live, Service Centre allocation for AMO for P&C & Foundational.
MP-Infor Upgrade		45.0%	27.8%	72.8%	WCCCCR & Net Claims Incurred-4-year rolling average & Service Centre allocation to Maintenance & Operating as the project is 100% expense.
MP-ERP System			72.8%	72.8%	WCCCCR & Net Claims Incurred-4-year rolling average-100% operating until go live. After go live, Service Centre allocation to Maintenance & Operating.
Allocated Shared Projects			72.8%	72.8%	Based on WCCCCR & Net Claims Incurred (all LOBs) & 100% Operating
Non-MP - Placeholder Budget			72.8%	72.8%	Based on WCCCCR & Net Claims Incurred (all LOBs) & 100% Operating
MP Placeholder Budget			72.8%	72.8%	Based on WCCCCR & Net Claims Incurred (all LOBs) & 100% Operating

The average spend on Road Safety, allocated to Basic, has been $10.7M for the period from 2021/22 to 2025/26, the lowest spend within this range being $10.3M in 2021/22. The departmental costs to run the Road Safety program average $2.2M annually or approximately 20% of the Road Safety budget for Basic. Non-departmental or actual direct program costs have averaged $8.5M during this period. The forecasted Road Safety spend for Basic in 2026/27 is $11.8M in total, which is approximately $941 thousand higher versus the actual average spend to date in total. The overall forecasted Road Safety spend is expected to range from $11.7 to $12.8 million for the period 2026/27 to 2030/31.

The figures below represent total corporate Road Safety Program costs.

2027 GRA Compared Against 2025/26 Forecast

Land and Building

Land and Building costs were lower than the 2026 GRA submission primarily due to:

- Timing delay to the start of the gravel lot resurfacing project
- Planned renovations on hold until the outcome of a facility study
- Smaller projects have been deferred and some items did not require refresh as quickly as anticipated when the forecast was created.

Data Processing Equipment

Data Processing equipment costs are lower than the 2025 GRA submission because of revised refresh dates in future fiscal years and the delay in purchase completion.

Deferred Development

Deferred Development actual spend is lower in comparison to the 2026 GRA submission due to extension of the MyMPI and IRP Online project duration, with deferred development costs shifting from FY2025/26 to FY2026/27 and the determination that the Major Programs BI3 Upgrade project did not meet the IAS 38 deferred development criteria, as originally forecasted.

Implementation Expense

Refer to EXP Appendix 06 2026 vs 2027 GRA Comparative for the detailed comparison of the 2025/26 implementation expense comparative explanations.

2026/27 Forecast

Land and Building

Land and Building costs are higher than the 2026 GRA submission primarily due to the timing around starting and expected completion of underlying projects – mostly related to weather impacts on projects.

Deferred Development - $2.5 million decrease compared to the 2026 GRA is a result of a $2.2 million decrease due to reclassification of Major Programs non-committed forecast to the Major Programs placeholder expense account and a decrease of $1.4 million due to the determination that the Major Programs BI3 Upgrade project did not meet the IAS 38 deferred development, offset by an increase of $1.1 million in the Major Program MyMPI and IRP Online forecasted project spend.

Implementation Expense

Refer to EXP Appendix 06 2026 vs 2027 GRA Comparative for the detailed comparison of the 2026/27 forecasted implementation expense comparative explanations.

Appendix 16:

Appendix 18:
Corporate Information Technology Costs

The following figures provide a comprehensive analysis of Corporate Information Technology (CIT) expenses and capital expenditures. This includes both historical actual from 2021/22 to 2025/26 and the forecast period from 2026/27 to 2030/31.

The first figure provides a 10-year summary, including compounded annual growth rates for all corporate expense costs related to Information Technology (IT) within Manitoba Public Insurance.

8	**Total**	**27,606**	**22,651**	**12,876**	**14,054**	**8,980**	**9,937**	**4,633**	**4,554**

(1) Actual consultants are headcount for fiscal year. Forecasted consultants are Corporate FTE equivalents, calculated as: Corporate consultant expenses at $125/hr, 8 hrs/day, 252 days/yr. By comparison, forecasts in Figure IT App 11-1 are calculated as Basic FTE equivalent

(2) Forecasted initiative consultants for 2027/28 beyond is not available. 2027/28 initiative budget is a placeholder and not allocated by nature of expense, accordingly forecasted consultant count based on implied dollar is nil as the forecasted dollar is an unallocated placeholder only (refer to EXP Expenses chapter)

Appendix 21:
Expense Details - Broker Commissions Paid and Written

MPI pays compensation in the form of commissions and flat fees to brokers (approximately 300) across Manitoba for selling Basic insurance products. There are variable commissions related to the purchase of Basic insurance policies and flat fees which MPI pays for administering various types of transactions. Examples of flat fee transactions include cancellations, buyouts, document replacement and midterm changes. Flat fees represent approximately 12% on average of the forecast period of overall commissions paid out on the Basic program. This also includes commissions related to the administration of driver licenses.

MPI typically establishes commission rates through negotiation with the Insurance Brokers Association of Manitoba (IBAM). Once established, these rates are then incorporated into amended provincial regulation (i.e., *Agent Commissions Regulation*, *M.R. 93/2009* under *The Manitoba Public Insurance Corporation Act*).

Forecasting Assumptions

The forecasted commission rates are based on the commission agreement that was negotiated between IBAM and MPI during the 2020/21 fiscal year. The contract outlined all future regulated and effective commission rates for the period from April 1, 2021, through to March 31, 2026. IBAM re-negotiated their commission agreement in 2023 so that the commission rates for in-person and online transactions would now begin on the date that online transactions are implemented. The revised agreement and regulation also extended the contractual rates for all Basic (and Extension) products until March 31, 2028.

The calculation of Basic variable commission rates blends the effective interest rate as a percentage of premiums written and includes Drivers variable commissions. Flat

fees are subject to CPI increases and MPI forecasts them based on transaction volumes, which range from about $5 to $25 per transaction.

The following figure shows a detailed breakdown of broker commissions by category (e.g., Basic, Extension, etc.) over the last five fiscal years and across the forecast period. The figure also shows the assumed variable commission rates throughout the outlook period.

Appendix 22: Budgeting Process Framework

This appendix sets out the principles and processes underpinning the budgeting process – specifically, how MPI goes about forecasting its revenues, expenses and obtaining approvals with respect to same.

Operating budgets are set annually. Once approved, the budget establishes a means by which the Corporation monitors and measures its financial performance and ensures value in its products, pricing and service levels. Various Key Performance Indicators (KPIs) are established via the budget and actual results are measured against these KPIs throughout the year.

MPI Lines of Business (LOB)

MPI operates four LOBs: Basic, Extension, Special Risk Extension and Driver and Vehicle Administration (DVA). These LOBs are mutually exclusive and are managed and operated independently with their own operating budgets.

Operating Results – Annual Budget

Budgets are set annually by LOB, utilizing fiscal year end results, assumptions based on historical averages and all plausible changes expected in the future.

Common or shared operating and administrative costs are allocated to each LOB using various allocators and include a monthly breakdown of the year. Cost allocation is based on the regulator approved integrated cost allocation methodology (ICAM) as detailed in Part VIII Expenses Chapter, section *EXP.4* Aggregating the LOB presents a corporate view and allows for an assessment of how MPI is performing "overall" as a company.

External financial reporting reflects a corporate view, with supplemental LOB business information included as note disclosure. Budgets are set for a single fiscal

period. Funds that are not utilized over the course of a year lapse and, if still required, form part of a subsequent budget submission.

Operating Results – Five Year Forecast

MPI prepares a five-year financial forecast. The annual budget is the first year of the forecast.

MPI has projects/initiatives that span multiple years. The five-year forecast provides direction as to the expected impacts and timing around same. Key assumptions incorporated in preparing the annual budget are reflected in the forecast, where material changes are warranted, they are incorporated.

Naturally, the accuracy of forecasting beyond a year materially reduces as the forecasted time horizon increases. Nevertheless, the forecast provides an assessment, all things being equal, of the potential future financial performance at the Corporate and LOB levels.

2. Statement of Operations Budget

2.1 Insurance Revenues, Service Fees and Fleet Rebates

Part VIII Revenues Chapter Section REV.1. Insurance revenues, service fees and fleet rebates and the like are assessed and forecasted by LOB, reflecting expected rate action, trending and/or expected changes in activity. At end of the fiscal year, variances to the prior year plan are reviewed along with underlying assumptions, which are then updated and built into the upcoming year's budget and accompanying five-year forecast.

2.2 Claims Incurred (included in Total Insurance Service Expense)

Part VIII Net Incurred Claims Chapter. Claims Incurred are assessed and forecasted by insurance LOB. The key underlying assumptions for establishing the claims incurred

budget are the application of selected trends for expected claims frequency and claims severity to historical claims loss costs as well as the application of risk adjustments and Unallocated Loss Adjustment Expenses (ULAE) assessment. Insurance finance income or expense (i.e., unwinding of discounting and change in discount rates) are also related to claims forecasts, although they are reflected on a separate line of the statement of operations.

2.3 Reinsurance Revenue and Expense

Part VIII Revenues Chapter Section REV.3. Reinsurance is assessed and forecasted for the insurance LOB. A key consideration is the Corporation's risk appetite related to expected claims incurred (i.e., how much exposure the Corporation wants to assume in a fiscal period).

Reinsurance is a mechanism that facilitates and balances cost containment and contributes to rate stability. Costs are based on a prevailing point in time, considering market conditions at the time of preparation and assuming 100% participation of reinsurers with respect to Catastrophe and Casualty placement asks.

2.4 Operating Expenses

Overall, operating expenses are comprised of corporate operating expenses, which are then allocated to the categories of Maintenance, Acquisition, and Operating on the Statement of Operations as well as non-policy commissions reflected by LOBs. As stated, the allocation of expenses follows ICAM (See *Part VIII Expenses Chapter Section EXP.3* for more information on the ICAM).

Operating expenses are subject to a combined top-down and bottom-up approach to ensure alignment.

The Executive Committee (EC) establishes top-down guidance (*EXP Appendix 22a*). This also reflects direction, if any, from the Treasury Board (TB). As of the filing date,

TB has not advanced any guidance with respect to its operating or capital expenditure. MPI does not expect any specific guidance to be advanced in the near term.

Alignment at the EC level is then disseminated to individual business units as a guard rail on departmental budget expectations.

Bottom-up exercise

This reflects department operating and initiative plans, budget and resource requirements while aligning to the guidance/constraints provided. This provides senior leaders the discretion on planning and execution. The manager's budget will bear the full resource impact of the decisions made.

Alignment Process – Internal

Business unit budgets are aggregated and presented to EC for final alignment. Competing tradeoffs for resources, if any, between departments are resolved.

2.5 Investment Income

Part IX Investments Chapter Investment income is reflective of the LOB Investment Portfolio and its respective individual investment objectives. MPI has five investment portfolios whereby a budget/forecast is established for each portfolio. A naïve investment yield is used in budgeting/forecasting investment performance.

2.6 Commission Expense

Part VIII Revenues Chapter. Commissions are based on underlying agreements and related activity subject to commissions. Annually, commissions are reviewed against expected budgets to ensure accuracy and reliability. Should unexpected variances occur, they are investigated, and subsequent budgets/forecasts are adjusted accordingly.

2.7 Premium Taxes

Part VIII Revenues Chapter. Premium taxes are based on underlying arrangements with the Government of Manitoba (GoM), and related activity subject to such taxation.

2.8 Initiative Expenses (as reported on the Corporate Project Funding Summary)

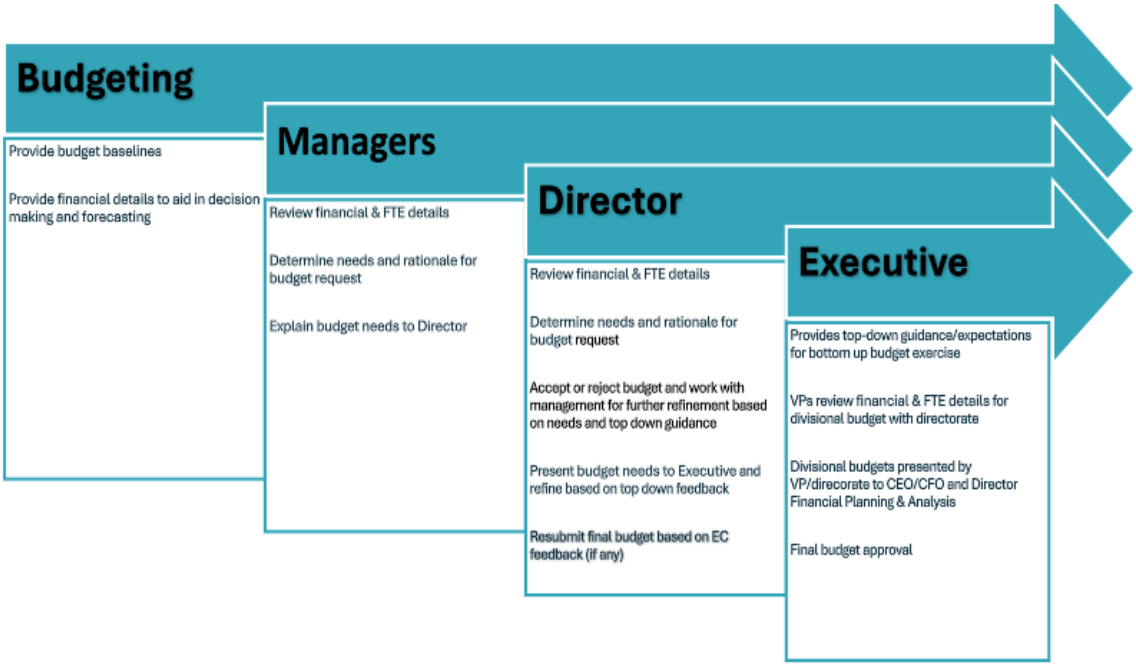
See *Part VIII Expenses Chapter Section EXP.5*. Initiatives have two main areas of spend: i) Facilities and Infrastructure and, ii) Technology Infrastructure.

For 2027/28 IT Major Programs budget, MPI has included a $15 million implementation placeholder within initiative expenses. This amount has not been allocated by nature of expense (such as licensing or external labour), or to individual projects. Allocation has been fully assumed to be operating at this time, and eligibility for capitalization will be assessed at the time of business casing. At this time, the currently approved and open business cases do not forecast spending beyond 2027/28; however, MPI does not assume that all related work will be completed within the current forecast horizon. Notwithstanding that expectation, MPI does not have a sufficiently reliable basis at this time to pre-allocate future amounts to specific projects or expense categories, as any such allocation would necessarily be preliminary and subject to change prior to the filing of the GRA. Accordingly, MPI has adopted a simplified placeholder approach (operating expense in nature) to reflect the likelihood of continued implementation spending without creating an artificial degree of precision that would require ongoing retrospective justification or reconciliation. Based on the recent Corporate Project Funding (CPF) Summary and underlying business cases, no specific spend is currently forecast into 2027/28 for those programs; as a result, the Major Programs forecast amount is presented as an uncommitted envelope, consistent with the approach used for the $5 million CPF funding provision for the non-major program initiative budget.

Within the initiative budget, certain expenditures are expected to qualify for capitalization in accordance with International Financial Reporting Standards (IFRS). These include:

- **Property and equipment:** Costs related to the acquisition or construction of facilities and infrastructure assets that meet the criteria for capitalization under IFRS 16.
- **Deferred development costs (intangible assets):** Expenditures related to the development of technology that meet the recognition criteria under IAS 38, such as internally developed software or intellectual property arising from development activities.

Capitalized initiative expenses are subject to amortization over their useful life. The expected period cost is budgeted based on both past and forecasted completion of initiatives.



In addition to expenses eligible for capitalization, the budget also includes operating expenses and other costs that do not meet the capitalization criteria under IFRS. These non-capitalizable expenditures will be recognized as expenses in the period in which they are incurred. Examples include research-phase costs, general overhead, and training and administrative expenses. Expenses not eligible for capitalization represent real and necessary investments in the creation and realization of an asset.

2.9 Other Revenue

Other Revenue includes funds retained by the Corporation to fund the DVA LOB. DVA is funded by GoM and TB determines the funding level set in any given year. As of the time of filing, the funding is set at $54M as conveyed to MPI. There is no formal DVA funding agreement in place at the time of filing, nor is one expected in the near term. MPI continues to be in discussions with TB in this regard.

3. The Budget Review Process

The table below shows the budget review process, prior to release to external stakeholders:

4. Budget Stakeholders

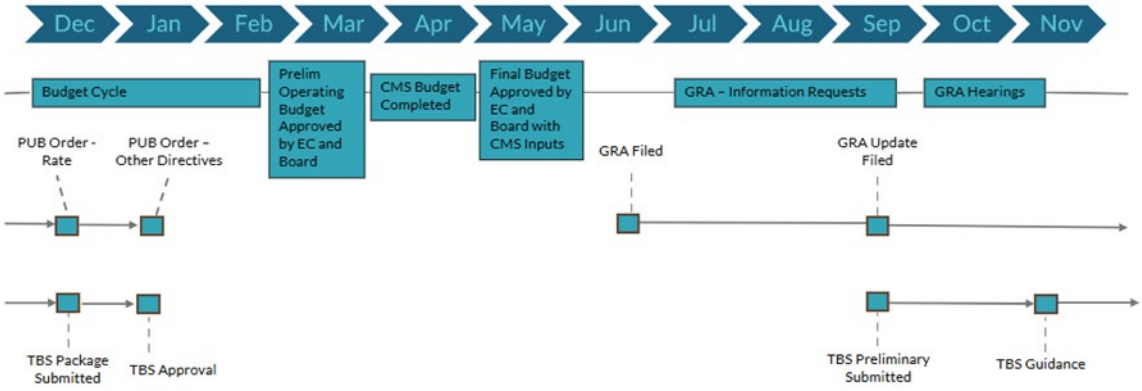
MPI has a core set of stakeholders beyond individual ratepayers. More specifically,

- TB
- GoM - Department of Justice
- Public Utilities Board – for the Basic LOB

5. Budget Timelines

Stakeholder Expectations - Stakeholders, as noted above, have different information needs and reporting requirements. There is no natural alignment amongst the parties, meaning the timing of information is often staggered throughout the fiscal year. MPI does its best to accommodate the inherent conflicts within the processes

but there has and will continue to be material differences in financial information presented by MPI at various points of time and therefore available to each stakeholder.



The GRA does not include MPI's final budget. The GRA is confined primarily to the Basic LOB, and the application and rate setting process takes place in advance of MPI's final budget submission to TB.

The GRA can be viewed as a core element used in formulating the final Basic LOB and the TB budget submission (known as an "Estimates Package"), but different assumptions can be presented and incorporated into the budget once the annual PUB process is completed. Some of these assumptions could materially impact the Basic LOB, creating a situation in which PUB-approved rates are potentially overpriced or underpriced.

While corporate operating expenses reflected in the GRA may not represent the final operating expense budget submission to the TB, MPI is actively seeking to align the GRA submission with its TB submission in this regard and will seek to carry one budget through GRA compliance filing to TB submission. That said, potential changes could come from direction being provided to MPI from TB with respect to the budget for 2027/28. Any such changes would be captured in the next GRA. Alternatively, MPI could adjust its project or initiative budget to reflect an updated forecast based on current estimates that change over time.

Timeline Milestones - several reporting milestones are built into the budget process which continually impact MPI's budget through to submission and final TB approval:

Figure EXP App-22 1 Budget Timeline

6. Budget Approval Process

MPI's Budget approval is as follows:

1. EC submits the budget to the Board of Directors for approval.
2. Once approved, MPI submits the budget to the Minister's office for review and approval.
3. Once approved, the Minister's Office submits the budget to TB for review and approval. The TB-approved budget is then conveyed to MPI.
4. TB has the final say on MPI's budget and can direct changes and/or provide direction for the next budget cycle.

7. PUB Orders / Directives

The PUB issues orders/directives as it relates to the Basic LOB. This typically occurs after MPI has submitted its budget to TB, but before approval by TB. PUB orders can vary materially from MPI's budget. With respect to rate setting, the PUB approved rates have historically been similar to the rate sought by MPI. However, as seen in

recent years, rates approved by the PUB can deviate from actual need, causing known misses on the budgeted revenue for the Basic LOB.

8. Key Performance Indicators (KPIs)

MPI uses a select number of KPIs to measure its results to ensure the Corporation is financially sound and properly capitalized, as well to assess and gauge its performance against others. KPIs support informed decision making and operational harmony.

KPIs vary in cadence from monthly, quarterly, and annually. The core KPIs for the corporation are externally reported in MPI's monthly, quarterly and annual reports. See *EXP Appendix 24* for selected KPIs.

2027/28 Budget Process & Context
Corporate Operating Expenses

Preamble

In keeping with our ongoing commitment of holding ourselves accountable to all Manitobans to deliver value as a public auto insurer, the following guidance is being provided to the Senior Leadership Team (SLT) as we embark on building out the corporations operating expense budget that will be included in both our 2027 General Rate Application (GRA), as well as our 2027/28 fiscal budget submission to the Treasury Board.

The Executive team has reviewed the enclosed and is aligned to the overall corporate operating top-down expense guidance for 2027/28. Following the zero-based bottom-up budget exercise, directorate will have an opportunity to present and advance a discussion on individual departmental expense and resourcing needs prior to the finalization of the budget. The final decision on corporate expenses, resources and the allocation between directorates shall be made by the CEO.

Budget Overview

Departmental Operating Expenses

1) Emphasis on Fiscal Prudence

As a Crown corporation, MPI is held to the highest standard of financial stewardship and public accountability. Therefore:

- Affordability is paramount. Only costs essential to service delivery, strategic priorities or legislated obligations are to be considered.
- All expenses must be reasonable, defensible and directly tied to operational requirements or approved initiatives.

2) Zero-Based, Bottom-Up Budgeting

All operating expense submissions must follow a zero-based, bottom-up budgeting approach. This means:

- All expenses must be fully justified, regardless of whether it existed in the prior year.
- Budget owners must clearly articulate the need, purpose and value of expenses.
- All submissions must be supported by a detailed budget presentation outlining assumptions, cost drivers, and alignment to priorities.

3) Use of the Prior 2026 GRA Forecast as a Reference Point

While budgets must be built from zero, your previously identified forecasted requirements from last year's budget cycle should serve as a directional reference point, not a baseline, and should not be assumed or automatically carried forward without justification. Pending business needs, legislative

requirements, service demands and emerging priorities, may require that certain expenses increase beyond prior forecasts. In these cases, divisions must provide clear justification demonstrating why costs need to rise and how the increases support mandated service delivery, risk mitigation or strategic priorities. This approach maintains fiscal responsibility while ensuring MPI can still respond to legitimate operational and strategic requirements.

Full-Time Equivalent (FTE) and Workforce Capacity

1) No Net-New Staff Resourcing

The direction for 2027/28 fiscal year is to hold the current FTE resources. This includes:

- Ensuring current staff are aligned to the most critical work.
- Reviewing activities, processes, and deliverables to identify opportunities to reprioritize, streamline or sunset lower-value work.

2) Reprioritization May Require Stopping Current Work

To accommodate new or emerging corporate priorities:

- Divisions may need to stop or pause existing work that is not directly aligned to mandated services or strategic objectives.
- Leaders are responsible for assessing their portfolios and determining where effort can be redirected. If a department believes that additional work beyond identified priorities must continue, leaders are encouraged to find capacity within your current FTE complement.

3) Approved Over-Budget FTE for Surge Capacity

The Corporation had an approved over-budget FTE allocation of 40 for 2026/27, which is being maintained within existing FTE salary dollars. This allocation is reserved strictly as surge capacity against vacancy allowance to ensure continuity of operations during periods of staffing transition or required ramp-up. This pool is not available for permanent staffing and divisions must plan their workforce needs assuming this surge pool is centrally managed and is not an existing extension of their baseline FTE complement.

4) Reclassification of FTEs from Initiatives to Normal Operations

As stated in the 2026 GRA, the closure of project Nova, yielded 24 FTEs being identified as part of Nova leadership stream (Major Programs Leadership) or Nova transition to operations (FTE supporting projects as part of a full-time permanent role) which are permanent FTE within the organization. The Corporation has reclassified 24 initiative funded FTE into the core operating workforce. This update was made as these roles represent ongoing, permanent operational needs rather than temporary initiative based positions. Maintaining them as initiative FTE (which are intended to only be temporary support to a project bound timeline and incremental roles who are backfilled) would have misrepresented the true staffing requirements of the Corporation and understated the normal operations baseline. Reclassifying these roles ensure that our budget and workforce planning accurately reflects current state and supports transparent, sustainable resource

management. The classification of these roles is in process of being updated in HRIS throughout fiscal 2025/26 and will be updated formally within the 2027/28 budget presentation. As these existing roles were being funded by initiative dollars, there is no impact on the total Corporate budget, however there will be a known shift of budgeted compensation dollars from initiative expenses to normal operations.

Compensation will continue be set by the Finance team based on the staffing complement of FTEs that are approved.

Initiative Budget

MPI's strategic plan and the IT roadmap will serve as an authoritative source for prioritized initiatives, sequencing and dependencies, and long-term investment expectations:.

IT debt and risk items identified through the Roadmap, ensuring that critical modernization and risk mitigation needs are incorporated into the delivery trajectory.

- Historical evidence that our program delivery capacity is limited by significant ramp-up time for detailed solution planning, procurement (RFP), contract negotiation and requirements development.
- The need to ensure initiatives are realistically sequenced.
- Recent delivery rate of planned implementation work and importance of preventing over-commitment and avoiding budget carryforwards or delays caused by underestimation of workload complexity.
- The impact of total initiative spending on the overall corporate operating budget ask.

The ceiling will be intended to ensure affordability, operational sustainability and realistic delivery expectations. Given recent experience:

- Initiatives will be scheduled within the implementation ceiling to ensure that work can be delivered effectively within available FTE and vendor capacity.
- Initiatives that exceed the ceiling will be deferred or phased in alignment with roadmap and strategy prioritization and corporate capacity planning.

The modernization budget includes the following components:

- Corporate Project Funding (non-major programs) – capped at $5M;
- Ongoing licensing and support costs (such as Duck Creek and Celtic) carried forward from Project Nova – will be capped at existing contractual obligations;
- Major Programs Implementation budget – As stated above, the implementation run-rate (ceiling) will be determined after the above considerations around strategic priorities and Roadmap needs, capacity, historical delivery, and proposed normal operations expenses.

The initiative budget will be structured to clearly distinguish between committed (approved business cases) and uncommitted funding (placeholder), ensuring transparency, affordability and alignment with the forthcoming 2027/28 IT roadmap. Initiative funding is only considered committed only once scope, timing and dependencies are confirmed via an approved business case.

1) Committed Initiative Funding – Approved Business Cases

Committed funds will reflect only those initiatives with approved business cases, forming the core of the initiative budget. However, it is important to acknowledge that significant variability persists, even for approved initiatives, due to the fact that business cases are prepared before RFP processes are initiated and before contracts and statements of work are signed. As a result, assumptions regarding vendor availability, procurement timelines, implementation sequencing and delivery resourcing are often subject to change once the RFP and contract award stages begin. This creates inherent uncertainty in forecasting the timing of expenditures, and MPI continues to experience slippage year over year as planned start dates and delivery milestones shift. Given these dynamics, budgeting committed funds years in advance remains challenging, and timing estimates must therefore be treated as directional rather than precise. Finance will monitor these variances, but the Corporation should expect continued shift in committed spending, even when initiative approval has been granted.

2) Uncommitted Envelope- Roadmap and Strategy Aligned Placeholder

The remaining initiative funding will be consolidated into an uncommitted envelope, which will be mapped to expectations derived from MPI's strategic plan and IT Roadmap. This allocation will serve strictly as a placeholder, representing anticipated projects to draw on these funds once business casing is approved. No detailed budget dollars will be assigned to these placeholders, as business cases have not yet been prepared and therefore estimates cannot be reasonably produced. The uncommitted envelope will be aligned to the Roadmap and strategy prioritized initiatives as a planning guide, indicating which future projects are expected to consume available funding. This alignment is intended to support sequencing, resource planning, and affordability, however it does not constitute approval to initiative work or to confirm final budgets.

3) Categorization of Operating vs Capital

For planning purposes, the uncommitted envelope will be assigned a flat, high-level split between operating and capital classification, based on historical initiative profiles and expected investment types. This categorization will remain preliminary and will be refined only once detailed business cases are completed and approved. Even for business cased initiatives, the operating vs. capital treatment is still assumed rather than confirmed. Final classification depends on the specific nature of expenditures once incurred, as well as the outcome of the technical and accounting assessments performed at the time costs are realized. Accordingly, actual categorization may shift as project details become clearer through procurement, solution design and implementation. The expected variability in estimated expense and capital (deferred expense) classification will impact the actual dollars incurred compared to budget.

Stretch Target(s)

- *Initiatives:* Major programs has and will continue to consume enormous resources and non-incremental staff capacity. This leaves little to no capacity to undertake net new other initiatives. This will increase both the overall risk to other modernization efforts and the ultimate cost of resolution thereto given the delay. This is acknowledged and accepted.

- *Staffing:* In support of affordability, the Corporation does not need to raise the ceiling on FTEs. MPI needs to manage and better allocate staffing resources based on prevailing demands of the business.
- *Operating Expenses:* Unless MPI amends its current service delivery model, the underlying operating costs have a natural cost escalation related to same. Currently the top 4 expense categories (compensation, data processing, special services and merchant and bank charges) represent appx. 82% of expenses over a 10-year period). As this budget is being built two years into the future, holding costs flat overall has an implied savings based upon improved efficiency, or reduction of services/service levels that are no longer valid.

Strategic Alignment of Operating Budgets

The SLT is directed to work with their Strategy lead on how their operating budgets align to the strategic plan and approved list of 2027/28 initiatives from the Executive offsite in November 2025. The strategy department is responsible to support the divisions for making these linkages and presenting same in the 2027 GRA.

Budget Process – Zero- Based Budget Approach

Zero based budgeting is a budgeting technique in which all expenses must be justified for a new year starting from zero, versus starting with the previous budget and adjusting as needed. While we have identified flat ceilings on FTE and operating expenses, it will be the expectation of each department's directorate to build up their budget using a zero-based approach and to be able to speak to the build up of the budget by component to the Executive.

Budget Templates – SharePoint

Budget templates (Operating and FTEs) for each directorate are located and stored on the budget SharePoint site. As with past years, your final budget template is to be saved to this site by the deadline outlined herein.

In addition, the drive will include a budget presentation template for directorate use for departmental presentations to the Executive in February. The directorate will be responsible for presenting the proposed budget and rationale for all line items of expenses, including an understanding of how resources will be allocated. If anyone has difficulty gaining access, please reach out to Daphne Machado, Manager of Budgeting.

Budget Approval Process

Budgets are approved by the Board of Directors and then ultimately by the Treasury Board. The final 2026/27 budget will be confirmed to SLT in February 2026, after Treasury Board approval. The preliminary 2027/28 budget will go to the Board of Directors for approval during 2026 and final approval 2027/28 budget approval will happen by Treasury board in early 2027.

Timeline

See Appendix 1.

We would like to thank you in advance for your dedication and engagement to the 2027/28 budget process. All insurance lines of business continue to facing increasing rate pressure again next year, this naturally puts pressure on our operating service model and the cost to maintain same.

Sincerely,

E-SIGNED by Satvir Jatana

Appendix 1 – Timeline

Process	Process Owner	Timing
Budget Guidance: established and acknowledged by the Executive Committee	Executive Committee	November 2025
Budget Kick-off: FP&A team reviews budget guidance/process with senior leadership team	Senior Leadership Team	December 3, 2025
Budgets Out: templates with departmental operating expenses (pre-NOVA initiative spend) & FTE's circulated to each department	FP&A team	1st week of December, 2025
Budget review period (following zero-based budget approach): • Departmental Manager/Director budget preparation and review, following zero-based budget approach • Budgets signed off by departmental Directorate/VP's (via automated workflow) • Budgets returned to FP&A team	Managers & Directors by department	Kick off 1st week of December, 2025 Deadline January 16, 2025
Budgets In: corporate consolidation completed	FP&A team	Deadline January 23, 2026
Departmental Directorate Budget Presentations: Directors to present departmental budgets to respective department VP, CEO & CFO (to be scheduled by FP&A team)	Directorate/ VP by department, CEO/CFO, FP&A team	February 2-13, 2026 (2-week window)
Corporate Alignment: Operating budget (corporate view, pre- initiative forecast spend) presented to EC for alignment	Executive Committee	February 26, 2026
Corporate Project Funding Summary forecast for initiative spend finalized.	IT & FP&A team	Deadline March 20, 2026
Final operating budget (corporate view with initiative spend) presented to EC for alignment	Executive Committee	April 2, 2026
Final VP sign off via automated workflow on operating departmental budgets	Individual VP's	April 2, 2026

Appendix 23: Summary of Regulatory Deferral Accounts

MPI notes that IFRS 20, *Regulatory Assets and Regulatory Liabilities*, was issued in May 2026 and is effective for annual reporting periods beginning on or after 1 January 2029, with earlier application permitted. *As it concerns MPI, the Standard expressly excludes from its scope regulatory assets and regulatory liabilities that arise if premiums charged in insurance contracts within the scope of IFRS 17 are regulated.* In addition, the consequential amendments distinguish IFRS 20 presentation from IFRS 17 and confirm that regulatory assets are addressed separately from assets within the scope of IFRS 17, including in the amendments to IAS 36. Accordingly, IFRS 20 does not apply to insurance entities (i.e., MPI) in respect of regulated insurance premiums within the scope of IFRS 17.

This summary should be read together with Appendix 29 from the 2026 General Rate Application (GRA), and MPI relies on that prior filing for the detailed history, context, and broader discussion of Regulatory Deferral Accounts (RDAs) and initiative expenses.

