To assess the implications for the current rate-setting process of the implementation of MPI's Strategic Plan and the implications on its budget process, operating expenses and cost containment initiatives.

RESPONSE:

a) Please see ***Appendix1***, which provides MPI's most recent quarterly strategic performance report for Q1 2026/27. The report consolidates information from MPI's strategic performance reporting and Integrated Corporate Portfolio governance processes. It provides the current status of Corporate Initiatives, including work that is active, completed, deferred, cancelled or recategorized, and identifies where prioritization, sequencing or delivery plans have changed.

The report demonstrates how MPI actively manages execution of its multi-year strategic plan through annual planning, portfolio governance and quarterly performance reporting. This approach provides a current view of the portfolio, reflects decisions made based on organizational priorities and capacity, and maintains alignment between MPI's strategic direction, planned work and delivery.

b) MPI has previously assessed and shared information concerning the external and internal environment affecting the Corporation. As part of the 2025 GRA, MPI filed its situation analysis in CAC (MPI) 1-27 - Attachment A – Confidential. Slide 26 included the Top Corporate Risks identified through MPI's Enterprise Risk Management process.

MPI does not rely on that point-in-time situation analysis as its sole means of assessing changes in its operating environment. Since that filing, MPI has continued to mature its ERM Policy and supporting practices. The ERM framework expressly considers MPI's external social, cultural, political, legal, regulatory, financial, economic and technological environment and identifies developments that could significantly affect MPI's ability to achieve its strategic objectives.

As explained in *PUB (MPI) 1-100*, the updated ERM Policy includes a formal risk escalation process. This enables significant new risks to be identified, reported and escalated for appropriate management and governance oversight, while allowing reporting formats, dashboards, metrics and committee materials to evolve with business needs.

MPI does not maintain a separate analysis labelled "external transformative forces." MPI's established corporate methodology for assessing how events and trends may affect the Corporation is its Enterprise Risk Management framework.

MPI's current assessment is reflected in the Top Corporate Risks filed in *Part X, RMF Appendix 10 - Comparison of Top Corporate Risks - Confidential.* The accompanying risk profiles describe the risks facing MPI, the potential consequences should they materialize, the controls in place and the risk treatments intended to reduce residual exposure. The comparison also shows how MPI's risk assessment changes as external conditions, internal exposure and mitigation effectiveness evolve.

These corporate risks are not a direct restatement of “external transformative forces,” and not every corporate risk arises exclusively from an external development. Rather, they reflect the material effects that external and internal events and trends may have on MPI and identify the matters MPI has prioritized for management and governance oversight.

They are the risks important to MPI. MPI takes no position on whether some or all of them are “transformative forces”.

For rate-setting and regulatory purposes, MPI’s focus is on how those external factors affect the Corporation’s risk exposure, financial forecasts, operations and requested rates. MPI refers to part (g) for examples of external factors currently affecting MPI and the actions being taken in response.

MPI’s ERM framework therefore provides the structured corporate methodology for assessing the potential effects of the external trends most relevant to MPI and directing management and governance attention to the resulting risks with the greatest assessed likelihood and impact.

One cross-reference to correct: the current GRA source indicates that the detailed Top 7 Corporate Risk Profiles are in RMF Appendix 11, while RMF Appendix 7 is the Enterprise Risk Management Policy. The prior draft’s final reference to “risk profiles filed in RMF Appendix 7” should therefore be changed to RMF Appendix 11.

c) As described in part (b), MPI assesses how external events and trends may affect the Corporation through its Enterprise Risk Management framework. The multi-year strategic plan is one component of MPI’s broader response to the resulting risks and opportunities.

The strategic plan establishes MPI’s overall direction, while the strategic pillars organize the efforts through which that direction is advanced. The “Be Ready for

What's Ahead" pillar focuses particularly on strengthening the capabilities, resilience and readiness required for MPI to respond to future change. However, risks and opportunities are not assigned exclusively to individual pillars. Depending on their nature and potential impact, MPI's response may involve initiatives and operational efforts across several pillars, business areas and corporate governance processes.

Beyond the efforts organized under the "Be Ready for What's Ahead" pillar, MPI's broader strategic and operational portfolio as a whole responds to changes in its external operating environment through:

- Regular product and coverage reviews addressing evolving customer needs, vehicle technologies, affordability, fairness and usability;
- Legislative and regulatory planning that enables MPI to assess operational, technology and customer impacts in advance;
- Road safety initiatives informed by stakeholder perspectives and collision trends;
- Customer experience and service delivery improvements responding to expectations for timely, clear and convenient service; and
- Planning and governance improvements that strengthen prioritization, organizational capacity and delivery discipline and support the mitigation of priority risks.

Accordingly, "Be Ready for What's Ahead" should not be interpreted as the sole response to every external force or corporate risk. It organizes many of MPI's future-readiness and modernization efforts, but not all.

d) MPI has not conducted customer research that asks customers to identify or assess the threats and opportunities arising from the risks and events and external

factors described in part (b). MPI assesses the implications of external events and trends through its established risk management, planning and governance processes. Customer research serves a different purpose: it identifies what Manitobans value and expect from MPI.

As described in MPI's response to CC (MPI) 1-1(b), customer insights indicate that customers value:

- timely service, including reduced wait times, appointment availability and shorter cycle times;
- clear information and appropriate preparation throughout the customer journey;
- ease of interaction and convenient access to services;
- respectful treatment and feeling valued; and
- confidence that MPI is delivering on its mission, including affordable rates, exceptional coverage, exceptional service and safer roads.

e) The findings within the Winnipeg Facility study will be reviewed by the Executive and Board in late fall / early winter.

f) The formal target-setting framework provides MPI with a consistent and repeatable method for establishing and reviewing operational performance targets and service standards. It is intended to ensure that targets are transparent, evidence-based and informed by a balanced range of considerations rather than any single data point.

The framework uses the following inputs:

- customer experience data and customer expectations;

- historical operational performance and baselines;
- applicable legislative and regulatory requirements;
- available and useful external peer and industry benchmarks;
- feasibility within existing funding and staffing levels; and
- known internal or external changes that may affect future operational performance.

The framework also establishes accountability for confirming measures, analyzing data, setting and approving targets, communicating approved targets, monitoring performance and initiating reviews. Business-area management is responsible for setting targets and monitoring performance, with executive accountability for target approval. Operational targets and service standards are reviewed annually in advance of the fiscal year.

The target-setting framework uses customer experience data to inform operational performance targets and service standards. It is not a framework for establishing customer satisfaction targets.

g) Customer research, feedback, operational insights, and service experience data continue to indicate that customers value:

- Confidence that MPI is delivering comprehensive coverage at affordable rates.
- Clear information and improved understanding of products and processes.
- Access to timely service.
- Safer roads.

These insights help inform the prioritization and design of product enhancements, service improvements, and future modernization efforts.

Emerging Technologies

MPI continues to monitor developments in technology that may influence customer needs and the products and coverage that MPI should offer. Examples include:

- Vehicles equipped with more self-driving features including the introduction of full self-driving vehicles like Waymo in some areas.
- Implication of electric bikes and e-Scooters including the introduction of new legislative frameworks that apply to them.
- Advanced Driver Assistance Systems (ADAS), their growing sophistication, improved vehicle safety and increasing claims costs.
- Low Speed Vehicle pilot programs in other Canadian jurisdictions.
- Telematics explored as part of the 2024/25 Taxi Study

Changing Operating Conditions

MPI's planning activities also consider changing operating conditions that may affect customers, service delivery, and product design, including:

- Changes in claims trends and operating demands.
- Inflationary pressures affecting claims and service costs.
- Evolving risk environments including severe weather events (floods, hail, etc.)

- Industry developments affecting insurance products, customer needs and risk including changes to benefits in other jurisdictions, changes to laws and court rulings.
    - Supported by the annual filing of the Comparison of Basic Policies as part of the GRA.

Stakeholder Feedback

Stakeholder input is obtained through ongoing engagement with customers, brokers, partners, advocacy groups, Government, and other interested parties. Feedback received through these channels helps inform product reviews, enhancements, modernization initiatives, and decisions.

Legislative and Regulatory Requirements

MPI regularly assesses existing and potential legislative and regulatory changes that may affect products, services, operations, and customer experience. Legislative and regulatory initiatives are integrated into MPI's broader planning processes to help coordinate product enhancements, service improvements, coverage changes, and compliance requirements. Specific changes in acts or regulations can have direct and specific impact to MPI's insurance products.

Overall, research, analysis and understanding of these areas support MPI's ongoing efforts to be ready for what is ahead and address customer needs. Examples of which can be seen in Basic Autopac Coverage (BAC) chapter section *BAC.4* with the introduction of three new PIPP coverages, the 2026/27 changes to Basic and Extension deductibles, MPI's End to End Adjusting Strategy and the Safety Incentive Program preliminary framework as presented in the BAC chapter section *BAC.5*.

h) No. The Round 1 appendix provided an update related to a specific question. The Q1 2026/27 Strategic Performance Report reflects subsequent portfolio

activity, including initiatives completed or added during Q1 and initiatives recategorized through the Corporate Planning and Governance process.

Current additional Corporate Initiative descriptions for the initiatives appearing in the Q1 report that were not listed in the Round 1 appendix are identified in *Appendix 1* of this response.

Additional Corporate Initiative Descriptions

Initiatives identified in the Q1 2026/27 Strategic Performance Report and not included in CC (MPI) 1-1 Appendix 1

Title	Description
Business Continuity Management (BCM) Software as a Service (SaaS)	MPI procured a replacement software solution to support its Business Continuity Management Program following the end of its agreement with the existing provider. The solution supports the continued management of business impact analyses and business continuity plans, including the information used to assess business-process criticality, continuity requirements and threat and risk considerations. It also maintains contact information used to communicate with employees during continuity events.
Enterprise Data Domain Modeling Focusing on MyMPI Foundation and IRP Online	This initiative completed Enterprise Data Model enhancements specific to the MyMPI Foundation and IRP Online project. The work included reviewing and defining the business relationships and data attributes required for IRP Online, helping establish consistent data structures to support the project and its integration with MPI's broader enterprise data environment.
End-to-End Adjusting Strategy	MPI developed an End-to-End Adjusting Strategy to address delays, unnecessary complexity, inconsistent outcomes, fragmented regional processes and unclear accountability within adjusting. The strategy established a future direction centred on a more centralized, end-to-end operating model, clearer roles and decision rights, consistent processes and performance measures, and phased implementation intended to deliver faster, clearer and more consistent outcomes for customers. The scope of this initiative was strategy development but not implementation.
Product Migration/Retirement	MPI assessed selected products within the Special Risk Extension portfolio to determine whether they should continue to be offered through SRE, migrate to Autopac Extension or be discontinued. The assessment considered customer access, sales potential, legal risk, product complexity and the effort required to maintain and support the products. The assessment and decision-making phase was completed; implementation of the approved directions will proceed through operational work and, where required, legislative or regulatory changes.
SRE Remediation: Assessment and Planning Phase	This initiative assessed the future state for Special Risk Extension business processes and technology following ongoing system and data-quality issues associated with the existing Duck Creek implementation. The work included defining target-state requirements with SRE Underwriting, Financial Operations, Pricing, Reinsurance and Product teams; assessing current processes and technology; reviewing relevant vendor arrangements; and evaluating the technology components required to support the future state. The assessment informed the decision to focus on stabilizing SRE operations in the Specialty Insurance Services system and to defer large-scale system change.
[REDACTED]	**[REDACTED].**

CC (MPI) 2-8

Part and Chapter:	**CC (MPI) I-2 (c) (e) (i)** **CC (MPI) I-3 (e) (f) (g)**	**Page No.:**	
Topic:	**Operating Expense Budget Processes (Top-Down, Bottom-Up & Alignment)**		
Sub Topic:			

Preamble to IR (If Any):

In the response to CC (MPI) 1-2 (c), MPI indicated that there were no material changes to the overall operating expense budgeting process for the 2027/28 budget process.

In CC (MPI) 1-2 (e), MPI was requested to provide the Executive Committee top-down operating expense targets ($ and FTE) for the 2027/28 budget process by division. In the response, MPI indicates that the Executive Committee guidance for the 2027/28 budget cycle was “Use of the Prior 2026 GRA forecast as a reference point.” MPI provided this divisional information at the MPI 2026 GRA in response to CC (MPI) 1-25 (d), Appendix 1.

In the response to CC (MPI) 1-2 (i), MPI indicates that the treatment of vacancy and surge capacity is embedded in the salary budgeting process and is not a separate operating expense item that can be isolated independently from the filed compensation forecast without reperforming the underlying budget model.

In the responses to CC (MPI) 1-3 (e), CC (MPI) 1-3 (f) and CC (MPI) 1-3 (g), MPI indicates that it did not track bottom-up operating expense budget information and Executive Committee alignment adjustments at the level of discrete divisional versions for the 2027/28 budget process. MPI provided this divisional information at the MPI 2026 GRA in response to CC (MPI) 1-26 (e), (f) and (g), Appendices 1, 2 and 3.

Question:

a) Please explain why MPI was not readily able to provide EC operating expense targets, divisional bottom-up budgets and EC alignment adjustments ($ and FTEs) for the 2027/28 budget process by division, when it was able to do so for the 2026 GRA and considering the response to CC (MPI) 1-2 (c) from the current 2027 GRA, where MPI indicated that there were no material changes to the overall operating expense budgeting process for the 2027/28 budget process. As part of the response, please explain what has changed in the MPI operating expense budgeting process for the 2027/28 cycle such that it was not able to readily provide the requested divisional information.

b) Please provide an estimate of the cost in the 2027/28 operating expense budget related to the 40 over-budget FTE/surge capacity by using an average 2027/28 salary forecast (Part VIII, EXP Appendix 7) and adding a provision for employee benefits (i.e., salary fully loaded for benefits) forecast for 2027/28.

Rationale for Question:

To gain an understanding of the MPI operating expense budget approach, process and outcomes related to the 2026 GRA.

RESPONSE:

a) Refer to *Part VIII EXP Appendix 22a*, where MPI provided the 2027/28 budget guidance and detailed use of the 2026 GRA forecast as a reference point, along with detailed budget instruction. In the 2026/27 budget instruction, it was noted that the opening budget reflects the 2026/27 forecast presented in the 2025 GRA. There is nothing different, other than an illustration of the divisional break-down that was included in the 2026

guidance document. Although the divisional breakdown was not included in the 2027 guidance document, that does not mean the information was not available and known by divisions. Having clarified a request for the final 2027/28 operating expense and FTE amounts by division forecasted in the 2026 GRA and the divisional breakdown for 2027/28 in the 2027 GRA, this information was provided in *CC (MPI) 1-2 Appendix 1*.

b) The requested calculation cannot be provided in the manner described because it assumes that the 40 over-budget FTE/surge capacity is a discrete group of positions against which a specific cost can be charged. That is not how MPI's salary budget operates.

Vacancy is a notional concept used in the salary budgeting process to reflect the fact that, at any point in time, not all approved positions are expected to be filled for the full fiscal year. It is not a real position, employee, program, or budget line item. MPI does not "charge" costs against vacancy, nor does vacancy generate actual expenditures. Actual salary and benefit costs are incurred only for employees actually employed and paid during the period.

Accordingly, applying an average salary and benefit rate to 40 FTEs would not produce a meaningful estimate of incremental operating expense. Such a calculation would incorrectly imply that there are 40 identifiable incremental employees or positions for which MPI incurs a separate cost. MPI incurs actual salary and benefit costs based on actual employees in place and paid, not against a notional vacancy assumption.

CC (MPI) 2-9

Part and Chapter:	**CC (MPI) 1-4 (a) (b) (c)**	**Page No.:**	
Topic:	**Operations**		
Sub Topic:	**Changes in the Level of Corporate FTEs**		

Preamble to IR (If Any):

In information request CC (MPI) 1-4 (a), the Consumers Coalition requested MPI to provide detailed variance explanations by division between the 2025/26 actual FTEs (2,041.3) and 2025/26 budgeted FTEs (2,088.8) which indicated an under budget of 47.5 FTEs on an overall corporate basis (Part VIII – EXP Appendix 9, page 2). In the response, MPI did not provide the variance explanations by division and instead simply indicated that the variances by division resulted from normal business and staff movement.

In the response to CC (MPI) 1-4 (b), MPI provided an analysis of the $9.5 million unfavorable variance in total corporate salaries for 2025/26 between actual and budgeted amounts, indicating that the corporate vacancy provision was $6.0 million unfavorable for 2025/26.

In information request CC (MPI) 1-4 (c), the Consumers Coalition requested MPI to provide detailed variance explanations by division between the 2025/26 actual FTEs (2,041.3) and 2026/27 budgeted FTEs (2,088.8) which indicates an increase of 47.5 FTEs on an overall corporate basis (Part VIII – EXP Appendix 20, page 2). In the response, MPI did not provide the variance explanations by division and instead simply indicated that FTEs by division can vary at any point in time.

Question:

a) Please provide a variance explanation for the following divisions related to the variances between 2025/26 actual FTEs and 2025/26 budgeted FTEs from Part VIII – EXP Appendix 9, page 2:

   a. the under budget of 59.5 FTEs in Information & Technology,

   b. the under budget of 15.5 FTEs in Claims, and

   c. the over budget of 33.9 FTEs in Customer & Product Value.

b) Please provide a detailed explanation why the corporate vacancy provision was unfavorable in the amount of $6.0 million for 2025/26 actual vs. budget, considering that total corporate FTEs were 47.5 FTEs under budget for 2025/26.

c) Please provide an explanation for the following divisions related to the increases in FTEs between 2025/26 actual FTEs and 2026/27 budgeted FTEs from Part VIII – EXP Appendix 20, page 2:

   a. the increase of 24.5 FTEs in Information & Technology, and

   b. the increase 23.5 FTEs in Operations.

Rationale for Question:

To understand the reasons for variances between actual and budgeted FTEs for 2025/26 and 2026/27.

RESPONSE:

a) The variance explanation for the following divisions related to the variances between 2025/26 actual FTEs and 2025/26 budgeted FTEs from Part VIII – EXP Appendix 9, page 2:

   a. the under budget of 59.5 FTEs in Information & Technology:

- 33 FTE moved from IT to Customer & Product Value in a re-organization including roles in Product Management & Business Architecture such as Product Manager, Product Owners, Scrum Masters and Project Coordinators.
- The remaining (59.5-33 = 26.25 FTE) would be a combination of vacant FTE in the division and initiative FTE budget at the point in time.

b. the under budget of 15.5 FTEs in Claims:

- 11 FTE moved from Claims to Operations in a re-organization including roles in Estimating and Vehicle Safety.
- The remaining (15.5-11 = 4.5 FTE) would be vacant FTE in the division at the point in time.

c. the over budget of 33.9 FTEs in Customer & Product Value:

- 33 FTE moved into Customer & Product Value from IT in a re-organization as per above.

b) *CC(MPI)1-4, Figure 1, Salary Change – 2025/26 BF vs Actuals* demonstrates that under Corporate Vacancy Provision the budget forecast of -$6M had $0 actuals in 25/26. This is because the vacancy provision is reported as a reduction to budgeted compensation expenses anticipating unfilled positions throughout the year. Actual expenses are not incurred against the vacancy provision budget and therefore the vacancy provision is reported as an unfavourable variance.

c) The explanation for the following divisions related to the increases in FTEs between 2025/26 actual FTEs and 2026/27 budgeted FTEs from Part VIII – EXP Appendix 20, page 2:

a. The increase of 24.5 FTEs in Information & Technology would not be a true increase in FTE but rather a combination of vacant FTE in the division and initiative FTE at the point in time the 2025/26 actuals were pulled, compared to the 2026/27 budget.

b. The increase of 23.5 FTEs in Operations would not be a true increase in FTE but rather vacant FTE in the division at the point in time the 2025/26 actuals were pulled, compared to the 2026/27 budget.

CC (MPI) 2-10

Part and Chapter:	**CC (MPI) 1-5 (b) (c) (d) (f) (j) (k) (m)**	**Page No.:**	
Topic:	**Operations**		
Sub Topic:	**MPI's Use of Key Performance Indicators (KPIs)**		

Preamble to IR (If Any):

In the response to CC (MPI) 1-5 (b), MPI indicates that it recognizes that Objectives and Key Results (OKRs) can be an effective tool for driving organizational focus and advancing specific strategic outcomes. However, MPI does not intend to re-introduce OKRs as a component of its performance management system at this time. MPI asserts that its approach of strategic KPIs is designed to provide the same benefits sought through an OKR framework.

In the response to CC (MPI) 1-5 (c), MPI indicates that its focus on stability as the key driver in the design of its performance measurement system and related strategic KPIs should be understood in the context of establishing a performance measurement framework and that the intent is not to avoid ambition in setting milestones. MPI further indicates that the intent was to establish milestones in the first few years of strategic plan implementation to inform future year milestone setting based on an actual trajectory.

In the response to CC (MPI) 1-5 (d), MPI indicates that it has not established a dedicated strategic KPI for its "Be Ready for What's Ahead" strategic pillar – as work undertaken within this pillar is expected to positively influence a number of strategic KPIs such as employee engagement, percentage of planned work completed within schedule, MCT ratios and customer experience.

In the response to CC (MPI) 1-5 (f), MPI indicates that it has not obtained customer feedback specifically from lower-income Manitobans to determine what ratio of premiums to income that segment of the market would consider affordable and that its 2.25% affordability milestone was developed at an aggregate level and not based on feedback segmented by income group.

In information request CC (MPI) 1-5 (j), the Consumers Coalition requested MPI to provide the following calculations for 2025/26 to 2028/29: (i) the $59,824 average income for 2024/25 escalated by 3% on an annual basis (ii) the average insurance premium for each of the years that would correspond to a 2.25% ratio of the average insurance premium to average income (iii) the corresponding annual premium increase for each of the years to produce a 2.25% ratio (iv) the corresponding cumulative annual premium increase from 2025/26 to 2028/29 and (v) the corresponding even annual premium increase for the period from 2025/26 to 2028/29. MPI was also requested to provide MPIs views on whether the calculated even annual premium increase associated with a 2.25% milestone is a reasonable target from a customer affordability perspective and represents an aspirational milestone or a milestone that is easily achievable given that the current ratio is around 2.01%. In the response, MPI did not provide the requested calculations but instead indicated that the 2.25% affordability milestone was intended to support on-going monitoring of affordability trends and provide an indication of when affordability outcomes may warrant additional review and consideration.

In the response to CC (MPI) 1-5 (k), MPI indicates it chose the % planned work completed within schedule KPI as a performance measure for organizational effectiveness over a % planned work completed within budget KPI as this KPI was intended to provide an enterprise-level view of whether MPI is selecting and executing a realistic portfolio of work and was not

intended to measure project management performance at the individual initiative level.

In the response to CC (MPI) 1-5 (m), MPI indicates that it chose the expense ratio KPI as a performance measure for organizational effectiveness over the expense dollars per vehicle registered KPI as the expense ratio KPI is simpler and more broadly understood by diverse audiences that use MPI's public reporting.

Question:

a) Please explain how MPI intends to achieve the same benefits from strategic KPIs that measure directional trends over time as would be achieved by OKRs that translate selected strategic priorities into focused objectives and measurable results over a defined time period.

b) Please reconcile the MPI intent not to avoid ambition in setting KPI milestones with the intent to inform future year milestone setting based on an actual trajectory as opposed to use of stretch targets.

c) Please provide MPIs view on the potential limitations of using its more traditional strategic KPIs (MCT ratio, customer satisfaction and employee engagement etc.) to measure MPI's progress towards its strategic pillar "Be Ready for What's Ahead" considering that they are lagging in nature (showing where the organization has been) and have an internal focus (measuring current organizational health rather than external auto insurance ecosystem dynamics). As part of the response, please explain if performance indicators that are leading (predict future adaptability such as speed of decision making), track innovation velocity (how fast new ideas move from concept to pilot) and track technology adoption may be more appropriate and relevant for this strategic pillar.

d) Please explain if MPI has any plans to develop affordability milestones that are segmented by income group or ratepayer classes. If not, please explain why not.

e) Please explain if the 2.25% affordability milestone incorporates consideration of changes to the basic deductible. If yes, please explain how. If not, please explain why not.

f) Please confirm (or adjust with an explanation) the following calculations that were requested in information request CC (MPI) 1-5 (j):

   a. $59,824 average income escalated at 3% for three years is $61,619, $63,467 and $65,371, respectively

   b. average premium for each of the three years that would correspond to 2.25% of average income is $1,386, $1,428 and $1,471, respectively

   c. the corresponding average premium increase is 14.9% ($180/$1,206), 3.0% ($42/$1,386) and 3.0% ($43/$1,428), respectively

   d. the corresponding cumulative annual premium increase for the three year period is 21.9% (1.149*1.03*1.03) and

   e. the corresponding even annual premium increase for the three year period would be 6.8%/year.

g) Please explain why a % of planned work within schedule KPI is a better measure of MPI's organizational effectiveness than an aggregate measure of % of planned work with budget.

h) Please explain why a financial business measure such as an expense ratio KPI is simpler and more readily understandable by stakeholders that use MPIs public reporting than an expense dollars per vehicle registered KPI - that on the face of it appears to more relatable to external stakeholders that are likely to be registered vehicle owners.

Rationale for Question:

To gain an understanding of MPI's performance measurement system and the selection and use of performance metrics and KPIs to inform decision making and contain operating expenses.

RESPONSE:

a) When strategic KPIs are supported by annual milestones, clear ownership, regular performance monitoring and management action, they can provide many of the same practical benefits associated with OKRs. Annual milestones establish measurable expectations for a defined fiscal period, focus attention on desired outcomes, align organizational effort and provide a basis for assessing whether progress is occurring at the expected pace. The underlying KPI remains stable to support baseline development and trend analysis, while the annual milestone provides the time-specific performance expectation.

MPI's current priority is to continue maturing this performance measurement foundation. Stable measures, reliable data, and credible baselines enable MPI to better identify areas requiring focused action and to establish meaningful, evidence-based performance expectations. MPI continues to recognize that OKRs may be an effective complementary tool in circumstances where a narrower, time-bound objective is appropriate, but does not consider the reintroduction of a corporate-wide OKR framework necessary to obtain focus, alignment, accountability, and measurable annual progress because the strategic KPI framework MPI has implemented will achieve those benefits.

b) Evidence-based does not mean unambitious. MPI will use its actual performance trajectory to establish a reliable starting point and understand the factors influencing results. It will not simply extend the existing trajectory into future years or accept the status quo.

Ambition will come from setting milestones that require performance to improve beyond the expected trajectory. The level of improvement will be supported by specific initiatives, organizational capacity, strategic priorities and management action. This approach ensures that milestones are challenging while remaining credible, measurable and capable of supporting accountability.

As MPI develops a stronger understanding of performance drivers and the results of its initiatives, it will use that evidence to set progressively more ambitious milestones where supported. Actual trajectory is therefore an input into milestone setting, not a limit on MPI's ambition.

c) MPI's strategic KPIs are not intended to measure individual strategic pillars. The pillars organize and provide oversight of the initiatives and other efforts through which MPI executes its corporate strategy. Strategic KPIs operate at a different level: they collectively measure the overall impact of the corporate strategic plan.

As noted in MPI's response to *CC (MPI) 1-5(d)*, MPI has not established a dedicated strategic KPI for "Be Ready for What's Ahead." Work undertaken within this pillar may contribute to enterprise-level results reflected in several strategic KPIs, including affordability, employee engagement, planned work completed within schedule, MCT ratios and customer satisfaction. However, those KPIs do not measure the pillar itself, and changes in those KPIs cannot be attributed exclusively to work undertaken within one pillar.

MPI is currently developing a network of cascading operational KPIs that will support its strategic KPIs. These operational KPIs are expected to include more leading indicators, providing earlier insight into the activities, capabilities and performance drivers that contribute to enterprise-level outcomes. They will ladder up to the strategic KPIs rather than being assigned to or used to measure individual strategic pillars.

Measures such as speed of decision-making, innovation velocity and technology adoption may be relevant operational indicators where there is a clear connection to an intended outcome, an established definition and reliable data. MPI will consider such measures through the development of its operational KPI network. Their appropriateness will depend on whether they provide meaningful insight into the drivers of a strategic KPI, not whether they can be associated with a particular pillar.

MPI acknowledges traditional strategic KPIs and leading operational indicators serve different but complementary purposes. Strategic KPIs assess the overall impact of MPI's corporate strategy, while operational KPIs provide more timely insight into the factors expected to drive those results. Neither is intended to measure a strategic pillar.

d) MPI does not plan to develop affordability milestones segmented by income group or ratepayer class. The affordability strategic KPI is intentionally an enterprise-level measure of the overall affordability of Basic insurance for Manitobans. The 2024 Basic Insurance Model quantitative research found that 73% of Manitobans considered vehicle insurance in Manitoba affordable.

Segmenting the milestone would change the nature and purpose of the strategic KPI. MPI considers the current enterprise-level measure appropriate for assessing the overall impact of the corporate strategy and does not consider separate strategic milestones by income group or ratepayer class necessary.

e) The 2.25% affordability KPI is calculated as the relationship between average insurance premiums and average income. As such, the KPI does not separately quantify or assign a distinct value to changes in the Basic deductible. Rather, it is intended to provide an organization-level indication of premium affordability over time by monitoring the ratio of average insurance premiums to average income.

Affordability considerations were taken into account when the decision was made to increase the Basic deductible from $750 to $1,000. As previously explained in response to *CMMG (MPI) 1-1*, affordability was one of the factors that contributed to the decision, with the deductible change reducing the rate requirement associated with rising repair costs and claims costs while helping to support affordable insurance coverage for Manitobans.

MPI also explained in response to *CC (MPI) 1-37* that the deductible change supports affordability by lowering the premium required for Basic coverage while continuing to provide customers with flexibility through optional Extension products, including lower deductible options.

Accordingly, the affordability KPI does not explicitly incorporate deductible levels as a separate measure. However, the affordability considerations that informed the deductible decision are reflected indirectly to the extent that the deductible change affects the premium levels being monitored through the affordability KPI.

f) MPI confirms that the calculations are generally correct, subject to minor rounding differences.

MPI notes that the calculations effectively reverse-engineer the affordability threshold into a series of implied premium levels. While mathematically valid, this is not the purpose for which the affordability KPI was designed.

The affordability KPI was established to monitor the relationship between average insurance premiums and average income over time and to provide an indication of when affordability pressures may warrant additional scrutiny. The 2.25% milestone functions as a threshold or ceiling, not as a premium growth objective or target. As a result, the premium increases implied by the calculations should not be interpreted as premium increases that MPI considers acceptable, desirable, or necessary in order to achieve the KPI. Rather, they simply illustrate the premium

levels that would correspond to the threshold under the assumptions provided in the Information Request.

Consistent with MPI's previous responses, the objective is to remain below the threshold and monitor trends over time, not to move toward the threshold.

g) MPI selected “% of Planned Work Completed Within Schedule” because it directly measures the intended strategic outcome: whether MPI establishes realistic annual commitments and delivers them as planned. At the enterprise level, consistent delivery within schedule provides an indication of effective prioritization, capacity planning and execution.

An aggregate measure of work completed within budget would assess financial performance rather than whether MPI fulfilled its planned commitments. Work may remain within budget because it was delayed, deferred or reduced in scope. Further, aggregating budget results across initiatives of different sizes and types would not provide a clear enterprise-level measure of delivery against plan.

For these reasons, schedule performance is better aligned with the purpose of this strategic KPI. Budget performance continues to be monitored through MPI’s established financial and initiative-level controls and is not replaced by this KPI.

h) Although expense dollars per vehicle may appear more relatable, the measure is less intuitive as an indicator of performance because the dollar amount would normally increase over time due to inflation and other cost pressures. A higher result could therefore be interpreted as deteriorating performance even when expenses are being effectively managed. Expense ratio provides the necessary business context by measuring operating expenses relative to the scale of operations, making it more appropriate for assessing enterprise cost discipline over time.

CC (MPI) 2-11

Part and Chapter:	**Part II – COM Appendix 2** **CC (MPI) 1-6**	**Page**	
Topic:	**Claims Cost Control KPIs – response to PUB Order 2/25, Directive 9**		
Sub Topic:			

Preamble to IR (If Any):

In discussing salvage as a cost control, CC (MPI) 1-6 b) response states in part:

> "Currently in an average year, MPI has roughly 2300 unique buyers, of which over 80% of buyers are located within the province. Of note, approximately three quarters of all buyers are dealers, recyclers, and exporters."

Question:

a) Please provide a narrative discussion explaining the type of salvage vehicles exporters purchase -- repairable or irreparable vehicles.

b) In the event exporters purchase irreparable vehicles and ship them to another country and sell them as road worthy vehicles; please provide a narrative discussion of the legal (potential liability) and/or other implications these types of transactions may pose to MPI?

c) Please provide a narrative discussion regarding the impact exporters have on the final auction price of salvage vehicles, if any.

Rationale for Question:

To clarify and better understand the influence and impact exporters have on MPI's salvage operations and if MPI has a legal duty of care or other duty/responsibility with respect to salvage vehicles being exported to other countries that may or may not be road worthy.

RESPONSE:

a) Exporters represent approximately 4.8% of MPI's buyer base and account for about 2.2% of total vehicle purchases. Of the vehicles purchased by exporters, approximately 80% have a salvageable status, 18% are irreparable, and the remaining 2% consist of a mix of normal-status vehicles and salvage vehicles with exceptions.

b) Once salvage vehicles are sold, MPI has limited visibility into their destination and no oversight regarding whether the vehicles are repaired, inspected, or brought into compliance with applicable safety standards before being resold.

While such a lawsuit has never been advanced against MPI, if a vehicle was resold for road use in another country (with an ensuing accident causing damage), jurisdictional issues aside, MPI would in all likelihood be found to have discharged any duty owed to the purchaser, having sold the vehicle to the exporter with an irreparable status. There would be no contractual basis to sue MPI in such a scenario.

c) MPI is not aware of any evidence indicating that exporters have a material impact on the final auction sale price of salvage vehicles.

CC (MPI) 2-12

Part and Chapter:	**Part VIII – Revenues** **CC (MPI) 1-36**	**Page No.:**	
Topic:	**Variance explanations**		
Sub Topic:			

Preamble to IR (If Any):

In response to CC (MPI) 1-36 a), relating to the catastrophe program, MPI, in part, states:

> "As the treaty is written on an annual aggregate basis, it does not contain reinstatement provisions."

In response to CC (MPI) 1-36 c), MPI, in part, states:

> "In light of the magnitude of the June 2026 catastrophe event and the potential for catastrophe losses to approach the limits of the existing program, MPI purchased an additional $200 million of catastrophe reinsurance protection excess of a $70 million aggregate deductible, subject to a $3M per-occurrence deductible; effective July 10, 2026 to provide additional protection for the remainder of the 2026 catastrophe season."

Question:

a) For greater clarity, please explain the concept of 'reinstatement provisions' relating to a reinsurance catastrophe program.

b) Please elaborate as to whether MPI has purchased reinstatements in its reinsurance catastrophe program within the past 10 years. If so, when and how many.

c) Please elaborate the reasons MPI did not include one or two reinstatements in the current catastrophe program.

d) Please provide the cost of the additional catastrophe reinsurance protection purchased effective July 10, 2026 and compared this premium to one reinstatement premium had that been purchased at the inception of the current program.

Rationale for Question:

To review and understand the concept and cost of catastrophe reinstatement provisions.

RESPONSE:

a) A reinstatement provision is a common feature of occurrence-based reinsurance programs that restores coverage after a covered loss event has exhausted or reduced a reinsurance layer. Reinstatements are typically available for an additional premium specified in the treaty terms.

   MPI's catastrophe treaty is written on an annual aggregate basis, under which losses accumulate against a single annual deductible and limit. As coverage is not depleted on an event-by-event basis, reinstatement provisions are not applicable.

b) MPI's catastrophe reinsurance program included reinstatement provisions when it was structured on an occurrence basis. The most recent occurrence-based program was in place during the 2018/19 treaty year and provided two reinstatements on the first layer and one reinstatement on each higher layer. During that treaty year, MPI experienced a catastrophe event that triggered a reinsurance recovery and the associated reinstatement premium was paid to restore coverage. The 2017/18 treaty year included similar reinstatement structure; however, no catastrophe events triggered a reinsurance recovery and no reinstatement premium was required.

Effective March 1, 2019, MPI transitioned to an annual aggregate catastrophe reinsurance structure under which reinstatements are not applicable. Since that time, MPI has not purchased catastrophe reinstatements.

c) Reinstatement provisions were not included because MPI's catastrophe reinsurance program is written on an annual aggregate basis, under which losses accumulate against a single annual deductible and limit. The aggregate structure was selected because it provides protection against both large catastrophe events and the accumulation of multiple events during the treaty year, providing coverage for events that would not otherwise be covered.

d) The additional catastrophe reinsurance protection purchased effective July 10, 2026 was not a reinstatement of existing coverage. Rather, it was a separate placement providing an additional $200 million of aggregate catastrophe protection excess of a $70 million aggregate deductible, subject to a $3 million per-occurrence deductible, for the remainder of the 2026/27 treaty year. The premium applicable to the Basic line of business for this coverage was $27.3M.

MPI's catastrophe reinsurance program is structured on an annual aggregate basis and does not contain reinstatement provisions. Accordingly, a directly comparable reinstatement premium is not available. Any comparison would require assuming a different occurrence-based program design that was not purchased for the 2026/27 treaty year.

In addition, the cost of the July 10 placement reflected market conditions after the June 2026 catastrophe events, when reinsurers had already incurred significant losses and available capacity had become more limited. As a result, the premium would not be comparable to coverage purchased at the inception of the treaty year.

CC (MPI) 2-13

Part and Chapter:	**Part VIII - Pro Formas** **Part VIII - Expenses, EXP** **Appendix 18, Figure EXP App 18-5** **Part II - MFR Appendix 10** **PUB (MPI) 1-59 (c)**	**Page No.:**	
Topic:	**Significant Claims incurred increases, year over year, from 2025/26 through to 2027/28**		
Sub Topic:			

Preamble to IR (If Any):

Regarding the DVA, the response to PUB (MPI) 1-59 c) states:

"Government has approved the recovery at $54M on a go forward basis."

Question:

a) Please file a copy of the updated and current DVA Agreement with Government relating to funding DVA operations. If the DVA Agreement is not updated, please file the latest agreement with the supporting correspondence, including Order in Council and annual payment changes.

b) Please provide a narrative discussion on how the Province of Manitoba and/or MPI plans on settling the annual funding shortfalls, if any. (see Figure 1 PUB (MPI) 1-59 b)).

c) Please file a chart, for greater clarity, listing the annual DVA funding amounts paid to MPI by the Province of Manitoba.

Rationale for Question:

To review the Province of Manitoba DVA funding arrangements.

RESPONSE:

a) Please refer to *Appendix 1*.

MPI and the Government of Manitoba are engaged in discussions to update and modernize the DVA agreement to better reflect the full scope of services delivered by MPI on behalf of Government under the DVA line of business. These discussions remain ongoing and an updated agreement is being drafted. The DVA Agreement establishes the framework under which MPI delivers driver licensing, vehicle registration and related services on behalf of the Government of Manitoba. While the Agreement provides the overarching framework for the relationship, annual funding levels are determined through the Government's budget approval process. Approved funding amounts are communicated to MPI through the Department of Justice.

b) MPI and the Government of Manitoba recognize the importance of ensuring that DVA operations are appropriately funded on a sustainable basis. Discussions between MPI and the Government of Manitoba regarding DVA funding have been ongoing, with a focus on aligning provincial funding with the actual costs incurred by MPI in delivering DVA programs and services. These discussions include the development of an updated DVA funding agreement intended to establish a funding approach that more accurately reflects current operating requirements and supports the long-term financial sustainability of DVA operations. The objective of these discussions is to ensure that DVA operating costs are fully offset through provincial funding on an ongoing basis.

MPI will continue to work collaboratively with government to ensure future funding levels remain aligned with the costs of delivering DVA services and to address any emerging funding pressures through established processes.

c) Please refer to PUB 1-59(b), Figure 1, line item "DVA Operations Recovery," for the annual DVA funding amount paid by the Province of Manitoba to MPI in 2025/26.

Master Agreement as of the 1St day of October, 2004.

BETWEEN:

HER MAJESTY THE QUEEN IN RIGHT OF THE GOVERNMENT OF MANITOBA,

As represented by the Minister of Transportation and Government Services

- and –

THE MANITOBA PUBLIC INSURANCE CORPORATION

Master Agreement as of the 1St day of October, 2004.

BETWEEN:

HER MAJESTY THE QUEEN IN RIGHT OF THE GOVERNMENT OF MANITOBA, As represented by the Minister of Transportation and Government Services

(called the "Government")

- and –

THE MANITOBA PUBLIC INSURANCE CORPORATION

(called "MPI")

WHEREAS the Government announced that certain authorities, powers and duties were to be transferred from the Division of Driver and Vehicle Licensing ("DDVL") of the Department of Transportation and Government Services to MPI;

AND WHEREAS the parties entered into an Agreement dated April 20, 2004, respecting the interim transfer and delegation of authorities, powers and duties and other matters of common interest until appropriate legislation could be enacted by the Legislature to legally effect the transfer (the "Interim Agreement"). The Interim Agreement requires that the parties use their best efforts to negotiate agreements that address various issues related to the transfer. A copy of the Interim Agreement is attached as Schedule A;

AND WHEREAS the parties and the Manitoba Government Employees Union ("MGEU") entered into an Employee Transition Agreement dated June 29, 2004 respecting the transfer of employees from DDVL to MPI. A copy of the Employee Transition Agreement is attached as Schedule B;

AND WHEREAS the Government has announced its intention to introduce legislation that, when enacted and in force, will among other things, enable the transfer from DDVL to MPI (the "Enabling Legislation");

AND WHEREAS until the Enabling Legislation is in force, the Registrar of Motor Vehicles has, with the approval of the Minister of Transportation and Government Services (the "Minister"), delegated those statutory authorities, duties and powers which can by law be delegated to officers and staff of MPI in a series of delegation

letters dated April 20, 2004, June 11, 2004 and October 20, 2004 (the "Registrar's Delegations");

AND WHEREAS the parties are entering into this Master Agreement effective October 1, 2004, to address other outstanding issues relating to the interim transfer and delegation of authorities, powers and duties and to govern their ongoing relationship once the Enabling Legislation is in force and the transfer is legally effected;

NOW THEREFORE, in consideration of the foregoing recitals and the terms, conditions and covenants contained herein, it is hereby agreed as follows:

1.00 TERM OF AGREEMENT

1.01 This Agreement comes into effect on the day first above written.

2.00 SERVICES

2.01 Pending enactment and coming into force of the Enabling Legislation and in consideration of the annual payments referred to in section 4.00, MPI assumes responsibility, to the extent permitted by law, for the driver licensing and vehicle registration services described in subsections 2.03 and 2.06(a) (the "Services") pursuant to the Registrar's Delegations and the Information Management Agreement referred to in subsection 10.02.

2.02 When the Enabling Legislation is in force and the transfer is legally effected, and in consideration of the annual payments referred to in section 4.00, MPI assumes responsibility for the Services.

2.03 In assuming responsibility for the Services, MPI acknowledges importance of the National Safety Code which describes uniform standards, processes and criteria for a broad array of traffic safety matters, including vehicle inspections, motor carriers, driver licensing and testing, medical standards and carrier and driver profiles. The Services are:

(a) Driver Licensing;
(b) Vehicle Registration;
(c) Driver Improvement and Control;
(d) Alcohol and Drug Program;
(e) Vehicle Dealers, Salespersons and Recyclers;
(f) Driver Training Schools and Instructors;
(g) Vehicle Standards and Inspection Programs;
(h) Provincial Photo Identification Card Program (upon proclamation);
(i) Medical Records;
(j) Driver Testing;
(k) Driver Records and Suspension;

(l) Research and Information Services;
(m) Maintaining registries; and
(n) Record keeping, reporting and information management relating to the Services described in clauses (a) to (n), including:
  (i) providing information, records and reports to the Government's Department of Transportation and Government Services (the "Department") as required, including without limitation:
    (A) Carrier file downloads;
    (B) Vehicle files downloads;
    (C) View access to driver and vehicle display and Autopac On-Line;
    (D) Commercial motor vehicle accident downloads to the carrier profile system;
    (E) Driver licence file downloads;
    (F) International Registration Plan file downloads of registrations;
    (G) Access to the Inter-Provincial Record Exchange dedicated line for Canadian Council of Motor Transport Administrators Carrier Data Exchange;
    (H) Access to the Interprovincial Record Exchange;
    (I) Periodic Mandatory Vehicle Inspection data relating to motor coaches and school buses;
    (J) Traffic Accident Reports and data files (respecting traffic accidents reportable under legislation such as *The Highway Traffic Act* and *The Off-Road Vehicles Act);* and
    (K) Compilation of specialized reports on reportable traffic accidents and related convictions under *The Highway Traffic Act, The Off-Road Vehicles Act* and the *Criminal Code,* for use by the Government for development and planning new initiatives, policies and programs; and
  (ii) complying on behalf of the Government with existing information sharing or disclosure agreements or arrangements and any such agreements or arrangements entered into by the Government while this Master Agreement is in effect.

2.04 Except for the Services described in subsections 2.03 and 2.06(a), the Government retains responsibility for all other driver licensing and vehicle registration matters including, without limitation:

(a) driver licensing standards and policy development, including establishment of driver medical standards and guidelines, driver examination and testing criteria;
(b) vehicle registration standards and policy development, including establishment of vehicle classes;
(c) standards for vehicles and inspections and policy development, including equipment requirements and safety standards, vehicle weights and dimensions on highways;
(d) establishment and waiver of any charges, taxes or other amounts for driver licensing and vehicle registration services;
(e) rules respecting control of traffic, including seatbelt and child restraint requirements and physically disabled persons parking permits; establishing standards of conduct for all users of Manitoba's highways, including drivers, pedestrians, cyclists and operators of horse-drawn vehicles;
(f) social policy initiatives to enhance sustainable transportation, including measures to implement Manitoba's climate change objectives related to reducing the on-road emissions from vehicles;
(g) social policy countermeasure initiatives, including impaired and disqualified driving, prostitution-related offences, domestic and family related offences, stalking legislation, etc.;
(h) statutory bodies, including the Licence Suspension Appeal Board, the Medical Review Committee, the Taxicab Board, the Highway Traffic Board and the Motor Transport Board; and
(i) motor carrier fitness, including regulation of public service, commercial and other vehicles.

The Government agrees to consult with MPI regarding changes to the retained responsibilities identified in this subsection which affect the delivery of Services described in subsection 2.03.

2.05 The parties may make recommendations to the Minister, either alone or jointly, concerning

(a) policy development regarding driver licensing and vehicle registration matters not specified in subsection 2.04; and
(b) legislative and regulatory amendments respecting driver licensing and vehicle registration.

2.06 MPI agrees that it will:

(a) assume responsibility for the delivery of any new initiatives related to the Services or to driver licensing and vehicle registration matters generally as directed by the Government. Any such

initiatives will be Services for the purposes of this Master Agreement;

(b) not discontinue or substantially change any Services without the prior written consent of the Government; and

(c) implement changes to the Services required by the Government in a timely manner.

2.07 The Government agrees to negotiate with MPI any increase or decrease in costs that may result from any implementation of a new initiative or discontinuance of any Service hereto relating. Without limiting the generality of the foregoing, the parties will take into account the cost of operational and procedural changes necessitated by the implementation of new initiatives or the discontinuance of any Service or Services.

2.08 The Government agrees that all requests for the implementation of new Services, standards and other requirements shall be in accordance with MPI's established business practices and change protocols.

2.09 Subject to subsection 2.06, MPI will have full discretion over the manner in which the Services are managed on a day to day basis and will continue to identify opportunities for service improvement.

2.10 The parties acknowledge that the transfer of authorities, powers and duties from DDVL to MPI is intended to improve customer service, achieve cost efficiencies and amalgamate similar functions performed by the parties. The parties therefore agree that:

(a) they will review the operation of this Agreement at least once in each fiscal year, commencing as of April 1, 2006; and

(b) MPI shall provide the Department with such financial and operational reports respecting the Services as may be requested.

3.00 EMPLOYEE ISSUES

Pension Benefit Liabilities:

3.01 MPI shall be solely responsible for funding the employer's portion of the pension benefit liability for all DDVL personnel transferred to the employ of MPI in respect of service accrued on or after the following dates:

(a) for non-union employees, May 3, 2004;

(b) for union employees, October 4, 2004; and

(c) for all subsequent transfers, the effective date of the transfer.

3.02 The Government agrees that it shall continue to be responsible for the employer's share of pension benefits earned of the transferred employees in respect of service accrued prior to the dates set out in subsection 3.01.

Accrued Liabilities:

3.03 On or before June 30, 2005, the Government will pay MPI all accrued vacation, overtime, workers compensation and severance and retirement allowance benefits for the transferred employees, calculated as of the dates set out in subsection 3.01.

Sick Leave Benefits:

3.04 Effective as of the dates set out in subsection 3.01, MPI shall assume responsibility for earned sick leave benefits accumulated by the transferred employees. The Government agrees to provide MPI with all records of these sick leave benefits to the extent permitted by law.

4.00 FINANCIAL ISSUES

4.01 Subject to the following subsections, and in consideration of the Services performed by MPI pursuant to this Agreement and the Enabling Legislation, the Government shall pay to MPI, on an annual basis, the amount of twenty million and nine hundred and ninety-five thousand and two hundred dollars ($20,995,200.00).

4.02 The annual amount payable under subsection 4.01 shall be paid to MPI in equal monthly installments commencing on April 15, 2005 and continuing in perpetuity, subject to any adjustments referred to in this Section.

4.03 For the period from April 1, 2004 to March 31, 2005, the annual amount referred to in subsection 4.01 will be allocated between the Government and MPI. The Government has paid the costs of providing the Services for the period up to and including September 30, 2004. The balance of the annual amount will be paid to MPI in equal monthly installments commencing October 15, 2004 and ending March 15, 2005. The parties will complete reconciliation as at fiscal year end. The total payment by Government, on its own account and to MPI for the Services, will not exceed the annual amount set out in subsection 4.01.

4.04 The Government agrees that any operating efficiency created by MPI will be to the sole and exclusive benefit of MPI.

4.05 The Government is entitled to all charges, taxes and revenue respecting driver licensing, vehicle registration and related services under *The Highway Traffic*

Act, The Off-Road Vehicles Act, the Enabling Legislation and any other applicable legislation.

4.06 MPI shall collect:

(a) all charges, taxes and revenue referred to in subsection 4.05; and
(b) all charges, taxes and other amounts payable under the International Registration Plan

and remit all such amounts, except for Retail Sales Tax amounts on a daily basis net of refunds and overpayments. Retail Sales Tax amounts shall be remitted monthly in accordance with the retail sales tax project agreement described in Subsection 9.01 of this Agreement. By way of clarification the International Registration Plan is a plan that provides for the distribution of commercial vehicle registration charges among member jurisdictions based on distances traveled by a registrant within those jurisdictions. The Province of Manitoba is a member of the plan. The parties agree that any charges, taxes and other amounts collected by MPI in accordance with clause (b) that are payable to other jurisdictions under the International Registration Plan will be remitted directly to those jurisdictions by MPI.

4.07 MPI agrees to pay for all unamortized leasehold improvements booked for the DDVL location at 602 1St Street in Brandon, Manitoba as of October 1, 2004.

5.00 CONTRACTS

5.01 To the extent permitted by law, MPI has assumed all leases, memoranda of understanding and agreements between the Government and third parties with respect to the Services effective October 1, 2004.

5.02 The Government as Landlord and MPI as tenant entered into lease agreements effective October 1, 2004, respecting space used by DDVL and located in Provincial buildings in Portage la Prairie, Dauphin, The Pas and Thompson.

6.00 1075 PORTAGE AVENUE

6.01 MPI has purchased the building and land known as 1075 Portage Avenue in Winnipeg from the Government for one million, seven hundred thousand dollars ($1,700,000.00) effective October 1, 2004.

7.00 FURNITURE AND EQUIPMENT

7.01 The Government will transfer all DDVL furniture and equipment to MPI at no cost, effective October 1, 2004. MPI will be liable for and pay all applicable federal and provincial sales taxes, federal goods and services taxes and all

other taxes, duties and other like charges properly payable in connection with the transfer.

8.00 SOFTWARE, COMPUTERS AND COMPUTER EQUIPMENT

8.01 The Government will transfer all DDVL computers and computer equipment and owned software required by MPI for the Services at a cost of seven hundred and five thousand, seven hundred and thirty six dollars and fifty three cents ($705,736.53).

8.02 Any DDVL licensed software required for the Services will be assigned to MPI if permitted by the license or agreed to by the licensor.

8.03 MPI will also be liable for and pay all applicable federal and provincial sales taxes, federal goods and services taxes and all other taxes, duties and other like charges properly payable in connection with the transfer.

9.00 RETAIL SALES TAX PROJECT

9.01 MPI, on behalf of Manitoba Finance - Taxation Division, as part of the Retail Sales Tax Project is making changes to its Autopac On-Line (AOL) system to process retail sales tax transactions. The Government agrees to pay to MPI a service fee of two hundred and two thousand, two hundred and eighteen dollars ($202,218.00) per year on an annual basis for five (5) years commencing on June 1, 2005 and ending with the final payment on June 1, 2009. A copy of the agreement respecting this project is attached to this Agreement as Schedule C. Notwithstanding Section 4.06 hereof, remittances in respect of Retail Sales Tax shall be made in accordance with Schedule C hereof.

10.00 PRIVACY AND INFORMATION MANAGEMENT AGREEMENT

10.01 While this Agreement is in effect, and at all times thereafter, the Government and MPI acknowledge the application of privacy legislation, in particular, *The Freedom of Information and Protection of Privacy Act* ("FIPPA") and *The Personal Health Information Act* ("PHIA").

10.02 The Government and MPI will enter into an Information Management Agreement respecting information and records relating to the Services (including the driver and vehicle information registries, medical reports and information MPI will manage on behalf of the Government until the Enabling Legislation is in place). The Information Management Agreement will include provisions protecting the privacy of the individuals the information and records are about. Once it is signed by the Government and MPI, a copy of the Information Management Agreement will be attached as Schedule D.

11.00 DISPUTE RESOLUTION

11.01 The parties shall use their best efforts to resolve any disputes that may arise as to their respective rights and obligations under this Agreement.

11.02 If a dispute arises, the matter shall be referred in the first instance to the General Counsel and Corporate Secretary in the case of MPI and the Assistant Deputy Minister of the Department of Transportation and Government Services in the case of the Government.

11.03 If the representatives referred to in subsection 11.02 are unable to resolve the dispute, within five (5) working days of either party notifying the other that the dispute cannot be resolved, each representative shall prepare and deliver a written report to the Chief Executive Officer in the case of MPI and to the Deputy Minister of the Department of Transportation and Government Services, who shall work together to resolve the dispute.

11.04 If the representatives referred to in subsection 11.03 are unable to resolve the dispute, within five (5) working days of either party notifying the other that the dispute cannot be resolved, each representative shall prepare and deliver a written report to the Minister of Transportation and Government Services and the Minister responsible for *The Manitoba Public Insurance Act* for resolution. The decision of the Ministers shall be final and binding on the parties.

12.00 SURVIVAL OF TERMS

12.01 The terms and conditions contained in the Agreement that by their sense and context are intended to survive the performance of the Agreement by the parties shall so survive the completion and performance, suspension, cancellation or termination of the Agreement.

13.00 NO ASSIGNMENT OF AGREEMENT

13.01 Neither party shall assign or transfer this Agreement or any of the rights or obligations under this Agreement.

14.00 TIME OF ESSENCE

14.01 Time shall be of the essence of this Agreement.

15.00 AMENDMENTS

15.01 No amendment or change to, or modification of, this Agreement shall be valid unless it is in writing and signed by both parties.

16.00 SEVERABILITY

16.01 If any provision of this Agreement is for any reason invalid, that provision shall be considered separate and severable from this Agreement, and the other provisions of this Agreement shall remain in force and continue to be binding upon the parties as though the invalid provision had never been included in the Agreement.

17.00 APPLICABLE LAW

17.01 This Agreement shall be interpreted, performed and enforced in accordance with the laws of Manitoba.

17.02 In the event of any inconsistency between this Agreement and the Enabling Legislation, the Enabling Legislation shall prevail.

18.00 WAIVER

18.01 Any failure or delay by either party to exercise or partially exercise any right, power or privilege hereunder shall not be deemed a waiver of any of the rights, powers or privileges under this Agreement. The waiver by either party of a breach of any term, condition or provision of this Agreement shall not operate as, or be construed as, a waiver of any subsequent breach thereof.

19.00 AGREEMENT TO PERFORM NECESSARY ACTS

19.01 The parties agree to perform any further acts and execute and deliver any documents that may be reasonably necessary to carry out the provisions of this Agreement.

20.00 HEADINGS

20.01 Paragraph headings used herein are for convenience only, and shall not be deemed to be part of this Agreement.

21.00 INTERPRETATION

21.01 In this Agreement, unless the context clearly otherwise requires:

(a) person includes individuals, firms or corporations; and

(b) the singular includes the plural and vice versa.

22.00 NOTICES

22.01 Any notice or other communication to the Government under this Agreement shall be in writing and shall be delivered, sent by registered mail, postage prepaid or sent by facsimile to:

Paul Rochon
Assistant Deputy Minister, Department of Transportation and Government Services 17th Floor, 215 Garry Street
Winnipeg, Manitoba R3C 3Z1
Fax no: 204-945-5115

22.02 Any notice or other communication to Manitoba Public Insurance under this Agreement shall be in writing and shall be delivered, sent by registered mail, postage prepaid or sent by facsimile to:

Kevin M. McCulloch
General Counsel and Corporate Secretary
Box 6300
9th Floor-234 Donald Street
Winnipeg, Manitoba R3C 4A4

Fax no: 942-1133

22.03 Any notice or communication sent by registered mail shall be deemed to have been received on the third business day following the date of mailing. If mail service is disrupted by labour controversy, notice shall be delivered personally.

Any notice or communication sent by facsimile shall be deemed to have been received on the first business day following the date of transmission.

This Agreement has been executed on behalf of The Manitoba Public Insurance Corporation and the Government (by their duly authorized representatives) on the date first above written.

Schedule A to the Agreement between Her Majesty the Queen in Right of the Government of Manitoba, as represented by the Minister of Transportation and Government Services and the Manitoba Public Insurance Corporation, made as of the day of October, 2004

DRAFT

THIS AGREEMENT made the 20TH day of April, 2004

BETWEEN

HER MAJESTY THE QUEEN
IN RIGHT OF THE GOVERNMENT OF MANITOBA,
as represented by the Minister of
Transportation and Government Services

(called the "Government");

- and -

THE MANITOBA PUBLIC INSURANCE CORPORATION,

(called "Manitoba Public Insurance").

WHEREAS the Government has announced that certain authorities, powers and duties are to be transferred from the Division of Driver and Vehicle Licencing ("DDVL") to Manitoba Public Insurance;

AND WHEREAS the transfer is intended to take place in two phases; an Intermediate Phase to be followed by a Permanent Phase;

AND WHEREAS the Intermediate Phase is based on a general delegation of authority by the Registrar to an Official at Manitoba Public Insurance pursuant to Section 323(4) of the Highway Traffic Act, C.C.S.M. c H70 ("The Registrar's Delegation");

AND WHEREAS the Intermediate Phase is generally intended by the parties to be in effect until appropriate statutory amendments can be made by the Legislature to make the transfer permanent;

AND WHEREAS this Agreement is intended to govern matters of common interest to the Government and Manitoba Public Insurance during the Intermediate Phase;

NOW THEREFORE, in return for mutual good and valuable consideration passing between the parties, it is hereby agreed as follows:

1.00 TERM OF AGREEMENT

1.01 This Agreement comes into force as of the date when the Registrar's Delegation takes effect and shall continue in effect until terminated in accordance with clause 1.02.

1.02 This Agreement shall be terminated on the occurrence of any one of the following:

(a) The legislative amendments have been enacted and have come into force to make the transfer of the authorities, powers and duties from the Division of Driver and Vehicle Licencing to Manitoba Public Insurance permanent; or

(b) The Registrar's Delegation, with the written approval of the Minister, is revoked, rescinded or otherwise terminated; or

(c) By agreement of the parties.

1.03 Notwithstanding clause 1.02, the parties may extend this Agreement beyond an event described in sub clause 1.02(a) or 1.02(b).

2.00 TRANSFER OF RESPONSIBILITIES

2.01 Once the Registrar's delegation takes effect, Manitoba Public Insurance will ensure that the person identified by the Registrar as the delegate will exercise the full range of authorities, powers and duties that fall within the scope of the delegation.

2.02 Despite clause 2.01, it is recognized that some authorities, powers and duties will initially continue to be formally exercised by the Registrar during the Intermediate Phase. Nevertheless, Manitoba Public Insurance will immediately assume management and supervision of day-to-day administration of all matters that fall within the scope of the Registrar's Delegation.

2.03 As of the Effective Date, Manitoba Public Insurance shall, to the extent allowable by law, be responsible for management of the business and administrative operations of the Division of Driver and Vehicle Licencing.

3.00 TRANSFER OF NON-UNION EMPLOYEES

3.01 As of the Effective Date, Manitoba Public Insurance shall assume responsibility for all non-union positions within DDVL. To that end, Manitoba Public Insurance will make formal offers of employment to the non-union DDVL staff. Manitoba Public Insurance will make formal offers of employment to each of the incumbents in those positions with the exception of the position of Registrar of Motor Vehicles to permit those employees to retain their respective positions.

3.02 Transfer of unionized staff positions from DDVL to Manitoba Public Insurance will occur in accordance with provisions set out in the applicable collective agreement.

4.00 REPORTING RELATIONSHIPS

4.01 As of the Effective Date, non-unionized staff positions transferred in accordance with clause 3.01 of this Agreement will report to Manitoba Public Insurance management in accordance with Manitoba Public Insurance structure and direction.

4.02 The parties do not expect the Registrar to abdicate her (or his) responsibilities as the delegator of the Registrar's legislated authorities, powers and duties for the duration of the Intermediate Phase.

5.00 COLLATERAL MATTERS

5.01 The parties agree that they will use their best efforts to negotiate an agreement that addresses issues relating to the transfer of unionized employees, the sharing of employee benefit costs (including accrued vacation benefits, severance entitlement and pension liabilities), remuneration to be paid to Manitoba Public Insurance, the transfer of land and assets from DDVL to Manitoba Public Insurance, and such other matters as the parties may deem necessary or advisable. To that end the parties agree to enter into a Memorandum of Understanding addressing these issues.

6.00 DISCLOSURE OF INFORMATION

6.01 The parties acknowledge that are each bound by *The Freedom of Information and Protection of Privacy Act* ("FIPPA"), and *The*

Personal Health Information Act ("PHIA") and agree that any transfer of personal information shall be conducted in accordance with FIPPA and PHIA.

7.00 SURVIVAL OF TERMS

7.01 The terms and conditions contained in the Agreement that by their sense and context are intended to survive the performance of the Agreement by the parties shall so survive the completion and performance, suspension, cancellation or termination of the Agreement.

8.00 NO ASSIGNMENT OF AGREEMENT

8.01 Neither party shall assign or transfer this Agreement or any of the rights or obligations under this Agreement without first obtaining written permission from the other.

8.02 No assignment or transfer of this Agreement shall relieve either party of any obligations under this Agreement, except to the extent they are properly performed by such party's permitted assigns.

8.03 This Agreement shall be binding upon the executors, administrators, heirs, successors and any permitted assigns of the parties.

9.00 ENTIRE AGREEMENT

9.01 This document contains the entire agreement between the parties with respect to the subject matter hereof. There are no undertakings, representations, or promises, express or implied, other than those contained in this Agreement and none have been relied on.

10.00 AMENDMENTS

10.01 No amendment or change to, or modification of, this Agreement shall be valid unless it is in writing and signed by both parties.

11.00 SEVERABILITY

11.01 If any provision of this Agreement is for any reason invalid, that provision shall be considered separate and severable from this Agreement, and the other provisions of this Agreement shall remain in force and continue to be binding upon the parties as though the invalid provision had never been included in the Agreement.

12.00 APPLICABLE LAW

12.01 This Agreement shall be interpreted, performed and enforced in accordance with the laws of Manitoba.

13.00 FORCE MAJEURE

13.01 Neither party shall be responsible for any failure to comply with or for any delay in performance of the terms of this Agreement where such failure or delay is directly or indirectly caused by or results from events of force majeure beyond the control of either party. These events shall include, but not be limited to fire, flood, earthquake, accident, civil disturbances, acts of terrorism, war, rationing, embargoes, strikes or lockouts, delays in transportation, inability to secure necessary materials, parts or components, delay or failure of performance of any supplier, acts of God, or acts of government.

14.00 WAIVER

14.01 Any failure or delay by either party to exercise or partially exercise any right, power or privilege hereunder shall not be deemed a waiver of any of the rights, powers or privileges under this Agreement. The waiver by either party of a breach of any term, condition or provision of the Agreement shall not operate as, or be construed as, a waiver of any subsequent breach thereof.

15.00 AGREEMENT TO PERFORM NECESSARY ACTS

15.01 The Parties agree to perform any further acts and execute and deliver any documents that may be reasonably necessary to carry out the provisions of the Agreement.

16.00 HEADINGS

16.01 Paragraph headings used herein are for convenience only, and shall not be deemed to be part of the Agreement.

17.00 INTERPRETATION

17.01 In this Agreement, unless the context clearly otherwise requires:

(a) person includes individuals, firms or corporations;

(b) the singular includes the plural and vice versa;

(c) the male gender includes the female gender and vice versa, and each includes the neuter gender and the neuter gender includes both the male and female genders.

This Agreement has been executed on behalf of Manitoba Public Insurance and by the Government (by its duly authorized representatives) effective the date first above written.

SCHEDULE "B"

EMPLOYEE TRANISTION AGREEMENT

Schedule B to the Agreement between Her Majesty the Queen in Right of the Government of Manitoba, as represented by the Minister of Transportation and Government Services and the Manitoba Public Insurance Corporation, made as of the day of October, 2004.

DRAFT

Employee Transition Agreement
DDVL Employees to MPI
June 29, 2004

Attachment A
Agenda C
September 22, 2004

APPLICATION

1:01 The Employee Transition Agreement (ETA) applies to full-time and part-time employees of the Division of Driver Vehicle Licensing (DDVL), Manitoba Transportation and Government Services who are appointed to positions with Manitoba Public Insurance (MPI) the date of implementation.

1:02 The date of implementation will be the first day of the MPI pay period on or after October 1, 2004.

1:03 The employees covered by this ETA are listed in the attached Appendix "1". The ETA applies to those employees of DDVL who are on leave or secondment on the date of implementation and who subsequently return to work with MPI. The ETA will not apply to employees of DDVL who have retired, resigned or whose employment has been terminated prior to the date of implementation and who have not been reinstated as a result of the grievance/arbitration procedure.

1:04 The provisions respecting part-time permanent employees will be based on the applicable provisions contained in Memorandum of Agreement #1 of the MPI Collective Agreement 2002-2005.

1:05 Temporary (term) employees of DDVL, listed in the attached Appendix "2", may be offered in writing further work by MPI. With the exception of provisions 1:02 1:06, 1:07, 1:08, 4:01 to 4:09 inclusive, 4:10 (a), 4:10 (c) and 4:10 (d), 4:11, 4:12, 7:01, 13:01, 14:01, 14:02, 15:01, 15:02, 15:03, 15:04, 16:01, 16:02 provisions of this ETA do not apply to employees who are on term with DDVL on the date of implementation.

1:06 Temporary (term) employees of DDVL who are appointed as term employees with the MPI and who commence employment with no break in their service will be eligible for the following:

a) Vacation accumulation based on their accumulated service with DDVL; and
b) Employees' sick leave balances with DDVL will be recognized by MPI effective the date of implementation.
c) Recognition of accumulated service with DDVL for the purposes of determining their service date with MPI.

1:07 For the purposes of conversion from term to permanent employee under Article 1:01:14 of the MPI agreement, employees will begin to accumulate service beginning on the date of implementation.

1:08 Accumulated service with DDVL will be applied towards the four months of continuous service in order to satisfy the terms of the MPI Collective Bargaining Agreement.

4:05 The Job Evaluation Committee shall have the authority to establish new classifications within existing pay ranges to accommodate DDVL classifications not currently in existence within MPI. In the event the Committee establishes a point rating for a classification that is beyond the maximum of the Inscope Pay Plan, the Committee shall refer this matter to MPI and the Union for discussion and resolution.

4:06 The Job Evaluation Committee shall determine the conclusion of the job evaluation review process. Immediately at the conclusion of the job evaluation process all employees will be notified in writing of the results of the job evaluation review for their respective positions.

4:07 Employees who disagree with the results of the job evaluation and the pay range assigned to their position will have the right to appeal the results and have the initial result reviewed by the Job Evaluation Committee as set out in 4.04 of this ETA. Employees shall have 10 working days from the date of receipt of written notification to appeal the decision to the Job Evaluation Committee. The results of this review shall be final and binding.

4:08 Effective the Slotting Date, all DDVL positions will be classified into the MPI classifications and pay plan. The Slotting Date shall be the first Monday following the date of the notification letters to employees regarding their position classifications.

4:09 If the Slotting Date is later than March 18, 2005, the GEMA negotiated general pay increase (Memorandum of Agreement #14) will be applied to the salary ranges of all transitioned DDVL employees.

4:10 On the Slotting Date, all DDVL employees will be slotted into the appropriate MPI classification and pay range. Employees will be slotted and paid at their same rate of pay in effect with DDVL as at the Slotting Date with the following exceptions:

(a) if the salary is under range, the salary will be increased to the first step in that range;

(b) if the salary is over range, the salary will receive over-range protection for a period of up to twenty-four (24) months in accordance with MPI practice. If the salary is still over range after twenty-four (24) months, the salary will be placed at the top of that range;

(c) if the salary is within $10.00 biweekly of the next highest pay point in the MPI pay range, the salary will be slotted to the next highest pay point;

(d) if a term employee's salary is over range, the salary will be placed at the maximum of the slotted range.

4:11 Employees will be provided with a calendar month anniversary date that is based on their current anniversary date as determined by DDVL.

4:12 Employees who are not slotted at the maximum pay rate for their MPI classification will be eligible for an increment on their increment date in accordance with the MPI collective agreement.

SICK LEAVE

5:01 An employee's sick leave balance with DDVL will be transferred to MPI on the date of implementation

5:02 On the date of implementation all employees will begin to accumulate sick leave credits in accordance with the MPI collective agreement.

8:03 If an employee on long term disability subsequently becomes an employee of MPI the existing practices of MPI with respect to their terms and conditions of employment will apply.

8:04 Employees of MPI who are away from work on long term disability do not accumulate vacation or sick leave credits.

