Manitoba Public Insurance
Automobile Insurance Division - Basic
Accident Benefits - Other (Indexed) - Ceded
Summary of Discounting
As of March 31, 2026

Exhibit 6
Sheet 32

Manitoba Public Insurance

Summary of Discounting - DIRECT

COVERAGE: **Accident Benefits - Other (Indexed)**

Unwinding of Claims Occuring in the Most Recent Year

(Simplified Annual Method)

(Current Accident Year Discounted Reserves @ t=1 + Current Accident Year Paid Losses) x
[(1+Discount Rate)^(-0.5)] x (Discount Rate)/2

At Valuation Date	Current Discounted	Discount Rate	Discount Factor	Discounted	Unwinding
Paid Losses	0	4.15%	0.9799	0	0
Unpaid Losses	0	4.15%	0.9799	0	0
Total	0	4.15%	0.9799	0	0

[1] Incurred chain ladder method selected.
[2] This is a change from our previous selection of BF incurred. We have decided to change our methodology due to the deficiency in our loss ratios year over year.

[1] No IBNR assumed prior to 2024 AY, Ultimate loss set as incurred loss.
[2] Ultimate loss calculated as incurred + IBNR.
[3] IBNR provided by reinsurance team with 91.5% allocation to Basic LOB.
[4] Paid and Incurred DFM are calculated and compared to reinsurance teams analysis. This ensures consistency in the analysis

[1] Catastrophe segment includes events with total claims related to hail, flood, and windstorm over $2M incurred or 1000 reported claims (between all lines of business).
[2] Catastrophes not identified for years prior to 1997.
[3] Catastrophes identified as of the December 2024 valuation date, and historical triangles may not be reflective of all events which would be identified at prior valuation dates.

[1] Catastrophe segment includes events with total claims related to hail, flood, and windstorm over $2M incurred or 1000 reported claims (between all lines of business).
[2] Catastrophes not identified for years prior to 1997.
[3] Catastrophes identified as of the December 2024 valuation date, and historical triangles may not be reflective of all events which would be identified at prior valuation dates.

[1] Catastrophe segment includes events with total claims related to hail, flood, and windstorm over $2M incurred or 1000 reported claims (between all lines of business).
[2] Catastrophes not identified for years prior to 1997.
[3] Catastrophes identified as of the December 2024 valuation date, and historical triangles may not be reflective of all events which would be identified at prior valuation dates.

[1] Catastrophe segment includes events with total claims related to hail, flood, and windstorm over $2M incurred or 1000 reported claims (between all lines of business).
[2] Catastrophes not identified for years prior to 1997.
[3] Catastrophes identified as of the December 2024 valuation date, and historical triangles may not be reflective of all events which would be identified at prior valuation dates.

Data suggests that on average the incurred amount in year 2 is half what it was after 1 year and continues to drop from there. We see that in the development factors. However prevuous selections that were made capped the developpment at 1 yr which has caused us to greatly overestimate the ultimate.

Recommend we change the age of where development ends to 3 or 4 years as this is where the data starts fluctuating and thinning out.

Indexation adjustment has been negative the last couple of years which is why we see a drop starting after year 1 as this is the point in

Data suggests that on average the incurred amount in year 2 is half what it was after 1 year and continues to drop from there. We see that in the development factors. However prevuous selections that were made capped the developpment at 1 yr which has caused us to greatly overestimate the ultimate.

Recommend we change the age of where development ends to 3 or 4 years as this is where the data starts fluctuating and thinning out.

Indexation adjustment has been negative the last couple of years which is why we see a drop starting after year 1 as this is the point in

Data suggests that on average the incurred amount in year 2 is half what it was after 1 year and continues to drop from there. We see that in the development factors. However prevuous selections that were made capped the developpment at 1 yr which has caused us to greatly overestimate the ultimate.

Recommend we change the age of where development ends to 3 or 4 years as this is where the data starts fluctuating and thinning out.

Indexation adjustment has been negative the last couple of years which is why we see a drop starting after year 1 as this is the point in