MPI is again in this application, seeking to have the PUB declare RDA amounts are no longer of any value for rate setting and abandon the practice of RDAs. A declaration of no value is not a reference to impairment or a write off for accounting purposes, or that there is no value to rate payors for the expenses. Rather, it is a simple acknowledgement that there is to be no recovery of existing amounts presently deferred in future GRAs.

MPI further clarifies that the RDA consists only of amounts that are or would be expensed through the Statement of Operations to date for PUB-specific rate-setting purposes. It is not an actual asset of the Corporation, and as such is not reported within MPI's audited external financial statements.

MPI notes that the PUB has not previously confirmed what the PUB views to be the dollar amount of the RDA balance nor the practice of accounting for it. This is of no moment if the PUB accepts the relief sought by MPI concerning the RDA balance. If the PUB again

rejects MPI's position, MPI respectfully asks that the PUB provide guidance in its 2027 Order as to how RDA expenses are to be accounted for and the rules that will govern same. The value of the RDA balance is not clear to MPI because the expenses excluded from rates were determined on the applicable rating year for each of the last three rate applications. While difficult to calculate, it is possible to make use of different dollars amounts in different combinations to arrive at an RDA Balance (see *Figure EXP App 23–1* below). These being forecasted amounts excluded (based on the two-year average per rate order or fiscal year), expenses forecasted per fiscal year, or actual expenses incurred (post GRA), or a combination thereof.

Figure EXP App 23-1 Basic Allocation of Initiative Expenses

($'s in millions)	2023 GRA (2023/24 Rate)	2024 GRA (2024/25 Rate)	2025 GRA (2025/26 Rate)	2026 GRA (2026/27 Rate)	2027 GRA (2027/28 Rate)*
Initiative expenses excluded for rating year (2 year average) per rate order	23.7	24.1	15.4	32.2	8.3

	2023/24 Forecast	2024/25 Forecast	2025/26 Forecast	2026/27 Forecast	2027/28 Forecast
Initiative expenses forecasted for fiscal year	21.6	24.0	18.5	31.2	18.3

	2023/24 Actual	2024/25 Actual	2025/26 Actual
Actual initiative expenses incurred in fiscal year statement of operations	10.3	24.2	56.5
Impairment / write off normalization adjustment		(9.9)	(8.0)
Normalized actual expenses	10.3	14.3	48.5

*$8.3M for rating year 2027/28 is $18.4M net of the proposed inclusion of $10.1M of initiative expenses for the rating year average.

The deferred initiative expenses have effectively been funded via capital transfers from the Extension line of business. Extension capital transfers are controlled by the MPI Board of Directors and considered for approval on an annual basis, meaning MPI cannot guarantee the transfer of funds from Extension to Basic.

MPI's application requests a discharge of the RDA and the abandonment of the practice. Accordingly, MPI has included $10.1M of initiative expenses for recovery in the 2027 GRA, as outlined in *Figure EXP App 23-2* below. In the 2026 GRA, MPI advanced the notion of adjusting initiative expenses for inflation but has decided against doing so in this

application. MPI has decided instead to keep the process of including initiatives simple, given the variances that naturally occur between forecasted and actual spending.

Should the PUB exclude initiative expenses for recovery through rates in any given GRA, those expenses would not be carried forward into future GRAs. Instead, they would be satisfied by monies in the RSR – as has occurred with expenses deferred to date. This would hold true for both multi-year initiatives in progress and initiatives that have been completed.

Appendix 23a: Supporting Evidence for Recovery of Initiative-Related Expenses

EXP Appendix 23a builds on the list of initiatives presented in *EXP Appendix 23*, which identifies projects for which cost recovery is sought in this application. In addition to these appendices, *IT Appendix 9* also provides a detailed inventory of technology-related initiatives, including project scope, business objectives, and portfolio alignment.

MPI seeks approval in this Application to recover from Basic ratepayers the initiative-related expenses forecast to be incurred in the 2027/28 rating year, totaling approximately $10.1 million.

MPI has included business cases for the initiatives listed above in this Application or in previous filings, as referenced herein. These initiative expenses can be grouped into the following major categories:

Below, MPI provides an assessment of each initiative for which cost recovery is sought. Please refer to *Part VIII EXP Appendix 23b* – provided electronically – for further summarized details of the business case objective and benefits.

Closed- Scope Complete Initiatives $3M

Closed-scope complete expenditure is deemed necessary to deliver the project outcome and therefore of use to the Corporation. Refer to below for a summary of the project outcome.

Capital Modelling Solution

Amount for recovery in 2027 GRA $196,061.

Used: The Capital Modelling Solution was implemented and is actively used by MPI's Capital Management team. Following implementation, the team worked within the software to develop and refine Financial Condition Testing (FCT) models, complete training, build modelling scenarios, and continue maturing the models for ongoing use. The project was formally closed in October 2025 after all project closeout activities were completed.

Useful: The solution supports Financial Condition Testing (FCT), a regulatory requirement, and informs strategic decisions related to the application of capital. It improves FCT capabilities under a broader set of conditions, supports development of Economic Capital models, enhances understanding of financial risk, enables more detailed scenario, sensitivity and stress testing analysis, supports reinsurance analysis, and brings Basic FCT capability in-house.

Prudently acquired: The initiative was undertaken because no current FCT solution was in place and no readily available market solutions existed that could meet MPI's requirements while improving efficiency and reducing the risk of errors. The solution was procured through a competitive RFP process, vendor evaluations and demonstrations were completed, a service agreement was negotiated and executed with the selected vendor, implementation and training were completed, and the approved project scope was delivered before formal project closeout.

Cloud Migration

Amount for recovery in 2027 GRA $1,127,694.

Used: The Cloud Migration initiative was implemented and is actively used. Approximately 650 in-scope business applications were migrated from legacy data centres to Microsoft's Azure VMWare Solution (AVS) environment, migration waves were completed, migrated systems were placed into operation, and the project closed in October 2025 after all deliverables identified in the business case were completed.

Decommissioning activities were substantially completed and any remaining optimization and operational activities were transitioned to ongoing operations and managed services support.

Useful: The initiative is useful because it migrated in-scope business applications from legacy data centres to a cloud environment, enabling MPI to safely conclude the current Kyndryl-managed data centre model, reduce risks associated with technology obsolescence and technical debt, and establish a more reliable, resilient, and secure technology environment. The initiative also laid the foundation for future modernization efforts while ensuring migration occurred with no disruption to business systems and implementing a sustainable management model for the new environment.

Prudently acquired: The initiative was prudently acquired and delivered through established project governance and vendor management practices. The migration was planned, designed, scheduled, and executed in multiple waves in partnership with Kyndryl, Microsoft, and MPI, with migration runbooks, testing, change management, disaster recovery planning, infrastructure readiness activities, staged deployments, lessons learned reviews, and formal project closeout completed. The approved project scope was delivered, all business case deliverables were completed, and the project was formally closed in October 2025. Benefits are being measured and reported under the Benefit Realization Management (BRM) process.

Contact Centre as a Service (CCaaS)

Amount for recovery in 2027 GRA $917,311.

Used: Contact Centre as a Service (CCaaS) Phase 1 was implemented and is actively used. The initiative successfully replaced MPI's existing telephone platform with the Five9 cloud-based contact centre solution and was rolled out across multiple business areas through staged releases. Training, testing, implementation, adoption, hyper care support,

and transition to operations were completed, and the project was formally closed in February 2026.

Useful: The initiative is useful because it ensured the continued operation of MPI's telephone services through replacement of an end-of-life platform whose contract was expiring. The new cloud-based solution provides a modern contact centre platform that supports future omnichannel communications, can improve reporting capabilities, can reduce manual processes, can improve employee efficiency, strengthen information and data security, and provides a foundation for additional customer communication channels and future capabilities. It also enables a vendor-managed solution that remains current through ongoing updates and support.

Prudently acquired: The initiative was prudently acquired through a formal procurement and implementation process that included vendor evaluation, contract negotiation and execution, requirements gathering, configuration, systems integration, testing, training, staged implementation, hyper care support, change control, and operational transition. The approved Phase 1 scope was delivered, the solution was placed into production use, and the project was formally closed following completion of project closeout activities in February 2026. Benefits are being measured and reported under the Benefit Realization Management (BRM) process.

Content Architecture Phase 2

Amount for recovery in 2027 GRA $66,613.

Used: The Content Architecture Phase 2 initiative was complete and the capabilities delivered are actively used. While the project scope evolved during delivery, the initiative delivered plain language training and capability building for MPI employees, with training sessions conducted throughout 2025 and early 2026 before the project was formally closed in March 2026. Employees can apply this capability when creating and maintaining content that meets readability and accessibility standards.

Useful: The initiative is useful because it supports the original objective of creating content that is easier to understand, more accessible, and aligned with established content standards. By building internal plain language writing capability, MPI is better positioned to create and maintain content that meets reading ease and accessibility standards, answers customer questions, and supports improved access to information.

Prudently acquired: The initiative was prudently acquired and delivered through established project governance processes. As business needs evolved, the scope was adjusted through formal change management to focus project funding on expanding plain language training opportunities for employees. Training delivery continued through multiple in-person and virtual sessions, the approved scope was completed, and the project was formally closed in March 2026.

Digital Culture Improvements - Audio Visual Systems

Amount for recovery in 2027 GRA $252,384.

Used: The Digital Culture Improvements – Audio Visual Systems initiative was completed and the assets and capabilities are actively used. Audio visual equipment and Microsoft Teams Room capabilities were installed across the identified locations, installations were completed and approved, and the project was completed with closeout activities in September 2025.

Useful: The initiative is useful because it provides a consistent Microsoft Teams meeting room experience across the identified service centres and office locations, supporting hybrid meetings and collaboration regardless of where employees are located. The upgraded audio visual systems improve the quality of virtual meetings, support remote participation, enable room scheduling capabilities, and help create a more inclusive and collaborative work environment.

Prudently acquired: The initiative was prudently acquired through established procurement and project delivery processes. Technical requirements were identified, locations and room requirements were confirmed, vendor cost estimates were obtained, statements of work were executed, equipment was procured, installations were planned and completed, and schedule and budget adjustments were managed through formal change requests. The approved project scope was delivered, all installations were completed, and the project was formally closed following completion of project closeout activities.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Improve Identification of Stolen Vehicle/VIN - Pilot

Amount for recovery in 2027 GRA $45,894.

Used: The Improve Identification of Stolen Vehicle/VIN – Pilot was implemented and operationalized as a pilot. MPI engaged Carfax Canada, received and reviewed VIN scan reports, and completed approximately 36,000 VIN scans during the pilot period. The information generated through the pilot was reviewed by MPI staff to assess the prevalence and characteristics of potentially fraudulent vehicle and VIN transactions. The engagement concluded in June 2025 and the project was formally closed on August 7, 2025.

Useful: The initiative is useful because it provided MPI with information on the prevalence, volume, and identification of potentially fraudulent vehicles and VINs that would not otherwise be available through existing processes. The pilot tested MPI's ability to identify fraudulent vehicle ownership transactions, assess the quality and quantity of

available data, better understand the severity of fraud-related activity, and provide information to support future decisions regarding fraud detection and prevention.

Prudently acquired: The initiative was prudently acquired and delivered through a structured pilot approach designed to evaluate a tool identified as the best available market option for detecting potentially fraudulent vehicle transactions. The project included implementation of the VIN scanning process, review and analysis of scan results by MPI staff, collection of data over the pilot period, and assessment of the tool's ability to provide meaningful information regarding fraudulent activity. The approved pilot scope was completed, the results were evaluated, and the project was formally closed on August 7, 2025.

Print Management Software Upgrade

Amount for recovery in 2027 GRA $56,912.

Used: The Print Management Software Replacement was implemented and is actively used. The initiative upgraded MPI's InfoPrint environment to the supported version on new Azure-based servers, and by March 2026 all print jobs were either fully or partially using the new InfoPrint version. Testing, disaster recovery validation, migration of print objects, and production deployment activities were completed, with remaining minor issues transitioned to production support. The project reached functional completion in February 2026 and proceeded through formal closeout activities in March 2026.

Useful: The initiative is useful because it replaced an end-of-life print management solution that supports high-volume printing and critical customer communications. The initiative ensures continued printing operations, maintains support for business-critical printing functions, secures access to current software functionality and vendor support, and supports uninterrupted delivery of customer communications and operational printing services.

Prudently acquired: The initiative was prudently acquired through a formal Request for Tender (RFT) and contract process to ensure compliance with procurement requirements and secure a cost-effective solution. The project included solution design, vendor engagement, server provisioning, software installation, testing, disaster recovery validation, cross-training, migration activities, and operational readiness reviews. The approved scope was delivered, the upgraded solution was implemented into production, and remaining minor issues were transitioned to operational support as part of project closeout activities in March 2026.

Taxi Telematics

Amount for recovery in 2027 GRA $2,812.

Used: The Taxi Telematics Pilot was implemented and operationalized as a pilot. Telematics devices were deployed within participating taxis, data was collected over the pilot period, quarterly reporting and training were completed, and the Road Safety team analyzed the telematics data collected through the initiative. An action plan and pilot analysis report were completed based on the information gathered, and the project was formally closed in August 2025 following completion of the pilot and project closeout activities.

Useful: The initiative is useful because it enabled MPI to gather information on driving behaviours that would not otherwise be available through traditional claims analysis. The pilot supported MPI's objective of understanding the factors contributing to high claims experience within the taxi industry, assessing the quality and usefulness of telematics data, and developing an action plan based on the information collected. The initiative also provided data that could be analyzed to inform future decisions and understand resourcing requirements should a longer-term solution be considered.

Prudently acquired: The initiative was prudently acquired and delivered through a structured pilot approach designed to evaluate telematics technology and the data it

could provide. The project included vendor engagement, deployment of telematics devices, training, collection and validation of quarterly reporting, review of pilot results, analysis of collected data, development of an action plan, and project closeout activities. The approved pilot scope was completed, the intended data was collected and analyzed, and the project was formally closed in August 2025.

In-progress Initiatives $3.9M

In-progress continuing expenditure is related to ongoing and in-flight projects. As these projects remain in progress at the time of filing and have not been cancelled, MPI submits that the expenditure is useful to the Corporation in support of delivering the project's intended outcomes and scope.

BI3 Upgrade

Amount for recovery in 2027 GRA $1,957,100.

Used: BI3 Upgrade will be used to support the continued operation of the BI3 platform through the FINEOS upgrade, database re-platforming, integration build, testing, and related remediation work. Once implemented, the upgraded solution will support existing BI3 functionality, including the FINEOS build, related integrations, reporting remediation, and document storage scope identified through project delivery. The project remains in progress and is currently tracking to a re-baselined go-live of Spring, 2027.

Useful: The initiative is useful because it supports the continued delivery of BI3 capabilities through an upgraded FINEOS environment and the associated integration, testing, reporting, and data-related work required to make the upgraded platform operational. The work remains in progress, with the FINEOS build substantially complete,

integration build underway, testing strategies being developed, and scope and quality items actively managed through project governance.

Prudently acquired: The initiative is being prudently acquired and delivered through established Major Program and PMO governance practices. The project has an approved business case, signed vendor statements of work, mobilization workshops, project charter approval, vendor management escalation, Benefit Realization Management Plan, change requests, re-baselining, project steering committee oversight, executive steering committee reporting, RAID management, testing strategy development, privacy assessment, and active monitoring of scope, schedule, budget, risks, and deliverables. Expenditures incurred to date are necessary to deliver the approved upgrade and support completion of the in-flight solution.

Changes to Deductible Products

Amount for recovery in 2027 GRA $1,502.

Used: Changes to Deductible Products will be used to implement the approved deductible changes through updated rates, regulations, customer communications, training materials, system changes, and supporting calculation tools. The implemented changes will support administration of the revised deductible products, including updates to the Insurance Rate Calculator, policy documentation, cover letters, technical communications, and training materials. The initiative is currently in its final administrative closeout stage, with implementation completed and project closure activities underway.

Useful: The initiative is useful because it enables implementation of approved deductible product changes and the associated operational, regulatory, and customer-facing updates required to support those changes. The work includes updates to regulations, customer communications, policy documentation, training materials, and supporting systems to ensure the revised deductible products can be administered correctly and consistently.

The initiative remains useful as it progresses through final closeout following successful implementation of the approved changes.

Prudently acquired: The initiative is being prudently acquired and delivered through established project governance and delivery practices. The project included development and implementation of regulatory changes, system and Insurance Rate Calculator updates, testing, communication planning, training and KnowledgeNet updates, customer communications, issue remediation, and formal closeout activities. Expenditures incurred to date have supported delivery of the approved deductible product changes and the activities necessary to implement and sustain those changes.

ERP Assessment & Planning

Amount for recovery in 2027 GRA $167,294.

Used: ERP Assessment & Planning will define MPI's future ERP target state, develop ERP software requirements, prepare ERP software procurement activities, and establish the implementation readiness required for ERP replacement. The initiative will produce the target state, capability assessments, implementation preparation deliverables, ERP software procurement requirements, and current-state process documentation that will be used to support future ERP replacement decisions and implementation activities. The project remains in progress, with advisor engagement, requirements development, ERP strategy work, and implementation preparation activities underway.

Useful: The initiative is useful because it improves business readiness and procurement readiness for ERP replacement. The work supports documenting business expectations and requirements, defining the ERP target state, assessing capability gaps, preparing implementation requirements, developing ERP software procurement requirements, and improving readiness for future ERP implementation activities. The initiative remains useful as current-state process mapping, stakeholder engagement, strategy development, requirements gathering, and implementation preparation activities continue.

Prudently acquired: The initiative is being prudently acquired through established Major Program, project governance, procurement, and planning practices. The project includes completion of advisor pre-work deliverables, a competitive advisor vendor procurement process, advisor engagement, stakeholder surveys and interviews, business process mapping, ERP strategy development, requirements gathering, governance reviews, Benefit Realization Management Plan, change requests, steering committee oversight, executive steering committee reporting, and implementation preparation activities. Expenditures incurred to date support delivery of the approved planning and assessment work and are necessary to develop the target state, procurement requirements, and implementation readiness needed for ERP replacement.

Foundational Setup for Enterprise Data Platform

Amount for recovery in 2027 GRA $519,015.

Used: The Foundational Setup for Enterprise Data Platform initiative will be used to establish the foundational capabilities required to support MPI's future enterprise data and analytics environment. Building on the work completed to date, the initiative will be used to provide a scalable Microsoft Fabric platform, standardized data architecture, foundational governance capabilities, and data integration patterns that enable trusted reporting and analytics across core systems. Deliverables received through discovery and implementation activities, including readiness assessments, current-state analysis, architecture designs, requirements documentation, implementation plans, source-to-target mapping work, and Microsoft Fabric environment configuration, will be used to support the revised delivery approach and future expansion of enterprise data capabilities.

Useful: The initiative is useful because it supports MPI's long-term objective of modernizing its data ecosystem and improving data accessibility, quality, governance, and reporting capabilities. The work completed to date has established important foundational assets, including enterprise data architecture, platform design patterns, data

models, requirements documentation, source system analysis, and Microsoft Fabric infrastructure that can be leveraged in future phases. The initiative continues to support the original objective of creating a scalable enterprise data platform that enables more reliable reporting, analytics, decision-making, and future artificial intelligence and advanced analytics capabilities across the corporation.

Prudently acquired: The initiative is being prudently acquired through established project governance, vendor management, architecture review, and executive oversight processes. Throughout delivery, MPI conducted discovery activities, requirements gathering sessions, architecture reviews, business readiness assessments, security reviews, technical design work, platform configuration, testing preparation, change control, executive escalations, and independent assessments of vendor performance. When vendor delivery concerns emerged, MPI paused progression of the original approach, conducted project reviews, assessed vendor performance, evaluated options, and began replanning the initiative to align future work with business priorities and organizational needs. Expenditures incurred to date have produced foundational technology assets, planning deliverables, architecture artifacts, requirements documentation, and Microsoft Fabric capabilities that remain available to support the revised path forward and the original strategic intent of establishing an enterprise data platform. Benefits will be measured and reported under the Benefit Realization Management (BRM) process.

Governance, Risk and Compliance (GRC) Solution

Amount for recovery in 2027 GRA $290,626.

Used: The Governance, Risk, and Compliance (GRC) Solution was implemented and is actively used. The initiative implemented AuditBoard capabilities including CrossComply, Third Party Risk Management (TPRM), and Risk Oversight functionality. User acceptance testing was completed, operational processes and templates were developed and

reviewed, outstanding items were transitioned to operations, and the project was closed in March 2026 following completion of implementation and closeout activities.

Useful: The initiative is useful because it provides a centralized platform to improve visibility into risks, streamline risk and compliance management processes, enhance policy and compliance management, improve audit readiness, and strengthen third-party risk management. The solution supports more effective risk identification, assessment, monitoring, and mitigation activities while reducing manual effort and improving decision-making related to governance, risk, and compliance activities.

Prudently acquired: The initiative was prudently acquired through a competitive procurement process that included development of an RFP, vendor evaluations, product demonstrations, contract negotiations, vendor selection, implementation planning, discovery and design activities, testing, and operational transition. The project included implementation of the approved modules, stakeholder reviews, user acceptance testing, development of Risk Oversight templates and workflows, and transition of the solution into ongoing operations. The approved scope was delivered, implementation activities were completed, and the project was closed following completion of project closeout activities.

Note- this initiative was in progress at time of preparation of filing material and is therefore listed as “in progress” on Appendix 23, but scope has since been completed as noted above.

ERP - Infor Upgrade

Amount for recovery in 2027 GRA $720,836.

Used: ERP Replacement – Infor Upgrade will be used to maintain MPI's existing ERP functionality by upgrading the Infor platform to a supported version, migrating business and application data to new infrastructure, and transitioning Finance and People &

Culture operations to the upgraded environment. Upon implementation, the upgraded solution will support existing Finance, HR, and payroll functions while replacing technology components approaching end of support. The project remains in progress, with infrastructure builds substantially complete, application installations and data migration activities underway, and testing activities progressing toward a planned November 2026 go-live.

Useful: The initiative is useful because it supports continued operation of MPI's ERP capabilities while maintaining vendor support and existing business functionality. The project is expected to minimize business disruption by implementing a supported version of the Infor suite, upgrading underlying server and database infrastructure, migrating existing data, and ensuring business and technical requirements continue to be met. The work remains ongoing, with fit-gap assessments, infrastructure deployment, application installation, data migration, testing, and remediation activities progressing as planned.

Prudently acquired: The initiative is being prudently acquired through established Major Program, project governance, procurement, and delivery practices. The project includes an approved business case, Board-approved funding, Benefit Realization Management Plan, vendor statements of work, fit-gap assessments, detailed impact analysis, infrastructure planning and deployment, testing strategy development, data migration activities, governance reviews, decision requests, change requests, executive steering committee oversight, and active management of project risks, schedule, scope, budget, and quality. Expenditures incurred to date are necessary to deliver the upgraded ERP environment and maintain supported Finance, HR, and payroll capabilities while positioning MPI for future ERP replacement activities.

[REDACTED]

[REDACTED]

MyMPI Foundation and International Registration Plan (IRP) Online

Amount for recovery in 2027 GRA $258,353.

Used: MyMPI Foundation & IRP Online will be used to provide IRP customers with enhanced digital self-service capabilities through MyMPI and IRP Online. Upon implementation, IRP customers will be able to access online registration and insurance services using the MyMPI platform, while supporting integration with MPI's core systems through the completed MPI Registration and Registration Event Sync components. Development is complete, deployments have been completed to testing and operational readiness environments, and the program is progressing toward the planned MyMPI Foundation & IRP Online deployment on August 14, 2026.

Useful: The initiative is useful because it advances MPI's digital service strategy by providing IRP customers with convenient online access to registration and insurance services while reducing reliance on manual and paper-based processes. The initiative supports improved IRP customer experience, increased digital adoption, enhanced self-service capabilities, improved data quality, and operational efficiencies through the automation and integration of key IRP customer transactions. The project remains in progress, with testing activities substantially complete, development complete, and implementation preparations underway for the final MyMPI Foundation & IRP Online release.

Prudently acquired: The initiative is being prudently acquired through established Major Program governance, project management, testing, and delivery practices. The project has been actively governed through executive steering committee and project steering committee oversight, phased deployment planning, Benefit Realization Management Plan, change requests, operational readiness reviews, user acceptance testing, regression testing, defect remediation, deployment activities, and implementation planning. Expenditures incurred to date have been necessary to deliver the MyMPI and IRP Online capabilities, complete integration with MPI's core systems, and support the

implementation activities required to realize the approved business case objectives and benefits.

Amortization $1.4M

Amortization: Amortization of the remaining R1 and R2 digital assets, is evidence these assets are in use by the Corporation. Reference can be made to *PUB (MPI) 1-57 Appendix 1 - Confidential* for the 2025/26 year-end impairment assessment, which concluded these assets are not impaired as of March 31, 2026. The expenditure is therefore useful, in-use, and prudently acquired as these assets followed the relevant project delivery governance framework.

Digital- Ongoing Costs $1.8M

Digital ongoing costs (Microsoft/Azure): These costs support the ongoing operation of MPI's cloud-based technology environment, including Microsoft Azure infrastructure, Microsoft 365 services, data storage and backup, application hosting, identity and access management, and related security services. These services provide the foundational technology required to host and operate business applications, maintain digital services for customers and employees, securely store and process data, and manage user access to corporate systems. Ongoing investment in these platforms ensures MPI's technology environment remains secure, reliable, scalable, and capable of supporting current and future business operations

Appendix 24: Budgeting Framework KPIs

This appendix provides an update on the key KPIs as they pertain to the Finance division. The budgeting framework KPIs vary in cadence from monthly, quarterly, and annually. The core budgeting KPIs for the corporation are externally reported in MPI's monthly, quarterly and annual reports.

Figure 1 provides an overview of the calculation details and frequency for all key performance indicators.

Figure EXP App 24-1
Summary of Key Performance Indicators with Calculation Details and Frequency

Line No	Key Performance Indicator (KPI)	Calculation Description	Frequency
1	Basic MCT	Basic: Total Minimum Capital Available / Total Minimum Capital Required	Quarterly
2	Corporate - Gross Combined (Partially Discounted) Ratio	(Total Insurance Service Expense + Operating Expenses) / Total Insurance Revenue	Monthly
3	Corporate - Gross Combined (Fully Discounted) Ratio	((Total Insurance Service Expense + Operating Expenses) - (Net Insurance Financial Result) / Total Insurance Revenue	Monthly
4	Corporate - Total Expense Ratio %	((Acquisition Expense + Maintenance Expense + Operating Expense) / Revenue from Premiums	Monthly
5	Basic - Gross Combined (Partially Discounted) Ratio	(Total Insurance Service Expense + Operating Expenses) / Total Insurance Revenue	Monthly
6	Basic - Gross Combined (Fully Discounted) Ratio	((Total Insurance Service Expense + Operating Expenses) - (Net Insurance Financial Result) / Total Insurance Revenue	Monthly
7	Basic - Total Expense Ratio %	((Acquisition Expense + Maintenance Expense + Operating Expense) / Revenue from Premiums	Monthly
8	Corporate - Loss Ratio %	Incurred Claims / Revenue from Premiums	Monthly
9	Basic - Loss Ratio %	Incurred Claims / Revenue from Premiums	Monthly
10	Corporate - Average Cost Per Claim	Corporate Incurred Claims before Reinsurance / # Corporate Claims	Yearly
11	Basic - Average Cost Per Claim	Basic Incurred Claims before Reinsurance / # Basic Claims	Yearly
12	Claims Count Ratio	Monthly Average Claims Reported / Monthly Average Claims Support FTEs	Monthly

The second table (*Figure 2*) includes the current actual and forecasted results related to the key budgeting framework KPIs utilized by the corporation. These metrics are essential for monitoring expense ratios, cost per claim, and other key indicators tied to MPI's financial health.

Figure EXP App 24-2
Summary of Key Performance Indicators with Calculation Details and Frequency

Line No.	Key Performance Indicator (KPI)	2023/24A	2024/25A	2025/26A	2026/27BF	2027/28F	2028/29F	2029/30F	2030/31F
1	Basic MCT [1]	93.9%	106.9%	108.2%	105.2%	106.5%	105.2%	113.9%	126.9%

12	Corporate - Average Cost Per Claim	$ 5,051	$ 4,289	$ 4,434					
13	Basic - Average Cost Per Claim	$ 4,314	$ 4,068	$ 4,182					
14	Claims Count Ratio - # of Claims Reported / Claims FTEs [3]	251.0	273.2	260.1					

[1] KPI is based on the *Manitoba Public Insurance Corporation Act* (100% Basic).

[2] For comparability - Normalized Expense Ratio removes one time items (i.e. impairments)

[3] Claims FTE's calculation based on average monthly Claims FTE's. Annual figure provided for GRA. Operationally this ratio is calculated monthly

The figures listed above are not performance targets. They are forecasted values generated from MPI's long-term financial forecasting model and represent MPI's best estimate of expected performance based on current assumptions. These figures are used for planning purposes and to support multi-year visibility into operational and financial trends. They are not intended to serve as fixed goals or performance benchmarks. As an insurance business, these ratios (combined, loss, expense) are subject to variability due to a wide range of external factors, including claims volatility, inflation, regulatory shifts, and other economic events and conditions, , many of which are outside of MPI's control. These uncertainties mean MPI cannot absolutely predict these ratios over the long-term with certainty. As a

public auto insurer operating within a fixed service delivery model, MPI lacks many of the operational levers that a private insurer might use to respond to these conditions. As a result, setting long-term targets for these ratios would not be meaningful and could create unrealistic expectations about the degree of predictability and influence MPI has over these figures. Instead, the forecasted values provide a directional view to support trend analysis and internal planning. These forecasts are recalibrated annually based on updated assumptions to guide decision making, reflecting MPI's commitment to responsible financial management and adaptability to changing conditions.

Please note: No comparable measure calculations are available for fiscal 2022/23 and prior as MPI was starting to transition to IFRS17 and the internal reporting and data source structure required for the calculations was not fully developed in accordance with current MSA Research KPI's.

Appendix 25: 10 Year Summary Basic Project Expenditures (Expense and Deferred Development)

Figure EXP App 25-1 10 Year Summary Basic Corporate Project Expenditures (Expense and Deferred Development)

International Financial Reporting Standard 20 Regulatory Assets and Regulatory Liabilities

Objective

1 The objective of this Standard is to require an entity to provide relevant information that faithfully represents how *regulatory income* and *regulatory expense* affect the entity's financial performance, and how *regulatory assets* and *regulatory liabilities* affect its financial position. To achieve this objective, the Standard sets out requirements for the recognition, measurement, presentation and disclosure of regulatory assets, regulatory liabilities, regulatory income and regulatory expense.

2 Regulatory assets and regulatory liabilities are a subset of the rights and obligations created by a *regulatory agreement*. Information about this subset of rights and obligations enables users of financial statements to understand:

(a) an entity's regulatory income and regulatory expense, which arise from the regulatory assets and regulatory liabilities. That understanding, together with information required by other IFRS Accounting Standards, will provide insights into the *total allowed compensation* for *regulatory goods or services* supplied by the entity in a reporting period, and hence into the entity's financial performance and prospects for future cash flows.

(b) an entity's regulatory assets and regulatory liabilities. That understanding will provide insights into the entity's financial position at the end of a reporting period and the amount, timing and uncertainty of the entity's future cash flows.

3 Total allowed compensation is the amount of compensation to which a regulatory agreement entitles an entity for regulatory goods or services supplied in a reporting period. The amount might be charged through *regulated rates*—and hence included in revenue from contracts with *customers* recognised applying IFRS 15 *Revenue from Contracts with Customers* (referred to in this Standard as IFRS 15 revenue)—in either the same period as the entity supplies the regulatory goods or services, or a different period. The Standard establishes definitions of a regulatory asset and a regulatory liability, and resulting definitions of regulatory income and regulatory expense, based on the principle that an entity recognises the total allowed compensation for regulatory goods or services in the same reporting period that the entity supplies those regulatory goods or services.

Scope

4 An entity shall apply this Standard to all its regulatory assets and all its regulatory liabilities, except for regulatory assets and regulatory liabilities that arise if premiums charged in insurance contracts within the scope of IFRS 17 *Insurance Contracts* are regulated.

© IFRS Foundation

5 This Standard specifies how to account for regulatory assets and regulatory liabilities and the resulting regulatory income and regulatory expense. Its application results in information that supplements the information provided by applying other IFRS Accounting Standards, primarily information about revenue from contracts with customers recognised applying IFRS 15. An entity shall apply other IFRS Accounting Standards to account for rights and obligations created by a regulatory agreement before applying this Standard.

Regulatory assets, regulatory liabilities, regulatory income and regulatory expense

6 A regulatory asset is an enforceable present right, created by a regulatory agreement, to add an amount in determining a regulated rate to be charged to customers in future periods because part or all of the total allowed compensation for regulatory goods or services already supplied has not yet been included in IFRS 15 revenue. A right to add an amount in determining a future regulated rate for any other reason is not a regulatory asset.

7 A regulatory liability is an enforceable present obligation, created by a regulatory agreement, to deduct an amount in determining a regulated rate to be charged to customers in future periods because part or all of the total allowed compensation for regulatory goods or services to be supplied in the future has already been included in IFRS 15 revenue. An obligation to deduct an amount in determining a future regulated rate for any other reason is not a regulatory liability.

8 In determining whether a regulatory asset or a regulatory liability exists, an entity shall assess whether it has an enforceable present right to add, or an enforceable present obligation to deduct, an amount in determining a regulated rate to be charged to customers in future periods (see paragraphs B3–B7).

9 A regulatory asset or a regulatory liability can exist only if:

(a) an entity and a *regulator* are parties to a regulatory agreement that prescribes the regulated rate the entity charges for goods or services it supplies to customers (see paragraphs 11–13); and

(b) part or all of the total allowed compensation for regulatory goods or services supplied by the entity in a reporting period is charged to customers through regulated rates in a different period (past or future), creating a difference in timing (see paragraphs 14–23).