OTHER BENEFIT PLANS

9:01 MPI will waive the six month waiting period and coverage will commence on the date of implementation for the following (employer paid) benefit plan where the employees have completed six months service with DDVL:

Dental Care

9:02 Employees of DDVL with less than 6 months service with DDVL will be required to serve the remaining portion of the six month waiting period prior to being covered for the above noted benefit plan.

9:03 MPI will provide coverage on the date of implementation for the following employer paid benefits:

Vision Care
Prescription Drug Plan
Ambulance, Hospital and Semi-Private
Extended Health Coverage
Emergency Travel Health
Health Spending Account

9:04 On the implementation date, MPI will offer the following optional employee paid benefits:

Optional Life Insurance
Optional Travel Health

9:05 The following compulsory (employee paid) benefit plans have no waiting periods and coverage will commence on the date of implementation :

Group Life Insurance
Accidental Death and Disablement.

PROBATION

10:01 Employees who have completed a probation period with DDVL will not be required to serve one as an MPI employee.

10:02 Employees who are on probation at the time of transfer will continue to be on probation up to the completion of the initial period of 120 working days. The probationary period may be extended by MPI for a further period of 60 working days. During the probationary period, an employee shall be entitled to all applicable rights and benefits of the MPI Agreement.

accordance with the provisions of the MPI collective agreement at the date of their retirement or death.

For example:

Employee A – (Age 56 at retirement)		
DDVL Service - 14 years	Severance under GEMA	14 weeks
MPI Service – 5 years	Retirement Allowance	5 weeks
	Total	19 weeks
Employee B – (Age 60 at retirement)		
DDVL Service – 29 years	Severance under GEMA	19 weeks
MPI Service – 5 years	Retirement Allowance	5 weeks
	Total	24 weeks
Employee C – (Age 60 at retirement)		
DDVL Service – 8 years	Severance under GEMA	0 weeks
MPI Service – 4 years	Retirement Allowance	12 weeks
	Total	12 weeks

HOURS OF WORK

16:01 Effective the date of implementation DDVL employees who transfer to MPI will work hours as outlined in the MPI collective agreement. The days of work shall be Monday to Friday inclusive.

16:02 Notwithstanding the provisions of 16.01, the parties agree that where it is necessary to provide service to the public on Saturdays, sufficient staff may be maintained at one (1) work location for the purpose of providing such service.

On Behalf of the MGEU

SCHEDULE "C"

RETAIL SALES TAX PROJECT AGREEMENT

06/02/2005 17:01 FAX 204 945 5539 TRANSPORT POLICY

Manitoba Public Insurance

Manitoba

AGREEMENT BETWEEN MANITOBA FINANCE – TAXATION DIVISION AND MANITOBA PUBLIC INSURANCE RE:

COSTS INCURRED FOR IMPLEMENTATION AND ON-GOING MAINTENANCE OF RST BUSINESS CASE ONE – CO-MINGLING OF RST AND MPI FUNDS

June 9, 2004

06/02/2005 17:01 FAX 204 945 5539 TRANSPORT. POLICY

RESPONSIBILITY

Manitoba Finance – Taxation Division (Taxation) will be responsible for:

- all normal duties and responsibilities of Taxation staff associated with processing and balancing the monthly remittances, reports and supporting documentation upon receipt from Manitoba Public Insurance.
- costs of operational or procedural changes to the Autopac On-Line (AOL) system that are requested by Taxation for their sole benefit, unless through prior negotiation agreement is reached between Taxation and MPI as to a method of sharing the costs of the individual items.

Manitoba Public Insurance (MPI) will be responsible for:

- payment of all normal administrative costs associated with the operation of the AOL system.
- all normal operating costs associated with the financing program for RST receivables.
- cost of all operational or procedural changes to AOL related to the vehicle insurance / registration system.
- cost of all changes to AOL performed to correct errors within the application, including errors within the Retail Sales Tax modules.
- cost of all computer forms, normal printing and stationery requirements, and postage associated with the Retail Sales Tax modules within AOL.

PROJECT REPAYMENT

As detailed in RST Business Case One – Co-mingling RST and MPI Funds, the cost to Manitoba Finance – Taxation Division for the work required will be $1,011,090.00. This amount will be financed by MPI, and will be re-paid according to the following schedule:

DATE	PAYMENT	BALANCE
Initial Project Cost		$1,011,090.00
June 1 2005 Payment	$ 202,218.00	$ 808,872.00
June 1 2006 Payment	$ 202,218.00	$ 606,654.00
June 1 2007 Payment	$ 202,218.00	$ 404,436.00
June 1 2008 Payment	$ 202,218.00	$ 202,218.00
June 1 2009 Payment	$ 202,218.00	0

Notes:

1. If MPI is able to complete the project for less than the stated amount, the project repayment schedule will be adjusted to reflect the real cost of the project.
2. If the project budget is exceeded, MPI is responsible to absorb the negative variance.

06/02/2005 17:01 FAX 204 945 8939 TRANSPORT. POLICY

REMITTANCES FROM MPI TO TAXATION

As part of normal daily processing, MPI will pull from the Brokers' general accounts all money collected for retail sales tax. Any adjustments processed for RST will be netted against the money to be pulled from the account.

By the 20th day of every month, the money that has been collected for RST during the previous month will be transferred from MPI's general account to Taxation. Accompanying this remittance will be batch report(s) that provide details of all money collected and all adjustments performed during that month.

Any RST amounts that are financed through MPI will be remitted in full to Taxation. MPI is responsible for administering the financing program.

Also on a monthly basis, MPI will provide to Taxation a micro-film copy of all RST forms generated by AOL during that month, or access to an electronic retrieval system should such a system be in place by June 2005.

CHANGE PROTOCOL

All requests for changes / enhancements to Autopac On-Line must go through the Autopac Delivery Steering Committee (ADSC). This committee is comprised of representatives of all different divisions within MPI. With the integration of RST receivables into AOL, Manitoba Finance – Taxation Division will be asked to provide a representative to attend the monthly meetings of the ADSC.

There is a standard procedure that is followed every year to identify and prepare for major changes to AOL. In July, a letter will be sent to Manitoba Finance – Taxation Division, asking for the identification of any requirements for planned changes to AOL for the following year (March through February). These requirements are to be submitted to MPI by August 31st. By September 15th, a Statement of Work is prepared, finalized and submitted to MPI's business partner (EDS). EDS then prepares a response to the Statement of Work, in which they estimate the cost to perform each individual work item. Once this response has been received, the ADSC performs an analysis to determine which, if any, of the identified work items may have to be removed from the Statement of Work, due to budgetary restrictions.

Once all of the work items have been approved, a schedule is created that details the AOL releases and which work items are to be included in each release.

CC (MPI) 2-14

Part and Chapter:	**Part X – Information Technology and Governance** **CC (MPI) 1-86**	**Page No.:**	
Topic:	**Corporate Planning and Governance (CP&G)**		
Sub Topic:	**Funding Approach**		

Preamble to IR (If Any):

In the response provided for CC (MPI) 1-86, MPI stated:

> "The basis for the $15M placeholder amount was the implementation spend for the last two fiscal years (2023/24 and 2024/25). Please see MPI's response to PUB 1 – 54. Similarly, the $5M placeholder for the EPMO projects (the non-Major Programs) was based on prior periods.
>
> Appendix 22 to the Expenses Chapter explains that the forecast for 2027/28 was based on the Corporate Project Funding Summary (EXP.4) and the underlying business cases (the committed spend for 2026/27 for those projects with open business cases) with the remaining uncommitted amounts to a placeholder because business cases have not yet been developed."

It was also stated in the 2027 GRA at Part V – Information Technology at page 6 that:

> "MPI has transitioned from large, multi-year transformations to more targeted initiatives, typically delivered within 12 to 24 months. This approach enhances predictability, better aligns work with organizational capacity, and promotes more disciplined execution across the portfolio."

Question:

a) As the funding for Major Projects is from within this allocation, please provide a narrative explanation if the business benefits of former Project Nova will be attained, incrementally though a series of major programs or otherwise?

b) Please provide a list of high-level business and technology functions/capability needs that Project Nova was to address, and please identify the programs/projects that are in flight, planned, or anticipated that will address these needs. If the business benefit no longer needs to be realized (and therefore there is no anticipated project), please indicate.

Rationale for Question:

To understand the scope of planned and future technology modernization and legacy renewal efforts.

RESPONSE:

a) Project Nova was closed after MPI determined that the program, as structured, could not be delivered in a manner that would achieve the intended benefits. As a result, MPI is not pursuing a direct replacement program for Project Nova.

   Consistent with the approach described in the 2027 GRA, MPI has transitioned from large, multi-year transformation initiatives to smaller, targeted initiatives that are typically delivered within 12 to 24 months. Under MPI's current governance model, technology investments are evaluated, prioritized, and approved through established portfolio management and business case processes. All Major Programs and EPMO initiatives funded through the approved project allocation require an approved business case.

MPI is currently developing its technology roadmap with a focus on reducing technical debt, modernizing legacy platforms, and establishing a more composable architecture. Under this approach, modernization investments are intended to be progressed incrementally based on identified business needs, organizational capacity, and approved funding.

Accordingly, MPI is not seeking to attain the former Project Nova benefits through a single successor initiative. Rather, where business needs previously associated with Project Nova remain relevant, they would be considered through MPI's normal governance, prioritization, and business case processes and may be addressed through a series of discrete projects and major programs. Any benefits realized would therefore be achieved through individually approved initiatives rather than through completion of the former Project Nova program.

b) Project Nova was intended to address a broad range of business and technology modernization objectives, including legacy platform renewal, reduction of technical debt, technology simplification, and improvements to the Corporation's ability to adapt technology capabilities to changing business needs.

As noted in response to part a), Project Nova was closed after MPI determined that the program could not be delivered in a manner that would achieve the intended benefits. Consequently, MPI is not maintaining a Project Nova delivery plan or a defined set of successor projects intended to replicate the former Project Nova scope.

Under MPI's current approach, technology modernization and legacy renewal needs are assessed through established governance, prioritization, and business case processes. Consistent with the approach described in the 2027 GRA, MPI has transitioned from large, multi-year transformation

initiatives to smaller, targeted investments that are generally delivered within 12 to 24 months. MPI is currently developing its technology roadmap with a focus on reducing technical debt, modernizing legacy platforms, and building a composable architecture.

Accordingly, MPI does not maintain a mapping of Project Nova functions or capabilities to specific in-flight, planned, or anticipated projects. Where business or technology needs previously contemplated under Project Nova remain relevant, those needs are considered through MPI's normal portfolio planning and governance processes and may be addressed through future approved initiatives. Any such initiatives would be subject to separate business case development, prioritization, and funding approval

CC (MPI) 2-15

Part and Chapter:	**Part VII – Risk Classification, RC Appendix 6** **PUB (MPI) 1-76** **CC (MPI) 1-61** **CMMG (MPI) 1-11**	**Page No.:**	**4**
Topic:	**Driver Safety Rating**		
Sub Topic:			

Preamble to IR (If Any):

To determine DSR relativities, MPI fits two contiguous straight lines from DSR 0 to +20, with the point of slope change being DSR +4. MPI presents this model in Figure RC App 6-1.

MPI further comments on the models in PUB (MPI) 1-76, CC (MPI) 1-61, and CMMG (MPI) 1-11.

Question:

a) Please provide the data underlying Figure RC App 6-1. Provide sufficient detail (i.e., both numerators and denominators) to calculate the observed relativities.

b) Please provide the exposures underlying each DSR level.

c) Please provide comment on whether MPI considered the use of a weighted regression model (for example, as described in https://real-statistics.com/multiple-regression/weighted-linear-regression/weighted-regression-basics/ or using weights argument to the R function lm).

If MPI considered this approach, describe why MPI rejected it. If MPI did not consider this approach, comment on whether MPI might consider such an approach in future GRAs.

d) Please reconcile or explain the difference between:

   a. "Fitted Relativity" for the "MBP Two-Linear Fit" included in PUB (MPI) 1-76 - Appendix 1-1, and

   b. the "Fitted Relativities" included in Figure RC App 6-2.

e) Please provide the fitted models presented in:

   a. Figure RC App 6-1,

   b. PUB (MPI) 1-76 - Appendix 1-2 (MBP Two-Linear Fit only), and

   c. CC (MPI) 1-61 - Appendix 1.

f) MPI includes the following in response to CMMG (MPI) 1-11:

> … treating DSR levels as distinct categories allows the model to account directly for observed differences in driver risk without imposing a specific functional form on the relationship. While fitting a curve to smooth the DSR discounts may be appropriate for developing an intuitive discount scale …

Regardless of MPI's view of the advantage of an intuitive discount scale, comment on MPI's view as to whether the DSR level is a categorical variable (the treatment in the GLM) or numerical variable (the treatment in developing DSR discounts).

Rationale for Question:

To better understand MPI's development of DSR relativities.

RESPONSE:

a) & b)

The DSR relativities presented in *Figure RC App 6-1* are derived using a multi-variable Minimum Bias Procedure that simultaneously considers Territory, Insurance Use, Vehicle Type, Vehicle Rate Group and DSR. As a result, there is no single numerator and denominator that can be used to directly reproduce the observed DSR relativities.

To provide transparency regarding the underlying experience, MPI provides the incurred losses and earned units used in the analysis for accident years 2019 to 2023 in *Appendix 1*, aggregated by Territory, Insurance Use, Vehicle Type, Vehicle Rate Group and DSR level for each applicable combination of rating variables. This information represents the underlying experience used in the development of the DSR relativities presented in *Figure RC App 6-1*.

c) The weighted regression approach referenced is incorporated within the methodology used to derive DSR relativities. Specifically, MPI applies weights to reflect differences in the credibility of experience across DSR levels.

d) The "Fitted Relativity" for the "MBP Two-Linear Fit" included in *PUB (MPI) 1-76 Appendix 1-1* corresponds to the same set of relativities shown in *Figure RC App 6-2*, after rebasing all relativities to DSR 0.

e) MPI cannot provide the models used to develop the figures presented in Figure RC App 6-1, PUB 1-76, or CC 1-61 as they contain internally developed methodologies, assumptions, and analytical techniques unique to MPI's business. Disclosure of same may result in misuse or misapplication and could lead to conclusions that are inaccurate or misleading and inconsistent with their intended application and limitations.

The data provided in *Appendix-1* forms the basis for the fitted relationships presented in *Figure RC App 6-1*, *PUB (MPI) 1-76 - Appendix 1-2 (MBP Two-Linear Fit only)*, and *CC (MPI) 1-61 - Appendix 1*. The purpose of the fitted models is to summarize and smooth the underlying experience, and the data provided in response to parts (a) and (b) contain the experience used to develop those fitted relationships.

f) MPI would like to clarify that the paragraph referenced from *CMMG (MPI) 1-11* pertains to Rate Line Analysis, where DSR is included as a control variable to help isolate the relationship between Vehicle Rate Group and loss cost. In that context, DSR is treated as a categorical variable so that the model can account for observed differences in driver risk without imposing a pre-defined functional relationship across DSR levels.

In contrast, for the purpose of developing DSR discounts, DSR is treated as a numerical variable within the DSR Minimum Bias Procedure as presented in *RC Appendix 6* from 2027 GRA. This allows a smooth and monotonic relationship to be fit across DSR levels when deriving the final DSR discounts.

Similar to MPI's response to CC 2-21 in the 2026 GRA, MPI does not view DSR as being exclusively categorical or numerical. Rather, the treatment depends on the objective of the analysis. DSR is treated as a categorical variable when used as a control variable within the Rate Line GLM and as a numerical variable when deriving DSR relativities within the DSR ratemaking framework. This approach is consistent with MPI's broader ratemaking framework and historical practices, where different analyses are used to estimate different components of the rate structure.

CC (MPI) 2-16

Part and Chapter:	**PART VI - Claims Forecasting and Loss Trend Analysis, CF.4.2 Model Considerations**	**Page No.:**	**26**
Topic:	**Loss Trending Procedures**		
Sub Topic:			

Preamble to IR (If Any):

MPI describes its loss trending procedures in Part VI, CF.4.2.

Question:

a) Please describe MPI's consideration of the degrees of freedom in selecting models.

b) For all coverages except Accident Benefits – Other (Non-Indexed) coverage and Comprehensive Other, MPI uses the results of frequency and severity models, rather than a loss cost model. Please discuss MPI's consideration of the consistency in the periods underlying the separate frequency and severity models.

c) The various Table 9s included Part VI - CF Appendix 3 present charts with observed loss cost. For all coverages except Accident Benefits – Other (Non-Indexed) and Comprehensive Other coverage, please add the product of the fitted values from the selected frequency and severity models to Table 9. Include the fitted values for all periods (2012 to 2025), including periods that do not underlie the fitted models.

d) The various Table 9s included Part VI - CF Appendix 3 present charts with observed loss costs. For Accident Benefits – Other (Non-Indexed) and Comprehensive Other coverages, please add the fitted values from the

selected loss cost models to Table 9. Include the fitted values for all periods (2012 to 2025), including periods that do not underlie the fitted models.

Rationale for Question:

To better understand MPI's evaluation of loss trend.

RESPONSE:

MPI will respond to the questions but reminds the Consumers' Coalition of the following rule under the PUB's Rules of Practice and Procedure:

> *"33(5) Unless the board orders otherwise, second and subsequent round information requests may only be asked in respect of*
>
> *(a) responses to previous-round information requests; or*
>
> *(b) additional evidence filed in the hearing since the deadline for asking previous-round information requests."*

a) As described in Part VI, *CF 4.2*., MPI compares and selects models using Adjusted R^2. Models with fewer residual degrees of freedom, whether due to having a smaller set of observations or from the inclusion of additional parameters, are penalized by the Adjusted R^2 calculation.

b) Frequency and severity trends for a given coverage are often influenced by different underlying factors and may exhibit different historical patterns. MPI considered the consistency of the periods underlying the selected frequency and severity models; however, where observed frequency and severity experience supported different trend periods, MPI selected the model period independently from each component. This approach prioritizes the model that best reflects the underlying experience for each

component while recognizing that the implied loss cost trend is derived from the combination of the selected frequency and severity trends.

c) Please refer to *Appendix 1: Implied Loss Cost Trends* for the updated Table 9 plots showing the products of the fitted values from the selected frequency and severity models for all periods of all coverages, except Accident Benefits – Other (Non-Indexed) and Comprehensive Other, including periods not used in the selected models. The loss cost plots for Accident Benefits – Other (Non-Indexed) and Comprehensive Other in Tables 3e-9 and 3n-9 are discussed in part d).

   MPI typically only shows fitted values over a model's trending period in experience charts so as not to mislead the reader. The selected trends are not intended to model experience prior to the start of the trending period, because prior trends are likely to differ from the current selected trends. The model's predicted values are intended only to be compared with historical experience in the trending period from which the model is derived.

d) Please refer to *Appendix 1: Implied Loss Cost Trends* Tables 3e-9 and 3n-9 for updated plots showing fitted values from the selected loss cost models for all periods of Accident Benefits – Other (Non-Indexed) and Comprehensive Other, including periods not used in the selected models. As described in part c), please note that predicted values are only intended to be considered alongside historical experience in the trending periods from which the model is derived, not for all accident years.

   For clarity with respect to the *Appendix 1: Implied Loss Cost Trends* plots, the "Implied Loss Cost" line represents the predicted values in the periods underlying the selected models and is consistent with the "Predicted" line in the plots submitted in response to CC (MPI) 1-51. The "CC 2-016" line

represents predicted values extended to accident years outside of the trending period. As discussed in part c), the model's predicted values are not intended to be applied to accident years prior to the start of the trending period.

CC (MPI) 2-17

Part and Chapter:	**PART VI - Claims Forecasting and Loss Trend Analysis, CF.5.5 Accident Year Weighting**	**Page No.:**	**42**
Topic:	**Ultimate Losses**		
Sub Topic:			

Preamble to IR (If Any):

MPI applies equal weight of 20% to the most recent five accident years in the estimation of ultimate losses as directed by the Public Utilities Board (PUB) in Order No. 145/23 issued December 18, 2023.

Question:

a) Does MPI view PUB Order No. 145/23 as applying only to the 2024 GRA or to all GRAs issued after the order?

b) Are there any circumstances under which MPI would propose a deviation from the noted accident year weights?

Rationale for Question:

To better understand MPI's evaluation of loss trend

RESPONSE:

MPI previously addressed these questions in its response to the 2026 GRA Round 1 Information Request CC (MPI) 1-55. As MPI's position on accident year weighting has not changed, MPI continues to rely on the response provided at that time, which is reproduced below:

a) “In 2024 GRA MPI introduced accident year weights to claims forecasting, which used 20% weights for each of the most recent five accident years, excluding 2020 accident year.

In MPI’s view, PUB Order 145/23 supported the inclusion of the five most recent accident years with equal weights, provided mobility effects were addressed through scalar adjustments. In the 2026 GRA, MPI has continued to apply equal 20% weights across the five most recent accident years, including 2020, again with appropriate scalar adjustments made. MPI believes this approach is appropriate and remains consistent with PUB Order 145/23.”

b) “MPI considers the current approach the most reasonable for all coverages in 2026 GRA. Accident year weights assumption is significant in claims forecasting calculations and MPI will not revise this assumption on a year-to-year basis without a clear rationale, to maintain stability and comparability across successive forecasts. However, alternative methodologies may be considered in the future if they are expected to enhance the overall long-term stability and reliability of forecasting results.”

CC (MPI) 2-18

Part and Chapter:	**CC(MPI)1-76**	**Page No.:**	**2-4**
Topic:	**Road Safety**		
Sub Topic:	**Traffic Safety Culture**		

Preamble to IR:

In CC(MPI)1-76, response b), MPI explains various measures it intends to employ to change traffic safety culture.

Question:

a) Please explain whether any of the activities identified in response b) were newly implemented specifically because of the traffic safety culture focus of the new Road Safety Strategy 2030.

b) Please explain how MPI will monitor and evaluate the progress for the Traffic Safety Culture pillar.

Rationale for Question:

Get more clarity on how the new focus on traffic safety culture is shaping activities in road safety.

RESPONSE:

a) The activities identified in CC (MPI) 1-76(b) were already underway prior to the public launch of Road Safety Strategy 2030 (RSS 2030) in May 2026. Given that the Strategy was released only three months ago, there has been limited opportunity to develop and implement new initiatives specifically because of its traffic safety culture focus.

   However, RSS 2030 introduced a new focus on traffic safety culture and provides a framework to guide road safety work. Under this approach,

existing and future initiatives are considered together for their role in influencing road user attitudes, behaviours, and social norms over time.

b) MPI intends to monitor and evaluate progress under the Traffic Safety Culture pillar (Pillar 1: Building a Culture of Road Safety) through research, stakeholder engagement, and performance measures that track changes in road user attitudes, behaviours, and perceptions over time. An approach for this work is under development.

As an initial step, MPI is redeveloping its Traffic Safety Culture Survey and plans to engage the Community Partners in Road Safety Committee in fall 2026 to help inform this work. These discussions will help identify the information to be collected, potential performance measures, and approaches for monitoring and evaluating progress over time.

CC (MPI) 2-19

Part and Chapter:	**CC(MPI)1-78**	**Page No.:**	**2**
Topic:	**Road Safety**		
Sub Topic:	**Community Partners in Road Safety Committee**		

Preamble to IR:

In CC(MPI)1-78, response a) at pages 2-3, MPI mentions the Community Partners in Road Safety Committee Terms of Reference which establishes a formal governance structure, defined member roles and responsibilities, meeting requirements, reporting expectations, and processes for creating and overseeing working groups.

Question:

Please provide the most recent terms of reference for the Community Partners in Road Safety Committee.

Rationale for Question:

Better understand the governance of the Community Partners in Road Safety Committee.

RESPONSE:

A copy of the Community Partners in Road Safety Committee Terms of Reference, adopted in April 2026, is included as *Appendix 1*.

The Committee is made up of a number of organizations including:

- Active Aging in Manitoba
- Assembly of Manitoba Chiefs
- Association of Manitoba Municipalities
- Bike Winnipeg

- Canadian Automobile Association Manitoba
- City of Brandon
- City of Winnipeg
- Coalition of Manitoba Motorcycle Groups
- Consumers Coalition (vacant)
- Green Action Centre
- Manitoba Association of Senior Communities
- Manitoba Public Insurance
- Manitoba Transportation & Infrastructure
- Manitoba Trucking Association
- Royal Canadian Mounted Police
- Safety Services Manitoba
- Winnipeg Police Service

COMMUNITY PARTNERS IN ROAD SAFETY COMMITTEE - TERMS OF REFERENCE
Adopted on: April 8th, 2026

Purpose:

The Community Partners in Road Safety Committee ("the Committee") engages Manitoba road safety stakeholders in efforts to improve road safety in Manitoba. It provides a forum for members to share information about their organization's initiatives and to establish working groups to collaboratively address road safety issues.

Scope of Work:

The Committee will provide subject matter expertise, guidance, and assistance on:

- Improving road safety initiatives to reduce the number of fatalities and injuries on Manitoban roads.
- Disseminating key road safety information to relevant stakeholders, including information about opportunities for collaboration, best practices, and potential ideas for new initiatives.
- Collaborative data collection on key road safety risks that drive collisions, fatalities, and serious injuries with the intention of using this data to reduce road safety related harms.
- Collectively planning and hosting meetings, conferences, and events between relevant road safety stakeholders, as requested or required.
- The Committee is not intended to replace or diminish existing and ongoing engagement activities among members.

Committee Governance

The Committee consists of a permanent Co-Chair, a rotating Co-Chair, and Members.

The Committee's governance structure is provided below:

Permanent Committee Co-Chair	MPI
Rotating Committee Co-Chair	Elected annually from the Committee membership
Community Partners in Road Safety Committee	Committee Membership
	Organizations from within Manitoba that are interested and active in improving road safety.
Ad Hoc Working Groups	Temporary groups formed to address specific road safety issues identified by the Committee.

Permanent Committee Co-Chair

The Permanent Committee Co-Chair leads and facilitates meetings of the Committee, ensuring discussions remain focused and productive.

Permanent Committee Co-Chairperson Roles and Responsibilities

Leadership and Facilitation

- Preside over Committee meetings, ensuring they start and end on time.
- Keep discussions focused on road safety objectives and the agenda.
- Encourage participation from all members and maintain a respectful, collaborative environment.

Agenda and Meeting Management

- Prepare and distribute meeting agendas in advance.
- Ensure minutes are recorded and approved.
- Confirm that meetings occur at the required frequency.

Compliance and Governance

- Ensure the Committee operates within its Terms of Reference and aligns with Manitoba's road safety priorities.

Strategic Oversight

- Help guide the Committee in identifying, prioritizing, and addressing road safety issues.
- Oversee the progress of ad hoc working groups and ensure accountability with their objectives.

Documentation and Accountability

- Ensure accurate records of meetings, decisions, and recommendations.
- Follow up on assigned tasks and track progress toward goals.

Rotating Committee Co-Chair

The Rotating Co-Chair supports the Chair in leading the Committee, ensuring meetings are effective, inclusive, and aligned with the Committee's goals. The Rotating Co-Chair shares responsibility for strategic planning, facilitation, and communication.

Co-Chair Roles and Responsibilities

Meeting Leadership

- Collaborate with the Permanent Co-Chair to plan agendas and meeting materials.
- Help the Permanent Co-Chair solicit members for agenda items.
- Co-facilitate meetings and discussions.
- Step in to lead meetings when the Permanent Co-Chair is unavailable.

Strategic Support

- Help set Committee goals and priorities.
- Provide input on key decisions and initiatives.
- Support the implementation of action items.

Member Engagement

- Encourage participation and ensure all voices are heard.
- Support onboarding of new members.
- Share responsibility for communication with members regarding meeting schedules, updates, and key decisions.

Election of Rotating Co-Chair

1. **Eligibility**: Any current Committee member in good standing is eligible to serve as the Rotating Co-Chair.
2. **Nomination**: Nominations will be opened annually and may be submitted by self-nomination or by another member with the nominee's consent.
3. **Candidate Statements**: Nominees will be invited to submit a brief statement outlining their interest and vision for the role.
4. **Voting**: An anonymous vote will be conducted by MPI. Each stakeholder organization shall have one vote. The nominee receiving the majority of votes will be elected.
5. **Term**: The Rotating Co-Chair shall serve a term of one year with the option for re-election if eligible.

Membership and Representation

The Committee's membership shall reflect a broad and inclusive range of perspectives, experiences, and expertise relevant to its mandate. The goal is to ensure that decisions and recommendations are informed by the diverse realities of stakeholders across the province. Member organizations should have work that is directly relevant to road safety in Manitoba, ensuring meaningful contributions to discussions and initiatives.

Composition

- The Committee shall consist of organizations drawn from a variety of sectors, regions, and communities.
- Membership will aim to include representation from:
    - Urban, rural, and remote areas
    - Equity-deserving and underrepresented groups
    - Relevant sectors (e.g., education, health, community organizations, youth, Indigenous communities, etc.)
    - Organizations of varying sizes and capacities

Organizational Representation

- Each participating organization may appoint up to two representatives.
- Regardless of the number of representatives, each organization shall have one vote in decision-making processes.

Selection and Appointment

- Members may be nominated by their organizations or invited based on expertise, lived experience, or regional representation.

Roles and Responsibilities

- Participate actively in scheduled meetings and contribute to discussions on road safety issues.
- Share expertise and insights relevant to road safety from their organization or area of experience.
- Review and provide input on materials, proposals, and recommendations brought before the Committee.
- Support ad hoc working groups by joining or advising on specific projects or initiatives as needed.
- Communicate updates from the Committee back to their respective organizations to ensure alignment and awareness.
- Promote collaboration by fostering constructive dialogue and respecting diverse perspectives.

Ad Hoc Working Groups

When necessary, working groups may be formed to address specific road safety issues. These groups are temporary in nature and exist to address a specific issue identified by the Committee and discussed during Committee meetings. Any member of the Committee may put forward a proposal to create a working group.

Proposals should clearly outline and define the following:

- Rationale for how the working group's efforts will improve road safety in Manitoba.
- Designated working group lead (member and organization)
- Subject area of interest/concern
- Participating working group members, including an explanation for how their organization is connected to the issue of concern.
- Scope of work, objectives and expected outcomes of the working group.
- Projected timeline to complete the working group objectives and produce deliverables.

All proposals put forward must be seconded by another organization represented on the Committee that will also participate in the working group.

Proposals will be sent to the Committee Co-Chairs (via email) a minimum of four weeks prior to the next scheduled Committee meeting. The Co-Chairs will review and distribute the proposal to the Committee prior to the meeting.

At the next scheduled meeting, the Committee will review and discuss the proposal. The Committee will then vote on the creation of the working group and if a simple majority of members vote to move forward, the working group will be formed.

The Committee will have a maximum of two (2) working groups at the same time. Additional working groups may be formed at the discretion of both Co-Chairs.

Working Group Leads

The Working Group Lead is responsible for guiding the group's activities and ensuring alignment with the Committee's objectives. Key responsibilities include:

- Serve as the primary point of contact for the working group.
- Coordinate working group meetings, set agendas, and facilitate discussions.
- Ensure the working group's objectives, scope, and timelines are clearly defined and documented.
- Direct the work of the group, including assigning tasks and setting priorities to ensure objectives are met.
- Monitor progress toward deliverables and report status updates to the Committee.
- Make decisions on behalf of the working group within the scope approved by the Committee.

Working Group Reporting / Accountability

At each Committee meeting, the active working groups must report the following:

- Progress on objectives and deliverables.
- Key actions completed since the last report.
- Current challenges or risks and mitigation plans.
- Next steps and timeline for remaining tasks.

Meetings

Committee meetings will be held on a quarterly basis, at the call of the Committee Co-Chairs.

- A draft agenda and any relevant materials will be set and circulated to members prior to the meeting. Committee members are expected to review these materials prior to the meeting and come prepared to share.
- The Permanent Co-Chair shall keep Committee meeting minutes. A summary of key points and action items shall be made available to all Committee members following the meeting.

MPI will host meetings in support of Committee activities. Working group meetings will be the responsibility of working group participants.

Scheduling Meeting Dates / Agenda

Specific meeting dates and times for the next quarterly meeting will be selected and approved at the end of each Committee meeting. Since meetings happen quarterly, this will provide each member 3 months of advance notice.

An agenda for the meeting will be produced and distributed a minimum of two weeks prior to the next meeting. Agenda items for future meetings may come from Committee discussions or member submissions. Members may submit a request to the Co-Chairs via email to have an item added to the agenda subject to their approval. It is expected that members actively bring forward submissions on a regular basis.

Attendance

To ensure effective collaboration and decision-making, all Committee members are expected to actively participate in meetings and related activities.

Minimum Attendance Requirement

- Members must attend at least 2 of the 4 quarterly meetings per calendar year to remain in good standing. Attendance may be in person or virtual, depending on the meeting format.
- Members who are unable to attend a meeting should notify the Co-Chairs in advance, providing a reason for their absence when possible.
- Organizations may designate an alternate representative to attend in place of the regular member. In such cases, the organization must notify the co-chairs in advance of the meeting.
- AI bots are not permitted to participate in Committee meetings. Any bots that join will be promptly removed.

Loss of Good Standing

- Members who fail to meet the minimum attendance requirement may be:
    - Contacted by the Co-Chairs to discuss their continued participation.
    - Subject to removal or replacement, depending on the Committee's needs.

Leave of Absence

- Members may request a temporary leave of absence due to personal, professional, or health-related reasons. Such requests should be submitted in writing and approved by the Co-Chairs.

Communications & Reporting

Communications will be primarily conducted through email. All reports developed by the Committee or ad hoc working groups shall be submitted to the Committee Co-Chairs and circulated amongst Committee members.

Access, Representation, and Inclusion

The Committee is committed to fostering an environment that values and promotes access, representation and inclusion in all aspects of its work. This includes recognizing and addressing systemic barriers, amplifying underrepresented voices, and ensuring that all members feel respected, heard, and empowered to contribute.

Principles

- **Access**: We strive to identify and eliminate barriers that prevent full participation, particularly for equity-deserving groups.
- **Representation**: We value the unique perspectives that come from differences in race, ethnicity, gender, age, ability, sexual orientation, socioeconomic status, geography, and lived experience.
- **Inclusion**: We are committed to creating a welcoming and accessible space where all members can engage meaningfully.

Practices

- The Committee will actively seek diverse representation in its membership and leadership.
- Meeting materials and discussions will be made accessible (e.g., plain language, captioning, translation, or other accommodations as needed).
- Members are expected to engage respectfully and uphold inclusive practices in all interactions.
- The Committee will periodically reflect on its practices and seek feedback to improve its approach to access, representation and inclusion.

Accountability

- Concerns related to equity, inclusion, or respectful conduct may be raised confidentially with the Co-Chairs.

Review and Approval

These Terms of Reference will be reviewed and revised by the Committee on an annual basis or as needed. The Committee approved these Terms of Reference on _____.

CC (MPI) 2-20

Part and Chapter:	**CC(MPI)1-79**	**Page No.:**	**3**
Topic:	**Road Safety**		
Sub Topic:	**Fatal Collision review**		

Preamble to IR:

In CC(MPI) 1-79, MPI identifies that it is aware of post-crash responses and recognizes the importance of effective post-crash response in improving road safety outcomes.

In response d) at page 3, MPI explains that it participates in a City of Winnipeg led committee reviewing fatal collisions.

Question:

a) Please clarify whether MPI will review its position on post-crash response and include it as part of the Road Safety Strategy 2030.

b) Please explain whether MPI will seek the participation of the appropriate emergency medical services and healthcare providers in the Community Partners in Road Safety Committee in the future?

c) Please provide more information on the details of this City of Winnipeg committee, such as when meetings are held, what other groups are involved, and what information is shared.

d) Please clarify whether any reports or meeting minutes are produced from the above-mentioned meetings. If so, please provide the 3 most recent reports/notes as an example.

e) Please clarify whether similar meetings are held in the case of fatal rural collisions with the appropriate law enforcement agencies.

a. If so, please provide the same information requested in sub question b) and c) above.

Rationale for Question:

Get more clarity on how MPI and other partners in road safety respond to fatal collisions.

RESPONSE:

a) MPI is not planning to update Road Safety Strategy 2030 (RSS 2030) to include a specific focus on post-crash response at this time.

RSS 2030 reflects the road safety priorities identified through extensive engagement with stakeholders and the public during its development. This process provided opportunities for a broad range of organizations to share their perspectives and priorities. Through that engagement, post-crash response was not identified as a primary area of focus.

MPI recognizes that post-crash response is an important element of the Safe Systems Approach. However, responsibility and leadership for post-crash response primarily reside with other organizations and sectors. As a result, this area is not currently within the scope of RSS 2030.

That said, MPI values ongoing dialogue with stakeholders and remains willing to participate in discussions related to post-crash response, where appropriate. MPI will also continue to consider stakeholder feedback, evolving needs, and emerging road safety issues as part of its ongoing road safety planning and program development.

b) The Community Partners in Road Safety Committee is intended to bring together organizations with a shared interest in improving road safety in Manitoba. Emergency medical services and healthcare providers have

important perspectives on road safety and post-crash response and would be welcome to participate in the Committee if there is interest in doing so.

As noted in response to CC (MPI) 1-79(d), MPI also collaborates with emergency medical services and healthcare organizations through other formal and informal channels.

c) and d)

As noted in response to CC (MPI) 1-79(d), the City of Winnipeg leads the Collision Review Committee. MPI participates as a member of the committee but is not responsible for its administration. MPI cannot therefore respond on behalf of the City of Winnipeg or provide any minutes or reports prepared by the City of Winnipeg.

e) MPI is not aware of, and does not participate in, a standing rural fatal collision review committee comparable to the committee referenced in response to CC (MPI) 1-79(d). However, if invited, MPI would be willing to participate in such a forum.

CC (MPI) 2-21

Part and Chapter:	**CC(MPI)1-82**	**Page No.:**	**2-4**
Topic:	**Road Safety**		
Sub Topic:	**Enhanced Enforcement Program**		

Preamble to IR:

In CC(MPI)1-82, MPI explains the enhanced enforcement program, how funding is allocated and what types of activities take place.

Question:

a) Please provide the number of proposals from law enforcement agencies that were submitted in 2025, as well as:

   a. How many of those were approved by MPI, and

   b. What specific law enforcement agencies sent in proposals.

      i. Should this include RCMP detachments, please provide the location of the RCMP detachment.

Rationale for Question:

Get more clarity on the agencies involved in the enhanced enforcement program.

RESPONSE:

a) In the 2025/2026 fiscal year, MPI received proposals from 13 law enforcement agencies and enforcement partners requesting a combined total of approximately $2.71 million in Enhanced Enforcement Program funding. MPI approved funding for all 13 proposals, with total approved funding of approximately $2.01 million.

   The following agencies and organizations submitted proposals:

   - Altona Police Service
   - Brandon Police Service

- CN Rail Police Service
- Cornwallis Police Service
- Manitoba First Nations Police Service
- Manitoba Motor Carrier Enforcement
- Morden Police Service
- RCMP D Division
- Springfield Police Service
- Sainte-Anne Police Service
- Victoria Beach Police Service
- Winkler Police Service
- Winnipeg Police Service

With respect to the RCMP, the submission was made by RCMP D Division as a provincial program rather than by individual detachments. The proposal identified enforcement activities across the Manitoba East District, Manitoba West District, and Manitoba North District.

Manitoba Public Insurance

2027 General Rate Application

Round 2 Information Requests

September 8, 2026

Coalition of Manitoba Motorcycles Groups (CMMG)

MANITOBA
PUBLIC INSURANCE

CMMG (MPI) 2-1

Part and Chapter:	CMMG MPI 1- 13	Page No.:	4
Topic:			
Sub Topic:			

Preamble to IR (If Any):

MPI stated:

> *"Pillar 3: Shaping Safer Driving Behaviours* - This pillar has the most direct connection to motorcycle safety. For motorcyclists, this includes promoting safe riding behaviours, encouraging training and skill development, and expanding access to training opportunities."

Question:

a) Since the completion of the motorcycle collision analysis, please provide specific examples of how MPI has
   - Encouraged training and skill development for motorcyclists
   - Expanded access to training opportunities for motorcyclists

b) Please confirm how many people have taken the Experienced Rider – Skills Refresher course in the last 5 years.

Rationale for Question:

To examine the specific changes MPI has made in light of the information learned from the motorcycle collision analysis, and uptake of the Experienced Rider course.

RESPONSE:

a) Since the completion of the Motorcycle Collision Analysis in 2025, MPI has undertaken the following actions to promote rider training and skill development and to support access to motorcycle training opportunities:

- During the development of Manitoba's Road Safety Strategy 2030, key findings from the Motorcycle Collision Analysis were used to inform engagement discussions with the CMMG on November 12, 2026.

- In June 2025, MPI shared key findings from the Motorcycle Collision Analysis with Safety Services Manitoba (SSM), Manitoba's primary motorcycle training provider, to support discussions on motorcycle safety, rider training, skill development, and collision risk factors.

- MPI has continued to support motorcycle training by providing a $200 rebate to eligible riders who complete the Gearing Up motorcycle training course. SSM also provides an additional $50 rebate, helping reduce financial barriers to participation in formal rider training.

- MPI has collaborated with the CMMG to continue motorcycle safety education and awareness campaigns that reinforce safe riding practices and highlight the importance of rider training and skill development. An example of this work is MPI’s recently launched video (August 2026) on group riding, the content for which was provided by the CMMG.

b) As discussed during the 2026 Technical Conference, the Experienced Rider - Skills Refresher course is owned, operated and funded by SSM. MPI does not administer, fund, or maintain participation records for this course. MPI cannot respond on behalf of SSM.

CMMG (MPI) 2-2

Part and Chapter:	CMMG MPI 1-13 and CMMG MPI 1-14	Page No.:	
Topic:			
Sub Topic:			

Preamble to IR (If Any):

The motorcycle collision analysis recommended a prioritization of the development of a safer riding culture among younger motorcyclists.

MPI has identified that 6 fatal collisions have occurred before July 15, 2026.

Please see CBC article "*Manitoba motorcycle safety expert says rise in fatal crashes highlights need for road safety, skills training*" dated August 3, 2026. This CBC article notes that the last 4 motorcycle fatalities involved riders age 56 and up. The article also discusses increased interest in motorcycling by older riders.

Question:

1. Please file the 31 page motorcycle collision analysis that includes the referenced tables as appendices.
2. Please confirm that a further motorcyclist was killed on July 25th, 2026 bringing total motorcycle fatalities to 7 in the current year.
3. Please speak to whether MPI's data supports an increase in trends towards older adults becoming involved in motorcycle riding.
4. Please comment on the data with respect to the age of riders involved in motorcycle fatalities in 2026 as compared to previous years.
5. Table A15 of the motorcycle collision analysis identifies 5 fatal collisions in 2019, 5 fatal collisions in 2020, 4 fatal collisions in 2021 and 2 fatal collisions in each

2022 and 2023. These numbers do not appear to align with the data presented in Figure 1 of CMMG MPI 1-14. Please clarify.

Rationale for Question:

Understanding and analysing motorcycle collision data

RESPONSE:

1. Please see ***Appendix 1*** for a copy of the Motorcycle Collision Analysis, including the referenced appendices. The report was developed through extensive collaboration with the CMMG to establish the scope, conduct the analysis, and interpret the findings. MPI previously provided this report to the CMMG on July 15, 2025.

   Important to note that the Motorcycle Collision Analysis was conducted to identify opportunities to reduce collisions involving motorcyclists. It was not intended to support ratemaking decisions or evaluate motorcycle insurance premiums. As a result, the findings should not be used to draw conclusions about insurance rates.

2. MPI confirms that a motorcyclist was fatally injured in a collision that occurred on July 25, 2026. As of August 19, 2026, the total number of motorcycle-related fatalities reported in Manitoba in 2026 is eight (8).

3. A high-level review of class 6A (motorcycle) license holders showed that the proportion of riders aged 60 years and older increased from 33.4% to 42.6% between 2019 and 2026. This suggests an aging trend among licensed motorcyclists. However, the data reflects the number of licensed riders and does not indicate how frequent individuals ride or whether older adults are becoming more involved in riding motorcycles at higher rates than other age groups.

4. The age profile of motorcycle riders involved in fatal collisions is trending higher in 2026 compared to recent years.

   In 2026, the median age of motorcycle riders involved in fatal collisions between January 1 and July 31 was 60 years, compared to 39 years during the same period in 2025. For context, the median age was 55 years in 2023 and 23 years in 2024.

   The higher median age observed in 2026 indicates that older riders represented a larger proportion of motorcycle fatalities compared to recent years. The median age is used rather than the mean age because the median is less sensitive to outliers and provides a better representation of the typical rider involved in a fatal collision.

   However, caution should be exercised when interpreting these results. Motorcycle fatality counts are relatively small, and year-to-year results can be significantly influenced by a limited number of cases.

5. Table A15 in the Motorcycle Collision Analysis reports the number of fatal ***collisions*** (incident level), whereas Figure 1 of ***CMMG (MPI) 1-14*** reports the number of ***fatalities*** (i.e., the total number of persons killed). As a result, the counts in Figure 1 may differ from those in Table A15 because a single collision can involve more than one fatality.

   The exception is 2021, where Figure 1 reports fewer fatalities than the number of fatal collisions shown in Table A15. In this case, a fatal event identified in Table A15 was later determined not to be attributable to a traffic collision. As a result, that fatality was not excluded from MPI's fatality counts and is therefore not reflected in Figure 1.

Final Version: Motorcycle Collisions Findings

Overview

Purpose

As stated in the project charter, the purpose of the following analysis is to identify opportunities for collision prevention for motorcyclists through analysis of collisions involving motorcycles.

To achieve this purpose, this analysis assesses the characteristics of collisions involving motorcycles and performs a deep dive into the major contributing factors associated with motorcycle collisions.

Scope

The following points were deemed **in-scope** for this analysis.

- Gather data on relevant motorcycle collisions from 2019-2023 from MPI databases.
- Analyze the types and causes of motorcycle collision by injury status (Physical Damage Only, Injury, Fatality)
- Assess variables that significantly impact injury and fatality motorcycle collisions.
- Share findings with CMMG and integrate subject matter expertise into interpretation of data.
- Provide recommendations on areas to focus on to prevent motorcycle collisions in Manitoba.

The following was deemed **out-of-scope** for this analysis.

- Any analysis or use of the data related to ratemaking or motorcycle insurance premiums. While both MPI and CMMG understand the importance of these areas, we agree that this data and analysis is solely applicable to collision prevention and safety improvements.
- Any potential safety initiatives that arise from this project's findings. This project will be deemed complete once the set of recommendations has been developed.

Based on the above, the following are some high-level characteristics of the data pulled for the following analysis.

- The motorcycle collision data was queried on December 18, 2024, and covers the 2019 - 2023 calendar years. This includes all incidents involving a motorcycle, except incidents classified as "Glass Only" which are chips in glass usually due to small stones.
- The three injury levels used in this analysis are Physical Damage Only (PDO), Injury (Any level of injury except fatality), and Fatal. These injury levels indicate the highest level of injury sustained by a motorcyclist involved in a collision.
- The analysis does not make a distinction between at-fault or not-at-fault collisions. If a motorcyclist is riding too fast for the conditions, the relevance to our situation is not whether this factor would contribute to the motorcyclist being at-fault or not.

MANITOBA PUBLIC INSURANCE | SOCIÉTÉ D'ASSURANCE PUBLIQUE DU MANITOBA

Project process

This following is the process taken from initial conception to final analysis.

1. Discussed the upcoming analysis during the 2024 PUB Hearings.
2. MPI and CMMG held a kick-off meeting to discuss the purpose of the analysis, scope of the analysis, and how findings might be used.
3. MPI and CMMG agreed to a project charter.
4. MPI conducted a descriptive analysis to obtain a detailed understanding of the characteristics of collisions involving motorcycles with the intent to identify variables that are of greatest concern in the causes of motorcycle collisions.
5. MPI shared the descriptive analysis with CMMG for review, met to discuss findings, then identified areas for a more detailed analysis.
6. MPI conducted more detailed analysis of agreed-upon areas, developed recommendations, and shared final draft of analysis with CMMG for review.

Recommendations on areas to focus on

These are the recommended areas to focus on based on our analysis.

1. Motorcyclists under 30 years of age get into twice as many collisions as motorcyclists between 30 and 59 years of age: 63 versus 32 collisions per 10,000 motorcyclists. Prioritizing the development of a safer riding culture among younger motorcyclists should be a key area of focus.

2. Careless driving is the primary factor in motorcycle collisions and is included in 28% of such incidents. These primarily involve reckless driving behaviours, such as motorcyclists following too closely, changing lanes unsafely, or losing control of the motorcycle. Enhancing education and/or training on increasing awareness of surroundings and handling may help reduce the occurrence of these collisions.

3. Of the collisions involving careless driving, 25% are related to navigating atypical road surface conditions, such as gravel roads, potholes or debris. This includes taking appropriate measures when navigating turns, exit ramps, or slippery surfaces such as dirt, gravel, or sand. However, a more holistic approach is likely required to reduce these instances further. The work of the MTI-CMMG Motorcycle Road Debris Working Group is expected to include recommendations in this area.

MANITOBA PUBLIC INSURANCE SOCIÉTÉ D'ASSURANCE PUBLIQUE DU MANITOBA

Descriptive Characteristics of Motorcycle Collisions

The descriptive characteristics of motorcycle collisions are categorised into the sections below. The tables of data supporting the points made are in the appendix. Relevant appendix tables are cited below each heading.

Population Statistics

See Table through Table .

On average there are 86,393 motorcyclists with active licences in each calendar year from 2019 – 2023, and about 86% of them are male. Note that not all individuals with a valid licence actively own a motorcycle. This analysis focuses on the most frequent types and causes of collisions and is not designed to compare collision rates across groups of motorcyclists. This data and analysis is not appropriate for a rate-based analysis.

In an average year, the number of collisions involving motorcycles is 259, though in 2021 there was a spike in motorcycle collisions of 303.

In any given year, between about 50% to 60% of motorcycle collisions result in an injury.

Demographics

See Table A9 through Table A16.

Males make up about 91% of all collisions (93% PDO, 89% Injury, 94% Fatal). Comparing collision rates of males to females indicate that males get into 56% more motorcycle collisions than females.

The youngest motorcyclists (15 – 29 years of age) have collision rates about twice as high as those between 30 – 59 years of age: 63 versus an average of 32 motorcycle collisions per 10,000 motorcyclists in the younger age group compared to those in the older age group, respectively.

Within each age group, more than 50% of collisions result in an injury.

Geographic Distribution of Collisions

See Table and Table A18.

Most collisions occur within the Winnipeg area and other highly populated areas surrounding Winnipeg. This pattern holds for both PDO and injury-related collisions. Fatal collisions are discussed in more depth later in this report, but they tend to occur in more rural areas.

Locations with more than ten collisions over the five-year study period include highly populated areas around Winnipeg, the city of Brandon, Thompson, and the Whiteshell.

Temporal Patterns of Collisions

See Table A19 through Table A23.

The analysis showed that most collisions occur between June and August, as expected.

Most motorcycle collisions occur on weekends, particularly on Saturdays, and during the afternoon hours. This aligns with the recreational nature of motorcycle riding, as most people ride on weekends.

Weather and Lighting Conditions

See Table A24 and Table A25.

Motorcycle collisions tend to occur during clear or cloudy weather, likely due to the recreational nature of riding and the preference for favourable weather conditions.

Nighttime riding is the second most common lighting situation for collisions while the first is daytime riding, but we lack the data required to compare the safety of nighttime to daytime riding. Both have unique hazards and risks. Riding during high traffic periods carries different risks compared to riding at night, when it may be more difficult for other vehicles to see motorcyclists on the road.

Major Contributing Factors

***See*Table** *Table A28, Table A28, Table A29*

Table *and Table A30.*

MPI records four types of major contributing factors: driver action, environmental condition, human condition, and vehicle condition.

- **Driver Action**: This indicates how the driver was acting at the time of the collision.

  Driver action is the most common reason for collisions. Careless driving, following too closely, and driving too fast for conditions are the top three most common driver actions reported for the motorcyclists involved in the collision.

  Careless driving behaviour is investigated further in the next section.

- **Environmental Condition**: Anything related to the driving environment.

  Common factors include collisions with wild animals (mainly deer) and issues with the driving surface (defects, obstructions, debris).

- **Human Condition**: If the driver's physical condition is inhibited in some way.

  Generally uncommon as a reason for collisions, but when it occurs it is usually distraction or inattention related. Motorcyclists may be more aware of their physical state due to the inherent risks of riding.

- **Vehicle Condition**: If there was something defective with the vehicle.

  This was rarely a significant issue in motorcycle collisions.

Multi-Vehicle Collisions Involving Non-Motorcycle Vehicles

See Table A31, Table A32, and Table A33.

MANITOBA PUBLIC INSURANCE SOCIÉTÉ D'ASSURANCE PUBLIQUE DU MANITOBA

In multi-vehicle collisions with a motorcycle and another type of vehicle, the main factors attributed to the non-motorcycle driver were typically related to driver action, particularly careless driving and lane changing behaviour.

Environmental, human, and vehicle-related contributing factors associated with the other vehicle are not major concerns in motorcycle collisions.

Correlation Between Conviction History and Subsequent Motorcycle Collisions

See Table .

The correlation analysis explores the relationship between conviction history in one year and collision history in the following year.

For motorcyclists with zero convictions in a calendar year, about 24 motorcyclists out of 10,000 will get into one collision the following year. When considering motorcyclists with one conviction, about 52 out of 10,000 will get into one collision the following year.

There is an increasing trend in the number of collisions for motorcyclists with two or more convictions in the previous year. However, this should be interpreted cautiously due to the small number of collisions, as this leads to lower confidence in the estimates.

Investigating Causes of Motorcycle Collisions

Information from 1,306 motorcycle claims for incidents which occurred between 2019-2023 is analyzed further. Of all the claims considered, there are 707 single vehicle claims and 599 multi-vehicle claims. The summaries below are reported at the claim level, with each count or collision count representing a single filed claim.

Careless Driving

A number of different factors can contribute to the cause of a collision, one of which MPI refers to as careless driving. All 361 single and multi-vehicle collision claims recorded as careless driving are considered, and the corresponding summaries from this analysis can be found in Table . The two most prevalent themes attributed to careless driving claims include driver action and road surface conditions.

The most prevalent categories within driver action are driver behaviour and losing control. Different driver behaviours account for collisions which involve factors within the motorcyclist's control, such as following a vehicle too closely or changing lanes unsafely. These are present in approximately 30% of careless driving claims. A motorcyclist losing control can be associated with about 18% of the careless driving claims studied. The 64 claims where a motorcyclist lost control of their motorcycle were investigated further. While there were a number of codes assigned to these claims, approximately 25% of claims where a motorcyclist lost control were related to behaviour taken while approaching a corner, turn, or exit ramp. Furthermore, 19% of instances where a motorcyclist lost control can be attributed to the motorcyclist losing their balance or there being

some form of operator error, such as hitting the throttle instead of the brakes. Further breakdown of this contributing factor can be found in Table A1, located in the appendix.

Across all careless driving claims, different road surface conditions accounted for approximately 25% of scenarios a motorcyclist encountered. These include instances where a motorcyclist comes across loose gravel/sand, which was the most common road surface condition and was a factor in 19% of careless driving claims.

Environmental and vehicular conditions are also considered; however, they are factors in less than 10% of these careless driving claims. Environmental conditions include circumstances such as slippery road surface, obstructions or debris in roadway, and the wind.

Table 1: Summary of single and multi-vehicle collision claims attributed to careless driving.

Avoiding Action

There are several reasons why a motorcyclist might take action to avoid a collision. This could involve, but is not limited to, avoiding third-party vehicles, poor road surface conditions, wildlife, or domestic animals. A total of 24 collisions in the data utilized for this project were initially recorded in the traffic accident report as motorcyclists avoiding action, including 20 single vehicle and 4 multi-vehicle collisions. The accident detail text was reviewed for all 707 single vehicle claims to determine if more accidents may have involved the motorcyclist taking avoiding action, in addition to the 20 initially coded as such. It was determined that the motorcyclist was taking avoiding action in 56 additional single-vehicle claims. In total, 80 claims in the study involved a motorcyclist taking avoiding action – 76 single-vehicle and 4 multi-vehicle claims.

Motorcyclists tried to avoid third party vehicles who cut them off in about 15% of these 80 claims. In fact, 50% of the 80 avoiding action claims were the result of motorcyclists avoiding a third-party vehicle. Approximately 33% of the avoidance claims were due to motorcyclists attempting to avoid wildlife, primarily deer. Specific details about collisions which resulted from a motorcyclist taking avoiding action are listed in Table A2 of the appendix.

Collision Configuration: 'Other'

Each claim is assigned a specific collision configuration to illustrate how the collision occurred. There are 16 different collision configurations recognized by MPI such as rear end, head on and side swipe. If a collision does not match any of the 16 pre-defined configurations, it is assigned a collision configuration of 'other': 664 collisions reported from 2019 – 2023 met these criteria.

A summary of the claim perils for these 664 collisions based on injury status can be found in Table 2. It is clear that the vast majority of claims were recorded as a collision, rather than a collision with a domestic animal or wildlife. Collisions with wildlife represent a much larger proportion of these claims than collisions with a domestic animal, accounting for about 18% of claims recorded with a collision configuration of 'other'.

Table 2: Summary of claim perils for collisions with a configuration of "other": physical damage only (PDO).

	Claim Peril			
Claim	**Collision**	**Collision With Domestic Animal**	**Collision With Wildlife**	**Total**
Fatal	13	0	1	14
Injury	276	4	62	342
PDO	247	3	58	308
Grand Total	**536**	**7**	**121**	**664**

Fatalities

Of all the claims reviewed, 17 involved a fatality, and the analysis identified two primary themes. First, a third-party (TP) vehicle was involved in 7 (41%) of these 17 claims. These incidents were largely attributed to a lack of awareness or poor judgment on the part of the TP vehicle driver,

resulting in 5 out of the 7 fatal collisions involving TP vehicles. Most of these occurred at highway intersections.

The second theme, accounting for 35% of the fatalities, involved motorcyclists losing control of their vehicles. These single-vehicle collisions typically occurred on roadway curves, where motorcyclists lost control, veered into a ditch, and were ejected from their motorcycles.

While road surface and environmental conditions occasionally contributed to fatalities, the vast majority were linked to driver behaviour. Most fatalities resulted from poor judgement by the TP or the motorcyclist losing control – both linked to driver behaviour and decision-making. In fact, these were the most prevalent factors found within careless driving claims, which were discussed in detail earlier, and 7 fatalities were recorded with careless driving as a major contributing factor.

Table 3: Summary of factors in incidents with fatalities: blood alcohol concentration (BAC); first-party (FP); third-party (TP). FP refers to the motorcyclist.

Factor	Number of Claims
Collision with TP Vehicle (multi-vehicle collision)	**7**
FP hit TP vehicle	4
TP crossed intersection before safe to do so	2
TP failed to stop at stop sign	1
FP passed TP vehicle using oncoming lane, TP turned left in front of motorcycle	1
FP hit by TP vehicle	3
FP crossed intersection before safe to do so	1
Head on – TP changed lanes improperly while turning	1
Read end – TP failed to stop for traffic stalled for highway construction	1
FP Lost Control (single-vehicle collision)	**6**
Driving on a curve in roadway	4
Drove into ditch	2
Collided with cement culvert	1
Passing TP	1
BAC beyond limit (collided with median)	1
Drifted into ditch	1

Overall number of motorcycle collision

The below table shows that the number of motorcycle physical damage (PD) claims and the number of incidents are very close. Given that many variables are at the claim level, we will stick with an analysis at the claim level going forward, though the terms collision and physical damage claim may be used interchangeably.

Table A6: Total claim and incident counts for this analysis

Injury Status	# of PD Claims	# of Incidents	Difference
2019			
Fatal	5	5	0
Injury	132	132	0

Motorcyclist Gender

When interpreting the "% Within Gender" percentage, a 53% for Injury in 2019 indicates that 53% of collisions involving males in 2019 resulted in an injury.

When interpreting the "% Across Gender" percentage, a 92% for Injury in 2019 indicates that 92% of collisions resulting in an injury in 2019 involve males.

1.4 Accident Municipality

- There are 166 municipalities with incidents in the data.
  - 70 municipalities have a single incident.
  - 37 had two incidents.
  - 12 had three incidents.
  - 14 had four incidents.

Municipalities that had more than ten incidents over the 2019-2023 period are shown in the following table:

Table A17: Overall Claim Counts by Municipality

Claim counts of 10 or more

INCD_MNCP_NAM	PD Claim Count	% of Total
Winnipeg	729	56%
Brandon	43	3%
Selkirk	32	2%
Lockport	19	1%
Winkler	17	1%
Steinbach	15	1%
Beausejour	13	1%
Portage La Prairie	13	1%
Thompson	13	1%
Whiteshell (cottage owners)	11	1%
Morden	11	1%

Looking at the top ten locations by severity level gives a sense of where targeted actions may be able to provide the most benefit, besides the Winnipeg location which is the top location across all categories.

- Besides Winnipeg, the top injury and PDO locations appear to be the larger communities outside of the Winnipeg area.
- Fatal incidents typically occur in rural communities, and are not focused in Winnipeg, though Winnipeg has the largest number of fatal involved collisions at three.

MANITOBA PUBLIC INSURANCE SOCIÉTÉ D'ASSURANCE PUBLIQUE DU MANITOBA

Motorcycle Rider Contributing Factors

Some general notes on the contributing factor information assessed in this section.

- The traffic accident report (TAR) associated with a physical damage claim will include a maximum of three Major Contributing Factors (MCFs). If there are more than three, then the three assumed to be the most important for the event will be recorded in decreasing order of importance. The analysis in this document does not make a distinction between which factors were deemed more important than others in a collision, only whether a factor existed for a collision.
- The MCFs may all be from the same category, or they may all be from different categories.

Non-motorcycle contributing factors

The tables below indicate the contributing factors for vehicles other than motorcycles involved in a collision, which is almost exclusively passenger vehicles and trucks.

The injury level (PDO, Injury Only, or Fatal) indicated in the table below is the highest level of injury sustained by a motorcyclist involved in the collision.

For example, Careless Driving was a contributing factor in 58 Physical Damage Only incidents, indicating that 58 vehicles other than motorcycles had Careless Driving as a contributing factor when they were involved in a collision with a motorcycle and no motorcyclists were injured in the incident.

MANITOBA PUBLIC INSURANCE SOCIÉTÉ D'ASSURANCE PUBLIQUE DU MANITOBA

Conviction Collision Correlation Analysis

The correlation analysis performed involved the following steps:

1. For each calendar year from 2019 – 2022, the number of convictions each motorcyclist was issued (0, 1, 2, 3, …).
2. The number of motorcycle collisions in the following calendar year (2020 – 2023) was then counted.
3. For each pair of years, the counts of number of convictions in the initial year and the number of convictions in the following year was tabulated. This produced 4 tables.
4. The four tables in step 3 were combined to produce a single table to summarise the results.
5. Rates per 10,000 motorcyclists were calculated for each table row by taking the number of motorcyclists who were involved in 0, 1, or 2 collisions, dividing by the total number of motorcyclists who were involved in 0, 1, or 2 collisions, then multiplying the resulting value by 10,000.

   For example:
   a. For every 10,000 motorcyclists who get zero convictions (in any vehicle) throughout one year, 24 of them will get into 1 motorcycle incident the following year.
   b. For every 10,000 motorcyclists who get one conviction (in any vehicle) throughout one year, 52 of them will get into 1 motorcycle incident the following year.

   There does appear to be a general increasing trend that the more convictions a motorcyclist gets into one year, the more likely they are to get into a motorcycle collision the following year. However, given that there are few motorcyclists involved in a large number of convictions, the strength of this relationship for conviction counts above 2 should be considered unknown.

Table A34: Correlation between Convictions and Collisions

	# of Motorcycle Collisions in the following year			Rate per 10,000 Motorcyclists		
# of Convictions in the preceding year	0	1	2	0	1	2
0	318,059	781	14	9,975	24	0
1	20,132	105	1	9,948	52	0
2	2,352	19	0	9,920	80	0
3	399	3	0	9,925	75	0
4	115	0	0	10,000	0	0
5	41	0	0	10,000	0	0

CMMG (MPI) 2-3

Part and Chapter:	**CMMG 1-16**	**Page No.:**	
Topic:	**Road Safety**		
Sub Topic:			

Preamble to IR (If Any):

Question:

a) Would the Corporation consider financial incentives for further driver training to fall within the scope of the Road Safety budget?

b) Please provide a summary of what caused the under spending in the road safety budget in the 2025/26 year.

Rationale for Question:

To understand and examine the road safety budget historically and forecasted amounts.

RESPONSE:

a) Yes; MPI would consider financial incentives for driver training to be within the scope of the Road Safety budget, provided they align with program objectives and demonstrate potential to improve road safety outcomes. Examples include the $200 rebate funded by MPI for riders who complete the Gearing Up motorcycle training course offered through Safety Services Manitoba, as well as MPI subsidization of both the Driver Z and Class 5 Adult Driver Training programs to reduce barriers to training.

b) Road Safety expenditures in 2025/26 were below budget primarily due to changes in project scope and timing, delays in program implementation and delivery, procurement challenges, and the timing of external funding reimbursements.

For example, wildfire-related disruptions in northern Manitoba resulted in the cancellation of Class 5 adult driver training courses and reduced program delivery at University College of the North, leading to lower expenditures than planned.

Several pilot initiatives also incurred lower-than-budgeted expenditures, including the Let's Buckle Up rural seatbelt program, where MPI reduced the number of participating communities from 10 to four to support more manageable implementation and evaluation before considering expansion.

Expenditures related to vulnerable road users were also below budget because the successful vendor for the pedestrian visibility gear program required longer-than-expected production and shipping timelines. As a result, delivery of the program was delayed to the subsequent fiscal year, and associated expenditures went unspent in 2025/26.

In addition, year-over-year variances were impacted by the timing of speed display sign purchases and reimbursements received through Transport Canada's Enhanced Road Safety Transfer Payment Program. Approximately $305,000 in speed display signs were purchased in 2024/25, while the related reimbursement of approximately $230,000 was received in 2025/26, and this offset of costs would have been shown as underspending in that budget line.

CMMG (MPI) 2-4

Part and Chapter:	**Part IX - INV Appendix 5**	**Page No.:**	**1 of 7**
Topic:	**Shadow Portfolios**		
Sub Topic:	**Risk Metrics for Shadow and Passive Portfolios**		

Preamble to IR (If Any):

PUB (MPI) 1-89 in response to d) MPI provided an explanation of how the Shadow portfolios are being utilized in the pending risk appetite and asset mix work. Notably while the GRA filing included returns for the Shadow and Passive Portfolios, risk metrics that were reported in previous years were excluded.

*Note: PUB Order 156/25 Directive 14.28 directed MPI to "continue to make use of and report on Shadow Portfolios as has been done in prior GRAs."

Question:

a) Please provide the risk metrics that have been provided in past GRAs, including the underlying data in Excel that supports the calculations.

Rationale for Question:

To assess both the performance and risk of the Shadow Portfolios in relation to the Passive Portfolios.

RESPONSE:

a) Please refer to *Appendix 1 – Surplus Volatility March 2026* for the requested risk metrics. For reference, prior periods risk metrics were provided under *CC (MPI) 1-79 Appendix 2 - Performance & Surplus Volatilities*.

CMMG (MPI) 2-5

Part and Chapter:	**Part VI – Claims Forecasting - Redacted**	**Page**	**46 of 95**
Topic:	**Ratemaking Methodology**		
Sub Topic:			

Preamble to IR (If Any):

Referencing CMMG (MPI) 1-6 MPI stated it "is unable to provide a directly comparable combined current trend selection for the coverages that were separated in the 2027 GRA."

CMMG acknowledges that the trends are not directly comparable as the method to achieve the results are different (weighted average vs regression analysis), nevertheless the data will provide an estimate regarding any material change in the results by separating the coverages in this years GRA.

Question:

Please provide a combined weighted current selections for coverages that were separated in this GRA

Rationale for Question:

To evaluate the implied impact of separating the sub-coverages and implied change in trend selections

RESPONSE:

As noted in the response to CMMG (MPI) 1-6, any weighted-average trend would depend on the weighting basis selected and would not represent the trend that would result from a trend analysis of the combined historical experience. Accordingly, MPI

does not consider such a measure to be directly comparable to the prior combined trend selection and has not produced a weighted-average trend estimate.

Notwithstanding the above, MPI has provided bridging analyses for the coverages separated in the 2027 GRA in *CC (MPI) 1-47* and *PUB (MPI) 1-62*, including Accident Benefits Other (Indexed), Accident Benefits (Travel, Personal Care Assistance), and Theft (Entire Theft and Attempted & Partial Theft). The bridging analyses provide a more meaningful assessment of the impact of separating the coverages than a weighted-average trend estimate, as they directly illustrate the effect of the separation on projected loss costs rather than relying on a weighting methodology that does not reflect the actuarial trend-selection process.

The impact of updating both past and future trends for the Accident Benefits (Travel, Personal Care Assistance), and Accident Benefits Other (Indexed) is $6.89 and $8.81 in loss cost respectively for the 2027/28 Rating Year or a total of $15.70.

The impact of updating both past and future trends for the split of Comprehensive Theft is -$1.90 and -$6.89 in loss cost respectively for the 2027/28 Rating Year or a total of -$8.79.

CMMG (MPI) 2-6

Part and Chapter:	**Part VIII – REV Appendix 2**	**Page No.:**	**2 of 4**
Topic:	**Ratemaking methodology**		
Sub Topic:			

Preamble to IR (If Any):

Referencing CMMG (MPI) 1-7, as MPI does not believe that providing actual results for 4 months of experience would be representative of the transfer to Extension, then a sample of the different driver profiles can be used.

Question:

Using the 30 customer profiles found in Part IV - BMK Appendix 1a

a. Please provide the rates for each profile within each territory using the 2026 GRA rates had the change in basic deductible not been made and assuming each profile has no extension insurance ($750 deductible).

b. Please provide the rates for each profile within each territory using the 2026 GRA rates with the change in basic deductible and assuming each profile has no extension insurance ($1,000 basic deductible).

c. Please provide the extension rates for each territory to move back to $750 deductible using the current 2026 rates (with the change in basic deductible).

Rationale for Question:

To understand the customer impact of increasing the Basic Deductible to customer premiums

RESPONSE:

a. & b.

MPI respectfully declines to provide the requested analysis. While CMMG suggests the use of the 30 benchmark customer profiles as an alternative to four months of actual experience, MPI does not believe this alternative resolves the representativeness concern. As noted *in Part IV BMK Appendix 1 - Vehicle Rate Comparison - section 1.4*, the customer profiles comprise a static set of customers and therefore become less representative of current market conditions and vehicle composition over time. MPI does not believe that results derived from a limited number of static customer profiles would provide a reliable or representative assessment of customer impacts associated with the deductible change.