10 Regulatory income and regulatory expense are income or expense arising from changes in a regulatory asset or regulatory liability. Not all changes in regulatory assets or regulatory liabilities give rise to regulatory income or regulatory expense—for example, the acquisition of regulatory assets or assumption of regulatory liabilities in a business combination does not give rise to regulatory income or regulatory expense. In addition, exchange differences resulting from translation into a presentation currency in accordance with IAS 21 *The Effects of Changes in Foreign Exchange Rates* are not regulatory income or regulatory expense.

© IFRS Foundation

Regulatory agreement and regulator

11 A regulatory agreement is an agreement that creates a set of enforceable rights and enforceable obligations that prescribes how a regulator determines a regulated rate (or a range for the regulated rate) that an entity charges for goods or services supplied to customers in a period. A regulator is a body that is required by law or regulation to apply a regulatory agreement to determine a regulated rate (or a range for the regulated rate—see paragraphs B8–B10).

12 The legal forms of regulatory agreements vary by jurisdiction and industry. For example, a regulatory agreement might take the form of:

(a) a contractual licensing agreement;

(b) a service concession arrangement; or

(c) a set of rights and obligations specified by law or regulation.

13 A regulatory agreement might create only regulatory assets, only regulatory liabilities or both regulatory assets and regulatory liabilities.

Total allowed compensation and differences in timing

14 Total allowed compensation is the amount of compensation to which a regulatory agreement entitles an entity for regulatory goods or services supplied in a reporting period. The amount might be charged through regulated rates in either the same period as the entity supplies the regulatory goods or services, or a different period.

15 Regulatory goods or services are goods or services supplied by an entity to comply with a regulatory agreement. Regulatory goods or services supplied in a period might include, for example:

(a) supplying goods or services to customers;

(b) maintaining a network, including routine maintenance, and being ready to repair damage to the network;

(c) making changes to the capacity of a network (for example, additions and upgrades or decommissioning); and

(d) satisfying other objectives set by the regulator as part of the regulatory agreement (for example, improving the quality and efficiency of services supplied to customers, or decreasing or increasing customer usage).

16 The amount of IFRS 15 revenue an entity recognises in a reporting period depends on the regulated rate charged for goods or services the entity supplies to customers in the period. In some cases, that amount of IFRS 15 revenue differs from the total allowed compensation for regulatory goods or services supplied by the entity in the reporting period. Specifically, the amount differs if part or all of the total allowed compensation for regulatory goods or services supplied in the period is included in determining the regulated rates charged to customers in a different period (past or future). Such differences in timing might give rise to regulatory assets or regulatory liabilities.

 © IFRS Foundation

Example
To illustrate a difference in timing described in paragraph 16, assume that the regulated rate an entity charged for goods or services supplied to customers in 20X1 was based on estimated input costs of CU100.[1] However, the entity recognised actual input costs in that year of CU120. Assume also that the regulatory agreement gives the entity an enforceable present right to add the resulting CU20 under-recovery of those input costs in determining the regulated rate to be charged to customers in 20X2.[2] In this example, the entity's IFRS 15 revenue for 20X1 includes compensation of CU100 based on the estimated input costs. Compensation for the CU20 under-recovery of input costs in 20X1 will be added in determining the regulated rates to be charged to customers in 20X2, and hence will be included in IFRS 15 revenue in 20X2. However, that compensation of CU20 forms part of the total allowed compensation for regulatory goods or services supplied in 20X1, not for those supplied in 20X2 —the total allowed compensation for regulatory goods or services supplied in 20X1 is CU120.

17 Applying IFRS 15 could also result in a difference between the period in which an entity supplies goods or services to customers and the period in which the revenue for those goods or services is recognised. For example, such a difference might arise if the entity supplies goods or services to a customer but, applying paragraph 56 of IFRS 15, the entity constrains the estimates of variable consideration until the associated uncertainty is resolved. Such differences do not give rise to regulatory assets or regulatory liabilities.

18 To supplement the information an entity provides by applying IFRS 15, this Standard sets out requirements for the recognition of regulatory income and regulatory expense. The definitions of a regulatory asset and a regulatory liability, and resulting definitions of regulatory income and regulatory expense, are based on the principle that an entity recognises the total allowed compensation for regulatory goods or services supplied by the entity in the same reporting period that the entity supplies those regulatory goods or services.

19 Table 1 sets out the most common types of compensation provided or deductions made by regulatory agreements through regulated rates, and establishes when the compensation or deductions form part of total allowed compensation.

1 Monetary amounts are denominated in 'currency units' (CU).

2 For simplicity, this example ignores the effect of regulatory interest.

© IFRS Foundation

	Table 1—Types of compensation provided or deductions made by a regulatory agreement through regulated rates	
	Compensation or deductions	**When the compensation or deductions form part of total allowed compensation**
1	Compensation for *allowable expenses* and deductions for *chargeable income*	In the reporting period in which an entity recognises allowable expenses or chargeable income by applying IFRS Accounting Standards (see paragraphs B13–B25).
2	*Regulatory returns* except for those identified in row 3 of this table	In the reporting period in which a regulatory agreement applies a rate of return to a *regulatory capital base* (see paragraphs B30–B34).
3	Regulatory returns (or part of the regulatory returns) treated as compensation for borrowing costs that are capitalised by an entity applying IAS 23 *Borrowing Costs*, in the specific circumstances set out in paragraph B35	In the reporting period in which an entity recognises the borrowing costs as an expense (see paragraphs B35–B40).
4	Compensation or deductions for performance incentives	In the reporting period in which an entity's performance occurs (see paragraphs B41–B50).
5	Compensation for inflation provided separately from *regulatory depreciation*	In the reporting period in which the inflation arises (see paragraphs B53–B54).

20 In addition, for the purpose of applying this Standard, an entity shall treat compensation provided by inflation adjustments to the regulatory capital base as forming part of the total allowed compensation for the reporting period in which the inflation is recovered through regulatory depreciation included in determining the regulated rates charged to customers (see paragraph B52).

21 The terms of regulatory agreements vary by jurisdiction and industry. Accordingly, a regulatory agreement might not provide all the types of compensation or make all the types of deductions described in paragraphs 19–20, might provide other types of compensation or make other types of deductions or might use different terminology to refer to the types of compensation or deductions described in paragraphs 19–20. An entity shall use its judgement in analysing the terms and conditions of a regulatory agreement to determine what types of compensation or deductions the regulatory agreement provides or makes. If the regulatory agreement provides a type of compensation or makes a type of deduction other than those described in paragraphs 19–20, the entity shall use its judgement to determine when that compensation or deduction forms part of total allowed compensation.

 © IFRS Foundation

22 Paragraphs B13–B54 describe when differences in timing might arise from the compensation or deductions described in paragraphs 19–20.

23 Differences in timing might also arise from the under-recovery or over-recovery of *allowed revenue* as described in paragraphs B57–B58.

Unit of account

24 An entity shall account for the right or obligation arising from an individual difference in timing—or from a group of differences in timing that are created by the same regulatory agreement, have similar expiry patterns and are subject to similar risks—as a single unit of account.

25 An entity is permitted to apply paragraph B37 to determine an individual difference in timing arising from part or all of the regulatory return that is treated as compensation for capitalised borrowing costs. An entity shall apply paragraph B66 to determine an individual difference in timing arising from regulatory depreciation of a regulatory capital base that has a direct relationship with depreciable or amortisable assets (as described in paragraph B64).

Recognition

26 Except as specified in paragraphs 29 and 31, an entity shall recognise:

(a) all regulatory assets and all regulatory liabilities existing at the end of a reporting period; and

(b) all regulatory income and all regulatory expense arising during a reporting period.

Existence uncertainty

27 If there is uncertainty about whether a regulatory asset or regulatory liability exists, an entity shall assess whether the regulatory asset or regulatory liability is more likely than not to exist. If the regulatory asset or regulatory liability is more likely than not to exist, and meets the criteria specified in paragraph 29 or 31 if applicable, the entity shall recognise it.

28 Uncertainty about the existence of a regulatory asset or regulatory liability might arise from uncertainty about the existence of a present right or present obligation, uncertainty about the enforceability of the present right or present obligation, or uncertainty about both existence and enforceability. The existence of a present right or present obligation does not need to be certain for an entity to be able to assess its enforceability. An entity shall consider both types of uncertainty and make a combined assessment of whether it is more likely than not that an enforceable present right or enforceable present obligation exists.

© IFRS Foundation

Recognition criterion for a regulatory asset or regulatory liability arising from regulatory depreciation of a regulatory capital base

29 An entity shall recognise a regulatory asset or regulatory liability arising from regulatory depreciation of a regulatory capital base if, and only if, the regulatory capital base has a direct relationship with a related item or items (see paragraph B59). A related item is an item that gives rise to amounts for which a regulatory agreement creates a right to compensation to be provided, or an obligation for a deduction to be made, through regulatory depreciation.

30 An entity's regulatory capital base has a direct relationship with a related item or items if the entity is able to track, by amount and reporting period, how regulatory depreciation provides compensation or makes a deduction for the amounts arising from the related item or items (see paragraphs B60–B72).

Recognition criterion for a regulatory asset or regulatory liability arising from compensation based on a benchmark determined using unobservable inputs

31 Compensation for an allowable expense might be based on a benchmark (for example, the actual expenses of an entity's peer group). In some cases, the benchmark is determined using unobservable inputs, and the regulator determines the compensation only after the entity's financial statements are authorised for issue. In such cases, an entity shall recognise any resulting regulatory asset or regulatory liability only when the regulator determines the compensation based on the actual benchmark.

Derecognition

32 An entity shall derecognise part or all of a regulatory asset or regulatory liability when that part or all of the amount recognised no longer meets the definition of a regulatory asset or regulatory liability. For example:

(a) when the entity recovers part or all of a regulatory asset or fulfils part or all of a regulatory liability and, applying paragraph 53(a), updates the estimates of future cash flows.

(b) when part or all of a regulatory asset is settled or when part or all of a regulatory liability is waived by a regulator or another party. In such cases, an entity shall:

(i) recognise an asset or liability if required by other IFRS Accounting Standards (for example, a financial asset or financial liability recognised by applying IFRS 9 *Financial Instruments*); and

(ii) recognise in profit or loss the difference between the amount derecognised and any new asset or new liability recognised by applying another IFRS Accounting Standard.

 © IFRS Foundation

33 An entity shall also derecognise part or all of a regulatory asset or regulatory liability when that part or all of the regulatory asset or regulatory liability no longer meets the recognition criteria set out in paragraph 27 or 29. In such cases, an entity shall derecognise the part of the regulatory asset or regulatory liability that no longer meets the recognition criteria and recognise any related regulatory expense or regulatory income in profit or loss.

Measurement

34 Except as specified in paragraph 60, an entity shall measure regulatory assets and regulatory liabilities using a cash-flow-based measurement technique that:

(a) includes an up-to-date estimate of all future cash flows arising from the recovery of a regulatory asset or fulfilment of a regulatory liability (see paragraphs 35–44 and 52–57); and

(b) discounts those estimated future cash flows using the *regulatory interest rate* (see paragraphs 45–52 and 56–57).

Initial measurement

Estimating future cash flows

Identifying future cash flows

35 To apply paragraph 34(a), an entity shall include all estimated future cash flows arising from the recovery of a regulatory asset or fulfilment of a regulatory liability that are within the boundary of the regulatory agreement, and only those cash flows. Such cash flows comprise:

(a) cash flows for which an entity has an enforceable present right to add amounts, or an enforceable present obligation to deduct amounts, in determining the regulated rates to be charged to customers in future periods. The future periods are those in which the entity has an enforceable present right or enforceable present obligation to supply regulatory goods or services.

(b) cash flows for which an entity has an enforceable present right to receive, or an enforceable present obligation to pay, compensation on termination of a regulatory agreement.

36 Paragraphs B73–B87 set out requirements for determining the boundary of a regulatory agreement.

37 To estimate future cash flows, an entity shall consider all reasonable and supportable information that is available at the reporting date without undue cost or effort. The entity shall consider information about past events and about conditions existing at the reporting date. The entity shall also consider information about variables that might affect estimates of future cash flows, namely:

© IFRS Foundation

(a) market variables—variables that can be observed in, or derived directly from, markets (for example, interest rates). The entity shall use assumptions about future market variables that are consistent with observable market prices at the reporting date—that is, at the reporting date, the entity shall disregard the effects of possible future changes in market variables.

(b) non-market variables—all other variables other than market variables (for example, the useful life of a depreciable asset). The entity shall use its expectations at the reporting date about future non-market variables, other than future changes in the regulatory agreement or in law or regulation.

38 Cash flows arising from a regulatory asset or regulatory liability include cash flows from regulatory interest specified in a regulatory agreement. However, if an entity elects to apply the exemption from discounting described in paragraph 50, the entity shall, in periods for which it applies the exemption, exclude regulatory interest cash flows from the estimates of future cash flows arising from the regulatory asset or regulatory liability.

Uncertain future cash flows

39 There might be uncertainty about the amount or timing of future cash flows that will arise from a regulatory asset or regulatory liability. Such uncertainty might be caused by, for example, credit risk or demand risk. The effect of credit risk and demand risk on the future cash flows depends on whether the entity or its customers bear the risk (see paragraphs B88–B91).

40 An entity's estimates of future cash flows arising from a regulatory liability shall not reflect non-performance risk of the entity (non-performance risk is defined in IFRS 13 *Fair Value Measurement*).

41 An entity shall estimate uncertain future cash flows using an unbiased range of possible outcomes incorporating the information described in paragraph 37, including outcomes in which the regulatory asset or regulatory liability does not exist, or produces no future cash flows.

42 An entity shall estimate uncertain future cash flows using whichever of these two methods the entity expects to better predict the ultimate cash flow that will occur after the uncertainty is resolved:

(a) the most likely amount, which is the single most likely amount in a range of possible outcomes (that is, a range of possible cash flows). The most likely amount might better predict the ultimate cash flow if the possible cash flows are clustered around one cash flow, or if there are only two possible cash flows and they differ widely.

(b) the expected value, which is the sum of the probability-weighted amounts in a range of possible outcomes. The expected value might better predict the ultimate cash flow if there are many possible cash flows and they are not clustered around one cash flow.

 © IFRS Foundation

43 In assessing which of the methods described in paragraph 42 would better predict the ultimate cash flow, an entity shall also assess whether a better prediction would result from:

(a) considering separately each regulatory asset and each regulatory liability identified by the entity applying paragraph 24. An entity shall use one of the methods of estimating uncertain future cash flows for some regulatory assets or regulatory liabilities and the other method for other regulatory assets or regulatory liabilities, if the entity expects that doing so will better predict the ultimate cash flow.

(b) considering any regulatory asset or regulatory liability together with other regulatory assets or regulatory liabilities. If such a grouping will better predict the ultimate cash flow, the entity shall apply the method that it expects will provide the better prediction to all the regulatory assets and regulatory liabilities in the group.

Foreign currency amounts

44 If regulated rates charged to customers are denominated in a foreign currency, an entity shall treat any related regulatory assets or regulatory liabilities as monetary items when applying IAS 21.

Discounting estimated future cash flows

45 Except as specified in paragraph 50, an entity shall discount the estimated future cash flows arising from a regulatory asset or regulatory liability using the regulatory interest rate specified or implied by the regulatory agreement for that regulatory asset or regulatory liability.

46 For a regulatory asset or regulatory liability that arises from regulatory depreciation of a regulatory capital base, the regulatory interest rate is the rate of return that the regulatory agreement applies to the regulatory capital base (see paragraph B30).

47 In some cases, an entity shall derive an implied regulatory interest rate from the terms of a regulatory agreement instead of using the interest rate specified in the regulatory agreement (see paragraphs 48–50).

An implied regulatory interest rate

48 An entity shall derive an implied regulatory interest rate if the regulatory agreement includes any of these terms:

(a) it specifies uneven interest rates over the life of a regulatory asset or regulatory liability. For example, a period of time might elapse between an entity recognising a regulatory asset or regulatory liability and a regulatory agreement starting to apply an interest rate to that regulatory asset or regulatory liability (see paragraph 50).

(b) it specifies an interest rate that does not apply to regulatory interest accrued in past periods, instead of a compound interest rate.

© IFRS Foundation

(c) it does not specify an interest rate but instead adjusts the amount of compensation provided or a deduction made for an item to also provide compensation or make a deduction for the time period until the recovery of the related regulatory asset or the fulfilment of the related regulatory liability. An entity shall use its judgement to determine whether a regulatory agreement provides compensation or makes a deduction for such a time period. Not all regulatory agreements specify an interest rate or provide compensation or make a deduction for such a time period, in which case the regulatory interest rate is nil.

49 In the cases described in paragraph 48, an entity shall determine the implied regulatory interest rate as the rate that at initial recognition discounts the estimates of future cash flows arising from a regulatory asset or regulatory liability, which include regulatory interest cash flows (see paragraph 38), back to an amount that equals the sum of the estimated future cash flows, excluding regulatory interest.

50 In some cases, an entity expects the period between the recognition of a regulatory asset or regulatory liability and the date when an interest rate specified in the regulatory agreement starts to apply to be one year or less. In such cases, the entity need not discount the estimated future cash flows arising from the regulatory asset or regulatory liability during that period. If the entity elects to apply that exemption, the entity shall discount the estimated future cash flows once the interest rate specified in the regulatory agreement starts to apply.

Regulatory interest rates linked to interest rate benchmarks

51 The uneven interest rates described in paragraph 48(a) do not include interest rates specified in a regulatory agreement that are linked to an interest rate benchmark. In such cases, applying paragraph 37(a), the entity shall disregard possible future changes in the interest rate benchmark until they occur, at which time the entity shall apply paragraphs 56–57.

Subsequent measurement

52 In measuring a regulatory asset or regulatory liability after its initial recognition, an entity shall at the end of each reporting period:

(a) update estimates of the amount and timing of future cash flows arising from the regulatory asset or regulatory liability (see paragraphs 53–57); and

(b) continue to use the discount rate determined at initial recognition, except as described in paragraphs 56–57.

53 An entity shall update the estimated future cash flows arising from a regulatory asset or regulatory liability at the end of each reporting period by applying paragraphs 35–44 to reflect, for example:

(a) recovery of part or all of the regulatory asset or fulfilment of part or all of the regulatory liability; and

 © IFRS Foundation

(b) any changes in estimates of the amount or timing of future cash flows because of a change in facts or circumstances or because of new information considered in accordance with paragraph 37.

54 Changes in facts or circumstances or new information, as described in paragraph 53(b), include:

(a) resolution of an uncertainty—for example:

(i) confirmation that the entity has met or not met performance criteria or confirmation of the outcome of court rulings; or

(ii) the regulator's agreement or disagreement with regulatory filings made by the entity or by other entities;

(b) actions by a regulator other than those in (a)(ii)—for example, the exercise of a right to renew or terminate a regulatory agreement, causing a change in the boundary of the regulatory agreement (see paragraphs B75–B78);

(c) changes in credit risk or demand risk (see paragraphs B88–B91);

(d) changes in the regulatory interest rate as described in paragraph 56; or

(e) changes in a regulatory agreement or in law or regulation.

55 An entity shall reassess the selected method of estimating uncertain future cash flows arising from a regulatory asset or regulatory liability—determined by applying paragraphs 42–43—if, and only if:

(a) facts or circumstances change or new information becomes available; and

(b) the change or new information might alter the entity's expectation of the method that will better predict the ultimate cash flow.

56 In some cases, the regulatory interest rate specified or implied by a regulatory agreement changes after initial recognition of a regulatory asset or regulatory liability because of a change in:

(a) the regulatory agreement; or

(b) an interest rate benchmark to which the regulatory interest rate is linked.

57 Such a change in the regulatory interest rate changes the future cash flows arising from a regulatory asset or regulatory liability. Consequently, when the regulatory interest rate changes as described in paragraph 56, an entity shall:

(a) update the future cash flows estimated by applying paragraphs 35–44.

(b) discount the estimated future cash flows using the new regulatory interest rate. The new regulatory interest rate is the new interest rate specified in the regulatory agreement or the new implied regulatory interest rate determined applying paragraph 48. The new implied regulatory interest rate discounts all the updated future cash flows to

© IFRS Foundation

the carrying amount of the regulatory asset or regulatory liability immediately before the new rate applied.

Simplified measurement approach—Items that affect regulated rates only when the related cash is paid or received

58 In some cases, a regulatory agreement provides compensation for an allowable expense or makes a deduction for chargeable income in determining the regulated rates charged to customers only when an entity pays or receives the related cash, or soon after that. A regulatory asset or regulatory liability might arise if, applying IFRS Accounting Standards, the entity recognises the allowable expense or chargeable income in a different reporting period.

59 Similarly, a regulatory asset might arise because a regulatory agreement provides compensation for credit losses in determining the regulated rates only when the regulator determines that there is no reasonable expectation of an entity receiving the related cash, instead of when the entity recognises impairment losses in its financial statements by applying IFRS 9.

60 An entity shall measure a regulatory asset or regulatory liability described in paragraphs 58–59 by:

(a) using the carrying amount of the related liability, related asset or related loss allowance resulting from applying IFRS Accounting Standards.

(b) adjusting that carrying amount to reflect any differences between the related liability, related asset or related loss allowance and the regulatory asset or regulatory liability. Such a difference might be caused by (i) an uncertainty present in the related liability, related asset or related loss allowance but not in the regulatory asset or regulatory liability or (ii) an uncertainty present in the regulatory asset or regulatory liability but not in the related liability, related asset or related loss allowance. Such uncertainties might arise from estimation, credit or demand risk.

61 An entity shall stop applying paragraph 60, and shall thereafter measure any remaining part of the regulatory asset or regulatory liability by applying paragraphs 34–57, when:

(a) for a regulatory asset or regulatory liability described in paragraph 58—the entity pays cash to settle the related liability, or receives cash to recover the related asset;

(b) for a regulatory asset described in paragraph 59—the regulator has determined there is no reasonable expectation of the entity receiving the related cash; or

(c) for a regulatory asset or regulatory liability described in paragraph 58 or 59—the entity derecognises the related liability, related asset or related loss allowance for any other reason.

Classification and presentation

Statement(s) of financial performance

62 **Except as required by paragraph 64, an entity shall:**

(a) **classify all regulatory income and all regulatory expense as revenue; and**

(b) **present all regulatory income minus all regulatory expense as a line item in the statement of profit or loss.**

63 Regulatory income includes regulatory interest income and regulatory expense includes regulatory interest expense.

64 **In some cases, an entity applying other IFRS Accounting Standards includes an item of expense or income in other comprehensive income. In such cases, the entity shall also include in other comprehensive income regulatory income or regulatory expense relating to that item of expense or income, as specified in paragraph 65. The entity shall:**

(a) **classify regulatory income and regulatory expense included in other comprehensive income in accordance with paragraph 88 of IFRS 18 *Presentation and Disclosure in Financial Statements*;**

(b) **present regulatory income or regulatory expense separately from the related expense or related income;**

(c) **reclassify regulatory income or regulatory expense included in other comprehensive income to the statement of profit or loss if, and only if, the entity reclassifies the related expense or related income to the statement of profit or loss in accordance with other IFRS Accounting Standards; and**

(d) **classify and present the reclassified regulatory income or regulatory expense in accordance with paragraph 62.**

65 The regulatory income or regulatory expense to be included in other comprehensive income is the regulatory income or regulatory expense that arises in a reporting period because an entity recognises the related expense or related income that is included in other comprehensive income in that period. The entity determines such regulatory income or regulatory expense based on the amount of the compensation or deduction for that related expense or related income.

66 To apply paragraph 64(c) when an entity derecognises a regulatory asset or regulatory liability applying paragraph 32(b) or 33, the entity:

(a) shall not reclassify regulatory income or regulatory expense included in other comprehensive income to the statement of profit or loss when the entity derecognises the regulatory asset or regulatory liability; and

© IFRS Foundation

(b) shall reclassify any regulatory income or regulatory expense included in other comprehensive income to the statement of profit or loss when the entity reclassifies the related expense or related income to the statement of profit or loss.

Statement of financial position

67 **An entity shall present in its statement of financial position:**

(a) regulatory assets and regulatory liabilities as line items; and

(b) current and non-current regulatory assets, and current and non-current regulatory liabilities, as separate classifications in accordance with paragraphs 99–102 of IFRS 18, except when the entity presents all assets and liabilities in order of liquidity.

Disclosure

68 **The overall objective of paragraphs 69–83 and B95–B97 is to require an entity to disclose in the notes information about the entity's:**

(a) regulatory income and regulatory expense that, together with the information required by other IFRS Accounting Standards, will provide insights into the total allowed compensation for regulatory goods or services supplied by the entity in a reporting period, and hence into the entity's financial performance and prospects for future cash flows; and

(b) regulatory assets and regulatory liabilities that will provide insights into the entity's financial position at the end of a reporting period and the amount, timing and uncertainty of the entity's future cash flows.

Regulatory assets and regulatory liabilities and resulting regulatory income and regulatory expense

69 **An entity shall disclose information that enables users of financial statements to understand:**

(a) the amounts that are recognised in the statement of financial position and statement(s) of financial performance for regulatory assets, regulatory liabilities, regulatory income and regulatory expense; and

(b) the nature of unrecognised regulatory assets or unrecognised regulatory liabilities and the reason they have not been recognised.

70 This information provides insights into:

(a) the total allowed compensation for regulatory goods or services supplied by the entity in a reporting period, in particular the extent to which part or all of the total allowed compensation for regulatory goods or services supplied by the entity in a reporting period was (or will be) included in determining the regulated rates charged to

 © IFRS Foundation

customers—and hence included in IFRS 15 revenue—in a different period; and

(b) the amount, timing and uncertainty of the entity's future cash flows.

71 To achieve the objective set out in paragraph 69, an entity shall apply paragraphs 72–81.

Recognised regulatory assets and recognised regulatory liabilities

72 An entity shall disclose, in a table, reconciliations from the opening to the closing carrying amounts of regulatory assets and from the opening to the closing carrying amounts of regulatory liabilities. In the reconciliations, an entity shall group the changes described in paragraph 73 into:

(a) changes included in the statement of profit or loss;

(b) changes included in other comprehensive income; and

(c) other changes not included in (a) or (b) (see paragraph 73(g)).

73 An entity shall disclose in the reconciliations required by paragraph 72 changes in the carrying amount of a regulatory asset or regulatory liability arising from:

(a) the origination of regulatory assets during the reporting period;

(b) the origination of regulatory liabilities during the reporting period;

(c) the recovery of regulatory assets during the reporting period;

(d) the fulfilment of regulatory liabilities during the reporting period;

(e) regulatory interest income on regulatory assets or regulatory interest expense on regulatory liabilities;

(f) other components of regulatory income or regulatory expense—for example, changes in the carrying amount of a regulatory asset or regulatory liability arising from remeasurements of the regulatory asset or regulatory liability or changes in the boundary of a regulatory agreement; and

(g) changes in regulatory assets and regulatory liabilities that did not give rise to regulatory income or regulatory expense—for example, regulatory assets acquired and regulatory liabilities assumed in a business combination.

74 An entity shall provide an explanation of the items described in paragraph 73(f)–(g).

75 For regulatory assets and regulatory liabilities measured in accordance with paragraph 34, an entity shall disclose quantitative information, using time bands, about when it expects to recover the regulatory assets and fulfil the regulatory liabilities. The entity shall disclose the quantitative information disaggregated between:

(a) regulatory assets and regulatory liabilities for which a regulatory agreement applies a regulatory interest rate that is not nil; and

© IFRS Foundation

(b) regulatory assets and regulatory liabilities for which a regulatory agreement applies a regulatory interest rate of nil.

76 The entity shall determine the quantitative information required by paragraph 75 using:

(a) undiscounted cash flows, excluding regulatory interest cash flows; and

(b) reasonable and supportable assumptions about the timing of future cash flows that are consistent between periods.

77 The entity shall use its judgement to determine an appropriate number of time bands for the quantitative information required by paragraph 75. For example, an entity might determine appropriate time bands to be:

(a) not later than one year;

(b) later than one year and not later than three years;

(c) later than three years and not later than five years; and

(d) later than five years.

78 For regulatory assets and regulatory liabilities measured in accordance with paragraph 34, an entity shall also disclose:

(a) the discount rate, or ranges of discount rates, used in measuring regulatory assets and regulatory liabilities to which a regulatory agreement applies a regulatory interest rate;

(b) an explanation of how uncertainties affect the recovery of regulatory assets or fulfilment of regulatory liabilities; and

(c) the carrying amounts of regulatory assets and of regulatory liabilities at the end of the reporting period to which the entity has applied the exemption from discounting estimated future cash flows in paragraph 50.

79 For regulatory assets and regulatory liabilities measured by an entity applying paragraph 60, the entity shall provide information about the regulatory assets and regulatory liabilities and the related liabilities and related assets that explains:

(a) the relationship between the carrying amounts, and changes therein, of the regulatory assets or regulatory liabilities and the carrying amounts, and changes therein, of the related liabilities or related assets;

(b) the relationship between the risks associated with the regulatory assets or regulatory liabilities and the risks associated with the related liabilities or related assets; and

(c) how uncertainties affect the recovery of regulatory assets or fulfilment of regulatory liabilities.

 © IFRS Foundation

80 For example, if a regulatory asset arises from pension costs and is measured by an entity applying paragraph 60, the entity will need to consider how to disclose the information required by this Standard and the information required by IAS 19 *Employee Benefits* in a manner that shows the relationships described in paragraph 79.

Unrecognised regulatory assets and unrecognised regulatory liabilities

81 An entity shall disclose information about unrecognised regulatory assets and unrecognised regulatory liabilities that enables users of financial statements to understand:

(a) the type of compensation or deduction the unrecognised regulatory assets and unrecognised regulatory liabilities relate to; and

(b) the reason they have not been recognised—for example, an entity might not recognise a regulatory asset because the entity has determined that its regulatory capital base does not have a direct relationship with a related item or items (see paragraph 29).

Relationship between an entity's regulatory capital base and related items

82 An entity shall disclose information that enables users of financial statements to understand the relationship between the entity's regulatory capital base and a related item or items. That understanding will:

(a) provide insights into the nature of a regulatory agreement and the effect of a regulatory agreement on the entity's financial position and financial performance; and

(b) enable users to make comparisons between entities subject to different regulatory agreements.

83 To achieve the objective in paragraph 82, an entity shall disclose:

(a) the type of relationship (direct or not direct) between its regulatory capital base and a related item or items;

(b) the reasons why the entity determined that the relationship is of that type;

(c) any change to or from a direct relationship, and the reason for the change; and

(d) the regulatory approach (nominal or real) used by the regulator to compensate the entity for inflation on its regulatory capital base (see paragraphs B51(a) and B52).

© IFRS Foundation

Appendix A
Defined terms

This appendix is an integral part of the IFRS Accounting Standard.

allowable expense	An item of expense, as defined in IFRS Accounting Standards, for which a **regulatory agreement** provides compensation by adding an amount in determining a **regulated rate** to be charged by an entity.
allowed revenue	The total amount of compensation that a **regulatory agreement** entitles an entity to charge customers through **regulated rates** in a period.
chargeable income	An item of income, as defined in IFRS Accounting Standards, for which a **regulatory agreement** makes a deduction of an amount in determining a **regulated rate** to be charged by an entity.
regulated rate	A price determined by a **regulator** that an entity charges for goods or services supplied to customers in a period.
regulator	A body that is required by law or regulation to apply a **regulatory agreement** to determine a **regulated rate** (or a range for the **regulated rate**).
regulatory agreement	An agreement that creates a set of enforceable rights and enforceable obligations that prescribes how a **regulator** determines a **regulated rate** (or a range for the **regulated rate**).
regulatory asset	An enforceable present right, created by a **regulatory agreement**, to add an amount in determining a **regulated rate** to be charged to customers in future periods because part or all of the **total allowed compensation** for **regulatory goods or services** already supplied has not yet been included in revenue recognised from contracts with customers applying IFRS 15.
regulatory capital base	Assets and other items that a **regulatory agreement** entitles an entity to recover by adding an amount for **regulatory depreciation** in determining a **regulated rate** to be charged to customers.
regulatory depreciation	The systematic allocation by a **regulator** of an amount of a **regulatory capital base** to be added in determining a **regulated rate**.
regulatory expense	Expense arising from changes in a **regulatory asset** or a **regulatory liability**.
regulatory goods or services	Goods or services supplied by an entity to comply with a **regulatory agreement**.

 © IFRS Foundation

regulatory income	Income arising from changes in a **regulatory asset** or a **regulatory liability**.
regulatory interest rate	The interest rate specified or implied by a **regulatory agreement** to provide compensation for the time period until recovery of a **regulatory asset** or to make a deduction for the time period until fulfilment of a **regulatory liability**.
regulatory liability	An enforceable present obligation, created by a **regulatory agreement**, to deduct an amount in determining a **regulated rate** to be charged to customers in future periods because part or all of the **total allowed compensation** for **regulatory goods or services** to be supplied in the future has already been included in revenue recognised from contracts with customers applying IFRS 15.
regulatory return	The return on the **regulatory capital base** resulting from the rate of return a **regulatory agreement** applies to a **regulatory capital base**.
total allowed compensation (for regulatory goods or services)	The amount of compensation to which a **regulatory agreement** entitles an entity for **regulatory goods or services** supplied in a reporting period. The amount might be charged through **regulated rates** in either the same period as the entity supplies the **regulatory goods or services**, or a different period.

Term defined in another IFRS Accounting Standard and used in this Standard with the same meaning

customer (defined in IFRS 15)	A party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration.

© IFRS Foundation

Appendix B
Application guidance

This appendix is an integral part of the IFRS Accounting Standard. It describes the application of paragraphs 1–83 and has the same authority as the other parts of the IFRS Accounting Standard.

B1 This appendix provides application guidance on:

(a) enforceable present rights and enforceable present obligations (see paragraphs B2–B10);

(b) differences in timing (see paragraphs B11–B58);

(c) recognition of regulatory assets and regulatory liabilities arising from regulatory depreciation of a regulatory capital base (see paragraphs B59–B72);

(d) the boundary of a regulatory agreement (see paragraphs B73–B87);

(e) uncertain future cash flows (see paragraphs B88–B91);

(f) application of this Standard with IFRIC 12 *Service Concession Arrangements* (see paragraphs B92–B94); and

(g) disclosure—aggregation and disaggregation (see paragraphs B95–B97).