Further, MPI is concerned that the requested analysis could be misleading, as any customer impacts identified through the selected profiles may not be reflective of the impacts experienced across the broader book of business. Accordingly, MPI does not believe that the requested profile-based analysis would provide a meaningful or reliable basis for assessing the impact of the deductible change on Manitoba drivers.

c. As noted previously, premiums for the Extension line of business are outside the scope of the PUB's regulatory authority. The requested information relates exclusively to optional Extension coverage and does not pertain to rates charged under Basic Autopac. Accordingly, MPI does not believe the requested information is relevant to the matters under consideration in the 2027 GRA and respectfully declines to provide it.

CMMG (MPI) 2-7

Part and Chapter:	**Part VII – RC Appendix 6**	**Page No.:**	**3 of 15**
Topic:	**DSR**		
Sub Topic:			

Preamble to IR (If Any):

Referencing CMMG (MPI) 1-9, The DSR level represents the driving behaviour of an individual, including scenarios where the individual drives multiple classes of vehicles.

MPI does not want to possibly include vehicle-specific effects that are not representative of the broader merit-eligible population.

Question:

a) Is DSR level assigned using the experience for all merit eligible classes of vehicles, including motorcycles?

   i. If yes, will a private passenger driver's DSR be lowered if they also ride a motorcycle and get into an accident on said motorcycle?

b) Using a scenario of two identical drivers of private passenger vehicles (A and B) both at DSR 15 with no prior claims, but driver B has a motorcycle and gets into an accident while riding the motorcycle and makes a claim of $10,000, and their DSR level decreases to 10.

In the DSR discount analysis,

   i. What DSR level does driver A fall under?

ii. What claim amounts does driver A contribute to the DSR level from the response in i)

iii. What DSR level does driver B fall under?

iv. What claim amounts does driver B contribute to the DSR level from the response in iii)

c) If neither driver from b) contribute claim amounts in the DSR analysis but are assigned different DSR levels, does this create a mismatch in the data used in the DSR analysis?

d) Is driving behaviour possibly different between territories?

i. If so, are there specific smaller territories excluded from the derivation of the discount?

ii. Does MPI not want to include territory-specific effects not representative of the broader merit-eligible population? Please explain.

e) Are there ways to account for vehicle-specific effects in the DSR derivation?

Rationale for Question:

To understand the appropriateness of excluding motorcycles experience when determining DSR discounts compared to other smaller subsets

RESPONSE:

To clarify the preamble, in response to CMMG (MPI) 1-9, MPI stated that motorcycles are not considered representative of the broader merit-eligible vehicle population due to their limited exposure, seasonal nature, and distinct risk characteristics. Therefore, it was stated that "*incorporating motorcycle experience*

into the DSR analysis could introduce vehicle-specific effects that are not representative of the broader merit-eligible population for which the DSR framework is intended."

a) Yes. DSR levels are determined based on an individual's overall merit-eligible driving experience.
    i. Yes. If a claim event on a merit-eligible motorcycle results in a change to the driver's DSR level under the DSR framework, that change would apply to the individual's DSR level regardless of the type of merit-eligible vehicle they operate.

b)
    i. Assuming that the scenario was meant to convey that Driver A and B got into an accident, if Driver B made a claim and was found 51% or more liable then Driver A would remain at DSR 15.
    ii. Given the presumed scenario indicates no claim from Driver A, Driver A would contribute zero claim amounts.
    iii. Driver B would fall to DSR 10 based on the scenario described.
    iv. The motorcycle claim would not contribute to the DSR discount analysis because merit-eligible motorcycles are excluded from the analysis as described in *Part VII RC Appendix 6*.

c) MPI does not consider this to represent a material mismatch in the DSR analysis because merit-eligible motorcycles and motorhomes represent a small proportion of merit-eligible vehicles and are not considered representative of the boarder population used to derive DSR discounts. While an individual's DSR level reflects their overall merit-eligible driving experience, the DSR analysis is intended to measure how expected loss costs vary across DSR levels for the representative population used to determine DSR discounts. The analysis is therefore based off broader

population of merit-eligible passenger vehicles and light trucks only, which together represent approximately 97% of all merit-eligible vehicles.

Merit-eligible motorcycles and motorhomes were excluded, as they are not considered representative of this broader population. These vehicle types are insured by a relatively small subset of Manitobans, are seasonal in nature, and exhibit materially different risk characteristics than passenger vehicles and light trucks.

d) Yes. MPI recognizes that driving experience and claims experience may vary across territories. However, territory is a characteristic of the entire insured population whereas motorcycles are a distinct subset of vehicles. Every vehicle is assigned to a territory and, therefore, territory-specific experience forms part of the broader population used in the DSR analysis.

   i. No. MPI does not exclude specific territories from the DSR discount analysis.

   ii. No. Territory-specific effects are explicitly recognized within MPI's existing risk classification framework through the territory rating variable, which is intended to capture differences in claims experience across geographic regions. As such, differences in driving behavior or claims experience by territory are not considered unintended effects, but rather part of the risk being measured and priced.

e) Yes, there are statistical techniques that can be used to account for vehicle-specific effects. However, MPI's objective in the DSR analysis is to determine a single set of DSR discounts that reflects differences in expected loss costs by driver behavior across the broader merit-eligible population. As described in CMMG (MPI) 1-9, merit-eligible motorcycles

and motorhomes are not considered representative of that broader population due to their limited exposure, seasonal nature, and distinct risk characteristics. Accordingly, MPI excluded those vehicle types from the DSR derivation rather than introducing vehicle-specific adjustments, as doing so would not align with the objective of deriving a common DSR scale applicable across all merit-eligible vehicles.

Manitoba Public Insurance

2027 General Rate Application

Round 2 Confidential Information Requests – Public Responses

September 8, 2026

Consumers Coalition (CC)

MANITOBA
PUBLIC INSURANCE

CC (MPI) CSI 2-2

Part and Chapter:	**Part V — IT Appendix 2** **CC (MPI) 1-46 Confidential**	**Page No.:**	
Topic:	**Project Nova Vendor decisions**		
Sub Topic:			

Preamble to IR (If Any):

CC (MPI) 1-46 c) poses the following question:

> "Infosys and Duck Creek are indicated as the 'key' vendor engagement decisions. Please provide a list of all terminated vendors and **related sunk costs relating to Project Nova."**

MPI's response states:

> "c) Aside from Infosys and Duck Creek, no other Nova vendor engagements related to Nova were ended earlier than anticipated. Other Nova vendor engagements concluded in the ordinary course, reached the end of their contractual term, or had their scope adjusted through normal project governance and change management processes."

Question:

a) For greater clarity and for the record, please provide a current chart (to July 31, 2026) detailing all Program Nova related Costs (capital expenditures, operating expenses, internal expenses—that is total cost picture of Program Nova) from the beginning (2019) by fiscal year and by expenditure/expense category.

b) Please provide a chart listing Program Nova assets (deferred expenditures) currently in use indicating the original cost, amortized amount and remaining balance as at July 31, 2026.

Rationale for Question:

For the record and clarity review a complete and total cost chart of Program Nova funded by policyholders.

RESPONSE:

a) Refer to *PUB (MPI) 1-57 Figure c* for the Program Nova Continuity Schedule, which includes all Program Nova related Costs (capital expenditures, operating expenses, internal expenses) over the life of the program. As Program Nova was closed in 2025/26, there are no additional costs beyond March 31, 2026.

b) Refer to below figure

Figure CC2 CI 002b Program Nova In Use Assets at July 31, 2026

Line No.	Asset	Cost	Accumulated Amortization	Balance at July 31 2026
1	*(C$000s, except where noted)*			
2	Nova IRP Asset	17,444	(3,634)	13,810
3	Nova R1 - Digital	3,750	(1,312)	2,437
4	Nova R2 - Digital	16,152	(3,365)	12,787
5	Total Nova In Use Assets at July 31, 2026	37,345	(8,311)	29,034

2027 General Rate Application

Pre-Ask Information Requests

Consumer's Coalition (CC)
CC (MPI) Pre-Ask 1 to 3

Public Utilities Board (PUB)
PUB (MPI) Pre-Ask 1 to 9

CC (MPI) Pre-Ask 1

Part and Chapter:	**Part II—COM Appendix 6**	**Page No.:**	**6**
Topic:	**ALM Study**		
Sub Topic:	**Cost of constraints**		

Preamble:

In Part II-COM Appendix 6 at page 6, no. 16, CC asked MPI/WTW to "Confirm that the cost of any constraints will be able to be quantified in the ALM Study, as it has been in the prior two ALM Studies."

MPI/WTW responded that "as part of the 2026 ALM study, the OCIO will quantify the economic impact of constraints on portfolio outcomes."

This does not appear to be included in the ALM study chapter (Exhibit #24).

Question:

Please provide the abovementioned cost of constraints.

Rationale for Question:

To understand the cost of any constraints MPI imposed on the investment portfolio.

RESPONSE:

a) The Asset Liability Management Study did not produce a standalone "cost of constraints" analysis. Rather, the impact of capital, liquidity, liability-matching, implementation and portfolio construction constraints was assessed through the evaluation of alternative structures and the resulting effects on liability values,

portfolio yield, liability matching, capital requirements, earnings outcomes and overall portfolio efficiency.

The study therefore quantified the impact of constraints through the comparison of alternative portfolio structures rather than through a separate constraint-cost metric.

CC (MPI) Pre-Ask 2

Part and Chapter:	**Part II—COM Appendix 6**	**Page No.:**	
Topic:	**ALM Study**		
Sub Topic:	**CC's Recommendations, ALM Study Chapter (Exhibit #24)**		

Preamble:

CC (MPI) 1-94 Attachment A includes 12 recommendations, made in May 2026 following the ALM Technical Conference. WTW's ALM Study Chapter (Exhibit #24) was filed in September 2026, after Round 2 Information Requests were due.

Question:

a) Were the 12 recommendations made in May 2026 considered before the ALM Study Chapter (Exhibit #24) was filed in September 2026?

b) Which of the 12 recommendations:

   a. will not be implemented;

   b. have been implemented; and

   c. may be implemented at a later stage of the ALM Study?

c) For any recommendations that will not be implemented, please explain the rationale for not implementing the recommendations.

d) For any recommendations that may be implemented at a later stage of the ALM Study, please explain:

a. how the implementations will be communicated to the PUB and other stakeholders; and

b. what opportunities stakeholders will have to provide additional feedback.

e) Please explain whether MPI disagrees with any of the principles or beliefs that were used to support the various recommendations, as described in CC (MPI) 1-94 Attachment A.

f) Please explain whether WTW disagrees with any of the above principles or beliefs.

Rationale for Question:

To understand how the 12 recommendations are being considered in the ALM Study.

RESPONSE:

a to f) The twelve recommendations submitted by the Consumers Coalition (CC) and Coalition of Manitoba Motorcycle Groups (CMMG) following the ALM Technical Conference were reviewed during the development of the 2026 Asset Liability Management Study. The recommendations address a range of topics including liability valuation, risk governance, portfolio construction, portfolio constraints, inflation-sensitive assets, shadow portfolios and stakeholder engagement. The table below summarizes how each recommendation was addressed within the analysis presented in *Part IX Asset Liability Management Chapter.*

Recommendation	Treatment in Study	Response
1. Return/Risk Definitions for Asset Mix Decision	Reflected in the study	The study assessed alternative structures using liability valuation impacts, liability discount rates, liability tracking error, earnings outcomes and capital impacts.

Recommendation	Treatment in Study	Response
2. Time Horizon for Decision-Making	Reflected in the study	The study incorporated long-term capital market assumptions and evaluated long-term portfolio outcomes when assessing alternatives.
3. Liability Risk Modeling	Reflected in the study	The liability-hedging analysis evaluated alternative structures using liability discount rates, liability impacts and liability tracking error measures.
4. Risk Tolerance versus Risk Appetite	Reflected in the study	The evaluation of alternatives incorporated risk objectives, downside outcomes, affordability considerations and capital requirements.
5. Timing of Asset Class Exclusions	Reflected in the study	Multiple liability-hedging structures were evaluated, including structures containing real return bonds, TIPS, government bonds, corporate bonds and MUSH bonds, before recommendations were developed.
6. Cost of Constraints	Considered during the study	Regulatory capital requirements, liquidity considerations, MCT impacts and implementation considerations formed part of the evaluation process. The specific analyses proposed in the recommendation were not separately presented.
7. Cost of Fixed Income Constraints	Considered during the study	The study compared alternative liability-hedging structures using liability impacts, yields, capital requirements and MCT impacts. The specific analyses proposed in the recommendation were not separately presented.
8. Cost of the Duration Constraint	Considered during the study	Duration alignment and hedge effectiveness formed part of the liability-hedging analysis. The specific analyses proposed in the recommendation were not separately presented.
9. Cost of the MCT Constraint	Reflected in the study	MCT impacts and capital requirements were assessed throughout the evaluation

Recommendation	Treatment in Study	Response
		of liability-hedging and return-seeking asset alternatives
10. Break-Even Inflation and US TIPS	Considered during the study	Structures containing real return bonds and TIPS were evaluated as part of the liability-hedging analysis. These structures were not included in the recommended structure.
11. Shadow Portfolios	Outside the scope of the study recommendations	This recommendation relates to shadow portfolio methodology and performance measurement rather than the asset allocation recommendations presented in Exhibit #24.
12. Additional Stakeholder Feedback	Outside the scope of the study recommendations	This recommendation relates to future stakeholder engagement and consultation opportunities.

WTW Perspective on the Supporting Beliefs

WTW does not disagree with the general investment principles underlying the recommendations. The recommendations represent one application of those principles. The analysis and conclusions presented in *Part IX Asset Liability Management Chapter* reflect their application within the context of MPI's objectives, liabilities, capital requirements and implementation consideration.

CC (MPI) Pre-Ask 3

Part and Chapter:	**CC (MPI) CI 2-2 – [Confidential filed as public IR]** **PUB (MPI) 1-57**	**Page No.:**	**6**
Topic:	**Information Technology**		
Sub Topic:	**Total Project Nova costs from inception to to-date**		

Preamble:

CC (MPI) CI 2-2 – Confidential (now Public) a) asked the question:

> "a) For greater clarity and for the record, please provide a current chart (to July 31, 2026) detailing all Program Nova related Costs (capital expenditures, operating expenses, internal expenses—that is total cost picture of Program Nova) from the beginning (2019) by fiscal year and by expenditure/expense category."

MPI's response through the regular IR process was as follows:

> "a) Refer to *PUB (MPI) 1-57 Figure c* for the Program Nova Continuity Schedule, which includes all Program Nova related Costs (capital expenditures, operating expenses, internal expenses) over the life of the program. As Program Nova was closed in 2025/26, there are no additional costs beyond March 31, 2026."

PUB (MPI) 1-57 Figure c does not clearly articulate the 'total' costs of Project Nova. Therefore, it is unclear what is/was actually the 'total' Program Nova costs that the policyholders will pay for with policyholder premiums.

Question:

a. Please confirm or, if incorrectly interpreted, correct (with detailed references) the following summarization of the total costs of Project Nova from inception (2019) to to-date ($000):

Total Project Nova Expenditures (Figure c)	$167,841
Ongoing Costs (Figure c)	116,941
2024/25 Write-off (Figure c)	60,777
2025/26 Write-off (Figure c)	15,089
2025/26 Onerous Contract Expense (Figure c)	37,341
Total operating expenses (expensed to operations to-date)	**$397,989**
Program Nova Assets in Use (Net of amortization expense[1])	
(CC (MPI) CI 2-2 Public response b)	29,034
Total Program Nova Costs from 2019 to to-date	**$427,023**

b. Please confirm that there are no other [beyond costs summarized in question a) above] internal, external or pending legal expenses relating to Project Nova. If there are additional expenses being or expected to be incurred for Project Nova please provide a detailed estimate of these future costs.

Rationale for Question:

To clarify and summarize, for the record, the Total Project Nova costs from inception of the program (2019) to to-date which policyholders (corporately) will pay for as time elapses.

[1] Amortization of $8,311 would have been charged to operating expenses and been part of the $397,989 amount

RESPONSE:

a) As the rationale for the question states: “To clarify and summarize, for the record, the Total Project Nova costs from inception of the program (2019) to to-date which policyholders (corporately) will pay for as time elapses” MPI would like to emphasize that *PUB (MPI) 1-57 Figure c* does not represent the amount which Basic policyholders will pay for as time elapses due to the deferral of initiative expenses through Order No. 4/23. The Project Nova costs since the date of the 2023 Order are historical and have been funded by the RSR and Extension transfers.

PUB (MPI) 1-57 Figure c provides the total expenditures (capital and expense) of the Program Nova program and ongoing expenses incurred from inception of the program (2019) to date.

The total Program Nova direct implementation expenditure (expense and capital) was $167,841 million (*PUB (MPI) 1-57 Figure c* Total Program Nova Expenditures column), which is inclusive of the impairment and write off costs.

Additionally, ongoing operations costs of $116,941 million (inclusive of the onerous contract provision recorded subsequent to project closure) were also incurred (*PUB (MPI) 1-57 Figure c* Ongoing Costs including Transition to Operations column, with line of business breakdown for these costs being provided in lines 28 to 34 of *PUB (MPI) 1-57 Figure c)***.**

For further clarification, please see below:

Figure 1 CC Pre Ask 003 Program Nova Implementation and Ongoing Expenditures

Line No.	*(C$000s, except where noted)*	**Actuals at March 31, 2026**
1	**Program Nova Implementation Expenditures (capital and expense)**	
2	Asset additions (not amortized)	117,763
3	Expenses not eligible for capitalization	50,078
4	**Total Program Nova implementation expenditure (capital and expense)**	167,841
5	**Total Program Nova Ongoing Costs (inclusive of onerous contract)**	116,941
6	**Total Program Nova Implementation and Ongoing Cost expenditures**	**284,782**
7	**Expenses in income statement:**	
8	Amortization of asset additions in line 6	11,618
9	Impairment of assets in line 6	75,866
10	Expenses not eligible for capitalization	50,078
11	Total Program Nova Ongoing Costs (inclusive of onerous contract)	116,941
12	**Total expensed for accounting in statement of operations**	**254,503**
13	**Remaining Program Asset Net Book Value (line 6 minus line 12)**	**30,279**

b) Program Nova was closed in 2025/26; therefore, no further implementation costs have been incurred after March 31, 2026. Upon closure, costs associated with the program ceased to be accumulated and tracked.

An onerous contract adjustment was booked for a contractual obligation as of March 31, 2026, which has been acknowledged in the schedule of costs above. For details on the Onerous Contract refer to *PUB (MPI) 1-38 Appendix 1*.

PUB (MPI) Pre-Ask 1

Part and Chapter:		**Page No.:**	
Topic:	**PUB (MPI) 2-15**		
Sub Topic:			

Question:

1. Issue #1
    a) In the 2027 GRA, in PF-3 the total equity balance at the end of 2027BF is $640,510 and the MCT is 105.2%
    b) In part a) of the response, MPI indicates that the collective reduction in Basic's MCT ratio is approximately 35 percentage points relative to the original forecast (with an estimated impact to equity as at the end of the first forecast year of approximately $160 million)
    c) In part k) of the response, Figure PUB 2-015K 03 has a total equity balance of $544,549 and the MCT is 81.1%
    d) The reduction in Equity in part k is 544,549 – 640,510, or about -$96 million, which is significantly different from the amount in response a) of $160 million
    e) The reduction in MCT is 81.1%-105.2% or -24.1% which is significantly different from the amount in response a) of 35 percentage points
    f) Could MPI please review a) and k) and determine which amounts are incorrect, and provide a corrected response?
2. Issue #2
    a) In the 2027 GRA, the requested rate change is +2.38%
    b) In part k) of the response, the basic rate change is +4.97% as indicated in blue, and the revenue from premiums reflects the larger rate change.

c) The IR did not ask for the requested rate change to be adjusted

d) Could MPI please provide response k) for both Scenario 1 and 2 with their requested rate change of +2.38%?

3. Issue #3

a) If the resulting MCT does not return to 100% within 5 years for Scenario 1 with the +2.38% rate requested, please indicate the required capital build provision, and provide PF-1 to PF-3 including the capital build provision, with the revenue from the capital build provision, and from each year of rate increases, separately identified.

RESPONSE:

1. Issue #1

The responses to PUB IR 2-15 parts a) and k) differed in their handling of assumptions pertaining to:

1. the magnitude of potential catastrophe events to be considered in addition to those experienced at the time of submission of the Round Two Information Requests; and
2. the increase in claims handling expenses associated with the management of catastrophe claims.

The response to part a) reflected a more conservative approach to both assumptions than the response to part k). As a result, the estimated impact on equity and the corresponding MCT ratios differ between the two responses. Since those responses were prepared, MPI has gained additional experience in the management of the June/July catastrophe-related claims and a further portion of the catastrophe season has elapsed, providing additional information to inform its assessment.

Based on the information currently available, MPI considers the assumptions reflected in its response to part k) to represent its current best estimate of the financial impact of catastrophe events and related claims handling costs.

2. Issue #2

When the pro formas filed in response to PUB 2-15(k), Scenario 1, are revised from the illustrative 4.97% rate increase to the requested 2.38% rate indication, the forecast must also recognize the resulting 2.59% rate deficiency (4.97% less 2.38%). Accordingly, the 2028/29 written premium assumption is increased by 4.88%, comprising the 2.59% deficiency and the 2.29% net trend assumption for that year. The net trend assumptions of 2.42% for 2029/30 and 2.55% for 2030/31 remain unchanged. As illustrated in the revised pro formas below, Basic's MCT ratio returns above the target level by Year 5.

The scenario assumes an annual Basic catastrophe reinsurance premium of $46 million. This assumption accounts for 1.88% of the increase in the indicated rate from 2.38% to 4.97%. Therefore, the 2.59% deficiency carried into 2028/29 would remain applicable only if the cost of the additional catastrophe reinsurance coverage continues at the level purchased in 2026/27. If that assumption holds, the deficiency must be reflected in the 2028/29 forecast to offset the continuing cost.

For purposes of the PUB-requested scenario, MPI has reflected the estimated cost of the reinsurance coverage based on information currently available. As MPI's reinsurance program is renewed annually, the eventual cost may differ from this estimate as coverage limits, retentions, program structure, and market conditions are assessed during the next renewal cycle. MPI has therefore not included this additional cost in its 2027 GRA rate request of 2.38%, as there is not presently a sufficient basis to conclude that the same coverage will be purchased at the same cost and as such, MPI must emphasize that this is not a rate deficiency in the application itself but only a demonstrated deficiency in this illustrative scenario should the assumptions therein hold true. The assumptions in this scenario have been applied at the PUB's request and are illustrative only, to demonstrate the potential financial impacts if the current cost were to continue.

3. Issue #3

As noted in the response to Issue 2, under Scenario 1 Basic's MCT ratio returns above the target level by Year 5. Accordingly, there is no capital build associated with this scenario to file in response to part (b).

More generally, there is no predetermined or automatic "required capital build," just as there is no automatic requirement to provide a capital rebate when the MCT ratio exceeds 120%. As part of each General Rate Application, MPI considers whether the circumstances support requesting a capital build or providing a capital rebate. That assessment considers the Corporation's current financial position, updated forecasts, emerging risks, and other relevant factors.

As an insurer, MPI's MCT ratio may be subject to significant volatility over a quarter, and even more so over a full fiscal year, as a result of changes in actuarial estimates, investment markets, economic conditions, and other factors. It would therefore be premature to determine or request a capital build based solely on a forecasted MCT ratio several years into the future. MPI evaluates capital needs annually after each fiscal year and reassesses its financial forecasts and capital position as part of each General Rate Application.

PUB (MPI) Pre-Ask 2

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #39 2026 Financial Condition Report**		
Sub Topic:			

Question:

1. Differences between the base scenario and the financials as filed in the 2027 GRA:

a. Please confirm that the main source of the differences is slightly different investment income.

b. Please explain the source of the differences in the total minimum capital required for 2026/27.

2. Adverse scenarios assumptions:

a. Please compare in a table the key adverse assumptions for each adverse scenario this year versus last year's FCT, and comment on any significant changes in assumptions.

b. For the catastrophe solvency scenario, last year's FCT used $200 million catastrophe and this year's FCT used $485 million catastrophe. Please indicate if the difference is due to changes in modeling, or due to the catastrophes that have occurred in the current fiscal year.

c. In both of the interest rate increase and the interest rate decrease solvency scenarios, the equity decreases from the base scenario. Please explain why both an increase and a decrease reduce the equity.

3. Alternative base scenario:

a. Please confirm that the alternative base scenario has the 2.38% rate requested, net trend for future years, and no capital build provision included.

b. Please confirm that the main difference between the alternative base and the response to PUB (MPI) 2-15 as filed is that the response to 2-15 had a larger rate increase of +4.97% instead of the requested increase of +2.38%.

c. Given the MCT does not return to 100% within 5 years, please confirm that a capital build provision would be required for the alternative base.

d. Please provide modeled results with a capital build provision included that follows the 2024 GRA proposed capital management plan.

e. If the MCT does not return to 100% under the above scenario, please calculate the required capital build provision, that would exceed the level of the 2024 GRA proposed capital management plan, to return to 100% MCT and include financial statements. Please separate the capital build provision revenue.

f. Please apply the adverse scenario assumptions of each of the following to the alternative base and provide financials:

i. Solvency scenarios (2 most significant)

1. Integrated

2. Asset deterioration

ii. Going concern (2 most significant)

1. High frequency/severity

2. Integrated.

RESPONSE:

1.

a) Confirmed. The FCT Base Scenario was developed to align as closely as possible with the Financial Forecast Model filed in the 2027 GRA. The underwriting and expense results are consistent, while minor differences arise primarily from the treatment of investment portfolio rebalancing in both the Basic and Extension FCT models. These differences affect investment income and asset values, as well as Extension's projected financial position and the resulting transfer amounts.

b) Total minimum capital requirements vary primarily due to differences in market and credit risk charges resulting from changes in asset allocation. Most notably, the lower allocation to equities in the FCT model reduces both the equity risk charge and the interest rate risk charge.

25	**Total Minimum Capital (Margin) Required**	130	422,486	442,605	-20,119

2.

a) Please see *Appendix 1*, provided electronically.

b) The increase in the catastrophe shock from $200 million in the prior year's FCT to $485 million in the current year's FCT is due to a change in methodology rather than the catastrophe events that occurred during the current fiscal year.

The prior year's FCT used a $200 million Probable Maximum Loss representing a 1-in-100-year series of events based on MPI's historical experience. The current FCT uses catastrophe modelling results provided by MPI's reinsurance broker. Aggregate Exceedance Probability outputs were used to estimate the losses associated with a 1-in-100-year event, resulting in a gross catastrophe loss assumption of $485 million.

The catastrophe events that occurred during the current fiscal year were not used to calibrate the $485 million shock. Those events were considered separately through the modified base scenario presented in the FCT.

c) The reduction in equity under both scenarios is partly attributable to differences in how the interest rate impacts on assets and liabilities are modelled. Insurance contract liabilities are revalued using discounted cash flows, which capture both duration and convexity effects. The impact on fixed-income assets is estimated using a duration-based approach that does not capture the convexity. This difference in methodology contributes to the reduction in equity under both an increase and a decrease in interest rates.

MPI does not expect these limitations to materially affect the overall results or the conclusions from the current model. However, MPI will consider whether future FCT models can be refined to better reflect asset convexity and changes in asset duration under the interest rate scenarios.

3.
a) The alternative base scenario presented in the FCT report has premium assumptions consistent with the originally filed financial forecast. This includes the 2.38% rate requested in the 2027/28 fiscal year and net trend rate increases of 2.28%, 2.40% and 2.53% for fiscal years 2028/29, 2029/30 and 2030/31 respectively. Further, the alternative base scenario presented does not include any capital build provisions.

b) The primary difference between the alternative base scenario and the response to PUB (MPI) 2-15 is the assumed rate increase, with the response to PUB (MPI) 2-15 reflecting a +4.97% rate increase compared to +2.38% in the alternative base scenario.

There is also a minor difference related to net trend assumptions. The response to PUB (MPI) 2-15 incorporated slight updates to the net trend assumptions for fiscal years 2028/29, 2029/30, and 2030/31 of 2.29%, 2.42%, and 2.55%, respectively. The alternative base scenario retained the original assumptions of 2.28%, 2.40%, and 2.53% for those years.

c) MPI does not confirm that a capital build provision would be required under the alternative base scenario. The alternative base scenario represents a projection rather than the financial position upon which a capital build determination would be made.

The need for any capital build is assessed as part of the annual rate application process, when MPI's actual financial position, updated forecast, applicable capital management framework, and other relevant factors are considered collectively.

d) Please see the response to Pre-Ask PUB (MPI) 1 Issue #3, a).

e) Please see the response to Pre-Ask PUB (MPI) 1 Issue #3, a).

f) Summary tables for the requested scenarios are provided below. Detailed financial information is available in *Appendix 2*, which contains P&C-1 Insurance Return Exhibits 10.00, 20.00, 20.10, 20.11, and 20.22 for the alternative base scenario and each of the requested scenarios.
In the Solvency Integrated with Management Action and alternative base, please note that the management action is an additional premium rate increase of 5% and 2.5% in forecast years ~~2027/28 and 2028/29~~ 2028/29 and 2029/30 respectively.

b) The primary difference between the alternative base scenario and the response to PUB (MPI) 2-15 is the assumed rate increase, with the response to PUB (MPI) 2-15 reflecting a +4.97% rate increase compared to +2.38% in the alternative base scenario.

There is also a minor difference related to net trend assumptions. The response to PUB (MPI) 2-15 incorporated slight updates to the net trend assumptions for fiscal years 2028/29, 2029/30, and 2030/31 of 2.29%, 2.42%, and 2.55%, respectively. The alternative base scenario retained the original assumptions of 2.28%, 2.40%, and 2.53% for those years.

c) MPI does not confirm that a capital build provision would be required under the alternative base scenario. The alternative base scenario represents a projection rather than the financial position upon which a capital build determination would be made.

The need for any capital build is assessed as part of the annual rate application process, when MPI's actual financial position, updated forecast, applicable capital management framework, and other relevant factors are considered collectively.

d) Please see the response to Pre-Ask PUB (MPI) 1 Issue #3, a).

e) Please see the response to Pre-Ask PUB (MPI) 1 Issue #3, a).

f) Summary tables for the requested scenarios are provided below. Detailed financial information is available in ***Appendix 2***, which contains P&C-1 Insurance Return Exhibits 10.00, 20.00, 20.10, 20.11, and 20.22 for the alternative base scenario and each of the requested scenarios.
In the Solvency Integrated with Management Action and alternative base, please note that the management action is an additional premium rate increase of 5% and 2.5% in forecast years 2028/29 and 2029/30 respectively.

Comparison of Key Adverse Assumptions for Each Adverse Scenario in the Current vs. Prior Year FCT

Line No.	Scenario	Prior Year FCT Assumptions	Current Year FCT Assumptions	Comments
1	High Frequency / Severity (Solvency) (Formerly the Loss Ratio Scenario)	Additive increase in net loss ratio of 23.3% for forecast year 2 and 11.6% for forecast year 3	Multiplicative increase in the direct ultimate loss for all coverages of 17.0% in forecast year 2 and 8.5% in forecast year 3	Prior year assumptions used historical loss-ratio variability to derive additive shocks. Current year assumptions use trended historical loss-cost variability to derive multiplicative shocks. Both approaches carry 50% of the initial shock into the following year.
2	High Frequency / Severity (Going Concern) (Formerly the Loss Ratio Scenario)	Additive increase in net loss ratio of 12.8% for forecast year 2 and 6.4% for forecast year 3	Multiplicative increase in the direct ultimate loss for all coverages of 9.0% in forecast year 2 and 4.5% in forecast year 3	
3	Catastrophe (Solvency)	$200 million direct loss and $150 million ceded loss in forecast year 2	$485 million direct loss and $305 million ceded loss in forecast year 2	Prior year FCT assumptions were based on an examination of historic company experience with consideration given towards growth. Current year FCT assumptions were selected using catastrophe modelling results provided by MPI's reinsurance broker.
4	Catastrophe (Going Concern)		$137 million direct loss and $38 million ceded loss in forecast year 2	
5	LIC Misestimation (Solvency)	Assumed an event causes a 3.0% increase in net liability for prior incurred claims in the second forecast year. Also assumed a 3.0% increase and 6.0% increase in net incurred claims during the second and third forecast years respectively.	An increase in unpaid claims for all prior accident years of 5% in both forecast year 2 and forecast year 3	Prior year FCT assumptions were set judgementally. Current year FCT assumptions were calibrated using stochastic reserving results derived from an Over-Dispersed Poisson (ODP) bootstrap simulation applied to the aggregate Basic line of business paid loss development triangle.
6	LIC Misestimation (Going Concern)	Assumed an event causes a 1.65% increase in net liability for prior incurred claims in the second forecast year. Also assumed a 1.65% increase and 3.3% increase in net incurred claims during the second and third forecast years respectively.	An increase in unpaid claims for all prior accident years of 3% in both forecast year 2 and forecast year 3	
7	High Inflation (Solvency)	An increase in projected unpaid claims, claims paid during the year, and general expenses of 4%, 4% and 9% in the second, third and fourth forecast years respectively An increase in the yield curve over the Base Scenario of 1%, 2% and 4.5% in the second, third and fourth forecast years respectively	An increase in forecasted ultimate losses of 4% in 2027/28 and 6.08% in 2028/29, 2029/30 and 2030/31 (reflecting inflation 4% and 2% more than expectation in 2027/28 and 2028/29 respectively) An increase in forecasted expenses of 4% in forecast year 2 and 6.08% all subsequent forecast years (reflecting inflation 4% and 2% more than expectation in forecast year 2 and 3 respectively) An increase in the inflation vector applied to undiscounted benefits on indexed coverages of 4% and 2% in forecast years 2 and 3 respectively A parallel increase in the yield curve of 2% in forecast years 2 and 3 respectively	Prior year assumptions were based on historical Canadian CPI experience, with interest-rate impacts selected judgmentally. Current year assumptions use Moody's economic scenario data to calibrate inflation shocks, with 50% of the initial shock carried into the following year. Interest-rate impacts are assumed to lag inflation changes.
8	High Inflation (Going Concern)	An increase in projected unpaid claims, claims paid during the year, and general expenses of 2%, 2% and 4.5% in the second, third and fourth forecast years respectively An increase in the yield curve over the Base Scenario of 1%, 2% and 4.5% in the second, third and fourth forecast years respectively	An increase in forecasted ultimate losses of 2% in 2027/28 and 3.02% in all subsequent forecast years (reflecting inflation 2% and 1% more than expectation in 2027/28 and 2028/29 respectively) An increase in forecasted expenses of 2% in forecast year 2 and 3.02% all subsequent forecast years (reflecting inflation 4% and 2% more than expectation in forecast year 2 and 3 respectively) An increase in the inflation vector applied to undiscounted benefits on indexed coverages of 2% and 1% in forecast years 2 and 3 respectively A parallel increase in the yield curve of 1% in forecast years 2 and 3 respectively.	

Comparison of Key Adverse Assumptions for Each Adverse Scenario in the Current vs. Prior Year FCT

Line No.	Scenario	Prior Year FCT Assumptions	Current Year FCT Assumptions	Comments
9	Asset Deterioration (Solvency)	A drop in the value of equities of -45% and a parallel increase in the yield curve of 180 basis points occurring in forecast year 2	A drop in the value of equities of -35% and parallel increase in the yield curve of 220 basis points occurring in forecast year 2	Prior year assumptions were based on historical Canadian equity and government bond returns, supplemented by judgment. Current year assumptions use Moody's economic scenario data to calibrate the equity decline and interest-rate increase at the applicable adverse percentile.
10	Asset Deterioration (Going Concern)	A drop in the value of equities of -30% and a parallel increase in the yield curve of 100 basis points occurring in forecast year 2	A drop in the value of equities of -15% and parallel increase in the yield curve of 130 basis points occurring in forecast year 2	
11	Interest Rate Increase (Solvency)		A parallel increase in the yield curve of 220 basis points occurring in forecast year 2	The current year FCT interest rate increase assumption was calibrated using the 10-year Canadian Government Bond ESG distribution and was determined as the difference between the selected adverse percentile and the median ESG outcome
12	Interest Rate Increase (Going Concern)		A parallel increase in the yield curve of 130 basis points occurring in forecast year 2	
13	Interest Rate Decrease (Solvency)	A parallel Decrease in the yield curve of 300 basis points occurring in forecast year 2	A parallel Decrease in the yield curve of 160 basis points occurring in forecast year 2	Prior year assumptions were based on historical Canadian government bond returns, supplemented by judgment. Current year assumptions use Moody's economic scenario data to calibrate the interest-rate decrease at the applicable adverse percentile.
14	Interest Rate Decrease (Going Concern)		A parallel Decrease in the yield curve of 110 basis points occurring in forecast year 2	
15	Persistent Rate Hold / Decrease Mandates		Forecasted rate changes in the Base scenario beginning in the second forecast year have been removed	

Comparison of Key Adverse Assumptions for Each Adverse Scenario in the Current vs. Prior Year FCT

Line No.	Scenario	Prior Year FCT Assumptions	Current Year FCT Assumptions	Comments
16	Integrated Scenario (Solvency)	Additive increase in net loss ratio of 12.8% for forecast year 3 and 6.4% for forecast year 4 An increase in projected unpaid claims and general expenses of 4%, 4% and 9% in the second, third and fourth forecast years respectively An increase in the yield curve over the Base scenario of 1.0%, 2.0% and 4.5% for forecast years 2, 3 and 4 respectively A decline in equities of 30% in forecsat year 2	Multiplicative increase in the direct ultimate loss for all coverages of 9.0% in forecast year 2 and 4.5% in forecast year 3 An increase in forecasted expenses of 2% in forecast year 2 and 1% in forecast year 3 An increase in unpaid claims for all prior accident years of 3% in forecast year 2 and 1.5% in forecast year 3 A parallel increase in the yield curve of 130 basis points occurring in forecast year 2 and 70 basis points in forecast year 3 A drop in the value of equities of -15% occurring in forecast year 2	Prior year assumptions combined the individual inflation, loss-ratio, policy-liability and equity-decline scenarios. Current year assumptions combine insurance and market shocks calibrated to the 90th percentile for solvency and the 75th percentile for going concern. The shocks are applied concurrently.
17	Integrated Scenario (Going Concern)	Additive increase in net loss ratio of 12.8% for forecast year 3 and 6.4% for forecast year 4 An increase in projected unpaid claims and general expenses of 2%, 2% and 4.5% in the second, third and fourth forecast years respectively An increase in the yield curve over the Base scenario of 0.5%, 1.0% and 2.25% for forecast years 2, 3 and 4 respectively A decline in equities of 30% in forecsat year 2	Multiplicative increase in the direct ultimate loss for all coverages of 5.0% in forecast year 2 and 2.5% in forecast year 3 An increase in forecasted expenses of 1.0% in forecast year 2 and 0.5% in forecast year 3 An increase in unpaid claims for all prior accident years of 1.0% in forecast year 2 and 0.5% in forecast year 3 A parallel increase in the yield curve of 60 basis points occurring in forecast year 2 and 30 basis points in forecast year 3 A drop in the value of equities of -3% occurring in forecast year 2

PUB (MPI) Pre-Ask 3

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slides 16, 17, 18**		
Sub Topic:			

Preamble:

Slide 16 of MPI Exhibit #24 lists nine structures for the Basic liability hedging assets (LHA) - although Scenarios 7, 8 and 9 differ only by who issues the bonds. Slide 17 scores them on liability discount rate, liability dollar impact, LHA yield, and yield spread, and presents a chart titled "MCT Impact" with bars for liability change and additional capital required and a line for net additional capital, all in dollars. No MCT ratio appears. For Scenarios 4 and 5 the chart shows a small liability decrease and a larger additional capital requirement, so the net line is above zero. The text states the MCT change for Scenarios 4 to 7 is less than 1%.

Slide 18 tests the preferred structure at 85%, 90%, 95%, and 100% LHA weights and selects 85% as the most efficient and practical structure evaluated. No LHA weight below 85% appears, and no efficient frontier or risk-adjusted measure is presented for the liability hedging assets.

Question:

a) Please define each series on the slide 17 chart, explain why Scenarios 4 and 5 show net additional capital above zero when liabilities decrease, and provide the MCT ratio and the capital required in dollars for each scenario and the current structure.

b) Please provide the efficient frontier for the liability hedging assets measured against the Basic liabilities, with expected excess return over the liabilities on one axis

and surplus volatility on the other, with real return bonds permitted and with them excluded, and plot the current structure and Scenarios 1 to 9 on it. If no frontier was built, please say so and explain how WTW concluded that Scenario 5 is the most efficient structure.

c) For each scenario and the current structure, please provide in one table the asset mix, LHA yield, liability discount rate, expected excess return over the liabilities, surplus volatility, information ratio, liability tracking error in dollars and as a percentage of the Basic Claims portfolio, LHA duration against liability duration, interest-rate hedge ratio, credit rating mix, and 5% VaR and 5% CVaR on surplus in dollars.

d) Please state whether any LHA weight below 85% was evaluated. If so, please provide the results in the same form as slide 18. If not, please explain why the range began at the current weight.

RESPONSE:

a) Please refer to the details below:

- Liability DR: The single equivalent discount rate from the interest rate yield curve used to calculate the present value of the Basic liabilities.
- Liability $ Impact: The change in the present value of the Basic liabilities relative to the current structure, where a positive amount is an increase and a negative amount is a decrease.
- LHA Yield: The expected portfolio yield generated by the liability-hedging assets under each scenario.
- Yield Spread: The difference between the LHA yield and the liability discount rate, calculated as LHA yield minus Liability DR.
- Liability Change: The change in the present value of the Basic liabilities relative to the current structure.
- Additional Capital Required: Additional capital requirement from the LHA mix.

- Net Additional Capital: Combines Liability Change and Additional Capital Required.

At March 31, 2026:

Scenario	Liability Impact	Additional Capital Requirement	NET IMPACT	MCT Ratio
4	-$3M	+$10.9M	+$7.9M	~106.2%
5	-$6M	+$11M	+$5M	~107.1%
Current	-	-	-	108.2%

The net additional capital requirement under Scenarios 4 and 5 is positive, as the incremental capital requirement associated with the higher corporate bond allocation more than offsets the increase in available capital resulting from the reduction in liabilities. This results in a modest decline in the MCT ratio.
Please note that we identified a typo in the second bullet point on slide 17. The end of the sentence should read “resulting in a change of 2% or less” rather than “less than 1%.”

Scenario	Liability Impact	Additional Capital Requirement	Net Capital Impact	MCT Ratio
1	+$153M	+$0.9M	+$153.9M	71.2%
2	+$57M	+$5.4M	+$62.4M	93.5%
3	+$24M	+$7.7M	+$31.7M	100.8%
4	-$3M	+$11.6M	+$8.6M	106.2%
5	-$6M	+$11.0M	+$5M	107.1%
6	-2$M	+$3.7M	+$1.7M	108.2%
7	-	-	-	108.2%
8	-	-	-	108.2%
9	-	-	-	108.2%
Current	-	-	-	108.2%

b) Efficient frontiers were not used for the liability hedging assets analysis. The hedging portfolio was developed by aligning the liability hedging asset with the Basic liabilities to minimize the interest rate risk and to improve the hedging effectiveness, which was measured by the yield difference between the liability hedging assets and liability discount rate, rather than the expected return per unit of surplus risk/volatility.

Scenario 5 was therefore identified as the preferred structure based on its yield efficiency relative to the liability discount rate (+0.13%), low impact on capital requirement and MCT ratio, while also balancing the relevant implementation considerations, especially around RRB and MUSH bonds.

c) As most of the metrics requested in question (c) are either available on slide 17 or elsewhere in the materials, or were not calculated as part of the LHA analysis, we have not included an additional table. Instead, the following provides further context for each requested metric and, where applicable, explains why certain information has not been provided.

LHA duration against liability duration and interest-rate hedge ratio: All LHA structures including current provide a 100% hedge ratio, meaning that the LHA duration is always aligned with the liability duration.

Credit rating mix: The credit rating mix target of the corporate allocation is the same under all structures, including the current structure:

Credit Rating	**Percentage of corporate bond allocation**
AA/A	45%
BBB	55%

LHA yield: Provided on slide 17. Slide 34 also shows the LHA yield for the other LHA levels.

Liability discount rate: Provided on slide 17. Each scenario has the same liability discount rate across LHA levels. For example, the liability discount rate for Scenario 5 is the same at 100%, 95%, 90% and 85% LHA.

Expected excess return over the liabilities: The objective of the LHA portfolio is not to generate excess returns relative to the liabilities, but rather to hedge liability interest-rate risk as efficiently as possible. Because changes to the LHA allocation also affect the liability yield curve, the target expected excess return over the liabilities is zero. Accordingly, expected excess return was not calculated as part of the LHA analysis; instead, the yield spread was used to assess the relative efficiency of each structure.

Surplus volatility, 5% VaR and 5% CVaR on surplus in dollars: All three metrics were not calculated as part of the LHA analysis. However, they were part of the RSA analysis and are shown in the earnings volatility analysis on slide 28.

Liability tracking error in dollars and as a percentage of the Basic Claims portfolio: The annual liability tracking error in dollars can be shown on slide 19 and was based on Scenario 5 only to determine the impact of different LHA levels on the ability to properly hedge both interest rate risk and credit spread risk. The tracking error is very similar between all LHA levels under scenario 5 and they all show an improvement of approximately $6M compared to the current structure.

LHA Level	**100%**	**95%**	**90%**	**85%**	**Current**
Annual Tracking Error (TE)	$8.5M	$8.9M	$9.0M	$9.4M	$15.4M
TE as percentage of liabilities	0.42%	0.44%	0.44%	0.46%	0.75%

Information ratio: The information ratio was not calculated as part of the analysis.

d) LHA allocations below 85% were not considered as part of the analysis given the negative implications on regulatory capital requirements and for the Minimum Capital Test (MCT) ratio. Since liability hedging assets are subject to lower capital charges than return-seeking assets, any reduction in the LHA allocation below 85% would inherently increase capital requirements and, all else being equal, result in a lower MCT ratio.

PUB (MPI) Pre-Ask 4

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slides 20, 21, 33**		
Sub Topic:			

Preamble:

MPI Exhibit #24 proposes moving about $203 million of shorter-dated MUSH bonds from Basic to SRE and about $55 million to RSR (slide 20). The bonds carry a duration of about 3.0 years and a yield of about 4.0%, against 2.5 years and 2.9% to 3.0% for the government bonds SRE and RSR hold today (slide 21). MUSH bonds are non-marketable, held to maturity, and have no daily price (slide 33).

Basic rates are set by the Board. SRE is a competitive line outside rate regulation. RSR is the reserve for Basic. Exhibit #24 does not describe how the transfer would be carried out, at what value, or what Basic receives in exchange.

Question:

a) Please describe how the transfer would be carried out, whether by sale, exchange for the government bonds SRE and RSR hold, or book entry, and state what Basic receives in return. Provide a simple before-and-after snapshot of the three portfolios showing what leaves and what arrives.

b) Please state the value at which the bonds would move, who sets that value, whether an independent valuation would be obtained, and whether the transfer would be recorded at fair value or carrying value with any gain or loss recognized in Basic.

c) Please quantify the annual investment income that would move from Basic to SRE under the proposed transfer, in each of the two test years. Please describe any mechanism that protects Basic ratepayers from subsidizing the competitive line as a result of this transfer. Please quantify the effect of the transfer on the Basic rate indication in each test year.

d) Please state who approves a transfer of investment assets between Basic and SRE, whether Board approval is required or will be sought, and whether the transfer is reflected in the investment income forecast and the Basic and SRE MCT ratios in the Application for each forecast year.

e) Please explain how the liquidity of SRE was tested given it would hold about $203 million of bonds with no liquidity against short-tail liabilities, and state what liquid assets SRE would hold after the transfer.

RESPONSE:

a) The proposed transfer is a recommendation arising from the ALM study and has not yet been approved. In addition, the implementation plan for the new investment mix has not yet been fully designed. Many of the secondary effects identified in this question and the following questions would depend on the final structure and implementation of the recommendation, if adopted.

   The transfer would be completed on an in-kind basis. Under this approach, the designated MUSH bonds would be transferred directly from Basic Claims to SRE and RSR at their latest available valuation (MUSH bonds are valued monthly). SRE and RSR would fund the purchase by selling government bonds and transferring the cash proceeds to Basic Claims. As a result, Basic Claims would receive cash in exchange for the MUSH bonds.

Portfolio changes:

Portfolio	Before	After
Basic Claims	$358M MUSH Bonds	$100M MUSH Bonds; $258M Cash (to be reinvested)
SRE	$203M Government Bonds	$203M MUSH Bonds
RSR	$97M Government Bonds	$55M MUSH Bonds; $42M Government Bonds

In short, Basic Claims transfers MUSH bonds to SRE and RSR and receives cash in return.

b) The MUSH bonds would be transferred at fair value based on the most recent valuation provided by the Province of Manitoba, as the issuer of the bonds. No independent valuation is conducted. The transfer would be recorded at fair value, and any difference between the bonds' carrying value and fair value at the transfer date would be recognized as a gain or loss by Basic.

To fund the purchase, SRE and RSR would sell government bonds at prevailing market prices and transfer the resulting cash proceeds to Basic. Any gain or loss on the sale of the government bonds would be recognized by SRE and RSR at the time of sale.

c) The proposed transfer would result in the investment income associated with the transferred MUSH bonds moving from Basic to SRE. However, because the transfer would occur at fair value and the proceeds would be reinvested by Basic in assets that better align with its liability-hedging objectives, Basic would continue to earn investment income on the replacement assets.

As the transfer would occur at fair value, SRE would not be getting subsidies from the Basic ratepayer.

The effect on the Basic rate indication has not been separately quantified for the test years because the recommendation has not been approved or implemented. However, the recommended portfolio is expected to increase the yield on the liability-hedging asset portfolio, which would have a favorable impact on the Basic rate indication, all else being equal.

d) All changes recommended in the ALM study, including the proposed transfer of MUSH bonds from Basic to SRE and RSR, would require Board approval before implementation.

Based on the current timeline, implementation, if approved, is expected to start during the 2027/28 fiscal year. Accordingly, the proposed transfers are not reflected in the forecasts included in this year's GRA application, including the investment income forecasts and the Basic and SRE MCT ratios.

e) MPI respectfully submits that this question relates to the liquidity management and asset allocation of the Special Risk Extension (SRE) line of business, which is outside the scope of the Basic line of business under consideration in this General Rate Application.

The purpose of the proposed transfer is to improve asset-liability alignment within the Basic portfolio. The transfer is proposed to occur at fair value and does not adversely affect the financial position of the Basic line of business. To the extent that the Board considers the proposal relevant to the Basic rate-setting process, MPI has provided information regarding the impact of the transfer on Basic. However, MPI does not consider a detailed assessment of SRE liquidity management to be necessary for determining Basic insurance rates.

PUB (MPI) Pre-Ask 5

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 25**		
Sub Topic:			

Preamble:

Slide 25 of MPI Exhibit #24 is titled "Efficient Frontier" and plots roughly 40 candidate return-seeking asset (RSA) portfolios by 10-year expected return and annual return volatility, coloured by equity weight from 7% to 10%, with the current RSA portfolio and Portfolios A, B, and C marked. No frontier line appears.

Two shaded blocks meet at the current portfolio. One covers every portfolio with expected return under 6.35%. The other covers every portfolio with volatility over 6.8%. We read the unshaded block above and to the left of the current portfolio as the candidates with both higher return and lower volatility than the current mix, and the slide as a comparison of each candidate against the current portfolio rather than an identification of the efficient set.

If this reading is incorrect, please provide a clarification in the response.

Question:

a) Please confirm that every portfolio in the unshaded block on slide 25 has both a higher expected return and a lower volatility than the current RSA portfolio, and that every portfolio in the shaded blocks is weaker than the current portfolio on at least one of those two measures.

b) Please provide the RSA efficient frontier, being the portfolio with the highest expected return at each level of volatility, plotted with the current RSA portfolio, Portfolios A, B, and C, and the other candidates on slide 25, and give the asset mix at each point along the frontier.

c) If WTW did not compute a frontier, please say so and describe how the candidate portfolios on slide 25 were built.

d) Several candidates sit in the unshaded block. Please explain how WTW selected Portfolio B from among them.

e) Portfolio A sits in the shaded block to the right of the current portfolio, with the same expected return as Portfolio B at higher volatility. Please discuss the merits of this portfolio relative to Portfolio B.

RESPONSE:

a) Yes. As illustrated on slide 25, all portfolios within the unshaded region are expected to deliver both higher returns and lower volatility relative to the current RSA portfolio, representing an improvement on both measures. Conversely, each portfolio within the shaded regions is less attractive than the current RSA portfolio on at least one of these dimensions, either by offering a lower expected return, higher volatility, or both.

b) Efficient frontiers were not used for the RSA analysis. See answer to question c) below for more details.

c) An efficient frontier approach was not used to the RSA portfolio analysis, as capital requirements, rather than traditional risk-return optimization, were the primary constraint. Considering the MCT and liquidity constraints, and as demonstrated by the 10% EQ (B) portfolio on slide 7, the maximum equity allocation was established at 10%, subject to an additional limit of 19% for equities and real assets combined. As a result, the 40 portfolios presented on slide 25 comprise the complete set of portfolios that satisfy these two constraints.

d) Portfolio B was selected because it provides the highest expected return and highest expected real return of all 40 portfolios without increasing the volatility and capital requirement of the current RSA portfolio.

e) Portfolio A refers to the initial portfolio 10% EQ (B) on slide 7. It was included primarily for illustrative purposes as a reference point for evaluating the 40 portfolios considered. From a portfolio construction perspective, Portfolio B is the more efficient option. While both portfolios offer the same expected return, Portfolio B achieves this outcome with lower volatility and comparable capital requirement. As a result, Portfolio B provides a more attractive risk-return trade-off and better aligns with the optimization objectives.

PUB (MPI) Pre-Ask 6

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 26**		
Sub Topic:			

Preamble:

Slide 26 of MPI Exhibit #24 reports nine measures for the current RSA portfolio and Portfolios A, B, and C: asset mix, 10-year median expected return, annual return volatility, Sharpe ratio, one-year 5% VaR, one-year 5% CVaR, average real return, real return volatility, and real asset capital to be redeployed. None of the measures is defined. The MCT effect is described as within approximately 1% without a figure. Risk is stated at a one-year horizon against a ten-year return, and each risk figure is a percentage of an unstated base.

Slide 26 concludes that Portfolio B provides the strongest balance of expected return, downside risk, and portfolio efficiency among the alternatives evaluated.

Question:

a) For each measure on slide 26, please state the definition, the inputs, and the horizon used, including the risk-free rate behind the Sharpe ratio, and explain what each result signifies for the RSR.

b) Please add to the slide 26 table, for each of the four portfolios: the MCT ratio and the capital required, the dollar value of the one-year 5% VaR and 5% CVaR shown on the slide and the resulting RSR balance, the probability of a positive real return over 10 years, the probability of a negative return in any one year, and the share of the portfolio realizable within 12 months.

c) Portfolio C shows a higher Sharpe ratio, lower volatility, smaller VaR and CVaR, and less real asset capital to redeploy than Portfolio B, with 15 basis points less expected return. Please explain, in detail, the basis on which WTW concluded that B, rather than C, provides the strongest balance.

RESPONSE:

a) Expected Return (10-Year Median)

The median annualized portfolio return over a 10-year projection horizon based on WTW capital market assumptions. This metric provides an indication of the expected long-term return outcome of the portfolio.

Annual Return Volatility

The expected year-to-year variability of portfolio returns based on WTW capital market assumptions. This metric is used as an indicator of uncertainty in annual return outcomes.

Sharpe Ratio

A measure of return per unit of risk, calculated as expected portfolio return less the risk-free rate divided by annual return volatility. The risk-free rate used in the analysis was based on prevailing short-term Government of Canada Treasury Bill yields as of March 31, 2026. Higher values indicate greater expected return relative to risk.

In retrospect, using the 10-year expected return for Treasury bills of 2.96% would have been more consistent with the 10-year expected returns used for the other asset classes. However, applying a consistent alternative risk-free rate across the portfolios would not change the overall conclusion or the relative assessment of Portfolios B and C.

RSA Portfolio	Current	A	B	C
Sharpe Ratio on slide 26 with 2.32% risk-free rate	0.59	0.57	0.63	0.70
Sharpe Ratio with 2.96% risk-free rate	0.50	0.48	0.53	0.59

5% Value at Risk (VaR) (1-Year)

The one-year return threshold expected to be exceeded in 95% of modeled outcomes. It provides an indication of downside risk under adverse but not extreme market conditions.

5% Conditional Value at Risk (CVaR) (1-Year)

The average one-year return in the worst 5% of modeled outcomes. This metric provides an indication of the severity of extreme downside outcomes.

Average Real Return

The expected portfolio return after adjusting for inflation. This metric provides an indication of the portfolio's expected ability to increase purchasing power over time.

Annual Real Return Volatility

The expected variability of annual real returns after adjusting for inflation. This metric measures uncertainty in inflation-adjusted outcomes.

Real asset (RA) capital to be redeployed

The expected variability of annual real returns after adjusting for inflation. This metric measures uncertainty in inflation-adjusted outcomes.

With respect to the RSR portfolio, the metrics defined above were not calculated separately for the RSR portfolio, as the analysis focused on the impact at the

total portfolio level, including the resulting effects on expected earnings, regulatory capital requirements, and the MCT ratio.

b) The metrics presented on slide 26 represent the measures used in the evaluation of the return-seeking asset alternatives.

Capital requirements and MCT impacts were considered as part of the assessment and portfolio selection process.

Some of the additional metrics requested, including resulting RSR balances under VaR and CVaR scenarios and portfolio liquidity within 12 months, were not calculated as part of the return-seeking asset analysis and are therefore not available for the alternatives presented on slide 26.

The return-seeking asset analysis focused on expected return, expected real return, volatility, downside risk measures and capital efficiency when comparing alternative portfolio structures.

RSA Portfolio	Current	A	B	C
MCT Ratio*	108.2%	107.6%	110.2%	113.6%
Probability RR>0% over 10y	95.3%	94.3%	95.6%	97.4%
Probability return < 0% in any one year	14.8%	15.4%	13.9%	11.6%

c) Portfolio B was identified by WTW as the preferred return-seeking asset alternative among the portfolios evaluated. In WTW's assessment, Portfolio B provided the strongest overall balance of expected return, expected real return, downside risk measures and capital considerations.

* MCT ratios for each RSA portfolio were calculated using the current LHA structure. Additional clarification: On slide 26, bullet 4, the referenced 1% MCT impact reflects the maximum potential adverse impact on the MCT ratio. The intention was to establish a downside threshold while also allowing for the assessment of any positive MCT impacts that may arise during implementation.

Portfolio C exhibited lower volatility, lower downside risk measures and a higher Sharpe ratio than Portfolio B. However, Portfolio C also exhibited lower expected return and lower expected real return.

WTW's role was to evaluate alternatives and provide recommendations for MPI's consideration. The ultimate decision regarding any changes to the portfolio structure remains the responsibility of MPI.

PUB (MPI) Pre-Ask 6

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 26**		
Sub Topic:			

Preamble:

Slide 26 of MPI Exhibit #24 reports nine measures for the current RSA portfolio and Portfolios A, B, and C: asset mix, 10-year median expected return, annual return volatility, Sharpe ratio, one-year 5% VaR, one-year 5% CVaR, average real return, real return volatility, and real asset capital to be redeployed. None of the measures is defined. The MCT effect is described as within approximately 1% without a figure. Risk is stated at a one-year horizon against a ten-year return, and each risk figure is a percentage of an unstated base.

Slide 26 concludes that Portfolio B provides the strongest balance of expected return, downside risk, and portfolio efficiency among the alternatives evaluated.

Question:

a) For each measure on slide 26, please state the definition, the inputs, and the horizon used, including the risk-free rate behind the Sharpe ratio, and explain what each result signifies for the RSR.

b) Please add to the slide 26 table, for each of the four portfolios: the MCT ratio and the capital required, the dollar value of the one-year 5% VaR and 5% CVaR shown on the slide and the resulting RSR balance, the probability of a positive real return over 10 years, the probability of a negative return in any one year, and the share of the portfolio realizable within 12 months.

c) Portfolio C shows a higher Sharpe ratio, lower volatility, smaller VaR and CVaR, and less real asset capital to redeploy than Portfolio B, with 15 basis points less expected return. Please explain, in detail, the basis on which WTW concluded that B, rather than C, provides the strongest balance.

RESPONSE:

a) Expected Return (10-Year Median)

The median annualized portfolio return over a 10-year projection horizon based on WTW capital market assumptions. This metric provides an indication of the expected long-term return outcome of the portfolio.

Annual Return Volatility

The expected year-to-year variability of portfolio returns based on WTW capital market assumptions. This metric is used as an indicator of uncertainty in annual return outcomes.

Sharpe Ratio

A measure of return per unit of risk, calculated as expected portfolio return less the risk-free rate divided by annual return volatility. The risk-free rate used in the analysis was based on prevailing short-term Government of Canada Treasury Bill yields as of March 31, 2026. Higher values indicate greater expected return relative to risk.

In retrospect, using the 10-year expected return for Treasury bills of 2.96% would have been more consistent with the 10-year expected returns used for the other asset classes. However, applying a consistent alternative risk-free rate across the portfolios would not change the overall conclusion or the relative assessment of Portfolios B and C.

RSA Portfolio	Current	A	B	C
Sharpe Ratio on slide 26 with 2.32% risk-free rate	0.59	0.57	0.63	0.70
Sharpe Ratio with 2.96% risk-free rate	0.50	0.48	0.53	0.59

5% Value at Risk (VaR) (1-Year)

The one-year return threshold expected to be exceeded in 95% of modeled outcomes. It provides an indication of downside risk under adverse but not extreme market conditions.

5% Conditional Value at Risk (CVaR) (1-Year)

The average one-year return in the worst 5% of modeled outcomes. This metric provides an indication of the severity of extreme downside outcomes.

Average Real Return

The expected portfolio return after adjusting for inflation. This metric provides an indication of the portfolio's expected ability to increase purchasing power over time.

Annual Real Return Volatility

The expected variability of annual real returns after adjusting for inflation. This metric measures uncertainty in inflation-adjusted outcomes.

Real asset (RA) capital to be redeployed

The expected variability of annual real returns after adjusting for inflation. This metric measures uncertainty in inflation-adjusted outcomes.

With respect to the RSR portfolio, the metrics defined above were not calculated separately for the RSR portfolio, as the analysis focused on the impact at the

total portfolio level, including the resulting effects on expected earnings, regulatory capital requirements, and the MCT ratio.

b) The metrics presented on slide 26 represent the measures used in the evaluation of the return-seeking asset alternatives.

Capital requirements and MCT impacts were considered as part of the assessment and portfolio selection process.

Some of the additional metrics requested, including resulting RSR balances under VaR and CVaR scenarios and portfolio liquidity within 12 months, were not calculated as part of the return-seeking asset analysis and are therefore not available for the alternatives presented on slide 26.

The return-seeking asset analysis focused on expected return, expected real return, volatility, downside risk measures and capital efficiency when comparing alternative portfolio structures.

RSA Portfolio	**Current**	**A**	**B**	**C**
MCT Ratio*	108.2%	107.6%	110.2%	113.6%
Probability RR>0% over 10y	95.3%	94.3%	95.6%	97.4%
Probability return < 0% in any one year	14.8%	15.4%	13.9%	11.6%

c) Portfolio B was identified by WTW as the preferred return-seeking asset alternative among the portfolios evaluated. In WTW's assessment, Portfolio B provided the strongest overall balance of expected return, expected real return, downside risk measures and capital considerations.

* MCT ratios for each RSA portfolio were calculated using the current LHA structure. Additional clarification: On slide 26, bullet 4, the referenced 1% MCT impact reflects the maximum potential adverse impact on the MCT ratio. The intention was to establish a downside threshold while also allowing for the assessment of any positive MCT impacts that may arise during implementation.

Portfolio C exhibited lower volatility, lower downside risk measures and a higher Sharpe ratio than Portfolio B. However, Portfolio C also exhibited lower expected return and lower expected real return.

WTW's role was to evaluate alternatives and provide recommendations for MPI's consideration. The ultimate decision regarding any changes to the portfolio structure remains the responsibility of MPI.

PUB (MPI) Pre-Ask 7

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 13, 16, 27**		
Sub Topic:			

Preamble:

Slide 27 of MPI Exhibit #24 presents the current combined Basic and RSR portfolio and six alternatives, each pairing a liability hedging structure at 50% or 75% corporate bonds with RSA Portfolio A, B, or C, and reports expected return and volatility only. The combined portfolio backs Basic and its reserve, and it is the level at which the liabilities, the surplus, and the MCT ratio are measured.

Slide 27's liability-hedging weight is 67% of the combined portfolio.

The liability hedging structures with real return bonds, Scenarios 1 to 3 on slide 16, were assessed for the Basic hedge on slides 17 and 18 and do not appear in any combined portfolio. Slide 13 identifies PIPP indexation as the primary long-term inflation exposure relevant to investment strategy.

Question:

a) Please provide, for the combined Basic and RSR portfolio, an efficient frontier chart in the same form as slide 25 (10-year expected return against annual return volatility), including the frontier line, with the current portfolio and the six alternatives on slide 27 plotted on it.

b) Please provide the efficient frontier for the combined Basic and RSR portfolio measured against the Basic liabilities, with expected excess return over the liabilities on one axis and surplus volatility on the other, and plot the current portfolio and the six alternatives on slide 27 on it.

c) Please add to the plots in parts (a) and (b) combined Basic and RSR portfolios pairing each of Scenarios 1, 2, and 3 on slide 16 with Portfolio B. Plot them on the same charts as the recommended structure (Scenario 5 with Portfolio B).

d) If no combined frontier was built, please say so and explain how WTW concluded on slide 27 that all evaluated alternatives improve expected portfolio outcomes.

e) For every portfolio plotted in parts (a) to (c), please provide in one table the asset mix, 10-year median return, expected excess return over the liabilities, surplus volatility, information ratio, MCT ratio and capital required, duration against liability duration, hedge ratio, one-year 5% VaR and 5% CVaR in dollars, the probability that the Basic MCT ratio falls below 100% at any point over 10 years, the probability that surplus at year 10 is below the starting surplus in real terms, the probability of a positive real return over 10 years, and the share of the portfolio realizable within 12 months.

f) Please explain how the inflation exposure from PIPP indexation is carried in the measures in part (e), and how it changes between the current portfolio, the recommended structure, and the Scenario 1 to 3 combinations.

RESPONSE:

a) WTW: Efficient frontiers were not used at the total portfolio level (Basic + RSR) because the purpose of the strategy review was not to optimize the total portfolio expected annual return and return volatility but rather to improve the efficiency of the total portfolio on a Liability Driven Investment (LDI) basis relative to the Basic liabilities.

An efficient frontier comparing expected return with return volatility is better suited for non-liability backing assets and is not considered an effective LDI tool as it does not reflect the liabilities.

b) An efficient frontier measured against the Basic liabilities was not developed as part of the Asset Liability Management Study. The study evaluated total portfolio alternatives using asset-liability modelling and assessed their impact on liability values, earnings outcomes, capital considerations and overall portfolio efficiency.

The earnings outcomes associated with the evaluated alternatives are summarized on slide 28, including median earnings, earnings volatility and 5% CVaR.

c) Scenarios 1, 2, and 3 were not considered viable LHA portfolio alternatives due to the limited market liquidity of real return bonds following the Government of Canada's discontinuation of issuance in 2022. Given implementation constraints, these scenarios were not considered in the subsequent stage of the analysis.

d) Efficient frontiers were not used at the total portfolio level (Basic + RSR) because the purpose of the strategy review was not to optimize the total portfolio expected annual return and return volatility but rather to improve the efficiency of the total portfolio on a Liability Driven Investment (LDI) basis relative to the Basic liabilities.

An efficient frontier comparing expected return with return volatility is better suited for non-liability backing assets and is not considered an effective LDI tool as it does not reflect the liabilities.

The annual return volatility presented on slide 27 reflects the variability of asset returns under each alternative. However, the Asset Liability Management Study evaluated the alternatives using an asset-liability framework that considered liabilities, earnings outcomes and capital considerations in addition to asset return volatility. As a result, asset return volatility alone was not used to assess the relative attractiveness of the alternatives.

e) Several of the metrics requested are either presented in the Asset Liability Management Study or were not calculated as part of the total portfolio analysis.

Asset mix and 10-year median return: Provided on slide 27.

Duration relative to liabilities and hedge ratio: The liability-hedging component of each alternative was constructed to align with the Basic liabilities. As part of the analysis, all LHA structures were assumed to maintain a 100% hedge ratio.

MCT ratio and capital required: Capital impacts were assessed as part of the evaluation process. Portfolio-level MCT ratios and capital requirements were not presented for the total portfolio alternatives on slide 27.

Portfolio	Current	A-50% Corp	A-75% Corp	B-50% Corp	B-75% Corp	C-50% Corp	C-75% Corp
MCT Ratio	108.2%	107.6%	106.5%	110.2%	109.1%	113.6%	112.5%

Expected excess return over liabilities, surplus volatility, information ratio, one-year 5% VaR, one-year 5% CVaR, probability of the Basic MCT ratio falling below 100%, probability that surplus at year 10 is below the starting surplus in real terms, probability of a positive real return over 10 years, and the share of the portfolio realizable within 12 months: These metrics were not calculated as part of the total portfolio analysis.

The total portfolio analysis focused on liability values, earnings outcomes, earnings volatility, capital considerations and overall portfolio efficiency. Earnings outcomes associated with the evaluated alternatives are presented on slide 28.

f) The inflation risk associated with PIPP indexation was explicitly incorporated into the liability modelling used in the Asset Liability Management Study and is reflected in the earnings outcomes and earnings volatility measures presented on slide 28.

As noted in the study, higher allocations to real return bonds improve inflation protection but generally reduce portfolio yield and increase liability values.

Scenarios 1, 2, and 3 were not considered viable LHA portfolio alternatives due to the limited market liquidity of real return bonds following the Government of Canada's discontinuation of issuance in 2022. Given implementation constraints, these scenarios were not considered in the subsequent stage of the analysis.

Accordingly, the assessment focused on the overall impact of alternative structures on liability values, earnings outcomes, earnings volatility, capital considerations and portfolio efficiency, rather than on isolated measures of inflation exposure.

PUB (MPI) Pre-Ask 7

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 13, 16, 27**		
Sub Topic:			

Preamble:

Slide 27 of MPI Exhibit #24 presents the current combined Basic and RSR portfolio and six alternatives, each pairing a liability hedging structure at 50% or 75% corporate bonds with RSA Portfolio A, B, or C, and reports expected return and volatility only. The combined portfolio backs Basic and its reserve, and it is the level at which the liabilities, the surplus, and the MCT ratio are measured.

Slide 27's liability-hedging weight is 67% of the combined portfolio.