Enforceable present rights and enforceable present obligations

B2 This section covers:

(a) assessing enforceability (see paragraphs B3–B7); and

(b) identifying the regulator (see paragraphs B8–B10).

Assessing enforceability

B3 Paragraph 8 requires an entity to assess whether it has an enforceable present right or enforceable present obligation to add or deduct an amount in determining a regulated rate to be charged to customers in future periods.

B4 An entity assesses whether an enforceable present right or enforceable present obligation exists by using judgement and considering all reasonable and supportable information that is available without undue cost or effort. Such information might relate to:

(a) the legal and regulatory framework (see paragraph B5); or

(b) a specific difference in timing (see paragraph B6).

B5 Whether rights and obligations created by a regulatory agreement are enforceable is a matter of law. An enforceable present right or enforceable present obligation need not be explicitly specified in a regulatory agreement. An entity shall consider whether enforceable present rights or enforceable present obligations exist in the context of the applicable legal and regulatory framework that ensures a party's rights and obligations are upheld. Applicable regulatory decisions or court rulings might provide evidence about

 © IFRS Foundation

the existence of enforceable present rights or enforceable present obligations. The entity shall consider any applicable laws or legal precedents that could supplement or override the terms of the regulatory agreement. Other factors might provide evidence in specific jurisdictions.

B6 Facts or circumstances that might provide evidence of the existence of an enforceable present right or enforceable present obligation in relation to a specific difference in timing include:

(a) confirmation from a regulator of amounts to be added to or deducted from future regulated rates;

(b) explicit requirements or guidelines in a regulatory agreement;

(c) evidence that allowable expenses have been incurred;

(d) direct precedents—an entity's experience with its regulator's interpretation of the regulatory agreement in similar circumstances;

(e) indirect precedents—such as (i) the experience of other entities regulated by the same regulator, (ii) the decisions of other regulators in the same jurisdiction or (iii) court rulings in similar circumstances in the same jurisdiction;

(f) preliminary views expressed by a regulator; and

(g) advice from qualified and experienced legal or other advisers.

B7 In assessing whether an enforceable present right or enforceable present obligation exists, an entity shall consider the overall balance of the evidence. The presence of an individual fact or circumstance described in paragraph B6 might not be sufficient to enable an entity to determine whether a regulatory asset or regulatory liability exists. The weight given to each fact or circumstance in the assessment might depend on the legal and regulatory framework within which the entity operates and the effectiveness of the enforcement processes (see paragraph B5).

Identifying the regulator

B8 A regulator is a body that is required by law or regulation to apply a regulatory agreement to determine a regulated rate (or a range for the regulated rate). For a regulatory asset or a regulatory liability to exist, a regulator needs to be a party to the regulatory agreement (see paragraph 9(a)).

B9 Only situations in which a rate is determined by a regulator give rise to regulatory assets or regulatory liabilities. For example, a parent entity might determine the rate that a subsidiary charges its customers for goods or services supplied to them. However, the parent entity is not a body that is required by law or regulation to determine the rate the subsidiary is required to apply in its contracts with customers. Accordingly, the parent entity is not a regulator for the purposes of this Standard and, as a consequence, the agreement between the parent entity and its subsidiary is not a regulatory agreement that can create regulatory assets or regulatory liabilities.

© IFRS Foundation

MAY 2026

B10 Examples of when regulatory assets or regulatory liabilities might arise include when:

(a) an entity or a related party of the entity sets rates in accordance with a specified legal and regulatory framework and the application of that framework is subject to oversight or approval by a body that is required to do so by law or regulation.

Example
Law or regulation gives an entity the ability to set the rates it charges customers for goods or services supplied to them. In setting the rates, the entity must follow the pricing principles set out in law or regulation. Assume a government agency is required by law or regulation to ensure the entity sets the rates in accordance with applicable law or regulation. As a result, customers are able to appeal against the rates to the government agency if they have grounds to suspect that the entity breached the pricing principles set out in law or regulation. In this situation, although the entity sets the rates, it does so in accordance with law or regulation. A regulator—that is, the government agency—oversees whether the entity applies law or regulation appropriately. Consequently, regulatory assets or regulatory liabilities might arise in this situation.

(b) a regulatory agreement permits some flexibility in the rates charged to customers, with an entity being allowed some discretion to set the rate within a range of rates determined by the regulator.

Example
A regulatory agreement provides an entity with some discretion to set the rate to be charged to customers provided the rate is set within a specified range determined by the regulator. The regulatory agreement further specifies that, if the total amount charged to customers is below or above a specified threshold determined by the regulator, the entity has a right to add, or an obligation to deduct, the shortfall or excess in determining the regulated rates to be charged to customers in future periods. Consequently, a regulatory asset or regulatory liability might arise in this situation.

Differences in timing

B11 Paragraph 19 sets out the most common types of compensation provided or deductions made by regulatory agreements. This section describes differences in timing that might arise from such compensation or deductions:

(a) differences in timing arising from compensation for allowable expenses and deductions for chargeable income (see paragraphs B13–B29);

© IFRS Foundation

(b) differences in timing arising from a regulatory return on an entity's regulatory capital base (see paragraphs B30–B40);

(c) differences in timing arising from performance incentives (see paragraphs B41–B50); and

(d) differences in timing arising from compensation relating to inflation (see paragraphs B51–B54).

B12 This section also describes differences in timing that arise from the under-recovery or over-recovery of allowed revenue (see paragraphs B55–B58).

Differences in timing arising from compensation for allowable expenses and deductions for chargeable income

B13 This section describes:

(a) differences in timing arising from compensation for allowable expenses (see paragraphs B14–B19);

(b) differences in timing arising from deductions for chargeable income (see paragraphs B20–B22);

(c) differences in timing arising from compensation or deductions for income taxes (see paragraphs B23–B25); and

(d) the distinction between differences in timing and measurement differences (see paragraphs B26–B29).

Differences in timing arising from compensation for allowable expenses

B14 An allowable expense is an item of expense, as defined in IFRS Accounting Standards, for which a regulatory agreement provides compensation by adding an amount in determining a regulated rate to be charged by an entity. The regulatory agreement might determine the compensation for an allowable expense at an amount that differs from the expense recognised by applying IFRS Accounting Standards (see paragraphs B26–B29).

B15 As stated in paragraph 19, compensation for an allowable expense forms part of the total allowed compensation for the reporting period in which an entity recognises the allowable expense by applying IFRS Accounting Standards. Therefore, a difference in timing arises if the regulator includes compensation for an allowable expense in determining the regulated rates charged in a period that differs from the reporting period in which the entity recognises the allowable expense by applying IFRS Accounting Standards.

B16 Compensation for an allowable expense is provided through either regulatory depreciation of an entity's regulatory capital base or a component of compensation separate from regulatory depreciation.

© IFRS Foundation

Compensation for allowable expenses provided through regulatory depreciation

B17 Differences in timing might arise from compensation for allowable expenses provided through regulatory depreciation (see paragraphs B59–B72). For example:

(a) for depreciation or amortisation expense—a difference in timing arises if there is a difference between:

(i) the recovery period or recovery pattern of the items included in the regulatory capital base related to depreciable or amortisable assets; and

(ii) the useful lives or depreciation or amortisation method for those assets determined by applying IFRS Accounting Standards; or

(b) for an allowable expense other than depreciation or amortisation expense—a difference in timing arises if an entity recognises an allowable expense in a reporting period by applying IFRS Accounting Standards and the compensation for that allowable expense is included in the regulatory capital base, and hence is recovered through regulatory depreciation in future periods.

Compensation for allowable expenses provided separately from regulatory depreciation

B18 Compensation for allowable expenses might be provided through a component of compensation separate from regulatory depreciation. For example, compensation for pension costs, income taxes or provisions is often provided through a separate component of compensation included in the regulated rates.

B19 Examples of differences in timing that arise from compensation provided through a component of compensation separate from regulatory depreciation include:

(a) differences in timing that arise if compensation for an allowable expense is included in determining the regulated rates charged to customers either earlier or later than an entity recognises the allowable expense by applying IFRS Accounting Standards. For example:

(i) an entity recognises depreciation expense or amortisation expense as an asset is used to supply regulatory goods or services. However, the regulatory agreement provided compensation for the depreciation expense or amortisation expense in advance, separately from regulatory depreciation (see paragraph B59).

(ii) an entity recognises an allowable expense in a period by applying IFRS Accounting Standards. However, the regulatory agreement provides compensation for the allowable expense in determining the regulated rates charged to customers only

 © IFRS Foundation

when an entity settles the related liability in cash, or soon after that (see paragraphs 58 and 60–61).

(iii) an entity recognises expected credit losses in a period by applying IFRS 9 *Financial Instruments*. However, the regulatory agreement provides compensation for such losses in determining the regulated rates charged to customers only when the regulator determines that there is no reasonable expectation of the entity receiving the related cash (see paragraphs 59–61).

(iv) an entity recognises an allowable expense in a period. However, the regulatory agreement provides compensation for that allowable expense by applying another accounting framework used to prepare financial statements. The timing of the compensation determined by applying that accounting framework differs from the timing of the recognition of the allowable expense determined by applying IFRS Accounting Standards (see paragraph B29).

(b) differences in timing that arise from differences between the estimated and actual compensation. For example, the regulatory agreement determines compensation for an allowable expense to be added in determining the regulated rates charged to customers based on estimated amounts. However, the regulatory agreement specifies that any difference between the estimated and actual amounts is added or deducted in determining the regulated rates to be charged to customers in future periods.

Differences in timing arising from deductions for chargeable income

B20 Chargeable income is an item of income, as defined in IFRS Accounting Standards, for which a regulatory agreement makes a deduction of an amount in determining a regulated rate to be charged by an entity. The regulatory agreement might determine the deduction for chargeable income at an amount that differs from the income recognised by applying IFRS Accounting Standards (see paragraphs B26–B29).

B21 As stated in paragraph 19, a deduction for chargeable income reduces the total allowed compensation for the reporting period in which the entity recognises the chargeable income by applying IFRS Accounting Standards. Therefore, a difference in timing arises if the entity recognises chargeable income by applying IFRS Accounting Standards in a reporting period that differs from the period in which the regulatory agreement makes the deduction for that chargeable income in determining the regulated rates charged to customers.

B22 As with compensation for allowable expenses, deductions for chargeable income are either:

© IFRS Foundation

(a) deductions for chargeable income made by reducing regulatory depreciation (see paragraphs B59–B72). For example, an entity's regulatory capital base might be reduced by a deduction for a gain on disposal of a depreciable asset recognised by applying IFRS Accounting Standards. A difference in timing will arise because the deduction will be made in determining the regulated rates charged to customers in future periods.

(b) deductions for chargeable income made separately from regulatory depreciation in determining the regulated rates to be charged to customers. For example, a regulatory agreement might make a deduction in determining the regulated rates for a gain arising from a commodity futures contract. A difference in timing arises if the entity recognises the gain by applying IFRS Accounting Standards in a reporting period that differs from the period in which the deduction is made in determining the regulated rates charged to customers.

Differences in timing arising from compensation or deductions for income taxes

B23 An entity recognises tax expense or tax income by applying IAS 12 *Income Taxes*. Such tax expense or tax income might be an allowable expense or chargeable income. A difference in timing arises if part or all of the compensation or deduction for such tax expense or tax income is included in determining the regulated rates charged to customers in a different period from when the tax expense or income is recognised.

B24 For example, a difference in timing arises if a regulatory agreement provides compensation or makes a deduction in determining the regulated rates charged in a reporting period for current tax expense or income but not for deferred tax expense or income for that period.

B25 An entity shall also apply IAS 12 to account for differences between the carrying amount of a regulatory asset or regulatory liability and its tax base. Applying IAS 12, the entity might recognise a deferred tax liability or deferred tax asset related to a regulatory asset or regulatory liability. Further, the recognition of a deferred tax liability or deferred tax asset—and its related deferred tax expense or deferred tax income—in a reporting period might give rise to another regulatory asset or regulatory liability, which in turn results in the recognition of further deferred tax. In such cases, the measurement of the regulatory asset or regulatory liability related to the deferred tax reflects that iterative process, resulting in an amount for the regulatory asset or regulatory liability that includes the compensation or deduction for its own tax effect.

Measurement differences

B26 In some cases, the total amount of compensation for an allowable expense or a deduction for chargeable income determined by a regulatory agreement over all periods differs from the total amount of the expense or income an entity will recognise over all periods by applying IFRS Accounting Standards. Such differences are measurement differences that do not reverse over time.

 © IFRS Foundation

B27 A measurement difference might arise from compensation for an allowable expense or a deduction for chargeable income without that compensation or deduction giving rise to a difference in timing. For example, a regulatory agreement might determine the compensation for an allowable expense recognised in a reporting period based on an estimate, and not adjust future regulated rates to be charged to customers to reflect any difference between the estimate and the actual expense recognised. Such a difference is a measurement difference, not a difference in timing. The measurement difference is reflected in the statement(s) of financial performance in the reporting period through the recognition of IFRS 15 revenue, which includes compensation based on the estimate, and the recognition of the expense for the actual amount.

B28 In other cases, a difference in timing and a measurement difference might occur concurrently. In the example described in paragraph B27, assume that the regulatory agreement specifies that compensation based on an estimate for the allowable expense recognised in a reporting period is added in determining the regulated rates to be charged to customers in the future. A difference in timing—a regulatory asset—arises from the delayed compensation. There is also a measurement difference arising from any difference between the compensation based on the estimate and the actual expense recognised. The future cash flows arising from the regulatory asset—and hence its measurement—are determined by the amount of the compensation, not by the amount of allowable expense recognised by applying IFRS Accounting Standards. The measurement difference is reflected in the statement(s) of financial performance in the reporting period through the recognition of regulatory income for the compensation based on the estimate, and the recognition of the expense for the actual amount.

B29 A regulatory agreement might determine compensation for an allowable expense or a deduction for chargeable income for a reporting period by using the related expense or related income that would be recognised in the period by applying an accounting framework other than IFRS Accounting Standards. As a result, the amount of compensation or deduction that is included in determining the regulated rates charged in the period might differ from the related expense or related income recognised in that period by applying IFRS Accounting Standards. However, such differences are not measurement differences if the total amount of the compensation or deduction over all periods equals the total amount of the expense or income an entity recognises over all periods by applying IFRS Accounting Standards. Instead, these differences are differences in timing because part or all of the compensation or deduction for the expense or income the entity recognises in a reporting period is included in determining the regulated rates charged in a different period.

© IFRS Foundation

Differences in timing arising from a regulatory return on an entity's regulatory capital base

B30 Regulatory agreements generally apply a rate of return to an entity's regulatory capital base for a period, resulting in a regulatory return to which the entity is entitled for the period.

B31 Regulatory agreements might provide regulatory returns on a nominal or a real basis. A nominal regulatory return includes compensation for inflation (see paragraph B51(a)). Regulatory returns might include only a debt return, only an equity return or both a debt and equity return.

B32 A regulatory capital base might include both assets available for use and assets not yet available for use. In some cases:

(a) an entity has separate regulatory capital bases for assets available for use and for assets not yet available for use; and

(b) the rate of return applied to assets available for use differs from the rate of return applied to assets not yet available for use.

B33 Except in the circumstances specified in paragraph B35, a regulatory return forms part of the total allowed compensation for the reporting period in which the regulatory agreement applies the rate of return to a regulatory capital base.

B34 Differences in timing arise if a regulatory agreement includes part or all of a regulatory return in determining the regulated rates charged to customers in a different reporting period from the period in which the agreement applies the rate of return to the regulatory capital base. For example, a regulatory agreement might determine a regulatory return for a period based on an estimate of an entity's regulatory capital base. A difference in timing arises if the regulatory agreement provides compensation or makes a deduction for differences between the estimated and actual amounts of the regulatory return for the reporting period in determining the regulated rates to be charged to customers in a future period.

A regulatory return on assets not yet available for use in specific circumstances

B35 This section specifies requirements for differences in timing arising from a regulatory return on assets not yet available for use if:

(a) the entity capitalises borrowing costs related to those assets by applying IAS 23 *Borrowing Costs*;

(b) the regulatory return is only a debt return or both a debt and equity return; and

(c) the entity's regulatory capital base has a direct relationship with those assets (see paragraphs B59–B72).

B36 In the circumstances described in paragraph B35, the entity shall treat part or all of the regulatory return as compensation for an allowable expense—that is, the capitalised borrowing costs:

 © IFRS Foundation

(a) if the regulatory return comprises only a debt return, the regulatory return forms part of the total allowed compensation for the reporting periods in which the entity recognises the borrowing costs as an expense, in accordance with paragraph 19—that is, for the periods in which the assets are available for use; and

(b) if the regulatory return comprises both a debt and equity return, the regulatory return is treated as two parts:

(i) the regulatory return amounting to the entity's capitalised borrowing costs forms part of the total allowed compensation for the reporting periods in which the entity recognises the borrowing costs as an expense, in accordance with paragraph 19—that is, for the periods in which the assets are available for use; and

(ii) the regulatory return in excess of the entity's capitalised borrowing costs forms part of the total allowed compensation for the reporting period in which the regulatory agreement applies the rate of return to the regulatory capital base, in accordance with paragraph B33—that is, for the periods in which the assets are not yet available for use.

B37 Table B1 provides an overview of the regulatory assets and regulatory liabilities that might arise from differences in timing relating to the regulatory returns described in paragraph B36. The requirements set out in paragraph B66 for the determination of individual differences in timing apply to the differences in timing described in paragraph B36. However, an entity is permitted to determine individual differences in timing described in paragraph B36 using the disaggregation of the capitalised borrowing costs the entity uses to calculate depreciation or amortisation expense related to those costs.

Table B1—Overview of differences in timing

When the regulatory return is included in determining the regulated rates charged to customers	**Components of the regulatory return**	
	Only a debt return	**Both a debt and equity return**
While an asset is not yet available for use	B36(a): a difference in timing, resulting in a regulatory liability amounting to the regulatory return.	B36(b)(i): a difference in timing, resulting in a regulatory liability amounting to the capitalised borrowing costs (see also paragraph B39).

...continued

Table B1 — Overview of differences in timing		
While an asset is available for use	No difference in timing.	B36(b)(ii): a difference in timing, resulting in a regulatory asset amounting to the regulatory return in excess of the capitalised borrowing costs (see also paragraphs B39–B40).

B38 The effect of the differences in timing described in Table B1 in the statement of profit or loss differs because of the different reporting periods in which the regulatory return forms part of total allowed compensation as set out in paragraph B36:

(a) if the regulatory return comprises only a debt return — any difference between the regulatory return and the capitalised borrowing costs is a measurement difference that is recognised in profit or loss in the periods in which the assets are available for use (see paragraphs B26–B29); and

(b) if the regulatory return comprises both a debt and equity return — the regulatory return in excess of the capitalised borrowing costs is recognised in profit or loss in the periods in which the rate of return is applied to the regulatory capital base (that is, the periods in which the assets are not yet available for use).

B39 In some cases, a regulatory return that comprises both a debt and equity return on an asset not yet available for use is determined on a real basis (see paragraph B52). In such cases, an entity shall determine any regulatory asset or regulatory liability that might arise from the regulatory return described in paragraph B36(b) by applying a real interest rate to the inflation-adjusted borrowings related to the assets not yet available for use.

B40 Applying paragraph 8, an entity is required, during the period in which the asset is not yet available for use, to assess whether it has an enforceable present right for the regulatory return accrued to date to be added in determining the regulated rates to be charged in future periods. To make this assessment for the regulatory assets that arise from the regulatory returns described in paragraph B36(b)(ii), an entity shall consider what rights it would have if the regulator or another party were to terminate the regulatory agreement at the end of the reporting period for a reason other than the entity's failure to perform as specified in the agreement. The entity shall apply paragraphs B4–B7 to assess whether, in those circumstances, it would have an enforceable present right to receive an amount that reflects the regulatory return accrued to date.

© IFRS Foundation

Differences in timing arising from performance incentives

B41 A regulatory agreement might reward or penalise an entity with performance incentives for meeting or failing to meet performance criteria. These criteria could include, for example, targeted levels of service quality, reliability or customer satisfaction. Alternatively, these criteria might relate to an entity's efficiency in incurring capital and operating expenditure or performance in constructing an item of property, plant or equipment.

B42 Performance incentives form part of the total allowed compensation for the reporting period in which an entity's performance occurs. To determine that period, the entity shall consider the regulatory agreement's terms relating to the performance incentives, together with other facts and circumstances.

B43 A difference in timing arises if the period in which a performance incentive is included in determining the regulated rates charged to customers differs from the reporting period in which an entity's performance occurs.

B44 A regulatory agreement might determine a performance incentive in several ways. For example, a performance incentive might be determined using a fixed monetary amount (such as CU100) or a formula (such as 1% of the amounts charged to customers during a specified period), or by using a rate of return (such as an additional 1%) applied to the regulatory capital base for a specified period. When a performance incentive is determined by using a rate of return, an entity shall account for the performance incentive by applying paragraphs B41–B50, not by applying paragraphs B30–B40 as if it were part of the regulatory return.

Performance incentives relating to an entity's performance beyond the reporting period

B45 A performance incentive might relate to an entity's performance over a period that extends beyond the reporting period. In such cases, at the end of the reporting period, applying paragraph 8 an entity shall assess whether it has an enforceable present right to add, or an enforceable present obligation to deduct, an amount that reflects its performance to date in determining the regulated rates to be charged in future periods. The amount that reflects performance to date shall be determined as described in paragraph B47.

B46 To make the assessment required by paragraph 8, an entity shall consider what rights and obligations it would have if the regulator or another party were to terminate the regulatory agreement at the end of the reporting period for reasons other than the entity's failure to perform as specified in the agreement. The entity shall apply paragraphs B4–B7 to assess whether, in those circumstances, it would have an enforceable present right to receive or an enforceable present obligation to pay an amount that reflects its performance to date.

B47 The entity shall estimate the total amount of the performance incentive using either the most likely amount method or the expected value method in accordance with paragraph 42, and determine the portion of that estimated amount that reflects performance to date using a reasonable and supportable basis.

© IFRS Foundation

Performance incentives depending on more than one performance criterion

B48 In some cases, a performance incentive depends on more than one performance criterion and the criteria apply over periods with different end dates. Some amounts of the performance incentive will remain conditional on future performance criteria after other amounts have become unconditional. In such cases, an entity shall assess whether the amounts that remain conditional relate only to an entity's performance in future periods. For example, assume that a regulatory agreement provides an entity with a bonus of CU1,000 for reaching specified construction milestones but specifies that CU400 of that bonus is conditional on the asset continuing to operate at a specified level of capacity over a specified future period. The entity might assess that the bonus of CU1,000 comprises:

(a) an amount of CU600 that is related to the construction milestones—in which case this amount forms part of the total allowed compensation for the reporting period(s) in which the entity constructs the asset; and

(b) an amount of CU400 that is related to the entity maintaining a specified level of capacity over a specified future period—in which case this amount forms part of the total allowed compensation for the specified future reporting period(s) in which the asset operates at the specified level.

B49 The performance criteria might relate to an entity's performance beyond the reporting period. For each such performance criterion, an entity shall apply paragraphs B45–B47.

Compensation or deduction for performance incentives through regulatory depreciation

B50 A regulatory agreement might specify that compensation or a deduction for a performance incentive related to an entity's performance for a period is added to or deducted from the entity's regulatory capital base. In such cases, differences in timing arise because the compensation or deduction for an entity's performance for a period is provided or made through regulatory depreciation in future periods (see paragraphs B59–B72).

Differences in timing arising from compensation relating to inflation

B51 Compensation for inflation arising in a reporting period might be provided:

(a) through a nominal regulatory return on a regulatory capital base, to which an entity shall apply paragraphs B30–B40;

(b) by inflation adjustments to a regulatory capital base recovered through regulatory depreciation (see paragraph B52); or

(c) through a component of compensation that is separate from regulatory depreciation (see paragraphs B53–B54).

 © IFRS Foundation

B52 In some cases, a regulatory agreement applies a real rate of return to a regulatory capital base that is adjusted by inflation. Applying paragraph 20, an entity shall treat compensation provided by these inflation adjustments as forming part of the total allowed compensation for the reporting period in which the inflation is recovered through regulatory depreciation included in determining the regulated rates charged to customers. Accordingly, an entity shall not recognise any amounts for regulatory assets or regulatory liabilities for such compensation.

B53 A regulatory agreement might provide compensation for inflation arising in a reporting period separately from regulatory depreciation. Such compensation forms part of the total allowed compensation in that reporting period.

B54 Differences in timing could arise from such compensation for inflation. For example, a regulatory agreement might provide an entity with compensation for inflation for the current reporting period. That compensation might be based on the expected inflation rate for that period being applied to determine estimated costs or the entity's allowed revenue for the period. The regulatory agreement might also require the entity to add or deduct differences between the estimated and actual inflation rates for the current reporting period in determining the regulated rates to be charged to customers in future periods. Differences between the estimated and actual inflation rates give rise to a difference in timing in the current reporting period (see paragraph B19(b)).

Differences in timing arising from allowed revenue

B55 Allowed revenue is the total amount of compensation that a regulatory agreement entitles an entity to charge customers through regulated rates in a period. A regulatory agreement typically:

(a) determines an entity's allowed revenue for a period by considering different types of compensation or deductions, primarily those described in paragraph 19; and

(b) determines the regulated rates for a period by dividing the allowed revenue for the period by the estimated quantity of goods or services to be supplied to customers in that period.

B56 Differences in timing arise from paragraph B55(a) if allowed revenue for a reporting period includes amounts that form part of total allowed compensation in a different period, as discussed in paragraphs B13–B54.

B57 Differences in timing can also arise from paragraph B55(b), if:

(a) the entity charges customers less or more than the allowed revenue for a reporting period because, for example, it supplies less or more goods or services than were estimated when the regulated rate was determined (volume variances); and

(b) the regulator adds the under-recovered allowed revenue or deducts the over-recovered allowed revenue for a reporting period in determining the regulated rates to be charged in a future period.

© IFRS Foundation

Compensation or deduction for under-recovery or over-recovery of allowed revenue through regulatory depreciation

B58 A regulatory agreement might specify that compensation or a deduction for an under-recovered or over-recovered amount of allowed revenue for a period is added to or deducted from the entity's regulatory capital base. In such cases, differences in timing arise because the compensation or deduction for an entity's under-recovered or over-recovered amount of allowed revenue for a reporting period is provided or made through regulatory depreciation in future periods (see paragraphs B59–B72).

Recognition of regulatory assets and regulatory liabilities arising from regulatory depreciation of a regulatory capital base

Scope of requirements in paragraph 29

B59 Paragraph 29 sets a criterion for the recognition of regulatory assets and regulatory liabilities arising from regulatory depreciation of an entity's regulatory capital base. In some cases, a regulatory agreement provides compensation for amounts that will arise from depreciable or amortisable assets separately from regulatory depreciation. Such compensation reduces the regulatory depreciation that would otherwise be provided. If such separate compensation does not relate specifically to capitalised borrowing costs and is provided while the assets are not yet available for use, an entity shall treat any regulatory liabilities arising from the compensation as arising from regulatory depreciation of an entity's regulatory capital base for the purposes of paragraph 29.

Relationship between a regulatory capital base and a related item or items

B60 The regulatory capital base comprises assets and other items that a regulatory agreement entitles an entity to recover by adding an amount for regulatory depreciation in determining a regulated rate to be charged to customers. That regulatory depreciation provides compensation or makes a deduction for amounts arising from related items. Examples of related items are:

(a) items recognised by an entity as depreciable or amortisable assets by applying IFRS Accounting Standards;

(b) an allowable expense added to, or chargeable income deducted from, the regulatory capital base other than expenses or income arising from the assets described in (a); and

(c) other amounts added to, or deducted from, the regulatory capital base —for example, performance incentives (see paragraph B50) and the under-recovery or over-recovery of allowed revenue (see paragraph B58).

 © IFRS Foundation

B61 The regulatory capital base could comprise parts that have a direct relationship with a related item or items and a part that does not have such a relationship. An entity shall apply paragraphs 30 and B62–B70 to identify whether any part of its regulatory capital base has a direct relationship with a related item or items. To apply these paragraphs and the disclosure requirements in paragraphs 82–83, an entity shall read the references in those paragraphs to the 'regulatory capital base' as being to 'a part of the regulatory capital base'.

B62 When applying paragraph 30, an entity determines whether its regulatory capital base has a direct relationship with a related item or items. In making that determination, the entity shall use its judgement and consider all reasonable and supportable information that is available without undue cost or effort. Such information includes the regulatory methodology underlying the determination of its regulatory capital base, the determination of the regulatory depreciation, and how the regulator monitors whether regulatory depreciation provides compensation or makes a deduction for amounts arising from a related item or items.

B63 Paragraphs B67–B70 set out indicators of whether a regulatory capital base has a direct relationship with a related item or items. These indicators are not exhaustive. An entity might give more weight to some indicators than others in determining whether its regulatory capital base has a direct relationship with a related item or items. Nonetheless, an entity is permitted to presume its regulatory capital base does not have a direct relationship with depreciable or amortisable assets if neither of the indicators described in paragraph B67 are present.

Direct relationship with depreciable or amortisable assets

B64 A depreciable or amortisable asset is an asset that is depreciable or amortisable in accordance with IFRS Accounting Standards—for example, IAS 16 *Property, Plant and Equipment*, IAS 38 *Intangible Assets* or IFRS 16 *Leases*. An IFRS asset class is a group of assets as described in paragraph 37 of IAS 16, paragraph 119 of IAS 38 or paragraph 8 of IFRS 16.

B65 Paragraph 30 states that an entity's regulatory capital base has a direct relationship with a related item or items if the entity is able to track, by amount and reporting period, how regulatory depreciation provides compensation or makes a deduction for the amounts arising from the related item or items. An entity shall determine whether its regulatory capital base has a direct relationship with its depreciable or amortisable assets by considering the smallest aggregation of assets for which the entity is able to do the tracking specified in paragraph 30. The aggregation shall be no larger than an IFRS asset class. For example:

(a) if an entity is able to track such compensation or deductions for individual assets—the regulatory capital base has a direct relationship with the individual assets;

© IFRS Foundation

(b) if an entity is not able to track such compensation or deductions for individual assets, but can track such compensation or deductions by disaggregating an IFRS asset class—the regulatory capital base has a direct relationship with the assets in the disaggregated part of the IFRS asset class for which the entity is able to track the compensation or deductions;

(c) if an entity is not able to track such compensation or deductions for any disaggregation of an IFRS asset class, but can track such compensation or deductions for the IFRS asset class—the regulatory capital base has a direct relationship with the assets in the IFRS asset class; and

(d) if an entity is not able to track such compensation or deductions for any IFRS asset class—the regulatory capital base does not have a direct relationship with its depreciable or amortisable assets.

B66 An entity shall determine an individual difference in timing as required by paragraph 25 for each aggregation of assets with which the regulatory capital base has a direct relationship.

B67 Indicators that an entity's regulatory capital base has a direct relationship with its depreciable or amortisable assets include:

(a) the assets or classes in the regulatory capital base are sufficiently similar to the depreciable or amortisable assets or IFRS asset classes for the entity to be able to track any differences between assets or classes in the regulatory capital base and the related assets or IFRS asset classes; or

(b) the regulator determines an amount of regulatory depreciation to provide compensation for the depreciation or amortisation expense determined by applying IFRS Accounting Standards.

B68 Indicators that an entity's regulatory capital base does not have a direct relationship with its depreciable or amortisable assets include:

(a) the regulator determines the regulatory capital base by using information that differs significantly from information about the entity's depreciable or amortisable assets accounted for by applying IFRS Accounting Standards; or

(b) the regulator determines regulatory depreciation by considering factors unrelated to the depreciation or amortisation of depreciable or amortisable assets.

Direct relationship with related items other than depreciable or amortisable assets

B69 Indicators that an entity's regulatory capital base has a direct relationship with related items other than depreciable or amortisable assets (see paragraph B60(b)–(c)) include:

(a) the regulatory capital base has a direct relationship with the entity's depreciable or amortisable assets; or

 © IFRS Foundation

(b) the regulator monitors how regulatory depreciation provides compensation or makes a deduction for the amounts arising from the related items separately from the rest of the regulatory capital base. For example, the regulatory monitoring might provide the entity with the information necessary to track, by amount and reporting period, how items in the regulatory capital base that relate to allowable expenses arising in a reporting period are recovered through regulatory depreciation.

B70 An indicator that an entity's regulatory capital base does not have a direct relationship with related items other than depreciable or amortisable assets is that the entity is unable—using a reasonable and supportable basis—to allocate to related items adjustments to the regulatory capital base or regulatory depreciation. This situation might arise if the regulator determines regulatory depreciation by considering the regulatory capital base as a whole.

Reassessment

B71 An entity shall reassess whether its regulatory capital base has a direct relationship with a related item or items:

(a) if facts or circumstances change or new information becomes available —for example, a change in the regulatory agreement; and

(b) if that change or new information could alter that relationship.

B72 If an entity determines that the relationship between its regulatory capital base and a related item or items has:

(a) ceased to be a direct relationship—the entity shall derecognise any affected regulatory assets and regulatory liabilities and recognise any related regulatory expense or regulatory income in accordance with paragraph 33; and

(b) started to be a direct relationship—the entity shall start to recognise any affected regulatory assets and regulatory liabilities in accordance with paragraph 29, and any resulting regulatory income or regulatory expense.

Boundary of a regulatory agreement

B73 Paragraph 35 states that cash flows within the boundary of a regulatory agreement comprise:

(a) cash flows from amounts added or deducted in determining the regulated rates to be charged to customers in future periods (see paragraphs B74–B80); and

(b) cash flows from compensation on termination of the regulatory agreement (see paragraphs B81–B85).

© IFRS Foundation

Regulated rates charged to customers in future periods

B74 Cash flows from amounts added or deducted in determining the regulated rates to be charged to customers in the future are within the boundary of a regulatory agreement if an entity has:

(a) an enforceable present right or enforceable present obligation to supply regulatory goods or services at the future date (see paragraphs B75–B78); and

(b) an enforceable present right to recover a regulatory asset, or an enforceable present obligation to fulfil a regulatory liability, through regulated rates to be charged to customers in the future (see paragraphs B79–B80).

Enforceable present right or enforceable present obligation to supply regulatory goods or services

B75 An entity's enforceable present right or enforceable present obligation to supply regulatory goods or services at a future date might be affected by a right, held by any party, to renew the regulatory agreement or to terminate it. For example, an entity might have an enforceable present right to renew a regulatory agreement. Such a right would give the entity an enforceable present right to supply regulatory goods or services at a future date covered by that renewal if no other party has an enforceable present right to prevent the renewal.

B76 Rights to renew or terminate a regulatory agreement might be explicit or implicit. In assessing whether such a right affects an entity's enforceable present right or enforceable present obligation to supply regulatory goods or services at a future date, the entity shall disregard a right held by any party if the party has no practical ability to exercise that right in any circumstances.

B77 The holder of a right might have no practical ability to exercise the right if, for example:

(a) the economic consequences of exercising the right are significantly more adverse for the holder than the consequences of not exercising it;

(b) exercising a right held by an entity would lead to that entity being liquidated or ceasing to trade; or

(c) exercising a right held by a regulator would lead to major disruption in the provision of an essential public service.

B78 In some cases, an entity might conclude that it has an enforceable present right or enforceable present obligation to supply regulatory goods or services for an indefinite period. An entity might reach this conclusion if:

(a) the entity operates through a legal and regulatory framework that entitles the entity to supply regulatory goods or services for an indefinite period; or

 © IFRS Foundation

(b) the entity operates through renewable agreements for which the renewal is viewed as an administrative procedure—for example, renewal occurs unless the agreement is significantly breached and the direct costs of renewal are insignificant.

Enforceable present right to recover a regulatory asset or enforceable present obligation to fullfil a regulatory liability through regulated rates

B79 Paragraph B4(a) requires an entity to consider the features of its legal and regulatory framework when assessing whether it has an enforceable present right to recover a regulatory asset, or an enforceable present obligation to fulfil a regulatory liability, by adding or deducting an amount in determining the regulated rates to be charged to customers. Examples of situations in which the entity might determine that such an enforceable present right or enforceable present obligation exists include when:

(a) the regulatory process for determining the regulated rate is set out in law and guarantees that the entity will recover its costs and earn a return on amounts included in the regulatory capital base; or

(b) the regulator has historically applied a consistent approach to cost recovery in determining the regulated rates and there is no indication of uncertainty about this approach or potential changes in it.

B80 There might be uncertainty about the existence of an enforceable present right to recover a regulatory asset or an enforceable present obligation to fulfil a regulatory liability by adding or deducting an amount in determining the regulated rates to be charged to customers during the life of the regulatory asset or regulatory liability. If such uncertainty exists, cash flows within the boundary of a regulatory agreement are those for which the entity determines it is more likely than not that such a right or obligation exists.

Compensation on termination of a regulatory agreement

B81 The term ‘compensation on termination of a regulatory agreement’ refers to cash flows arising from an enforceable present right to receive compensation relating to regulatory assets that have not yet been recovered or an enforceable present obligation to pay compensation relating to regulatory liabilities that have not yet been fulfilled. Such compensation could arise in a variety of situations (for example, cancellation of a regulatory agreement, non-renewal of a regulatory agreement or termination of a regulatory agreement by mutual consent).

B82 Cash flows from compensation on termination of a regulatory agreement are within the boundary of a regulatory agreement to the extent that an entity has:

(a) an enforceable present right to receive compensation for unrecovered regulatory assets; or

(b) an enforceable present obligation to pay compensation for unfulfilled regulatory liabilities.

© IFRS Foundation

B83 In assessing whether such an enforceable present right or enforceable present obligation exists, an entity shall consider what rights and obligations it would have if the regulator or another party were to terminate the regulatory agreement at the end of the reporting period for reasons other than the entity's failure to perform as specified in the agreement. The entity shall apply paragraphs B4–B7 to assess whether, in those circumstances, it would have an enforceable present right to receive compensation for unrecovered regulatory assets or an enforceable present obligation to pay compensation for unfulfilled regulatory liabilities to date.

B84 There might be uncertainty about the existence of an enforceable present right to receive compensation or an enforceable present obligation to pay compensation on termination of a regulatory agreement. If such uncertainty exists, cash flows within the boundary of the regulatory agreement are those for which the entity determines it is more likely than not that such a right or obligation exists.

Exercise of a termination right

B85 If a termination right has been exercised so that a contractual right to receive cash or an obligation to pay cash has been created, that right or obligation is a financial asset or financial liability. In such cases, an entity shall apply the derecognition requirements in paragraph 32 and recognise and measure the financial asset or financial liability by applying IFRS 9, recognising any resulting difference in profit or loss.

Reassessment of and changes in the boundary

B86 At the end of each reporting period, an entity shall reassess the boundary of a regulatory agreement.

B87 If this reassessment changes the cash flows within the boundary of a regulatory agreement, the entity shall update the carrying amount of any affected regulatory assets or regulatory liabilities. Paragraphs 73(f) and 74 require an entity to disclose changes in the carrying amount of a regulatory asset or regulatory liability caused by a change in the boundary of a regulatory agreement, and an explanation for that change in the boundary.

Uncertain future cash flows

B88 Future cash flows arising from a regulatory asset or regulatory liability might be subject to risks that create uncertainty about the amount or timing of those cash flows. Such risks include:

(a) credit risk—the risk that some customers will not pay the amounts charged.

(b) demand risk—the risk that arises from changes between the estimated and actual demand for goods or services an entity supplies to customers in a period. Demand risk might give rise to volume variances (see paragraph B57(a)).

 © IFRS Foundation

B89 An entity bears a risk to the extent that the regulatory agreement does not compensate the entity for the outcome of an uncertainty. In such cases, an entity shall include the effects of the uncertainty in the range of possible cash flows when estimating the future cash flows arising from a regulatory asset or regulatory liability. For example, if an entity bears credit risk, the credit risk affects the amounts receivable from customers. These amounts include the net amount from the recovery of regulatory assets and from the fulfilment of regulatory liabilities. To avoid overstating the effect of credit risk, the entity shall estimate the uncollectible amounts by considering the net cash flows that are expected to arise in the same period from regulatory assets and regulatory liabilities that are created by the same regulatory agreement. An entity shall allocate the estimate of uncollectible amounts to regulatory assets only.

B90 Customers bear a risk to the extent that a regulatory agreement provides compensation to an entity for the outcome of an uncertainty in determining future regulated rates. In such cases, an entity shall include the effects of the uncertainty and the compensation for the outcome of the uncertainty in the range of possible cash flows when estimating the future cash flows arising from a regulatory asset or regulatory liability.

B91 For example, assume an entity expects to be unable to collect some amounts from customers in a future period but the regulatory agreement provides compensation for such uncollected amounts in a period after they have not been collected. When measuring a regulatory asset, the entity will include in the estimated future cash flows for a period the expectation that some amounts will be uncollected and include the expectation of compensation for such amounts in the estimated cash flows for the later period in which the regulatory agreement provides the compensation.

Applying this Standard with IFRIC 12 *Service Concession Arrangements*

B92 IFRIC 12 *Service Concession Arrangements* applies to public-to-private service concession arrangements if the grantor controls or regulates the price at which the operator must provide services, and if other specified conditions are met (see paragraph 5 of IFRIC 12). Service concession arrangements within the scope of IFRIC 12 might create regulatory assets or regulatory liabilities. In such arrangements, the regulator is typically the grantor as described in IFRIC 12. This Standard refers to the grantor as the regulator and the operator as the entity. An entity shall first apply IFRIC 12 and other IFRS Accounting Standards to account for rights and obligations arising from such arrangements before applying this Standard to any remaining rights and obligations that meet the definition of a regulatory asset or a regulatory liability.

B93 In service concession arrangements that might create regulatory assets or regulatory liabilities, an entity's regulatory capital base includes items of infrastructure arising from the construction or upgrade services provided. In this section, the references to 'assets' refer to items of infrastructure that arise

© IFRS Foundation

from the construction or upgrade services, and the references to 'the regulatory capital base' refer to a subset of the regulatory capital base that comprises these assets. Applying IFRIC 12, the entity might account for an intangible asset arising from the consideration it receives for those construction or upgrade services. A regulatory asset or regulatory liability might arise from regulatory depreciation of the regulatory capital base, which provides compensation for the amortisation expense of that intangible asset.

B94 In applying this Standard, an entity shall determine whether the regulatory capital base, or a part of the regulatory capital base, has a direct relationship with any intangible asset recognised by applying IFRIC 12 (see paragraphs B59–B72). The entity shall also determine whether a difference in timing arises from the regulatory depreciation. In particular, if the service concession arrangement gives rise to:

(a) only an intangible asset—the entity shall determine whether a difference in timing arises by considering any difference between:

(i) the recovery period or recovery pattern of the assets in the regulatory capital base; and

(ii) the useful life or amortisation method of the intangible asset.

(b) both an intangible asset and a financial asset—a portion of the assets in the regulatory capital base relates to the intangible asset and the remaining portion relates to the financial asset. In such cases, the entity shall determine whether a difference in timing arises by considering any difference between:

(i) the recovery period or recovery pattern of a part of the regulatory capital base—specifically, the portion of the assets in the regulatory capital base that relates to the intangible asset; and

(ii) the useful life or amortisation method of the intangible asset.

Disclosure—Aggregation and disaggregation

B95 Paragraphs 41–43 of IFRS 18 *Presentation and Disclosure in Financial Statements* set out requirements relating to the aggregation and disaggregation of information. In applying these requirements to information about regulatory income, regulatory expense, regulatory assets and regulatory liabilities, an entity shall consider whether to use the same aggregation or disaggregation of such information provided for other purposes—for example, disclosures presented outside the financial statements, such as in regulatory reports.

B96 Examples of characteristics that might be appropriate as a basis to aggregate or disaggregate the information required by this Standard about regulatory income, regulatory expense, regulatory assets and regulatory liabilities include:

(a) type of rate-regulated activity—for example, electricity distribution, gas distribution, water supply;

 © IFRS Foundation

(b) geographical location;

(c) type of regulatory agreement—for example, service concession arrangements or contractual licensing agreements;

(d) type of items that the regulatory assets or regulatory liabilities relate to—for example, recovery of input cost variances, performance incentives, recovery of income taxes, recovery of pension costs; and

(e) exposure to substantially different risks or uncertainties.

B97 The appropriate aggregation or disaggregation might differ for different information and will also depend on the disclosure requirement and disclosure objective to which the information contributes.

© IFRS Foundation

Appendix C
Effective date and transition

This appendix is an integral part of this IFRS Accounting Standard.

Effective date

C1 An entity shall apply this Standard for annual reporting periods beginning on or after 1 January 2029. Earlier application is permitted. If an entity applies this Standard for an earlier period, it shall disclose that fact in the notes.

Transition

C2 For the purposes of the transition requirements in paragraphs C3–C17:

(a) the date of initial application is the beginning of the annual reporting period in which an entity first applies this Standard; and

(b) the transition date is the beginning of the annual reporting period immediately preceding the date of initial application. If an entity presents adjusted comparative information for any earlier periods:

(i) in its annual financial statements—the transition date is the beginning of the earliest adjusted comparative annual reporting period presented (see paragraph C7(a)); or

(ii) in its interim financial statements—the transition date is the beginning of the earliest adjusted cumulative comparative interim reporting period presented (see paragraph C16(a)).

C3 An entity shall apply this Standard to all regulatory assets and all regulatory liabilities either:

(a) retrospectively in accordance with IAS 8 *Basis of Preparation of Financial Statements*; or

(b) using the modified retrospective approach, as specified in paragraphs C9–C13.

C4 An entity shall also apply paragraphs C6–C8, regardless of whether the entity elects to apply this Standard retrospectively or to use the modified retrospective approach.

C5 At the transition date, an entity shall:

(a) recognise and measure regulatory assets and regulatory liabilities as if the Standard had always been applied;

(b) derecognise all regulatory balances that the entity would not have recognised as regulatory assets or regulatory liabilities if this Standard had always been applied;

(c) recognise any deferred tax effects of the adjustments described in (a)–(b); and

 © IFRS Foundation

(d) recognise the net amount of the adjustments described in (a)–(c) in opening retained earnings (or other component of equity, as appropriate).

Comparative information

C6 An entity shall:

(a) present adjusted comparative information for the annual reporting period immediately preceding the date of initial application; and

(b) disclose the quantitative information required by paragraph 28(f) of IAS 8 for the annual reporting period immediately preceding the date of initial application.

C7 An entity is permitted, but not required:

(a) to present adjusted comparative information for any earlier periods presented before the beginning of the annual reporting period immediately preceding the date of initial application;

(b) to disclose the quantitative information required by paragraph 28(f) of IAS 8 for the current period or any earlier periods presented as described in (a); or

(c) to disclose the information specified in paragraphs 68–83 of this Standard for any earlier periods presented as described in (a).

C8 If an entity presents in its primary financial statements or discloses in the notes unadjusted comparative information for any earlier periods presented, the entity shall clearly identify the information that has not been adjusted, disclose that it has been prepared on a different basis, and explain that basis.

Transition reliefs—Modified retrospective approach

C9 At the transition date, an entity electing to use the modified retrospective approach may use one or more of the transition reliefs in paragraphs C10–C12.

C10 An entity may elect to apply the requirements for a regulatory return on assets not yet available for use in specific circumstances (see paragraphs B35–B40) only to assets that are not yet available for use at the transition date.

C11 To apply the requirements for an implied regulatory interest rate (see paragraphs 48–50 and 56–57), an entity may elect to disregard any implied regulatory interest rates that would have been derived from the terms of the regulatory agreement before the transition date.

C12 An entity may use hindsight at the transition date in applying the requirements in this Standard. For example, an entity may use hindsight when estimating the cash flows arising from a regulatory asset or a regulatory liability.

C13 An entity electing to use the modified retrospective approach shall:

© IFRS Foundation

(a) disclose which of the transition reliefs in paragraphs C10–C12 it has applied; and

(b) describe, if appropriate, how it has applied those transition reliefs.

Interim financial statements

C14 If an entity applies IAS 34 *Interim Financial Reporting* in preparing condensed interim financial statements in the first year of applying this Standard, the entity shall present in the condensed interim financial statements each heading and subtotal it expects to use in applying the Standard, despite the requirements in paragraph 10 of IAS 34. An entity shall apply the requirements in paragraph 10 of IAS 34 for headings and subtotals in condensed interim financial statements after it has issued its first set of annual financial statements prepared in accordance with this Standard.

C15 If an entity applies IAS 34 in preparing interim financial statements in the first year of applying this Standard, the entity shall:

(a) present adjusted comparative information for the comparative interim period and the cumulative comparative interim period of the immediately preceding financial year; and

(b) disclose in the notes, as part of the information required by paragraph 16A(a) of IAS 34, the amounts previously presented for each line item affected in the financial statements for the comparative interim period and the cumulative comparative interim period of the immediately preceding financial year.

C16 An entity is permitted, but not required:

(a) to present adjusted comparative information for any earlier comparative interim periods and cumulative comparative interim periods presented before the beginning of the immediately preceding financial year; and

(b) to disclose the information described in paragraph C15(b) for:

(i) the current interim period and the cumulative current interim period; or

(ii) any earlier interim periods presented as described in (a).

C17 If an entity presents in its primary financial statements or discloses in the notes unadjusted comparative information for any earlier interim periods presented, the entity shall clearly identify the information that has not been adjusted, disclose that it has been prepared on a different basis, and explain that basis.

Withdrawal of IFRS 14 *Regulatory Deferral Accounts*

C18 This Standard supersedes IFRS 14 *Regulatory Deferral Accounts*.

Appendix D
Amendments to other IFRS Accounting Standards

This appendix sets out amendments to other IFRS Accounting Standards.

IFRS 1 *First-time Adoption of International Financial Reporting Standards*

Paragraphs 31B, D1 and D8B are amended. The heading before paragraph 31B is also amended. Paragraphs 31D, 39AL and D37 are added. Headings are also added before paragraphs 31D and D37. Paragraph 39V is deleted. New text is underlined and deleted text is struck through.

Presentation and disclosure

...

Explanation of transition to IFRSs

...

Use of deemed cost by first-time adopters applying IFRS 20 ~~for operations subject to rate regulation~~

31B If an entity uses the exemption in paragraph D8B ~~for operations subject to rate regulation~~, it shall disclose that fact and the basis on which carrying amounts were determined under previous GAAP.

...

Use of transition reliefs in IFRS 20 for regulatory assets and regulatory liabilities

31D If an entity uses the transition reliefs specified in paragraph D37 for regulatory assets and regulatory liabilities, it shall disclose which reliefs it has applied and, if appropriate, describe how it has applied them.

...

Effective date

...

39V [Deleted] ~~IFRS 14 *Regulatory Deferral Accounts*, issued in January 2014, amended paragraph D8B. An entity shall apply that amendment for annual periods beginning on or after 1 January 2016. Earlier application is permitted. If an entity applies IFRS 14 for an earlier period, the amendment shall be applied for that earlier period.~~

...

© IFRS Foundation

MAY 2026

39AL IFRS 20 *Regulatory Assets and Regulatory Liabilities*, issued in May 2026, amended paragraph 31B and its related heading, paragraphs D1 and D8B, added paragraphs 31D and D37, and related headings, and deleted paragraph 39V. An entity shall apply those amendments when it applies IFRS 20.

...

Appendix D
Exemptions from other IFRSs

...

D1 An entity may elect to use one or more of the following exemptions:

...

(u) revenue (paragraphs D34 and D35); ~~and~~

(v) foreign currency transactions and advance consideration (paragraph D36); and~~.~~

(w) regulatory assets and regulatory liabilities (paragraph D37).

An entity shall not apply these exemptions by analogy to other items.

...

Deemed cost

...

D8B Some first-time adopters applying IFRS 20 *Regulatory Assets and Regulatory Liabilities* ~~entities~~ hold items of property, plant and equipment, right-of-use assets or intangible assets whose carrying amounts ~~that are used, or were previously used, in operations subject to rate regulation. The carrying amount of such items~~ might include amounts that were determined under previous GAAP but do not qualify for capitalisation in accordance with IFRSs. If this is the case, a first-time adopter may elect to use the previous GAAP carrying amount of such an item at the date of transition to IFRSs as deemed cost. If an entity applies this exemption to an item, it need not apply it to all items. At the date of transition to IFRSs, an entity shall test for impairment in accordance with IAS 36 each item for which this exemption is used. ~~For the purposes of this paragraph, operations are subject to rate regulation if they are governed by a framework for establishing the prices that can be charged to customers for goods or services and that framework is subject to oversight and/or approval by a rate regulator (as defined in IFRS 14 *Regulatory Deferral Accounts*).~~

...

Regulatory assets and regulatory liabilities

D37 A first-time adopter may apply the transition reliefs set out in paragraphs C10–C12 in Appendix C to IFRS 20. If an entity elects to apply those transition reliefs:

(a) it shall read the references to the transition date in paragraphs C10–C12 of IFRS 20 as the date of transition to IFRSs; and

(b) it shall not apply the transition relief in paragraph C10 of IFRS 20 to assets that are not yet available for use at the date of transition to IFRSs if it has applied the exemption in paragraph D8B to those assets.

MAY 2026

IFRS 3 *Business Combinations*

Paragraph 28C and a heading above that paragraph are added. Paragraph 64S is also added. New text is underlined.

The acquisition method

...

Recognising and measuring the identifiable assets acquired, the liabilities assumed and any non-controlling interest in the acquiree

...

Exceptions to the recognition or measurement principles

...

Exceptions to both the recognition and measurement principles

...

Regulatory assets and regulatory liabilities

28C The acquirer shall recognise and measure all regulatory assets acquired and regulatory liabilities assumed in a business combination in accordance with IFRS 20 *Regulatory Assets and Regulatory Liabilities*.

...

Effective date and transition

Effective date

...

64S IFRS 20, issued in May 2026, added paragraph 28C and a related heading. An entity shall apply those amendments when it applies IFRS 20.

© IFRS Foundation

IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*

Paragraph 5 is amended. Paragraph 44O is added. New text is underlined.

Scope

...

5 The measurement provisions of this IFRS do not apply to the following assets, which are covered by the IFRSs listed, either as individual assets or as part of a disposal group:

...

(g) regulatory assets (IFRS 20 *Regulatory Assets and Regulatory Liabilities*).

...

Effective date

...

44O IFRS 20, issued in May 2026, amended paragraph 5. An entity shall apply that amendment when it applies IFRS 20.

MAY 2026

IFRS 18 *Presentation and Disclosure in Financial Statements*

Paragraphs 64, 75 and 103 are amended. Paragraph C1A is added. New text is underlined and deleted text is struck through.

Statement of profit or loss

...

Categories in the statement of profit or loss

...

The financing category

...

64 An entity shall exclude from the financing category and classify in the operating category:

(a) income and expenses from issued investment contracts with participation features recognised applying IFRS 9 *Financial Instruments* (see paragraph B58); ~~and~~

(b) insurance finance income and expenses included in the statement of profit or loss applying IFRS 17 *Insurance Contracts*; and.

(c) regulatory interest income or regulatory interest expense included in the statement of profit or loss applying IFRS 20 *Regulatory Assets and Regulatory Liabilities*.

...

Items to be presented in the statement of profit or loss or disclosed in the notes

75 An entity shall present in the statement of profit or loss line items for (see paragraph B77):

(a) amounts required by this Standard, namely:

(i) revenue, presenting separately the line items described in (b)(i), ~~and~~ (c)(i) and (d);

...

(b) amounts required by IFRS 9, namely:

...

(v) any cumulative gain or loss previously recognised in other comprehensive income that is reclassified to profit or loss at the date of reclassification of a financial asset from measurement at fair value through other comprehensive income to measurement at fair value through profit or loss; ~~and~~

 © IFRS Foundation

(c) amounts required by IFRS 17, namely:

...

(v) finance income or expenses from reinsurance contracts held; and.

(d) amounts required by IFRS 20, namely all regulatory income minus all regulatory expense.

...

Statement of financial position

...

Items to be presented in the statement of financial position or disclosed in the notes

103 An entity shall present in the statement of financial position line items for:

...

(e) financial assets (excluding amounts shown under (g), (j) and (k));

(ea) regulatory assets as defined in IFRS 20;

...

(o) financial liabilities (excluding amounts shown under (m) and (n));

(oa) regulatory liabilities as defined in IFRS 20;

...

MAY 2026

IFRS 19 *Subsidiaries without Public Accountability: Disclosures*

Paragraph 4 is amended. Paragraph A7 and a heading above that paragraph are added. Paragraphs 98–102 and related subheadings are deleted. New text is underlined and deleted text is struck through.

Objective

...

Meeting the objective

...

4 Notwithstanding paragraphs 2–3:

...

(b) if an entity applying this Standard applies IFRS 8 *Operating Segments*, IFRS 17 *Insurance Contracts*, IFRS 20 *Regulatory Assets and Regulatory Liabilities* or IAS 33 *Earnings per Share*, it shall apply all the disclosure requirements in those Standards.

...

Disclosure requirements

...

~~IFRS 14 *Regulatory Deferral Accounts*~~

~~Explanation of activities subject to rate regulation~~

98-102 [Deleted]

~~98~~ ~~An entity shall disclose, for each type of rate-regulated activity:~~

~~(a)~~ ~~a brief description of the nature and extent of the rate-regulated activity and the nature of the regulatory rate-setting process; and~~

~~(b)~~ ~~the identity of the rate regulator(s). If the rate regulator is a related party (as defined in IAS 24 *Related Party Disclosures*), the entity shall disclose that fact, together with an explanation of how it is related.~~

~~99~~ ~~The disclosures required by paragraph 98 shall be given in the financial statements either directly in the notes or incorporated by cross-reference from the financial statements to some other statement, such as a management commentary or risk report, that is available to users of the financial statements on the same terms as the financial statements and at the same time. If the information is not included in the financial statements directly or incorporated by cross-reference, the financial statements are incomplete.~~

© IFRS Foundation

~~Explanation of recognised amounts~~

~~100~~ ~~An entity shall disclose the basis on which regulatory deferral account balances are recognised and derecognised and how they are measured initially and subsequently, including how regulatory deferral account balances are assessed for recoverability and how any impairment loss is allocated.~~

~~101~~ ~~For each type of rate-regulated activity, an entity shall disclose, for each class of regulatory deferral account balance, a reconciliation of the carrying amount at the beginning and the end of the reporting period in a table, unless another format is more appropriate. The entity shall apply judgement in deciding the level of detail necessary (see paragraphs 28–29 of IFRS 14 *Regulatory Deferral Accounts*), but these components would usually be relevant:~~

~~(a) the amounts that have been recognised in the current period in the statement of financial position as regulatory deferral account balances;~~

~~(b) the amounts that have been recognised in the statement(s) of profit or loss and other comprehensive income relating to balances that have been recovered (sometimes described as amortised) or reversed in the current period; and~~

~~(c) other amounts, separately identified, that affected the regulatory deferral account balances, such as impairments, items acquired or assumed in a business combination, items disposed of, or the effects of changes in foreign exchange rates or discount rates.~~

~~102~~ ~~When an entity concludes that a regulatory deferral account balance is no longer fully recoverable or reversible, it shall disclose that fact, the reason why it is not recoverable or reversible and the amount by which the regulatory deferral account balance has been reduced.~~

...

Appendix A—Effective date and transition

...

IFRS 20 *Regulatory Assets and Regulatory Liabilities*

A7 IFRS 20, issued in May 2026, amended paragraph 4 and deleted paragraphs 98–102 and the related subheadings. An entity shall apply those amendments when it applies IFRS 20.

© IFRS Foundation

MAY 2026

IAS 8 *Basis of Preparation of Financial Statements*

Paragraph 54G is deleted. Paragraph 54K is added. New text is underlined and deleted text is struck through.

Effective date and transition

...

54G [Deleted] ~~If an entity does not apply IFRS 14 *Regulatory Deferral Accounts*, the entity shall, in applying paragraph 11(b) to regulatory account balances, continue to refer to, and consider the applicability of, the definitions, recognition criteria, and measurement concepts in the *Framework for the Preparation and Presentation of Financial Statements** instead of those in the *Conceptual Framework*. A regulatory account balance is the balance of any expense (or income) account that is not recognised as an asset or a liability in accordance with other applicable IFRS Standards but is included, or is expected to be included, by the rate regulator in establishing the rate(s) that can be charged to customers. A rate regulator is an authorised body that is empowered by statute or regulation to establish the rate or a range of rates that bind an entity. The rate regulator may be a third-party body or a related party of the entity, including the entity's own governing board, if that body is required by statute or regulation to set rates both in the interest of the customers and to ensure the overall financial viability of the entity.~~

...

54K IFRS 20 *Regulatory Assets and Regulatory Liabilities*, issued in May 2026, deleted a footnote to paragraph 11(b), paragraph 54G and a footnote to paragraph 54G. An entity shall apply those amendments when it applies IFRS 20.

The footnote to paragraph 11(b) is deleted. Deleted text is struck through.

~~* Paragraph 54G explains how this requirement is amended for regulatory account balances.~~

The footnote to paragraph 54G is deleted. Deleted text is struck through.

~~* The reference is to the IASC's *Framework for the Preparation and Presentation of Financial Statements* adopted by the Board in 2001.~~

© IFRS Foundation

IAS 36 *Impairment of Assets*

Paragraphs 2 and 3 are amended. Paragraph 140O is added. New text is underlined and deleted text is struck through.

Scope

2 **This Standard shall be applied in accounting for the impairment of all assets, other than:**

...

(h) contracts within the scope of IFRS 17 *Insurance Contracts* that are assets and any assets for insurance acquisition cash flows as defined in IFRS 17; ~~**and**~~

(i) non-current assets (or disposal groups) classified as held for sale in accordance with IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*; **and**~~.~~

(j) regulatory assets (see IFRS 20 *Regulatory Assets and Regulatory Liabilities*).

3 This Standard does not apply to inventories, assets arising from construction contracts, deferred tax assets, assets arising from employee benefits, ~~or~~ assets classified as held for sale (or included in a disposal group that is classified as held for sale), or regulatory assets because existing IFRSs applicable to these assets contain requirements for recognising and measuring these assets.

...

Transition provisions and effective date

...

140O IFRS 20, issued in May 2026, amended paragraphs 2 and 3. An entity shall apply those amendments when it applies IFRS 20.

Issue

...

5 Certain aspects and disclosures relating to some service concession arrangements are already addressed by existing International Financial Reporting Standards (eg IAS 16 applies to acquisitions of items of property, plant and equipment, IFRS 16 applies to leases of assets, IFRS 20 applies to regulatory assets and regulatory liabilities, and IAS 38 applies to acquisitions of intangible assets). However, a service concession arrangement may involve executory contracts that are not addressed in International Financial Reporting Standards, unless the contracts are onerous, in which case IAS 37 applies. Therefore, this Interpretation addresses additional disclosures of service concession arrangements.

Appendix E
Requirements for an entity that applies IFRS 20 before applying IFRS 18

This appendix is an integral part of this IFRS Accounting Standard.

E1 IFRS 18 *Presentation and Disclosure in Financial Statements* supersedes IAS 1 *Presentation of Financial Statements* for annual reporting periods beginning on or after 1 January 2027. An entity that elects to apply IFRS 20 *Regulatory Assets and Regulatory Liabilities* for a reporting period earlier than the reporting period in which it first applies IFRS 18 shall apply:

(a) paragraph E2 instead of paragraph 64;

(b) paragraph E3 instead of paragraph 67;

(c) paragraph E4 instead of paragraph B95;

(d) paragraph E5 and Appendix C to this Standard; and

(e) paragraph E6 and Appendix D to this Standard.

Classification and presentation

E2 In some cases, an entity applying other IFRS Accounting Standards presents an item of expense or income in other comprehensive income. In such cases, the entity shall also present in other comprehensive income regulatory income or regulatory expense relating to that item of expense or income, as specified in paragraph 65. The entity shall:

(a) classify regulatory income and regulatory expense presented in other comprehensive income in accordance with paragraph 82A of IAS 1;

(b) present regulatory income or regulatory expense separately from the related expense or related income;

(c) reclassify regulatory income or regulatory expense recognised in other comprehensive income to the statement of profit or loss if, and only if, the entity reclassifies the related expense or related income to the statement of profit or loss in accordance with other IFRS Accounting Standards; and

(d) classify and present the reclassified regulatory income or regulatory expense in accordance with paragraph 62.

E3 An entity shall present in its statement of financial position:

(a) regulatory assets and regulatory liabilities as line items; and

(b) current and non-current regulatory assets, and current and non-current regulatory liabilities, as separate classifications in accordance with paragraphs 66–76B of IAS 1, except when the entity presents all assets and liabilities in order of liquidity.

© IFRS Foundation

Disclosure

E4 Paragraphs 29–31 of IAS 1 set out requirements relating to materiality and aggregation. An entity shall aggregate or disaggregate information about regulatory income, regulatory expense, regulatory assets and regulatory liabilities in the notes, in accordance with IAS 1.

Transition

E5 An entity applying IAS 1 and Appendix C to this Standard shall read the reference to IAS 8 *Basis of Preparation of Financial Statements* in paragraph C3(a) as a reference to IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*.

Amendments to other IFRS Accounting Standards

E6 An entity applying IAS 1 and the amendments to other IFRS Accounting Standards set out in Appendix D to this Standard shall apply the amendments to IAS 1 set out in this appendix. In applying Appendix D to this Standard, an entity shall:

(a) read the reference to IAS 8 *Basis of Preparation of Financial Statements* in the 'References' section of IFRIC 12 *Service Concession Arrangements* as a reference to IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*; and

(b) read the reference to IFRS 18 *Presentation and Disclosure in Financial Statements* in the 'References' section of SIC-29 *Service Concession Arrangements: Disclosures* as a reference to IAS 1 *Presentation of Financial Statements*.

IAS 1 *Presentation of Financial Statements*

Paragraphs 54 and 82 are amended. Paragraph 139X is added. New text is underlined and deleted text is struck through.

Structure and content

...

Statement of financial position

Information to be presented in the statement of financial position

54 **The statement of financial position shall include line items that present the following amounts:**

...

(da) portfolios of contracts within the scope of IFRS 17 that are assets, disaggregated as required by paragraph 78 of IFRS 17;

 © IFRS Foundation

(db) regulatory assets as defined in IFRS 20 *Regulatory Assets and Regulatory Liabilities*;

...

(ma) portfolios of contracts within the scope of IFRS 17 that are liabilities, disaggregated as required by paragraph 78 of IFRS 17;

(mb) regulatory liabilities as defined in IFRS 20;

...

Statement of profit or loss and other comprehensive income

...

Information to be presented in the profit or loss section or the statement of profit or loss

82 In addition to items required by other IFRSs, the profit or loss section or the statement of profit or loss shall include line items that present the following amounts for the period:

(a) revenue, presenting separately:

(i) interest revenue calculated using the effective interest method; ~~and~~

(ii) insurance revenue (see IFRS 17); and

(iii) all regulatory income minus all regulatory expense (see IFRS 20);

...

Transition and effective date

...

139X IFRS 20, issued in May 2026, amended paragraphs 54 and 82. An entity shall apply those amendments when it applies IFRS 20.

MAY 2026

Approval by the International Accounting Standards Board of IFRS 20 *Regulatory Assets and Regulatory Liabilities* published in May 2026

IFRS 20 *Regulatory Assets and Regulatory Liabilities* was approved for publication by 12 of 13 members of the International Accounting Standards Board (IASB). Dr Chen abstained from voting in view of her recent appointment to the IASB.