The liability hedging structures with real return bonds, Scenarios 1 to 3 on slide 16, were assessed for the Basic hedge on slides 17 and 18 and do not appear in any combined portfolio. Slide 13 identifies PIPP indexation as the primary long-term inflation exposure relevant to investment strategy.

Question:

a) Please provide, for the combined Basic and RSR portfolio, an efficient frontier chart in the same form as slide 25 (10-year expected return against annual return volatility), including the frontier line, with the current portfolio and the six alternatives on slide 27 plotted on it.

b) Please provide the efficient frontier for the combined Basic and RSR portfolio measured against the Basic liabilities, with expected excess return over the liabilities on one axis and surplus volatility on the other, and plot the current portfolio and the six alternatives on slide 27 on it.

c) Please add to the plots in parts (a) and (b) combined Basic and RSR portfolios pairing each of Scenarios 1, 2, and 3 on slide 16 with Portfolio B. Plot them on the same charts as the recommended structure (Scenario 5 with Portfolio B).

d) If no combined frontier was built, please say so and explain how WTW concluded on slide 27 that all evaluated alternatives improve expected portfolio outcomes.

e) For every portfolio plotted in parts (a) to (c), please provide in one table the asset mix, 10-year median return, expected excess return over the liabilities, surplus volatility, information ratio, MCT ratio and capital required, duration against liability duration, hedge ratio, one-year 5% VaR and 5% CVaR in dollars, the probability that the Basic MCT ratio falls below 100% at any point over 10 years, the probability that surplus at year 10 is below the starting surplus in real terms, the probability of a positive real return over 10 years, and the share of the portfolio realizable within 12 months.

f) Please explain how the inflation exposure from PIPP indexation is carried in the measures in part (e), and how it changes between the current portfolio, the recommended structure, and the Scenario 1 to 3 combinations.

RESPONSE:

a) WTW: Efficient frontiers were not used at the total portfolio level (Basic + RSR) because the purpose of the strategy review was not to optimize the total portfolio expected annual return and return volatility but rather to improve the efficiency of the total portfolio on a Liability Driven Investment (LDI) basis relative to the Basic liabilities.

An efficient frontier comparing expected return with return volatility is better suited for non-liability backing assets and is not considered an effective LDI tool as it does not reflect the liabilities.

b) An efficient frontier measured against the Basic liabilities was not developed as part of the Asset Liability Management Study. The study evaluated total portfolio alternatives using asset-liability modelling and assessed their impact on liability values, earnings outcomes, capital considerations and overall portfolio efficiency.

The earnings outcomes associated with the evaluated alternatives are summarized on slide 28, including median earnings, earnings volatility and 5% CVaR.

c) Scenarios 1, 2, and 3 were not considered viable LHA portfolio alternatives due to the limited market liquidity of real return bonds following the Government of Canada's discontinuation of issuance in 2022. Given implementation constraints, these scenarios were not considered in the subsequent stage of the analysis.

d) Efficient frontiers were not used at the total portfolio level (Basic + RSR) because the purpose of the strategy review was not to optimize the total portfolio expected annual return and return volatility but rather to improve the efficiency of the total portfolio on a Liability Driven Investment (LDI) basis relative to the Basic liabilities.

An efficient frontier comparing expected return with return volatility is better suited for non-liability backing assets and is not considered an effective LDI tool as it does not reflect the liabilities.

The annual return volatility presented on slide 27 reflects the variability of asset returns under each alternative. However, the Asset Liability Management Study evaluated the alternatives using an asset-liability framework that considered liabilities, earnings outcomes and capital considerations in addition to asset return volatility. As a result, asset return volatility alone was not used to assess the relative attractiveness of the alternatives.

e) Several of the metrics requested are either presented in the Asset Liability Management Study or were not calculated as part of the total portfolio analysis.

Asset mix and 10-year median return: Provided on slide 27.

Duration relative to liabilities and hedge ratio: The liability-hedging component of each alternative was constructed to align with the Basic liabilities. As part of the analysis, all LHA structures were assumed to maintain a 100% hedge ratio.

MCT ratio and capital required: Capital impacts were assessed as part of the evaluation process. Portfolio-level MCT ratios and capital requirements were not presented for the total portfolio alternatives on slide 27.

Portfolio	**Current**	**A-50% Corp**	**A-75% Corp**	**B-50% Corp**	**B-75% Corp**	**C-50% Corp**	**C-75% Corp**
MCT Ratio	108.2%	107.6%	106.5%	110.2%	109.1%	113.6%	112.5%

Expected excess return over liabilities, surplus volatility, information ratio, one-year 5% VaR, one-year 5% CVaR, probability of the Basic MCT ratio falling below 100%, probability that surplus at year 10 is below the starting surplus in real terms, probability of a positive real return over 10 years, and the share of the portfolio realizable within 12 months: These metrics were not calculated as part of the total portfolio analysis.

The total portfolio analysis focused on liability values, earnings outcomes, earnings volatility, capital considerations and overall portfolio efficiency. Earnings outcomes associated with the evaluated alternatives are presented on slide 28.

f) The inflation risk associated with PIPP indexation was explicitly incorporated into the liability modelling used in the Asset Liability Management Study and is reflected in the earnings outcomes and earnings volatility measures presented on slide 28.

As noted in the study, higher allocations to real return bonds improve inflation protection but generally reduce portfolio yield and increase liability values.

Scenarios 1, 2, and 3 were not considered viable LHA portfolio alternatives due to the limited market liquidity of real return bonds following the Government of Canada's discontinuation of issuance in 2022. Given implementation constraints, these scenarios were not considered in the subsequent stage of the analysis.

Accordingly, the assessment focused on the overall impact of alternative structures on liability values, earnings outcomes, earnings volatility, capital considerations and portfolio efficiency, rather than on isolated measures of inflation exposure.

PUB (MPI) Pre-Ask 8

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 13, 14, 22, 31, & PUB(MPI) 2-37**		
Sub Topic:			

Preamble:

Slide 13 of MPI Exhibit #24 identifies PIPP benefit indexation as the primary long-term inflation exposure relevant to investment strategy and states that claims cost inflation is principally addressed through pricing. The preferred structure on slide 31 eliminates the real return bond allocation and relies on real assets and short-term credit for inflation sensitivity (slides 14 and 22).

WTW describes its model as simulating stress scenarios including hyperinflation (PUB(MPI) 2-37 Attachment A). The investment income forecast in the Application rests on WTW's capital market assumptions.

Question:

a) Please state the CPI inflation assumption in WTW's capital market assumptions and in the financial forecast for each of the two test years, and confirm whether the two are the same.

b) For CPI inflation running 100 basis points and 200 basis points above the forecast assumption in each test year, please provide, by year, the change in: (i) Basic claims liabilities from PIPP indexation, (ii) the market value and yield of the liability hedging assets, (iii) forecast investment income, (iv) Basic net income, and (v) the Basic MCT ratio.

c) Please provide the results in part (b) for the current portfolio and for the proposed structure (Scenario 5 at 85% LHA with Portfolio B), and state whether the proposed structure increases or reduces the sensitivity of each item relative to the current portfolio.

d) Please provide the same results under Scenario 3 on slide 16 (20% real return bonds), so to gauge the inflation protection the eliminated RRB allocation would have provided.

e) Please state whether the Basic rate indication reflects any sensitivity to inflation above the forecast assumption, and if not, how MPI proposes to recover a shortfall from higher indexation: through rates, through the RSR, or through the capital build provision.

f) Please explain what inflation protection remains in the recommended structure (Scenario 5 at 85% with Portfolio B) compared with the current portfolio and with Scenario 3 (20% real-return bonds). Please identify which assets are assumed to play that role in each of the two test years.

RESPONSE:

a) WTW Capital market assumption on inflation for the next two years are 2.6% and 2.2% respectively while MPI inflation assumptions are 2.5% and 2.2%.

b) See the response provided in information request PUB (MPI) 1-88 part a), where we quantified the change from a sustained 1% increase in CPI.

- A 1% increase in the inflation assumption represents about ~$15 million increase in liabilities.
- On the asset sides, we only estimated the impact on real return bonds (limitation of the financial forecast model), so it doesn't really estimate the full impact of a hyperinflation scenario.

c) Once RRBs are removed from the portfolio, the proposed LHA structure would have less sensitivity to short term inflation changes. However, the proposed LHA structure provides a higher yield than the current structure and RSA Portfolio B provides a higher expected real return.

d) In theory, Scenario 3 would provide better protection against inflation. However, due to implementation liquidity issues with RRBs, scenario was not tested.

e) The Basic rate indication does not include any sensitivity to inflation above the forecast assumption. If actual liabilities increase beyond the forecast assumption, the Rate Stabilization Reserve (RSR) would be the first source available to absorb the shortfall.

   As noted on Slide 13, MPI is exposed to two forms of inflation risk: claim cost inflation and PIPP benefit indexation.

   Any shortfall arising from claim cost inflation exceeding the forecast assumption could be addressed through pricing via the annual general rate application.

   Any shortfall arising from PIPP benefit indexation exceeding the forecast assumption is mitigated through the design of the Basic portfolio investment strategy.

   If inflationary pressures exceed these mitigating mechanisms and result in the MCT falling below 100% and the five-year forecast indicates it will not return to 100% within five years, MPI would be required to address the deficiency through a capital build provision.

f) In theory, Scenario 3 would provide better protection against inflation. However, due to implementation liquidity issues with RRBs, scenario 3 was not tested. The

proposed RSA portfolio B provides a higher expected real rate of return than the current structure due to its higher allocation to short duration assets such as commercial mortgages and short/mid-term private debt.

PUB (MPI) Pre-Ask 8

Part and Chapter:		**Page No.:**	
Topic:	**MPI Exhibit #24, Part IX – Asset Liability Management Slide 13, 14, 22, 31, & PUB(MPI) 2-37**		
Sub Topic:			

Preamble:

Slide 13 of MPI Exhibit #24 identifies PIPP benefit indexation as the primary long-term inflation exposure relevant to investment strategy and states that claims cost inflation is principally addressed through pricing. The preferred structure on slide 31 eliminates the real return bond allocation and relies on real assets and short-term credit for inflation sensitivity (slides 14 and 22).

WTW describes its model as simulating stress scenarios including hyperinflation (PUB(MPI) 2-37 Attachment A). The investment income forecast in the Application rests on WTW's capital market assumptions.

Question:

a) Please state the CPI inflation assumption in WTW's capital market assumptions and in the financial forecast for each of the two test years, and confirm whether the two are the same.

RESPONSE:

g) WTW Capital market assumption on inflation for the next two years are 2.6% and 2.2% respectively while MPI inflation assumptions are 2.5% and 2.2%.

h) See the response provided in information request PUB (MPI) 1-88 part a), where we quantified the change from a sustained 1% increase in CPI.

- A 1% increase in the inflation assumption represents about ~$15 million increase in liabilities.
- On the asset sides, we only estimated the impact on real return bonds (limitation of the financial forecast model), so it doesn't really estimate the full impact of a hyperinflation scenario.

i) Once RRBs are removed from the portfolio, the proposed LHA structure would have less sensitivity to short term inflation changes. However, the proposed LHA structure provides a higher yield than the current structure and RSA Portfolio B provides a higher expected real return.

j) In theory, Scenario 3 would provide better protection against inflation. However, due to implementation liquidity issues with RRBs, scenario was not tested.

k) The Basic rate indication does not include any sensitivity to inflation above the forecast assumption. If actual liabilities increase beyond the forecast assumption, the Rate Stabilization Reserve (RSR) would be the first source available to absorb the shortfall.

As noted on Slide 13, MPI is exposed to two forms of inflation risk: claim cost inflation and PIPP benefit indexation.

Any shortfall arising from claim cost inflation exceeding the forecast assumption could be addressed through pricing via the annual general rate application.

Any shortfall arising from PIPP benefit indexation exceeding the forecast assumption is mitigated through the design of the Basic portfolio investment strategy.

If inflationary pressures exceed these mitigating mechanisms and result in the MCT falling below 100% and the five-year forecast indicates it will not return to 100% within five years, MPI would be required to address the deficiency through a capital build provision.

l) In theory, Scenario 3 would provide better protection against inflation. However, due to implementation liquidity issues with RRBs, scenario 3 was not tested. The

proposed RSA portfolio B provides a higher expected real rate of return than the current structure due to its higher allocation to short duration assets such as commercial mortgages and short/mid-term private debt.

PUB (MPI) Pre-Ask 9

Part and Chapter:		**Page No.:**	
Topic:	**Part VII Rate Indication, PUB (MPI) 1-6 and PUB (MPI) 1-41**		
Sub Topic:			

Preamble:

In response to PUB(MPI) 1-6 c & d MPI has stated its position on how to address the RDA.

> "MPI is unable to provide the requested alternative rate indication on the basis proposed. As set out in Part VIII – EXP Appendix 23, Summary of Regulatory Deferral Accounts, the PUB has not previously confirmed what it views to be the dollar amount of the RDA balance or the practice of accounting for it. MPI also explained that the value of the RDA balance is not clear because the expenses excluded from rates were determined by reference to the applicable rating year in each of the last three rate applications, and different dollar amounts or combinations of amounts could be used to estimate a balance, including forecasted amounts excluded from rates, expenses forecasted by fiscal year, actual expenses incurred after the GRA, or combinations of those amounts. Accordingly, there is no confirmed 2025/26 RDA balance that MPI can reliably use as the basis for an alternative RI-14 scenario spread over 10 years. Preparing such a scenario would require MPI to first select a balance from among several possible approaches, each of which would be dependent on assumptions about what should be included, what period should be used, and whether the measure should reflect forecasted, excluded, or actual expenses. In MPI's view, presenting a rate indication on that basis would imply a level of precision and acceptance of an RDA balance that does not exist."

According to PUB(MPI) 1-41 MPI proposes to recover $10.1 million of 2025/26 actual integration expenses in the test years. This represents a portion of the 2025/26 actual

initiative expenses. MPI represents that the Actual 2025/26 initiative expenses for 2025/26 was $56.4 million including onerous contract charge of $36.97 million.

MPI proposes to not seek recovery of prior actual initiative expenses nor the onerous contract charge and have been excluded from rates, and only seek recovery of the $10.1 million. The basis of the recovery is understood to be actual initiative expenditures, not forecast amounts.

Actual integration costs that have been incurred are set out in PUB(MPI) 1-41, which equates to $90.897 million until the end of 2025/26, including an onerous contract charge and $53,926 excluding it. [PUB(MPI) 1-41(a)]

In response to CC(MPI) 1-39 MPI in part states MPI does not believe there is a single confirmed RDA balance because the amounts excluded from rates were determined in relation to the applicable rating years in prior rate applications, while other potential measures could include fiscal year forecasted expenses or actual expenses incurred. For that reason, MPI does not identify one definitive regulatory deferred amount as an IFRS-recognized asset. If the PUB accepts MPI's requested relief, the historical RDA balance would have no ongoing relevance for future rate setting. If the PUB does not accept MPI's position, MPI respectfully requests that the PUB provide clear direction in its 2027 Order regarding the amount it considers to be the RDA balance, how those expenses are to be accounted for rate-setting purposes, and the rules that will govern any such treatment going forward.

To understand how an alternative disposition of the RDA balance (for actual amounts not included in rates in prior applications) may be dealt with, MPI is requested to provide the following information.

Please file the response to PUB(MPI) 2-7 as revised.

Question:

a) Please indicate to what extent the $53.9 million in integration/initiative expenses incurred and included in the list provided in PUB(MPI) 1-41 Appendix 1 up to the end of 2025/26 provides or is expected to provide value to customers? Please identify and remove all costs related to impairments of deferred development expenditures.

b) Please provide alternative rate indication (RI-14) including the 2025/26 Regulatory Deferral Account balance (excluding onerous contract and impairment charges) spread over 10 years, instead of the proposed $10.1M of initiative expenses included in the filing.

c) Please file a PF-1, PF-2 and PF-3 on that basis.

RESPONSE:

a) The composition of initiative expense actuals was already filed as *PUB (MPI) 1-41 - Appendix 1*. Refer to *Appendix 1 - Confidential* and *Appendix 2 - Confidential* for further details of this expenditure as requested.

b) Prerequisite to responding to this question is having clear direction from the PUB regarding both the current outstanding Regulatory Deferral Account (RDA) balance and the governance pertaining to same. MPI acknowledges that Pre-Ask 9 provides neither of these requirements, but rather suggests the potential RDA Balance being advanced by the PUB is retrospectively to be based on “actual amounts not included in rates in prior applications.” This clarification identifies the general population of costs the PUB is contemplating in constructing a retroactive rate setting scheme. It does not, however, establish the amount of the balance or the methodology and governance required to determine and administer it, as contemplated in PUB Order 4/23. Outstanding matters include the applicable measurement period, which expenditures qualify, the allocation to Basic, the treatment of amounts already funded through the Rate Stabilization Reserve (RSR) or Extension capital transfers, the disposition and recovery mechanism, and the treatment of future initiative expenses. MPI says it is exempt from both IFRS 14 and

IFRS 20, which aligns with the industry as a whole and its Crown peers. Similarly, there is no current IFRS accounting standard available to MPI that would support the application of amortizing in-period costs under IFRS, as is being contemplated by the PUB. Accordingly, the clarification in Pre-Ask 9 does not provide a prescriptive means with respect to how non-conforming IFRS accounting treatment should be viewed.

While MPI has created non-compliant IFRS pro formas as requested, MPI also suggests a simple proxy of what the rate impact of amortizing period costs into future periods, using a $1.0 million inclusion of expenses, the WCCCR/Claims incurred allocators (approximately 75% allocation to Basic), and that the $1.0 million applies equally to 27/28 & 28/29, would result in a rate increase of approximately 0.05%. MPI's current forecasted spend rate for these periods is $20 million per annum and is expected to remain as such in the interim. This provides a directional impact of dollars being retroactively reintroduced into rate setting.

Key Take Away: Pre-Ask 9 clarifies that the PUB is considering actual prior year amounts not included in rates in prior applications, but it does not address what happens to amounts not recovered through the proposed amortization or to future initiative expenses. Amortization of any determined amount on a 10-year straight-line basis means that 90% (nine-tenths of the amount in the first year) would continue to be deferred and funded by the RSR. This RSR funding gap compounds over time because the annual initiative spend is perpetual in nature. In time, the gap will materialize as a need to rebuild capital. When this occurs, the amortization approach does not eliminate the funding requirement; it makes capital builds a natural part of MPI's future GRAs as a result of a retroactive rate setting amortization inclusion model.

Additional Context to MPIs Response:

MPI acknowledges that Pre-Ask 9 now articulates the intended subject of the alternative disposition as actual amounts not included in rates in prior applications. That wording provides greater clarity as to the category of costs under consideration. It does not, however, quantify an RDA balance or establish the methodology and governance

framework needed to determine one. In particular, it does not identify the measurement period, eligibility criteria, allocation methodology, treatment of prior funding sources, or rules for recovery and disposition. This remains materially different from the treatment of the $10.1 million amount referenced elsewhere in the same question, for which a specific value and supporting evidence were provided.

As outlined in Figure EXP App 23-1 of MPI's 2027 GRA, there are several potential approaches that could be used to determine an RDA balance, including rating-year forecasts, fiscal-year forecasts, actual expenditures incurred after filing, or various combinations of these measures. Each approach produces a different outcome. MPI recognizes that the examples presented in the filing may not represent the full range of possible methodologies.

Although Pre-Ask 9 narrows the potential population to actual amounts not included in rates in prior applications, selecting and measuring a balance would still require MPI to apply assumptions that have not been endorsed by the PUB. The reported actuals do not by themselves resolve which costs qualify, whether benefits to Basic should affect inclusion, how costs are allocated, how prior RSR funding and Extension capital transfers are recognized, or whether subsequent recovery would duplicate funding already borne by policyholders. Applying an assumed methodology, as has been done to create pro formas to illustrate a 10-year amortization of initiatives as requested, creates an unwarranted impression of certainty regarding an outcome that remains subject to review and determination. MPI therefore believes it would be premature to calculate a specific notional RDA balance without explicit direction. Moreover, as MPI has neither a financial-reporting need nor an operational use for RDAs, consistent with the industry as a whole, the regulatory construct and its governing rules are matters for the PUB to determine. Readers of the non-IFRS compliant information as attached herein are cautioned as to their use, reliance and merits of the information presented.

More broadly, MPI remains mindful of the importance of ratepayer value and wishes to avoid scenarios where historical deferred amounts result in customers effectively paying

more than once for the same underlying costs, particularly where initiative funding has already been addressed through the RSR and Extension capital transfers.

A 10-Year Amortization Period is Not a Principled or Supportable Solution. The question specifically refers to a 10-year amortization period. MPI's position is that there is no basis of support for selecting and imposing arbitrary rules of accounting that fall outside the established IFRS accounting framework that MPI is eligible to apply in the normal course of its operations. This applies equally to any amortization period, 10-years or otherwise.

Moreover, MPI submits that amortizing expenses that are appropriately recognized as period costs effectively seeks to embed rate deficiency by design into rate setting and transfer rate deficit to the RSR – not its intended use. This approach increases reliance on the RSR, exposing the Corporation to additional pricing and capital adequacy risk, and increases the likelihood that future GRAs may require a capital build to restore financial strength.

Implied Impact of a 10-Year Amortization Period Impact on the RSR. The table below illustrates the projected standalone impact of embedding rate deficiency and leveraging the RSR, by design, from imposing a 10-year amortization period of initiative-related costs. Under a 10-year amortization approach, a portion of the costs incurred ($1/10^{th}$) to support the Basic Line of Business would not be recovered through current rates, resulting in a gradual re-build of capital to the RSR. While the RSR can effectively support rate stability in the short term, continued reliance on the reserve for the ongoing funding of operating initiatives would reduce its capacity to perform its primary role of mitigating unforeseen volatility in claims experience. Over time, and all else being equal, MPI may be required to transition from filing rate applications focused solely on annual rate adequacy to applications that also include measures to rebuild capital, once reserve levels are no longer sufficient to support this funding approach.

Assuming a 10-year amortization period and the assumptions outlined herein, approximately $110 million would be drawn from the RSR over the forecast period.

Amounts prior to PUB Order 4/23 that would have been included in rate setting based on forecasted spend. The eventual funding of these amounts directed to the RSR would be dependent upon one or more future sources, including investment income generated on the RSR, capital build applications to maintain legislated capital requirements, discretionary capital transfers from Extension to Basic when appropriate and approved by the Board of Directors, favorable claims experience relative to pricing assumptions, or a combination of these factors. While amortization of period costs may contribute to lower Basic rate requirements in the near term, it also introduces additional uncertainty regarding the future replenishment of reserves and the sustainability of this funding model over the longer term.

MPI believes transparent recognition and recovery of costs within the period in which they are incurred provides greater rate stability, stronger alignment with cost causation principles, and improved long-term financial sustainability for Basic policyholders.

The Key Take Away: A core funding source of the RSR is discretionary Extension capital transfers. This shift naturally embeds and presupposes financial leverage onto the Extension LOB, thereby directly transferring financial rate action otherwise needed in the Basic LOB to that of the Extension line of business, in whole or part.

The table below demonstrates the standalone impact of a 10-year amortization approach for initiative expenditures on the RSR. The illustration assumes no opening historical Regulatory Deferral Account (RDA) balance, annual initiative expenditures of $20 million throughout the forecast period ($15 million related to major programs and $5 million related to non-major programs), and no recovery of initiative costs through Basic rates during the 10-year period. For illustrative purposes, the initiative costs have been entirely allocated to Basic under this purpose, as this directionally highlights the compounding implicit rate deficiency over an amortization period. Under these assumptions, the embedded rate deficiency accumulates over time, highlighting the long-term implications of delayed cost recovery on capital reserve adequacy.

Figure 1- Embedding Rate Deficiency by Design into Basic Rates

Embedding Rate Deficiency by Design Into Basic Rates
($'s in millions)

Amortization of Initatives - Straight Line - 10 Years		Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9	Year 10	Year 11

Additions to amortization Pool		20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0
Amortization		-	(2.0)	(4.0)	(6.0)	(8.0)	(10.0)	(12.0)	(14.0)	(16.0)	(18.0)	(20.0)
Closing Balance - Amounts Funded by the RSR	**$**	**20.0**	**38.0**	**54.0**	**68.0**	**80.0**	**90.0**	**98.0**	**104.0**	**108.0**	**110.0**	**110.0**

Key Assumptions/Disclaimers:

(i) Amortization period reflect the PUB stated direction of 10 years.

(ii) Amortization is expected to start the year following the actual spend. This means a full year delay of recovering cash paid expenses incurred. This results in an effective amortization period to 11 years, not 10 years.

(iv) Tha amounts shown as Amortization would be reflected and recovered in future GRA's through Basic rates.

(v) The rate deficiency of Basic grows over time by design and is implicitly paid for by the RSR and/or Extension transfers of capital. All things being equal, amortization ignores capital adequacy and focuses solely on the Basic rate impact in isolation.

(vi) The PUB has yet to define a RDA balance or the governance around same.

Figure 2- Five year Summary of RSR Income

Line No.	*(C$ 000s, except where noted)*	2021/22A	2022/23A	2023/24A	2024/25A	2025/26A
1	RSR Income	24,949	13,595	9,015	42,821	42,517

Investment income is excluded from AAP rate setting. Figure 2, above, illustrates the key non-Extension transfer of capital source of funds within the RSR and the volatility related to same. Amortization of initiatives embeds financial pressure upon the RSR capital available by design, to which the primary sources of funding are Investment income and Extension capital transfers.

Pre-Ask 9 Identifies a Potential Historical Cost Population but Does Not Automatically Establish an RDA Balance. MPI acknowledges that Pre-Ask 9 describes the alternative disposition as applying to actual amounts not included in rates in prior applications. *PUB (MPI) 1-41 Appendix 1* reports initiative expenditures by project and includes $90.9 million of actual costs incurred between 2023/24 - (when the PUB directed that such expenses be excluded from rate setting), and 2025/26. Those reported expenditures may inform the PUB's consideration of the issue, but they do not, in and of themselves, establish that the full amount is an RDA balance. The schedule was prepared to enhance transparency by providing a retrospective view of actual initiative spending. It does not determine which costs qualify for regulatory recovery, the amount attributable to Basic, the effect of prior funding through the RSR or Extension capital transfers, or the framework under which any balance would be governed,

recovered, or disposed of. MPI is exempt from IFRS 14 and IFRS 20 accounting requirements.

Recovery Requested in the 2027 GRA Reflects a Prospective and Practical Approach. The $10.1 million recovery proposed in the 2027 GRA is a discrete amount supported by Appendix 23. This request should not be interpreted as suggesting that prior initiative expenditures lacked value or benefit. Rather, it recognizes that these costs have already been incurred and funded, and that seeking recovery of historical expenditures from current ratepayers creates additional financial pressures that may not align with principles of fairness and affordability. MPI's proposal to include prior-year actual initiative expenditures as a proxy for forecasted initiative spend in rate reflects the practical reality that initiative costs must ultimately be funded either through rates or through future capital accumulation requirements. Absent alternative revenue/capital sources, the need for future capital build applications may become necessary to restore the RSR and maintain legislated capital targets for the Basic line of business.

Clarifying the RDA Population Does Not Change the Nature or Accounting Treatment of the Underlying Costs. The actual initiative expenditures reported for 2023/24 through 2025/26 in *PUB (MPI) 1-41 Appendix 1* represent operating expenses that were incurred and recognized in MPI's Statement of Operations in accordance with applicable IFRS requirements during the periods in which they arose. These amounts are not capital assets recorded on the balance sheet and subject to amortization unless specifically accounted for in that manner under established accounting standards. In addition, the actual incurred expenses includes the amortization of those assets that were eligible for capitalization.

Deferring and amortizing those amounts again for rate-setting purposes would re-amortize costs that have already been allocated over time, with no underlying accounting rationale. Pre-Ask 9's description of actual amounts not included in rates in prior applications may clarify the proposed regulatory population, but it does not change the accounting treatment of the costs, does not create an amortizable asset, or establish the amount recoverable from future ratepayers. Any alternative disposition still

requires a clearly defined and supportable regulatory framework addressing measurement, governance, recovery, and safeguards against duplicate funding.

Historical Excluded Costs Have Already Been Funded. The initiative expenses excluded from rates have been funded through a combination of Extension capital transfers and the RSR. Continuing to track these amounts through a separate regulatory mechanism would require the maintenance of a parallel accounting framework for expenditures that are not recognized as assets under IFRS. MPI submits that such an approach would create additional administrative complexity without necessarily improving the fairness, transparency, or accuracy of rate setting. Consistent with its objective of promoting sustainable and transparent rate setting, MPI has therefore proposed including prior-year actual initiative expenditures in the 2027 General Rate Application rather than defer consideration of these costs until a future capital build requirement emerges. This approach supports greater transparency, rate stability, and alignment between costs incurred and the period in which they are recognized.

Recovering historical expenditures in later periods would produce revenue without a corresponding current-period expense, rather than aligning forecast costs and rate recovery within the applicable rating period. It would also require a separate, spreadsheet-based regulatory tracking mechanism for amounts that are not recognized as an asset under IFRS, creating ongoing administrative burden without improving the accuracy or fairness of rates.

MPI submits that, as it is exempt from both IFRS 14 and IFRS 20, the exemptions apply in their entirety. Consequently, it would not be appropriate to selectively adopt individual concepts, principles, or components from standards that have otherwise been expressly excluded. The exemption extends not only to the standards themselves, but also to the underlying mechanisms and constructs that are integral to their operation.

Although MPI disagrees with the incompleteness and inaccuracy of the proposed scenario, MPI has amortized $36,099 in Basic initiative actual expenses over a 10-year

period for a total of $3.610M inclusion in the rating year (the total Basic actual initiative expenses as filed in ***PUB (MPI) 1-41 - Appendix 1*** over the 3-year exclusion are $90,897M less $36,791 referred to PUB in part b) less impairment of $17,872 over the 3-year exclusion.

Based on the dictated inclusion of $3.61M rather than $10.1M of initiative expenses for the rating year, an alternative version of Figure RI-14 is provided below. Please note that this figure does not include the acquisition costs adjustment noted in *MPI Exhibit #9*.

	Total initiative actual expenses since PUB order as filed in PUB(MPI)1-41 Appendix 1	**10,277**	**24,167**	**56,453**	**10,124**

Total 2025/26 initiatives expenses as requested in Appendix 23-2

Reconciliation to PUB's reference of initiative expenses in pre-ask 9 part b and c):	
Total actual initiative expenses over 3 year order period in PUB(MPI)1-41 Appendix 1	90,897
2025/26 expense including onerous contract adjustment	(36,971)
PUB referenced initaitive dollar in pre-ask 9 part a)	**53,926**
Impairment	(17,827)
Pub referenced initaitive costs to amortize over 10 years in pre-ask 9 part b)	**36,099**

Legend

- As project had 2025/26 expenses, this value already explained by MPI via Appendix 23 a.
- Nova expenses and impaired assets
- Cancelled/deferred
- Project spend in the 23/24 and 24/25 fiscal years and were not previously assessed as part of Appendix 23a - refer to pre-ask 9 a) Appendix 2
- In a "recovery/reversal" position as relates to processing of final invoice post year-end compare (true up against last accrual).

Appendix 2

MPI has requested recovery of initiative expenses forecasted to be incurred in the 27/28 rating year ($10.1M). Refer to *PUB (MPI) Pre-Ask 9 – Appendix 1 – Confidential* for reconciliation of this proxy forecast amount to 2025/26 initiatives. As reconciled in *PUB (MPI) Pre-Ask 9 – Appendix 1 – Confidential* MPI is not requesting recovery of the last 3 year's of Basic historical actual initiative spend totaling $90.897.

In assessing the initiative expenses included in *PUB(MPI) 1-41 - Appendix 1*, MPI reviewed each initiative to determine the extent to which the expenditures have provided, or are expected to provide, value to customers.

Customer value can be realized in different ways. Initiatives can directly improve customer-facing services, information, accessibility, convenience, or interactions. Initiatives can also improve the effectiveness, efficiency, reliability, and sustainability of the services delivered to customers by strengthening the underlying processes, systems, and capabilities that support those services. Other initiatives will help protect customer information, reduce operational and cybersecurity risks, maintain service continuity, improve decision-making, or establish foundational capabilities that support future service improvements and modernization. Most initiatives offer customer value in many ways.

The assessment for each initiative includes whether the expenditure was used, how it has provided or is expected to provide value to customers (useful), and why the expenditure was prudently acquired. Delivery statements are based on project records. Descriptions of customer value are based on the objectives and expected benefits identified in the applicable business case, project charter, Epic Hypothesis Statement, statement of work, closeout report, or other formal project documentation.

The customer value, used, useful and prudently acquired assessment for the following initiatives are set out in the previously filed *Part VIII - EXP Appendix 23a*:

- Contact Centre as a Service
- Content Architecture Phase 2
- Queue Management
- MyMPI and IRP Online
- Changes to Deductible Products
- Capital Modelling Solution

- Digital Culture Improvements - Audio Visual Systems
- Governance, Risk, and Compliance (GRC) Solution
- Cloud Migration
- **[REDACTED]**
- **[REDACTED]**
- **[REDACTED]**
- **[REDACTED]**
- **[REDACTED]**
- Improve Identification of Stolen Vehicle/VIN - Pilot
- Print Management Software Replacement
- Taxi Telematics
- BI3 Upgrade
- Infor Upgrade
- ERP Assessment & Planning
- Foundational Setup for Enterprise Data Platform
- **[REDACTED]**

The following initiatives had project spend in the 23/24 and 24/25 fiscal years and were not previously assessed as part of *Part VIII – EXP Appendix 23a* ($90.897) and are not part of the $10.1M proxy for forecasted initiative spend requested for rate inclusion in the 2027/28 rating year:

Basic Insurance Model (BIM) Public Consultation

Used: Yes. Project records confirm that the Basic Insurance Model Public Consultation was completed in 2024 using qualitative research and a representative quantitative survey conducted by Leger. The consultation gathered feedback from Manitobans regarding their understanding of the Basic Insurance Model, the considerations that matter when evaluating alternative models, and their preferences among potential alternatives. The results were used to support MPI's analysis, stakeholder discussions, regulatory proceedings, and future consideration of changes to the Basic Insurance Model.

Useful: The Leger statement of work identified the need for an in-depth and representative understanding of customer perspectives on potential changes to the Basic Insurance Model. The consultation examined the values and considerations important to Manitobans, including what is just and reasonable, privacy and information sharing, safe driving, actuarial accuracy, fairness and equity, and preferences among alternative models. This provides customer value by ensuring that decisions about potential changes to Basic insurance are informed by the perspectives and priorities of the customers who would be affected. The findings also provide evidence for evaluating alternatives and supporting informed regulatory and stakeholder discussions.

Prudently acquired: The initiative was undertaken in response to the Government of Manitoba's request that MPI conduct public consultation on possible changes to the Basic Insurance Model. MPI engaged Leger under an existing services agreement to conduct qualitative and quantitative research using an approved statement of work. The documented approach included a representative cross-section of Manitoba drivers, qualitative research, online discussion forums, surveys, a representative province-wide quantitative study, and conjoint trade-off analysis. Defined deliverables included research materials, cleaned data, qualitative and quantitative findings, stakeholder briefings, a publicly available report, and presentations to MPI and PUB intervenors. MPI retained responsibility for formally reviewing and accepting the deliverables before completion and final payment.

BPM and Lean CoE 2.0

Used: Yes. BPM and Lean CoE 2.0 was implemented and is actively used. The initiative deployed the Bizzdesign platform and established a centralized capability for documenting and managing business processes, business capabilities, applications, and architectural relationships. Delivery included platform configuration, migration of existing metadata, process and capability mapping, application portfolio management activities, user onboarding, training, governance, dashboards, and transition to operational support. The project reached functional completion in February 2025 and was subsequently closed.

Useful: The initiative supports customer value by improving how MPI understands, plans, and manages changes to the processes and technology used to deliver services. The business case identified improved change-impact analysis, stronger architectural insight and solution design, reduced effort, and easier access to reusable business-process assets as expected benefits. Centralizing this information allows MPI to identify operational and technology dependencies, assess the potential effects of proposed changes, and reuse existing process and architecture information rather than recreating it. These capabilities support more informed planning and reduce the risk that changes

affecting customer services are designed or implemented without a complete understanding of the related processes, applications, people, and technology.

Prudently acquired: The initiative was prudently acquired as the next stage in developing MPI's business process management and Enterprise Architecture capabilities. The approved scope included selecting and deploying a business process management and enterprise architecture tool, establishing business-process asset quality controls, developing work-intake processes and roadmaps, and further maturing the BPM, Lean and EA functions. Delivery proceeded through approved funding and project-governance processes and included requirements development, platform selection and configuration, metadata migration, training, governance, user support, operational transition, and project closeout.

Camera and Peripheral Replacement

Used: Yes. The Camera and Peripheral Replacement initiative was implemented and is actively used at service centres and broker locations to capture customer photographs for driver's licences and other identity products. The project replaced the aging camera and peripheral fleet with supported, standardized equipment and updated image-capture software. Deployment included new hardware, software updates, installation packages, user guidance, troubleshooting support, and rollout activities. Following deployment, image-rejection and installation issues were addressed, knowledge articles were updated, and support was provided to users. Hardware deployment was completed in January 2025, and the project was subsequently closed following completion of deployment and closeout activities.

Useful: The initiative provides direct customer value by maintaining the equipment required to issue driver's licences and identity products at service centres and broker locations. The previous camera model was more than 10 years old, was no longer available for purchase, and had created concerns regarding picture quality, equipment availability, and customer experience. The replacement introduced a supported camera model, increased the availability of replacement equipment, and enabled use of updated image-capture software with enhanced picture-quality features. These improvements help address customer concerns about photo quality, reduce the risk that unavailable or failed equipment could interrupt service, and support the continued delivery of identification and licensing transactions.

Prudently acquired: The initiative was prudently acquired to address the service-continuity and customer-experience risks associated with an aging and unavailable camera model. The selected equipment was validated as meeting MPI's integration requirements, business needs, and supply requirements. The implementation approach included a request for tender, proof of concept, pilot, software testing, equipment

procurement, targeted rollout, communications and training, troubleshooting, and break-fix support. Issues identified during deployment were monitored and addressed before the initiative transitioned to operational support and formally closed.

Configuration Hardening Enhancements

Used: Yes. Configuration Hardening Enhancements was completed and the resulting standards are used to guide the secure configuration of MPI technology platforms. The initiative developed minimum configuration-hardening standards that were reviewed and accepted by the responsible platform owners. Platform owners prepared plans for applying the standards within their environments, and implementation was substantially complete when the project closed. The project closure report was submitted in May 2024.

Useful: The initiative provides customer value by reducing the risk that insecure, inconsistent, or non-standard technology configurations could contribute to a cybersecurity incident or disrupt systems used to deliver customer services. Consistent security standards strengthen preventative controls across MPI's technology environment and support the secure and reliable operation of customer-facing and supporting systems. The standards and implementation plans also provide a sustainable foundation for maintaining secure configurations as technology and cybersecurity risks evolve.

Prudently acquired: The initiative was prudently acquired to address identified cybersecurity and technology risk-management requirements through a consistent set of enterprise configuration-hardening standards. The project included developing the standards, engaging the responsible platform owners, obtaining their review and acceptance, establishing platform-level implementation plans, and transitioning responsibility for continuing implementation to operational technology teams. This approach established enterprise expectations while placing ongoing implementation with the teams responsible for managing each technology environment.

[REDACTED]

[REDACTED].

[REDACTED].

[REDACTED].

Data 2.0 Detailed Solution Architecture

Used: Yes. Data 2.0 Detailed Solution Architecture produced the detailed architectural designs required to guide future data-platform and analytics work. The deliverables addressed data ingestion, processing, storage, quality, monitoring, security, networking, resilience, and governance. The resulting architecture, standards, design decisions, and implementation recommendations are available for use in enterprise data-platform planning and subsequent solution-design activities.

Useful: The initiative provides customer value by reducing the risk of undertaking major data-platform investments without an integrated, secure, and MPI-compliant design. The architecture establishes common requirements and design approaches for managing the quality, security, availability, and movement of data. This supports service sustainability by reducing the likelihood of fragmented or incompatible solutions, while improving MPI's readiness to use data more effectively in customer service, operational decision-making, reporting, analytics, and future modernization.

Prudently acquired: The initiative was prudently acquired to complete the detailed planning and architecture required before significant investment in data-platform implementation. The work included requirements and architecture analysis, end-to-end solution design, data-quality and governance considerations, security and infrastructure requirements, resilience and monitoring requirements, and alignment among Data Management and Analytics, Enterprise Architecture, security, and technology stakeholders. This approach produced reusable design assets and implementation guidance before MPI committed to broader platform delivery.

Desktop as a Service (DaaS)

Used: Yes. Desktop as a Service was implemented and is actively used. **[REDACTED]** _____. The project completed its transition to operations and closed on October 31, 2022.

Useful: The initiative supports customer value by providing the operational teams delivering and supporting MPI services with more reliable, secure, and scalable access to the systems required to perform their work. The business case identified improved productivity, real-time collaboration, faster employee and contractor onboarding, secure remote access, centralized storage of user data, disaster recovery, reduced on-site maintenance, and rapid scalability as expected benefits. **[REDACTED]** _____. These capabilities support service continuity and help operational teams remain productive when working remotely or when additional computing capacity is required.

Prudently acquired: The initiative was prudently acquired through a structured assessment and implementation process. Fifteen vendors responded to the request for information, identifying nine platform options that were compared based on cost, hosting model, and their ability to meet MPI's requirements. **[REDACTED]**_____, and the approved scope included architecture and network readiness, pilot testing, deployment to the identified user groups, training for operational support staff, and transition to operations. During delivery, MPI approved the use of internal resources rather than a systems integrator.

DMA – Data Governance Tool Implementation Part 1

Used: Yes. DMA – Data Governance Tool Implementation Part 1 was completed and put into use. **[REDACTED]**___ was implemented in MPI's environment, and the related ADO portfolio epic was marked done. The initiative established foundational data-governance capabilities, including identification of governance use cases, definition of governance roles and responsibilities, platform configuration, classification and

scanning rules, registration of selected data sources, security-aligned collections, initial glossary structures, and knowledge transfer.

Useful: The initiative supports customer value by establishing a foundation for MPI to better understand and govern the data used to operate the business and support services. The business case identified the need for a unified data-governance capability and documented existing risks related to data quality, visibility, and consistency. The Phase 1 work was intended to improve data accessibility and understanding, clarify accountability for data, and demonstrate value through data discovery, identification of duplication, and refresh automation. These capabilities are expected to support more reliable information and better-informed operational decisions, reducing the risk that service improvements and future initiatives are designed using incomplete, inconsistent, or poorly understood data.

Prudently acquired: The initiative used a deliberately limited Phase 1 approach to establish and test foundational capabilities before undertaking broader corporate adoption. An integration partner was engaged for a four-week implementation, with defined deliverables covering discovery, governance roles, platform configuration, classification and scanning, source registration, glossary development, security, business-value assessment, and knowledge transfer. **[REDACTED]**, with no additional tool-usage cost identified in the business case. The full corporate rollout of a data-governance tool and subsequent governance initiatives were explicitly excluded from Phase 1 and required separate future submissions.

Driver Education Instructor Community (DEIC) Re-platforming

Used: Yes. Driver Education Instructor Community Re-platforming was implemented and is actively used. The initiative migrated the Driver Education Instructor Community **[REDACTED]**. The new platform went live on August 21, 2024. Following implementation, the initiative completed its warranty period, lessons learned, and project closeout activities.

Useful: The initiative provides customer value by maintaining the information service used to support driver educators in delivering the Driver Education program. The **[REDACTED]**, creating a risk that driver educators could lose access to the content required to support program delivery. Migrating the content to a current, hosted **[REDACTED]** solution reduced that risk, maintained access for approximately 180 community members, improved security, and established a supported platform with a path to accommodate future requirements.

The initiative therefore supports customers indirectly by helping driver educators continue to access the information and resources needed to deliver driver education services.

Prudently acquired: The initiative was prudently acquired to address the service-continuity and security risks associated with operating the Driver Education Instructor Community on unsupported technology. The selected approach **[REDACTED]** while preserving the existing service for the driver education community. Delivery included requirements and solution planning, **[REDACTED]**, content migration, quality-assurance and penetration testing, **[REDACTED]** integration, training materials, user onboarding, implementation planning, change management, and decommissioning of the **[REDACTED]**. The initiative proceeded through MPI's portfolio and project-governance processes and was closed following completion of the warranty period, lessons learned, and closeout activities.

ECM – Collaboration Migration

Used: Yes. ECM – Collaboration Migration transitioned collaboration sites, documents, workflows, forms, websites, and selected custom solutions from **[REDACTED]**. The migrated environment supports document storage, information sharing, collaboration, and workflows used by MPI employees and operational areas. The work included site-owner validation and testing, a warranty period for migrated sites, and the transition of remaining migration work to operations.

Useful: The initiative supports customer value by maintaining the documents, workflows, and information-sharing capabilities used by employees and operational areas to deliver customer services. **[REDACTED]** supported hundreds of business processes and contained customer, financial, legal, personal, and other privileged information. Moving this content and related processes to **[REDACTED]** reduced the risk that unsupported technology could interrupt access to critical documents or the workflows supporting service delivery. The business case also identified improved security and compliance, easier access to content, lower support and upgrade requirements, and increased use of **[REDACTED]** collaboration and automation capabilities as expected benefits. These improvements support more reliable internal processes and help employees access the information needed to serve customers.

Prudently acquired: The initiative was prudently acquired in response to **[REDACTED]**, which it already owned through its Microsoft licensing, after considering alternative products and continued use of network drives and custom websites. Those alternatives were assessed as having higher cost, greater complexity, longer time to value, or an inability to meet existing business requirements. The implementation used internal

resources supported by migration software, advisory services, and consultants, and followed a phased approach covering content, websites, workflows, and custom solutions. As the inventory and complexity became clearer, MPI reviewed the scope, removed sites and custom solutions that did not require migration, used site-owner validation and warranty support, and transitioned remaining work to operations. **[REDACTED]**.

ECM – Intranet 2.0 MVP

Used: Yes. ECM – Intranet 2.0 MVP was implemented and is actively used. **[REDACTED]** that provides employees with access to corporate updates, policies, events, news, and other internal information. The delivered minimum viable product included the intranet home page, existing intranet services, news and updates, Courier, Insider, and Bulletin Board content. The solution went live and achieved functional completion on June 24, 2024, after which the project was closed.

Useful: The initiative supports customer value by improving employees' access to the corporate information and communications needed to perform their work and support service delivery. The business case identified improved content relevance, broader employee access, decentralized publishing, employee engagement and feedback, reduced technology risk, improved security and compliance, and lower maintenance and upgrade requirements as expected benefits. By providing employees across MPI locations with a supported source for current policies, corporate updates, and operational communications, the platform helps employees remain informed and better equipped to deliver consistent services to customers.

Prudently acquired: The initiative was prudently acquired to address the service-availability, security, and business-continuity risks associated with the end of support for SharePoint 2013. **[REDACTED]** which was assessed as better aligned with the Culture 2.0 and Talent 2.0 objectives. The project used an MVP approach to deliver the core intranet services first, with further development assigned to the operational team. Delivery included requirements analysis, solution design, use of external expertise, content assessment and migration, knowledge transfer, change support, governance, and transition to ongoing operational ownership. **[REDACTED]**.

ECM – Content Architecture Phase 1

Used: Yes. ECM – Content Architecture Phase 1 was implemented and completed in August 2023. The initiative delivered comprehensive web-content standards, a content audit identifying improvement opportunities, content taxonomy and guidelines, standardized templates, content-design guidance, a lexicon of key terms, a prioritized content inventory, and baseline reading-ease assessments for MPI webpages. These deliverables established the content foundation used to inform subsequent website-content improvements, including Content Architecture Phase 2.

Useful: The initiative supports customer value by establishing a consistent, evidence-based foundation for making website information easier for customers to find, understand, and use. The project assessed existing content, identified information gaps and improvement opportunities, prioritized content based on its importance and customer pain points, and developed common templates, taxonomy, terminology, and design guidelines. Standardized templates were developed to support a more consistent approach to customer journeys, while the website review identified practices and potential solutions for improving reading ease and information effectiveness. Reading-ease scores were also recorded for MPI webpages to support future work toward plain-language content at a Grade 8 reading level.

Prudently acquired: The initiative was prudently acquired as a defined, foundational phase of MPI's broader content-modernization work. MPI negotiated and approved an 18-week engagement with Blast on January 9, 2023, with onboarding beginning January 16, 2023. The work followed a structured sequence covering mobilization, content inventory and assessment, identification of relationships and priorities, development of content structures and standards, and preparation for subsequent content redesign. The project was completed in August 2023. Review and transition of the first content designs were appropriately deferred to Phase 2, rather than expanding Phase 1 beyond its intended foundational scope.

ECM – Public Website Re-platforming

Used: Yes. ECM – Public Website Re-platforming was implemented and is actively used. The initiative recreated MPI's public website on supported technology and **[REDACTED]**. The website continues to provide customers, brokers, and the public with access to MPI information and online content, including the home page, service information, news, and updates. The initiative was reported as complete in August 2024.

Useful: The initiative provides customer value by maintaining reliable access to MPI's primary public-facing information **[REDACTED]**

[redacted]. The project was designed to preserve the website's existing branding and user experience while replacing the unsupported technical platform. The documented benefits include reduced risk of technology failure and business disruption, current patching and updates through a Software-as-a-Service solution, scalability and built-in disaster recovery for periods of unexpected demand, improved content-publishing processes, and lower operating, maintenance, and upgrade costs. These benefits support continued access to public information while reducing the risk that unsupported technology could interrupt the website services customers rely on.

Prudently acquired: The initiative was prudently acquired to address the operational, security, and **[REDACTED]**, a tier-one platform hosting MPI's public website and other public services. The selected approach recreated the website and migrated its content to supported technology while retaining the existing branding and user experience, avoiding the cost and complexity of a broader website redesign. The project assessed hosting arrangements, managed procurement and contract activities, migrated website content and publishing capabilities, and implemented a supported platform aligned with MPI's broader Enterprise Content Management work. Project records also show that delays in selecting a hosting provider and related cost impacts were managed through formal change-control and approval processes.

Enhance IT Process Governance Framework

Used: Yes. Enhance IT Process Governance Framework was completed and is in use. The initiative updated MPI's existing IT process governance framework, aligned IT processes with the responsible directorates and process owners, clarified roles and responsibilities, and established common process definitions. The completed deliverables included an IT Process Governance Executive Summary and Roadmap, a COBIT 2019 capability view by directorate, and IT Process Governance Control Cards. The project closeout report confirms that each of the initiative's four objectives was completed.

Useful: The initiative supports customer value by strengthening the governance of the technology processes on which customer services depend. Clear process ownership, common definitions, and defined responsibilities improve MPI's ability to identify process gaps, manage technology and cybersecurity risks, maintain alignment with applicable standards, and make informed decisions about process improvements and resource allocation. The business case identified improved risk management, strengthened compliance, and improved efficiency through clearer roles, better collaboration, and more consistent decision-making. The closeout report records these three outcomes as completed. Together, these improvements reduce the risk that

unclear ownership or inconsistent IT processes affect the technology services supporting customers.

Prudently acquired: The initiative was prudently acquired to address inefficiencies and weaknesses in the management of IT process risks. The project assessed the existing framework, identified areas for improvement, consulted affected IT directorates, developed and approved the updated framework and rollout plan, clarified process ownership, created common process definitions and control artifacts, and established a roadmap for ongoing process improvement. The work did not involve procuring new technology or completing hardware or software upgrades. A schedule extension was managed through an approved change request, and the completed framework, roadmap, capability mapping, and control cards were documented through the formal project closeout process.

Enterprise Information Architect for DMA

Used: Yes. The funding was used to provide dedicated enterprise data-architecture expertise within Data Management and Analytics. The role supported work related to data strategy, information architecture, integration, governance, ownership, and alignment between business and technology requirements.

Useful: The initiative provides customer value by strengthening the foundations required for reliable, consistent, and responsible use of information across MPI. Enterprise data architecture supports clearer ownership, stronger governance, more consistent data structures, and better alignment between business needs and technology solutions. These capabilities reduce the risk that fragmented or inconsistent information affects operational decisions or service delivery and improve MPI's readiness for future reporting, analytics, integration, and modernization initiatives.

Prudently acquired: The initiative was prudently acquired to address the documented need for specialized enterprise data-architecture leadership as MPI expanded its data-management and analytics capabilities. Rather than representing a discrete technology implementation, the approved funding established dedicated expertise focused on data strategy, architecture, integration, governance, and business-technology alignment. This enabled MPI to develop foundational direction and architectural capability before undertaking larger future data investments.

eSignature

Used: Yes. eSignature was implemented and is actively used. The initiative established an enterprise capability that allows authorized MPI users to prepare, send, track, and retrieve electronically signed documents. Delivery included supporting templates and

processes, recorded training, onboarding of more than 50 employees from several corporate functions, user guidance, vendor resources, and operational support arrangements. The service was transitioned to the Digital Solutions Centre of Excellence before project closeout.

Useful: The initiative provides customer value by establishing the technology required to offer customers a more convenient alternative to printing, physically signing, and scanning documents. The approved business case identified improved customer service, greater flexibility, choice and convenience, reduced paper-based processes at MPI and independent broker locations, improved system integration by avoiding scanning, and shorter completion times for face-to-face transactions as expected benefits. The enterprise capability also provides a reusable foundation that can support additional customer-facing and internal transactions as the applicable business processes, legal requirements, and system integrations are approved.

Prudently acquired: The initiative was prudently acquired through an approved detailed business case and established project-governance activities. Before implementation, MPI assessed the hardware, software, source-system, capture, storage, security, integration, and legal requirements associated with electronic signatures and evaluated the technical options needed to establish the capability. Delivery included implementation of the service, development of supporting processes and templates, user onboarding, training, documentation, operational support arrangements, and transition to the Digital Solutions Centre of Excellence. The project completed its closeout reporting after remaining work was managed through an approved change request.

[REDACTED]

[REDACTED].

[REDACTED].

[REDACTED].

HRMS Gap Analysis

Used: Yes. The HRMS Gap Analysis was completed and produced assessment and planning deliverables for potential future HRIS modernization. The completed work included approved future-state requirements, an HRIS software request for proposals, readiness and cost analyses, supporting business cases, high-level employee and foundational data requirements, timecard discovery documentation, a data-migration strategy, and related assessments. The project closed on April 21, 2023.

Useful: The initiative provides customer value by reducing the risk of making a significant future investment in HR technology without an adequate understanding of MPI's requirements, data, processes, costs, and implementation readiness. The completed capability map, readiness tactics, data requirements, migration strategy, cost analysis, and business-case documentation can be reused in future planning and reduce the need to repeat foundational discovery. This supports the sustainability of internal services and improves MPI's readiness to modernize the systems and processes supporting the workforce responsible for customer service delivery.

Prudently acquired: The initiative was prudently managed as a bounded assessment and planning project. The work contemplated structured requirements gathering, business and technical stakeholder involvement, request-for-proposal development, vendor-evaluation planning, architecture review, reporting, and oversight. When corporate priorities and external conditions changed, MPI approved a revised scope rather than proceeding with the full original plan.

[REDACTED]

[REDACTED].

[REDACTED].

[REDACTED].

Information Technology Service Management (ITSM) System Replacement

Used: Yes. The initiative replaced the legacy on-premises BMC Remedy platform with a cloud-based IT service-management solution. The implemented platform supports core service-management processes, including incident, change, problem, knowledge, service-request, service-catalogue, asset, service-desk, and reporting functions. The replacement was placed into production by December 31, 2023, and the legacy Remedy environment was subsequently decommissioned.

Useful: The initiative provides customer value by sustaining the technology services on which MPI's customer and business operations depend. Replacing the legacy platform before the end of extended support reduced the risk of service disruption, unsupported technology, security exposure, and increasing operational complexity. The cloud-based platform supports more consistent management of incidents, problems, changes, requests, and service knowledge, helping technology teams restore and maintain services more effectively. Its scalability, disaster-recovery capability, and continuing

vendor support also provide a more sustainable platform for future service-management needs.

Prudently acquired: The initiative was prudently acquired to replace a business-critical platform approaching the end of extended vendor support. MPI conducted a formal procurement through RFP 3179, evaluated more than 17 responses, selected a cloud-based platform and implementation partner, and completed configuration, data migration, testing, training, production deployment, operational transition, and decommissioning of the legacy environment. The selected Software-as-a-Service approach reduced dependence on internally maintained infrastructure while providing the IT service-management capability required to support ongoing operations.

Investment Reporting Solution

Used: Yes. The Investment Reporting Solution was implemented and is actively used to support investment performance measurement and reporting. The solution uses data from MPI's investment accounting system and external sources to support risk and return calculations, performance attribution, compliance reporting, peer comparisons, benchmarking, and reports for Executive and Board oversight. Following the competitive procurement process, **[REDACTED]**. The project was completed and closed on July 31, 2024.

Useful: The initiative supports customer and ratepayer value by improving the information used to oversee MPI's investment portfolio. The business case identified automated risk and return calculations, more timely and accurate reporting, reduced risk of manual error, faster responses to information requests, and more time for Investment Department staff to analyze the drivers of portfolio risk and return as expected benefits. Replacing spreadsheet-based reporting with a dedicated solution supports more consistent and efficient reporting to Executive and the Board and strengthens the information available for investment oversight and decision-making on behalf of ratepayers.

Prudently acquired: The initiative was prudently acquired through a competitive procurement and evaluation process. RFP 3110 was issued in April 2022 and received seven responses, followed by vendor demonstrations and trials. When negotiations with the preferred vendor did not proceed because of a data-security issue, MPI reassessed the available options and sought approval to implement the second-ranked Moody's solution, which honoured its submitted pricing. The approved approach included the solution and first-year licensing, required third-party benchmark and peer data, data extracts from the investment accounting system, implementation, testing of key reports and interfaces, user training, and ongoing support. This approach allowed MPI to

preserve the intended reporting benefits while responding to the security concern identified during vendor negotiations.

IT GRC Framework

Used: Yes. The IT GRC Framework project established documented frameworks for IT process governance, compliance management, and technology risk management. The completed structures, roles, processes, and supporting artifacts provide a common basis for governing technology risk and compliance activities. The project closeout report confirms completion of the framework deliverables while noting that continuing implementation of the IT process-governance framework remained an operational responsibility within IT.

Useful: The initiative provides customer value by strengthening how MPI identifies, oversees, and responds to technology, cybersecurity, and compliance risks that could affect customer information or service delivery. Consistent governance and risk-management practices improve accountability and support earlier identification and mitigation of control weaknesses. The frameworks also make these activities more sustainable by replacing isolated or informal practices with repeatable approaches that can adapt to emerging technologies, risks, regulatory expectations, and future modernization.

Prudently acquired: The initiative was prudently acquired to formalize MPI's approach to technology governance, risk, and compliance. The project assessed existing practices, defined roles and responsibilities, established process-governance, compliance-management, and technology-risk frameworks, and created supporting artifacts for ongoing implementation. The work deliberately established the necessary framework and accountability structure, with continuing operation and maturity assigned to the responsible technology functions after project completion.

[REDACTED]

[REDACTED].

[REDACTED].

[REDACTED].

KnowledgeNet and Broker Online (BOL) Re-platforming

Used: Yes. The initiative established a consolidated **[REDACTED]**___ for KnowledgeNet and Broker Online, replacing the separate knowledge platforms previously hosted on **[REDACTED]**. The resulting solution is used by MPI employees and brokers to access knowledge content, operational information, procedures, communications, and broker-support resources. The solution brought the two knowledge bases onto a common platform while maintaining role-based separation of content for internal users and the broker community. The project completed its minimum viable product deliverables and was closed in November 2024 after an improved architectural direction removed the need for some of the software development originally planned. Remaining benefits continued to be pursued through operational work.

Useful: The initiative provides customer value by maintaining the knowledge platforms used by employees and brokers who deliver MPI products and services. **[REDACTED]** _____ reduced the risk that these users could lose access to the information needed to support customer transactions and respond to customer questions. The consolidated [REDACTED] solution also introduced a common

publishing platform, streamlined authoring and publishing, reduced the time required to publish and update articles, automated content replication, and reduced dependence on technical resources. These improvements support more timely and consistent access to operational information for the employees and brokers serving customers.

Prudently acquired: The initiative was prudently acquired to address the operational and supportability risks created by **[REDACTED]**. MPI selected a like-for-like re-platforming approach intended to preserve the existing knowledge services while moving them to supported technology with a useful product life and capacity for future growth. The work included consolidating two separately hosted knowledge platforms,migrating content to [REDACTED], establishing role-based access controls, and completing the minimum viable product items. When the architectural direction changed, MPI closed the project rather than proceeding with software development that was no longer required and transitioned the remaining benefit opportunities to operational work.

[REDACTED]

[REDACTED].

[REDACTED].

[REDACTED].

[REDACTED]

[REDACTED].

[REDACTED].

[REDACTED].

Requirements Management Solution (Proof of Concept)

Used: Yes. The initiative completed a proof of concept to evaluate standardized requirements tooling and developed a draft Requirements Management Framework, including supporting governance, standards, processes, and implementation approach. The proof of concept demonstrated the potential usefulness of requirements-management tooling for traceability, impact assessment, versioning, reporting, and change management. Although no enterprise tool was implemented or transitioned into operations, the draft framework outputs informed the subsequent development of MPI's enterprise Requirements Management Framework.

Useful: The initiative provided value by testing potential technology capabilities and developing foundational requirements-management practices. Following the proof of

concept, MPI's approach evolved from a standalone Requirements Centre of Excellence concept to a top-down enterprise framework integrated into existing governance processes. This was a continuation of the requirements-management work, rather than a separate initiative operating in isolation. The current requirements management framework provides consistent requirements practices, clearer ownership, and traceability from approved business outcomes through solution design, testing, and implementation. The framework is foundational and is intended to evolve through practical application, governed improvement, and evidence of adoption and effectiveness.

Prudently acquired: The initiative was prudently acquired as a bounded proof of concept rather than a full implementation. It allowed MPI to evaluate potential tooling and develop a draft framework before committing to further funds. MPI held off on tooling implementation while the enterprise Requirements Management Framework was further developed and endorsed, ensuring that governance, accountability, and requirements practices were established before considering a broader technology investment. The proof-of-concept findings remain available to inform any future consideration of requirements-management tooling, but MPI has not committed to procuring or implementing a particular solution.

Undertaking #01

Which year's income data is used in 'Affordibility' KPI? (Ref: Part II – COM Appendix 3, Page 3)

June 24, 2026 CONFIDENTIAL 2027 GENERAL RATE APPLICATION Part II - COM Appendix 3 - Redacted

Affordability: Strategic Goal Summary

Goal 1: Average Insurance Premium as a % of Average Income

Executive SME	[REDACTED]
Reporting Owner	[REDACTED]
Reporting Frequency	Annual
Data Sources / Availability	Statistics Canada / Internal Pricing Data

Baseline	Milestones				
FY15/16 - FY24/25	FY25/26 (Actual)	FY26/27	FY27/28	FY28/29	FY29/30
2.24%	2.01%	< 2.25%	< 2.25%	TBD	TBD

Strategic Intent

The average insurance premium as a percentage of average income is a vital metric for corporate strategy because it reflects the economic and affordability impact on consumers, indicating how accessible necessary coverages are to the average person. Additionally, it highlights our competitiveness in the market by showing how our pricing aligns with consumer income levels.

***This metric has not been captured previously.**

How it's calculated

The ratio of average premium to the average income

Premium Data:
- Vehicle Type: Passenger Vehicle and Trucks
- Insurance Use Code: All Purpose and Pleasure
- Product: Basic Autopac Insurance

Interpretation: Higher ratio indicates insurance is becoming less affordable to Manitobans, lower ratio indicates increased affordability

Considerations / Limitations

Statistics Canada has various sources for income data
- Survey of Employment, Payrolls, and Hours – average weekly earnings
- available, gross earnings only, multiply by 52 to annualize income (least accurate but most recent).

Other sources NOT used for calculation:
- Canadian Income Survey – average income available pre and post tax, however, 1 year lag (more accurate and applicable)
- Census – average/median income available pre and post tax, however, only available every 5 years (most accurate but least current)

3

Manitoba Public Insurance Page 3 of 19

RESPONSE:

The Affordability KPI uses Survey of Employment, Payrolls and Hours (SEPH) gross weekly earnings data for the same fiscal year in which the Basic insurance rates are applicable.

SEPH data is used because it has approximately a two-month reporting lag, compared with an approximately two-year lag for net income data. To calculate annual income for the KPI, weekly earnings from SEPH are annualized by multiplying the weekly amount by 52.

Accordingly, the Affordability KPI result reported in Appendix 3 for the 25/26 fiscal year uses actual gross income data for the 52 weeks of the 2025/26 fiscal year.

Undertaking #02

MPI to provide information as to how many rural and northern communities have been offered the Driver's Ed courses.

RESPONSE:

During the 2025/26 Fiscal Year, 53 rural and northern Manitoba communities were offered the High School Driver's Ed course (Driver Z). While courses are delivered in the communities listed below, students may also attend courses in nearby communities, including Winnipeg, which broadens access to Driver Z across the province. The locations and number of courses offered were:

Driver Z Courses - Fiscal Year 2025/26

Community	Number of Courses

Undertaking #03

MPI to provide information as to how much of the 2027/'28 Driver Education and Improvement Program forecast is for expanding courses in rural and northern communities.

RESPONSE:

MPI continually works to improve the availability of the High School Driver Education program (Driver Z) in rural and northern communities.

In 2025/26, MPI expanded Driver Z offerings in rural and northern communities by 19%, compared with 2024/25.

Area	2025/26 Seats Offered	2025/26 Increase in Offerings
Rural Manitoba	4,184	24%
Northern Manitoba	244	20%

Region	2025/26 Seats Offered	2025/26 Increase in Offerings
Brandon	505	50%
Eastman	40	0%
Interlake	760	29%
Northern Manitoba	244	20%
Parkland	286	27%
South Central	1,448	26%
South East	673	12%
South West	286	6%
West Central	186	25%
Total	**4,428**	**19%**

MPI has continued this expansion in the 2026/27 fiscal year, and is targeting an 8-10% increase in course availability in rural and northern communities during both 2026/27 and 2027/28.

Over the past two fiscal years, MPI has increased spending in rural and northern communities to fund the increase in Driver Z courses and seats, and plans to continue increasing spending over the 2026/27 and 2027/28 fiscal years.

Area	2024/25 YOY Increase In Spending - Actual	2025/26 YOY Increase In Spending - Actual	2026/27 YOY Increase In Spending - Projected	2027/28 YOY Increase In Spending - Forecasted
Rural Manitoba	$199,975	$548,861	$158,000	$170,000
Northern Manitoba	$25,213	$20,580	$8,000	$10,000

In January 2025, MPI updated instructor contracts, increasing pay for Driver Z instruction by up to 35% and added fleet vehicles, with the intention of attracting new and retaining existing instructors in rural and northern communities. This increase in pay is reflected in both the 2024/25 and 2025/26 increase in program spending. Further increases in spending reflect the work done to expand course offerings in rural and northern communities.

While MPI continues to actively recruit Driver Z instructors in a number of rural and northern communities, recruitment activity does not necessarily indicate a lack of program access. A review of course availability between April 2025 and March 2026 found that nearly all identified recruitment communities had access to Driver Z programming either through courses offered within the community or through nearby community options. During the review period, only one community, Lynn Lake, did not have either a local course or a nearby alternative; however, Lynn Lake was only recently added as a recruitment community. These results reflect the progress made in expanding and maintaining Driver Z access across rural and northern Manitoba.

In 2025/26, students in rural and northern Manitoba filled 88% of the Driver Z seats offered, demonstrating that the current course offerings are in large part meeting the demand for courses in these communities.

Region	2025/26 Seats Offered	2025/26 Seats Filled	2025/26 Filled Ratio
Rural Manitoba	4,184	3,736	89%
Northern Manitoba	244	149	61%

Region	2025/26 Seats Offered	2025/26 Seats Filled	2025/26 Filled Ratio
Brandon	505	457	90%
Eastman	40	38	95%
Interlake	760	681	90%
Northern Manitoba	244	149	61%
Parkland	286	231	81%
South Central	1,448	1,291	89%
South East	673	626	93%
South West	286	256	90%
West Central	186	156	84%
Total	**4,428**	**3,885**	**88%**

Undertaking #04

MPI to advise was the forecast found in Section 5.3 of Exhibit 39 communicated to MPI's Board or Risk Management Committee and was any concern expressed with respect to same.

RESPONSE:

While Section 5.3 of Exhibit 39 (Financial Condition Test Report) was not included in the presentation, MPI management had discussions with the Audit and Finance Committee about the modified scenario on September 16, 2026. No concerns regarding the Alternative Base Scenario were raised during the discussion.

Undertaking #05

MPI to reconcile how the hundred million dollar reduction flowed into the financials, as in how much went through incurred claims and how much is as finance income.

RESPONSE:

The impact of the PIPP Termination Rate Project was booked to financial statements as of February 28th, 2026, resulting in $97.307M reduction. See Figure 1.

- Incurred claims decreased by $62.345M from impacts to IBNR, ULAE, Inflation, Discounting and Risk Adjustment.

- Finance income increased by 34.962M from impacts to change in discount rate and unwinding.

As of March 31st, the financial impact of the PIPP Termination Rate Project is estimated at a $100M reduction. The updated amount reflects changes in interest rates and inflation.

Figure 1 PIPP Termination Rate Project Impacts

Incurred Claims - PIPP Termination Rate Project Impacts

($'s in '000's)	PIPP	Basic Pre PIPP	Total
IBNR	55,487	(6,752)	48,735
ULAE	14,626	(1,061)	13,565
Inflation adjustment	253,954	(930)	253,024
Discounting	(386,387)	13,601	(372,786)
Risk adjustment	(4,697)	(186)	(4,883)
Total	**(67,017)**	**4,672**	**(62,345)**

Note: Incurred claims expenses presented as positive and income as negative.

Net Insurance Financial Result - PIPP Termination Rate Project Impacts

($'s in '000's)	PIPP	Basic Pre PIPP	Total
Change in discount rate PIPP	23,299	0	23,299
Change in discount rate non-PIPP	0	11,808	11,808
Unwinding of discount rate PIPP	(567)	0	(567)
Unwinding of discount rate non-PIPP	0	422	422
Total	**22,732**	**12,230**	**34,962**

Undertaking #06

MPI to provide the Treasury Board minute or Order in Council that set the $54 million. (TAKEN UNDER ADVISEMENT)

RESPONSE:

MPI is not provided Treasury Board minutes from Government. Rather, MPI is provided with an email annually which confirms approvals by Treasury Board as it relates to MPI's estimates (budget) submission.

Attached as *Appendix 1* is a redacted version of the email relating to DVA funding.