Manitoba Public Insurance

Pension Benefit Obligations Under The Civil Service Superannuation Act

IAS 19
Actuarial Valuation Report
as at March 31, 2026

May 2026

NOTICE TO READER – This Report is Privileged and Confidential

The primary purpose of this engagement is to prepare a report that provides the financial disclosure information based on our understanding of the International Financial Reporting Standards, and the Canadian Institute of Actuaries Standards of Practice in effect at the date of this report. The list of intended purposes of this report is noted in the Terms of Engagement discussed in Section 2.

Additionally, the intended recipients are noted in the Terms of Engagement and no party other than the parties noted shall rely upon the information presented herein. The recipient shall neither reproduce the report nor parts thereof unless reproduction is necessary for its evaluation and approved by Ellement Consulting Group (Ellement). The recipient agrees to protect the confidentiality of the information contained in this report and shall take all the necessary and reasonable measures to prevent the unauthorized use, disclosure, or distribution of the report or parts thereof. The recipient agrees not to use, amend, adapt, convert, translate, or exploit the contents of this document without written consent from Ellement, nor allow Ellement's competitors or unintended recipients to have access to its contents.

An actuarial valuation report is a snapshot of a pension plan's estimated financial condition and health at a particular point in time; it does not predict the pension plan's future financial condition or its ability to pay benefits indefinitely. The actual financial condition and contribution adequacy will be more favourable, or less favourable, depending on actual experience, when the next formal actuarial valuation report is prepared. Further, the financial condition and health may change due to a change in assumptions, a change in the provisions in the plan text, or a change in governing legislation.

Over time, a pension plan's actual cost will depend on several factors, including but not limited to:

- the level of the benefits the pension plan provides;
- the number of individuals paid benefits, the age at which their benefit is settled, and the length of time benefits are paid in retirement;
- the amount of expenses incurred for operating and investing; and
- the amount earned on any invested assets, if any.

These amounts and other variables are uncertain and impossible to predict with precision at any particular point in time.

Due to the nature of our engagement, the actuarial assumptions, as described in Appendix III, have been selected to develop results for a single scenario from the range of possibilities for each valuation basis. Actual experience will differ from the results based on the assumptions from the single scenario illustrated herein. In addition, different assumptions or scenarios may also be within the reasonable range and results based on those assumptions would be different. Differences between actual experience and the selected assumptions may prove to be significant or material. As such, frequent monitoring and periodic valuations are recommended. In any case, the actuary will review the selected assumptions at the next actuarial valuation date and may make adjustments for a number of factors including changes in regulatory requirements, plan experience, and changes in expectations about the future.

Given the intended purpose of the engagement and the uncertainty in the financial condition and health of the pension plan into the future described above, decisions about benefit reductions or enhancements, benefit security and sustainability, investment policy, funding policy, and benefit policy should be made only after careful consideration of alternative future financial conditions and scenarios, and not solely based on an actuarial valuation report or reports focused on a particular point in time.

APPENDICES

I	Membership Data
II	Summary of Plan Provision
III	Summary of Actuarial Accounting Assumptions

1. ACTUARY'S OPINION

We have been engaged by the management of Manitoba Public Insurance (M.P.I.) to value the pension benefit obligations as at March 31, 2026 (Measurement Date) as a result of the participation of its eligible employees in the Civil Service Superannuation Act (CSSA). The Pension Benefit Obligations Actuarial Valuation Report (Report) has been prepared to provide an estimate of the defined benefit obligation as at March 31, 2026, which will be incorporated into the entity's financial statements under the International Financial Reporting Standards (IFRS).

The pension benefit obligations are a portion of the defined benefit plan, which is classified as post-employment benefits. The guidance for the calculation of the obligations and the preparation of this Report are the Practice-Specific Standards for Financial Reporting of Pension Costs (Section 3400) of the Canadian Institute of Actuaries (CIA) and the IFRS – International Accounting Standards 19 (IAS 19) Post-Employment Benefits. The calculations have been made in accordance with our understanding of these standards and applicable laws and regulations.

M.P.I. is a non-matching employer under the CSSA. The calculations made contemplate that the pension benefits, described in this Report and the CSSA, will continue to exist and that employees are entitled to these pension benefits upon their fulfillment of eligibility requirements (going concern basis).

Pursuant to CSSA subsection 22(11), employer funding for employees of more than one non-matching Agency shall be on a pro rata basis in accordance with the portion of the amount paid or transferred to the employee in respect of which no employer matching contributions were made effective for events on or after January 1, 1998. This may decrease or increase the pension benefit obligations in the absence of CSSA subsection 22(11). However, for enhanced benefits, it is the administrative practice to bill all the enhanced benefits to the current or last employer.

The defined benefit obligation is based on the assumptions and methods outlined in Appendix III. The discount rate utilized to determine the results was developed and provided by M.P.I. using Fiera Capital's CIA Method Discount Rate Curve as at March 31, 2026. The assumptions used in this Report are considered to be managements best estimate assumptions selected for accounting purposes. The assumptions will continue to be monitored and updated as appropriate.

In our opinion:

- The membership data on which the valuation is based are sufficient and reliable for the purpose of the valuation;
- The assumptions and methods are appropriate for the purpose of the valuation;
- The calculations have been made in accordance with my understanding of the requirements of the International Financial Reporting Standards – IAS 19 Post-Employment Benefits; and
- This Report has been prepared, and our opinions given, in accordance with accepted actuarial practice in Canada.

Nevertheless, emerging experience differing from the assumptions will result in gains or losses that will be revealed in subsequent actuarial valuations, and we recommend that the next report be prepared no later than March 31, 2027.

Respectfully submitted,

ELLEMENT CONSULTING GROUP

May 15, 2026

2. TERMS OF ENGAGEMENT

We are pleased to present the results of the actuarial valuation as of March 31, 2026 (Plan), for the Manitoba Public Insurance (M.P.I.). Further to the Notice to Reader found at the beginning of the report, we note the following terms of engagement and other important information.

Purpose

Ellement has been engaged by the management of M.P.I. to perform an actuarial valuation of the Plan as of March 31, 2026 for accounting purposes, in accordance with the International Financial Reporting Standards and applicable Standards of Practice developed by the Canadian Institute of Actuaries. The previous valuation, as of March 31, 2025, was also performed by Ellement.

Specifically, the purpose of this Report is to:

- Indicate the liabilities (Defined Benefit Obligation) which M.P.I. has as at March 31, 2026 (Valuation Date), as a result of the participation of its employees in the Civil Service Superannuation Act (CSSA); and
- Provide the change in Defined Benefit Obligation for the period beginning April 1, 2025 and ending March 31, 2026.

We have not been engaged to calculate the defined benefit cost or the change in the fair value of assets. The results of this Report may not be appropriate for any other purpose, other than the purposes listed above.

These liabilities are an estimate of the present value of the future payments which M.P.I. is expected to make to the Civil Service Superannuation Fund (CSSF).

The liabilities have been computed on an accounting basis. This basis contemplates the continued existence of the pension plan and the funding arrangements for the benefits under the pension plan.

The analysis and recommendations presented in this Report is not intended to be a legal opinion and Ellement is not a law firm. If you require a legal opinion on the material reviewed in this Report, we recommend securing the advice of legal counsel.

Intended Recipients and Users

The intended recipients and users of this Report include the following:

- Manitoba Public Insurance; and
- Auditor.

Subsequent Events

Emerging experience differing from the assumptions after March 31, 2026, will result in gains or losses, which will be revealed in subsequent valuations.

Further, any impacts to the demographics of the Plan's membership, including increased retirement rates, morbidity, and mortality, will be monitored. As with other experience, the financial impact of this event, as it applies to the Plan, will be reflected in future actuarial valuation reports.

Effective February 25, 2026, the Plan was amended through Order in Council No. 31/2026. The amendment increases both employee and pre-funding employer contribution rates under the Plan by 2.0% below and above the YMPE. As a result, ultimate employee contribution rates are 10.0% up to the YMPE and 11.0% above the YMPE, while ultimate pre-funding employer contribution rates are 9.1% up to the YMPE and 11.0% above the YMPE.

The 2.0% increase will be phased in over a four-year period at 0.5% increments based on the following schedule:

Effective Date	<= YMPE	> YMPE
Current	8.0%	9.0%
April 1, 2026	8.5%	9.5%
April 1, 2027	9.0%	10.0%
April 1, 2028	9.5%	10.5%
January 1, 2029	10.0%	11.0%

We are not aware of any other matters or subsequent events occurring since the completion of this Report which would materially affect the financial position of the Plan as at March 31, 2026.

3. VALUATION RESULTS

The following table shows the pension benefit liabilities which M.P.I. has as at March 31, 2026 with comparable results as at March 31, 2025 as a result of the participation of its employees and former employees in the CSSA. This information is utilized in the preparation of the accounting disclosure information.

The pension benefit liabilities and current service cost has been determined based on the membership data (Appendix I), pension benefit plan provisions (Appendix II), and the methodology and assumptions (Appendix III). Experience differing from the assumptions will result in gains or losses which will be revealed in the future.

	31-Mar-2025	31-Mar-2026
Pension Benefit Liabilities		
- Contributors	$ 173,049,400	$ 165,644,200
- Deferred Pensioners	12,453,300	12,360,200
- Pensioners & Survivors	249,857,500	248,857,700
Total Liabilities	**$ 435,360,200**	**$ 426,862,100**

	% of Employee Contributions	2026 Actual	% of Employee Contributions	2027 Expected
Pension Benefit Current Service Cost				
Total Current Service Cost	104.3%	$ 14,671,900	94.9%	$ 13,756,300
Total Actual/Expected Contributions	14,067,000		14,489,000	

Key Assumptions		
Discount Rate	4.68%	5.11%
Assumed Rate of Inflation*	vary by year / 2.00%	vary by year / 2.00%
Assumed General Salary Increase*	vary by year / 2.00% + Merit	2.00% + Merit

* Please refer to Appendix III - Assumtions & Methodology for the Merit Scale table

The economic assumptions have been chosen by management of M.P.I. The specific choices are made after a review with internal staff and the actuary. The existing economic assumptions were confirmed to us on January 22, 2026, and subsequently on April 2, 2026, by management after management's review of the assumptions.

The expected average remaining service life (EARSL) of contributing employees is 15.0 years.

4. ACCOUNTING DISCLOSURE INFORMATION

The accounting disclosure information has been prepared with reference to IFRS International Accounting Standards 19 – Post Employment Benefits as at March 31, 2026, with comparative results as at March 31, 2025. The disclosure information provides the Change in Defined Benefit Obligation only. We have not been engaged to provide the Change in Fair Value of Plan Assets or the Defined Benefit Cost.

	April 1, 2024 to March 31, 2025	April 1, 2025 to March 31, 2026
Change in Defined Benefit Obligation		
Defined Benefit Obligation - Beginning of Period	$ 403,541,400	$ 435,360,200
Current Service Cost	13,895,800	14,671,900
Interest Expense	19,664,100	20,286,800
Benefit Payments	(18,362,000)	(18,434,000)
Defined Benefit Obligation - Projected	$ 418,739,300	$ 451,884,900
Remeasurements		
Change due to Demographic Assumptions	-	-
Change due to Financial Assumptions	11,300,200	(25,223,700)
Change due to Experience	5,320,700	200,900
Defined Benefit Obligation - End of Period	**$ 435,360,200**	**$ 426,862,100**

For this valuation, the liabilities were $200,900 more than projected prior to reflecting changes in actuarial accounting assumptions.

The change due to financial assumptions includes changes to the indexing assumption, and the discount rate. Specifically, the increase in the discount rate from 4.68% to 5.11% decreased the liabilities by $26.2 million.

5. SENSITIVITY / MATURITY ANALYSIS

The impact on pension obligations due to changes in the actuarial assumptions depends largely upon the number of years over which benefits will be paid and the exact pattern of the expected benefits cash flow.

The demographics of the group covered by a valuation basis have an impact on the resulting change in pension obligation for a given change in an actuarial assumption.

Different parts of the actuarial valuation are affected differently by a change in a specific actuarial valuation assumption. One of the more significant assumptions is the assumed discount rate.

There are rules of thumb to estimate the effect upon pension obligations due to a change in the assumed discount rate. These rules of thumb can be expressed mathematically by introducing the concept of duration where:

% change in pension obligation = - duration x % change in assumed rate

The approximation is usually quite good for small changes in the assumed discount rate. We will test a negative 0.50% change – the "Estimated Duration" shown below is the effect of a 0.50% decrease in the assumed discount rate.

The following table summarizes the application of the above formula to the plan data as at March 31, 2026.

Pension Benefit Obligation Sensitivity	5.11% Liability	Sensitivity of a Decrease in the Assumed Rate of Return			
		4.61% Liability	$ Change in Liability	% Change in Liability	Estimated Duration
Total Liabilities	**$ 426,862,100**	**$ 457,655,700**	**$ 30,793,600**	**7.2%**	**14.4**

Pension Benefit Obligation Current Service Cost Sensitivity	5.11% Normal Cost	Sensitivity of a Decrease in the Assumed Rate of Return			
		4.61% Normal Cost	$ Change in Normal Cost	% Change in Normal Cost	Estimated Duration
Total Current Service Cost	**$ 13,756,300**	**$ 15,271,400**	**$ 1,515,100**	**11.0%**	**22.0**

The following table shows the estimated future benefits as at March 31, 2026 and March 31, 2025:

	Less than 1 year	Between 1 - 2 years	Between 2 - 5 years	Over 5 years	Total
31-Mar-2026	$ 21,121,400	$ 21,569,300	$ 68,036,000	$ 927,180,300	$ 1,037,907,000
31-Mar-2025	20,097,700	20,447,100	64,075,500	901,135,700	1,005,756,000

APPENDIX I

Membership Data

It is anticipated no amendments will be made to the CSSA.

Liabilities and membership information are calculated for March 31, 2026 based on December 31, 2025 data plus 0.25 years of age and services. Salary is increased by 2.00%, plus merits, from December 31, 2025 due to the wage growth assumptions of 2026.

The data used in the calculations includes the portion of each pension, currently in payment or which is expected to be in payment, that M.P.I. is responsible for.

The data for all the pensions in payment and the accrued pensionable service of all employees participating in the CSSA was provided by the Civil Service Superannuation Board (Superannuation Board).

Information on the pensions and benefits paid by M.P.I. and the employee contributions for 2026 were estimated using the 2025 data obtained from M.P.I., as reported by the Superannuation Board.

Due to time constraints, the data provided by the Superannuation Board was sent without performing their normal annual edit checks. However, the data was checked for missing information, illogical information and reconciled with the prior valuation data. A few minor changes to the data resulted from the checks made.

Membership

The data provided indicated that M.P.I. was the employer of record for the following participants:

	31-Mar-2026			31-Mar-2025		
	Males	Females	Total	Males	Females	Total

Both the pension amounts and cost-of-living (cola) amounts shown in the above table are the total amounts paid.

APPENDIX II

Summary of Plan Provision

The calculations in this Report are based on the Civil Service Superannuation Act (CSSA) as amended to the Measurement Date. The Civil Service Superannuation Board (Board) is responsible for administering the CSSA. The Fund is a contributory defined benefit final pay pension plan that covers eligible employees of the Province of Manitoba and its participating Agencies. The following is a brief summary of the benefits as they existed at the Measurement Date. For a more complete description of the benefits, reference should be made to the CSSA.

1. Effective Date:

The Board and Fund were established under the CSSA in May, 1939.

2. Recent Changes:

Bill 43, The Civil Service Superannuation Amendment Act, received Royal Assent in the Manitoba legislature on October 14, 2020. This Bill changes the provisions of the CSSF pension plan and requires the going concern actuarial valuation assumptions be used in the calculation of the commuted value lump sum calculations.

Contribution rates to the Plan were increased over a four year period (2012 – 2015) until the contribution rates are 2% higher than they were previously. The increased contributions are not intended to provide increased pension benefits, but are necessary to fund existing benefits in the future.

Effective May 31, 2010, the Manitoba Pension Benefits Act was amended to provide immediate vesting (previously 2 years of service required) which has been reflected in this Valuation. Other changes dealing with the payment of commuted values, interest credits, marriage breakups, etc. are not expected to have a material cost to the Plan.

Effective January 1, 2001, the employee contribution rate will be 6.0% of pensionable earnings up to Canada Pension Plan (CPP) maximum pensionable earnings and 7.0% of pensionable earnings above the CPP maximum each year. On pensionable earnings up to the CPP maximum, the matching employer contribution rate remains the same at 5.1%.

Effective September 1, 2000, the CSSA was amended to provide benefit improvements. The most significant benefit improvement was to amend the pension formula to increase the pension benefits payable effective September 1, 2000 from 1.4% to 1.6% of average earnings below the average CPP maximum. There were also changes to buy back provisions respecting pensionable service as well as to other administrative matters. The cost of these benefit improvements will be funded by the Fund and by an increase in employee contribution rates.

Employer Billings: Effective January 1, 1998, pursuant to subsection 22(11) of the CSSA, employer funding for employees of more than one non-matching Agency shall be on a pro-rata basis in accordance with the portion of the amount paid or transferred to the employee in respect of which no employer matching contributions were made effective for events on or after January 1, 1998.

3. Eligibility:

Each full-time employee of the Province of Manitoba or an Agency immediately begins to participate in the Fund.

Each part-time, temporary or term employee must become a participant upon completing 2 consecutive years of employment in which salary exceeds 25% of the Year's Maximum Pensionable Earnings as defined in the Interpretation Section of the Canada Pension Plan. Any such employee has the option to participate in the Fund any time after employment commences.

4. Contributions:

The Fund is financed by contributions required to be made by employees who are participants in the Fund and by participating employers.

Recently, a contribution rate was changed to the Plan to increase the rates by 2.00% of salary (matched by employers).

The rates of required contributions for employees who are participants in the Fund are scheduled as follows:

for pay periods ending:	Contribution rate on salary up to CPP earnings	Contribution rate on salary over CPP earnings
before July 1, 2012	6.00%	7.00%
on or after July 1, 2012 but before 2013	6.50%	7.50%
in 2013	7.00%	8.00%
in 2014	7.50%	8.50%
after 2014	8.00%	9.00%

In accordance with the CSSA, 10.2% of the contributions are allocated to the Indexing Account.

Some of the participating employers are "matching" the contributions made by their employees. The remaining employers are financing their portion of benefits on a pay-as-you-go basis.

5. Pension Formula:

The lifetime pension formula equals:

- 2.00% of a member's best 5-year average pensionable earnings multiplied by pensionable service, minus
- 0.4% of the average Canada Pension Plan's earnings for the same period multiplied by pensionable service since January 1, 1966.

The lifetime pension is subject to an overall maximum of 70% of the average earnings. Some pensions for members retiring prior to age 60 are subject to an early retirement reduction.

6. Retirement:

A participant receives an unreduced pension if such a participant retires on the last day of the calendar year in which the member attains age 71; on or after age 65 with one year of qualifying service; on or after age 60 with 10 years of qualifying service; or on or after age 55 if age plus qualifying service is equal to 80.

A participant is eligible to receive a reduced pension if such a participant retires on or after age 55 having completed 10 years of qualifying service. The 10-year service requirement has been eliminated after May 31, 2010.

The pension is paid for as long as a retired participant lives. If the participant dies before the total of the pension payments is at least equal to the participant's contributions with interest, the excess amount of these contributions over the pension payments made is paid to the participant's beneficiary or estate, whichever is applicable.

If the participant has a spouse at the date of retirement, a joint annuity is payable during the lives of the participant and the spouse. This annuity is reduced by one-third on the death of the participant. This annuity is reduced so that it is actuarially equivalent in value to the pension that would otherwise be payable. This form of payment is also guaranteed so that the total payments are at least equal to the participant's contributions with interest.

This form of payment can be waived if the spouse signs the appropriate waiver form.

7. Termination:

Pension entitlements are protected (vested) for participants immediately (previously 2 or more years of qualifying service required). These entitlements are portable and may be transferred to another pension plan or to a suitable locked-in vehicle. Calculation of a commuted value of pension in respect of service is performed at the time of termination, death, or retirement. A test is made to ensure that the participant's required contributions plus interest (less 10.2% allocated to the Indexing Account) provide no more than 50% of the benefit in respect of eligible service. This test may cause an additional benefit to be paid for such eligible service.

8. Disability:

A participant who has 10 or more years of qualifying service, has not reached age 60 and suffers from a disability may apply for a disability allowance.

If the disability is total and permanent, the participant qualifies immediately for an allowance calculated as a normal retirement pension.

Average annual salaries are determined at the date of disablement.

9. Death:

If a participant dies prior to retirement and has not 10 completed years of qualifying service, the death benefits are equal to the commuted value of the participant's accrued pension. This amount may be paid as an annuity if there is a surviving spouse.

If a participant dies prior to retirement and has completed 10 years of qualifying service, the participant's spouse receives an annuity equal to 60% of the participant's accrued pension. The value of the spouse's annuity must be at least equal to the commuted value of the participant's accrued pension.

If a participant dies prior to retirement and has completed 10 years of qualifying service but there is no surviving spouse, the value of the death benefit must be at least equal to the commuted value of the participant's accrued pension.

If there is no spouse, the commuted value benefit will be paid to the estate. If the participant dies prior to retirement and does not have a spouse, the death benefit is at least the commuted value of the participant's accrued pension.

10. Indexing:

Post-retirement: Increases to pensions in payment of up to 2/3 of the change in the Consumer Price Index (CPI) are granted if there is a sufficient amount available in the Indexing Account and there is an increase in the cost of living. A separate report has been prepared on the Indexing Account. Such amounts are not charged to the basic part of the Fund.

Pre-retirement: Increases to deferred annuities of up to 2/3 of the change in CPI are prefunded on the Valuation Balance Sheet between the date of termination and date of pension commencement. Such amounts are charged to the basic part of the Fund.

M.P.I. Share of Benefit Payments

The benefits expected to be paid are based on the provisions of the CSSA.

M.P.I. is expected to make payments due to:

- pensions in payment where M.P.I. is the last employer of record,
- pensions expected to become payable to former employees who retained the right to a deferred paid-up pension, and
- pensions and other benefits expected to become payable to existing employees as a result of service completed up to the Valuation Date.

At present, M.P.I. is contributing to the CSSF based on the pay-as-you-go method of funding. Under this method, no advance funding payments for the employer share of the cost of pensions are made to the CSSF. M.P.I. has, however, established a reserve against general assets which is being increased to match the increase in its pension liabilities.

Each month, M.P.I. makes payments to the CSSF to reimburse it for:

- a portion (currently about 44%) of each pension payment to retired employees,
- a portion (currently about 44%) of each pension payment to a beneficiary of a deceased pensioner or the survivor of an employee who dies in service,
- a portion of any amounts transferred to other pension plans under reciprocal agreements,
- a portion of any commuted values paid out as a result of employees terminating service or as a result of marriage breakdowns, and
- a portion of the administrative costs of operating the CSSF in respect of M.P.I. records.

Pensions in payment are indexed to 2/3 of the increases in the cost of living, provided sufficient funds exist in the Indexing Account to finance such increases. Former employees who retain a right to a deferred paid-up pension have their pensions indexed during both the deferral period and the payout period.

The employer share of each pension is based on when the pension starts. For pensions which commenced:

(a) prior to March 31, 1961, the employer is responsible for a portion of each increase in that pension and

(b) after March 31, 1961, the employer is responsible for a portion (currently about 44%) of the pension paid.

Pursuant to CSSA subsection 22(11), employer funding for employees who have service with more than one non-matching Agency shall be on a pro rata basis. This proration of the benefits assigned to an employer is based on the proration of service allocated to the employer. This proration assignment was made effective for events on or after January 1, 1998. This may decrease or increase the pension obligations in the absence of CSSA subsection 22(11). However, for enhanced benefits, it is the administrative practice to bill all of the enhanced benefits to the current employer.

APPENDIX III

Summary of Actuarial Accounting Assumptions

		31-Mar-2026	31-Mar-2025
1.	Annual Discount Rate	**5.11%**	4.68%
2.	Annual Rate of Inflation Included in Rate of Return	**2.33% in 2026, 2.17% in 2027, 2.00% thereafter**	1.80% in 2025, 1.91% in 2026, 2.00% thereafter
3.	General Salary Increases (service and merit is separate and age specific)	**2.00%**	3.60% in 2025, 2.00% thereafter
4.	Annual Salary Merit Increases	see TABLE	same
5.	Indexing of Pensions (2/3 of the assumed rate of inflation) (include deferred period)	**1.55% in 2027, 1.45% in 2028, 1.33% thereafter**	1.20% in 2026, 1.27% in 2027, 1.33% thereafter
6.	Annual Increase in Earnings under Canada Pension Plan	same as general salary increases	same
7.	Annual Increase in Maximum Pension under Income Tax Act	**2026: $3,932.22 Indexed ≥ 2027: same as 3. above**	2025: $3,756.67 Indexed ≥ 2026: same as 3. above
8.	Annual Rate of Interest Credited to Employee Contributions	4.00%	same
9.	Annual Rates of Death	CPM 2014 Public Mortality Projected using Scale B	same
10.	Annual Rates of Termination of Service	see TABLE	same
11.	Annual Rates of Disability	see TABLE	same
12.	Annual Rates of Retirement	see TABLE	same

The demographic assumptions have been developed from the accumulated experience of the CSSF. This experience is reflected in the demographic assumptions adopted for the actuarial valuations of the CSSF. Changes to these assumptions were made for the actuarial valuation of the CSSF as at December 31, 2024 (CSSF AVR 2024).

Actuarial Cost Method

Actuarial cost methods are used to recognize and fund pension benefits over the working lifetimes of employees who will ultimately receive a pension benefit from the Plan. Different actuarial cost methods use different approaches to assign the costs of future pension benefits, in all cases the contributions plus investment income should equal or exceed the benefit at retirement plus any associated expenses.

The projected unit credit cost method was used to calculate the liabilities and current service cost presented in this Report. This cost method accounts for salary increases by projecting employee earnings to the assumed retirement date. The benefit is then calculated at the assumed retirement date and redistributed across the employee's career. The liabilities presented in this report only reflect service accrued up to the Measurement Date and the current service cost reflects service that will be earned in the year following the Measurement Date. The sum of these liabilities obtained for all employees in aggregate is the pension benefit obligation.

Annual Discount Rate

The assumed accounting discount rate is based on the Canadian Institute of Actuaries Educational Note & Fiera Capital guidelines that tracks the bond economic environment independently for actuaries (Fiera Capital's CIA Method Accounting Discount Rate Curve as at March 31, 2026).

The discount rate developed based on this methodology is equal to 5.11% for this Report, provided by M.P.I.

General Salary Increases

The salary increase rate is developed based on a building block approach using the following components: inflation, productivity, and merit. The inflation and productivity assumption varies by year as provided by M.P.I.

Age based merit rates are in accordance with the following table, plus allowance for use of accrued vacation in calculation of average annual salary at date of retirement at 3.45%.

Age	Merit
15-19	3.94%
20-24	3.86%
25-29	3.27%
30-34	2.06%
35-39	1.37%
40-44	0.89%
45-49	0.54%
50-54	0.18%
≥ 55	0.00%

Annual Rate of Increase in Yearly Maximum Pensionable Earnings (YMPE)

The YMPE is the maximum salaried covered under the Canadian Pension Plan (CPP) in each year. The benefit in this Plan offsets the CPP benefit by covering a smaller percentage of salary below the YMPE. Therefore, YMPE is used to calculate employee retirement benefits and like the earnings must be projected to the assumed retirement date. For the purposes of this Report, we assume that the annual increase of YMPE is the same as the general salary increases. The YMPE in 2026 and 2025, are equal to $74,600 and $71,300 respectively. These values are indexed at the same rates as the general salary increases.

Rate of CRA Maximum Pension Increase Under the Income Tax Act

The Income Tax Act limits the maximum lifetime annual pension per year of pensionable service that a defined benefit pension plan can provide its members. The defined benefit maximum for 2026 and 2025, are equal to $3,932.22 and $3,756.67 respectively. These values are indexed at the same rates as the general salary increases.

Mortality Assumption

The Canadian Institute of Actuaries published a report in February 2014 named "Canadian Pensioners' Mortality Report." The report discusses Canadian specific mortality for registered pension plans and develops/reviews separate tables based on employment sector. The final report presents base table experience for public sector, private sector, and combined experience for public sector and private sector.

This Report uses the 2014 Canadian Pensioner Public Sector Mortality Table projected with CPM improvement Scale B. Pre-retirement mortality has been used when calculating the liabilities.

Pension Size Adjustment

The Canadian Pensioners Mortality Report includes a section on pension size adjustment factors. Based on these factors and the guidance in the report, a single adjustment factor has been calculated for each gender. The adjustment factor for males and females is equal to 1.050 and 1.050 respectively.

Termination Rates

This Report reflects termination rates based on age and gender. The termination rates are in accordance with the following schedule:

Age	Male	Female
15-19	28.00%	24.00%
20-24	18.00%	23.00%
25-29	11.00%	13.00%
30-34	9.00%	10.00%
35-39	7.00%	8.00%
40-44	7.00%	7.00%
45-49	6.00%	6.00%
50-54	5.00%	6.00%
≥ 55	0.00%	0.00%

Upon termination, 20% of members are assumed to elect a deferred pension under the Plan and 80% of members are assumed to elect a lump sum payment.

Disability Rates

This Report reflects disability rates based on age and gender. The disability rates are in accordance with the following schedule:

Age	Male	Female
≤ 34	0.00%	0.00%
35-39	0.02%	0.03%
40-44	0.05%	0.08%
45-49	0.13%	0.18%
50-54	0.35%	0.44%
55-59	0.66%	0.75%
≥ 60	0.00%	0.00%

Retirement Age Assumption

We note that there are many acceptable retirement age assumptions, and certainly it would be appropriate to use the first subsidized age.

The retirement age assumption should consider:

- the plan design features;
- historical experience; and
- the future outlook for retirement experience.

For a plan that includes material early retirement subsidies, in some cases it may be viewed as inappropriate to use a retirement age assumption that ignores the possibility of members taking advantage of the plan's early retirement options.

For this Report, retirement rates are based on age and gender and are in accordance with the following schedule:

Age	Male	Female
≤ 54	0.00%	0.00%
55	19.00%	20.00%
56	7.00%	9.00%
57	8.00%	9.00%
58	7.00%	8.00%
59	9.00%	10.00%
60	17.00%	17.00%
61	11.00%	13.00%
62	12.00%	14.00%
63	13.00%	15.00%
64	17.00%	16.00%
≥ 65	100.00%	100.00%

Ellement Consulting Group

Ellement Consulting Group is a national provider of integrated Retirement, Benefit, Actuarial, and Investment Consulting, as well as Administration Services for Retirement and Benefit programs, and Retirement and Benefit Software Solutions for internally administered organizations.

Led by a team of experienced professionals from our offices in Vancouver, Edmonton, Winnipeg, and Toronto, who provide valuable insight, stewardship, and customized solutions to our valued client partners.

NOTICE TO READER – This Report is Privileged and Confidential

The primary purpose of this engagement is to prepare a report that provides the financial disclosure information based on our understanding of the International Financial Reporting Standards, and the Canadian Institute of Actuaries Standards of Practice in effect at the date of this report. The list of intended purposes of this report is noted in the Terms of Engagement discussed in Section 2.

Additionally, the intended recipients are noted in the Terms of Engagement and no party other than the parties noted shall rely upon the information presented herein. The recipient shall neither reproduce the report nor parts thereof unless reproduction is necessary for its evaluation and approved by Ellement Consulting Group (Ellement). The recipient agrees to protect the confidentiality of the information contained in this report and shall take all the necessary and reasonable measures to prevent the unauthorized use, disclosure, or distribution of the report or parts thereof. The recipient agrees not to use, amend, adapt, convert, translate, or exploit the contents of this document without written consent from Ellement, nor allow Ellement's competitors or unintended recipients to have access to its contents.

An actuarial valuation report is a snapshot of a plan's estimated financial condition and health at a particular point in time; it does not predict the plan's future financial condition or its ability to pay benefits indefinitely. The actual financial condition and contribution adequacy will be more favourable, or less favourable, depending on actual experience, when the next formal actuarial valuation report is prepared. Further, the financial condition and health may change due to a change in assumptions, a change in the provisions in the plan text, or a change in governing legislation.

Over time, a plan's actual cost will depend on several factors, including but not limited to:

- the level of the benefits the plan provides;
- the number of individuals paid benefits, the age at which their benefit is settled, and the length of time benefits are paid in retirement;
- the amount of expenses incurred for operating and investing; and
- the amount earned on any invested assets.

These amounts and other variables are uncertain and impossible to predict with precision at any particular point in time.

Due to the nature of our engagement, the actuarial assumptions, as described in Appendix III (Summary of Actuarial Accounting Assumptions), have been selected to develop results for a single scenario from the range of possibilities for each valuation basis. Actual experience will differ from the results based on the assumptions from the single scenario illustrated herein. In addition, different assumptions or scenarios may also be within the reasonable range and results based on those assumptions would be different. Differences between actual experience and the selected assumptions may prove to be significant or material. As such, frequent monitoring and periodic valuations are recommended. In any case, the actuary will review the selected assumptions at the next actuarial valuation date and may make adjustments for a number of factors including changes in regulatory requirements, plan experience, and changes in expectations about the future.

Given the intended purpose of the engagement and the uncertainty in the financial condition and health of the plan into the future described above, decisions about benefit reductions or enhancements, benefit security and sustainability, investment policy, funding policy, and benefit policy should be made only after careful consideration of alternative future financial conditions and scenarios, and not solely based on an actuarial valuation report or reports focused on a particular point in time.

APPENDICES

I	Membership Data
II	Summary of Plan Provision
III	Summary of Actuarial Accounting Assumptions

1. ACTUARY'S OPINION

We have been engaged by the management of Manitoba Public Insurance (M.P.I.) to value the benefit obligations for Post-Retirement Health Benefits for Out-Of-Scope Employees as at March 31, 2026 (Measurement Date). The Post-Retirement Health Benefits for Out-Of-Scope Employees Actuarial Valuation Report (Report) has been prepared to provide an estimate of the defined benefit obligation as at March 31, 2026, which will be incorporated into the entity's financial statements under the International Financial Reporting Standards (IFRS).