From: [redacted]
Sent: March 3, 2026 3:57 PM
To: Campos, Maria [redacted]
Subject: TB Decision: 2026/27 MPI Estimates

CAUTION: [EXTERNAL] This message comes from an external organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hi Maria, TB decision on MPI's 2026/27 estimates proposal is as follows:

- [redacted]
- Treasury Board approved MPI to retain additional revenue of up to $13,800,000.00 beginning 2026/27, for a total retention of $54,000,000.00, from automobile and motor carrier licenses and fees to cover operating costs to administer the Drivers and Vehicles Act.
- [redacted]
- [redacted]
- [redacted]

Regards,

[redacted]

Assistant Deputy Minister | Executive Finance Officer

Corporate and Strategic Services

Department of Justice

Government of Manitoba

[redacted]

Undertaking #07

MPI to undertake to file the annual funding history from 2004 to 2025/'26.

RESPONSE:

Please see *Figure 1* below.

Figure 1 DVA Government Funding

Line No.	Fiscal Year	DVA Funding	Increase / (Decrease)

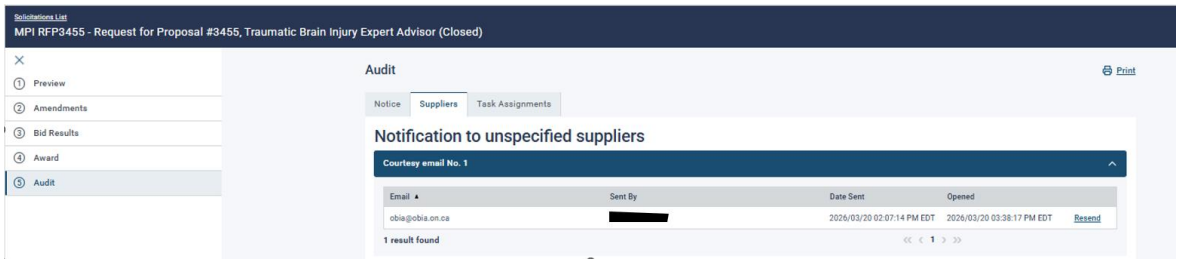
Undertaking #08

MPI to advise when the adjuster and senior adjuster moved to a higher pay grade after reclassification.

RESPONSE:



Market adjustments occurred in February 2025 and July 2025 depending on the adjuster classification. The market adjustment was not reflected in the 2026/27 budget as the changes happened after the conclusion of the 2026/27 budget cycle.

Undertaking #09

MPI to provide notification from Merx re RFP 3445.

RESPONSE:

The following is confirmation of notification of the RFP to the Ontario Brain Injury Association.

Undertaking #10

MPI to confirm whether or not MPI, in fact, sent correspondence to the Ontario Brain Institute.

RESPONSE:

Inadvertently, MPI did not send correspondence to the Ontario Brain Institute. The communication (Merx notification) was instead sent to the Ontario Brain Injury Association~~, which aligned more with the formal request MPI received from the Government of Manitoba (see *Appendix 1, Government Request – Traumatic Brain Injuries*), resulting from the PUB's recommendation to Government in the 2025 General Rate Application (Recommendation 15.6). Government requested that "*…MPI hire an independent investigator to examine MPI's current process of handing claimants with traumatic brain injuries*."~~

The Ontario Brain Injury Association did not respond to the RFP.

As confirmed by Mr. Bowering,[1]MPI is currently awaiting the report which assesses MPI's current process of handling claimants with traumatic brain injuries as compared to best practices, in compliance with the government request. See *Appendix 1.* ~~or clarity, in Order 2/25 the PUB recommended that Government appoint a doctor practicing at a recognized institute that focused on brain injuries, citing the Ontario Brain Institute as an example.~~

Manitoba
Justice
Deputy Minister of Justice and Deputy Attorney General
Room 110 Legislative Building, Winnipeg, Manitoba, Canada R3C 0V8

FEB 18 2025

Carmen Nedohin, Chairperson
Board of Directors
Manitoba Public Insurance
Box 6300
Winnipeg, MB R3C 4A4

Dear Carmen Nedohin:

Manitoba Public Insurance (MPI) appeared before the Public Utilities Board (PUB) on January 7, 2025 regarding the 2025 General Rate Application.

As a result of this hearing, the PUB Order 2/25 provided recommendations to the Government of Manitoba, including that the government appoint an independent expert from a recognized institute to create a report outlining the current scientific knowledge and proven medical best practices and best practicable technology to diagnose, assess, and manage brain injuries and compare them to the current practices and procedures of MPI.

To address the PUB's recommendation, the Government of Manitoba is requesting MPI hire an independent investigator to examine MPI's current process of handling claimants with traumatic brain injuries.

Yours truly,

Jeremy Akerstream, K.C.
Deputy Minister of Justice and Deputy Attorney General

c Honourable Matt Wiebe, Minister of Justice and Attorney General
Maheshwor Adhikary, Assistant Deputy Minister, Corporate and Strategic Services

Undertaking #11

MPI to provide the amended versions to PUB (MPI) PreAsk 6,7 and 8.

RESPONSE:

Please see *MPI Exhibits 74, 75, and 76.*

Undertaking #12

MPI to provide if the definition is different than what was just heard with respect to 'earnings' on page 28.

RESPONSE:

"Earnings" on slide 13 refers to net income from an accounting perspective.

Undertaking #13

MPI to confirm that WTW's assumptions related to real estate include some leverage, and at what percentage

RESPONSE:

WTW's assumptions are intended to reflect how typical core strategies are implemented in the market. For real estate, these strategies generally use low Loan-to-Value leverage average that generally range from 0% to 50%. Accordingly, our modelling reflects this by using a 25% leverage assumption for real estate.

Undertaking #14

MPI to provide a document comparing the sentence in the 2025 Annual Report (page 84, second paragraph, first line) with Ms. Low's understanding of how it should read.

RESPONSE:

The 2025 Annual Report (page 82, second paragraph) states:

"In applying the top-down approach, the Corporation selected a reference portfolio that is based on the composition of the marketable bond portfolio in the asset portfolio for the Basic line of business."

The selected reference portfolio includes all fixed income asset classes, excluding real estate, from the Basic lines of business, which includes the non-marketable municipal MUSH bonds.

The revised wording should read:

"In applying the top-down approach, the Corporation selected a reference portfolio that is based on the composition of all asset classes for the Corporation's Basic Claims asset portfolio, excluding real estate. The reference curve is constructed by applying weights to federal bonds, provincial bonds, municipal bonds, corporate bonds, and commercial mortgages."

Attention: Jennifer Dubois, Associate Secretary

Dear Ms. Dubois:

RE: Manitoba Public Insurance Corporation (MPI) 2027 General Rate Application (GRA) – MPI Exhibit #8 - Amended version of RMO – 1 and supporting schedules.

In the above matter, please find enclosed MPI Exhibit #8.

Yours truly,

Per: Jennie Stamp

Steve Scarfone
Senior Regulatory Counsel

MPI Exhibit #8

A $10.1 million imbalance between the Enterprise Data Warehouse (EDW) and BI3 was identified by the Claims division during a routine operational review of a claim in late May 2026. The discovery prompted a comprehensive investigation and reconciliation of all reserves recorded in both EDW and BI3. Due to the time required to understand, investigate, and quantify the issue, it was not identified early enough to assess its impact on rate allocations, and the resulting implications were not included in the original General Rate Application (GRA).

The investigation identified two isolated system issues that caused reserve changes to be recorded correctly in BI3 but not transmitted properly to EDW. A full reconciliation of all open and closed claims confirmed that the total imbalance was limited to $10.1 million, of which approximately $8.5 million (85%) related to three claims. As every claim was reviewed as part of the reconciliation process, MPI has confirmed that $10.1 million represents the full extent of the imbalance. The imbalance spans multiple loss years because it arose from reserve change transactions on open claims; however, the transactions themselves occurred during the 2025/26 loss year.

The root causes of both system issues have been identified, and corrective system changes have been implemented. Testing protocols have also been enhanced to include these uncommon scenarios in future system testing. Because the issue was detected through operational processes rather than an automated control, MPI has implemented a monthly reconciliation process to address the control gap. In addition, Data & Analytics will establish a formal communication process to ensure timely awareness across the data community when data issues affecting EDW or other data sources are identified, assessed, or resolved.

Pricing Impact

The actuarial team was not informed of the imbalance until June 24, 2026, the date the application was filed. As a result, the original GRA submission incorporated analyses that reflected the imbalance. MPI is therefore filing amendments to Figure RMO-1 and the supporting documentation.

Although the imbalance did not affect MPI's overall indicated rate change, as ultimate losses were derived using a paid-loss methodology, it did affect the allocation of indicated rate changes among major classes. Specifically, loss costs for Income Replacement Indemnity (IRI) coverage were overstated for Major Classes 1 and 3.

To correct the imbalance, MPI manually adjusted the incurred losses associated with the three claims responsible for approximately $8.5 million of the total discrepancy. Of these claims, only one affected the allocation of costs among major classes. A second claim arose from an accident that occurred prior to 2012 and therefore fell outside the experience period used in the analysis. The third claim involved an unidentifiable vehicle and consequently affected only MPI's pooled claims experience.

Pursuant to PUB Order 97/05, when an accident involves only MPI-insured vehicle(s) and no other injured party, total Personal Injury Protection Plan (PIPP) costs must be allocated equally on a per-vehicle basis across the rating categories of the involved vehicles. Consistent with this requirement, MPI allocated the imbalance equally between the vehicles involved in the claim, which belonged to Major Classes 1 and 3. The resulting impact on major class loss costs is shown in Part VII Rate Indication, RI Appendix 1, Table 5 – Major Class Loss Costs.

MPI acknowledges that the imbalance also affects the calculation of major class relativities. However, given the relatively small size of the adjustment and the mitigating effect of credibility weighting within the relativity methodology, MPI has not revised the major class relativities presented in Part VII Risk Classification, RC Appendix 4.

Please refer to the following appendices for updated schedules:

- Ratemaking Overview – Figure 1, and Rate Indication Figures 11, 14, 15,16 and 17.
- Updated figures DR 1, 2, 3, 4, 5 and 6; DR Appendices 1 and 2.
- Application Rate Table, ART appendix 1 and Rate Indication, RI Appendix 1 (electronically only).

MPI Exhibit #9

During the first round of the Information Request process, MPI identified a discrepancy in the calculation of operating expenses used in ratemaking for the 2027 GRA. As part of an update to the rating algorithm to incorporate initiative expenses, modifications were made to the operating expense calculation. During implementation of this change, the calculation logic was revised and the step that added acquisition expenses to operating expense for ratemaking purposes was inadvertently omitted. Acquisition expenses had historically been included in operating expenses and reported in Figure PF-1, line 9. As a result of the omission, the acquisition expense amounts were not added to the average forecast operating expenses from fiscal years 2027/28 and 2028/29. Consequently, the undiscounted costs shown in Figure RI-4 were understated by $6.7 million.

Following identification of the matter, MPI reviewed the impact on the rate indication and updated the calculation to reflect the intended methodology and consistency with prior filings. This results in an indicated overall rate increase of 2.86%, compared to the 2.38% indicated in *Part VII, Rate Indication Chapter*.

Accordingly, MPI is submitting these supplemental schedules to provide greater visibility of the underlying ratemaking inputs and impact on the relief sought by MPI.

MPI has attached an updated version of *Part VII, Appendix 01, Table 4*, while a reconciliation to *Part VIII, Financial Forecasting* can be seen in the figure below.

Figure 1 Reconciliation of Operating Expenses Used in Ratemaking

Line No.	Description	Fiscal Year 2027/28	Fiscal Year 2028/29	Rating Year 2027/28	Source of Forecast
1	**Acquisition Expenses**	6,647	6,807	6,727	*Figure PF-1, Line 9*
2	**Other Operating Expenses**	116,912	121,137	119,025	*Figure PF-1, Line 25*
3	**Initiative Expenses Removed**	(18,316)	(18,465)	(18,391)	*Figure PF-1, Line 30*
4	**Operating Expenses excluding Initiative Expenses**	105,243	109,479	107,361	*Sum of Lines 1 through 3*
5	**Prior Year Initiative Expenses Included for Ratemaking**			10,124	*Figure PF-1, Line 31*
6	**Operating Expenses with Prior Year Initiative Expenses Included for Ratemaking**			117,485	*Sum of Lines 4 and 5*
7	Notes:				
8	Amounts presented in the table are on an undiscounted basis.				
9	Minor differences between the total undiscounted costs presented in the Pro Forma Statements and the corresponding				
10	amounts in the Rate Indication appendices and figures are the result of rounding.				

Updated versions of figures RI-4, RI-14 and RI-15 and Proformas 1, 2 and 3 are accompanying this exhibit.

Manitoba Public Insurance

1. INTRODUCTION

The business activities undertaken by MPI in fulfilling its mission are exposed to a variety of risks.

This risk appetite statement ("RAS") considers the most significant risks that MPI is exposed to and provides an outline of the approach to managing these risks.

MPI's risk appetite is set annually by the Board of Directors ("Board") with the goal of aligning risk-taking with the Corporation's statutory requirements, strategic business objectives and capital planning.

The Risk Committee of the Board (RCB) and the Executive Risk Management Committee (ERMC) monitor MPI's adherence to the RAS and make necessary updates to capture changes in MPI's strategic initiatives, operating environment, and risk profile.

The purpose of the RAS is to clearly state the general principles for MPI's risk-taking, to raise risk awareness across the organization, and to guide the staff regarding acceptable and unacceptable behaviour.

The RAS is implemented through MPI's policies, standards, procedures, monitoring metrics, tolerances and limit system and internal controls. The RAS is thereby embedded in the MPI's core processes and governs the business activities of MPI in a holistic way.

2. OBJECTIVES

The objectives of the RAS are the following:

- To provide a clear articulation of MPI's risk-taking, risk mitigation and risk avoidance, and to define risk-taking at the aggregate level. The RAS creates a foundation for effective communication of risk among internal and external stakeholders.
- To increase understanding of MPI's material risk exposures and raise risk awareness across the organization.
- To positively impact the defined risk culture of MPI.
- To support the Board and MPI Executive and the senior management in planning, formulating, and executing strategic business decisions to achieve the long-term objectives of MPI.
- To provide means for the Board of Directors and MPI Executive and senior management to engage in discussions on risk-taking, risk management, and business strategy, and their interlinkages.
- To provide tools for the Board of Directors and MPI Executive and senior management to continuously monitor and align MPI's actual risk profile with the risk appetite.

Manitoba Public Insurance

3. GENERAL STATEMENT OF APPETITE

MPI will act in accordance with its risk appetite statement to achieve its strategic goals and objectives in pursuit of its mission. MPI must employ sound risk management principles, including identifying, measuring, monitoring, and controlling risk; transparent decision making; effective communication; and prioritization of risk. MPI manages eight interrelated categories of risk to effectively reflect its responsibilities as the trusted auto insurance, motor vehicle registrar, and driving licensing services provider for every Manitoban. Where MPI has discretion, the Corporation is willing to assume certain risks to remain agile in meeting the business challenges of its evolving business landscape. Strong risk management practices will enable the Corporation to operate proactively while controlling risk.

4. THE RISK MANAGEMENT FRAMEWORK

A “three-lines of defence” governance model is used to allocate risk management responsibilities to particular areas of MPI. The first line of defence is made up of MPI’s business units or functions that perform the day-to-day operations. They are the primary risk-takers and are primarily responsible for identifying, assessing, controlling, and mitigating risks, and ensuring that the activities within their domains are consistent with MPI’s risk appetite and policies. The second line of defence are MPI’s Risk Management functional units, primarily, Enterprise Risk Management (ERM) function and the Compliance function. They are responsible for maintaining the risk management framework and performing oversight on risk management activities performed by the first line of defence. The third line of defence is provided by MPI’s Internal Audit function. It provides the Board and its Committees, and MPI Executive management with independent and objective assurance on the overall effectiveness of the risk governance framework (design and implementation), including the way the first and second lines of defence achieve risk management and control objectives.

Manitoba Public Insurance

5. OVERVIEW

About MPI's Risk Appetite

- Risk appetite is an integral part of MPI's Enterprise Risk Management Framework.
- Risk appetite articulates the level and type of risk the corporation will accept while conducting its mission and carrying out its strategic plan.
- Where MPI has discretion, the corporation is willing to assume certain risks to remain agile in meeting the challenges of an evolving auto insurance and driver licensing landscape.
- MPI has established risk appetite in eight categories.
- MPI has an overall Low risk appetite, and Very Low or Moderate risk appetites in specific areas.
- MPI will align its strategic decisions with its risk appetite statement.

Risk Appetite Definitions

Very Low Appetite

- Inflexible approach with very low possibility of failure.
- No willingness to accept uncertain outcomes relative to achievement of MPI's mission, vision, or strategic objectives.
- Will not accept risk if achieving an outcome is especially important to MPI's mission, goals, or strategic objectives and there is limited possibility of failure to achieve desired outcomes.
- Avoid trading off this objective against achievement of other objectives.

Low Appetite

- Cautious and intentionally conservative.
- Limited willingness to accept uncertain outcomes relative to achievement of MPI's mission, vision, or strategic objectives.
- Will accept risk if achieving an outcome is especially important to MPI's mission, goals, or strategic objectives and there is limited possibility of failure to achieve desired outcomes.
- Prefer to avoid trading off this objective against achievement of other objectives.

Moderate Appetite

- Measured and deliberative approach.
- A degree of willingness to accept uncertain outcomes relative to achievement of MPI's mission, goals, or strategic objectives.
- Will accept selected risks but must be soundly justified.
- Willing to trade off this objective against achievement of other objectives in certain circumstances.

High Appetite

- Flexible approach with higher possibility of failure.
- Willing to accept uncertain outcomes relative to achievement of MPI's mission, goals, or strategic objectives.
- Willing to take risks when long-term benefits are foreseeable and outweigh risks.
- Willing to trade off this objective against achievement of other objectives.

Manitoba Public Insurance

Enterprise Risk Appetite

Strategy Risk

Risk that corporate strategy selection, prioritization, modification, and implementation jeopardize achievement of MPI's goals and objectives.

Low Risk Appetite

- Ineffective or inefficient decision making and execution.
- Insuring companies that are not Manitoba owned in the Special Risk Extension ("SRE") Line of Business.
- Executing and achieving of strategy and outcomes not in alignment with MPI's goals and objectives.
- Offering Basic products and providing services outside of MPI's legislated mandate.
- Non-responsiveness to changes in the internal and external operating environment.
- Exposure to non-auto products and services.

Moderate Risk Appetite

- Inability to evolve and adapt.

Earnings Risk

Risk that MPI's activities fail in achieving the desirable profitability. The risk arises from the uncertainties associated with net insurance cash flows, unexpected changes in the investment income, and from ineffective and inefficient use of resources.

Basic Line of Business

The Basic line operates on a break-even basis, prioritizing rate stability and capital adequacy over earnings.

Low Risk Appetite

- Failing to achieve net income outcomes that are closely aligned with budgeted expectations, reflecting a preference for stability and predictability in financial performance.
- Deviating from the equity-weighted average Return on Equity within +/- 5% of 0% calculated over a rolling five-year period.
- Deviating from the budgeted net income of no more than +/- $30 million on average calculated over a five-year historical period.

Extension Line of Business

The Extension line operates on a for-profit basis, with results intended to benefit the Basic line of business.

Low Risk Appetite

- Failing to achieve positive net income outcomes that support sustainable profitability and long-term value creation, while remaining broadly aligned with budgeted expectations.
- Deviating from the equity-weighted average Return on Equity within +/- 10% of 40%, calculated over a rolling five-year period.
- Deviating from budgeted net income of no more than +/- $10 million on average calculated over a five-year historical period.

Deleted: Low Risk Appetite¶
In the Basic Line of Business, deviating from the fiscal year's target value in more than the following percentage points: for the attritional loss ratio: +5, for expense loss ratio: +2, for catastrophe loss ratio: +4, for the prior year loss ratio: -5 to +2, and for the combined ratio: +10. ¶
In the Extension Line of Business, deviating from the fiscal year's target value in more than the following percentage points: for the attritional loss ratio: +10, for expense loss ratio: +5, for the prior year loss ratio: -5 to +2, and for the combined ratio: +15. ¶
In the SRE Line of Business, failing to avoid net losses.¶
Net impact of changes in interest rates on the Basic Line of Business resulting in a variance relative to the fiscal year's budgeted net income after non-recurring items of more than +/- 1% of the current market value of the Basic Claims investment portfolio.¶
Deviating by more than +/- 10% from the fiscal year's budgeted corporate net income.¶
Deviating by more than +/- 10 % from the fiscal year's budgeted expenses. ¶
Moderate Risk Appetite¶
Exposure to interest rates for non-Basic portfolios.

Manitoba Public Insurance

Earnings Risk

Risk that MPI's activities fail in achieving the desirable profitability. The risk arises from the uncertainties associated with net insurance cash flows, unexpected changes in the investment income, and from ineffective and inefficient use of resources.

SRE Line of Business

The SRE line operates on a for-profit basis, and given its relatively small business volume, greater variability in net income is expected.

Low Risk Appetite

- Failing to achieve positive net income outcomes that support sustainable profitability and long-term value creation, while remaining broadly aligned with budgeted expectations.
- Deviating from the equity-weighted average Return on Equity within +/- 10% of 0%, calculated over a rolling five-year period.
- Deviating from budgeted net income of no more than +/- $20 million calculated on average over a five-year historical period.

DVA Line of Business

DVA line operates on a cost-recovery basis.

Low Risk Appetite

- Incurring losses within a given fiscal period that is not fully funded in whole from the equity of the DVA Line of Business.

Solvency Risk

Risk that MPI is unable to absorb losses generated by all types of risks with the available capital.

Very Low Risk Appetite

- Falling in the Basic line of business below a 35% Minimum Capital Test (MCT) ratio based on 1-in-10 year stress testing.
- Falling in the Extension line of business below a 100% MCT ratio.
- Purchasing fixed income securities with a credit rating below BBB-.
- Failing in having enough cash and cash equivalents to meet our obligations.

Low Risk Appetite

- Falling in the SRE line of business below a 200% MCT ratio.
- Contracting with reinsurers having financial ratings below A-.
- Concentrating the exposure to a reinsurer within a reinsurance layer to more than 25%.

Moderate Risk Appetite

- Exposure to changes in unhedged foreign currency.

Moved [1]: <#>Falling in the SRE line of business below a 200% MCT ratio. ¶

Moved (insertion) [1]

Manitoba Public Insurance

Operational Risk

Risk that people, processes, systems, or external events impede MPI's ability to meet its objectives.

Very Low Risk Appetite

- Failing physical security.
- Employee and agent misconduct.
- Failing in being able to operate and self-fund MPI.

Low Risk Appetite

- Lack of proper business continuity planning and information technology disaster recovery.
- Process inefficiency.
- Weak internal corporate governance processes.
- Ineffective or inefficient third-party oversight.
- Ineffective or inefficient portfolio management and program or project execution.
- Ineffective or inefficient modeling design and implementation.

Moderate Risk Appetite

- Outsourcing to third parties including activities that involve outsourced services and use of independent consultants.
- Failure when piloting in the adoption of transformation initiatives.

Technology Risk

Risk that information technology processing, security, stability, capacity, and performance jeopardize core MPI's operations.

Very Low Risk Appetite

- Unauthorized access, use, or release of personally identifiable information, health data, or other sensitive data.
- Noncompliance with applicable technology directives, policies, standards or procedures.
- Lack of resiliency against cybersecurity threats.
- Unplanned downtime impacting systems which support its critical business functions.
- Deliberate misuse of information/data.
- Ineffective information/data management process.

Low Risk Appetite

- Inefficient or ineffective business resiliency planning and execution.
- Untimely analysis and diagnosis of information/data collected.
- Lack of adaptability of technology systems particularly in terms of stability, reliability, capability, performance, and capacity when responding to evolving business requirements and strategic priorities.

Moderate Risk Appetite

- Misalignment of information systems, data, and practices
- Inability to meet external user demands.
- Inability to meet internal user demands, including supporting a mobile workforce.

Manitoba Public Insurance

People Risk

Risk that resource use and employment practices do not align with MPI's mission and strategic objectives.

Very Low Risk Appetite

- Noncompliance with employee practices and with workplace safety laws and regulations.
- Noncompliance with equal employment opportunity principles, diversity principles, and ethical standards.
- Noncompliance with Employment and Labour law, rules, regulations, policy, or procedure, or other matters that could compromise MPI's integrity.
- Noncompliance with the collective agreement.
- Dishonest or fraudulent behaviour.
- Failing physical security measures.

Low Risk Appetite

- Failing in developing employees with the necessary skills and competencies, including critical thinking and sound judgment, retention, succession, leadership development, and training.
- Failing in aligning resource allocation and utilization with mission, strategic goals, and risk.
- Inefficient compensation policies.

Moderate Risk Appetite

- Ineffective or inefficient enterprise workforce plan execution.
- Delaying the recruiting and hiring of talent.
- Ineffective or inefficient employee performance management.
- Empowering staff within the appropriate delegation, oversight, and reporting parameters.
- Acquire talent outside of Manitoba.

Legal & Compliance Risk

Risk that the corporation does not fulfill its obligations under applicable laws, regulations, federal directives, mandates, or executive orders or has gaps in mission-critical functions to maintain a sound auto insurance, motor vehicle registration and driving licensing regime in the Province of Manitoba.

Very Low Risk Appetite

- Noncompliance with applicable laws, regulations, statutory reporting, tax filings, and Manitoba Government directives, mandates, and executive orders.
- Failing in abiding by contractual obligations.
- Poor employee or agent misconduct.
- Gaps in mission-critical functions required to maintain a sound auto insurance, motor vehicle registration, and driving licensing regime in the Province of Manitoba.
- Involvement in money laundering and terrorism financing.
- Having ineffective relationship with legislators.

Low Risk Appetite

- Lack of human resource guidance and practices.
- Failing in preparing for new, modified, or eliminated laws and regulations.
- Failing in managing third party relationships and risks appropriately.

Moderate Risk Appetite

- Ineffective or inefficient interagency coordination.

Manitoba Public Insurance

Reputation Risk

Risk that negative perception jeopardizes MPI's credibility, achievement of mission and strategic objectives, or its ability to maintain MPI's business model.

There are intentional overlaps with other risk categories, reflecting the interplay between other risk categories and reputational risk. Reputational risk may be directly impacted by a number of actions and/or inactions that are contemplated in other risk categories (reputational considerations are embedded across all areas of the organization), signaling the significance of reputational risk to MPI.

Very Low Risk Appetite

- Failing in performing MPI's functions as assigned to it by law.
- Suffering breaches in information security.
- Failing in being fiscally responsible.
- Human resources malpractices.
- Lack of responsibility and accountability.

Reputation Risk

Low Risk Appetite

- Inefficient or ineffective internal and external communication strategies.
- Lack of issue escalation and response processes.
- Tarnished MPI culture (external and internal view of MPI's vision, mission, values, and behaviours).
- Not taking a leadership role in pursuing and/or defending issues supportive of MPI's core mission.

6. IMPLEMENTATION OF MPI'S RISK APPETITE

The ERM Function, headed by the Chief Risk Officer, is responsible for the implementation of the RAS across the corporation.

All leaders of divisions, directorates and departments, as well as the Enterprise Risk Owners are responsible for the complying with this Statement.

6.1. Communication

MPI's RAS is published on the MPI's Intranet through the ERM Share Point Site.

6.2. Risk Assessments

The risk appetites described in this RAS are the broad description of the amount of risk MPI is willing to accept or retain to achieve its objectives. The RAS comprises a series of statements that describe MPI's attitude towards risk taking. The divisions, the directorates, the departments, and the enterprise risk owners are required to manage their specific risks in a manner that is consistent with the RAS, and to manage and mitigate any risks outside the agreed risk tolerances.

Manitoba Public Insurance

6.3. Risk Tolerances, Risk Limits, and Risk Metrics

MPI's risk tolerances will use the risk appetite in the RAS to inform:

- expectations for mitigating, accepting, and pursuing specific types of risk;
- boundaries and thresholds of acceptable risk taking, and;
- actions to be taken or consequence for acting beyond approved tolerances such as escalation procedures.

Risk tolerances are set to identify the level at which the risk can be accepted, rather than needing further mitigation to reduce the risk and are established at different levels across MPI (i.e., division, directorate, department) as appropriate.

Risk limits are defined to monitor that actual risk exposures across MPI do not deviate too much from the defined risk tolerances. Exceeding risk limits will typically act as a trigger for a risk management action.

Risk tolerances and risk limits are measured and monitored as per the risk metrics identified below:

- *Key Risk Indicators (KRIs)*
  KRIs are metrics used by management to provide an early signal of increasing risk exposures in different areas of the corporation.
- *Key Control Indicators (KCIs)*
  KCIs are metrics that provide information on the extent to which a given control is meeting its extended objectives (in terms of loss prevention, reduction, treatment, and acceptance). In so doing, they can be used to measure the effectiveness of particular risk controls at a particular point in time.

6.4. Monitoring & Reporting

A primary benefit of using indicators lies in their ability to link current exposure levels to risk limits, risk tolerances, and risk appetites.

By monitoring a set of appropriate risk indicators and by checking their actual values and trends against agreed tolerances and limits, an organization is able to see whether its risk exposures remain within its appetite for risk or exceed it. Hence the monitoring of risk indicators is an important mechanism by which an organization's management can gain assurance that it remains within it stated risk appetite.

The use of risk indicators also supports effective governance by providing a transparent, repeatable, and consistent means for tracking both risk exposures and management activity.

Reporting provides assurance that the risk appetite is effectively incorporated into management decisions. By embedding risk appetite within the management processes of MPI, it directly contributes to the maintenance of a robust control environment and sound risk governance.

Manitoba Public Insurance

7. REVIEW

This RAS is reviewed annually, or whenever there is a significant change to the MPI's internal and external environments. This review is coordinated by the ERM Function.

The ERMC proposes changes to the RAS to the Risk Committee of the Board ("RCB").

The RCB reviews the proposed changes by the ERMC and recommends a revised RAS for the approval by the Board of Directors ("BOD"). The BDO approves the revised version of the RAS.

Manitoba Public Insurance

Risk Appetite Statement

Approved by the Board of Directors of Manitoba Public Insurance on

June 24, 2026

Manitoba Public Insurance

Approved:	**Board of Directors**
Entry in force:	**June 24, 2026**
Document ownership:	**Enterprise Risk Management Function**
Implementation responsibility:	**Enterprise Risk Management Function**
Review Cycle:	**Annually**
Replaced Document:	**Risk Appetite Statement of March 25, 2026**

Manitoba Public Insurance

1. INTRODUCTION

The business activities undertaken by MPI in fulfilling its mission are exposed to a variety of risks.

This risk appetite statement ("RAS") considers the most significant risks that MPI is exposed to and provides an outline of the approach to managing these risks.

MPI's risk appetite is set annually by the Board of Directors ("Board") with the goal of aligning risk-taking with the Corporation's statutory requirements, strategic business objectives and capital planning.

The Risk Committee of the Board (RCB) and the Executive Risk Management Committee (ERMC) monitor MPI's adherence to the RAS and make necessary updates to capture changes in MPI's strategic initiatives, operating environment, and risk profile.

The purpose of the RAS is to clearly state the general principles for MPI's risk-taking, to raise risk awareness across the organization, and to guide the staff regarding acceptable and unacceptable behaviour.

The RAS is implemented through MPI's policies, standards, procedures, monitoring metrics, tolerances and limit system and internal controls. The RAS is thereby embedded in the MPI's core processes and governs the business activities of MPI in a holistic way.

2. OBJECTIVES

The objectives of the RAS are the following:

- To provide a clear articulation of MPI's risk-taking, risk mitigation and risk avoidance, and to define risk-taking at the aggregate level. The RAS creates a foundation for effective communication of risk among internal and external stakeholders.
- To increase understanding of MPI's material risk exposures and raise risk awareness across the organization.
- To positively impact the defined risk culture of MPI.
- To support the Board and MPI Executive and the senior management in planning, formulating, and executing strategic business decisions to achieve the long-term objectives of MPI.
- To provide means for the Board of Directors and MPI Executive and senior management to engage in discussions on risk-taking, risk management, and business strategy, and their interlinkages.
- To provide tools for the Board of Directors and MPI Executive and senior management to continuously monitor and align MPI's actual risk profile with the risk appetite.

Manitoba Public Insurance

3. GENERAL STATEMENT OF APPETITE

MPI will act in accordance with its risk appetite statement to achieve its strategic goals and objectives in pursuit of its mission. MPI must employ sound risk management principles, including identifying, measuring, monitoring, and controlling risk; transparent decision making; effective communication; and prioritization of risk. MPI manages eight interrelated categories of risk to effectively reflect its responsibilities as the trusted auto insurance, motor vehicle registrar, and driving licensing services provider for every Manitoban. Where MPI has discretion, the Corporation is willing to assume certain risks to remain agile in meeting the business challenges of its evolving business landscape. Strong risk management practices will enable the Corporation to operate proactively while controlling risk.

4. THE RISK MANAGEMENT FRAMEWORK

A “three-lines of defence” governance model is used to allocate risk management responsibilities to particular areas of MPI. The first line of defence is made up of MPI’s business units or functions that perform the day-to-day operations. They are the primary risk-takers and are primarily responsible for identifying, assessing, controlling, and mitigating risks, and ensuring that the activities within their domains are consistent with MPI’s risk appetite and policies. The second line of defence are MPI’s Risk Management functional units, primarily, Enterprise Risk Management (ERM) function and the Compliance function. They are responsible for maintaining the risk management framework and performing oversight on risk management activities performed by the first line of defence. The third line of defence is provided by MPI’s Internal Audit function. It provides the Board and its Committees, and MPI Executive management with independent and objective assurance on the overall effectiveness of the risk governance framework (design and implementation), including the way the first and second lines of defence achieve risk management and control objectives.

Manitoba Public Insurance

5. OVERVIEW

About MPI's Risk Appetite

- Risk appetite is an integral part of MPI's Enterprise Risk Management Framework.
- Risk appetite articulates the level and type of risk the corporation will accept while conducting its mission and carrying out its strategic plan.
- Where MPI has discretion, the corporation is willing to assume certain risks to remain agile in meeting the challenges of an evolving auto insurance and driver licensing landscape.
- MPI has established risk appetite in eight categories.
- MPI has an overall Low risk appetite, and Very Low or Moderate risk appetites in specific areas.
- MPI will align its strategic decisions with its risk appetite statement.

Risk Appetite Definitions

Very Low Appetite

- Inflexible approach with very low possibility of failure.
- No willingness to accept uncertain outcomes relative to achievement of MPI's mission, vision, or strategic objectives.
- Will not accept risk if achieving an outcome is especially important to MPI's mission, goals, or strategic objectives and there is limited possibility of failure to achieve desired outcomes.
- Avoid trading off this objective against achievement of other objectives.

Low Appetite

- Cautious and intentionally conservative.
- Limited willingness to accept uncertain outcomes relative to achievement of MPI's mission, vision, or strategic objectives.
- Will accept risk if achieving an outcome is especially important to MPI's mission, goals, or strategic objectives and there is limited possibility of failure to achieve desired outcomes.
- Prefer to avoid trading off this objective against achievement of other objectives.

Moderate Appetite

- Measured and deliberative approach.
- A degree of willingness to accept uncertain outcomes relative to achievement of MPI's mission, goals, or strategic objectives.
- Will accept selected risks but must be soundly justified.
- Willing to trade off this objective against achievement of other objectives in certain circumstances.

High Appetite

- Flexible approach with higher possibility of failure.
- Willing to accept uncertain outcomes relative to achievement of MPI's mission, goals, or strategic objectives.
- Willing to take risks when long-term benefits are foreseeable and outweigh risks.
- Willing to trade off this objective against achievement of other objectives.

Manitoba Public Insurance

Enterprise Risk Appetite

Strategy Risk

Risk that corporate strategy selection, prioritization, modification, and implementation jeopardize achievement of MPI's goals and objectives.

Low Risk Appetite

- Ineffective or inefficient decision making and execution.
- Insuring companies that are not Manitoba owned in the Special Risk Extension ("SRE") Line of Business.
- Executing and achieving of strategy and outcomes not in alignment with MPI's goals and objectives.
- Offering Basic products and providing services outside of MPI's legislated mandate.
- Non-responsiveness to changes in the internal and external operating environment.
- Exposure to non-auto products and services.

Moderate Risk Appetite

- Inability to evolve and adapt.

Earnings Risk

Risk that MPI's activities fail in achieving the desirable profitability. The risk arises from the uncertainties associated with net insurance cash flows, unexpected changes in the investment income, and from ineffective and inefficient use of resources.

Basic Line of Business

The Basic line operates on a break-even basis, prioritizing rate stability and capital adequacy over earnings.

Low Risk Appetite

- Failing to achieve net income outcomes that are closely aligned with budgeted expectations, reflecting a preference for stability and predictability in financial performance.
- Deviating from the equity-weighted average Return on Equity within +/- 5% of 0% calculated over a rolling five-year period.
- Deviating from the budgeted net income of no more than +/- $30 million on average calculated over a five-year historical period.

Extension Line of Business

The Extension line operates on a for-profit basis, with results intended to benefit the Basic line of business.

Low Risk Appetite

- Failing to achieve positive net income outcomes that support sustainable profitability and long-term value creation, while remaining broadly aligned with budgeted expectations.
- Deviating from the equity-weighted average Return on Equity within +/- 10% of 40%, calculated over a rolling five-year period.
- Deviating from budgeted net income of no more than +/- $10 million on average calculated over a five-year historical period.

Manitoba Public Insurance

Earnings Risk

Risk that MPI's activities fail in achieving the desirable profitability. The risk arises from the uncertainties associated with net insurance cash flows, unexpected changes in the investment income, and from ineffective and inefficient use of resources.

SRE Line of Business

The SRE line operates on a for-profit basis, and given its relatively small business volume, greater variability in net income is expected.

Low Risk Appetite

- Failing to achieve positive net income outcomes that support sustainable profitability and long-term value creation, while remaining broadly aligned with budgeted expectations.
- Deviating from the equity-weighted average Return on Equity within +/- 10% of 0%, calculated over a rolling five-year period.
- Deviating from budgeted net income of no more than +/- $20 million calculated on average over a five-year historical period.

DVA Line of Business

DVA line operates on a cost-recovery basis.

Low Risk Appetite

- Incurring losses within a given fiscal period that is not fully funded in whole from the equity of the DVA Line of Business.

Solvency Risk

Risk that MPI is unable to absorb losses generated by all types of risks with the available capital.

Very Low Risk Appetite

- Falling in the Basic line of business below a 35% Minimum Capital Test (MCT) ratio based on 1-in-10 year stress testing.
- Falling in the Extension line of business below a 100% MCT ratio.
- Purchasing fixed income securities with a credit rating below BBB-.
- Failing in having enough cash and cash equivalents to meet our obligations.

Low Risk Appetite

- Falling in the SRE line of business below a 200% MCT ratio.
- Contracting with reinsurers having financial ratings below A-.
- Concentrating the exposure to a reinsurer within a reinsurance layer to more than 25%.

Moderate Risk Appetite

- Exposure to changes in unhedged foreign currency.

Manitoba Public Insurance

Operational Risk

Risk that people, processes, systems, or external events impede MPI's ability to meet its objectives.

Very Low Risk Appetite

- Failing physical security.
- Employee and agent misconduct.
- Failing in being able to operate and self-fund MPI.

Low Risk Appetite

- Lack of proper business continuity planning and information technology disaster recovery.
- Process inefficiency.
- Weak internal corporate governance processes.
- Ineffective or inefficient third-party oversight.
- Ineffective or inefficient portfolio management and program or project execution.
- Ineffective or inefficient modeling design and implementation.

Moderate Risk Appetite

- Outsourcing to third parties including activities that involve outsourced services and use of independent consultants.
- Failure when piloting in the adoption of transformation initiatives.

Technology Risk

Risk that information technology processing, security, stability, capacity, and performance jeopardize core MPI's operations.

Very Low Risk Appetite

- Unauthorized access, use, or release of personally identifiable information, health data, or other sensitive data.
- Noncompliance with applicable technology directives, policies, standards or procedures.
- Lack of resiliency against cybersecurity threats.
- Unplanned downtime impacting systems which support its critical business functions.
- Deliberate misuse of information/data.
- Ineffective information/data management process.

Low Risk Appetite

- Inefficient or ineffective business resiliency planning and execution.
- Untimely analysis and diagnosis of information/data collected.
- Lack of adaptability of technology systems particularly in terms of stability, reliability, capability, performance, and capacity when responding to evolving business requirements and strategic priorities.

Moderate Risk Appetite

- Misalignment of information systems, data, and practices
- Inability to meet external user demands.
- Inability to meet internal user demands, including supporting a mobile workforce.

Manitoba Public Insurance

People Risk

Risk that resource use and employment practices do not align with MPI's mission and strategic objectives.

Very Low Risk Appetite

- Noncompliance with employee practices and with workplace safety laws and regulations.
- Noncompliance with equal employment opportunity principles, diversity principles, and ethical standards.
- Noncompliance with Employment and Labour law, rules, regulations, policy, or procedure, or other matters that could compromise MPI's integrity.
- Noncompliance with the collective agreement.
- Dishonest or fraudulent behaviour.
- Failing physical security measures.

Low Risk Appetite

- Failing in developing employees with the necessary skills and competencies, including critical thinking and sound judgment, retention, succession, leadership development, and training.
- Failing in aligning resource allocation and utilization with mission, strategic goals, and risk.
- Inefficient compensation policies.

Moderate Risk Appetite

- Ineffective or inefficient enterprise workforce plan execution.
- Delaying the recruiting and hiring of talent.
- Ineffective or inefficient employee performance management.
- Empowering staff within the appropriate delegation, oversight, and reporting parameters.
- Acquire talent outside of Manitoba.

Legal & Compliance Risk

Risk that the corporation does not fulfill its obligations under applicable laws, regulations, federal directives, mandates, or executive orders or has gaps in mission-critical functions to maintain a sound auto insurance, motor vehicle registration and driving licensing regime in the Province of Manitoba.

Very Low Risk Appetite

- Noncompliance with applicable laws, regulations, statutory reporting, tax filings, and Manitoba Government directives, mandates, and executive orders.
- Failing in abiding by contractual obligations.
- Poor employee or agent misconduct.
- Gaps in mission-critical functions required to maintain a sound auto insurance, motor vehicle registration, and driving licensing regime in the Province of Manitoba.
- Involvement in money laundering and terrorism financing.
- Having ineffective relationship with legislators.

Low Risk Appetite

- Lack of human resource guidance and practices.
- Failing in preparing for new, modified, or eliminated laws and regulations.
- Failing in managing third party relationships and risks appropriately.

Moderate Risk Appetite

- Ineffective or inefficient interagency coordination.

Manitoba Public Insurance

Reputation Risk

Risk that negative perception jeopardizes MPI's credibility, achievement of mission and strategic objectives, or its ability to maintain MPI's business model.

There are intentional overlaps with other risk categories, reflecting the interplay between other risk categories and reputational risk. Reputational risk may be directly impacted by a number of actions and/or inactions that are contemplated in other risk categories (reputational considerations are embedded across all areas of the organization), signaling the significance of reputational risk to MPI.

Very Low Risk Appetite

- Failing in performing MPI's functions as assigned to it by law.
- Suffering breaches in information security.
- Failing in being fiscally responsible.
- Human resources malpractices.
- Lack of responsibility and accountability.

Reputation Risk

Low Risk Appetite

- Inefficient or ineffective internal and external communication strategies.
- Lack of issue escalation and response processes.
- Tarnished MPI culture (external and internal view of MPI's vision, mission, values, and behaviours).
- Not taking a leadership role in pursuing and/or defending issues supportive of MPI's core mission.

6. IMPLEMENTATION OF MPI'S RISK APPETITE

The ERM Function, headed by the Chief Risk Officer, is responsible for the implementation of the RAS across the corporation.

All leaders of divisions, directorates and departments, as well as the Enterprise Risk Owners are responsible for the complying with this Statement.

6.1. Communication

MPI's RAS is published on the MPI's Intranet through the ERM Share Point Site.

6.2. Risk Assessments

The risk appetites described in this RAS are the broad description of the amount of risk MPI is willing to accept or retain to achieve its objectives. The RAS comprises a series of statements that describe MPI's attitude towards risk taking. The divisions, the directorates, the departments, and the enterprise risk owners are required to manage their specific risks in a manner that is consistent with the RAS, and to manage and mitigate any risks outside the agreed risk tolerances.

Manitoba Public Insurance

6.3. Risk Tolerances, Risk Limits, and Risk Metrics

MPI's risk tolerances will use the risk appetite in the RAS to inform:

- expectations for mitigating, accepting, and pursuing specific types of risk;
- boundaries and thresholds of acceptable risk taking, and;
- actions to be taken or consequence for acting beyond approved tolerances such as escalation procedures.

Risk tolerances are set to identify the level at which the risk can be accepted, rather than needing further mitigation to reduce the risk and are established at different levels across MPI (i.e., division, directorate, department) as appropriate.

Risk limits are defined to monitor that actual risk exposures across MPI do not deviate too much from the defined risk tolerances. Exceeding risk limits will typically act as a trigger for a risk management action.

Risk tolerances and risk limits are measured and monitored as per the risk metrics identified below:

- *Key Risk Indicators (KRIs)*
  KRIs are metrics used by management to provide an early signal of increasing risk exposures in different areas of the corporation.
- *Key Control Indicators (KCIs)*
  KCIs are metrics that provide information on the extent to which a given control is meeting its extended objectives (in terms of loss prevention, reduction, treatment, and acceptance). In so doing, they can be used to measure the effectiveness of particular risk controls at a particular point in time.

6.4. Monitoring & Reporting

A primary benefit of using indicators lies in their ability to link current exposure levels to risk limits, risk tolerances, and risk appetites.

By monitoring a set of appropriate risk indicators and by checking their actual values and trends against agreed tolerances and limits, an organization is able to see whether its risk exposures remain within its appetite for risk or exceed it. Hence the monitoring of risk indicators is an important mechanism by which an organization's management can gain assurance that it remains within it stated risk appetite.

The use of risk indicators also supports effective governance by providing a transparent, repeatable, and consistent means for tracking both risk exposures and management activity.

Reporting provides assurance that the risk appetite is effectively incorporated into management decisions. By embedding risk appetite within the management processes of MPI, it directly contributes to the maintenance of a robust control environment and sound risk governance.

Manitoba Public Insurance

7. REVIEW

This RAS is reviewed annually, or whenever there is a significant change to the MPI's internal and external environments. This review is coordinated by the ERM Function.

The ERMC proposes changes to the RAS to the Risk Committee of the Board ("RCB").

The RCB reviews the proposed changes by the ERMC and recommends a revised RAS for the approval by the Board of Directors ("BOD"). The BDO approves the revised version of the RAS.

* * *

Appendix 3: IT Risk Registry (updated)

The IT Risk Registry includes the Information Technology risks and mitigation strategies in FY 2026/27.

#	Risk Description	Potential Impacts	Inherent Risk	Mitigation Strategies	Residual Risk
1	Changes in Senior Leadership	Knowledge gaps, significant impacts to corporate memory and the culture of an organization.	• High	• Conduct succession planning at all levels to minimize the impacts of change in leadership. • Empower the teams, cascading the decision-making process to the next level down.	• Medium
2	Difficulty in attracting knowledgeable SMEs as Full Time Employees.	Limited capacity for delivery, impacting BAU/Project activities and timelines.	• High	• Develop attractive compensation to attract and retain talents.	• Medium
3	Failure in identifying the root causes of issues / problems.	Misaligned deliverables resulting in poor technological solutions that do not meet business needs.	• High	• Leverage the regularly cadenced delivery planning event (a.k.a. Program Increment planning) activities to prioritize initiatives based on business needs and risks to the Corporation. • Review and revamp requirements gathering to address business needs.	• Medium
4	Lack in-house technical capability / expertise	Limited capability to meet objectives, deliver quality solutions and impact timelines/SLAs.	• High	• Upskill resourcing based on skills gap assessment. • Augment staffing through Flextrack and System Integrators.	• Medium
5	Aging applications or technologies	Inability to meet business objectives by requiring work arounds or exceptions to deliver value to the business, potentially resulting in insecure solutions or higher support costs.	• High	• Stabilize and modernize aging / legacy applications and supported infrastructure to meet operational objectives.	• Medium

6	**[Redacted]**	**[Redacted]**	[Redacted]	**[Redacted]**	**[Redacted]**

Risks Added in 2027 (Not Present in 2026)

- None.

Risks Removed from Registry:

- Lack of Resource Capacity, and Organizational capacity impacted by demand for Major Programs: Both risks have been addressed through capacity management and proactive planning activities through corporate portfolio governance.
- Access revalidation controls: MPI has enhanced the access revalidation controls for business applications which will be conducted annually to ensure only authorized users have access.

Risks with Updated Mitigations

- **Lack of In-House Technical Capability**
  - *FY 2024/25:* Includes training aligned to staff roles.
  - *FY 2025/26:* Focuses on skills gap assessments and training needs.
  - *FY 2026/27:* Focuses on training needs to upskill resources.
- **Aging Applications or Technologies**
  - *FY 2024/25:* Mentions support for Nova's modernized software.
  - *FY 2025/26:* General modernization of legacy applications and infrastructure.
  - *FY 2026/27:* Focus on stabilizing core technology and look to modernization where appropriate.

Manitoba Public Insurance (MPI)

2027 GRA Intervener Evidence

MPI Information Requests to Consumers' Coalition (CC)

September 24, 2026

MPI (CC) 1

Part and Chapter:	**Section 4; Figures 3–45; Tables 4 and 42; Section 7 and Figure 50**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Reproducible calculations and source data**		
Sub Topic:			

Question:

a. Provide the native workbooks, scripts and input files used to produce RCS's claims models, base loss costs, trend adjustments and projected claims. Include the claim-development and benefit-assumption calculations relied upon for forecasting.
b. Identify differences between the data supplied by MPI and the data used by RCS, including exclusions, reclassifications, adjustments, corrected observations and changed claim-development assumptions.
c. For the historical comparisons requested in IRs 9 and 12, provide the retained files identified in the 2026 GRA as MPI CC 1-5c.xlsx and PUB (CC) 1-5b.xlsx, or a precise accessible filing reference. Identify any limitations in obtaining or reproducing those earlier analyses.

Rationale for Question:

Enable independent reproduction of the calculations actually relied upon.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 2

Part and Chapter:	**loss cost summary Tables 7–39; Figure 50; Section 4.21 and Table 40**	**Page No.:**	**Pages 6–7 and 80–81**
PUB Approved Issue No:			
Topic:	**Data vintages and projection periods**		
Sub Topic:			

Preamble to IR (If Any):

Page 80 describes the 2027 GRA trend data as valued at December 31, 2023, although the trend figures include later accident years. The summary tables describe HTA units as a weighted average of 2026/27 and 2027/28, while the trend-factor descriptions refer to 2027 and 2028.

Question:

a. Identify the actual valuation date of every data series used in Figure 50 and in the trend models. Confirm or correct the December 31, 2023 reference.
b. Identify the accident years and weights underlying the 1,025,314 HTA units, the projected losses and the future trend factor in each loss cost summary. Explain how these relate to the 2027/28 rating year and to the 1,385,741 total units. Confirm which HTA and total-unit forecasts RCS accepts, identify any adjustments, and explain how the exposure basis is used consistently in base loss costs, frequency and projected claim counts.
c. Confirm the year represented by the $38.86 and $29.24 base loss costs in Tables 27 and 33. Provide corrected labels and calculations if either table uses a different base year from the other coverage tables.

Rationale for Question:

Establish consistent valuation dates, units and accident-year-to-rating-year calculations.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 3

Part and Chapter:	**Section 4.2 and RCS alternative models in Figures 5, 12, 15, 20, 23, 26, 35, 38 and 45; 2026 MPI(CC)5, pp.23–25; 2025 OW report, pp.30–34**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Model selection**		
Sub Topic:			

Preamble to IR (If Any):

RCS states that statistical significance is not the sole determinant of a good model.

Question:

a. Describe the criteria used to select experience periods, exclusions, break dates, explanatory variables and the final model for each alternative in Table 42. Identify which choices were specified before reviewing model results. Identify any change from the framework explained in MPI(CC)5 in the 2026 GRA, and demonstrate its application to the present models; the prior general explanation need not be repeated.
b. Provide the material alternative specifications actually tested, with their selected trends, fit statistics and resulting forecast claims and loss cost impacts where calculated. Explain the principal reasons for rejecting them.

Rationale for Question:

Establish the reasons for the selected models and the alternatives rejected.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 4

Part and Chapter:	**Section 4.2, pages 8–10; Figures 5, 12, 18, 20 and 45; CC/MPI I-56, response pages 1–3; MPI CF.2.2 and CF.5.3.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Mobility and new-normal parameter tests**		
Sub Topic:			

Preamble to IR (If Any):

CC/MPI I-56 explains MPI's use of a joint F-test for the mobility and new-normal terms as one modelling construct. The Google mobility series ends in October 2022; MPI's model uses a separate new-normal term for the subsequent accident years.

Question:

a. Identify the precise test RCS understands MPI to use for mobility and new-normal parameters, including the null hypothesis, test statistic and decision rule. Reconcile the description that both parameters must be significant with the discussion of their combined significance.
b. For each alternative frequency model, provide the coefficients, standard errors, p-values and parameter correlations with both mobility and new-normal terms included, and after each disputed term is removed. For Collision, reconcile the individual significance results shown for MPI's selected frequency model in Figure 18 with the conclusion about new normal in RCS's alternative model; distinguish effects of the experience period, the underlying trend and the testing rule.

c. Does RCS contend that the joint F-test itself is statistically invalid in this application, or that a significant joint result is insufficient by itself to justify retaining both terms? Explain the basis for the position taken, when individual tests should govern retention, and how subject-matter evidence and limited statistical power affect that decision.
d. Identify the criteria permitting retention of an individually insignificant term, including the Weekly Indemnity terms, and explain how those criteria were applied consistently across coverages.
e. Address MPI's explanation in CC/MPI I-56 that the terms represent related aspects or successive phases of pandemic-related changes in driving behaviour. Explain why different time periods or causal descriptions make joint assessment inappropriate, if that remains RCS's position. Identify how RCS represents the period after the Google series ends, and explain the restriction imposed by omitting new normal on post-pandemic frequency, conditional on the selected underlying trend. Distinguish unavailable mobility observations from evidence of a return to pre-pandemic behaviour.
f. Has RCS tested whether its proposed individual-testing approach forecasts claims more accurately than MPI's approach? If so, provide the results using the same data and forecast period, and state whether later or withheld observations were used. If not, confirm this and explain the basis for preferring its approach.

Rationale for Question:

Clarify the disputed statistical decision rule and its consistent application.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 5

Part and Chapter:	**Page 35; Figure 20; 2026 PUB(CC)1; 2026 MPI(CC)3, pp.14–15; October 27, 2025 transcript, pp.1732:7–22, 1734:3–25, 1843:14–1844:5, 1854:1–18 and 1868:3–25; Order 156/25, pp.60–61.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Collision development and the latest observation**		
Sub Topic:			

Preamble to IR (If Any):

RCS states that the 2025 frequency observation may decrease at future evaluations.

Question:

a. Define the claim count used in this frequency measure: for example, reported claims, claims with payment, closed claims or estimated ultimate claims. Identify the exposure denominator and valuation date.
b. Identify the data, development history and assumptions supporting the possibility of a reduction in the 2025 estimate. Provide the relevant triangles or successive valuations relied upon, where available to RCS, and distinguish revisions to estimated ultimate counts from changes in reported counts.
c. Confirm whether RCS made a numerical adjustment to the 2025 observation or retained MPI's estimate unchanged. If an adjustment was made, provide its amount and the projected claim-cost impact.

d. Provide the change in RCS's selected trend and projected claim costs and coverage loss costs per insured unit when 2025 is included as supplied and when it is omitted. Explain how the higher 2025 observation affects RCS's confidence in its forecast.
e. Identify the mobility and new-normal assumptions the witnesses ultimately supported at the close of their 2026 GRA oral evidence. Reconcile those assumptions with the present selection, distinguishing new experience, greater maturity, changed specification and changed judgment. Compare the proportion of the accident year observed and subsequent development at the two valuation dates; explain whether the prior uncertainty argument applies with the same force now.

Rationale for Question:

Establish the factual basis and numerical effect of the latest-year maturity argument.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 6

Part and Chapter:	**Sections 4.10 and 4.21; Table 40; MPI Claims Forecasting Attachment A.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Collision exposure and independent evidence**		
Sub Topic:			

Question:

a. Identify Manitoba-specific mobility, commuting patterns, return-to-office arrangements, travel behaviour, road usage, distance travelled, traffic, weather, vehicle safety or other evidence relied upon to support the projected Collision frequency trend. State how that evidence was used quantitatively or qualitatively.
b. Explain the relevance and limitations of the pre-pandemic trend for the forecast period, including changes in vehicle mix, deductibles, reporting behaviour and claim definitions. Explain why the post-pandemic commuting, return-to-office, travel and road-use evidence does or does not justify greater reliance on recent accident years. Identify any explicit recency weights used; distinguish those weights from the influence of older years through a longer fitting period.
c. Show how the selected frequency trend combines with MPI's accepted HTA growth forecast to produce projected ultimate Collision counts. Distinguish claims per exposure from total claims.
d. Identify any independent evidence reviewed that supports a persistent post-pandemic level change, and explain why it did not result in retaining a new-normal parameter in RCS's selected Collision model.

Rationale for Question:

Test the Collision extrapolation against independent evidence and consistent exposure definitions.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 7

Part and Chapter:	**Sections 4.2, 4.10 and Appendix A; Oliver Wyman Alberta Annual Review, September 15, 2025, printed pages 59–60; Alberta preliminary Semi-Annual Review, January 15, 2026, printed pages 26, 44–45 and 48; Ontario Annual Review, October 14, 2025, printed pages 71–72; and Ontario Mid-Year Review, February 23, 2026, printed pages 21, 53 and 55–56.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Comparison with the authors' prior regulatory work**		
Sub Topic:			

Preamble to IR (If Any):

The cited Alberta Collision models include both a new-normal adjustment and a declining frequency trend; the Ontario models include new normal and a positive frequency trend. In all four selected Collision frequency models, mobility and new normal are individually significant, with each p-value reported as 0.000 (rounded). Their inclusion alone does not establish inconsistent testing. Separately, the January 2026 Alberta review's selected Accident Benefits frequency model retains new normal at p = 0.060, and the February 2026 Ontario review's selected Accident Benefits Total direct loss-cost model retains new normal at p = 0.091. Mobility is reported at p = 0.000 (rounded) in both. Each report describes p-values below 5% as statistically significant.

Question:

a. Confirm each witness's responsibility for preparing, reviewing or approving the cited analyses, and identify any correction to the document references or attribution.
b. Describe the model-selection principles used in those reviews to decide whether to include a post-pandemic level adjustment, an ongoing frequency trend, or both. Identify material differences from the principles used in this evidence.
c. Explain the data, coverage, exposure, deductible, valuation-date and jurisdictional differences that support the different Manitoba specification. Include relevant product reforms and movement of claims between Collision and DCPD. Provide existing comparable model results supporting the explanation.
d. For the three most recent prior MPI GRAs in which either witness supplied actuarial rate evidence, identify that witness's material Collision forecasts and provide any existing comparison with subsequently emerging experience. Specifically address the 2025 and 2026 GRAs, including the prospective estimates filed in 2025 PUB(CAC)1-2 and its attachment. Retain the assumptions as they stood at each forecast date; distinguish those results from models refitted using later information. State the adjustments needed for comparable coverage, exposure, claim-development and claim-cost bases. If no retrospective comparison was performed, please confirm.
e. Reconcile retaining new normal in the two selected Accident Benefits models, despite its individual p-value exceeding the reports' stated 5% significance benchmark, with the approach recommended for MPI. Explain the basis for retention in each case, including any alternative significance threshold or considerations beyond individual significance. State whether the same criteria would permit retention in MPI's models and, if not, identify the material differences supporting that conclusion. Distinguish the choice of statistical test from the decision to retain a term after reviewing its result.

Rationale for Question:

Assess consistency of the witnesses' methods and parameter-retention decisions while recognizing material jurisdictional differences.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 8

Part and Chapter:	**Sections 4.1, 4.3 and 4.11; Figures 21–23; Table 21; CC/MPI I-54 and PUB/MPI II-33(d); 2025 OW report, pp.24–25; November 4, 2024 transcript, pp.2153–2155.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Attempted and Partial Theft**		
Sub Topic:			

Question:

a. Identify the information in MPI's theft analysis and IR responses considered before concluding that the theft parameter is arbitrary. Explain the specific remaining deficiency in its derivation or validation. Distinguish that deficiency from the use of a scalar itself, having regard to OW's comprehensive scalar in the 2025 GRA. State the consistent evidentiary and calibration requirements for such adjustments and apply them to both cases.
b. Distinguish exclusion of 2021 and 2022 from the trend regression from their zero weight in the selected base-loss-cost average. Explain why 2019, 2020 and 2023 are retained in the regression, and why 2023–2025 are treated as representative years for the base average. Address the July 18, 2022 commencement of the Scrap Metal Act relative to accident years. Identify evidence, if any, of continuing implementation or behavioural adjustment during 2023/24, and explain how residual abnormal theft experience was treated; do not assume that the commencement date alone establishes when claim effects stabilized.
c. Provide the on-level costs and selected base cost under four cases: MPI's trend and five-year weights; RCS's trend and five-year weights; MPI's trend and three-year weights; and RCS's trend and three-year weights. Identify whether MPI's theft adjustment is retained, removed or replaced in each case.

d. Explain how each adjustment serves a distinct purpose and whether any residual theft effect is removed more than once. State precisely the proposed change to the base-loss-cost weighting approach and the circumstances in which five-year weights would resume.
e. Explain the actuarial basis for assigning each retained accident year 2023/24–2025/26 a one-third weight (33.3% when rounded). Identify alternative experience windows or weighting schemes actually considered, including any four-year equal weighting, 40%/30%/30% weighting, credibility weighting or exponential weighting. Specify the exact year-to-weight mapping and any credibility complement or decay assumption, and provide the resulting base loss costs and projected claim costs where calculated. If no alternatives were tested, please confirm. Explain how the selection balances representativeness of the expected theft environment against variability from using only three years in the base average, and provide any assessment of that variability. The five-year comparison in part (c) may be cross-referenced.

Rationale for Question:

Separate trend and baseline-weight effects and assess the treatment of abnormal theft experience.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 9

Part and Chapter:	**Section 4.16, pages 53–56; Figure 35.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Vandalism**		
Sub Topic:			

Question:

a. Identify the common experience period and unrounded frequency, severity and elevated-period coefficients supporting the selected trends.
b. Explain why the selected specification is preferable to MPI's and to the direct loss-cost model, including the basis for retaining the continuing severity term.
c. Provide the change in projected Vandalism claims and coverage loss cost from RCS's alternative, and confirm that the increase is included in its total projected claims. Reconcile the result to the underlying Vandalism calculations supporting Table 42.

Rationale for Question:

Verify the upward Vandalism claims adjustment and its inclusion in total projected claims.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 10

Part and Chapter:	**Section 4.20, pages 66–69; Figure 45.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Property Damage Other**		
Sub Topic:			

Question:

a. Provide the model containing both the frequency trend and new-normal terms, and explain the basis for omitting the new-normal term from the selected model.
b. Quantify the projected claim-cost impact separately from changes to historical on-level costs and the future frequency trend, retaining MPI's accepted severity assumptions.
c. Explain the treatment of 2025 maturity and provide the selected trend and projected claim costs with 2025 excluded. Identify whether RCS adjusted MPI's 2025 estimate numerically.

Rationale for Question:

Test the property-damage frequency specification and the treatment of recent experience.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 11

Part and Chapter:	**Sections 4.5, 4.6, 4.9, 4.13–4.15, 4.18 and 4.19.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Coverages with no proposed change**		
Sub Topic:			

Question:

a. Confirm whether RCS proposes any change to the claims forecasts for personal care assistance, travel, bodily injury, fire, glass, hail, third-party loss of use or third-party deductible transfer beyond the claims changes expressly identified in Table 42.
b. For travel, bodily injury and hail, provide the alternative trends actually tested, the resulting projected claim-cost impacts and the threshold used to conclude that the claims forecast was not sensitive.

Rationale for Question:

Define areas of agreement and quantify concerns described as immaterial.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 12

Part and Chapter:	**Claims forecasting discussion and figures on pages 5, 28, 33, 38, 42–43, 49, 58, 64 and 80; Figure 1's claims-cost component; coverage loss cost summary Tables 7–39; Figure 50.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Claims data and computational corrections**		
Sub Topic:			

Question:

a. Provide an errata schedule for coverage, year, valuation-date, coefficient and unit labels in the claims analysis. Address the 2026/27 rating-year reference on page 5, the coverage and year references on pages 33, 38 and 42, the 2026/27 reference on page 64, and the valuation-date description on page 80. Corrections already provided under other IRs may be cross-referenced.
b. Confirm whether Figure 1's claims-cost amount of 859.03 is dollars per insured unit rather than millions of dollars, and correct the scale if necessary. State the units and conversions required for rows G and J in the loss cost summary tables, including any thousands-to-dollars conversion. Explain how the displayed factor F for future rental days enters the actual calculation, whether it is omitted from a displayed formula, and whether its value of 1.000 in the displayed calculations makes any omission numerically immaterial. Demonstrate the full conversion from loss cost per insured unit to projected claim costs.
c. Explain the Oliver Wyman model legends in Figure 15 and identify the exact model and calculation files underlying that figure and confirm that they are the files used for RCS's current ABO Other Non-Indexed claims forecast. Explain any mismatch between the figure and the current model output.

d. For each correction, state whether it affects presentation only, an intermediate claims calculation, a selected coverage assumption or projected claims. Supply replacement pages and revised native files where a substantive calculation changes.

Rationale for Question:

Distinguish drafting errors from errors that change the claims forecast.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

MPI (CC) 13

Part and Chapter:	**Section 5, pages 73–74 and 78–79; Figure 49; Table 43; footnote 11.**	**Page No.:**	
PUB Approved Issue No:			
Topic:	**Merit Rating (DSR): overfitting and smoothing**		
Sub Topic:			

Question:

a. How does RCS assess the risk of overfitting at DSR levels with limited exposure or low credibility when DSR is modelled (i) as a categorical variable or (ii) using log-LOESS? Provide any existing validation or stability results supporting its assessment.
b. Under a categorical approach, should each DSR level have a separately estimated relativity, or should credibility weighting, pooling or smoothing be applied? Explain how RCS would select that treatment. For log-LOESS, explain how the degree of smoothing and treatment of levels with limited exposure are determined.

Rationale for Question:

Establish how the proposed approaches balance fit with credibility and stability.

RESPONSE:

CC to insert response here.

RATIONALE FOR REFUSAL TO FULLY ANSWER THE QUESTION:

CC to insert rationale for refusal here.

Updated New Money Yield

2027 General Rate Application

September 25, 2026

Table of Contents

New Money Yield Update – Aug 31, 2026 3

New Money Yield Update – Aug 31, 2026

The New Money Yield (NMY) as Aug 31, 2026, is 4.60%. The full calculation is shown in the figure below:

Figure 1 –New Money Yield Calculation as at August 31, 2026

Asset Class	IPS Target Weights	Relative Weights	Aug 31 Yield	Aug 31 Duration
Provincial Bonds	35%	35%	4.62%	10.69
Real Return Bonds	4%	4%	4.19%	10.40
Corporate Bonds	28%	28%	5.66%	10.58
MUSH Bonds	18%	18%	4.29%	4.36
Real Estate	10%	10%	3.63%	n/a
Commercial Mortgages	5%	5%	5.18%	2.07
Total	**100%**	**100%**	4.76%	**8.01**
Investment Management Fees			0.16%	
Yield After Fees			4.60%	

Compared to March 31, 2026, the NMY has increased by 12 bps, from 4.48% to 4.60%. The increase was driven by higher interest rates, with The Government of Canada 10-year bond yield has rising by 27 bps from 3.47% March 31 to 3.74% on August 31.

The impact of higher interest rates has been somewhat mitigated by the decrease in duration of Provincial Bond (1.24 years), Real Return Bond (0.3 years), and Corporate Bond (0.34 years) portfolios. The duration decrease was caused by claims resulting from the June hailstorm.

September 28, 2026

Information Technology Strategic Planning and Roadmap

MANITOBA PUBLIC INSURANCE

Key Messages

- Customer value is the foundation of modernization
- MPI has established a clear technology vision and modernization strategy for 2030.
- MPI is adopting an AI opportunistic approach to assist with its modernization efforts.
- Significant work is underway to strengthen our foundational capabilities, manage technology risk, and prepare for modernization.
- Current initiatives are expected to materially manage technical risk over the next 18 months.
- MPI should focus modernization efforts to deliver the greatest risk reduction while evolving foundational capabilities and providing reliable and secure customer centric services.

A history of delivering customer value

At MPI, we are dedicated to providing exceptional insurance coverage, products and services to meet the needs of our customers.

- For 55 years, we've been committed to delivering on this mandate by adjusting our approaches, adapting to changing technology and gathering feedback from Manitobans about how we can serve them better.

- They have consistently told us they want more online options and convenience – whether it's booking an appointment or getting more information about their claim.

New digital options, enhanced customer experience

MPI has delivered significant customer experience improvements through new and upgraded digital options since 2023, including:

- Online claim submission form with ongoing improvements
- Check my Claim tool
- Online appointment booking for front counter services at all MPI service centres
- Automated response email tools for Contact Centre representatives and adjusters to enhance and standardize customer communications
- Manitoba Collision Dashboard
- Updated Driver Z registration process, including customer email invites for staggered windows
- Licence Look-up tool
- Temporary self-serve online hail estimating appointment booking
- Online services for International Registration Plan customers and MyMPI portal foundation

Approach to Modernization

What was shared at the IT Summit and filed in the GRA

1. **Understand what matters most to the business**
   For each major business service (for example, Claims Management), identify the technologies that are essential to delivering that service.
2. **Assess and prioritize the risks tied to those technologies**
   Identify the key IT and business risks associated with the critical technologies, assess their relative impact and urgency, and evaluate practical treatment options using a standard set of approaches (such as retain, rehost, retire, etc.).
3. **Evaluate options and support executive decision-making**
   Assess how well each treatment option performs in both the current and future state, assign a clear fitness score, and present business-focused options to executives to inform decisions and obtain leadership direction.
4. **Plan work through IT Roadmap**
   Leverage the Architecture Vision and capture work to address supported option in the IT Roadmap for planning and execution.

5

Where We Are Going

MANITOBA
PUBLIC INSURANCE

IT North Star

Mission: Exceptional coverage and service, affordable rates and safer roads through efficient public auto insurance.

Vision: Manitoba's trusted auto insurer and driver services provider. Dedicated to road safety for all.