The guidance for the calculation of the obligations and the preparation of this Report are the Practice-Specific Standards for Post-Employment Benefit Plans (Section 6000) of the Canadian Institute of Actuaries (CIA) and the IFRS – International Accounting Standards 19 (IAS 19) Post-Employment Benefits. The calculations have been made in accordance with our understanding of these standards and applicable laws and regulations.

The defined benefit obligation is based on the assumptions and methods outlined in Appendix III. The discount rate utilized to determine the results was developed and provided by M.P.I. using Fiera Capital's CIA Method Discount Rate Curve as at March 31, 2026. The assumptions used in this Report are considered to be managements best estimate assumptions selected for accounting purposes. The assumptions will continue to be monitored and updated as appropriate.

In our opinion:

- The membership data on which the valuation is based are sufficient and reliable for the purpose of the valuation;
- The assumptions and methods are appropriate for the purpose of the valuation;
- The calculations have been made in accordance with my understanding of the requirements of the International Financial Reporting Standards – IAS 19 Post-Employment Benefits; and
- This Report has been prepared, and our opinions given, in accordance with accepted actuarial practice in Canada.

Nevertheless, emerging experience differing from the assumptions will result in gains or losses that will be revealed in subsequent actuarial valuations, and we recommend that the next report be prepared no later than March 31, 2027.

Respectfully submitted,

ELLEMENT CONSULTING GROUP

Kyle Meilleur, FSA, FCIA
Winnipeg, Manitoba
May 15, 2026

2. TERMS OF ENGAGEMENT

We are pleased to present the results of the actuarial valuation as of March 31, 2026 (Plan), for the Manitoba Public Insurance (M.P.I.). Further to the Notice to Reader found at the beginning of the report, we note the following terms of engagement and other important information.

Purpose

Ellement has been engaged by the management of M.P.I. to perform an actuarial valuation of the Plan as of March 31, 2026 for accounting purposes, in accordance with the International Financial Reporting Standards and applicable Standards of Practice developed by the Canadian Institute of Actuaries. The previous valuation, as of March 31, 2025, was also performed by Ellement.

Specifically, the purpose of this Report is to:

- Indicate the liabilities (Defined Benefit Obligation) which M.P.I. has as at March 31, 2026, as a result of the provision of Post-Retirement Health Benefits to out-of-scope employees; and
- Provide the change in Defined Benefit Obligation for the period beginning April 1, 2025 and ending March 31, 2026.

We have not been engaged to calculate the defined benefit cost or the change in the fair value of assets. The results of this Report may not be appropriate for any other purpose, other than the purposes listed above.

These liabilities are an estimate of the present value of the future payments which M.P.I. is expected to pay to provide Post-Retirement Health Benefits to out-of-scope employees after their retirement. The Post-Retirement Health Benefits include Ambulance/Hospital Benefits, Extended Health Benefits, Vision Care Benefits and Dental Benefits. M.P.I. pays premiums to Blue Cross to provide these benefits.

A summary of the Post Retirement Health Benefits is provided in Appendix II.

The liabilities have been computed on an accounting basis. This basis contemplates the continued existence of the Post-Retirement Health Benefits and the funding arrangements for the benefits.

The analysis and recommendations presented in this Report is not intended to be a legal opinion and Ellement is not a law firm. If you require a legal opinion on the material reviewed in this Report, we recommend securing the advice of legal counsel.

Intended Recipients and Users

The intended recipients and users of this Report include the following:

- Manitoba Public Insurance; and
- Auditor.

Subsequent Events

Emerging experience differing from the assumptions after March 31, 2026, will result in gains or losses, which will be revealed in subsequent valuations.

Further, any impacts to the demographics of the Plan's membership, including increased retirement rates, morbidity, and mortality, will be monitored. As with other experience, the financial impact of this event, as it applies to the Plan, will be reflected in future actuarial valuation reports.

We are not aware of any other matters or subsequent events occurring since the completion of this Report which would materially affect the financial position of the Plan as at March 31, 2026.

3. VALUATION RESULTS

The following table shows the benefit liabilities which M.P.I. has as at March 31, 2026 with comparable results as at March 31, 2025. This information is utilized in the preparation of the accounting disclosure information.

The benefit liabilities and current service cost has been determined based on the membership data (Appendix I), benefit plan provisions (Appendix II), and the methodology and assumptions (Appendix III). Experience differing from the assumptions will result in gains or losses which will be revealed in the future.

	31-Mar-2025	31-Mar-2026
Benefit Liabilities		
- Current Employees	$ 8,775,000	$ 8,694,100
- Retired Employees	11,162,000	11,590,700
Total Liabilities	**$ 19,937,000**	**$ 20,284,800**

	Cost Per Member	Fiscal 2026	Cost Per Member	Fiscal 2027
Benefit Current Service Cost				
Total Current Service Cost	$ 1,765	$ 624,800	$ 1,671	$ 591,700

Key Assumptions		
Discount Rate - End of Period	4.68%	5.11%
Increase in Post-Retirement Premium Rates	4.20%	4.30%
Premium Rates (Family / Single)	$185.58 / $94.04	$195.60 / $99.07

The economic assumptions have been chosen by management of M.P.I. The specific choices are made after a review with internal staff and the actuary. The existing economic assumptions were confirmed to us on January 22, 2026, and subsequently on April 2, 2026, by management after management's review of the assumptions.

4. ACCOUNTING DISCLOSURE INFORMATION

The accounting disclosure information has been prepared with reference to IFRS International Accounting Standards 19 – Post Employment Benefits as at March 31, 2026, with comparative results as at March 31, 2025. The disclosure information provides the Change in Defined Benefit Obligation only. We have not been engaged to provide the Change in Fair Value of Plan Assets or the Defined Benefit Cost.

	April 1, 2024 to March 31, 2025	April 1, 2025 to March 31, 2026
Change in Defined Benefit Obligation		
Defined Benefit Obligation - Beginning of Period	18,616,900	19,937,000
Current Service Cost	609,800	624,800
Interest Expense	915,300	935,300
Benefit Payments	(483,700)	(530,500)
Defined Benefit Obligation - Projected	19,658,300	20,966,600
Remeasurements		
Change due to Demographic Assumptions	-	-
Change due to Financial Assumptions	718,100	(1,144,400)
Change due to Experience	(439,400)	462,600
Defined Benefit Obligation - End of Period	**19,937,000**	**20,284,800**

For this valuation, the liabilities were $462,600 more than projected prior to reflecting changes in actuarial accounting assumptions.

The change due to financial assumptions includes changes to the health cost inflation assumption, and the discount rate. Specifically, the increase in the discount rate from 4.68% to 5.11% decreased the liabilities by $1,465,300.

5. SENSITIVITY / MATURITY ANALYSIS

The impact on obligations due to changes in the actuarial assumptions depends largely upon the number of years over which benefits will be paid and the exact pattern of the expected benefits cash flow.

The demographics of the group covered by a valuation basis have an impact on the resulting change in obligation for a given change in an actuarial assumption.

Different parts of the actuarial valuation are affected differently by a change in a specific actuarial valuation assumption. One of the more significant assumptions is the assumed discount rate.

There are rules of thumb to estimate the effect upon obligations due to a change in the assumed discount rate. These rules of thumb can be expressed mathematically by introducing the concept of duration where:

% change in obligation = - duration x % change in assumed rate

The approximation is usually quite good for small changes in the assumed discount rate. We will test a negative 0.50% change – the "Estimated Duration" shown below is the effect of a 0.50% decrease in the assumed discount rate.

The following table summarizes the application of the above formula to the plan data as at March 31, 2026.

Benefit Obligation Sensitivity	4.71% Discount Rate	4.21% Discount Rate	% Change in Liability	Estimated Duration
Total Liabilities	$ 20,284,800	$ 22,045,700	8.7%	17.4

Benefit Obligation Current Service Cost Sensitivity	4.71% Discount Rate	4.21% Discount Rate	% Change in Liability	Estimated Duration
Total Current Service Cost	$ 591,700	$ 676,200	14.3%	28.6

The following table shows the estimated future benefits as at March 31, 2026 and March 31, 2025:

	Less than 1 year	Between 1 - 2 years	Between 2 - 5 years	Over 5 years	Total
31-Mar-2026	$ 639,100	$ 680,200	$ 2,334,000	$ 54,104,000	$ 57,757,300
31-Mar-2025	582,900	623,300	2,134,300	49,207,600	52,548,100

Actuarial Valuation Report as at March 31, 2026
Liabilities for Post-Retirement Health Benefits for
Out-of-Scope Employees of Manitoba Public Insurance

APPENDIX I

MEMBERSHIP DATA

Liabilities and membership information are calculated for March 31, 2026 based on December 31, 2025 data.

The data used in the calculations includes the benefits, currently in payment or which is expected to be in payment, that M.P.I. is responsible for.

Information on each out-of-scope employee covered by the Post-Retirement Health Benefits was obtained from M.P.I. The data was checked for missing information, illogical information and reconciled with the prior valuation data. A few minor changes to the data resulted from the checks made. No data assumptions were used.

Membership Reconciliation

A reconciliation of the number of member records used in the calculations is shown below.

	EMPLOYEES			PENSIONERS & SURVIVORS		
	Males	Females	Total	Males	Females	Total
Participants as at 31-Mar-2025	201	203	404	192	87	279
New employees	27	38	65	-	-	-
Retirements	(6)	(7)	(13)	6	7	13

Total/Avg	**419**	**45.4**	**287**	**69.8**

APPENDIX II

SUMMARY OF PLAN PROVISION

AMBULANCE/HOSPITAL BENEFITS

The Plan provides for complete coverage for Ambulance and Hospital Semi-Private charges in Manitoba.

Full payment for reasonable and customary charges for ambulance services provided within the province, and payment of up to $250 per trip, (based on provincial rates) for ambulance services provided elsewhere.

Full payment for the charge of a semi-private room in a Manitoba hospital if the hospital does not normally provide the semi-private room, without charge to any patient.

EXTENDED HEALTH CARE BENEFITS

Prescription drugs are reimbursed at 70%.

Other necessary health expenses are reimbursed at 80%. Various limits and benefit periods apply for these other health expenses.

An annual deductible of $20 per person to a maximum of $40 applies.

Other necessary health expenses include expenses incurred for: travel health care, dental treatment due to accident, athletic therapy, paramedical practitioner, physiotherapy, chiropody, clinical psychology, nutritional counseling, private duty nursing, prosthetic appliances and miscellany, wigs, rental or purchase of medical equipment and cardiac rehabilitation.

VISION CARE BENEFITS

Eligible eye care expenses are reimbursed at 100% up to $150 per person per 24-month benefit period.

Eligible eye care expenses include the cost of eyeglasses, replacement glasses, repairs to existing glasses and contact lenses which are prescribed as a result of an eye examination by a licensed medical doctor, ophthalmologist or optometrist. Various limits and exclusions apply.

DENTAL BENEFITS

Basic Dental Services are reimbursed at 80%.

Major Dental Services are reimbursed at 50%.

Reimbursement for dental services is subject to an annual maximum of $800.

If the cost of the treatment is expected to exceed $500, then pre-treatment authorization is required.

Benefit payments are based on the Dental Fee Guide established by the Manitoba Dental Association.

Various exclusions apply. The exclusions depend on the type of dental treatment or the conditions giving rise to the charges.

SURVIVOR BENEFITS

The surviving spouse of a retired member receives the benefits under the Plan for up to 24 months following the death of the member.

M.P.I. share of Premiums

It has been anticipated that M.P.I. will continue to pay 100% of the premiums (benefits) required to finance the Post-Retirement Health Benefits for out-of-scope employees.

Actuarial Valuation Report as at March 31, 2026
Liabilities for Post-Retirement Health Benefits for
Out-of-Scope Employees of Manitoba Public Insurance

APPENDIX III

SUMMARY OF ACTUARIAL ACCOUNTING ASSUMPTIONS

	31-Mar-2026	31-Mar-2025
1. Annual Discount Rate:	**5.11%**	4.68%
2. Post-Retirement Premium Rates (at valuation date):		
- increase in post-retirement premium rates	**4.30%**	4.20%
- family rate per month	**$195.60**	$185.58
- single rate per month	**$99.07**	$94.04
3. Marital Status at Retirement:	same as at Valuation Date	same
4. Annual Rates of Death:	CPM 2014 Public Mortality Projected using Scale B	same
5. Annual Rates of Termination of Service:	see TABLE	same
6. Annual Rates of Retirement:	see TABLE	same

The demographic assumptions used in this Report have been adopted from the Manitoba Public Insurance Pension Benefit Obligations Actuarial Valuation Report as at March 31, 2026.

Actuarial Cost Method

Actuarial cost methods are used to recognize and benefits over the working lifetimes of employees who will ultimately receive a benefit from the Plan. Different actuarial cost methods use different approaches to assign the costs of future benefits, in all cases the premiums plus investment income should equal or exceed the benefit at retirement plus any associated expenses.

The projected benefit method prorated on service has been used to determine the accrued liabilities and the current service cost applicable to each year after the Measurement Date. For each out-of-scope employee, the present value of the expected post-retirement premiums (benefits) was determined. The proportion of this amount held as the accrued liability is equal to the ratio of the completed service as at the Measurement Date divided by the total service expected to be completed at the date of retirement.

For each retired out-of-scope employee, the present value of the expected post-retirement premiums (benefits) was determined. This full amount is held as the accrued liability.

Annual Discount Rate

The assumed accounting discount rate is based on the Canadian Institute of Actuaries Educational Note & Fiera Capital guidelines that tracks the bond economic environment independently for actuaries (Fiera Capital's CIA Method Accounting Discount Rate Curve as at March 31, 2026).

The discount rate developed based on this methodology is equal to 5.11% for this Report, provided by M.P.I.

Mortality Assumption

The Canadian Institute of Actuaries published a report in February 2014 named "Canadian Pensioners' Mortality Report." The report discusses Canadian specific mortality for registered pension plans and develops/reviews separate tables based on employment sector. The final report presents base table experience for public sector, private sector, and combined experience for public sector and private sector.

This Report uses the 2014 Canadian Pensioner Public Sector Mortality Table projected with CPM improvement Scale B. Pre-retirement mortality has been used when calculating the liabilities.

Pension Size Adjustment

The Canadian Pensioners Mortality Report includes a section on pension size adjustment factors. Based on these factors and the guidance in the report, a single adjustment factor has been calculated for each gender. The adjustment factor for males and females is equal to 1.050 and 1.050 respectively.

Termination Rates

This Report reflects termination rates based on age and gender. The termination rates are in accordance with the following schedule:

Age	Male	Female
15-19	28.00%	24.00%
20-24	18.00%	23.00%
25-29	11.00%	13.00%
30-34	9.00%	10.00%
35-39	7.00%	8.00%
40-44	7.00%	7.00%
45-49	6.00%	6.00%
50-54	5.00%	6.00%
≥ 55	0.00%	0.00%

Retirement Age Assumption

For this Report, retirement rates are based on age and gender and are in accordance with the following schedule:

Age	Male	Female
≤ 54	0.00%	0.00%
55	19.00%	20.00%
56	7.00%	9.00%
57	8.00%	9.00%
58	7.00%	8.00%
59	9.00%	10.00%
60	17.00%	17.00%
61	11.00%	13.00%
62	12.00%	14.00%
63	13.00%	15.00%
64	17.00%	16.00%
≥ 65	100.00%	100.00%

Ellement Consulting Group

Ellement Consulting Group is a national provider of integrated Retirement, Benefit, Actuarial, and Investment Consulting, as well as Administration Services for Retirement and Benefit programs, and Retirement and Benefit Software Solutions for internally administered organizations.

Led by a team of experienced professionals from our offices in Vancouver, Edmonton, Winnipeg, and Toronto, who provide valuable insight, stewardship, and customized solutions to our valued client partners.

Liabilities for Post-Retirement Health Benefits for In-Scope Employees

IAS 19
Actuarial Valuation Report
as at March 31, 2026

May 2026

NOTICE TO READER – This Report is Privileged and Confidential

The primary purpose of this engagement is to prepare a report that provides the financial disclosure information based on our understanding of the International Financial Reporting Standards, and the Canadian Institute of Actuaries Standards of Practice in effect at the date of this report. The list of intended purposes of this report is noted in the Terms of Engagement discussed in Section 2.

Additionally, the intended recipients are noted in the Terms of Engagement and no party other than the parties noted shall rely upon the information presented herein. The recipient shall neither reproduce the report nor parts thereof unless reproduction is necessary for its evaluation and approved by Ellement Consulting Group (Ellement). The recipient agrees to protect the confidentiality of the information contained in this report and shall take all the necessary and reasonable measures to prevent the unauthorized use, disclosure, or distribution of the report or parts thereof. The recipient agrees not to use, amend, adapt, convert, translate, or exploit the contents of this document without written consent from Ellement, nor allow Ellement's competitors or unintended recipients to have access to its contents.

An actuarial valuation report is a snapshot of a plan's estimated financial condition and health at a particular point in time; it does not predict the plan's future financial condition or its ability to pay benefits indefinitely. The actual financial condition and contribution adequacy will be more favourable, or less favourable, depending on actual experience, when the next formal actuarial valuation report is prepared. Further, the financial condition and health may change due to a change in assumptions, a change in the provisions in the plan text, or a change in governing legislation.

Over time, a plan's actual cost will depend on several factors, including but not limited to:

- the level of the benefits the plan provides;
- the number of individuals paid benefits, the age at which their benefit is settled, and the length of time benefits are paid in retirement;
- the amount of expenses incurred for operating and investing; and
- the amount earned on any invested assets.

These amounts and other variables are uncertain and impossible to predict with precision at any particular point in time.

Due to the nature of our engagement, the actuarial assumptions, as described in Appendix III (Summary of Actuarial Accounting Assumptions), have been selected to develop results for a single scenario from the range of possibilities for each valuation basis. Actual experience will differ from the results based on the assumptions from the single scenario illustrated herein. In addition, different assumptions or scenarios may also be within the reasonable range and results based on those assumptions would be different. Differences between actual experience and the selected assumptions may prove to be significant or material. As such, frequent monitoring and periodic valuations are recommended. In any case, the actuary will review the selected assumptions at the next actuarial valuation date and may make adjustments for a number of factors including changes in regulatory requirements, plan experience, and changes in expectations about the future.

Given the intended purpose of the engagement and the uncertainty in the financial condition and health of the plan into the future described above, decisions about benefit reductions or enhancements, benefit security and sustainability, investment policy, funding policy, and benefit policy should be made only after careful consideration of alternative future financial conditions and scenarios, and not solely based on an actuarial valuation report or reports focused on a particular point in time.

APPENDICES

I	Membership Data
II	Summary of Plan Provisions
III	Summary of Actuarial Accounting Assumptions

June 24, 2026

1. ACTUARY'S OPINION

We have been engaged by the management of Manitoba Public Insurance (M.P.I.) to value the benefit obligations for Post-Retirement Health Benefits for In-Scope Employees as at March 31, 2026 (Measurement Date). The Post-Retirement Health Benefits for In-Scope Employees Actuarial Valuation Report (Report) has been prepared to provide an estimate of the defined benefit obligation as at March 31, 2026, which will be incorporated into the entity's financial statements under the International Financial Reporting Standards (IFRS).

The guidance for the calculation of the obligations and the preparation of this Report are the Practice-Specific Standards for Post-Employment Benefit Plans (Section 6000) of the Canadian Institute of Actuaries (CIA) and the IFRS – International Accounting Standards 19 (IAS 19) Post-Employment Benefits. The calculations have been made in accordance with our understanding of these standards and applicable laws and regulations.

The defined benefit obligation is based on the assumptions and methods outlined in Appendix III. The discount rate utilized to determine the results was developed and provided by M.P.I. using Fiera Capital's CIA Method Discount Rate Curve as at March 31, 2026. The assumptions used in this Report are considered to be managements best estimate assumptions selected for accounting purposes. The assumptions will continue to be monitored and updated as appropriate.

In our opinion:

- The membership data on which the valuation is based are sufficient and reliable for the purpose of the valuation;
- The assumptions and methods are appropriate for the purpose of the valuation;
- The calculations have been made in accordance with my understanding of the requirements of the International Financial Reporting Standards – IAS 19 Post-Employment Benefits; and
- This Report has been prepared, and our opinions given, in accordance with accepted actuarial practice in Canada.

Nevertheless, emerging experience differing from the assumptions will result in gains or losses that will be revealed in subsequent actuarial valuations, and we recommend that the next report be prepared no later than March 31, 2027.

Respectfully submitted,

ELLEMENT CONSULTING GROUP

Kyle Meilleur, FSA, FCIA
Winnipeg, Manitoba
May 15, 2026

2. TERMS OF ENGAGEMENT

We are pleased to present the results of the actuarial valuation as of March 31, 2026 (Plan), for the Manitoba Public Insurance (M.P.I.). Further to the Notice to Reader found at the beginning of the report, we note the following terms of engagement and other important information.

Purpose

Ellement has been engaged by the management of M.P.I. to perform an actuarial valuation of the Plan as of March 31, 2026 for accounting purposes, in accordance with the International Financial Reporting Standards and applicable Standards of Practice developed by the Canadian Institute of Actuaries. The previous valuation, as of March 31, 2025, was also performed by Ellement.

Specifically, the purpose of this Report is to:

- Indicate the liabilities (Defined Benefit Obligation) which M.P.I. has as at March 31, 2026, as a result of the provision of Post-Retirement Health Benefits to in-scope employees; and
- Provide the change in Defined Benefit Obligation for the period beginning April 1, 2025 and ending March 31, 2026.

We have not been engaged to calculate the defined benefit cost or the change in the fair value of assets. The results of this Report may not be appropriate for any other purpose, other than the purposes listed above.

These liabilities are an estimate of the present value of the future payments which M.P.I. is expected to pay to provide Post-Retirement Health Benefits to in-scope employees after their retirement. The Post-Retirement Health Benefits include eligible health benefits.

A summary of the Post Retirement Health Benefits is provided in Appendix II.

The liabilities have been computed on an accounting basis. This basis contemplates the continued existence of the Post-Retirement Health Benefits and the funding arrangements for the benefits.

The analysis and recommendations presented in this Report is not intended to be a legal opinion and Ellement is not a law firm. If you require a legal opinion on the material reviewed in this Report, we recommend securing the advice of legal counsel.

Intended Recipients and Users

The intended recipients and users of this Report include the following:

- Manitoba Public Insurance; and
- Auditor.

Subsequent Events

Emerging experience differing from the assumptions after March 31, 2026, will result in gains or losses, which will be revealed in subsequent valuations.

Further, any impacts to the demographics of the Plan's membership, including increased retirement rates, morbidity, and mortality, will be monitored. As with other experience, the financial impact of this event, as it applies to the Plan, will be reflected in future actuarial valuation reports.

We are not aware of any other matters or subsequent events occurring since the completion of this Report which would materially affect the financial position of the Plan as at March 31, 2026.

3. VALUATION RESULTS

The following table shows the benefit liabilities which M.P.I. has as at March 31, 2026 with comparable results as at March 31, 2025. This information is utilized in the preparation of the accounting disclosure information.

The benefit liabilities and current service cost has been determined based on the membership data (Appendix I), benefit plan provisions (Appendix II), and the methodology and assumptions (Appendix III). Experience differing from the assumptions will result in gains or losses which will be revealed in the future.

	31-Mar-2025	31-Mar-2026
Benefit Liabilities		
- Current Employees	$ 2,079,700	$ 1,925,400
- Retired Employees	2,492,100	2,456,300
Total Liabilities	**$ 4,571,800**	**$ 4,381,700**

	Cost Per Member	Fiscal 2026	Cost Per Member	Fiscal 2027
Benefit Current Service Cost				
Total Current Service Cost	$ 73	$ 107,500	$ 63	$ 92,800
Key Assumptions				
Discount Rate - End of Period		4.68%		5.11%
Increase in Post-Retirement Benefit Rates		vary by year / 2.00%		vary by year / 2.00%
Benefit Per Year (Family / Single)		$350 / $350		$350 / $350

The economic assumptions have been chosen by management of M.P.I. The specific choices are made after a review with internal staff and the actuary. The existing economic assumptions were confirmed to us on January 22, 2026, and subsequently on April 2, 2026, by management after management's review of the assumptions.

4. ACCOUNTING DISCLOSURE INFORMATION

The accounting disclosure information has been prepared with reference to IFRS International Accounting Standards 19 – Post Employment Benefits as at March 31, 2026, with comparative results as at March 31, 2025. The disclosure information provides the Change in Defined Benefit Obligation only. We have not been engaged to provide the Change in Fair Value of Plan Assets or the Defined Benefit Cost.

	April 1, 2024 to March 31, 2025	April 1, 2025 to March 31, 2026
Change in Defined Benefit Obligation		
Defined Benefit Obligation - Beginning of Period	4,380,300	4,571,800
Current Service Cost	95,500	107,500
Interest Expense	212,300	211,800
Benefit Payments	(191,600)	(201,600)
Defined Benefit Obligation - Projected	4,496,500	4,689,500
Remeasurements		
Change due to Demographic Assumptions	-	-
Change due to Financial Assumptions	134,400	(267,600)
Change due to Experience	(59,100)	(40,200)
Defined Benefit Obligation - End of Period	**4,571,800**	**4,381,700**

For this valuation, the liabilities were $40,200 less than projected prior to reflecting changes in actuarial accounting assumptions.

The change due to financial assumptions includes changes to the health cost inflation assumption, and the discount rate. Specially, the increase in the discount rate from 4.68% to 5.11% decreased the liabilities by $274,600.

5. SENSITIVITY / MATURITY ANALYSIS

The impact on obligations due to changes in the actuarial assumptions depends largely upon the number of years over which benefits will be paid and the exact pattern of the expected benefits cash flow.

The demographics of the group covered by a valuation basis have an impact on the resulting change in obligation for a given change in an actuarial assumption.

Different parts of the actuarial valuation are affected differently by a change in a specific actuarial valuation assumption. One of the more significant assumptions is the assumed discount rate.

There are rules of thumb to estimate the effect upon obligations due to a change in the assumed discount rate. These rules of thumb can be expressed mathematically by introducing the concept of duration where:

% change in obligation = - duration x % change in assumed rate

The approximation is usually quite good for small changes in the assumed discount rate. We will test a negative 0.50% change – the "Estimated Duration" shown below is the effect of a 0.50% decrease in the assumed discount rate.

The following table summarizes the application of the above formula to the plan data as at March 31, 2026.

Benefit Obligation Sensitivity	5.11% Discount Rate	4.61% Discount Rate	% Change in Liability	Estimated Duration
Total Liabilities	$ 4,381,700	$ 4,704,200	7.4%	14.7

Benefit Obligation Current Service Cost Sensitivity	5.11% Discount Rate	4.61% Discount Rate	% Change in Liability	Estimated Duration
Total Current Service Cost	$ 92,800	$ 105,000	13.1%	26.3

The following table shows the estimated future benefits as at March 31, 2026 and March 31, 2025:

	Less than 1 year	Between 1 - 2 years	Between 2 - 5 years	Over 5 years	Total
31-Mar-2026	$ 176,200	$ 188,200	$ 634,700	$ 9,692,100	$ 10,691,200
31-Mar-2025	168,600	180,500	611,700	9,576,200	10,537,000

APPENDIX I

MEMBERSHIP DATA

Liabilities and membership information are calculated for March 31, 2026 based on December 31, 2025 data.

The data used in the calculations includes the benefits, currently in payment or which is expected to be in payment, that M.P.I. is responsible for.

Information on each in-scope employee covered by the Post-Retirement Health Benefits was obtained from M.P.I. The data was checked for missing information, illogical information and reconciled with the prior valuation data. A few minor changes to the data resulted from the checks made. No data assumptions were used.

Membership Reconciliation

A reconciliation of the number of member records used in the calculations is shown below.

	EMPLOYEES			PENSIONERS & SURVIVORS		
	Males	Females	Total	Males	Females	Total
Participants as at 31-Mar-2025	703	1,047	1,750	282	407	689

APPENDIX II

SUMMARY OF PLAN PROVISION

An annual post-retirement health benefits spending account is available, in the amount of $200, for eligible in-scope employees who retired after September 27, 2008.

Effective January 1, 2015, all eligible in-scope retirees who retired after September 27, 2008 had their post-retirement health benefits spending account increased from $200 to $350.

M.P.I. share of Premiums

It has been anticipated that M.P.I. will continue to pay 100% of the premiums (benefits) required to finance the Post-Retirement Health Benefits for in-scope employees.

APPENDIX III

SUMMARY OF ACTUARIAL ACCOUNTING ASSUMPTIONS

	31-Mar-2026	31-Mar-2025
1. Annual Discount Rate:	**5.11%**	4.68%
2. Post-Retirement Benefit Rates (as at valuation date):		
- increase in post-retirement benefit rates	**2.33% in 2026, 2.17% in 2027, 2.00% thereafter**	1.80% in 2025, 1.91% in 2026, 2.00% thereafter
- family rate (benefit) per year	$350	same
- single rate (benefit) per year	$350	same
3. Marital Status at Retirement:	same as at Valuation Date	same
4. Annual Rates of Death:	CPM 2014 Public Mortality Projected using Scale B	same
5. Annual Rates of Termination of Service:	see TABLE	same
6. Annual Rates of Retirement:	see TABLE	same
7. Portion of Health Spending Account Expected to be Utilized:	65%	same

The demographic assumptions used in this Report have been adopted from the Manitoba Public Insurance Pension Benefit Obligations Actuarial Valuation Report as at March 31, 2026.

Actuarial Cost Method

Actuarial cost methods are used to recognize and benefits over the working lifetimes of employees who will ultimately receive a benefit from the Plan. Different actuarial cost methods use different approaches to assign the costs of future benefits, in all cases the premiums plus investment income should equal or exceed the benefit at retirement plus any associated expenses.

The projected benefit method prorated on service has been used to determine the accrued liabilities and the current service cost applicable to each year after the Measurement Date. For each in-scope employee, the present value of the expected post-retirement premiums (benefits) was determined. The proportion of this amount held as the accrued liability is equal to the ratio of the completed service as at the Measurement Date divided by the total service expected to be completed at the date of retirement.

For each retired in-scope employee, the present value of the expected post-retirement premiums (benefits) was determined. This full amount is held as the accrued liability.

Annual Discount Rate

The assumed accounting discount rate is based on the Canadian Institute of Actuaries Educational Note & Fiera Capital guidelines that tracks the bond economic environment independently for actuaries (Fiera Capital's CIA Method Accounting Discount Rate Curve as at March 31, 2026).

The discount rate developed based on this methodology is equal to 5.11% for this Report, provided by M.P.I.

Mortality Assumption

The Canadian Institute of Actuaries published a report in February 2014 named "Canadian Pensioners' Mortality Report." The report discusses Canadian specific mortality for registered pension plans and develops/reviews separate tables based on employment sector. The final report presents base table experience for public sector, private sector, and combined experience for public sector and private sector.

This Report uses the 2014 Canadian Pensioner Public Sector Mortality Table projected with CPM improvement Scale B. Pre-retirement mortality has been used when calculating the liabilities.

Pension Size Adjustment

The Canadian Pensioners Mortality Report includes a section on pension size adjustment factors. Based on these factors and the guidance in the report, a single adjustment factor has been calculated for each gender. The adjustment factor for males and females is equal to 1.050 and 1.050 respectively.

Termination Rates

This Report reflects termination rates based on age and gender. The termination rates are in accordance with the following schedule:

Age	Male	Female
15-19	28.00%	24.00%
20-24	18.00%	23.00%
25-29	11.00%	13.00%
30-34	9.00%	10.00%
35-39	7.00%	8.00%
40-44	7.00%	7.00%
45-49	6.00%	6.00%
50-54	5.00%	6.00%
≥ 55	0.00%	0.00%

Retirement Age Assumption

For this Report, retirement rates are based on age and gender and are in accordance with the following schedule:

Age	Male	Female
≤ 54	0.00%	0.00%
55	19.00%	20.00%
56	7.00%	9.00%
57	8.00%	9.00%
58	7.00%	8.00%
59	9.00%	10.00%
60	17.00%	17.00%
61	11.00%	13.00%
62	12.00%	14.00%
63	13.00%	15.00%
64	17.00%	16.00%
≥ 65	100.00%	100.00%

Ellement Consulting Group

Ellement Consulting Group is a national provider of integrated Retirement, Benefit, Actuarial, and Investment Consulting, as well as Administration Services for Retirement and Benefit programs, and Retirement and Benefit Software Solutions for internally administered organizations.

MANITOBA PUBLIC INSURANCE SOCIÉTÉ D'ASSURANCE PUBLIQUE DU MANITOBA

SCHEDULE OF COMPENSATION IN ACCORDANCE WITH THE PUBLIC SECTOR COMPENSATION DISCLOSURE ACT TOGETHER WITH AUDITOR'S REPORT

FOR THE CALENDAR YEAR ENDED DECEMBER 31, 2025

COMPENSATION DISCLOSURE FOR 2025

The Public Sector Compensation Disclosure Act requires Crown Corporations to disclose to the public the total compensation of the Chairperson of the Board, officers and employees who earned $85,000 or more in a year as well as the aggregate compensation received by the Board of Directors. In compliance with the Act, Manitoba Public Insurance has prepared this disclosure schedule for the year ended December 31, 2025.

For the 2025 income tax year, Manitoba Public Insurance issued 2,417 T4 slips to full-time, part-time and temporary employees and officers. Manitoba Public Insurance had a monthly average of 2,038 employees during 2025. This schedule lists the compensation paid to 815 officers and employees in managerial, technical and professional support positions.

The schedule lists the employees and officers in alphabetical order, along with their position and total compensation. In each case, the most recent position that the employee or officer held during 2025 is given. Total compensation includes the officer's and employee's regular salary, taxable benefits, retiring allowances, retroactive pay, vacation pay and severance pay.