Who We Are

A trusted technology partner delivering:

- Secure & resilient systems
- Modern information solutions
- Reliable, affordable & transparent services
- Value that builds trust with Manitobans today & into the future

Foundation

One-Team Mindset:

- Empowered, engaged & skilled team
- Clear, consistent communication
- No surprises — share openly (good & bad)
- Break down silos & collaborate

Smart Governance:

- Fit-for-purpose processes
- Clear accountability
- Right tools for the job

How We Show Up

- One Team
- Learning Mindset
- Leadership at All Levels
- Customer Impact First
- We Do What We Say

IT 2030 Objectives

1. Customer / Stakeholder Perspective

Strong Trust Through Reliable and Customer-Centric Services

Description: We deliver consistent, transparent, and high-quality technology services that improve stakeholder confidence and end-user experience.
Corporate Strategic Pillar: Optimize Value for Customers
Corporate Focus Area: Customer Value

2. Financial / Value Perspective

Consistently Delivering Cost-Effective and Transparent Technology Services

Description: Our practical technology investments provide measurable value while maintaining affordability and transparency.
Corporate Strategic Pillar: Strengthen our Financial Practices
Corporate Focus Area: Financial Stability and Affordability

3. Internal Process Perspective

Mature Governance, Accountability, and Delivery Excellence

Description: We have clear decision-making, consistent execution, and strong ownership across all initiatives.
Corporate Strategic Pillar: Deliver on our Promises
Corporate Focus Area: Organizational Effectiveness

4. Responsible Information Systems Security and Architecture

Enhanced System Resilience, Security, and Modernization

Description: We have secure, resilient, and modern platforms that support long-term organizational needs.
Corporate Strategic Pillar: Be Ready for What's Ahead
Corporate Focus Area: Corporate Responsibility

5. Learning & Growth Perspective

A High-Performing, Collaborative, and Skilled Technology Team

Description: Our IT culture is aligned to "first team," continuous learning, and leadership at all levels.
Corporate Strategic Pillar: Build Engagement and Pride
Corporate Focus Area: Organizational Effectiveness

MPI's AI Ambition

MANITOBA
PUBLIC INSURANCE

Why AI belongs in our modernization strategy

Modernization and AI are the same conversation

[REDACTED], AI does not replace modernization — it changes how quickly and affordably we can work through it, and the choices we make now decide what AI we can use later.

Where AI accelerates the work

- Legacy code discovery and documentation shorten the analysis phase for every modernization candidate.
- AI-assisted development and testing speed the stabilization and upgrade work already underway.
- Automating manual, fragmented processes lifts value from platforms we are not ready to replace yet.
- Faster insight from fragmented data helps us sequence modernization by real business impact.

Why the roadmap must make room for AI

- Composable architecture and clean, governed data are prerequisites for using AI at any scale.
- AI capability ships inside modern, supported platforms; aged-out systems simply cannot consume it.
- Sequencing AI with modernization avoids paying twice — once to modernize, again to retrofit.

Gartner AI Ambition Scale

Ambition level	Ambition	Characteristics	Success metrics
AI-Cautious	Use AI selectively to improve productivity and reduce manual effort while limiting risk exposure.	Focuses on low-risk internal use cases, proven tools, human oversight, and controlled adoption. AI mainly supports staff, improves efficiency, and automates routine work.	Task completion time, manual effort reduced, staff adoption, service consistency, cost avoidance, and governance compliance.
AI-Opportunistic	Use AI where there is a clear business problem, measurable value, and acceptable risk.	Balances innovation and control. Reengineers selected workflows, builds reusable capabilities, strengthens data and governance, and scales use cases that prove value.	Workflow cycle time, rework reduced, quality improvement, use-case ROI, adoption of shared capabilities, data quality, and value realized from scaled use cases.
AI-First	Make AI a core part of how the organization designs services, makes decisions, and delivers value.	Embeds AI across core capabilities, customer-facing services, and decision processes. Requires mature platforms, strong data, advanced governance, explainability, and sustained investment.	Business outcome improvement, customer experience, decision effectiveness, reusable decision assets, trust measures, AI cost management, and enterprise portfolio value.

Our AI Ambition is bounded by our risk appetite

Risk appetite sets the boundary

MPI holds an overall Low risk appetite towards IT risks, confirmed annually. AI operates within that frame, not beyond it.

Firm limits

Where risk appetite is Very Low

- Personal, health, and sensitive data is never used without proper authorization.
- Cyber resilience, system availability, and regulatory compliance are never compromised.
- AI is never relied on where bias or uncertainty in its models or decisions could harm fairness, reputation, or public trust.

Room to move first

Where risk appetite is Moderate

- We pilot transformation initiatives, accepting measured failure as the cost of learning.
- We build capability through third parties and specialist partners.

Our risk appetite sets the boundary for how far we take AI.

[REDACTED]

[REDACTED]

Foundations first; humans own every decision

The non-negotiable: a human owns every AI decision

Human sign-off before any output is actioned, a named owner for every use case, and mandatory review with clear escalation when confidence is low.

Earn the right to use the tools

- Role-based AI literacy, gated before anyone gets tool access.
- Prompt skills and responsible use, including how to spot model bias and output limits.
- Start using the tools on internal work now, building AI experience in-house before it reaches customers.
- Approved use cases and usage policies, with documented processes and no shadow AI.

The data and controls underneath

- Clean, classified, accessible data held to quality and lineage standards.
- Logging and audit trails on every AI output.
- Bias and drift monitoring, with access controls.

Our 2030 Ambition: AI-Opportunistic

AI is already underway here — prototypes in flight, AI features live in SaaS apps, and AI tools speeding up developer productivity. AI-Opportunistic builds on our current state. Focusing on efficiency where value is clear and risk stays controlled.

AI-Cautious

Where we are today

- Low-risk, internal, staff-assisted use.
- A human owns every decision.
- Nothing customer-facing or automated.

AI-Opportunistic

Our 2030 ambition

- AI where the business case is proven.
- Measurable value, controlled risk.
- Customer-facing only with strong governance.
- Bounded agents run multi-step internal workflows, with a human approving any action that leaves the system.

AI-First

Not our goal

- AI leads decisions by default.
- Minimal human oversight.
- Beyond MPI's risk and regulatory reality.
- Autonomous agents execute decisions end-to-end, including customer-facing, without sign-off.

How we get there

We don’t rush this — each phase must earn the next.

Setting Foundation

Now · 18 – 24 months

- Get the data right first — trusted and well-governed before anything scales.
- Put AI to work inside the business first, on things like solution development.
- Staff-assisted use stays under clear controls, with a named owner.
- Prove the value while the risk is still ours to control.

Expand Capabilities

Next · 2028 - 2030

- Scale what proves value; embed AI into priority workflows.
- Intake, triage, knowledge search, and case preparation.
- Human review at every decision point.

Normalize

Later · Beyond 2030

- Extend selectively to broader and customer-facing use.
- Only where data, controls, and accountability are proven.
- Customer-facing AI only after readiness is demonstrated, never assumed.

Modernization

Approach and roadmap sequence

MANITOBA
PUBLIC INSURANCE

Customer value is the foundation of modernization

The next step is our modernization strategy.

- With MPI's core technology systems nearing end of life [REDACTED]_____ _____, a thoughtful, measured, customer-centric strategy is key.
- Incorporating the lessons learned from Project Nova, we have developed an IT road map that prioritizes managing technology risks and planning the best path forward for our foundational systems while considering the organization's capability and capacity.
- One key difference in this approach from those we have taken in the past is that our road map is an incremental rolling plan rather than one significant timebound project.
- This strategy provides a more manageable way to address the most urgent issues first and the agility to ensure we can complete the work we commit to each year.

Customer value is the foundation of modernization

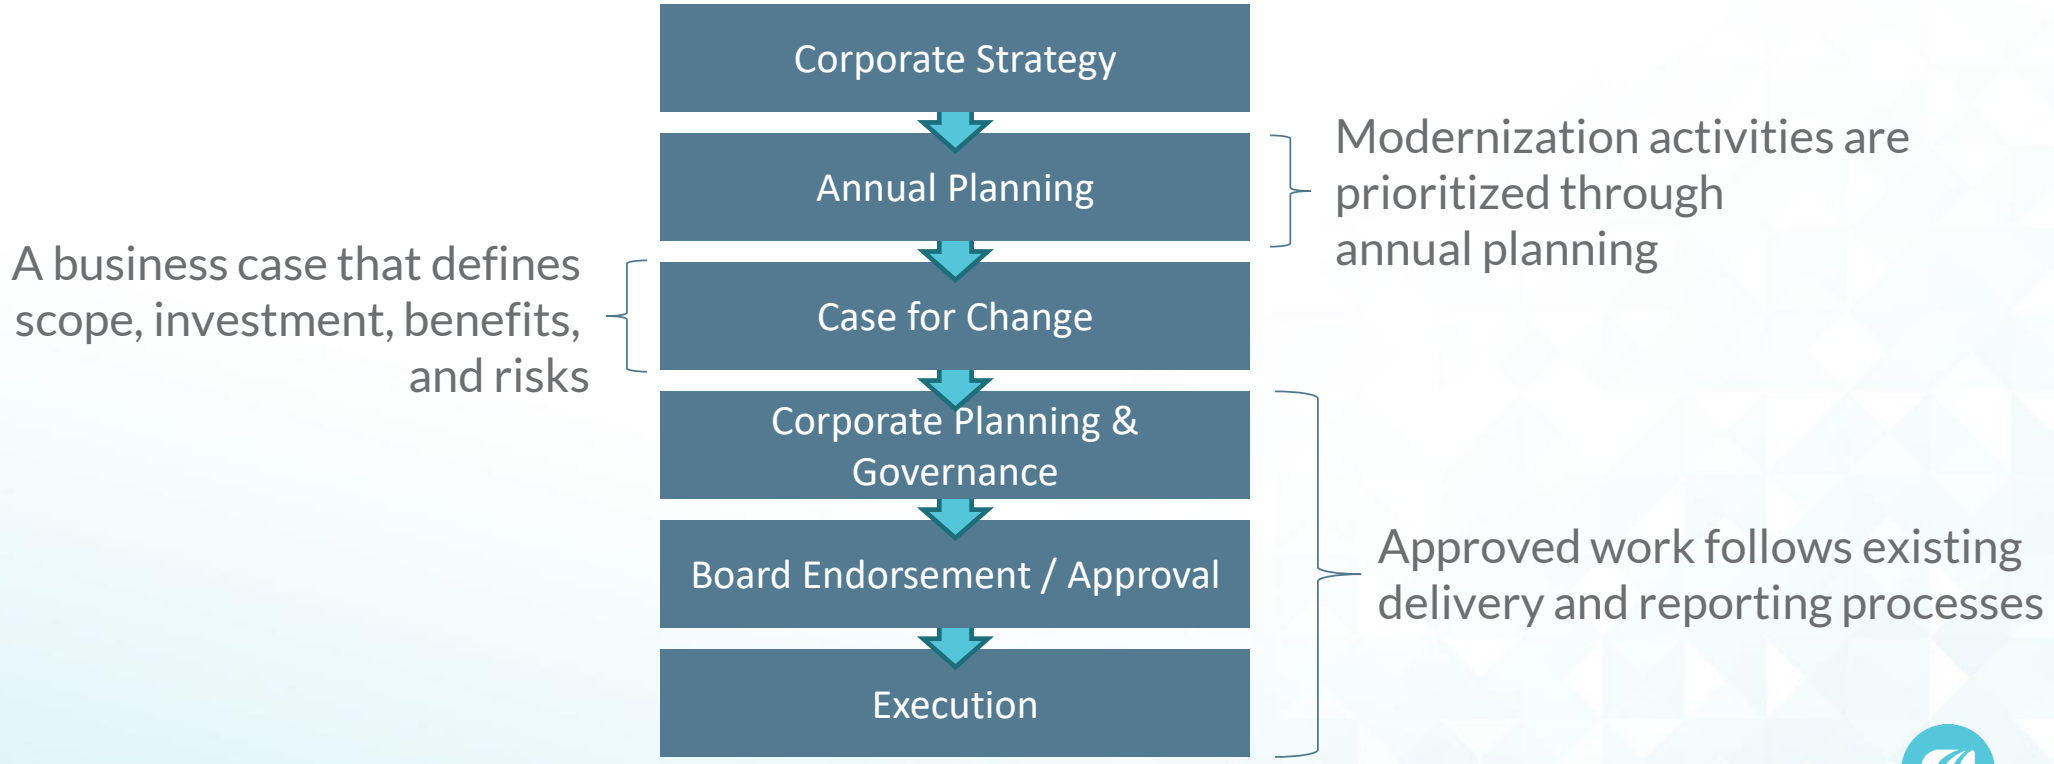
By strategically planning and executing its IT road map, MPI will continue delivering value for customers by:

- Ensuring the dependability of the MPI channels they rely on today, including our website, our service centres and our broker network.
- Better protecting customer data and personal information by safeguarding against current and future cybersecurity threats.
- Creating new and enhanced online, self-serve options and tools to allow them to access MPI services when and where it's most convenient.
- Being fiscally responsible by replacing aging technology systems in an incremental way to reduce unplanned impacts and costs.

Modernization Summary

MPI Will modernize business services through a consistent, principle-driven approach designed to manage risk and avoid the challenges associated with large-scale transformation initiatives.

Modernization Strategy



Modernization occurs through a series of manageable decisions and investments

Modernization follows MPI's existing planning, architecture, investment, and delivery governance processes

Modernization Governance

Modernization initiatives will follow the same governance, planning, and approval processes used for other significant MPI investments.

22

MPI's Modernization Strategy

MPI will modernize through a sequenced, principle-driven approach that reduces risk, establishes foundational capabilities, and enables incremental transformation.

	Stabilization	Prepare for Transformation	Execute Approved Change
Purpose	Manage technology risk and establish a supportable foundation	Build the business case and architectural foundations required for incremental transformation	Deliver business transformation through incremental, manageable, approved investments
Principle	L1-3: Reliability & Resilience	L1-7: Simplicity, Consistency & Reuse	L1-11: Strategic Intent over Tactical Convenience

23

Stabilization

Systematically **manage technology risk** while preparing for future modernization.

Modernization begins with stabilization so MPI can:

- Reduce Risk to Business Operations
- Establish Supported Technology Foundations
- Increase Understanding of Business Processes, Systems, and Dependencies

Workstream	*Objective*
Infrastructure & Platform Remediation	[REDACTED]
Application Remediation	Ensure the core application platforms [REDACTED]
Security Remediation	[REDACTED]

24

Prepare for Transformation

Before pursuing business transformation, MPI will develop a case for change while continuing to evolve its technology products to support future incremental transformation

Case for Change

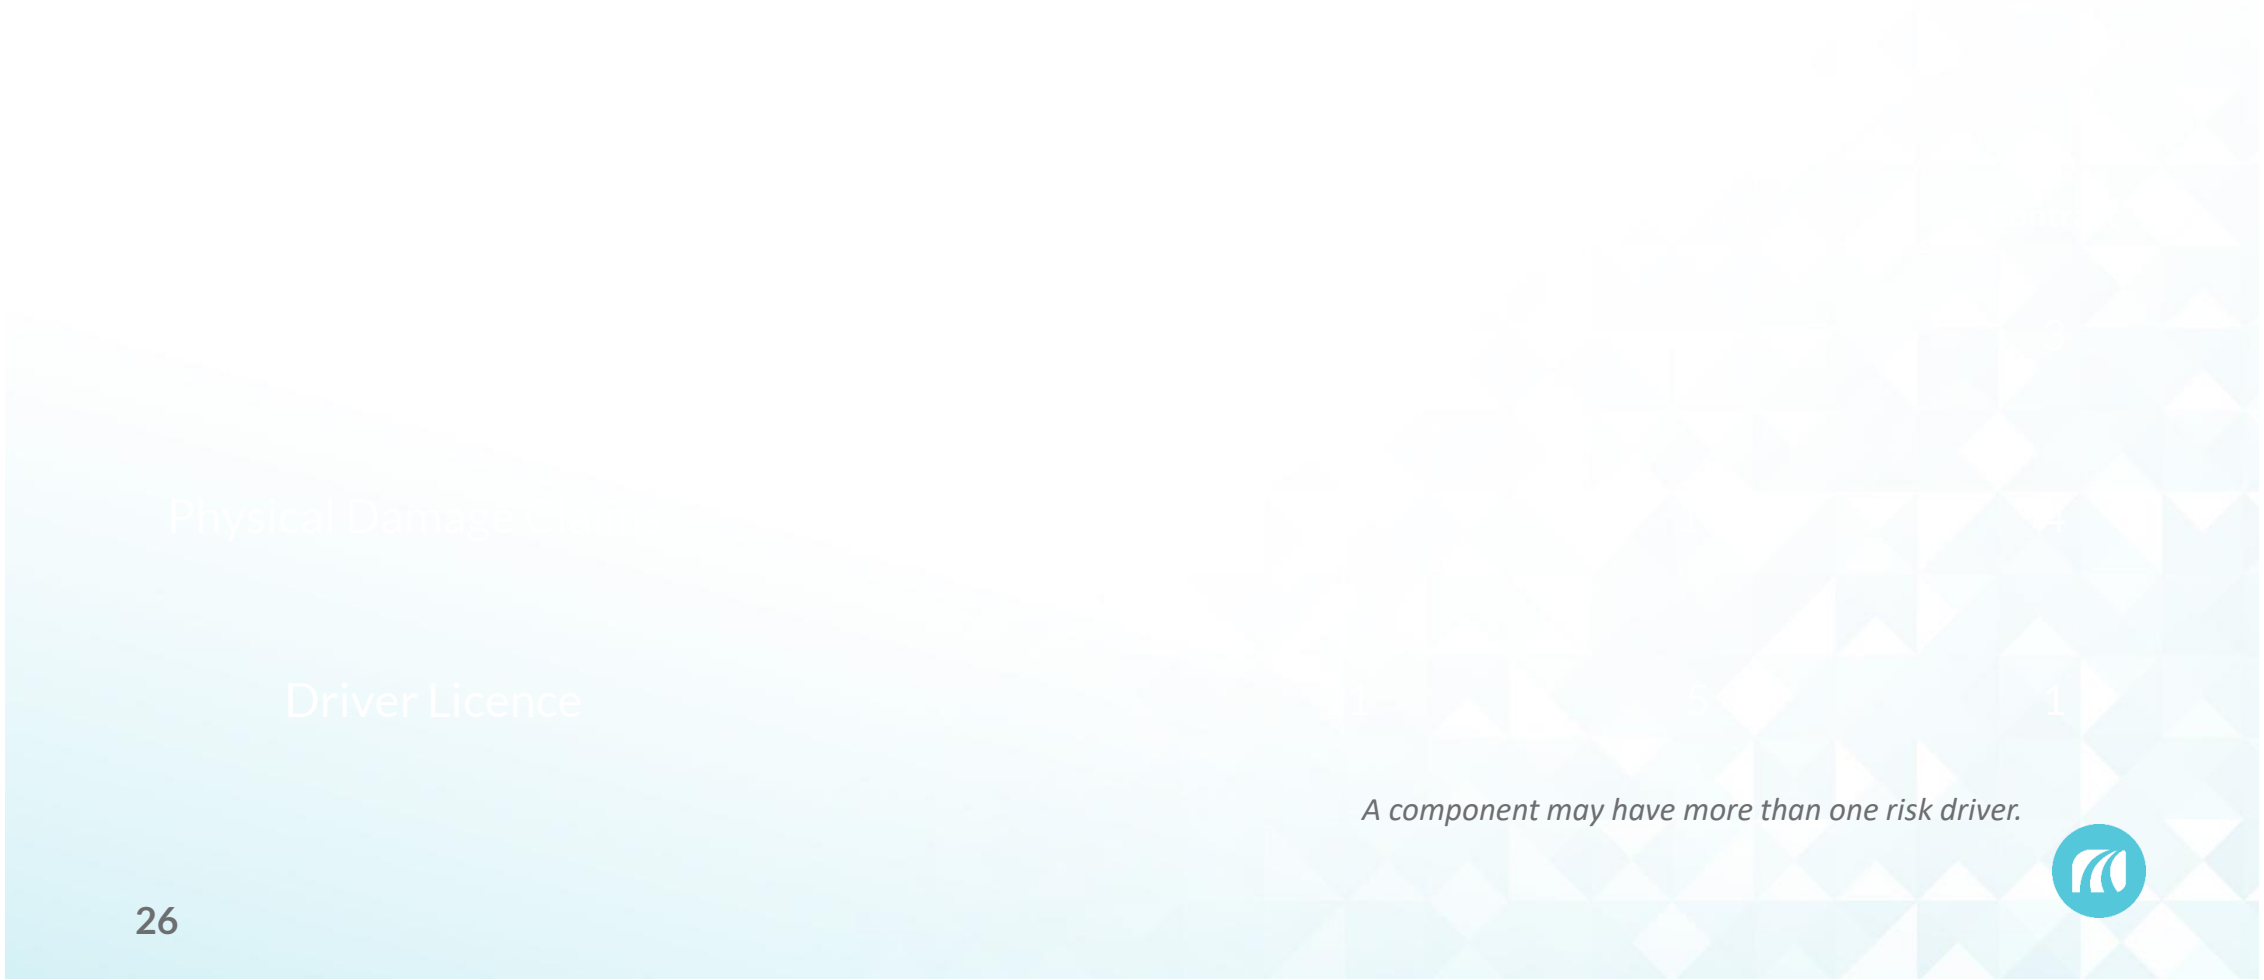
Define the business problem, evaluate options, and establish direction

- Understand Business Needs
- Assess Modernization Options
- Define Business & Technology Vision
- Validate Against Industry

Composable Architecture Foundations

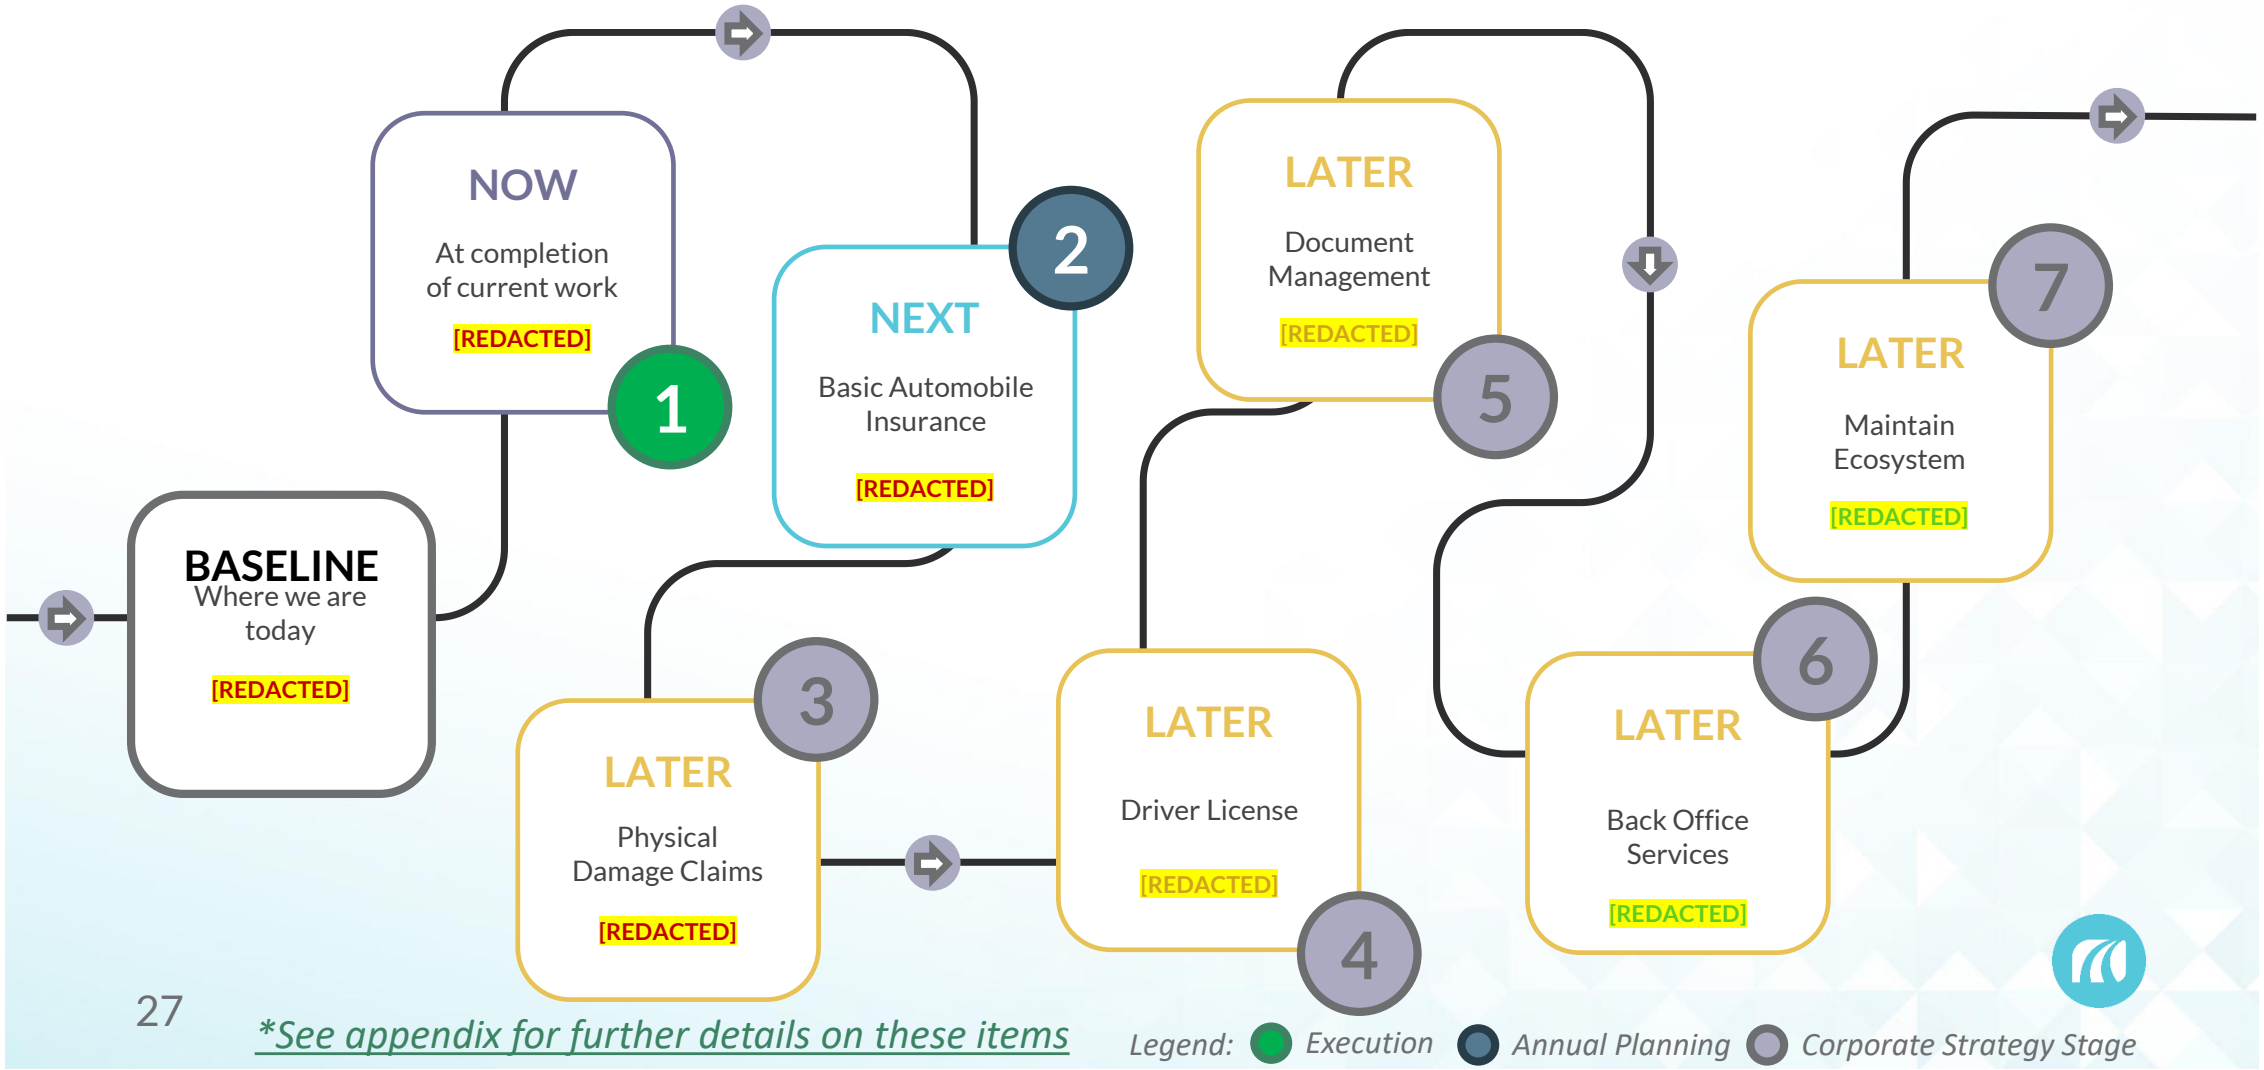
Establish the technical foundations for incremental modernization

- Establish Reusable Services and APIs
- Decouple Business Logic from Legacy Platforms
- Separate Business Capabilities from Applications
- Establish Trusted Enterprise Data



Outcomes

- Board-Ready Modernization Business Case
- Transformation-Ready Foundation



25

Executive Summary

Purpose

This report provides the Public Utilities Board with a detailed explanation of Manitoba Public Insurance's Information Technology strategic planning and roadmap. It is the next evolution of the direction presented at the May 2026 IT Summit, carrying forward its focus on technology risk management, fiscal discipline, governance maturity and delivery confidence. It expands that foundation by describing how customer value, responsible artificial intelligence adoption, enterprise architecture and portfolio planning are being brought together within one coherent, rolling direction.

Key Messages

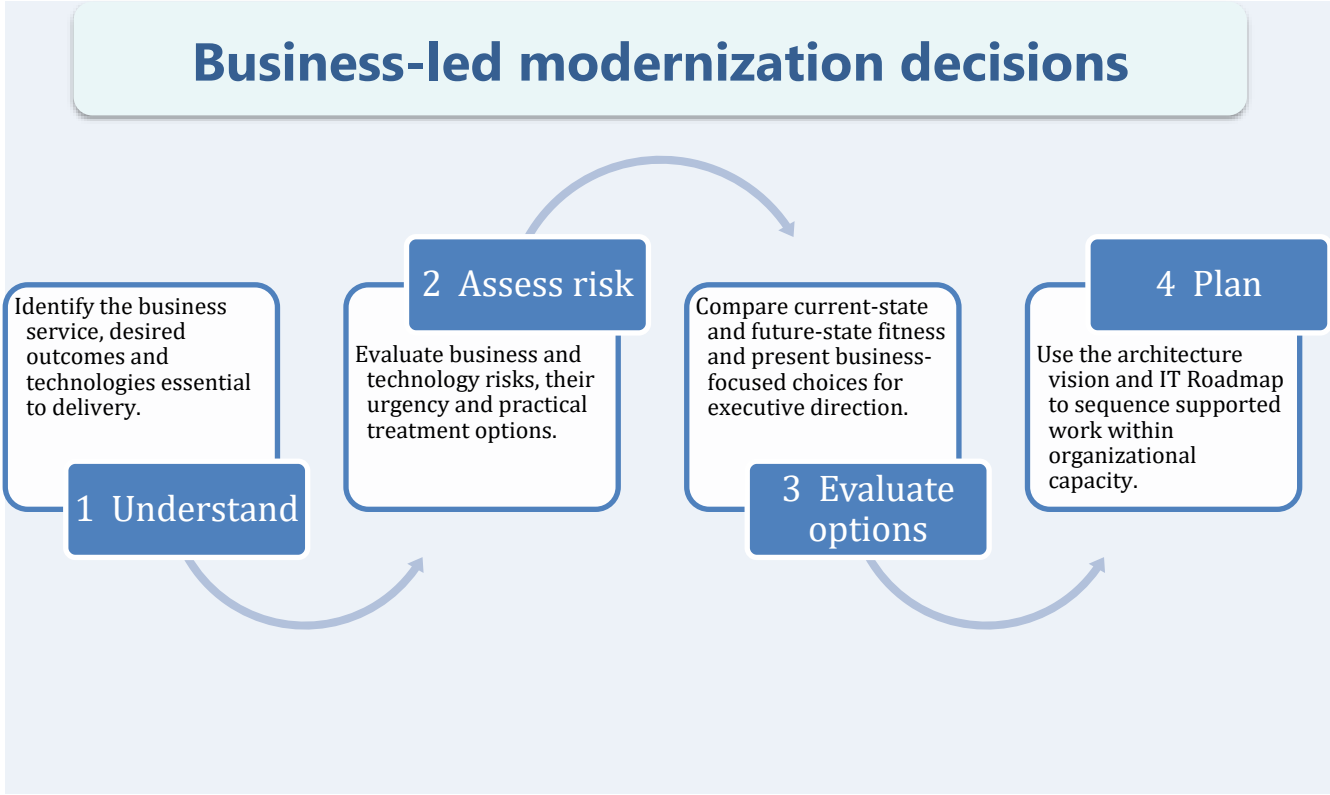
- Customer value is the foundation of modernization. Technology change is pursued to sustain reliable service, protect information, improve convenience and manage costs responsibly.
- MPI has established an IT North Star and five 2030 objectives that connect customer trust, affordability, governance, security, architecture and workforce capability.
- MPI intends to adopt an AI-Opportunistic posture. AI will be used where there is a defined business problem, measurable value and acceptable risk, with human accountability retained.
- Modernization continues the deliberate, risk-informed approach established in May 2026: stabilize and maintain supportability, prepare the business and architecture for transformation, and execute approved change incrementally.
- The Rolling IT Roadmap translates the May 2026 planning direction into clearer, risk-informed sequencing within available capacity, while future scope, timing and investment remain subject to cases for change, annual planning, funding and established governance.
- Basic Automobile Insurance is the initial concentrated modernization focus because the supporting ecosystem contains the greatest concentration of identified technology risk.

Overall message: Stabilize first, build readiness deliberately, and execute approved change through manageable, governed investments.

1. Customer Value and Strategic Direction

1.1 Customer value as the starting point

MPI's technology strategy begins with the services Manitobans rely on, not with a preferred technology product. For 55 years, MPI has adapted its service model and supporting technology as customer needs have changed. Customers continue to seek convenient access, clearer information and more online options. Modernization is therefore a means of sustaining MPI's mandate and improving service, rather than an end in itself.



Since 2023, MPI has delivered incremental digital improvements across four service areas:

- **Claims:** online claim submission, status updates and temporary self-serve hail estimating appointments.
- **Customer access:** service-centre appointment booking and enhanced communications.
- **Registration, licensing and safety:** registration improvements, licence lookup and road-safety information.
- **Commercial services:** online services for International Registration Plan customers, supported by the MyMPI foundation.

These improvements deliver near-term value while building reusable capabilities for broader modernization.

1.2 Business-led modernization decisions

Modernization decisions follow a consistent sequence that starts with the business service and moves toward an executable roadmap. This prevents solution selection from moving ahead of an understanding of the problem, dependencies and risk.

Key takeaway: Modernization begins with business need and risk, then proceeds through architecture, executive direction and roadmap planning.

2. IT North Star and 2030 Objectives

2.1 IT North Star

The IT North Star builds on the operating direction established in the May 2026 IT Summit Report. It describes both the technology outcomes MPI requires and the way the IT function must operate to achieve them: secure and resilient systems, modern information solutions, and reliable, affordable and transparent services delivered through clear accountability, disciplined governance and internal ownership.

Mission: Exceptional coverage and service, affordable rates and safer roads through efficient public auto insurance.

Vision: Manitoba's trusted auto insurer and driver services provider. Dedicated to road safety for all.

Who We Are	Foundation	How We Show Up
A trusted technology partner delivering: •Secure & resilient systems •Modern information solutions •Reliable, affordable & transparent services •Value that builds trust with Manitobans today & into the future	**One-Team Mindset:** •Empowered, engaged & skilled team •Clear, consistent communication •No surprises — share openly (good & bad) •Break down silos & collaborate **Smart Governance:** •Fit-for-purpose processes •Clear accountability •Right tools for the job	•One Team •Learning Mindset •Leadership at All Levels •Customer Impact First •We Do What We Say

A one-team mindset emphasizes empowered and skilled employees, clear communication, transparency and collaboration across organizational boundaries. Smart governance complements this mindset with fit-for-purpose processes, clear accountability and appropriate tools. Together, these foundations connect day-to-day behaviours with the service outcomes expected by Manitobans.

2.2 Five balanced objectives for 2030

The IT North Star guides five key objectives that collectively define the desired outcomes for 2030. Together, they align customer and stakeholder trust, financial discipline, internal execution, security and architecture, and workforce capability so that progress in one area does not come at the expense of another.

Customer and stakeholder	Build trust through reliable, transparent and customer-centric technology services.
Financial and value	Deliver cost-effective technology services and practical investments with measurable value and affordability.
Internal process	Strengthen governance, accountability, execution discipline and ownership across initiatives.
Security and architecture	Improve resilience, security and modernization through supported, well-architected platforms.
Learning and growth	Develop a collaborative, skilled technology team with leadership and learning at every level.

Key takeaway: The strategy balances customer value, financial discipline, operational execution, resilience and workforce capability.

3. Artificial Intelligence Ambition

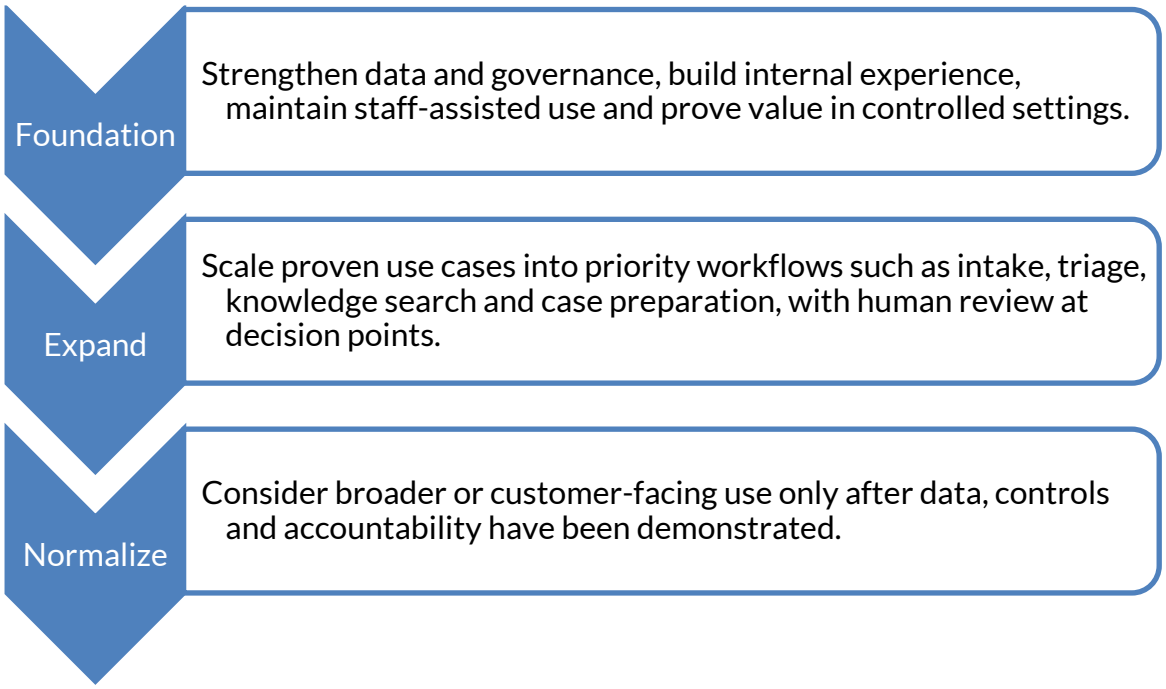
3.1 AI as an accelerator of modernization

AI is an extension of the modernization and data direction established in May 2026, not a separate transformation agenda. AI-assisted discovery can help document legacy environments; development and testing tools can support stabilization and upgrades; automation can improve fragmented processes; and analytics can improve understanding of business impact. These opportunities depend on the same foundations already underway: supported platforms, composable architecture, formal data governance and a trusted enterprise data platform.

The sequencing matters. The May 2026 report committed MPI to strengthening data governance and establishing **[REDACTED]** as a modern enterprise data platform. Those investments improve the quality, security and accessibility of data needed for responsible AI. Coordinating AI adoption with lifecycle remediation and modernization also reduces the risk of paying first to modernize and later to retrofit controls, data access and integration.

3.2 AI-Opportunistic as the 2030 ambition

MPI's intended ambition is AI-Opportunistic. This is a middle path between limiting AI to low-risk productivity assistance and making AI the default basis for enterprise decisions. Under this posture, MPI would pursue AI where a clear business problem, measurable value and acceptable risk have been demonstrated. Successful use cases could then scale into priority workflows using reusable capabilities and stronger governance.



AI-First is not the objective. MPI's mandate, risk tolerance and regulatory context require human oversight, explainability and careful control of customer-facing or decision-oriented uses. AI may assist work, but accountability remains with MPI.

3.3 Risk appetite and non-negotiable controls

- Sensitive information may be used only with appropriate authorization and protection.
- Cyber resilience, service availability and regulatory compliance cannot be compromised.
- AI must not be relied upon where uncertainty or bias could undermine fairness, reputation or public trust.
- Every use case requires a named accountable owner, human review and a clear escalation path.
- Employees require role-appropriate AI literacy and responsible-use skills before access is scaled.
- Data must be classified, accessible, trustworthy and supported by quality and lineage standards.
- AI outputs require logging, auditability, access control and monitoring for bias or drift.

3.4 Phased path to increased capability

MPI will increase its use of AI through a deliberate three-phase progression that aligns adoption with organizational readiness. The approach begins by establishing trusted foundations, expands proven use cases into priority workflows, and considers broader use only after value, controls and accountability have been demonstrated.

Key takeaway: MPI will scale AI only where value, readiness and controls have been proven, while retaining human accountability.

4. Modernization Strategy and Governance

4.1 From one-time transformation to a rolling roadmap

The May 2026 IT Summit Report established modernization as a deliberate, risk-informed discipline rather than a single initiative. This report carries that approach forward through an incremental, rolling roadmap: immediate risks are addressed through stabilization, lifecycle remediation and operational upgrades, while larger transformation opportunities proceed only after business need, architectural fit, value and organizational readiness have been established.

Customer value remains the anchor. Modernization is intended to sustain dependable service channels, strengthen the protection of personal information, expand convenient self-service options and replace aging technology in a fiscally responsible manner.

4.2 Three-stage strategy

Stabilization

[REDACTED]_____
_____.

Prepare for transformation

Define the case for change and establish reusable architecture, data and integration foundations that enable smaller, independent changes.

Execute approved change

Deliver business transformation through incremental, manageable investments after the required direction, funding and approvals have been obtained.

4.3 Governance remains in force throughout

The roadmap guides planning but does not bypass the strengthened decision rights and delivery oversight described in May 2026. Corporate strategy and annual planning establish priorities; the Enterprise Project Management Office provides an integrated portfolio and delivery view; and executive sponsors remain accountable for business outcomes and value. Where a potential modernization investment requires deeper consideration, a case for change defines the problem, desired outcomes, options, benefits, risks and likely investment. A subsequent business case proceeds through MPI's established corporate and Board approval processes, with oversight proportionate to cost, complexity and risk.

> **Key takeaway:** The roadmap is a decision framework and planning direction, not a substitute for business cases, approvals or delivery governance.

5. Stabilization and Preparation for Transformation

5.1 Stabilization protects today and improves tomorrow's choices

Stabilization is the first stage because transformation should not be launched from an unsupported or poorly understood base. **[REDACTED]**_____. It also improves understanding of business processes, systems, interfaces and dependencies.

Workstream	Objective
Infrastructure and platform remediation	**[REDACTED]**_____.
Application remediation	**[REDACTED]**_____.
Security remediation	**[REDACTED]**_____.

5.2 Preparing the business: case for change

The case for change establishes why transformation may be required before a specific solution is selected. It defines the business problem, desired outcomes, current constraints, modernization options and dependencies. It also supports validation against industry practices and creates the basis for a Board-ready investment decision.

5.3 Preparing the technology: composable architecture

Composable architecture reduces the need to replace an entire ecosystem at once. MPI will progressively establish trusted enterprise data, reusable services and APIs, and clearer separation between business capabilities and individual applications. Business logic that is tightly coupled to legacy platforms can then be decoupled over time. These foundations allow smaller components to change independently and reduce the scale and risk of future transformation.

> **Key takeaway:** Preparation combines a business case for change with architecture foundations that make incremental transformation practical.

6. Directional Modernization Roadmap

6.1 Risk-based sequencing

The roadmap prioritizes business capabilities according to the concentration of technology risk and the importance of the services they support. Current stabilization and remediation work is expected to reduce the overall risk indicator before the next concentrated modernization effort begins. Basic Automobile Insurance is the next focus, followed directionally by Physical Damage Claims, Driver Licence, Document Management and Back Office Services, while the broader ecosystem continues to be maintained.

The sequence is directional rather than fixed. Later placement means later concentrated modernization focus, not inactivity. Maintenance, regulatory changes, targeted remediation and approved corporate initiatives may continue across all capability areas. ERP replacement also proceeds in parallel because it is separately governed and addresses a distinct enterprise need.

6.2 How to interpret forecast risk indicators

Risk scores are planning indicators used to show the expected effect of identified initiatives on the assessed technology components. They are forecasts, not guaranteed reductions and not a complete measurement of enterprise technology risk. Scores may change as assessments are refreshed, initiatives are completed, new risks emerge or scope is validated through cases for change.

> **Key takeaway:** The roadmap provides a defensible direction while preserving flexibility for evidence, annual planning, capacity and governance.

7. Basic Automobile Insurance: Initial Focus

7.1 Rationale for prioritization

Previous analysis identified Basic Automobile Insurance as the strongest initial candidate for concentrated modernization attention because its supporting ecosystem contains the highest concentration of at-risk components. This prioritization does not diminish risks in other capability areas. It establishes a transparent starting point for focused risk management and preparation work.

7.2 Stabilization scope

The initial stabilization chapter addresses infrastructure and platform remediation, application remediation and security remediation. [REDACTED]

[REDACTED]. This creates a stable starting point for determining the future transformation path.

7.3 Parallel preparation without pre-judging the investment

Several workstreams can proceed in parallel while preserving the required decision sequence. Remediation can reduce immediate risk. The case for change can define the future option, delivery approach and investment. Composable architecture work can establish reusable readiness. Execution, however, remains a planning assumption until the case for change is complete and the required approvals are obtained.

> **Key takeaway:** Parallel work builds readiness, but transformation execution depends on a completed case for change and formal approval.

8. Integrated Technology Portfolio

The modernization roadmap must be managed alongside the full technology portfolio. The portfolio contains four connected categories of demand. Together, they provide an integrated view of risk, customer and business value, capacity and sequencing.

Portfolio	Role in the roadmap
Business Support Services	Keep essential technology operating and reduce foundational exposure through application, cybersecurity, data, infrastructure, contract and process work.

Portfolio	Role in the roadmap
Major Programs	Concentrate investment on platforms with material enterprise impact, including BI3, the current ERP upgrade, ERP replacement and [REDACTED].
Corporate Initiatives	Respond to business, regulatory and customer priorities such as digital services, road safety, data capabilities and selected AI-enabled services. Future items remain planning candidates until confirmed.
Operational Priorities	Sustain supportability and build enabling capabilities through data governance, software asset management, platform migration, cybersecurity, AI capability, digital-tool optimization and process improvement.

8.1 Portfolio-level sequencing

The major programs and planned initiatives draw on many of the same business leaders, subject-matter experts, delivery teams, architects, data specialists, cybersecurity resources and change capabilities. They therefore cannot be planned as isolated projects. Portfolio governance must make trade-offs explicit, protect business continuity and align commitments with the organization's practical capacity to absorb change.

> **Key takeaway:** The roadmap must be managed as one integrated portfolio of risk, value and capacity rather than as separate lists of projects.

9. Governance, Capacity and Delivery Considerations

9.1 Decision rights and accountability

Clear accountability is required at every stage. Business owners define outcomes and accept business risk. Architecture governance ensures proposed approaches align with enterprise direction and reusable foundations. Investment governance assesses scope, benefits, cost and risk. Delivery governance monitors approved work. AI use cases add a further requirement for a named owner, human review and escalation when confidence is low.

9.2 Capacity and organizational readiness

A directional roadmap creates demand but does not create capacity. Consistent with the internal-first model set out in May 2026, MPI employees retain ownership, accountability and long-term stewardship of core systems, while external resources are used selectively for defined skill gaps, temporary surges or time-bound specialist needs with knowledge transfer and MPI oversight. Annual planning and the evolving workforce plan must consider the combined burden of stabilization, major programs, corporate initiatives and operational priorities, including critical skills, business availability, change saturation and dependencies.

9.3 Measures of progress

Progress should be viewed through a balanced set of indicators rather than a single modernization score. Relevant measures include supportability of critical platforms, reduction of identified security exposure, service reliability, completion of architecture foundations, quality and governance of enterprise data, approved cases for change, delivery of customer outcomes, workforce readiness, and realized value from scaled AI or automation use cases.

9.4 Transparency of commitments

The distinction between direction, planning candidates and approved commitments is essential. The roadmap communicates intended sequence and areas of focus. Annual planning confirms priorities. Cases for change and business cases establish the rationale and investment. Approval authorizes execution. Maintaining this distinction supports transparent reporting and prevents directional information from being interpreted as a fixed commitment.

Closing

This report advances the direction established in the May 2026 IT Summit Report from foundational commitments into a clearer strategic and sequencing framework. MPI's technology direction remains a progression from risk to readiness and from readiness to sustainable change: stabilize essential technology and reduce exposure; prepare the business, workforce, data and architecture; and execute approved transformation through manageable investments that preserve governance, accountability and fiscal discipline.

AI supports this journey as an accelerator where value and acceptable risk can be demonstrated. It does not replace modernization, human accountability or established decision rights. Taken together, the strategy provides a practical path to sustain reliable service, protect customer information, improve convenience and modernize MPI's technology environment without returning to an all-at-once transformation model.

Appendix A: Reading Qualifications

- The roadmap is directional. Future scope, timing, sequencing and investment remain subject to validation, annual planning, cases for change, funding and established governance.
- Risk scores are forecasts and planning indicators. They are not guaranteed reductions and do not represent a complete measure of enterprise technology risk.
- Items identified for redaction in the presentation may contain operational, security, commercial or planning detail that requires separate treatment in public-facing versions.
- Cases for change will define the problem, evaluate options and support individual investment decisions before execution is approved.
- Corporate initiatives shown in future periods remain planning candidates until confirmed through annual planning and governance.
- Timelines for transformation execution are planning assumptions until business cases, procurement approaches, capacity and approvals are confirmed.

MPI Hail Claims Response

Summer 2026

Four Storm Events Drove the Claim Surge

June 6 – July 7, 2026 | Manitoba storm sequence

June 6–8, 2026

EVENT 1

Parkland storms and flooding

Swan River / Parkland area

Flood, hail, and wind claims across the Parkland region.

June 9–12, 2026

EVENT 2

Winnipeg & southern MB storm

Winnipeg and southern Manitoba

Hailstorm struck June 9 — the record Winnipeg hail event.

June 28–July 1, 2026

EVENT 3

Interlake and Parkland storms and flooding

Stonewall, Dauphin, Swan River

Hail, wind, tornados; roughly one-third identified as flood claims.

July 5–7, 2026

EVENT 4

Westman Manitoba storms

Boissevain and Killarney areas

July 7 identified internally as the main southwestern MB storm date.

Claim volumes cluster around the June 9 Winnipeg hailstorm, with Parkland and southwestern Manitoba events adding flood and wind exposure.

Hail Claims Largely Concentrated in Single June Loss Event — and in Winnipeg

Aggregated catastrophe claim volume, Jun 1 – Oct 3, 2026

Operational metrics

42,163
Total catastrophe claims

96%
Hail-related (40,401)

80%
From the June 9 storm

74%
Winnipeg loss occurrence

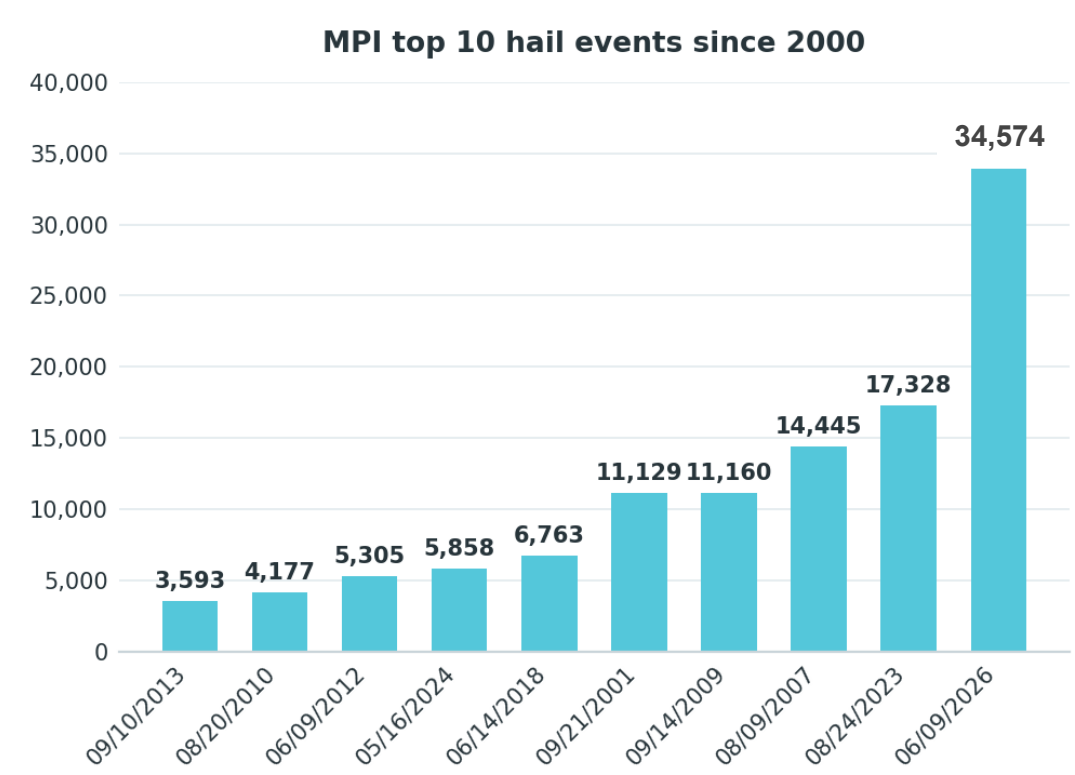
Non-Hail Catastrophe

1,103
Flood Claims

428
Windstorm Claims

Top loss regions by claim count

Winnipeg	31,097
Killarney	1,926
Boissevain	836
Oakbank	776
East St. Paul	670



Claim profile at a glance

Passenger vehicles	31,816 (76%)
Trucks & trailers	9,598 (23%)
Drivable Claims	39,325 (94%)
Largest centre outside Winnipeg	Brandon — 3,808
Non-hail perils (flood + windstorm)	1,503 (4%)

Source: Storm Dashboard, catastrophe claims Jun 1 – Oct 3, 2026 (refreshed Oct 4, 2026)

June Hail Event Drove Unprecedented Claim Volumes

Top 10 MPI hail events by claim count, 2000–2026

34,574
June 9, 2026 claims

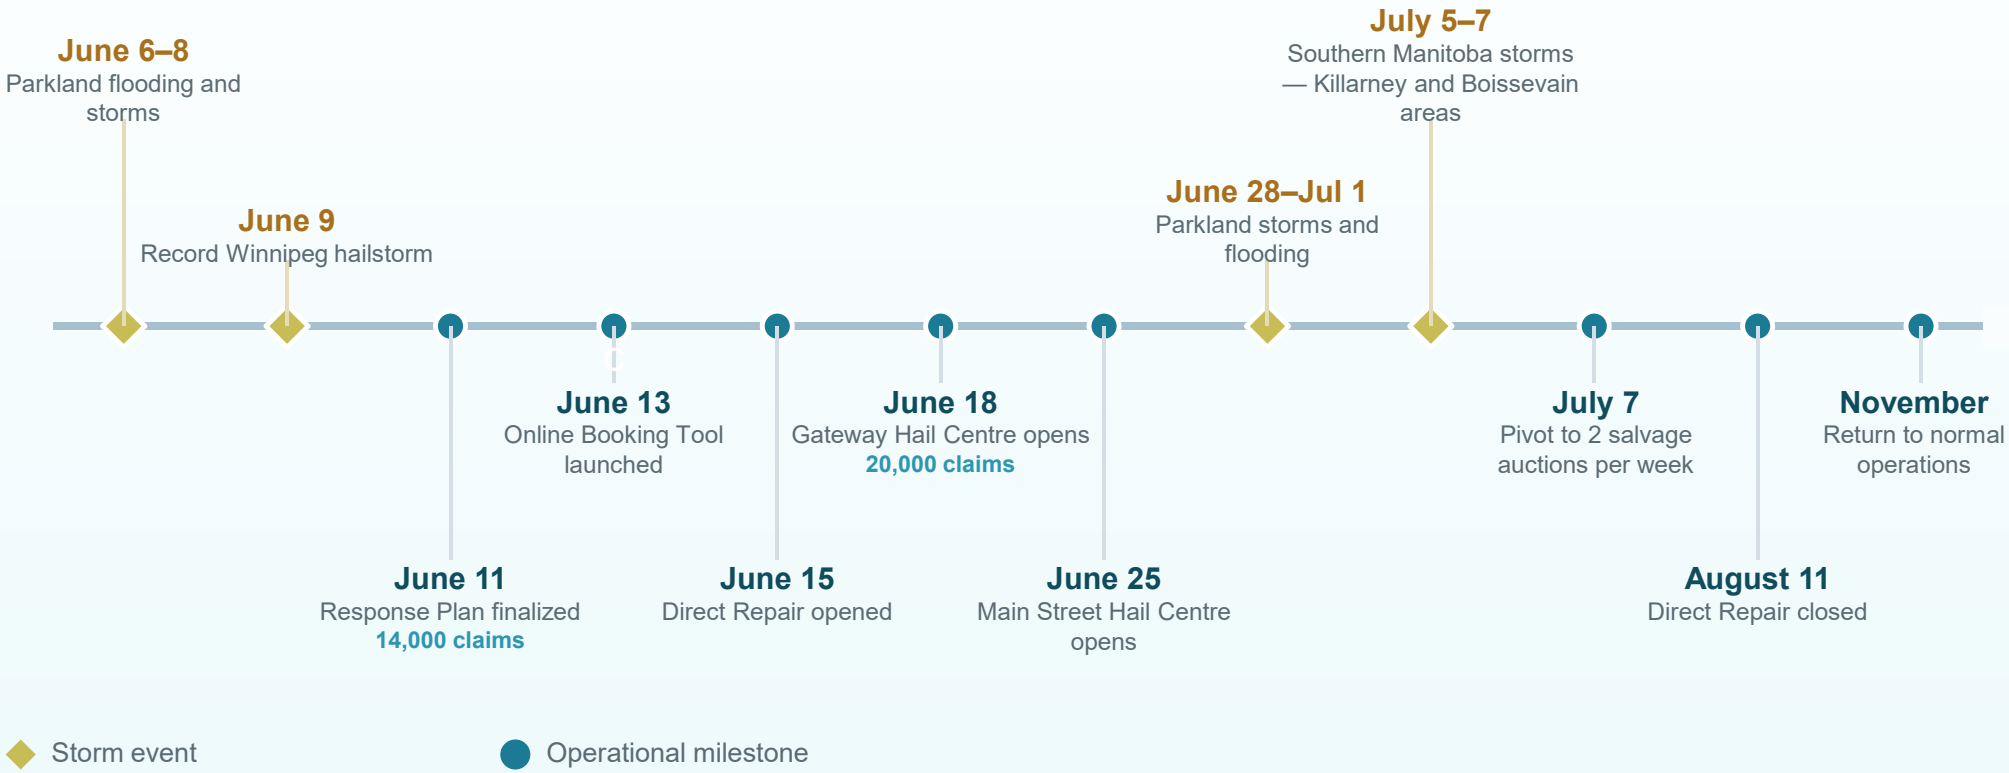
~2.0x
The previous record

What the history tells us

Unprecedented scale. At 34,574 claims, June 9 is nearly double the previous record of 17,328 (Aug 24, 2023).

Not a typical year. Seven of the top 10 hail events since 2000 fall between 3,500 and 11,200 claims — June 9 sits in a category of its own.

Almost 2 top 10 storms. At 3,435 claims reported so far, the July 5-7 storm in southwestern Manitoba has the potential to become a second top 10 storm in 2026



How Hail Claims Have Progressed

Takeaway: Each stage has its own timeline and challenges

STAGE 1	STAGE 2	STAGE 3	STAGE 4	STAGE 5
Reported	**Customer Action**	**Damage Assessed**	**Estimate Outcome**	**Completed**
40,663	**33,544**	**29,614**	**21,303** Repairable **8,311** Total loss	**8,368**
Entered the claims cycle	Progressed to customer action taken	Progressed to estimate completed		Progressed to repaired or total loss with salvage sold
100% of total reported	**83%** of claims reported	**73%** of claims reported	**72%** repairable **28%** total loss	**21%** of total reported
	▼ 1 in 6 have not progressed	3 in 4 progressed to assessment		Only 1 in 5 progressed to close

Storms and the Operational Response

Takeaway: Four storm events drove the surge; capacity and tooling milestones followed within days and wound down as volumes normalized.

Hail Customer Experience

CX snapshot and 2026 hail survey results

84%
Customer ease score

74%
Customer satisfaction

The 2026 hail survey scored higher across all six measures than the 2024 hail survey.

2026 hail claim experience

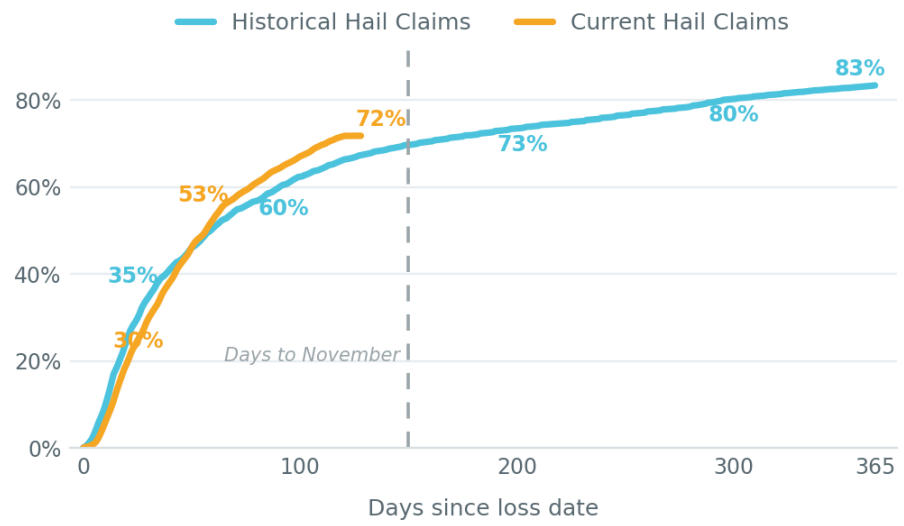
80% Opened their hail claim with Online FNOL.

84% Said booking their hail assessment with MPI was easy.

82% Felt their needs were met throughout the claim.
8 pts above all other claim types combined.

78% Satisfied with their overall claim experience.
7 pts above all other claim types combined.

Hail response comparison



Measure	2024	2026	Change
CSAT	60%	**78%**	+18 pts
Advocacy	59%	**74%**	+15 pts
Effective	63%	**82%**	+19 pts
Ease	63%	**87%**	+24 pts
Emotion	49%	**67%**	+18 pts
Dignity & respect	73%	**88%**	+15 pts

Simplicity, transparency and confidence were key drivers of a positive hail claim experience.

Estimates Are Ahead of the 150-Day Target

Loss Date to Estimate

Cycle time trend | cumulative share of claims with a completed estimate

▲ Historical curve: ~70% of claims estimated by day 150

Historical hail claims = loss dates Jan 1, 2015 – May 31, 2026

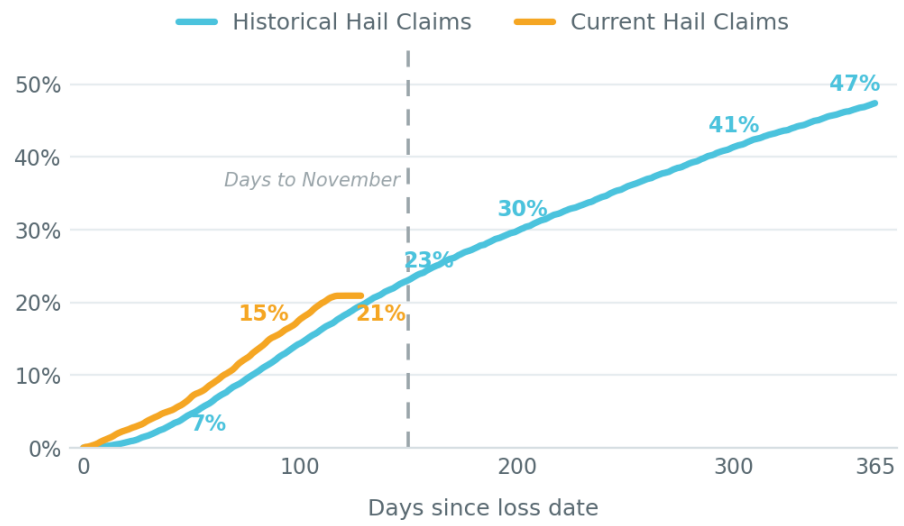
Why 150 Days?

June 1 – November 1 | the window to get this year's claims estimated

We benchmarked how long historical hail claims took to move from loss date to a completed estimate.

June 1 to November 1 — 150 days — is the window for handling this year's claims, so 150 days is our target.

70%
Historical: estimated by day 150



75–80%
2026 claims on pace by Nov 1

Current claims are running ahead of historical performance at the same point in the cycle.

Repairs Follow a Much Longer Cycle

Loss Date to Repair Date

Cycle time trend | cumulative share of claims repaired

▲ Only ~68% of historical hail claims were ever repaired

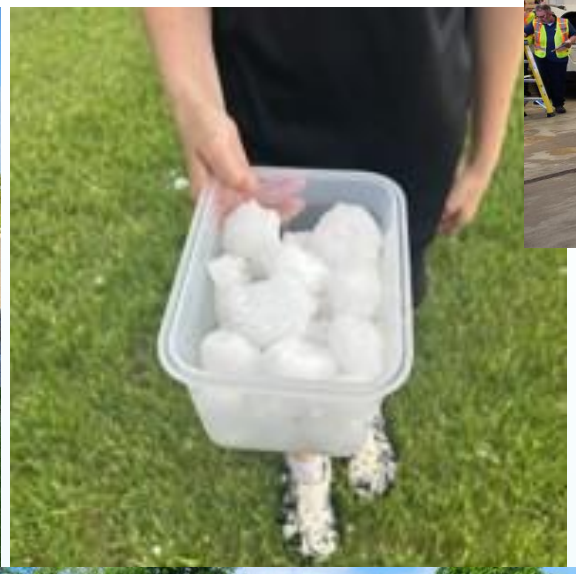
Historical hail claims = loss dates Jan 1, 2015 – May 31, 2026

A Longer Tail by Design

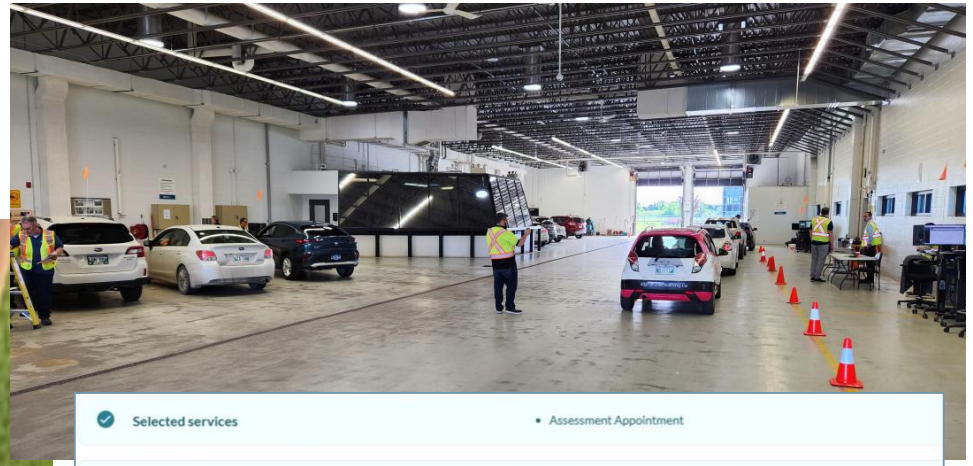
Repair completion measured from the loss date

The repair life cycle for hail claims is inherently slower than estimating — parts supply, shop capacity and customer scheduling all extend it.

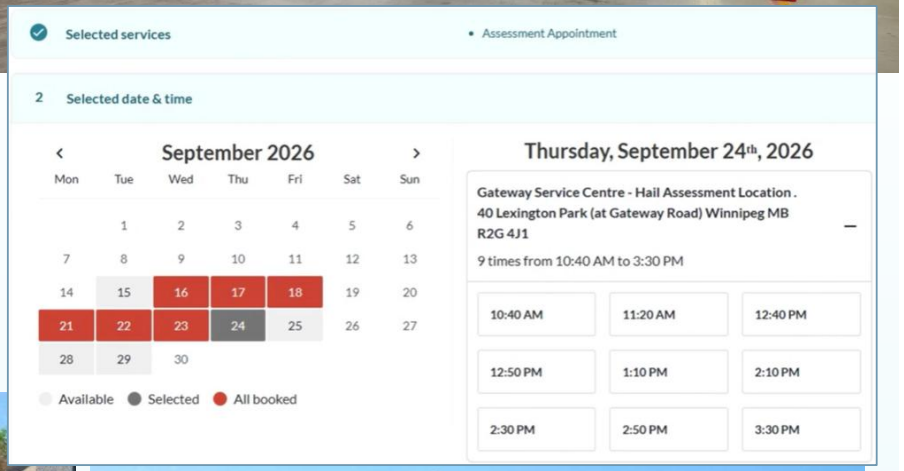
Historically, only about half of hail claims are fully repaired a full year after the loss date.