Independent auditor's report

To the Board of Directors of Manitoba Public Insurance Corporation

Our opinion

In our opinion, the accompanying financial information of Manitoba Public Insurance Corporation (the Corporation) for the calendar year ended December 31, 2025 is prepared, in all material respects, in accordance with the basis of accounting described in the note to the financial information.

What we have audited

The Corporation's financial information comprises the schedule of compensation in accordance with the Public Sector Compensation Disclosure Act of Manitoba for the calendar year ended December 31, 2025 and the note to the financial information, comprising material accounting policy information and other explanatory information.

Basis for opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial information* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Corporation in accordance with the ethical requirements that are relevant to our audit of the financial information in Canada. We have fulfilled our other ethical responsibilities in accordance with these requirements.

PricewaterhouseCoopers LLP
Richardson Building, 1 Lombard Place, Suite 2300
Winnipeg, Manitoba, Canada R3B 0X6
T.: +1 204 926 2400, F.: +1 204 944 1020
Fax to mail: ca_winnipeg_main_fax@pwc.com

"PwC" refers to PricewaterhouseCoopers LLP, an Ontario limited liability partnership.

Emphasis of matter – basis of accounting and restriction on use

We draw attention to the note to the financial information, which describes the basis of accounting. The financial information is prepared to comply with the requirements of the Public Sector Compensation Disclosure Act of Manitoba. As a result, the financial information may not be suitable for another purpose. Our report is intended solely for the Corporation. We neither assume nor accept any responsibility or liability to any other third party in respect of this report. Our opinion is not modified in respect of this matter.

Responsibilities of management and those charged with governance for the financial information

Management is responsible for the preparation of the financial information in accordance with the basis of accounting described in the note to the financial information, and for such internal control as management determines is necessary to enable the preparation of financial information that is free from material misstatement, whether due to fraud or error.

In preparing the financial information, management is responsible for assessing the Corporation's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Corporation or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Corporation's financial reporting process.

Auditor's responsibilities for the audit of the financial information

Our objectives are to obtain reasonable assurance about whether the financial information as a whole is free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of this financial information.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial information, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Corporation's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates, if any, and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Corporation's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial information or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Corporation to cease to continue as a going concern.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

NOTE TO SCHEDULE

Basis of presentation

The schedule lists employees or individuals affiliated with Manitoba Public Insurance Corporation who received compensation and benefits in excess of $85,000 for the year ended December 31, 2025. The amounts reported were calculated in accordance with the definition of compensation provided in Section 1 of The Public Sector Compensation Disclosure Act.

MANITOBA PUBLIC INSURANCE CORPORATION
NOTE TO SCHEDULE OF COMPENSATION IN ACCORDANCE WITH THE PUBLIC SECTOR COMPENSATION DISCLOSURE ACT
FOR THE YEAR ENDED DECEMBER 31, 2025

The Public Sector Compensation Disclosure Act requires public sector bodies to disclose:

- the compensation paid to the Chairperson of its Board of Directors, if the Chairperson's compensation is $85,000 or more;
- the aggregate of the benefits paid to the members of the Board of Directors;
- the individual compensation paid to its officers and employees whose compensation is $85,000 or more.

The compensation amount is calculated in accordance with the requirements of The Public Sector Compensation Disclosure Act.

Compensation includes but is not limited to:

- regular salary;
- all payments for overtime, acting pay, statutory holiday pay, retirement/severance payments, lump sum payments and vacation pay-outs; and
- value of the taxable benefits to board members, officers and employees.

External Actuary Review

This section presents the results of the review of policy liabilities for Basic as completed by the Manitoba Public Insurance (MPI) Appointed Actuary. For the most recent Fiscal Year, the Appointed Actuary signed off on three reviews

i) September 2025 Valuation - as at September 30, 2025

ii) December 2025 Valuation – as at December 31, 2025

iii) March 2026 Valuation - as at March 31, 2026

MPI used December 2025 and March 2026 valuations for claims forecasting.

This section is divided into three subsections:

1. Presents the two reports prepared by the Appointed Actuary for Basic for fiscal year (FY) 2025/26;
2. Presents an analysis of the runoff; and,
3. Presents the regression analysis by coverage for the selected trends used in the Appointed Actuary Report (AAR) as at March 31, 2026.

EAR.1 Review of Policy Liabilities

The following two reports are provided electronically as:

- *Attachment A*: Limited AAR as at December 31, 2025.
- *Attachment B*: AAR as at March 31, 2026

EAR.2 Analysis of Runoff

MPI defines runoff as the change in the ultimate loss estimate for prior accident years between the current and previous valuation years. Runoff can arise from three main sources: change in loss experience (e.g., incorporating an additional year of data), changes in valuation methodology (e.g., switching from the Incurred Loss Development method to the Cape Cod method), and changes in valuation assumptions (e.g., adjustments to loss development factors). *Figure EAR-1* illustrates the runoff attributable to each of these three sources.

Figure EAR-1 Sources of Runoff

Line No.	Changes	Favourable Runoff (Unfavourable) Runoff
1	**Experience**	2,733,589
2	**Valuation Methodology**	(52,084,251)
3	**Valuation Assumptions**	(8,146,708)
4	**Total**	**(57,497,370)**
5	Note: Positive figures indicate favourable runoff	

Figure EAR-4 shows the Basic total net runoff for the fiscal year (FY) 2025/26 by coverage and insurance year. In total, Basic saw unfavourable runoff of $57.5 million, attributable to the factors set out in Figure EAR–1 above.

EAR.2.1 Changes in Experience

Figure EAR-5 presents the net runoff from changes in experience for FY2025/26, which was broken down by coverage and insurance year. MPI calculated the total favourable runoff of $2.7 million by incorporating an additional year of data, while maintaining the valuation methodologies and assumptions from the March 2026 Valuation.

Comprehensive, Third Party Liability (TPL) Property Damage, and TPL Bodily Injury all experienced unfavourable prior year development, with Comprehensive being the largest contributor out of the non-accident benefit valuation lines. The adverse development in Comprehensive is primarily attributed to loss years 2024, driven by higher than expected attritional losses (non-catastrophic losses). This increase is largely due to rising frequency and severity of claims, particularly from escalating glass claim costs.

The unfavourable runoff was partially offset by a favourable runoff of $9.4 million in Collision coverage, mainly from loss year 2024, due to lower-than-expected claim counts.

For Weekly Indemnity coverage, which is indexed, there was a favourable runoff of $4.6 million, primarily due to better-than-expected loss experience in loss years 2007, 2011, and 2016.

For Accident Benefits Other (ABO) Indexed, the total favourable runoff was $2.4 million. This was mainly driven by lower-than-expected incurred development, mostly in loss years 2007 and 2011.

For Weekly Indemnity and ABO Indexed, accident years 2019 and forward show zero runoff from changes in experience. This is due to the implementation of the PIPP Termination Rate Project (see *Attachment B – Appointed Actuary Report as at March 31, 2026 Appendix: PIPP Termination Rate & Methodology Update Project)*, which introduced changes to termination rates that impacted both case estimates and ultimate claims. As a result, it is difficult to clearly attribute movements in ultimate losses between changes in assumptions, methodology, and underlying experience. Accordingly, the runoff has been presented as zero from 2019 onward, as any

breakdown of the movement would itself require additional assumptions and judgment.

ABO Non-Indexed coverage showed unfavourable runoff of $5.9 million, largely due to higher-than-expected incurred loss experience in insurance years 2022 to 2023.

EAR.2.2 Changes to the Valuation Methodology

The termination rates and methodologies for Weekly Indemnity and ABO Indexed were revised in FY 2025/26 (see *Attachment B – Appointed Actuary Report as at March 31, 2026 Appendix: PIPP Termination Rate & Methodology Update Project)*, and this change in methodology led to unfavourable development of $52.1M. Most of this was from Weekly Indemnity which had unfavourable development of $51.2M, most of which was from loss year 2023 and 2024. ABO Indexed had unfavourable development of $0.9M.

EAR.2.3 Changes to the Valuation Assumptions

Figure EAR-2 identifies the changes made to the valuation assumptions and the dollar impacts that contributed to the runoff based on the March 31, 2026 Basic AAR.

Figure EAR-2 Impact on Runoff from Changes in Valuation Assumptions

Line No.	Change	Rationale	Favourable Runoff (Unfavourable) Runoff
1	**Change to the loss development factors**		
2	Accident Benefits		($2,565,954)
3	TPL BI & PD	Note 1	($430,477)
4	Collision & Comprehensive		($4,840,351)
5	**Change in the IBNR selection**		
6	TPL PD		($732,183)
7	Accident Benefits	Note 2	$615
8	Collision		$421,643
9	**Total Valuation Assumptions**		($8,146,708)

10 **Note 1:** Changes to the loss development factors by coverage are documented
11 in the respective exhibits in the March 31, 2026 Appointed Actuary Report. Loss development factors
12 are revised annually to reflect recent experience

13 **Note 2:** for TPL PD, Collision, and Accident Benefits Non-Indexed,
14 the weights for the methodology to determine IBNR was changed.
15 For TPL PD, historical accident years used Incurred Development method instead of Incurred BF.
16 For Collision, Accident year 2025 was changed from Paid Development Method
17 to Incurred Development Method

EAR.2.4 Restating to Current Benefit Levels

MPI calculates the runoff figures for the two indexed valuation lines, Accident Benefits - Weekly Indemnity and Accident Benefits - Other by restating estimated ultimate losses to reflect current indexation levels.

For Accident Benefits - Weekly Indemnity (Indexed), MPI adjusts paid losses to current benefit levels by applying an indexation factor of 1.011 to the paid losses restated to benefit levels at 2025 (see *Attachment B – Appointed Actuary Report as at March 31, 2026 Exhibit 11*). MPI then adds these amounts to the unpaid losses from prior year-end valuations, which are again restated to current benefit levels. *Figure EAR- 3 –(a)* illustrates this calculation.

Figure EAR-3-(a) Estimated Ultimate Losses – March 2026 Valuation

Accident Benefits - Weekly Indemnity (Indexed)

Line No.	Insurance Year	Paid Losses Restated as at 2025	Paid Losses Restated as at 2026	Estimated Unpaid Losses	Unpaid Losses Restated	Estimated Ultimate Losses
1	*($000)*					
2	[a]	[b]	[c]	[d]	[e]	[f]
3	**2020**	31,242	31,586	75,226	76,053	107,639
4	**2021**	34,683	35,064	90,852	91,852	126,916
5	**2022**	28,496	28,810	93,924	94,957	123,766
6	**2023**	22,728	22,978	105,930	107,095	130,073
7	**2024**	13,233	13,379	130,019	131,450	144,829
8	[b] +[d] =Actuarial Report as at March 31, 2025 Exhibit 2 adjusted to bring to 2025 indexation					
9	[c] =[b] * 1.011					
10	[e] = [d] * 1.011					
11	[f] = [c] + [e]					

MPI performed a similar calculation for Accident Benefits - Other (Indexed) by adjusting both paid losses and unpaid liabilities to reflect current benefit levels. Historical paid losses from the *Appointed Actuary Report as at March 31, 2025* were first adjusted to 2025 cost levels by applying CPI indexation. Paid losses, excluding travel expenses, were indexed to the current benefit level by applying an indexation factor of 1.011. Historical amounts for travel expenses were also first adjusted to the 2025 cost levels and then restated to the current levels but indexed using a factor of 0.98. (See *Attachment B – Appointed Actuary Report as at March 31, 2026 Exhibit 12).* The indexed amounts were then added to the unpaid losses from prior year-end valuations, which were also restated to current benefit levels. *Figure EAR- 3 –(b)* provides an example of this calculation. *Attachment B – Appointed Actuary Report as at March 31, 2026* provides estimated ultimate losses restated to current benefit levels, for the year-end valuations.

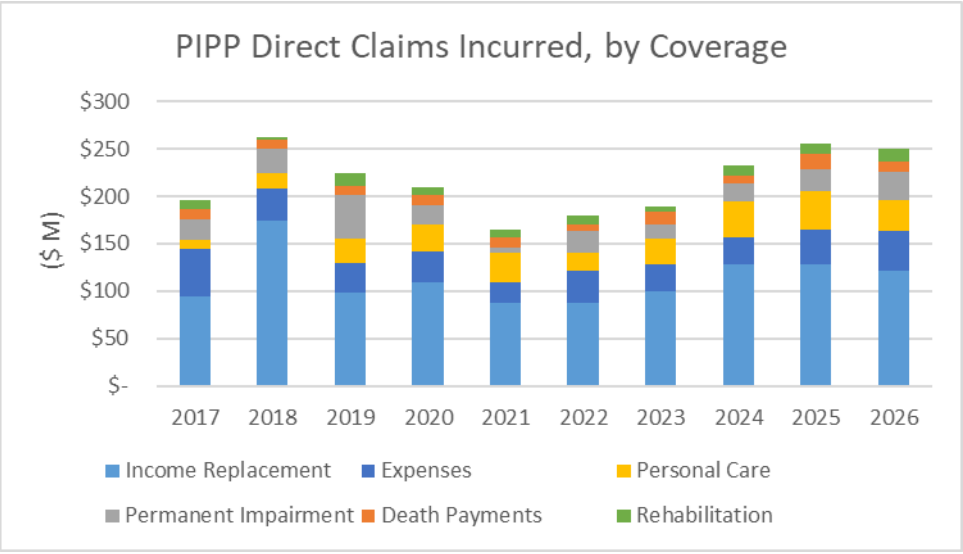
EAR.4 PIPP Claims Statistics by Coverage & Injury Type

This section is provided for information purposes only and does not appear in the AAR. In GRAs before 2025, the PIPP claim statistics by coverage and injury type appendices were included in the Claims Incurred chapter; however, as the appendices do not reflect the forecast nor the time value of money (e.g., discounting), it was moved to this chapter beginning with the 2026 GRA.

EAR Appendix 1 – Distribution of PIPP Costs shows the distribution of claims costs for direct claims incurred across the coverages. The overall incurred (see *Figure 13*) remains very similar to the previous year. The number of fatalities in 2026 (accident year 2025/26) was a 7-year low at 99. Other coverages remain relatively stable compared to historical trends.

Figure EAR-13 Distribution of Personal Injury Protection Plan (PIPP) Costs



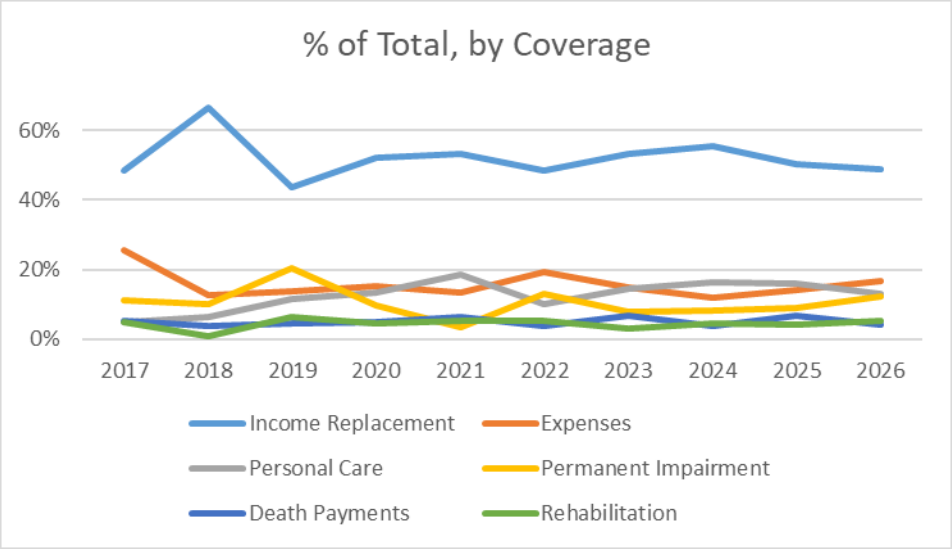


Figure EAR-14 Proportion of Incurred Loss by Coverage

EAR Appendix 2 – PIPP Claims Statistics by Injury Type shows PIPP claims statistics by injury type. The overall count of claims, and the distribution of types of claims (see *Figure 15*), remains very similar to the previous year. The overall total incurred (see *Figure 16*) decreased slightly compared to the previous year, also driven by lower fatalities.

2025 Report on the Valuation of Actuarial and Other Policy Liabilities
Manitoba Public Insurance Corporation
Universal Compulsory Automobile Insurance

Dear Satvir/Cara:

Enclosed is a copy of my 2025 Report on the Valuation of the Actuarial and Other Policy Liabilities for the Universal Compulsory Automobile Insurance operations of Manitoba Public Insurance ("MPI" or "the Company") as of December 31, 2025. This is for your own internal use.

Yours sincerely,

Cosimo Pantaleo, FCIA

1 Scope of Report

1.1. Introduction

The Board of Directors of Manitoba Public Insurance Corporation ("MPI" or "the Company") has engaged Cosimo Pantaleo as the Company's Actuary.

One of the duties of your Appointed Actuary is to annually value the actuarial and other policy liabilities of the Company. This report summarizes the methodologies and assumptions used by your Appointed Actuary to value the liabilities of the company as of 31 December 2025.

This valuation was performed by Ernst & Young LLP ("EY") under the direction of Mr. Pantaleo. Mr. Pantaleo is a Fellow of the Canadian Institute of Actuaries and of the Casualty Actuarial Society. Mr. Pantaleo is available to answer any questions regarding this report and can be reached at the following address:

Ernst & Young LLP
Insurance and Actuarial Advisory Services

Phone: (416) 943-3730
E-Mail: Cosimo.Pantaleo@ca.ey.com

For purposes of this report, actuarial and other policy liabilities[1] were reviewed in detail for both insurance contracts and reinsurance contracts held. Liabilities pertaining to net of reinsurance contracts held are generally established as the difference between direct and ceded policy liabilities.

The valuation has been prepared according to accepted actuarial practice ("AAP") in Canada. Accepted actuarial practice is defined in the professional actuarial standards of practice of the Canadian Institute of Actuaries ("CIA"), augmented by additional regulatory requirements such as those outlined in the Office of the Superintendent of Financial Institution's ("OSFI") Memorandum to the Appointed Actuary. Accepted actuarial practice in Canada requires all actuarial and other policy liabilities recognize both the time value of money and a risk adjustment.

[1]Policy liabilities are composed of liability for incurred claims (fulfilment cash flows related to past service allocated to the groups of contracts at that date), and liability for remaining coverage (future obligations related to the unexpired portion of policies).

1.2. Use and Distribution

This report and the opinions and conclusions contained herein were prepared for the internal use of the Company and were based on confidential information supplied by the Company. This valuation has been performed to support various analytical requirements as necessary. It is not intended nor necessarily suitable for any other purpose.

This report will be submitted to the Public Utilities Board of Manitoba (PUB) and insurance regulators in any other jurisdiction where the Company is licensed.

No further distribution of this report may be made without the prior permission of MPI and Ernst & Young LLP. The Company and its Appointed Actuary should be notified immediately following any requests for disclosure of any part of this report. Should the report be disclosed, it must be provided in its entirety and recipients advised that the author is available at their cost to discuss the report.

2 Summary

This valuation of actuarial and other policy liabilities has been conducted in accordance with International Financial Reporting Standards and accepted actuarial practice in Canada.

Data

We have made use of historical data and other quantitative and qualitative information supplied by the Company to estimate the future cash flows. We have reviewed this information for reasonableness and internal consistency but without independent audit or verification except as noted herein.

The Company has established a number of accounting policies and assumptions which are used in our valuation. We have relied on management inputs in our work such as:

- the choice of yield curves for discounting;
- grouping of lines into portfolios;
- target return assumptions;
- expense allocations.

We have reviewed management's position papers outlining their policy decisions and based on their qualifications, competence, integrity and objectivity do not take issue with their assessments.

Assumptions

To estimate the actuarial and other policy liabilities, we have relied on incurred and paid loss data triangles as well as the level of earned premiums and/or exposures recorded each year. Projected future claim reporting and payments were based upon the Company's historical experience, supplemented where deemed appropriate, by patterns drawn from other available sources. The value of the actuarial and other policy liabilities represents our best estimate based on the information available to us at the time of our valuation. However, being estimates, they can vary since the actual value is subject to events yet to occur. In our judgment, we have employed techniques and assumptions that are appropriate and the conclusions presented herein are reasonable.

We have considered the potential impact of environmental changes such as impacts of reforms on settlement patterns as well as the potential for the patterns post COVID-19 to differ from prior experience. Apart from contemplating these specific and known forces, we have assumed business will proceed as it has in the past, with no material changes in settlement procedures or cash flows.

We have not anticipated any extraordinary changes to the legal, social or economic environment (or to the interpretation of policy and treaty language) which might affect the cost, frequency, or future reporting of claims. In addition, our estimates make no provision for potential future claims arising from loss causes not contained in the historical data except in so far as claims of these types are included in the reported losses and are routinely developed.

The actuarial liabilities in this report are calculated net of anticipated future salvage and subrogation.

Estimates of Future Cash Flows

The estimates of future cash flows consist of claim payments of case reserves and IBNR as well as internal loss adjustment expenses ("ILAE", or Unallocated Loss Adjustment Expenses "ULAE") and future inflation adjustments. Allocated Loss Adjustment Expenses ("ALAE", or external loss adjustment expenses) are embedded in the future claim cash flow estimates.

It is assumed that ULAE costs are incurred 50% at the time a claim is opened and 50% at time of closing. Consequently 50% of this ratio is applied to direct Case Outstanding to account for closing costs. ULAE costs for claims that have occurred but not yet been reported to the Company and for development on claims that have been reported to the company must also be accounted for. We have assumed that all of IBNR relates to unreported claims, consequently 100% of this ratio is also applied to IBNR to provide for ULAE costs associated with IBNR estimates. These assumptions are consistent with the prior year.

Reinsurance

MPI's reinsurance structure consists of the following:

1. Automobile excess of loss casualty treaty with retention of $30 million excess of $20 million which is applicable to Basic.
2. Catastrophe program of $350 million excess of $50 million. The $50 million reflects MPI's retention for all catastrophes related events in a fiscal year. The threshold to be considered as an event is a minimum total loss of $2 million; for the annual aggregate deductible, the contribution layer is $350 million excess of $50 million.
3. Automobile Property Damage Treaty (SRE only) of $14 million excess of $1 million.
4. Beginning April 1, 2025, an automatic facultative reinsurance agreement (SRE only) was implemented for SRE long-haul trucking policyholders. This agreement provides coverage for third-party liability losses exceeding $5M with a maximum limit of $10M. This coverage takes effect upon policy renewal. For customers with renewal dates after April 1, 2025, MPI has "runoff" protection to replace the previous casualty reinsurance treaty.

Discount Curve

The discount curve is developed based on the top-down approach using a reference portfolio and removing items that are not aligned with the characteristics of the insurance liability, such as credit risk, from the yield curve. MPI uses the top-down approach to take advantage of MPI's robust asset-liability management (ALM) practice. In this valuation, the discount rates are expressed as spot rates.

It should be noted that MPI has engaged an external vendor, Addenda Capital, to determine the yield curve. More detail regarding the methodology can be found in the "IFRS 17 Claims Discount Rate Methodology Paper".

Risk Adjustment for Non-Financial Risk

The Quantile Approach is used to calculate the risk adjustment for non-financial risk.

Results

The results of our valuation are summarized in the following tables by reserving line of business.

Gross / Insurance Contracts Issued by Actuarial Reserving Line						
($000s)	Case Outstanding	Undiscounted IBNR	Indexation Provision	Discounting	Risk Adjustment	Total Unpaid
Bodily Injury - Basic	18,979	8,590		-2,139	1,124	26,553
Accident Benefits:						
Weekly Indemnity	883,431	292,623	558,045	-868,018	23,548	889,628
Other (Indexed)	558,476	175,807	289,843	-465,009	35,587	594,704
Other (Non-Indexed)	45,739	17,715		-4,440	4,098	63,111
Collision - Basic	115,451	112,984		-2,767	17,243	242,911
Comprehensive - Basic	42,674	47,209		-1,914	6,631	94,600
Property Damage - Basic	20,237	28,140		-1,081	1,826	49,121
ULAE		249,857		-96,038	7,889	161,708
Total	1,684,987	932,924	847,888	-1,441,406	97,945	2,122,337

Comparison of Actual Experience with Expected Experience in Prior Year-End Valuations

Comparing the current December 2025 and March 2025 valuations, the ultimate undiscounted estimates have developed as follows (negative indicates favourable):

		Dec-25	Mar-25		Development Mar to Dec '25	
March 2025 & prior ($000s)			Mar Val.	AB Adj.	Mar Val.	AB Adj.
Gross	Basic - Bodily Injury	91,385	90,418	90,418	967	967
	Basic - Property Damage	798,401	794,765	794,765	3,636	3,636
	Basic - Auto Collision	6,789,734	6,794,566	6,794,566	-4,832	-4,832
*	Basic - Comprehensive	1,943,533	1,924,646	1,924,646	18,887	18,887
**	Accident Benefits - Weekly Indemnity	1,934,300	1,882,185	1,931,978	52,116	2,322
**	Accident Benefits - Other (Indexed)	1,446,296	1,444,868	1,452,505	1,428	-6,209
	Accident Benefits - Other (Non-Indexed)	592,257	583,881	583,881	8,376	8,376
	Total	13,595,906	13,515,328	13,572,759	80,579	23,148
Net	Basic - Bodily Injury	91,385	90,418	90,418	967	967
	Basic - Property Damage	798,401	794,765	794,765	3,636	3,636
	Basic - Auto Collision	6,789,734	6,794,566	6,794,566	-4,832	-4,832
*	Basic - Comprehensive	1,767,785	1,760,904	1,760,904	6,881	6,881
**	Accident Benefits - Weekly Indemnity	1,928,465	1,878,213	1,928,007	50,252	458
**	Accident Benefits - Other (Indexed)	1,442,212	1,442,113	1,449,750	99	-7,538
	Accident Benefits - Other (Non-Indexed)	592,257	583,881	583,881	8,376	8,376
	Total	13,410,239	13,344,859	13,402,290	65,380	7,949

*Comprehensive coverage includes attritional and catastrophe losses
**Accident benefit coverages AB-WI and ABO-I include PIPP enhancements

When comparing the December valuation to the March valuation, a significant portion of the unfavorable development is coming from the indexed Accident Benefits lines, most notably Weekly Indemnity. This is attributable to the change to termination rate assumptions.

Estimates were recalculated as of March 31, 2025, using the updated termination rate assumptions. Under this consistent-methodology comparison, the level of unfavorable development in the indexed Accident Benefits lines is significantly lower, indicating that the majority of the development is driven by the assumption change rather than a deterioration in underlying loss experience.

The primary factor contributing to the remaining unfavorable development is the Comprehensive valuation line, mainly the attritional losses, where the loss experience for the 2024/25 accident year has been worse than anticipated. Specifically, the paid losses over the past six months have exceeded both the case reserves and the IBNR reserve releases.

Additionally, it is important to note that the ultimate loss estimates for the Accident Benefit valuation lines are based on current indexation levels.

3 Liability for Incurred Claims

The liability for incurred claims comprises of the fulfilment cash flows related to past service allocated to groups of contracts at that date. The fulfilment cash flows comprise of the best estimate of future cash flows, an adjustment to reflect the time value of money, and a risk adjustment for non-financial risk. The results presented in this report are prior to the Company's inclusion of payables and other finance driven components of LIC.

3.1 Incurred But Not Reported

Our methodology employed the incurred and paid development techniques (also known as the chain ladder methods), the related Bornhuetter-Ferguson ("B/F") method, the Cape Cod Technique, the Loss Ratio technique and the Claim Frequency/Severity method to estimate the claim liability for incurred but not reported (IBNR) by line on an ultimate undiscounted basis.

We performed the analysis on a gross and ceded basis, with net results being calculated as the difference between gross and ceded. The ultimate undiscounted unpaid case reserves and IBNR amounts were then discounted to recognize the time value of money and a risk adjustment for non-financial risk was estimated.

The general approach used to calculate the IBNR for each line of business is outlined below.

3.1.1 Bodily Injury

We selected the ultimate loss estimate based on the Incurred B/F method for all insurance years with the exception of the Prior row which places 100% weight on the Incurred Development method. There is no change in methodology from the previous September valuation. The selected a priori loss ratio assumption in the B/F method for prior years was unchanged from the March 2025 valuation. Incurred and Paid loss development factors basis of selection were kept the same from the last valuation. Data, loss development factors, and selections are shown on direct basis (equal to net) in Exhibit 4.

3.1.2 Property Damage

We selected the ultimate loss estimate based on the Incurred Development method for all insurance years. There is no change in methodology from the previous September valuation. The selected a priori loss ratio assumption in the B/F method for prior years was unchanged from the March 2025 valuation. Incurred and Paid loss development factors basis of selection basis for early ages were kept the same from the last valuation, until age 51 months. The selections for ages after 51 months were changed to all year Volume Weighted Average. to account for the more volatile development in later periods. The data, loss development factors, and selections are shown on a direct basis (equal to net) in Exhibit 5.

3.1.3 Collision

For the most recent insurance year, we retained the September selected ultimate, which was based on the Average Incurred Loss per Reported Claim with Payment Development. For the next recent insurance year, the selected ultimate loss estimate is based on the Paid Loss Development method. For all preceding insurance years, we selected the ultimate loss estimate based on the Incurred Loss Development method.

The selected a priori loss ratio assumption in the B/F method for prior years was unchanged from the March 2025 valuation. The current insurance year a priori loss ratio is based on the latest forecast for ultimate loss and premiums. Incurred and Paid loss development factors basis of selection were kept the same from the last valuation as the past selections are still appropriate to pick up the new data in latest 3 diagonals. The data, loss development factors, and selections are shown on a direct basis (equal to net) in Exhibit 6.

3.1.4 Comprehensive

We selected the ultimate loss estimates excluding catastrophes based on the Incurred Loss Development method for all insurance years. The selected a priori loss ratio assumption in the B/F method for prior years was unchanged from the March 2025 valuation. The current insurance year a priori loss ratio is based on the latest forecast for ultimate loss and premiums. Incurred and Paid loss development factors basis of selection were kept the same from the last. The data, loss development factors, and selections are shown on a direct basis in Exhibit 7.

Catastrophe losses are defined to Include hail, windstorm, wildfire, and flood-related losses greater than $2M or an event with 1,000 or more reported claims within four consecutive calendar days. A separate analysis was completed to calculate the ultimate losses from catastrophes. The analysis can be found in Appendix C.

3.1.5 Accident Benefits – Weekly Indemnity

We selected the ultimate loss estimate based on the Generalized Paid Cape Cod method, using exposures and index-adjusted incurred loss for all insurance years after 2005/2006 and the Incurred Loss Development method for years 2005/2006 and prior.

Indexing premium and loss were unchanged from the March 2025 levels. Incurred and Paid loss development factors were selected as the five-year volume weighted average, excluding the high and low. The data, loss development factors, and selections are shown on a direct basis in Exhibit 8.

3.1.6 Accident Benefits – Other Indexed

The ultimate loss estimates were selected as the sum of the "Personal Care", "Travel Expense", and "Other" segments. For Personal Care and Other, we selected the ultimate loss estimate based on the Generalized Paid Cape Cod method, using exposures and index-adjusted incurred loss for all insurance years after 2005/2006 and the Incurred Loss Development method for years 2005/2006 and prior. For Travel Expenses, we selected the ultimate loss estimates based on the Incurred Loss Development method for all insurance years.

Indexing premium and loss were unchanged from the March 2025 levels. Incurred and Paid loss development factors were selected as the seven-year volume weighted average, excluding the high and low, with the exception of the Incurred factors for Travel Expenses, where the five-year volume weighted average, excluding the high and low was selected. The data, loss development factors, and selections are shown on a direct basis in Exhibit 9.

3.1.7 Accident Benefits – Other Non-Indexed

We selected the ultimate loss estimate based on the Incurred B/F method for all insurance years after 2007/2008 and the Incurred Loss Development method for years 2007/2008 and prior. The selected a priori loss ratio assumption in the B/F method for prior years was unchanged from the March valuation. The current insurance year a priori loss ratio is based on the latest forecast for ultimate loss and premiums. Incurred and Paid loss development factors basis of selection were kept the same from the last valuation. The data, loss development factors, and selections are shown on a direct basis in Exhibit 10.

3.1.8 PIPP Enhancements

The estimate of the liability for incurred claims pertaining to PIPP enhancements were grouped into the standard line.

4 Liabilities for Remaining Coverage

Under the Premium Allocation Approach ("PAA"), liability for remaining coverage excluding loss component at initial recognition and at the end of each subsequent reporting period is measured by adjusting premiums received for components such as insurance acquisition cash flows, investment component, etc. The premiums received are allocated on the basis of the passage of time over the coverage period unless otherwise noted.

4.1 Measurement Approach

The Company's contracts are all one year or less in duration thus automatically qualify for PAA eligibility. The Company has chosen to expense acquisition expenses. Management has concluded on whether any contract groups are considered onerous.

The grouping of contracts for each portfolio is based on how the contracts are managed and tracked within the company.

The considerations used to determine the groups of insurance contracts used for the purposes of recognizing insurance revenue include:

- Adopting two possible profitability groupings:
  - Onerous at initial recognition; and
  - Others
- Facts and circumstances will be assessed at the group of contracts level; and
- Contracts within the same group cannot be issued more than one year apart as they are written on a losses-occurring-during basis. Contracts within the groups within the portfolios will be further subdivided into annual cohorts based on accident year.

Management concluded no contracts are onerous. We have reviewed both quantitative and qualitative material supporting their decision and do not have concerns with their categorization of whether the groups of contracts are onerous at initial recognition, have no significant possibility of becoming onerous, and the remaining contracts in the portfolio.

[1] Incurred chain ladder method selected.
[2] This is a change from our previous selection of BF incurred. We have decided to change our methodology due to the deficiency in our loss ratios year over year.