~50%
Historically repaired 1 year after loss

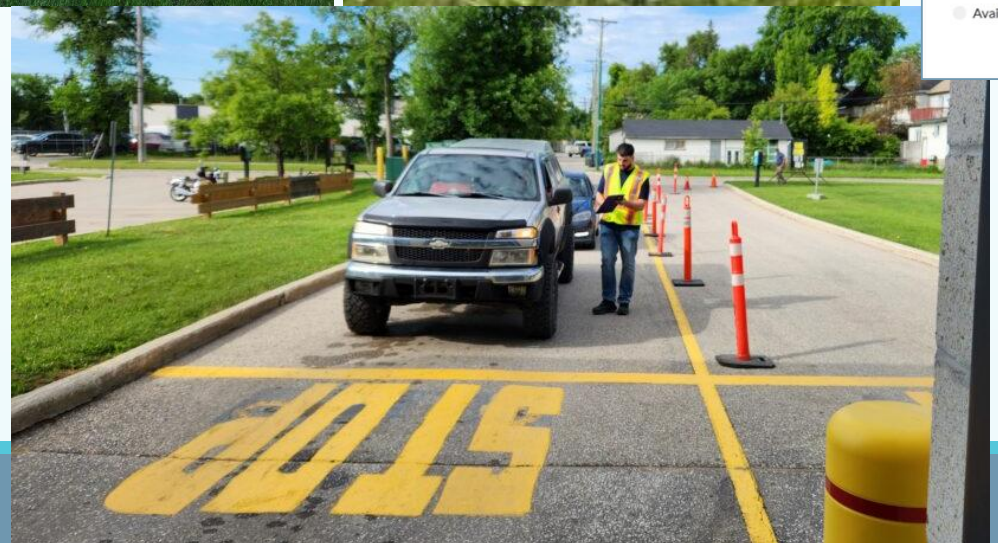


~68%
Historically ever repaired at all



Repair progress should be judged over a multi-year horizon, not against the estimate curve.

Rising To The Occasion



Thank You

Road Safety

2027 General Rate Application Presentation

MANITOBA
PUBLIC INSURANCE

Context Behind the Strategy

Our Mission:

Exceptional coverage and service, affordable rates and safer roads through efficient public auto insurance.

Our Vision:

Manitoba's trusted auto insurer and driver services provider. Dedicated to road safety for all.

What shaped this Strategy?

- Vision Zero Principles
- Canada's Road Safety Strategy 2035+
- A commitment to Partnering for Safer Roads and Reconciliation
- MPI's Corporate Strategic Plan
- A commitment to Diversity, Equity, Inclusion, and Accessibility
- The diverse perspectives of key stakeholders and the public
- The expertise and insights of MPI team members

Engaging with Stakeholders
MANITOBA
PUBLIC INSURANCE

Stakeholder and Public Engagement

MPI recognizes its responsibility to engage those who are impacted by, and contribute to, road safety outcomes.

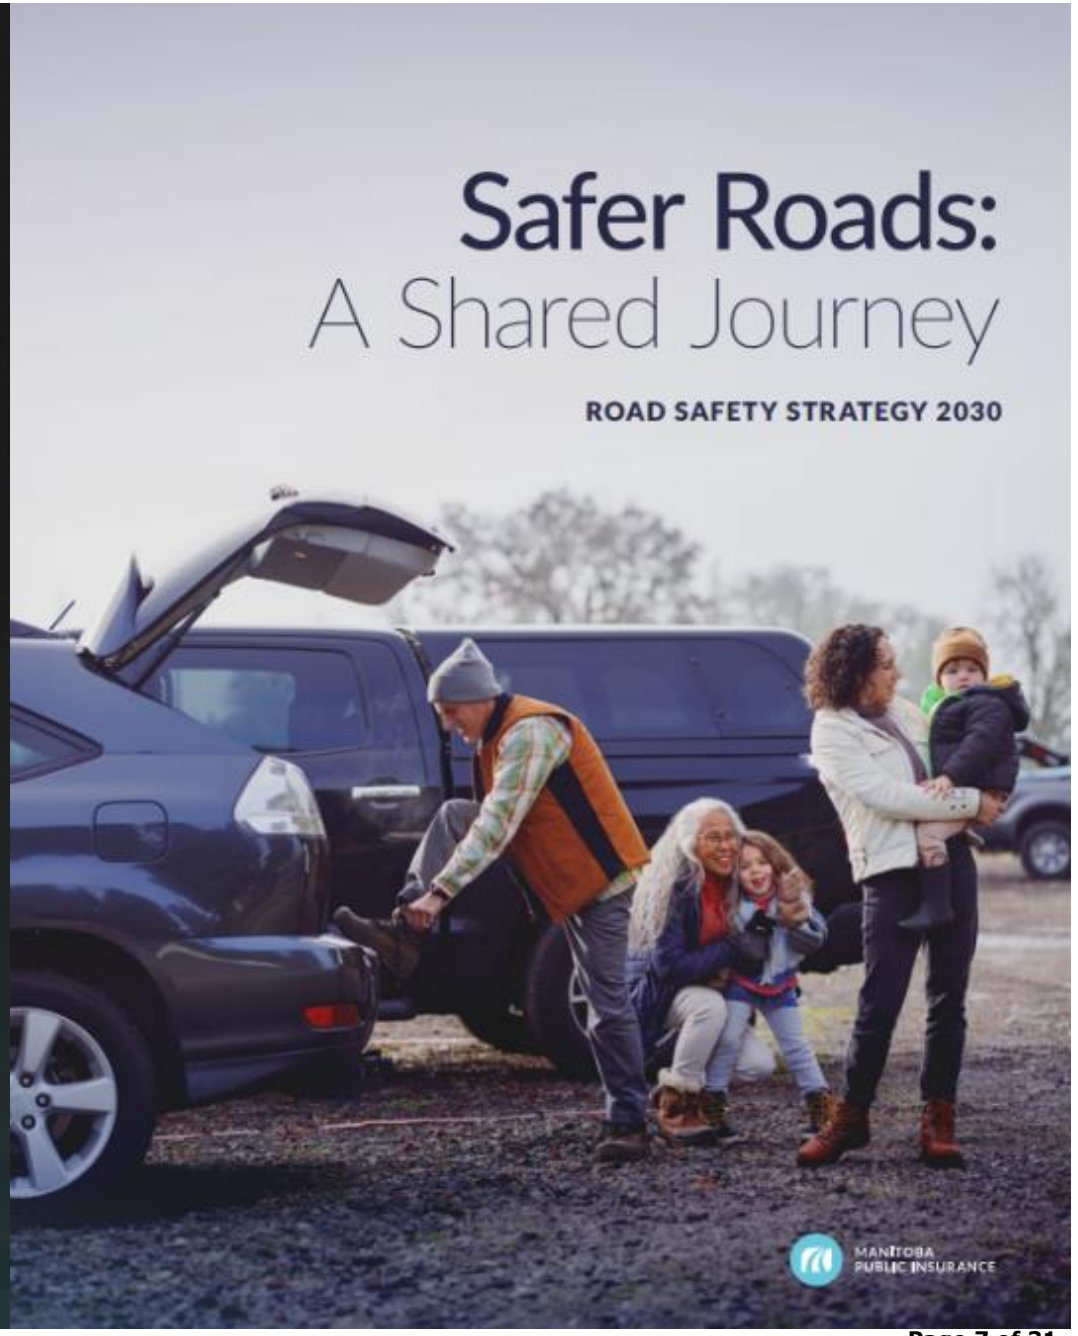
- This meant connecting with and listening to Manitoba's key road safety stakeholders and the public.
- MPI followed a leading stakeholder engagement framework to ensure the strategy is informed by a wide range of perspectives.
- Between July 2025 and January 2026, MPI engaged:
  - 275 external organizations and nearly 3,000 members of the public through surveys.
  - One-on-one discussions with 13 key stakeholder organizations.
  - MPI employees through engagement sessions and strategy development workshops.
- This extensive process clarified Manitobans' priorities and helped us identify opportunities to improve road safety, shaping the strategy's direction.

4

Engaging with Indigenous Communities

MPI recognizes that Indigenous communities hold unique knowledge, lived experience, and priorities related to road safety.

- Early engagement planning activities confirmed the need for culturally respectful, relationship-based approaches.
- Engagements with Indigenous communities are integrated with MPI's Indigenous Action Plan, allowing for the time needed to build foundational relationships and opening pathways for future dialogue.
- Letters introducing MPI's reconciliation efforts and inviting engagement were sent to the leadership of all First Nations in Manitoba and the Manitoba Métis Federation.
- MPI is prioritizing relationship-building as a first step, initiating introductions with community leadership and creating space for dialogue to understand expectations and preferred engagement methods.
- All future engagement efforts will be facilitated through MPI's Indigenous Action Plan, which emphasizes reconciliation and respectful engagement.



What We Heard

Stakeholders identified the need for stronger collaboration, behaviour change, and equitable access to road safety programs.

- **Top concerns**: Distracted driving (66%), alcohol-impaired driving (47%), drug-impaired driving (36%), and speeding (33%) identified as top concerns by public.
- **Normalization of risk**: Stakeholders felt risky behaviours have become culturally accepted and require a shift in social norms.
- **Training gaps**: Stakeholders highlighted need for modernized driver education, particularly for newcomers and rural residents
- **Partnership**: No single group can address road safety alone; centralized data and coordinated programs needed
- **Equity**: Calls for resources in non-official languages and culturally relevant programming for Indigenous communities.

The Result…

A strategy directly shaped by the people it will impact.

7

Pillars of Our Next Road Safety Strategy

1. Building a Culture of Road Safety
2. Strengthening Partnerships Through Shared Responsibility
3. Shaping Safer Driving Behaviours
4. Advancing Road Safety and Reconciliation

Pillar 1: Building a Culture of Road Safety

MANITOBA PUBLIC INSURANCE

Pillar 1: Building a Culture of Road Safety

Objective: *Foster a province-wide culture where road safety is understood and valued by all Manitobans: drivers, passengers, pedestrians, cyclists, and motorcyclists alike.*

Why This Matters:

- Sustainable improvements in road safety require a shift in attitudes.
- Stakeholders emphasized that risky behaviours have become “normalized” across the province and that changing this mindset is essential to progress. They also highlighted entrenched attitudes such as overconfidence, impatience, and a belief that collisions are inevitable.
- Creating a culture of safety means addressing these norms and making road safety a shared value of Manitobans.

Pillar 1: Building a Culture of Road Safety

Objective: *Foster a province-wide culture where road safety is understood and valued by all Manitobans: drivers, passengers, pedestrians, cyclists, and motorcyclists alike.*

Priorities

Enhance our **understanding of Manitobans' attitudes, beliefs, and experiences** related to road safety to inform program design, monitor cultural change, and track progress over time.

Expand road safety education for younger Manitobans to help build safe road-use habits before they begin driving, and for adult learners who face barriers to accessing driver training.

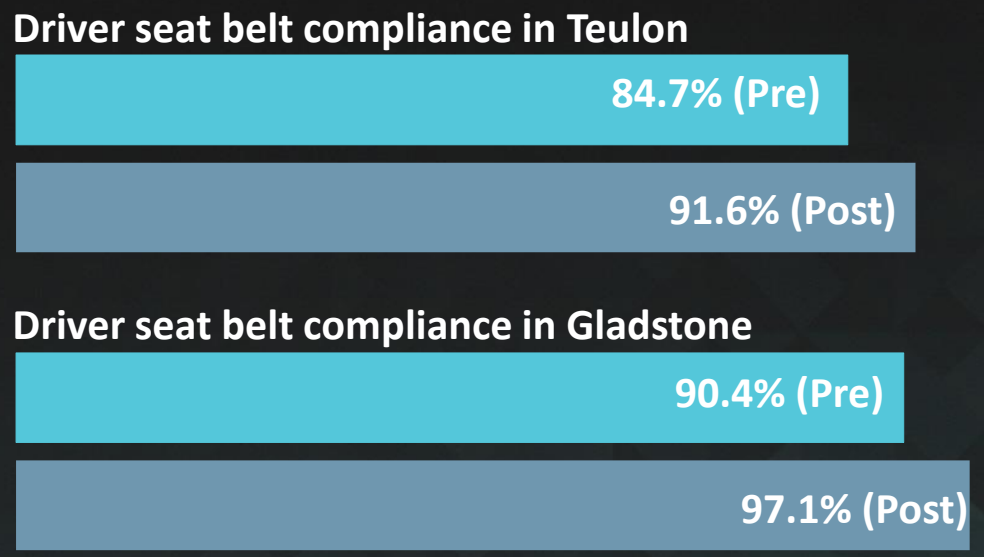
Design and deliver **public awareness and education campaigns** that counter the normalization of high-risk behaviours and educate Manitobans on how to share the road safely with other road users.

Increase public understanding of road safety by **positioning MPI as a trusted, visible, and authoritative source of guidance** that helps all Manitobans value and practice safe road behaviours.

Pillar 1 in Action: Car Seat Workshops

MPI's new car seat program provides caregivers with practical, hands-on education on the proper installation and use of child car seats.

- Car Seat Workshops were developed in collaboration with the Child Passenger Safety Association of Canada and Safety Services Manitoba.
- Organizations serving first-time parents and caregivers, First Nations, and new Canadians can request a workshop from Safety Services Manitoba.
- The program is designed to reach communities where car seat education has been identified as a need and uses trusted community organizations as delivery partners.
- On September 19, 2026, Safety Services Manitoba hosted a Car Seat Clinic at its Winnipeg office, providing caregivers with hands-on support to ensure child car seats were installed and used correctly.
- Safety Services Manitoba is now accepting registrations from organizations across Manitoba.



Manitoba's newest CPSAC-certified Child Passenger Safety Technicians.

12

Pillar 1 in Action: Let's Buckle Up Program

Targeted seatbelt interventions in rural communities showed short-term behavioural change in this pilot.

- Three-week pilot program at four high schools in rural Manitoba.
- The pilot consisted of three main activities: observation, education and awareness, and enforcement.
- Key Findings:
  - Seatbelt use was much lower among passengers than drivers.
  - Passenger seatbelt use was notably lower when the driver was not wearing a seatbelt.
  - The pilot improved seatbelt use in the short term, but effects diminished over time, underscoring the need to refine the pilot for sustained change.

13

Pillar 2: Strengthening Partnerships Through Shared Responsibility

MANITOBA PUBLIC INSURANCE

Pillar 2: Strengthening Partnerships Through Shared Responsibility

Objective: *Work collaboratively with road safety stakeholders to influence areas of road safety that MPI does not directly control and strengthen efforts in areas of shared responsibility, ensuring a coordinated and effective approach to improving road safety.*

Why This Matters:

- MPI operates within a broader road safety system that includes Indigenous organizations, industry, provincial and municipal governments, law enforcement, non-profits, and advocacy groups.
- Stakeholders emphasized that “no single organization can do it alone” and the need for a coordinated approach to reduce fatalities.
- MPI can support efforts in areas beyond its mandate with expertise and collaboration. At the same time, there are areas where other stakeholders are doing similar work. By coordinating more closely, we can amplify the effect of our efforts.

15

Pillar 2: Strengthening Partnerships Through Shared Responsibility

Objective: *Work collaboratively with road safety stakeholders to influence areas of road safety that MPI does not directly control and strengthen efforts in areas of shared responsibility, ensuring a coordinated and effective approach to improving road safety.*

Priorities

Improve **coordination and consistency of road safety messaging among stakeholders** through the existing Community Partners in Road Safety Committee.

Improve the **quality, consistency, and usefulness of shared road safety data** to better support infrastructure planning, policy development, and targeted safety initiatives.

Identify and support **strategic sponsorships and community-based initiatives** that align MPI and stakeholder priorities and amplify shared road safety objectives, particularly for underserved communities and populations with disproportionately high rates of fatalities and serious injuries.

Pillar 2 in Action: Community Partners in Road Safety Committee

Shared Planning and Communication Among the Manitoba Road Safety Community

- Chaired by MPI, with a rotating Co-Chair (currently CAA), the Committee brings together road safety organizations across Manitoba.
- Regular attendance of over 20 members at each meeting.
- Meets quarterly to share and coordinate initiatives, priorities, and data/research.
- Identifies opportunities to work together and align efforts.
- Establishes working groups for joint projects.
- Supports a collaborative, province-wide approach to road safety.

Pillar 2 in Action: Speed Display Sign Program

Speed display signs are used in partnership with communities to reduce speeding in high-risk areas.

- Speed signs encourage compliance with posted speed limits by providing drivers with real-time feedback on their speed. The signs are commonly used in school zones and speed transition areas.
- To date, MPI has loaned 109 speed display signs to 72 communities.
- Analysis of data collected by the signs indicates the signs create an **average reduction of 4% to 6%** in vehicles exceeding the speed limit.
- Program participants receive quarterly reports summarizing speeding behaviour captured by the signs. Insights are used by recipients to support additional speed mitigation and enforcement efforts.

Pillar 3: Shaping Safer Driving Behaviours

MANITOBA PUBLIC INSURANCE

Pillar 3: Shaping Safer Driving Behaviours

Objective: *Reduce high-risk behaviours such as speeding, distraction, impaired driving, and failure to use occupant restraints through targeted education, data-led interventions, and community-based programs.*

Why This Matters:

- Changing driver behaviour is essential because actions such as distracted driving, speeding, impaired driving, and inconsistent seatbelt use continue to be leading contributors to fatalities in Manitoba.
- Stakeholders stressed the need for more targeted, practical, and data informed approaches to help drivers make safer choices.
- MPI can influence driver habits through education, road safety programs, and tailored interventions that address the specific risks faced by different groups of Manitobans.

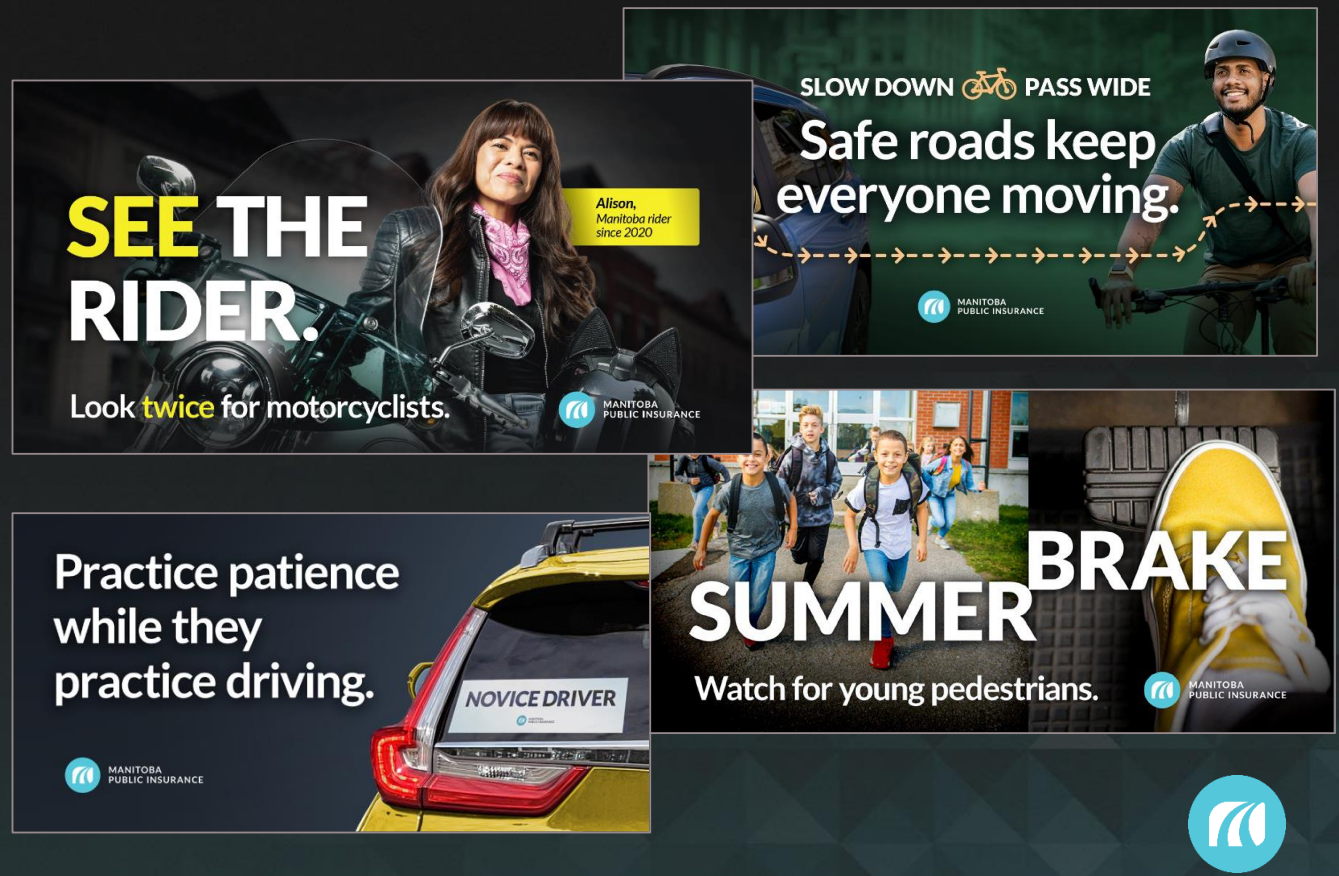
Pillar 3: Shaping Safer Driving Behaviours

Objective: *Reduce high-risk behaviours such as speeding, distraction, impaired driving, and failure to use occupant restraints through targeted education, data-led interventions, and community-based programs.*

Priorities

Continuously improve the **relevance, effectiveness, and reach of driver education and training**, ensuring that training and resources reflect current risks, best practices, and the needs of today's road users.

Enhance evidence-based interventions that support safer driving habits and improve **public understanding of how unsafe driving behaviours lead to collisions and personal consequences**.



Advance **evidence-based technologies, analyses, and policies** that improve Manitoba's road safety system and support high-risk and underserved populations.

Strengthen enforcement effectiveness by providing law enforcement partners with better data, insights, and operational collaboration, helping maintain **enforcement as a key factor in promoting safe driving** behaviours.

Pillar 3 in Action: Road Safety Advertising

MPI's campaigns aim to build a province-wide culture where safe road use is a shared value and responsibility among all Manitobans

- Campaigns are grounded in collision data and cover a variety of road safety topics
- MPI takes an "always on" approach, with top issues supported by a full media mix and seasonal topics receiving targeted channel support
- Paid advertising is part of a broader system approach to influence safer driving behaviours
- Concepts reflect insights and feedback from stakeholders and MPI extends reach and impact by working with community partners

Pillar 3 in Action: Community Outreach

MPI is dedicated to bringing road safety programming and sponsorship support directly into communities across the province

- MPI's Community Relations team acts as the Corporation's brand ambassadors, strengthening MPI's presence and reputation by promoting road safety at the local level
- The team creates two-way engagement with Manitobans in their communities through events, programming and presentations
- Impact is extended through partnerships and corporate sponsorships that advance shared road safety goals and amplify messaging
- Education and programming is targeted to all ages, supporting all road users in an effort to reduce injuries and deaths on Manitoba's roadways

Pillar 4: Advancing Road Safety and Reconciliation

MANITOBA PUBLIC INSURANCE

Pillar 4: Advancing Road Safety and Reconciliation

Objective: *Advance reconciliation by embedding road safety into MPI's Indigenous Action Plan, building relationships with Indigenous communities and co-developing road safety initiatives that address unique challenges and improve outcomes.*

Why This Matters:

- Indigenous communities experience unique road safety challenges shaped by systemic inequities. These realities contribute to disproportionate risk for Indigenous road users and require solutions that are co-created with Indigenous voices.
- Addressing these gaps means building trust, honouring reconciliation commitments, and ensuring fair access to safe mobility for all Manitobans.
- MPI's Indigenous Action Plan will provide the foundation for this work, ensuring reconciliation commitments guide meaningful action.

25

Pillar 4: Advancing Road Safety and Reconciliation

Objective: *Advance reconciliation by embedding road safety into MPI's Indigenous Action Plan, building relationships with Indigenous communities and co-developing road safety initiatives that address unique challenges and improve outcomes.*

Priorities

Embed road safety into MPI's Indigenous Action Plan by building strong relationships with Indigenous communities and organizations, and by ensuring their perspectives guide how MPI supports and serves Indigenous road users.

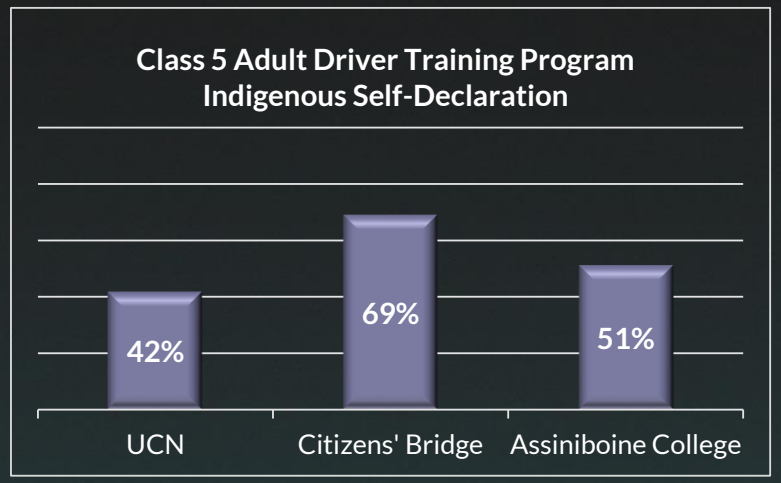
Expand MPI's engagement with Indigenous communities by **broadening the reach of road safety programs** and ensuring these programs reflect community-identified needs, priorities, and contexts.

Pillar 4 in Action: Off-Road Vehicle Workshops

MPI provides funding to deliver off-road vehicle (ORV) presentations at schools and community centres across the province, at no cost.

- Presentations, delivered by Safety Services Manitoba, provide education on the safe operation of ORVs and the proper use of safety gear.
- ORV helmets are also distributed as prizes to students attending presentations.

2026 Program Delivery (to date)



- ORV safety education has been delivered in several rural, northern, and Indigenous communities.
- Strong community interest has resulted in requests for additional ORV, snowmobile, and winter driving education.

27

Pillar 4 in Action: Adult Driver Training

MPI-funded programs are designed to reduce longstanding barriers to driver licensing faced by adult learners, including those residing in northern, rural, and remote communities.

- Where possible, training is delivered in-community, reducing the need for travel to urban centres for training and testing.
- University College of the North and Assiniboine College continue to expand services in First Nations, including remote and fly-in communities.

Indigenous and Métis communities served to date:

- Ebb and Flow First Nation
- Lynn Lake
- Manto Sipi Cree Nation (God's River)
- Marcel Colomb First Nation.
- Mathias Colomb Cree Nation (Pukatawagan)
- Misipawistik Cree Nation (Grand Rapids)
- Mosakahiken Cree Nation (Moose Lake)
- Nisichawayasihk Cree Nation (Nelson House)
- Norway House Cree Nation
- Opaskwayak Cree Nation
- O-Pipon-Na-Piwin Cree Nation
- Pimicikamak Cree Nation (Cross Lake)
- Sandy Bay First Nation
- Sioux Valley
- Swan River First Nation
- Tataskweyak Cree Nation (Split Lake)
- Wasagamack First Nation
- Waywayseecappo First Nation
- York Landing First Nation

Tracking Progress

Goal: Drive a downward trend in the number of motor vehicle collision fatalities throughout the duration of the strategy.

Culture Shift Objectives

1. Reduce social acceptance of impaired, distracted, speeding, and unbelted driving.
2. Increase perceived safety for all road users.
3. Increase belief that serious collisions are preventable.

Measurement Approach

- Multiple stakeholders are currently tracking similar information through different methods. In keeping with Pillar 2 of the strategy, MPI aims to learn from and adopt the most effective approaches across partners.
- MPI will engage partners through the Community Partners in Road Safety Committee to co-design tools that assess and monitor road safety culture across Manitoba.
- Stakeholders have identified the E-Survey of Road Users' Attitudes (ESRA) as a model for this type of work.

Safer Roads for All Manitobans

Road safety requires a shared commitment.

MPI's Road Safety Strategy will:

- Promote safe road use through education, engagement, and awareness.
- Address behaviours that contribute to serious collisions.
- Strengthen partnerships across Manitoba's road safety system.
- Advance road safety and reconciliation through ongoing collaboration with Indigenous communities.
- Support measurable progress toward reducing fatalities and serious injuries.

Our focus remains clear: reducing deaths and serious injuries and making Manitoba roads safer for everyone.

Thank you.

MANITOBA PUBLIC INSURANCE

Agenda

Topics

- Forecasted Extension Transfers
- Budgeting Practices
- Corporate Operating Expenses
- Initiative Implementation Placeholder
- Unsupported Deferral of Initiative Expenses
- PIPP Termination Rates
- Financial Condition Testing (FCT)

Key Message

Initiative costs belong in rates, not in a deferral account.

Initiative spend keeps the lights on and continues to modernize the Corporation. Work such as the ERP upgrade and replacement is necessary to run operations, it is not optional.

01

Disciplined Spend

Matured budgeting processes, contained FTEs and right-sized initiative implementation cost budget keeps expenses aligned with affordable rates.

02

Extension Capital

MPI continues to extend the courtesy of directing Extension excess capital to the benefit of Basic ratepayers.

03

Deferral of Initiative Expenses

Expenses are real in the period, recognized in the statement of operations. A ten-year amortization mismatches recovery and contradicts Basic's break-even mandate.

MPI'S REQUEST TO THE PUB

Discontinue deferring initiative expenses and return initiative implementation costs to rate setting, as was normal practice prior to Order No. 4/23.

Forecasted Extension Transfers

Extension - MCT Ratio (%)	Actual 2025/26	Budget Forecast 2026/27	Forecast 2027/28	Forecast 2028/29	Forecast 2029/30	Forecast 2030/31
Assuming no transfer	392.3%	476.2%	527.5%	598.3%	674.3%	758.9%
Post capital transfer	200.0%	200.0%	200.0%	200.0%	200.0%	200.0%

Basic - MCT Ratio (%)	Actual 2025/26	Budget Forecast 2026/27	Forecast 2027/28	Forecast 2028/29	Forecast 2029/30	Forecast 2030/31
Assuming no transfer	91.0%	80.2%	75.6%	67.9%	69.9%	76.3%
Post capital transfer	108.2%	105.2%	106.5%	105.2%	113.9%	127.2%

4

Budgeting Practices – Established Framework Sustained

1 Governed Budget Framework

Top-down, bottom-up and zero-based inputs, reviewed and approved by the Board, Minister's Office and Treasury Board, with PUB directives reflected in Basic rate setting.

2 Monitoring and Controls

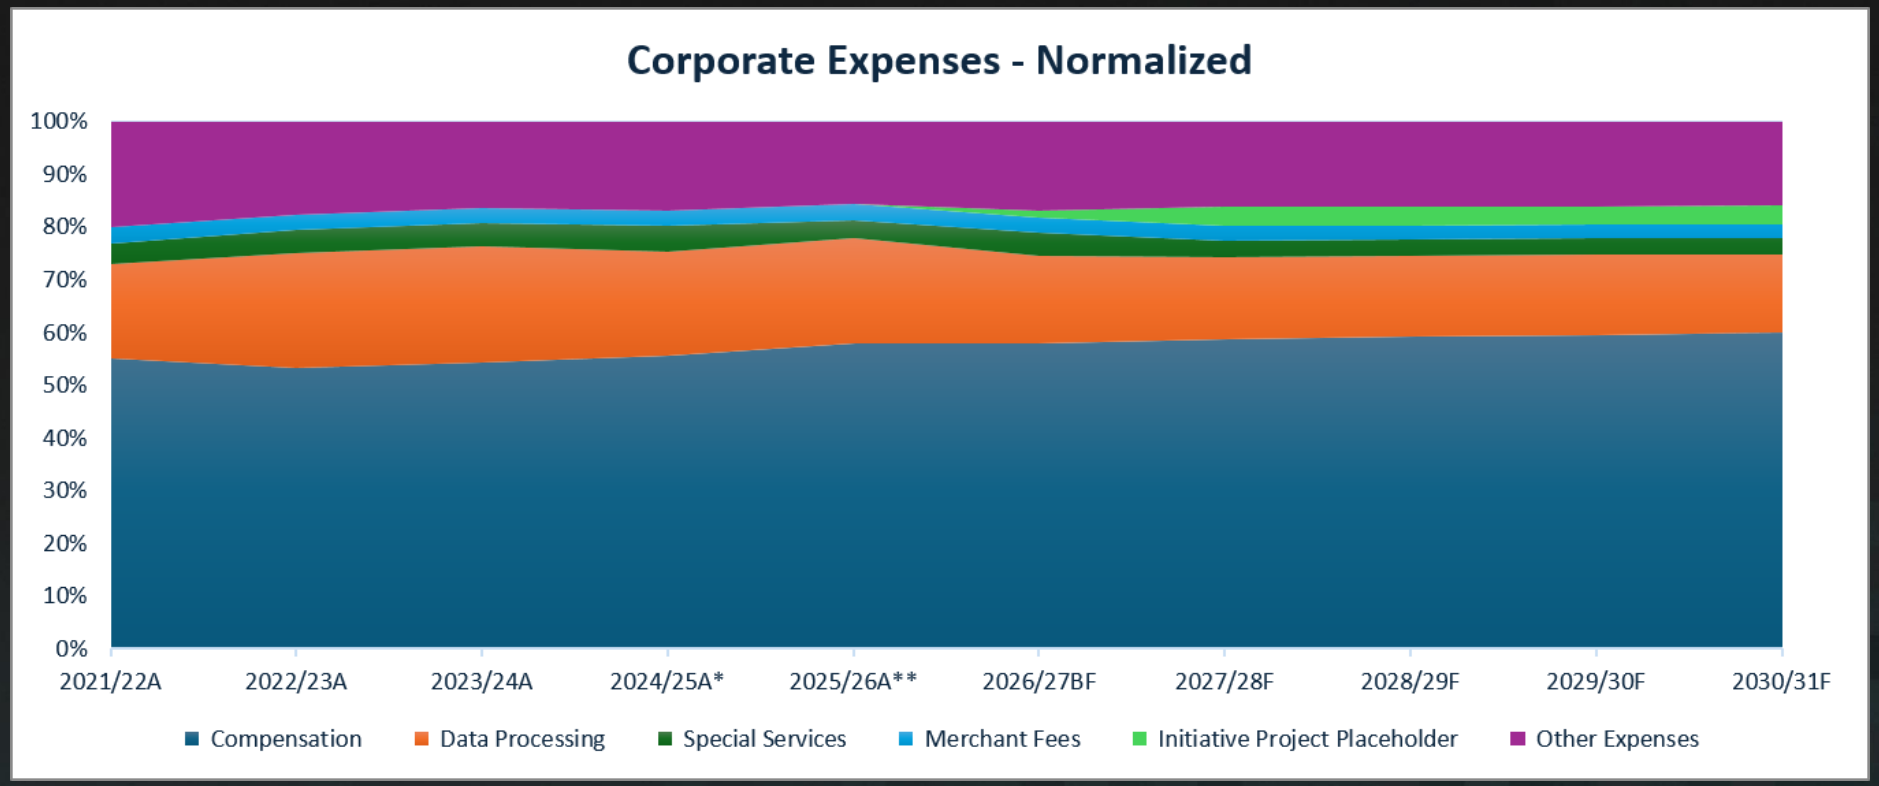
Rolling monthly divisional meetings with Finance and tightened oversight mechanisms continue to reinforce accountability, resource discipline and timely adjustments.

3 Strategy-Informed Annual Cycle

The full budget cycle remains anchored to the multi-year strategic plan, integrating initiative planning across with annual execution.

4 KPI and Variance Discipline

Budget-derived KPI targets are set annually from Board-approved inputs; forecast ratios are recalibrated yearly and variances analyzed monthly, quarterly and annually.



Corporate Expenses by Nature over 10 years

Line No.		2021/22A	2022/23A	2023/24A	2024/25A*	2025/26A**	2026/27BF	2027/28F	2028/29F	2029/30F	2030/31F
1	*($000's, except where noted)*										
2	**Total Corporate Expenses**	**327,338**	**358,358**	**359,035**	**457,235**	**448,669**	**397,538**	**415,941**	**425,073**	**435,048**	**443,209**
3	**Basic Allocated Corporate Expenses**										
4	Maintenance Expense		146,272	137,241	149,182	142,703	149,360	159,671	164,444	167,304	170,263
5	Acquisition Expense		8,535	9,200	6,913	6,708	6,051	6,647	6,807	6,969	7,129

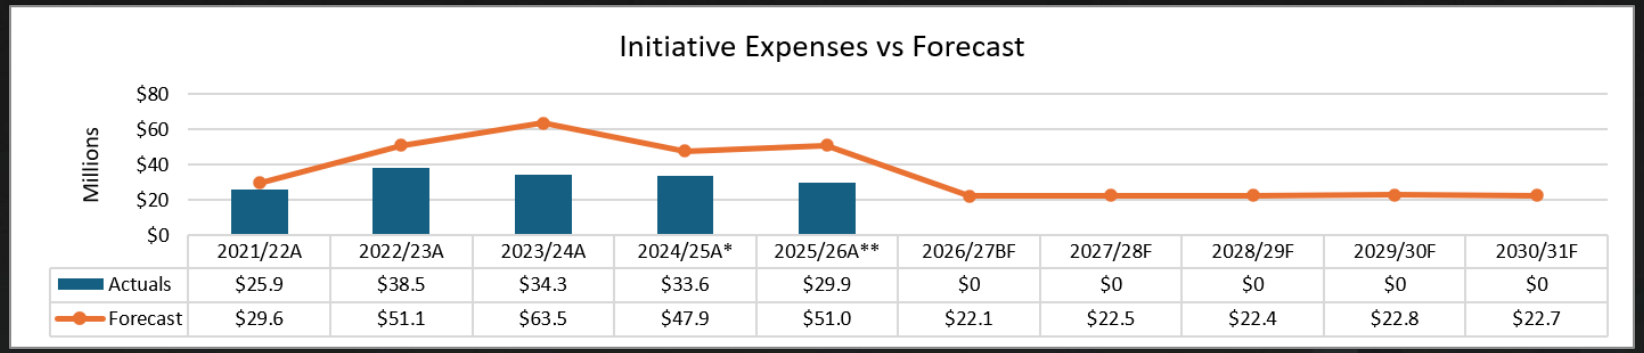
8	**Percentage of Corporate Operating Expenses**	*72.4%*	*68.4%*	*66.9%*	*58.6%*	*66.0%*	*67.6%*	*68.1%*	*68.8%*	*68.4%*	*68.3%*
9	**Basic Direct Expenses**										
10	Commissions	44,925	47,845	50,549	52,969	58,690	62,585	66,454	70,753	75,366	80,318
11	Premium Taxes	28,966	33,716	35,913	36,498	40,973	44,312	47,280	50,604	54,169	58,002
12	**Total Basic Direct Expenses**	**73,891**	**81,561**	**86,462**	**89,467**	**99,663**	**106,897**	**113,734**	**121,357**	**129,535**	**138,320**

Key Take-Aways:

- *2024/25A includes impairment of $60.8 million Corporate ($8.9 million Basic). When normalized, 2024/25 actuals are $396M.
- **2025/26A includes impairment of $15.1 million Corporate ($8.0 million Basic) and onerous contract expenses of $37.3 million ($29.5 million Basic). When normalized, 2025/26 actuals are $396M.
- 2027/28 forecasted expenses are $415.9M.
- The $9.0M decrease from the 2026 GRA forecast of $424.9M reflects a $27.6M reduction in initiative expenses due to revised initiative forecasts, partially offset by an $18.6M increase in normal operating expenses.
- Basic allocation (line 8) as a % of overall corporate operating expenses remains relatively consistent.

Corporate Expenses by Nature Over 10 Years



- *2024/25 is normalized for Nova impairment of $60.8M.
- **2025/26 is normalized for Nova impairment of $15.1M and onerous contract expenses of $37.3M.
- Top 5 expense categories represent 83.2% of expenses on average over 10 year-period.

7

Initiative Implementation Placeholder

A $20M implementation envelope, right sized to actual historical spend, rather than assumed precision about projects yet to have business cases or detailed estimates.

	2021/22A	2022/23A	2023/24A	2024/25A*	2025/26A**	2026/27BF	2027/28F	2028/29F	2029/30F	2030/31F
Actuals	$25.9	$38.5	$34.3	$33.6	$29.9	$0	$0	$0	$0	$0
Forecast	$29.6	$51.1	$63.5	$47.9	$51.0	$22.1	$22.5	$22.4	$22.8	$22.7

- $15M implementation placeholder in the 2027/28 IT Major Programs budget. This approach is consistent with the existing budgeting practice where there is a $5M placeholder for non-Major Programs, for $20M in total.
- MPI is required to advance a budget to Treasury Board for approval, and therefore inclusion of expected modernization run-rate is required in MPI's budget submission.
- Right-sized to actuals: $15M was the pure Major Programs implementation spend over the last two fiscal years, 2023/24 and 2024/25
- Allocation fully assumed to be operating at this time; eligibility for capitalization will be assessed at the time of business casing.
- No sufficiently reliable basis exists to pre-allocate future amounts. Any such allocation would not have a reliable foundation or basis until the time of detailed business casing. or by nature of expense. Guessing costs years out, without tangible timelines or detailed cost estimation, would create an artificial degree of precision requiring ongoing retrospective justification and reconciliation.
- Placeholder is not "permission" to utilize funds, all projects follow EMPO program governance structure.
- Historical volatility in forecasted initiative expenses is precisely the uncertainty the placeholder is designed to address.

8

Unsupported Deferral of Initiative Expenses

1. **MPI is ineligible to apply IFRS 20—** Paragraph 4 carves out regulated premiums in IFRS 17 contracts as being exempt. MPI did not apply the former regulatory accounting standard (IFRS 14) on transition to IFRS, so has never historically applied regulatory accounting in its audited financial statements. MPI is therefore ineligible to apply rate regulation accounting in the interim and is also ineligible to apply the new accounting standard effective 2029; therefore, no deferral balance has ever been recognized.

2. **The RDA is undefined —** The PUB has set no amount, calculation basis or disposition rules: rating-year forecasts, fiscal-year forecasts and actuals each give a different result.

3. **Spending is not an asset —** The $90.897M reported in PUB 1-41 App 1 was recognized as operating expense when incurred; an “RDA” label does not create a capital asset to amortize.

4. **Ten-year amortization fails —**Amortizing the $20M in annual initiative expenses over ten years would leave an approximate $110M rate deficiency on a compounding balance, pressuring the legislated 100% MCT position, forcing capital build, and adding manual tracking IFRS does not recognize.

5. **MPI’s request —** Acknowledge that MPI is an insurance Company reporting under the IFRS framework and is ineligible to apply IFRS 20 or IFRS 14 in the interim. Approve recovery of the initiative expenses forecasted to be incurred in the 27/28 rating year ($10.1M) on its merits, carry no historical initiative expenses forward (excluded costs stay funded by the RSR and Extension transfers), and return to inclusion of forecasted initiative expenses in rate setting.

Embedded Rate Deficiency of Basic by Design- Illustrative Example

For simplicity of illustration, the below assumes the $20 Corporate initiative spend is allocated to the Basic line of business to illustrate the compounding rate deficiency under the Board's suggested RDA approach to initiative spend that then amortizes over 10 years:

Embedded Rate Deficiency of Basic by Design _10 Year Amortization of Initiatives _Straight Line

($'s in millions)

		Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9	Year 10	Year 11
Opening Balance - Initiatives	$	-	20.0	38.0	54.0	68.0	80.0	90.0	98.0	104.0	108.0	110.0
Additions to amortization Pool		20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0	20.0
Amortization		-	(2.0)	(4.0)	(6.0)	(8.0)	(10.0)	(12.0)	(14.0)	(16.0)	(18.0)	(20.0)
Closing Balance - Embedded Rate Deficiency	**$**	**20.0**	**38.0**	**54.0**	**68.0**	**80.0**	**90.0**	**98.0**	**104.0**	**108.0**	**110.0**	**110.0**

Key Assumptions/Disclaimers:

(i) Amortization reflect the PUB stated direction of 10 years.

(ii) Amortization is expected to start the year following the actual spend. This means a full year delay of recovering cash paid expenses incurred, resulting in an effective amortization period to 11 years, not 10 years.

(iv) Amortization illustrtated would be reflected and recovered in future GRA's.

(v) The rate deficiency of Basic grows over time by design and is implicitly paid for by the RSR and/or Extension transfers of capital. All things being equal, amortization ignores capital adequacy and focuses solely on the Basic RI.

Unsupported Deferral of Initiative Expenses – Lookback onTimeline

1. **2023 GRA - PUB Order 4/23 is issued, deferring all initiative expenses until they are reviewed through a future GRA process—** MPI's understanding of the focus and concerns, were that Nova's budget had increased dramatically, and that the Board was concerned that MPI was moving beyond core legacy-system replacement into broader business transformation without sufficient evidence that all associated expenditures were necessary. The Board stated that MPI should focus on critical business needs, contain costs, and avoid expanding project scope beyond what is required to modernize systems essential to operating the business, and warned that if MPI could not demonstrate prudent management of initiative costs, there was a risk that future rate requests could be found not just and reasonable.

2. **2024 GRA—** MPI files formal opinion from Deloitte LLP supporting its position that MPI is not eligible to apply the existing IFRS 14 Regulatory Deferral Accounts standard that PUB is requesting. This opinion was not refuted.

3. **2025 GRA—** MPI files an additional formal opinion from Deloitte supporting its position that MPI is not eligible to apply IFRS 14 and begin recognizing regulatory deferral accounts. The second opinion is not refuted. MPI also filed the IASB unanimous view that organizations that were required to adopt IFRS 17 would be exempt from the new regulatory accounting standard (IFRS 20) when released.

4. **2026 GRA—**Nova formally closes as of June 30, 2025. The 2026 application covers the Project closure, MPI's new Major Programs structure and associated governance, and the path forward for alignment of legacy technology modernization efforts, but PUB provides no path toend deferral despite Appendix 29 evidence and request for relief.

5. **2027 GRA—** IFRS 20 issued May 2026, confirms MPI's exemption and inability to apply regulatory deferral accounting. MPI files its IT roadmap and reduces forecast initiative implementation spend to $20M.

PIPP Termination Rates

Background

- MPI used termination rates from a 1992 CIA study of Ontario long-term disability experience
- MPI now has over 30 years of its own PIPP claims experience which provides relevant data based on its own product
- The updated termination rates were independently reviewed by EY

Changes in termination rates

- Higher terminations in the early years of a claim, reflecting greater recoveries shortly after the date of accident.
- Lower terminations at later ages, reflecting improved life expectancy, which elongates the tail and makes the effect of discounting more pronounced.
- Margin for prudence of 10%,now applied once to the overall best estimate rather than for every termination rate.

Financial impact

- Combined termination rate and valuation methodology changes reduce discounted actuarial liabilities by $100M.
- These changes favourably affect MPI's capital position and improve its MCT ratio.

Impact to Ultimate Loss ($M)	Weekly Indemnity	Other Indexed	Total
Termination Rates applied to Case Reserve Calculators	(31)	(43)	(74)
Valuation Methodology Enhancements	13	(39)	(26)
Total Impact to discounted actuarial liabilities	**(18)**	**(82)**	**(100)**

As of March 31st, 2026

Financial Condition Testing (FCT)

- FCT completed internally by MPI, using the GRA projections as the base scenario.
- Model and results independently reviewed by the Appointed Actuary.
- Extension transfers are now conditional, with adverse scenarios applied consistently to Extension to test its ability to transfer capital.
- The recent hail event is not reflected in the base scenario used for adverse testing. The FCT report includes a modified base scenario reflecting the event. The FCT also tests catastrophe scenarios on both going concern and solvency bases.

Results summary

- Going concern worst scenario: High Frequency / Severity: Minimum MCT of 54%.
- Solvency worst scenario — Integrated: minimum equity of $135.6M.
- **MPI meets the FCT criteria: MCT stays above 38% in all going concern scenarios and equity remains positive throughout the financial projection period.**

Nine scenarios tested on both going concern and solvency bases: integrated, inflation, asset deterioration, catastrophe, high frequency / severity, LIC misestimation, interest rate increase, interest rate decrease and rate hold mandates.

2027 General Rate Application Presentation

MANITOBA PUBLIC INSURANCE

Agenda

1. Introduction
2. Our Evolution
3. IT Future Direction
4. Corporate Governance
5. Closing

Introduction
MANITOBA
PUBLIC INSURANCE

Tracy Riley – Vice President, Chief Information and Technology Officer

Responsible for:

- Strategic Direction

  Development and execution of long-term strategies for technology, information management, enterprise architecture, and digital platforms

- IT Services

  Ensuring the efficient, secure, and innovative delivery of IT services that enable high-quality, accessible automobile insurance and driver licensing services for Manitobans.

- Major Program Delivery (shared)

  Delivering high-quality innovative solutions that meet the strategic goals of the organization and that drive meaningful long-term value for the business

Maria Campos – Vice President, Chief Customer and Product Officer

Responsible for:

- Enterprise Transformation
  Connecting strategy to execution through enterprise planning, business architecture, process improvement and organizational readiness.
- Customer & Business Value
  Connecting customer needs and business priorities to drive modernization and deliver measurable outcomes.
- Portfolio Governance and Value Realization
  Aligning and prioritizing investments, managing organizational capacity, strengthening accountability and ensuring initiatives deliver their intended business and customer outcomes.

5

Our Progress

- ✓ Introduced new leadership and a new strategy to guide the next phase of delivery.
- ✓ Separated governance from delivery and made governance a clear priority to support consistent oversight and informed decisions.
- ✓ Focused resources on our Enterprise Project Management Office to clarify accountability.
- ✓ Prioritized capacity and planning to support achievable delivery commitments.
- ✓ Structured projects into smaller, manageable initiatives to keep delivery focused.
- ✓ Actively managing change readiness to help teams prepare for new ways of working.
- ✓ Delivered several initiatives successfully since Nova, demonstrating our capability.
- ✓ Several initiatives inflight to address technology modernization through renewal and maintenance and major programs.

Customer Value Delivered Through Online & Digital Services

For 55 years, MPI has adapted to meet Manitobans' needs. Customer research shows growing demand for digital services that offer greater choice and convenience.

Online claims and appointments

- ✓ Claim submission form
- ✓ Claims status "Check my Claim" tool
- ✓ Front counter booking at all MPI centres
- ✓ Online self-serve hail estimating booking
- ✓ Automated customer notifications post claim reporting
- ✓ Updated process with automated email invitations for registration times.

Information and other services

- ✓ Driver Status license look up tool
- ✓ Manitoba Collision Dashboard
- ✓ Automated Driver Z registration

Commercial vehicle services

- ✓ International Registration Plan online services and the foundation for the MyMPI portal

Corporate Technology Initiatives Delivered

In 2025/26, MPI completed several corporate initiatives that focused on managing risk, strengthening controls, and updating important systems.

Fraud, risk & resilience

- ✓ Stolen Vehicles and VIN Identification Pilot
- ✓ Cyber Crisis Management Plan
- ✓ Identity and Access Management

Enterprise enablement & sustainability

- ✓ Cloud Migration
- ✓ Capital Modelling Software
- ✓ Content Architecture
- ✓ Contact Centre as a Service (CCaaS)
- ✓ GRC Tool Implementation
- ✓ Print Management Software Replacement
- ✓ Digital Culture Improvements

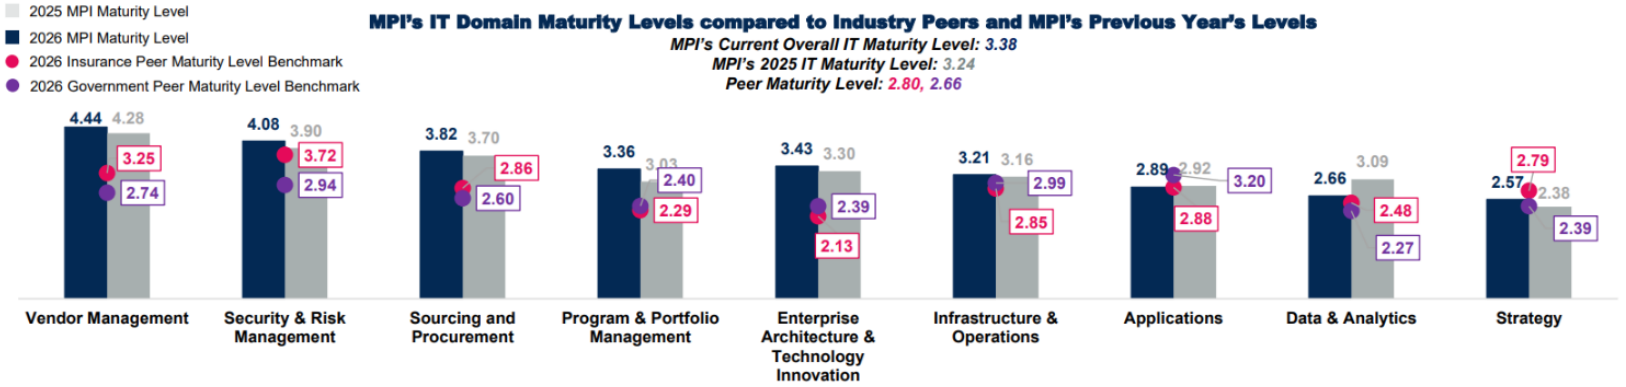
8

2026/27 Major Programs

MAJOR PROGRAM	DESCRIPTION	LATEST UPDATE
MyMPI Foundation & IRP Online	IRP online functionality and MyMPI online foundations.	All three releases completed within budget. Final release deployed August 17, 2026.
SRE Remediation	SIS Reversion, Assessment & Planning and Data Quality.	SIS migration successfully completed June 30, 2026. 6,100 policies renewed. Data migration underway.
BI3 Upgrade	Bodily Injury Claims Management system upgrade.	Joint scenario demo and vendor upgrade testing complete. On track for spring deployment.
ERP Replacement	Update current ERP system – Infor Upgrade. ERP Assessment & Planning Plan the future ERP solution.	Infrastructure, data migration and most testing complete. Cutover readiness underway. Business and Technology preparing a combined software and integrator RFP for early 2027.
Contact Centre as a Service (Phase 2)	Contact Centre infrastructure modernization.	Phase 2 planning underway with focus on Agent AI assist and Performance Management

Gartner Benchmark FY2025/26

MPI's IT investments have resulted in maturing IT capabilities, effectively equipping the organization to respond to evolving business needs; over the last year, maturity improvements have been made in 7 of 9 domains



MPI's overall IT maturity improved year-over-year, and outperforms Insurance and Government peer benchmarks in 7 of 9 IT domains

Vendor Management remains the most mature function; Program and Portfolio Management saw the largest improvement year-over-year

Data & Analytics maturity decreased year-over-year, primarily due to declines in managing the function, analytics content, and delays in delivering the Enterprise Data Platform; MPI already has several initiatives in place to address data governance, quality & availability.

MPI's IT Domain Maturity Levels compared to Industry Peers and MPI's Previous Year's Levels

MPI's Current Overall IT Maturity Level: 3.38
MPI's 2025 IT Maturity Level: 3.24
Peer Maturity Level: 2.80, 2.66

1. *Maturity scores are assessed on a scale from 1-5, with the score of 5 representing Gartner's best practices for the IT domain.*
2. *IT Score has been updated by Gartner Research to reflect best practices and changes in the industry for Applications. Due to the new structure of the survey completed in June 2026, previous year's comparison is not an "apples to apples" comparison.*

Gartner

10

Gartner Benchmark FY2025/26

Based on the FY 2025/26 analysis, Gartner is recommending that MPI focus improvements efforts in the following three areas:

1. **Plan Applications Lifecycle (Apps):** Strengthen product and application lifecycle planning, with a focus on strategic alignment, modernization, and governance

2. **Manage Vendors (PPM):** Mature vendor engagement to strengthen program & portfolio management outcomes

3. **Develop Technology Roadmap (Strategy & Execution):** Develop and institutionalize an enterprise technology roadmap aligned to business strategy and architecture

2024/25 Recommendations Update: MPI has made progress on last year's recommendations focused on Planning the Applications Lifecycle, Managing Vendors within the context of PPM, and Fostering the Data Ecosystem (see pages 61-64 for additional details). The 2025/26 recommendations address updated opportunities based on current maturity / importance levels and build on the progress made to date.

IT Future Direction

Modernization Strategy and Roadmap

MANITOBA PUBLIC INSURANCE

IT Vision and 2030 Objectives

Mission: Exceptional coverage and service, affordable rates and safer roads through efficient public auto insurance.

Vision: Manitoba's trusted auto insurer and driver services provider. Dedicated to road safety for all.

Our IT Vision

A trusted technology partner delivering secure, modern systems and reliable, affordable services that build trust with Manitobans.

Our foundation

An empowered, skilled team communicating openly across silos. Fit-for-purpose governance with clear accountability and the right tools.

How we show up

One Team. Learning Mindset. Leadership at All Levels. Customer Impact First. We Do What We Say.

1. Customer / Stakeholder

Reliable, customer-centric services that strengthen trust and the end-user experience.

Optimize Value for Customers / Customer Value

2. Financial / Value

Cost-effective, transparent technology investments that deliver measurable value.

Strengthen our Financial Practices / Financial Stability and Affordability

3. Internal Process

Mature governance, clear decisions and ownership, and consistent delivery.

Deliver on our Promises / Organizational Effectiveness

4. Information Systems Security and Architecture

Secure, resilient, modern platforms that support long-term organizational needs.

Be Ready for What's Ahead / Corporate Responsibility

5. Learning & Growth

A skilled, collaborative team with a "first team" culture, continuous learning and leadership at all levels.

Build Engagement and Pride / Organizational Effectiveness

Modernization Strategy

From one-time transformation to a rolling roadmap.

- With MPI's core technology aging, a thoughtful, measured, customer-centric strategy is key to maintaining the reliability of Manitoba's public insurance services.
- Incorporating the lessons learned from Project Nova, we have developed an IT road map that prioritizes managing technology risks and planning the best path forward for our foundational systems while considering the organization's capability and capacity.
- One key difference in this approach from those we have taken in the past is that our road map is an incremental rolling plan rather than one significant timebound project.
- This strategy provides a more manageable way to address the most urgent issues first and the agility to ensure we can complete the work we commit to each year.

Customer Value is the Foundation of Modernization

MPI will address the greatest needs first, keeping everyday services dependable while making improvements in manageable steps.

Guiding Principles

Dependable service
Reliable service through our broker partners, our service centres, and online.

Personal information protected
Careful handling and protection of our customer information.

More convenient access
Options to use MPI services online, when and where they are needed.

Responsible spending
Manage costs and limit disruption as we improve services.

How MPI will deliver – 3 stage strategy

1. Stabilization
Maintain reliable tools that enable employees to continue to serve our customers.

2. Prepare for modernization
Understand needs, compare options, and present costs and benefits for approval, while preparing technology.

3. Execute approved change
Build on lessons learned. Make improvements in smaller steps, review progress and adjust the plan each year.

Governance enforced throughout

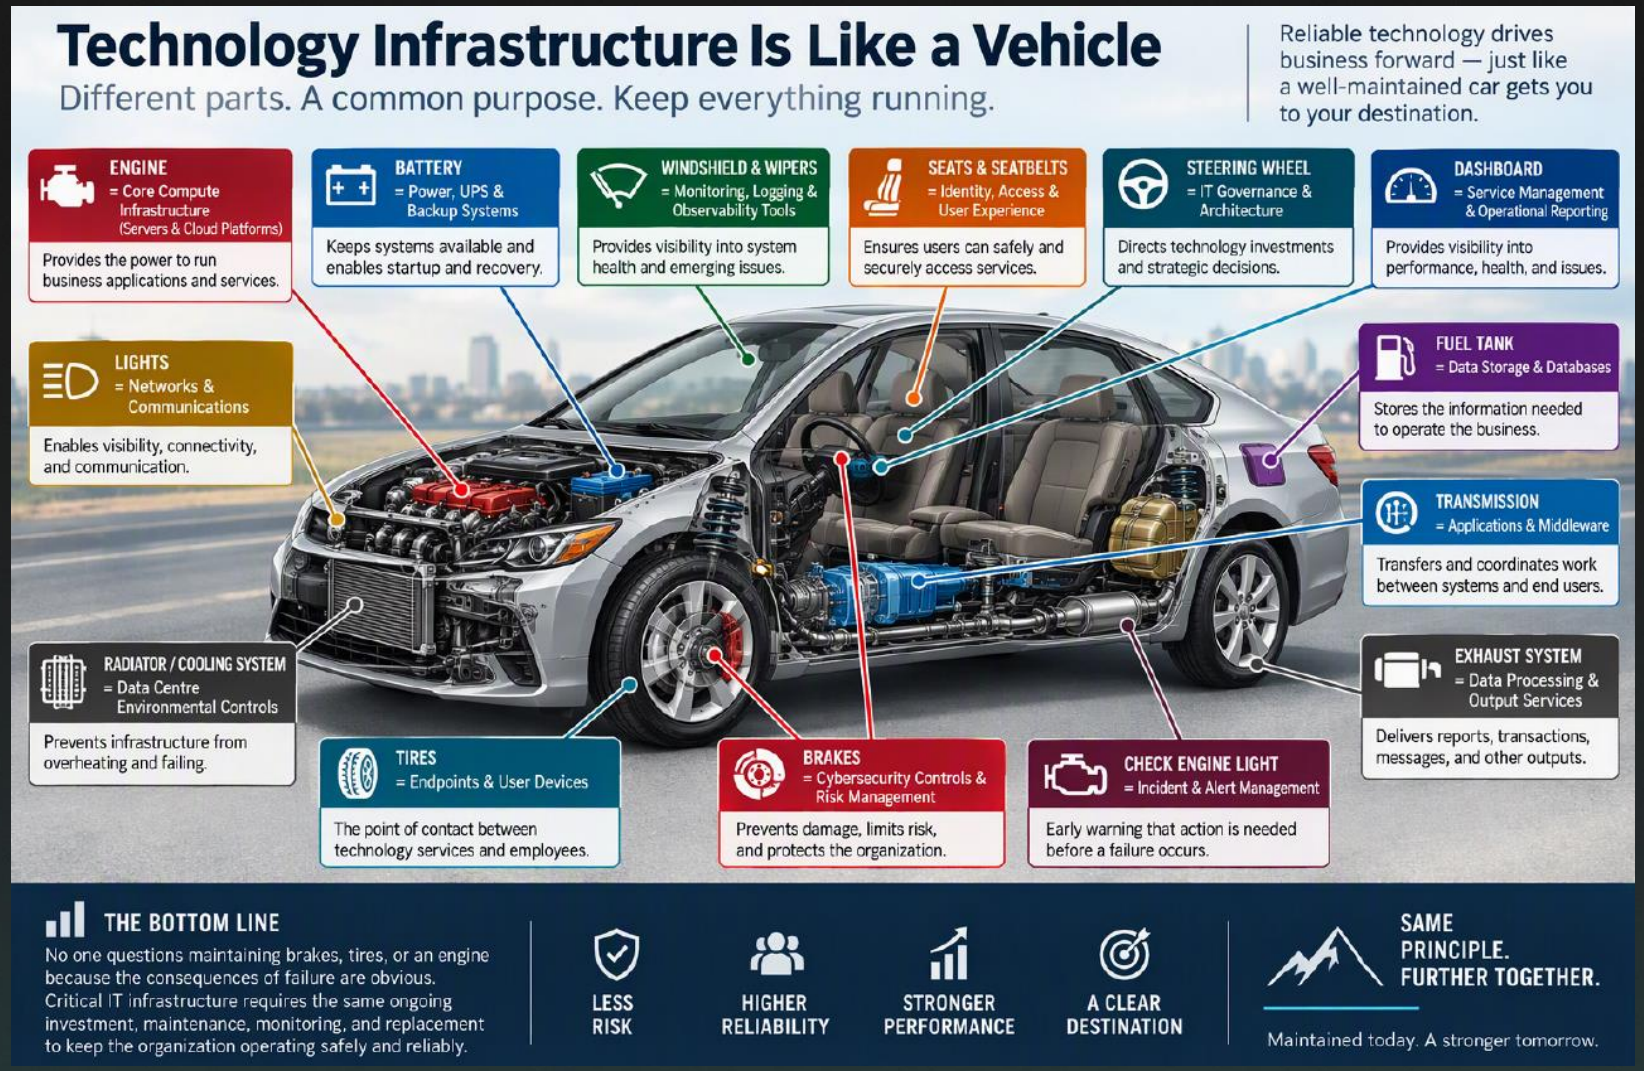
15

1. Stabilization & Preparation for Modernization

Stabilization protects today and improves tomorrow's choices. Modernization begins with stabilization so MPI can:

Reduce Risk to Business Operations	Establish Supported Technology Foundations	Increase Understanding of Business Processes, Systems, and Dependencies

Workstream



Infrastructure & Platform Remediation

Application Remediation

Security Remediation

16

Technology Infrastructure is Like a Vehicle

2. Prepare for Modernization: Prepare the Business

MPI will develop a case for each major program change while continuing to evolve its technology products to support future incremental modernization.

Case for Change

Define the business problem, evaluate options, and establish direction

- Understand Business Needs
- Assess Modernization Options
- Define Business & Technology Vision
- Validate Against Industry

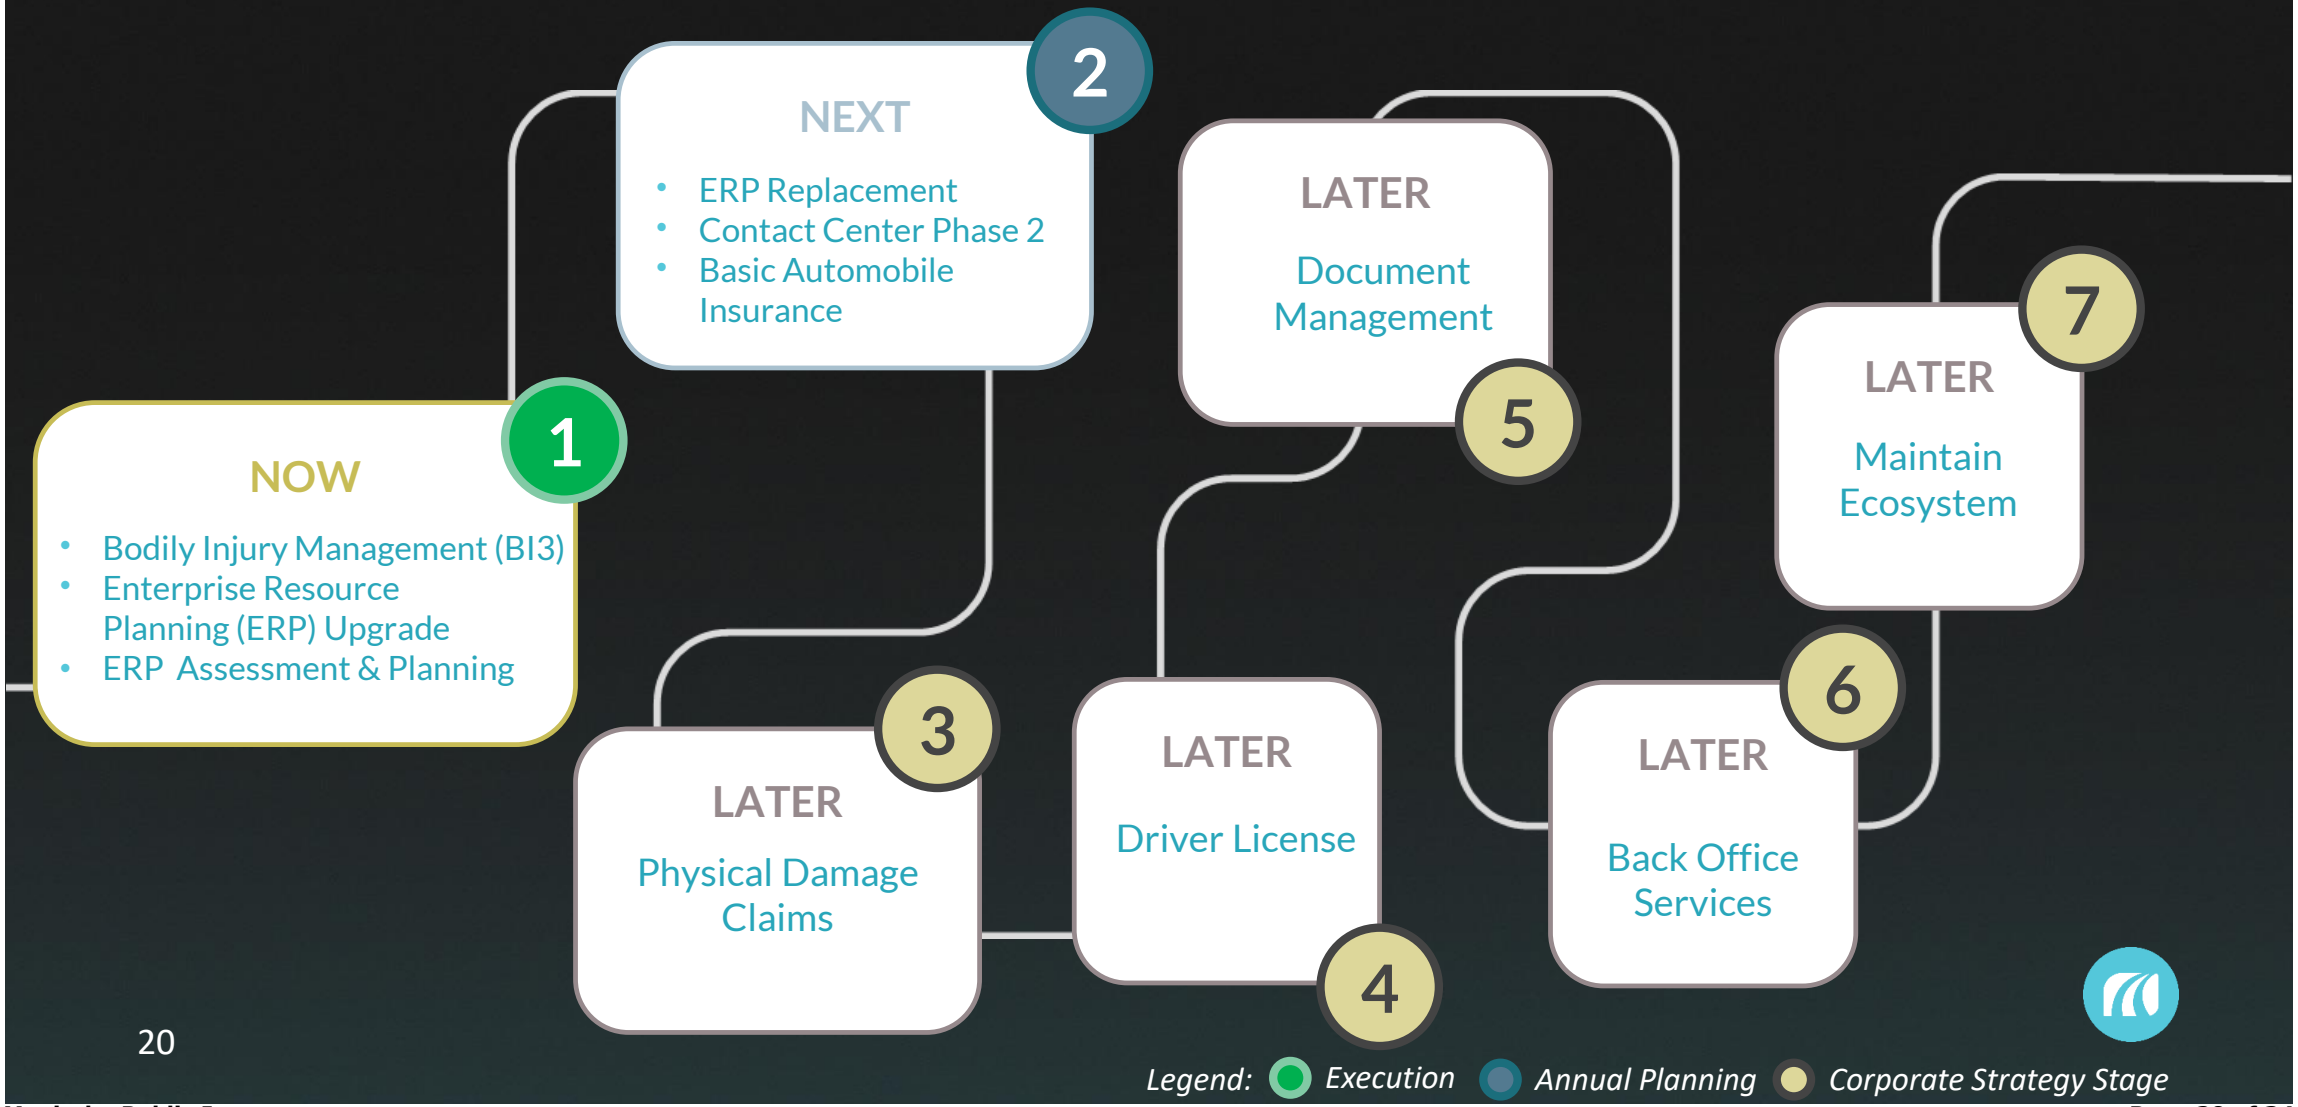
Outcome

Modernization Business Case

2. Prepare for Modernization: Prepare the Technology

Our approach...

Composable Architecture Foundations
Establish the technical foundations for incremental modernization



- Establish Reusable Services and APIs
- Decouple Business Logic from Legacy Platforms
- Separate Business Capabilities from Applications
- Establish Trusted Enterprise Data

Outcome

Modernization-Ready Foundation

3. Directional Modernization Roadmap

20

AI is an Accelerator of Modernization

Where AI accelerates the work

- Legacy code discovery shortens analysis for every modernization candidate
- AI-assisted development and testing speed stabilization and upgrade work
- Automation lifts value from platforms we are not ready to replace yet
- Faster data insight helps sequence modernization by business impact

Why the roadmap must make room for AI

- Composable architecture and clean, governed data are prerequisites for using AI at any scale
- AI capability ships inside modern, supported platforms; aged-out systems cannot consume it
- Sequencing AI with modernization avoids paying twice — once to modernize, again to retrofit

AI is an accelerator of modernization — it changes how quickly and affordably we can work through it.

21

A Clear Plan for Improving MPI Services

Business needs and lessons learned guide the order of work, with approval before each investment.

Our plan and progress

How we developed the plan

Leverage our updated governance to review business priorities, create an integrated technology portfolio, apply lessons learnt and right size to MPI's capacity to deliver.

Where we are now

Current work: Bodily Injury Management, Enterprise Resource Management upgrade and planning, Contact Center.

What comes next

Basic Automobile Insurance: assess needs and options, then seek approval.

How we will move forward

Make smaller, approved changes. Review results and priorities each year.

The foundation we need

Up-to-date tools

Bring solutions to the latest supported versions and keep them current.

One trusted source of information

Use the same information sources across services, with clear responsibility for keeping it correct.

Reusable parts that work together

Connect reusable business tasks that we can change independently.

Parts we can change separately

Keep screens, business rules and stored information separate.

22

Strengthened Governance and Evolution to an Enterprise Project Management Office

MANITOBA PUBLIC INSURANCE

Improved Annual Planning Process

Earlier review and more planning before initiatives are endorsed to move forward

SEPTEMBER

Corporate Planning & Executive Review

Bring forward initiatives for review and provide early direction.

NOVEMBER

Refine initiatives

Use feedback to refine the initiatives before detailed planning takes place.

DEC–FEB

Plan and estimate

Develop detailed plans and estimates before annual plan inclusion.

MARCH

Confirm annual plan

Formally identify the initiatives endorsed for the annual plan.

CORE IMPROVEMENTS

Earlier Corporate Planning and Executive Direction

Review initiatives starting in September.

Time to refine

Revisit initiatives in November.

Planning before commitment

Complete detailed plans and estimates first.

24

Corporate Planning & Governance Committee

WHO'S ON IT

EXECUTIVE VOTING MEMBERS

- Chief Executive Officer
- Chief Information & Technology Officer
- Chief Financial Officer
- Chief Customer & Product Value Officer
- Chief People Officer

SUPPORTED BY THE CORPORATE PORTFOLIO TEAM

Director-level representation from:

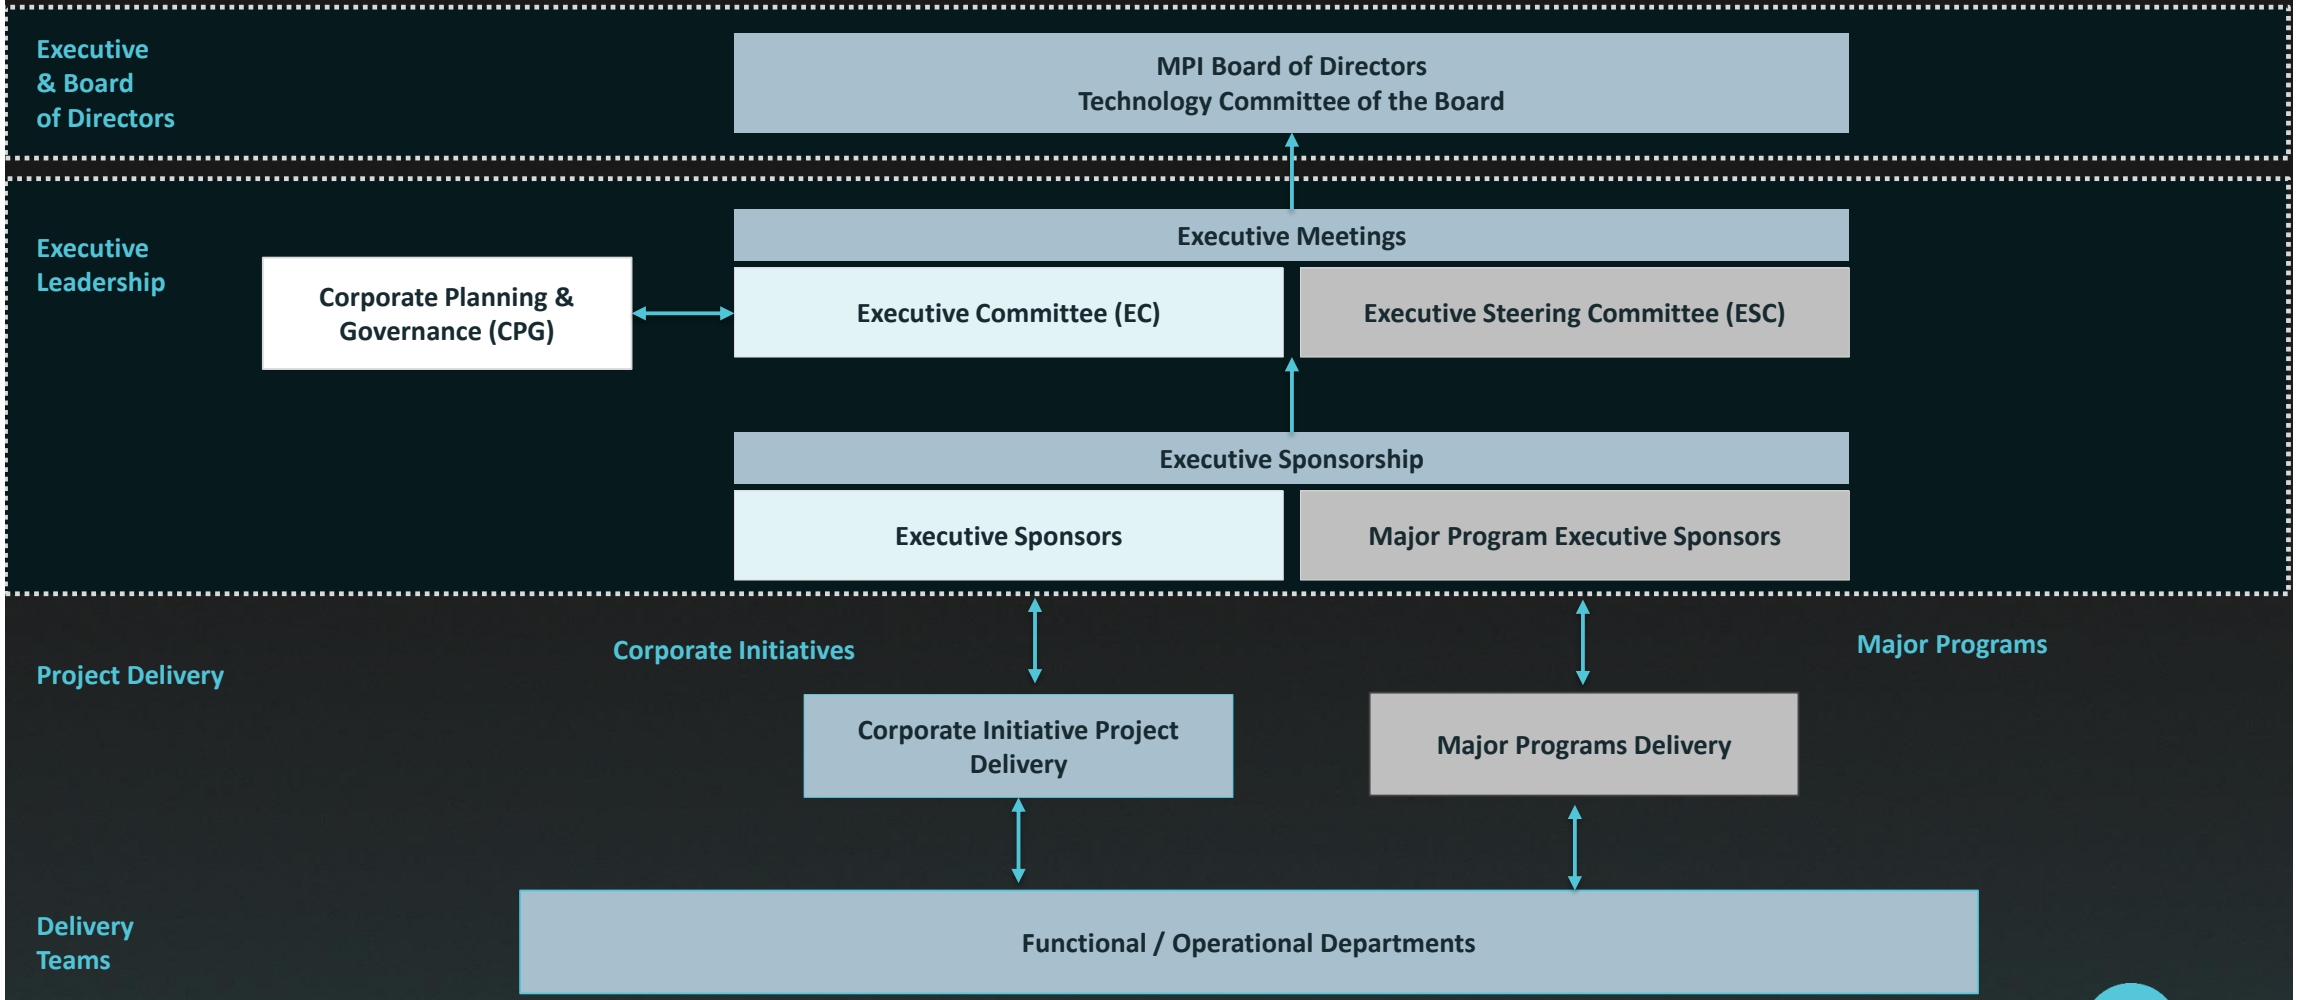
- Strategy / Project Management
- Enterprise Architecture / Cybersecurity
- Product Management / Business Architecture
- Financial Planning & Analysis

WHAT THEY FOCUS ON

Gatekeeping the integrated corporate portfolio and organizational capacity

Safeguarding enterprise resources and capacity, so new initiatives proceed only where affordable and strategically justified.

- Endorsement of new ideas (proceed Y/N)
- Solution selection & prioritization
- Funding decisions & business case approval
- Trade-off decisions & accountability



HOW OFTEN THEY MEET

Weekly meetings for early endorsements and ad hoc approvals

Quarterly portfolio reviews with the full Executive Committee to confirm progress and make trade-off decisions

25

Governance – Corporate Initiatives & Major Programs

26

Updated as of: Sept 16, 2026

Enterprise Project Management Office (EPMO)

Formally introduced April 2026 — one office, two delivery pillars, one enterprise view

The EPMO combines core Project Management Office (PMO) strengths with Major Programs capabilities, ensuring strategic alignment between business objectives and initiatives underway, and enabling improved on-time, on-budget delivery with agreed-upon scope.

EPMO | ONE DELIVERY FRAMEWORK, ONE ENTERPRISE VIEW

Major Programs (MP) Delivery

Technology programs exceeding $3M with high enterprise risk and complexity. Discrete programs on 12–24 month horizons, clear business sponsorship, defined business cases and discrete funding allocations.

+

Corporate PMO Delivery

Smaller, less complex projects across the enterprise, delivered against common standards, templates and reporting through the shared Project Control Log.

OPERATING IN TANDEM ON A SHARED FOUNDATION

Integrated Governance · Funding Discipline · Portfolio Visibility · Phase Gate Methodology · Shared Practices

27

How Is This Different?

	THEN	NOW
RISK	Single multi-year mega-program	Discrete programs, 12–24 months
FUNDING	Carried forward, few resets	Annual planning, discrete allocations
GOVERNANCE	MP and PMO governed separately	Unified phase-gate via CPG/ESC
VISIBILITY	Local reporting by initiative	One enterprise view

EPMO Maturity & Evolution

Building on one year of operational framework—not replacing it.

FOUNDATION ESTABLISHED	NEXT STAGE OF MATURITY
Stronger discipline Socialized terms of reference, consistent meeting attendance and greater process adherence.	**A more unified approach** Evolve toward EPMO framework, while respecting the deeper governance needs of major programs.
Better decision support Matured tools and dashboards; RAAIDD escalation applied to resolve project issues.	**Improved speed of decision making** Provide earlier visibility to key decisions for exec level awareness
Clearer engagement Stronger business sponsor engagement and role clarity, supported by ongoing communication.	**Enhanced benefits accountability** Clearer ownership of business sponsors to track benefits after delivery.

Governance Vendor Oversight

MPI has an expanded Governance Vendor engagement for Major Programs, which is focused on delivering services, expert advice and coaching that will result in measurable gains to enable MPI's success in delivering Major Programs on time and on budget.

Core areas of Focus:

- Independent – reporting directly to the Technology Committee of the Board of Directors
- Governance assessment and evaluation of Major Program's current state, risks and issues and validation of action plans
- Advisory services to identify gaps, ensure team alignment, and facilitate development of mitigations
- Develop governance best practices to enable Major Programs and MPI leadership to address risks prior to risks becoming issues, provide actionable and concrete mitigation steps and proactive solutions
- Measuring internal control effectiveness
- Providing guidance on conducting due diligence on potential and existing vendors
- Identifying risks and providing recommendations related to the ongoing monitoring of vendor performance and risk levels

29

Enabling Successful Execution

Five disciplines supporting successful delivery

Governance

Clear decision rights, business sponsor accountability, and independent oversight for Major Programs.

Resource planning

Regular reviews of staffing and external labor to match project needs.

Skills development

Targeted training and upskilling to close capability gaps.

Operational readiness

Dedicated teams for smooth transitions and knowledge transfer.

Continuous monitoring

Ongoing tracking of risks, resource saturation, and project health.

CLEAR ACCOUNTABILITY DELIVERY READINESS ACTIVE OVERSIGHT

Success Factors

		WHAT CHANGED	SUCCESS MEASURE
01	**Predictable delivery**	Programs sized to 12–24-month horizons, planned annually and gated at each phase.	Initiatives are on time, on budget and in scope, with fewer re-baselines.
02	**Disciplined investment**	Feasibility assessment and discrete annual funding precede every major commitment.	Funding follows enterprise priority, approved through gates on evidence-based feasibility allowing for informed trade-off and sequencing calls.
03	**One enterprise view**	A single portfolio of record covering cost, schedule, risk and benefits.	Reliable, trusted, timely, and decision-ready view of the portfolio including performance, risks, dependencies, resource demands, financial position, and priorities.
04	**Value we can prove**	Benefits defined at approval, owned by the business, and tracked past go-live.	Realized benefits are reported against the business case, and accountability sits with named owners.

31

Bottom line: success is a portfolio that is predictable to deliver, defensible to fund, and visible end to end.

Closing
MANITOBA
PUBLIC INSURANCE

Key Messages and Accomplishments

- ✓ Delivered multiple digital service improvements, including MyMPI and IRP Online releases within budget.
- ✓ Established the EPMO and strengthened governance, with clearer accountability across the portfolio.
- ✓ Set a rolling roadmap that applies Nova lessons learned through smaller, approved steps matched to capacity.
- ✓ Improved IT maturity in seven of nine domains, with the largest gains in Program and Portfolio Management. Data and Analytics and Application Lifecycle Management remain a priority.

Claims Forecasting

Presented By:

Cherity Ostapowich, Director, Pricing & Actuarial Forecasting

Tyler Clearwater, Manager, Actuarial Forecasting

MANITOBA
PUBLIC INSURANCE

Today's walkthrough

The calculation

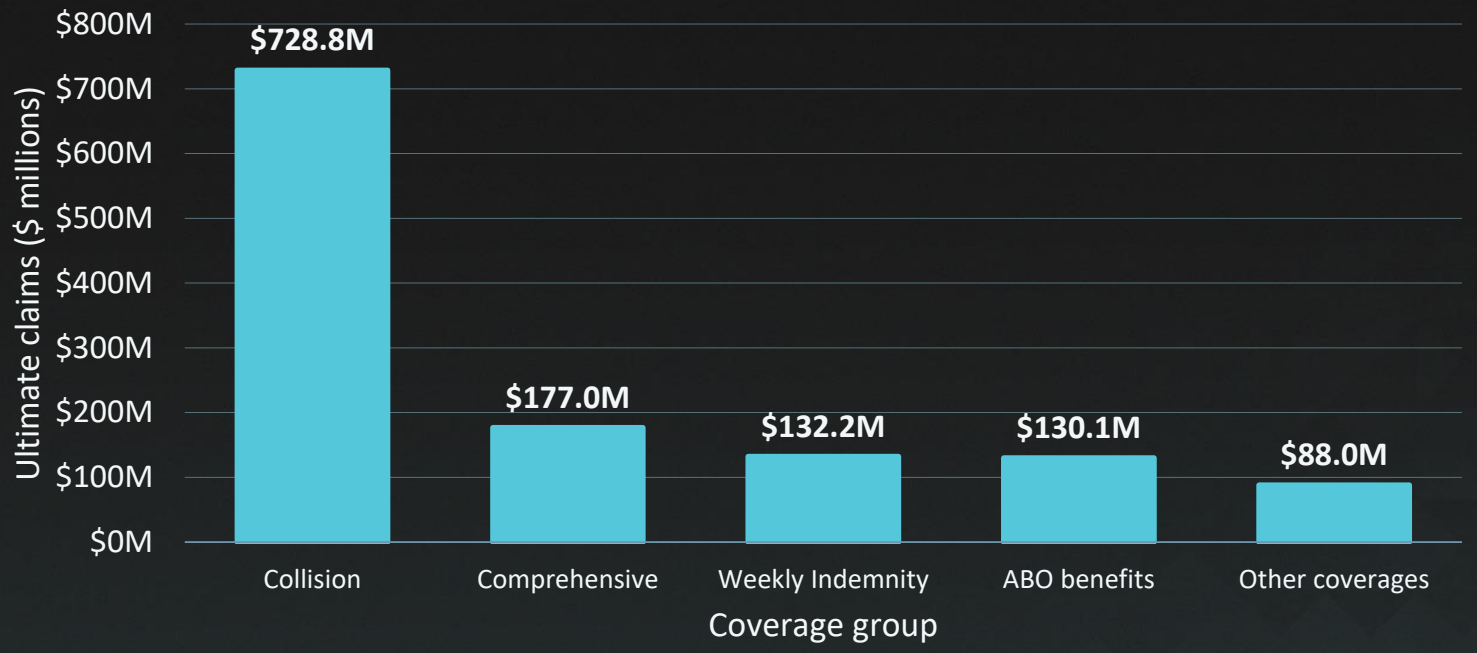
How claims experience becomes a forecast

The selections

Why MPI selected these assumptions

The claim drivers

Mobility, repairs, injury benefits and theft



The conclusion

The evidence supporting MPI's best estimate

The rating-year forecast is $1.256 billion

Basic ultimate claims for rating year 2027/28; chart amounts in millions

$1.256

billion in ultimate claims

+4.96%

vs last year's estimate for the same rating year

$1,224.81 per earned unit. Collision accounts for 58% of the total.

3 Source: CF Figures CF-1–CF-3, pp. 9–12. Undiscounted ultimate losses, rating year 2027/28.

The same rating-year forecast increases by $59.3 million

2027/28 rating year, undiscounted ultimate claims, $ millions

Coverage group	2026 GRA	2027 GRA	Change
Collision	$693.2	$728.8	+$35.6
All PIPP benefits	$234.6	$262.3	+$27.7
Comprehensive	$188.4	$177.0	−$11.4
Bodily Injury and Property Damage	$80.6	$88.0	+$7.5
Basic total	**$1,196.7**	**$1,256.0**	**+$59.3**

Amounts may not add due to rounding. This is a claims reconciliation, not a premium change.

4 Source: CF.1.4, Figure CF-3, p. 12. PIPP includes the prior separately reported enhancements.

The building blocks of claims cost

Frequency

Claims per earned unit

×

Severity

Average ultimate cost per claim

=

Loss cost

Expected claims cost per earned unit

Total expected claims cost = loss cost × earned units

A change in the number of insured vehicles can change total claims without changing frequency.

5

From comparable experience to future claims

1. Establish the starting level

Adjust past experience to the 2025 level
Average five adjusted accident years

2. Project future claims

Apply future trends and product terms
Then exposure and catastrophe assumptions

Past trends affect the starting level. Future trends affect how that level grows.

6

Claim valuation and trending serve different purposes

Valuation

Best estimate of ultimate claims

Trending

How costs change between accident years

Collision is short-tailed

For Collision, MPI uses the valuation team's selected ultimates.
Actuarial Forecasting develops its own Property Damage and Comprehensive splits.

Collision ultimates already allow for expected development.

MPI applies a consistent selection discipline

$p < 0.05$

Evidence for inclusion

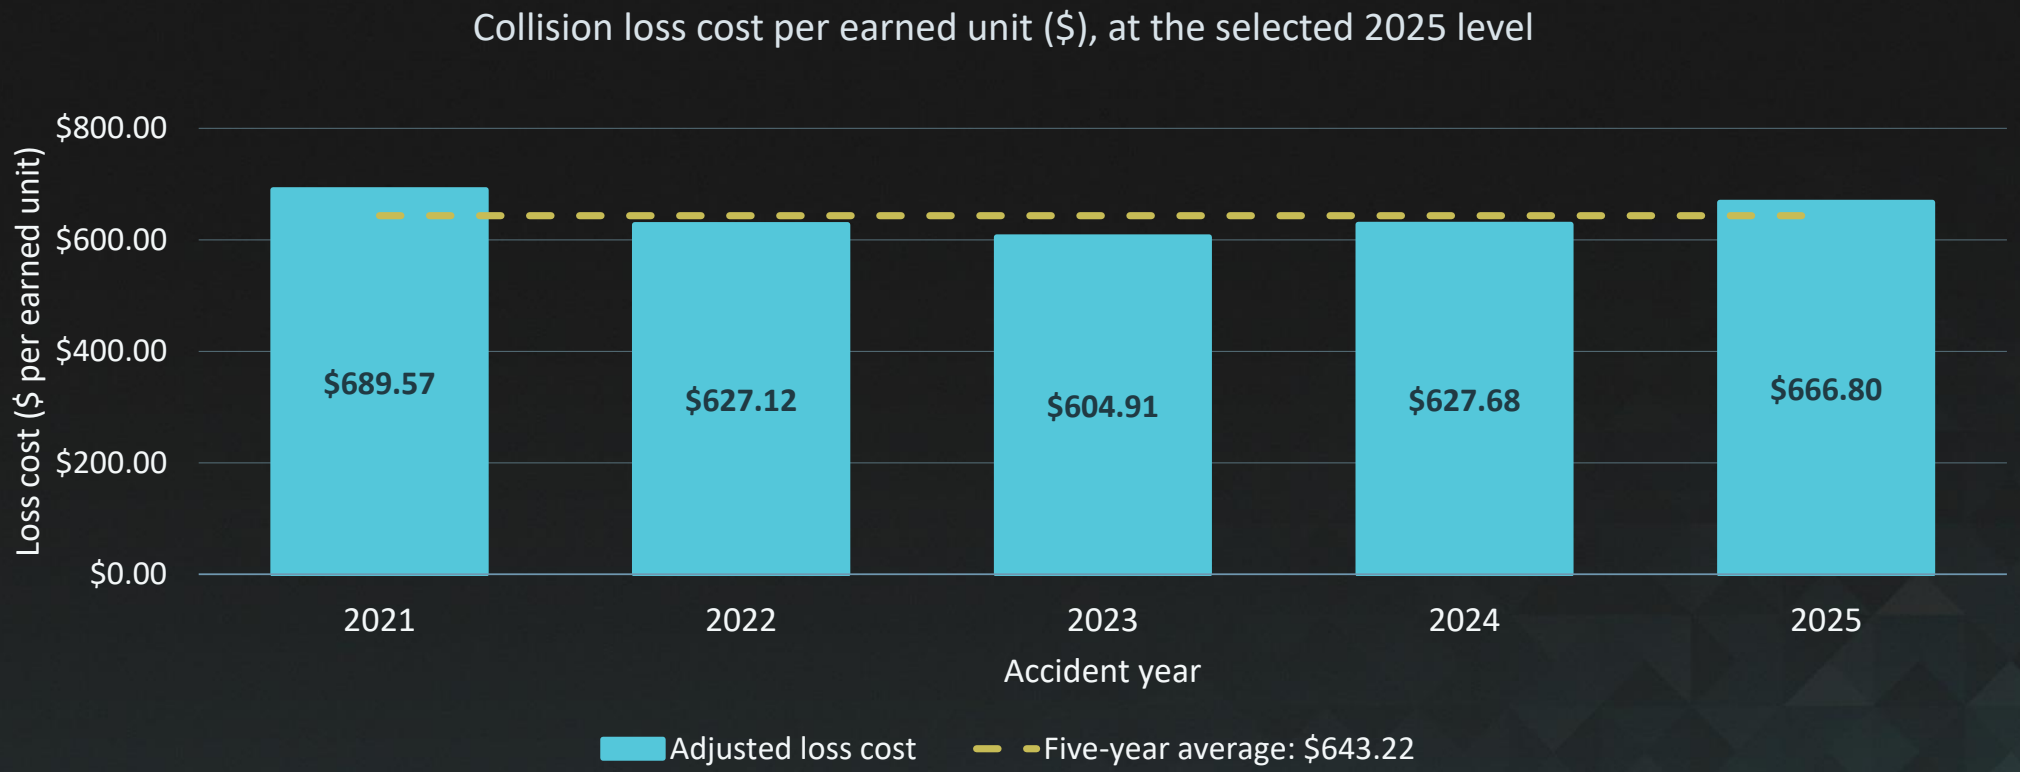
Variables or a coherent group of variables

Adjusted R^2

Fit with discipline

How well the model fits, allowing for complexity

Claim evidence



A credible explanation

Why the pattern can reasonably continue

Test Time in context: the period and other variables matter.

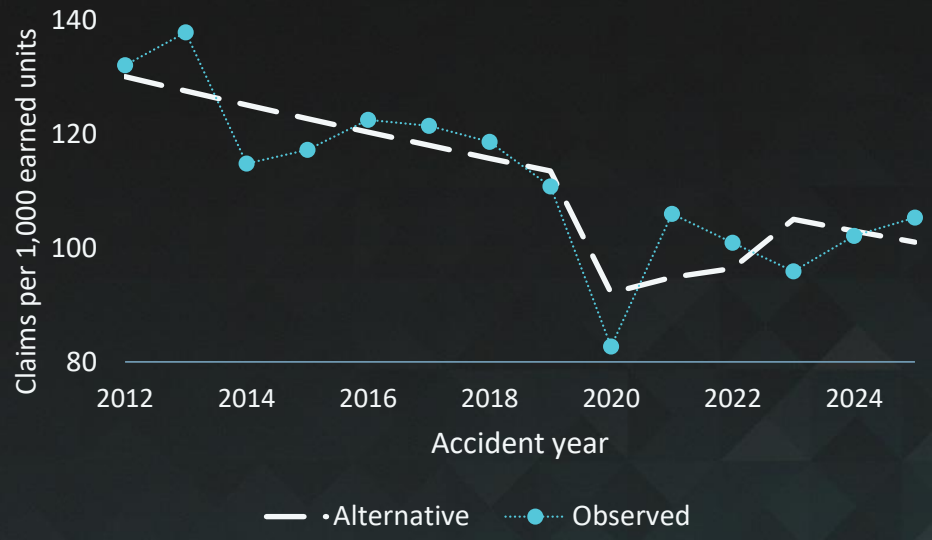
Collision frequency: a level change or a continuing decline

The alternative uses Time and Mobility, with no New Normal term



MPI: Mobility + New Normal

2014–2025; 0.00% annual trend

Alternative: Time + Mobility

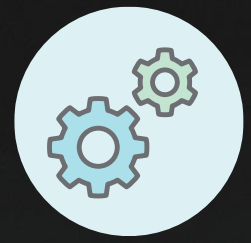
2012–2025; −1.93% annual trend

The alternative passes significance tests. MPI's level model fits the same 2014–2025 years better.

14 Source: CF Appendix 3g; alternative specification in hearing evidence. Curves reconstructed from filed inputs.

One change can have two phases

A shop introduces a new checkout system



Old checkout

An established routine

Staff training

A temporary transition

Regular operation

A potentially different level

Does allowing for both phases explain the change?

The joint test assesses the combined contribution. The claims explanation supports using both phases.

15

The joint test supports the selected Collision model

A combined mobility and new-normal adjustment, estimated from MPI claims

Same 12 annual observations: 2014–2025

One constant level, without the mobility pair

Restriction-period change and a later level

The joint test assesses the added contribution of the pair as one modelling choice.

0.00059

Joint p-value
MPI threshold: 0.05

0.766

Adjusted R^2

Joint support is one part of the claims and mobility explanation.

16 Source: CF Appendix 3g, Table 2, sheet 3g-2, row 15 and selected-model block; CC (MPI) I-56, pp. 2–3.

Collision frequency: compare the same years as well

Compare the model structures on the same years

Model and period	Annual trend	Adjusted R^2	Time p-value	Mobility p-value	New Normal p-value	Mobility pair joint p
MPI: M + N 2014–2025	**0.00%**	**0.766**	**omitted**	**<0.001**	**0.003**	**<0.001**
Alternative: T + M 2012–2025	-1.93%	0.725	0.002	0.009	omitted	n/a
T + M, same years 2014–2025	-1.51%	0.621	0.032	0.013	omitted	n/a

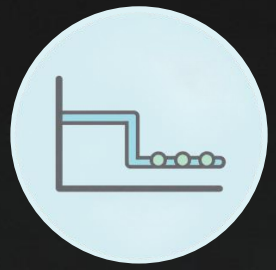
T = Time M = Mobility N = New Normal

"Omitted" = term not included; "n/a" = joint test not applicable.

Historical fit supports selection; it does not establish future accuracy.

17 Source: CF Appendix 3g; hearing evidence Figure 20; supplementary same-period diagnostic from filed inputs.

Collision frequency: why MPI selects 0% future growth



Working patterns

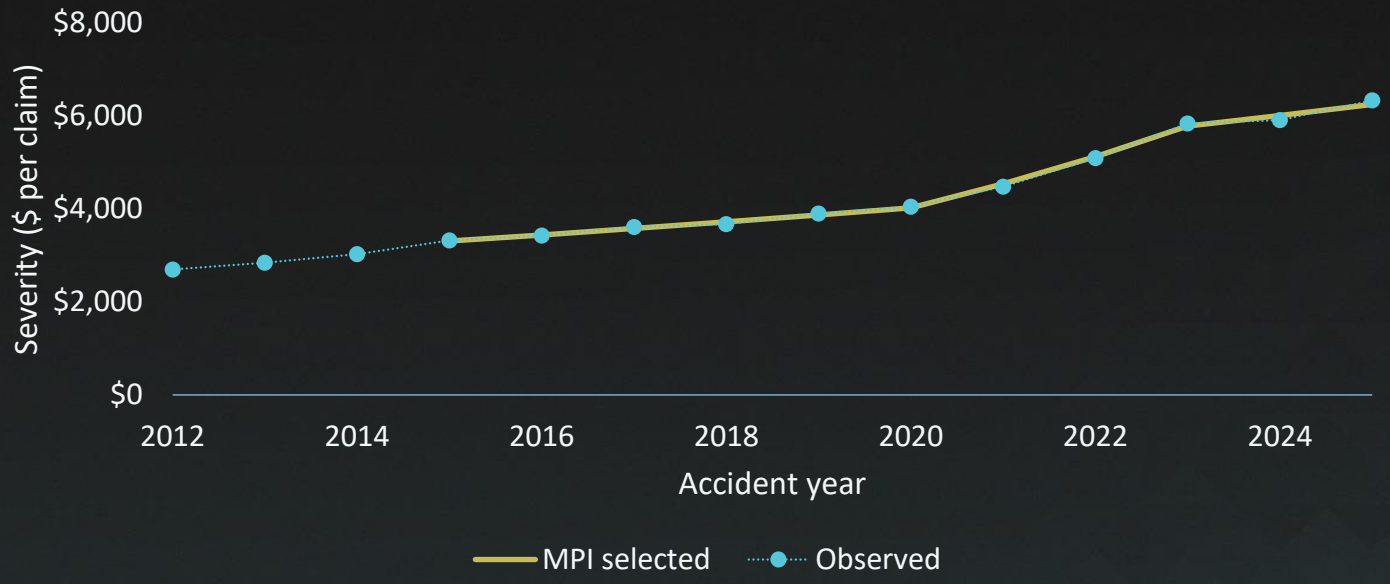
MDR evidence supports a lasting change

MPI claims experience

Mobility terms represent the change in level

0% future trend

Carries the selected past trend into the future



Carry the selected past trend forward unless evidence supports a different future pattern.

18 Source: CF.12 and CF Appendix 3g; CF Attachment A, MDR pp. 22–24; CC (MPI) I-56.

Collision severity: why MPI selects 2015–2025

Underlying growth, with a separate 2021–2023 cost shift

MPI selected: 2015–2025; +3.98% annual trend

Selection rationale

0.997

adjusted R^2
selected 2015–2025 model

Alternative 2012–2025:
+5.08% underlying trend

Both models have supported
Time and cost-shift terms

Alternative accepts MPI
future component severity

MPI selects the supported historical relationship; future severity uses expected repair and total-loss costs.

19 Source: CF.12.1, p. 57; CF Appendix 3g, Tables 4–6. Historical context: 2017 GRA CI pp. 34–36.

Future Collision severity rationale

Historical combined trend

3.98%

Summarizes the historical repair and total-loss cost environment

Future cost components

Repair costs + total losses

Scheduled rates, selected quantities and prices, combined with cost weights

The component approach brings information about future repair costs into the projection.

20 Source: CF Figures CF-28–CF-32, pp. 56–60; PUB (MPI) I-70, pp. 1–3; II-33(a), pp. 4–5.

Weekly Indemnity increased for several reasons

Rating-year 2027/28 loss cost rises from $106.08 to $128.91 per unit

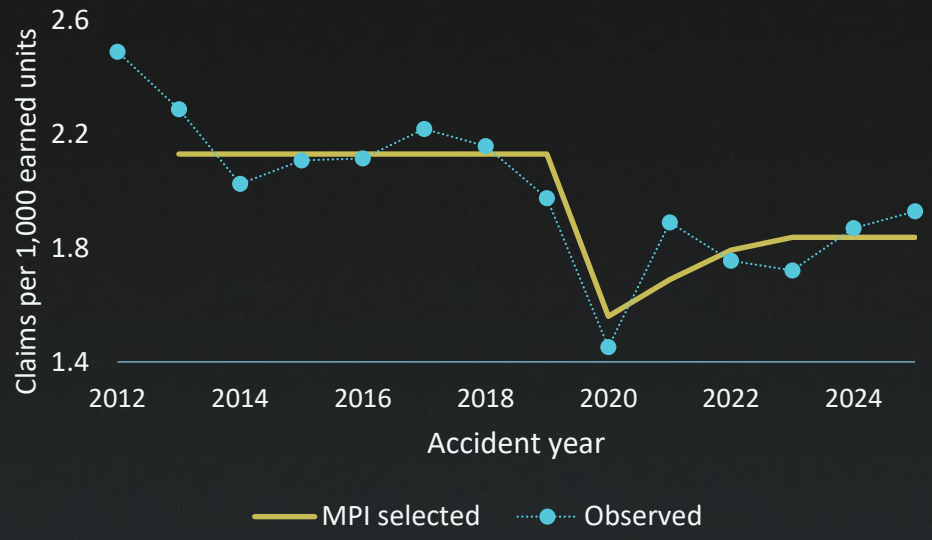
Sequential bridge item	$ per earned unit
2026 GRA starting estimate	**$106.08**
PIPP enhancements included	+$2.13
Prior-year claim experience	+$11.39
Adding AY 2025	+$0.54
Updated past trend	+$6.74
Updated future trend	+$8.55
New mobility model	−$6.52
2027 GRA selected estimate	**$128.91**

$128.91

+21.52%

vs the prior estimate
for the same rating year

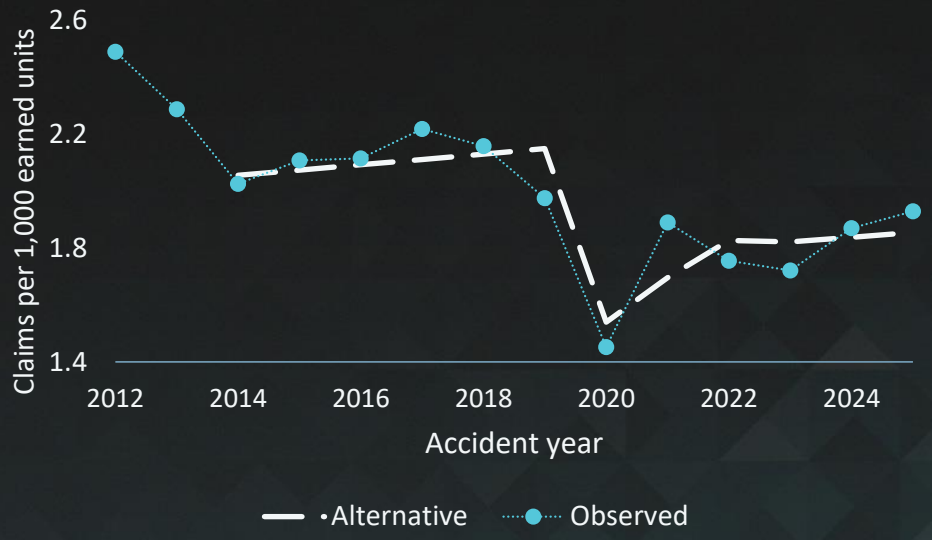
Prior-year claim experience adds $11.39. Updated trends also matter. The mobility change offsets $6.52.



21 Source: PUB (MPI) I-61, Figure 1, pp. 3–4. Bridge compares the 2026 and 2027 GRAs for the same rating year.

Weekly Indemnity frequency: testing an upward Time trend

The alternative retains Time, Mobility and New Normal



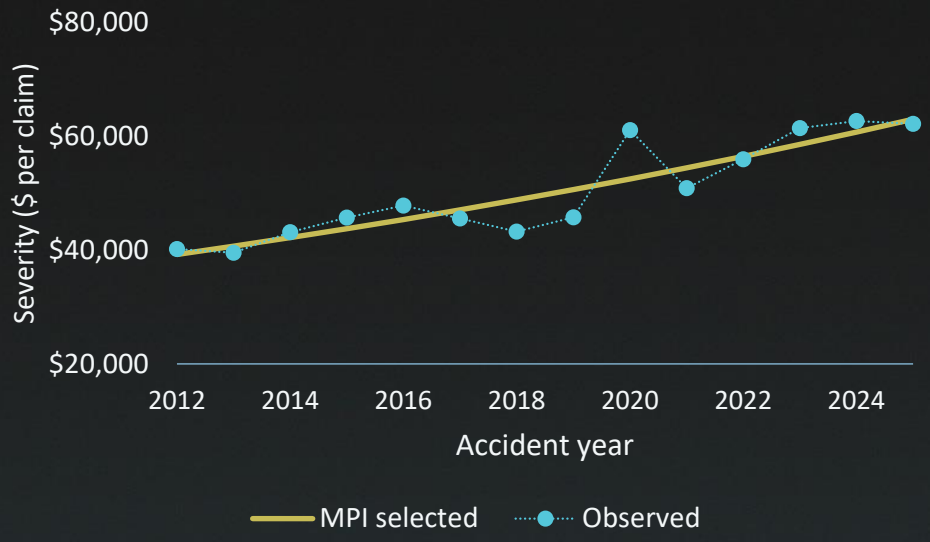
MPI: Mobility + New Normal

2013–2025; 0.00% annual trend

Alternative: all three terms

2014–2025; +0.90%; Time p = 0.466

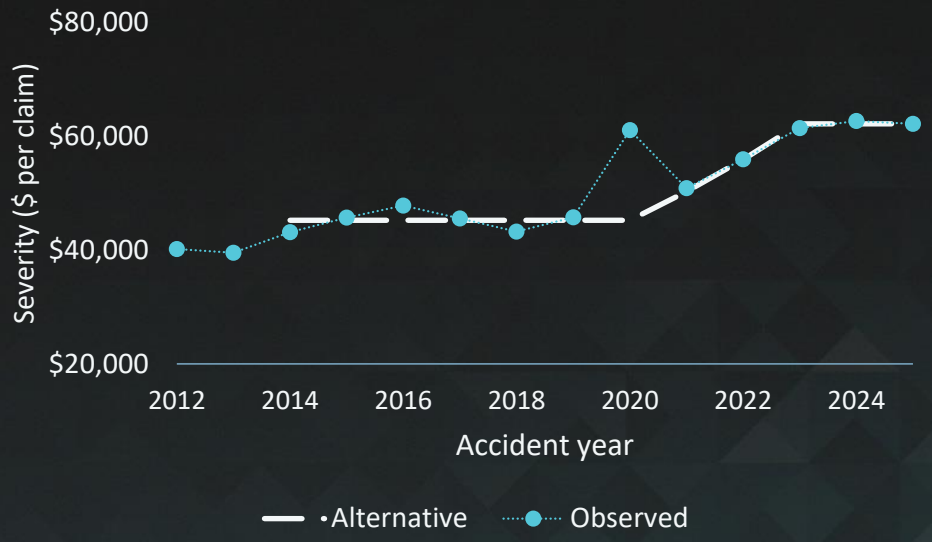
Recent increases warrant attention. The alternative's continuing Time slope lacks statistical support.



22 Source: CF Appendix 3a; alternative specification in hearing evidence. Curves reconstructed from filed inputs.

Weekly Indemnity severity: continuing growth or a cost shift

The alternative excludes 2020 and concentrates underlying growth in 2021–2023



MPI: continuing Time trend

2012–2025; +3.71% underlying trend

Alternative: cost-shift term only

2014–2025, excluding 2020; 0% outside shift

The alternative is flat outside its 2021–2023 cost shift. MPI selects continuing 3.71% underlying growth.

23 Source: CF Appendix 3a, Tables 4–6; alternative Figure 5, p. 15. Reconstructed from filed inputs.

Weekly Indemnity: future growth under each selection

MPI future selection

+3.71%

Underlying loss-cost growth

Frequency: 0.00%

Underlying severity: +3.71%

Alternative future selection

+0.90%

Underlying loss-cost growth

Frequency: +0.90%

Underlying severity: 0% after the cost shift

Future benefit indexation applies separately.

The key severity choice: continuing growth or a completed 2021–2023 shift.

24 Source: CF.6.1, pp. 44–45; CF Appendix 3a; alternative pp. 14–15, Figure 5.

Accident Benefits require different selections

Coverage	MPI future trend	Reason for separate analysis
ABO Personal Care Assistance	Severity +5.98%	Care requirements and service costs
ABO Travel	Frequency −7.75% as filed	Distinct travel utilization pattern
ABO Other Indexed	Loss cost +3.63%	Frequency −2.79%, severity +6.60%
ABO Other Non-Indexed	Loss cost +3.91%	Direct loss-cost model

Separate analysis prevents offsetting coverage patterns from obscuring the underlying drivers.

25 Source: CF.1.3, pp. 10–11; CF.7–CF.10, pp. 46–53; PUB (MPI) I-69(a), pp. 1–2.

Frequency and severity can need different historical periods

Filed example: ABO Other Indexed

Frequency

How often do claims occur?

Driving, reporting and claim-occurrence patterns

2012–2025

Severity

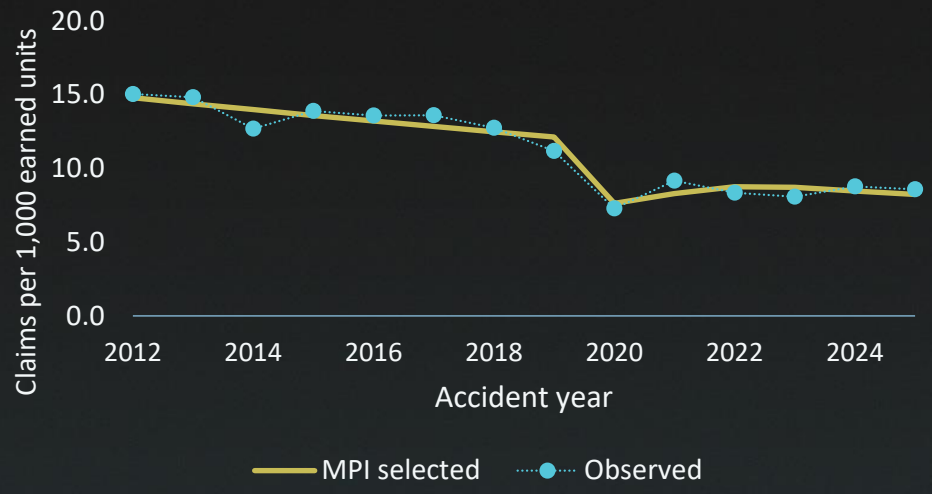
What does each claim cost?

Prices, benefit use and claim-cost patterns

2021–2025

Apply consistent criteria to each component, then assess the combined loss-cost pattern.

26 Source: CC (MPI) II-16(b)–(c), pp. 2–3; CF Appendix 3d, Tables 2 and 5; PUB (MPI) II-33(b), pp. 6–7.

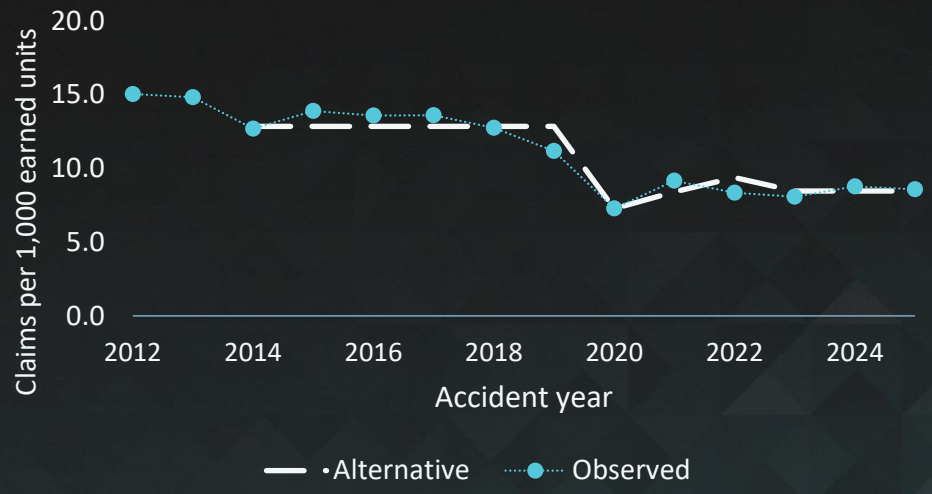


ABO Other Indexed: declining trend or a changed level

Both approaches account for pandemic and later mobility effects

MPI: Time + Mobility + New Normal

2012–2025; −2.79% underlying trend



Adjusted R^2 = 0.931

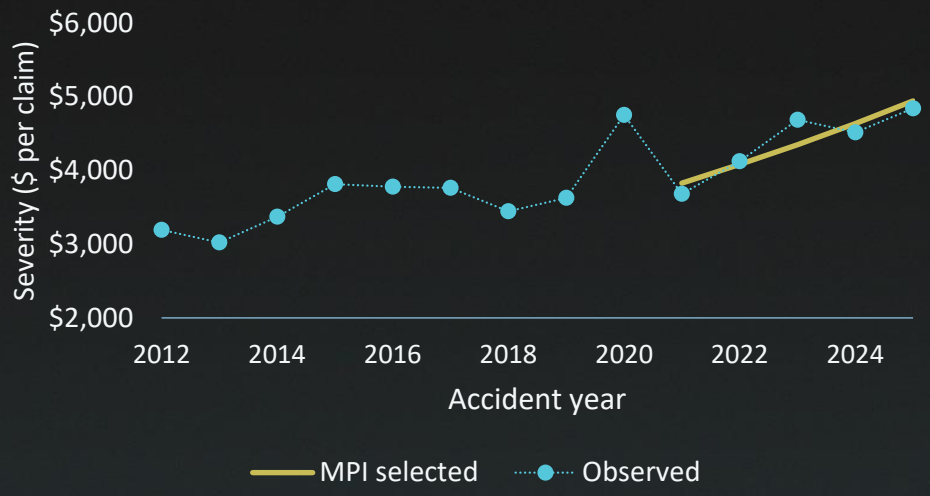
Alternative: Mobility + New Normal

2014–2025; 0% underlying trend

Adjusted R^2 = 0.891

MPI selects the decline supported over its full historical period.

27 Source: CF Appendix 3d, Tables 1–3; alternative pp. 24–25, Figure 12.

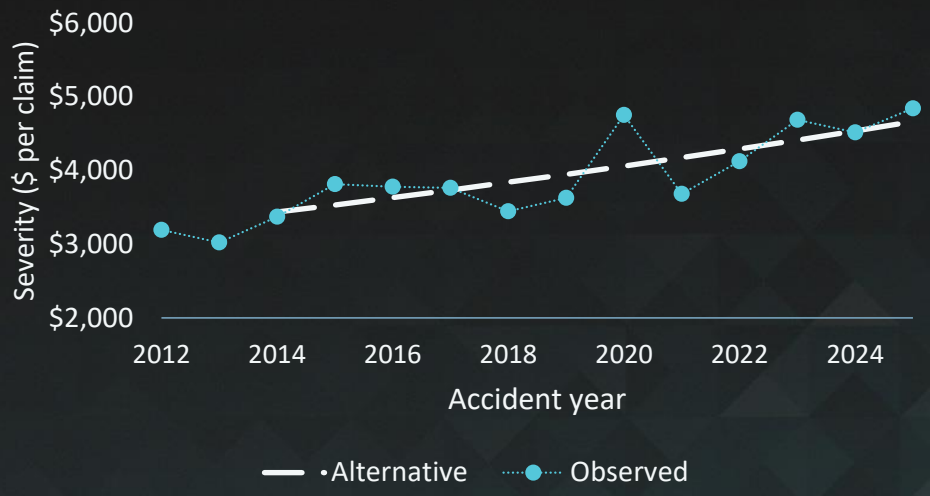


ABO Other Indexed: recent and broader severity patterns

Alternative severity uses 2014–2025, matching its frequency period

MPI: recent severity relationship

2021–2025; +6.60%



Time p = 0.031 Adjusted R^2 = 0.774

Alternative: broader severity history

2014–2025; +2.81% fitted; 2.80% selected

Time p = 0.003 Adjusted R^2 = 0.557

Both Time trends are supported. MPI selects recent costs; the alternative uses a broader common window.

28 Source: CF Appendix 3d, Tables 4–6; alternative pp. 24–25, Figure 12.

ABO Other Indexed: compare the complete selections

Compare the combined frequency and severity selections

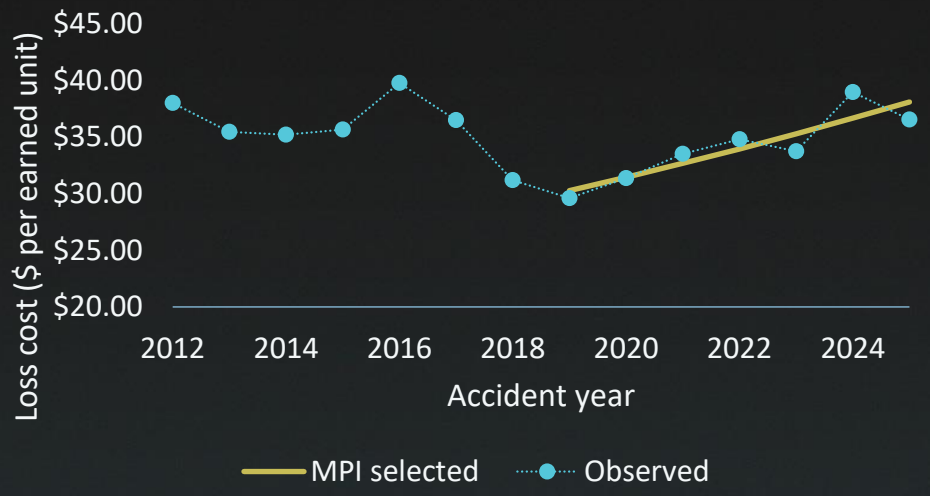
Component	MPI selection	Alternative selection
Frequency	**2012–2025: –2.79%**	**2014–2025: 0.00%**
Severity	2021–2025: +6.60%	2014–2025: +2.80%
Future loss-cost trend	+3.63%	+2.80%

Two views of the representative period

MPI selects each component separately; the alternative uses 2014–2025 for both.

Underlying loss-cost growth: MPI +3.63%; alternative +2.80%. Future indexation is separate.

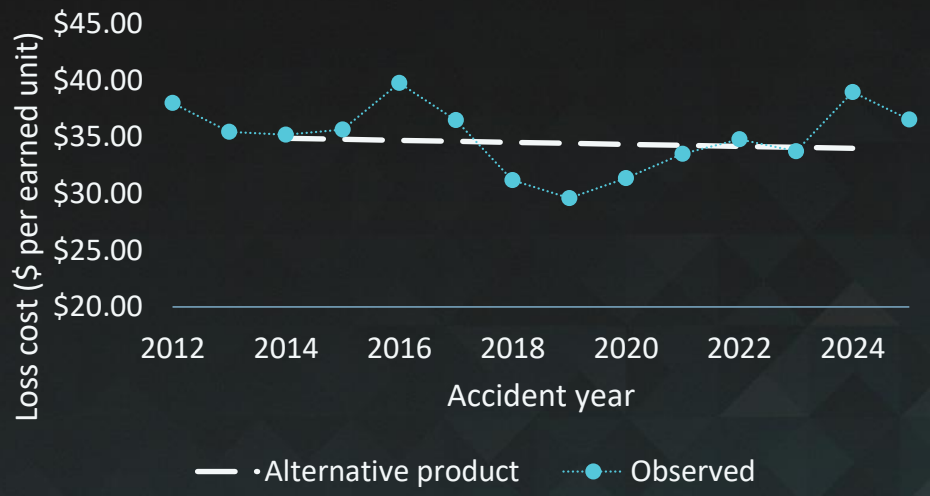
29 Source: CF.9.1, pp. 50–51; CF Appendix 3d; alternative pp. 24–25, Figure 12.



ABO Other Non-Indexed: separate past and future judgments

Alternative component fits support its future assumption. It accepts MPI's past trend.

MPI: selected direct loss-cost fit



2019–2025 +3.91% past and future trend

Time p = 0.005 Adjusted R^2 = 0.782

Alternative: supporting component product

2014–2024 −0.26% implied annual trend

MPI continues +3.91%. The alternative uses −0.26% for the future while accepting MPI's past trend.

30 Source: CF Appendix 3e, Tables 1–9; PUB (MPI) II-33(c), pp. 8–9; alternative p. 28, Figure 15.

Theft has two different underlying patterns

Attempted and Partial Theft

A temporary concentration of catalytic-converter theft

+8.36%

future loss-cost trend

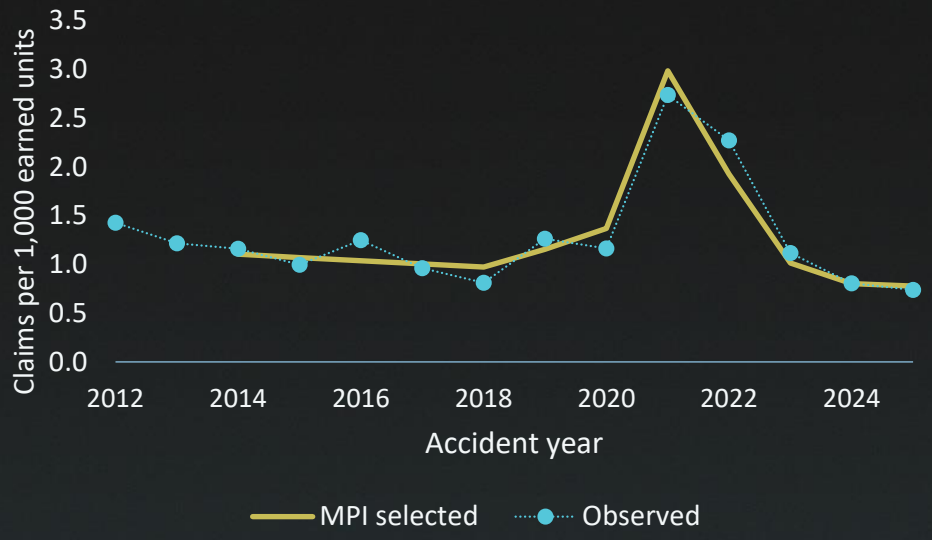
Entire Theft

Future frequency: 0%
Historical frequency: +4.82%

+3.28%

future loss-cost trend

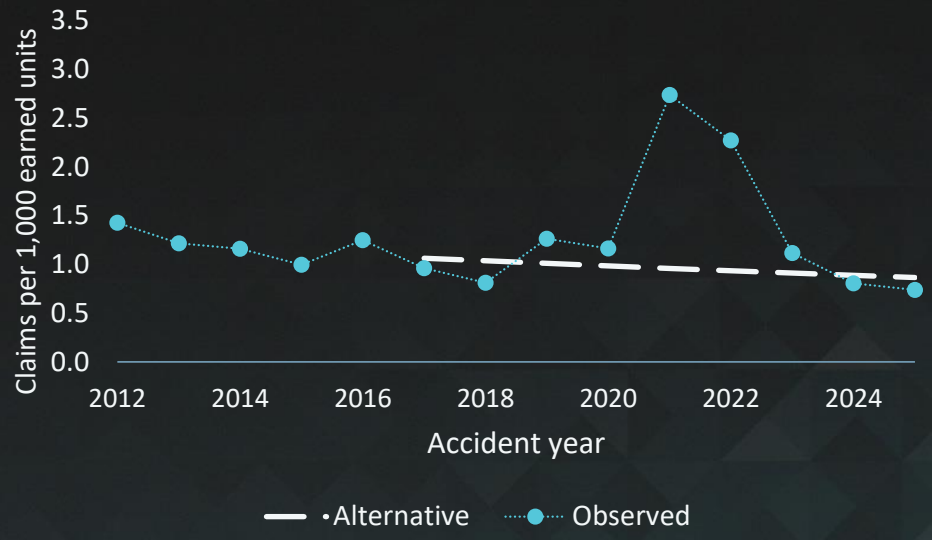
Separate theft patterns require separate forecasts.



31 Source: CF.13.3–CF.13.4, pp. 69–72; CC (MPI) I-53–I-54; PUB (MPI) II-33(d)–(e), pp. 9–13.

Attempted and Partial Theft: model or exclude the episode

The alternative frequency fit excludes 2021 and 2022; MPI models the temporary theft effect



MPI: Time + theft parameter

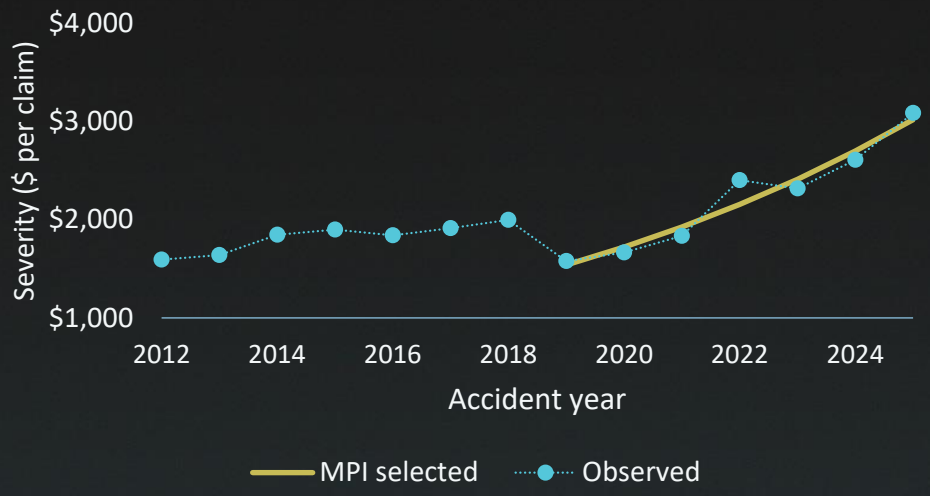
2014–2025; −3.14% underlying frequency

Alternative: supporting Time-only fit

2017–2025, excluding 2021–2022; −2.54%

The alternative ultimately selects direct loss cost. Its frequency-only fit is supporting evidence.

32 Source: CF Appendix 3h, Tables 1–3; alternative pp. 39–40, Figure 23.

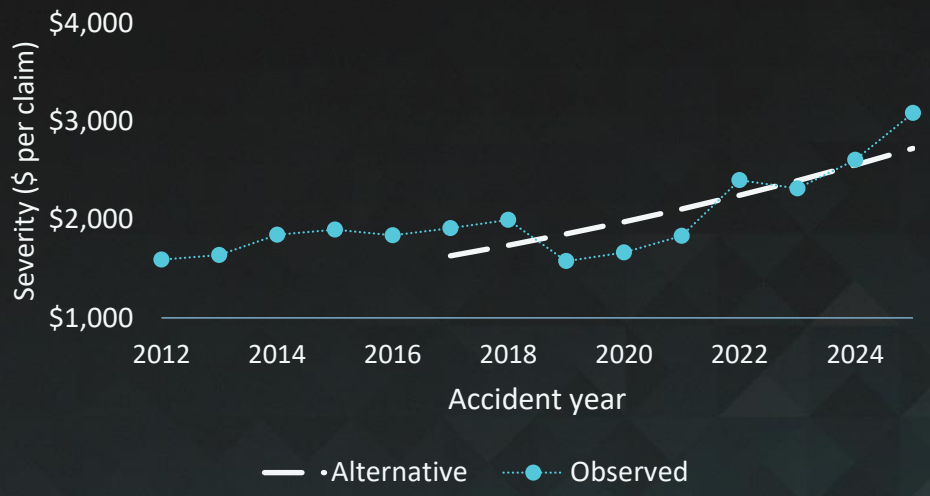


Attempted and Partial Theft: supporting severity comparisons

The alternative severity fit retains 2021 and 2022

MPI: recent severity relationship

2019–2025; +11.88%



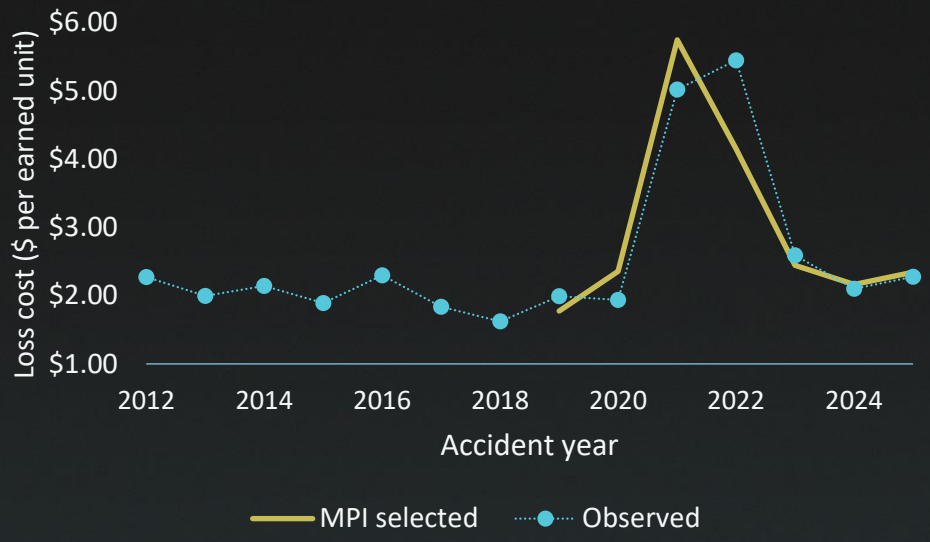
Time p < 0.001 Adjusted R^2 = 0.939

Alternative: supporting severity fit

2017–2025; +6.62%

Time p = 0.010 Adjusted R^2 = 0.585

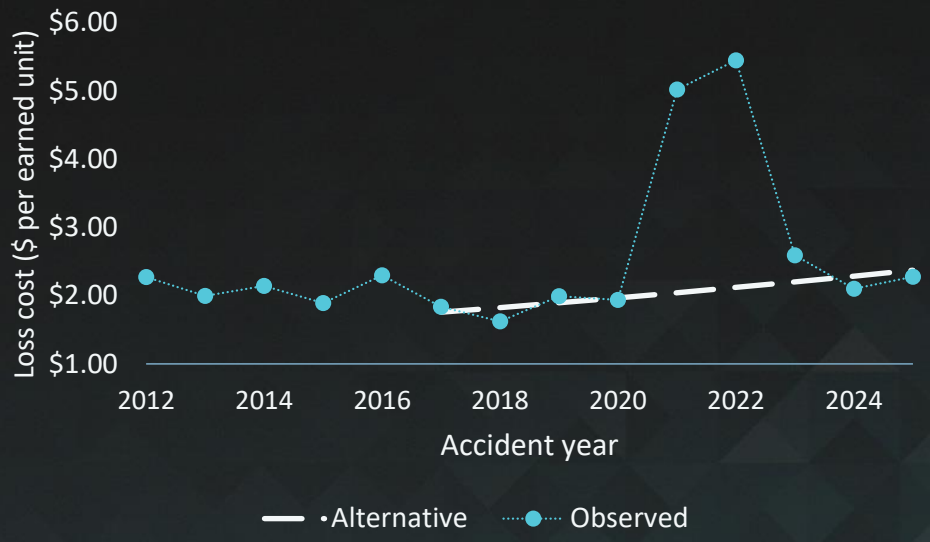
MPI selects the highest adjusted fit among periods with Time p < 0.05, supported by the recent cost environment.



33 Source: CF Appendix 3h, Tables 4–6; alternative pp. 39–40, Figure 23.

Attempted and Partial Theft: compare the loss-cost selections

MPI's component product versus the alternative direct loss-cost model



MPI: frequency × severity

Shown where both selected component fits apply

Alternative: direct loss-cost fit

2017–2025, excluding 2021–2022; +3.82% fitted

Alternative: +3.80% selected trend and equal weights on 2023–2025. Both choices affect its forecast.

34 Source: CF Appendix 3h, Tables 1–9; CF.5.5, p. 42; alternative pp. 39–40, Figure 23.

Attempted and Partial Theft: model and base years

MPI

5

adjusted years in the base

2021–2025

20% on each year

Models the temporary concentration of theft claims

Alternative

3

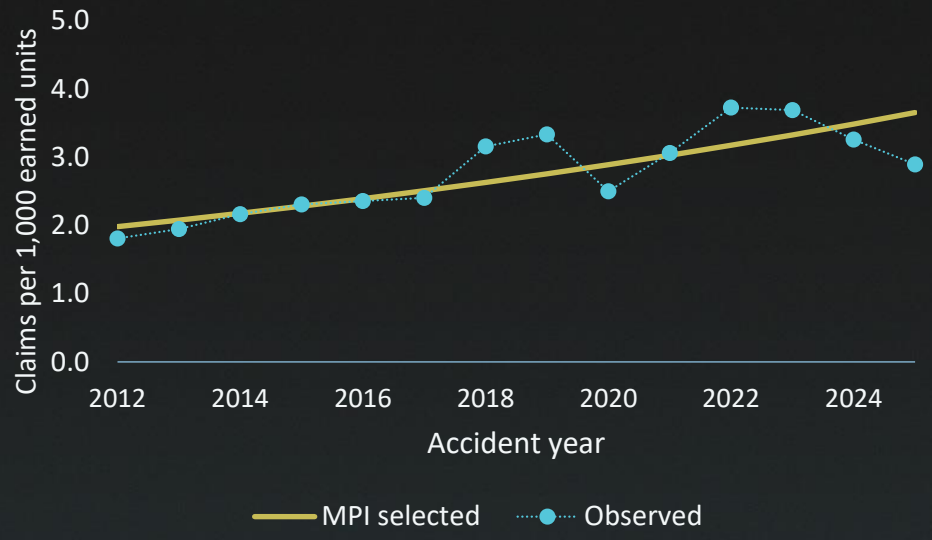
recent years in the base

2023–2025

One-third on each year

Excludes 2021 and 2022 from the direct loss-cost trend fit

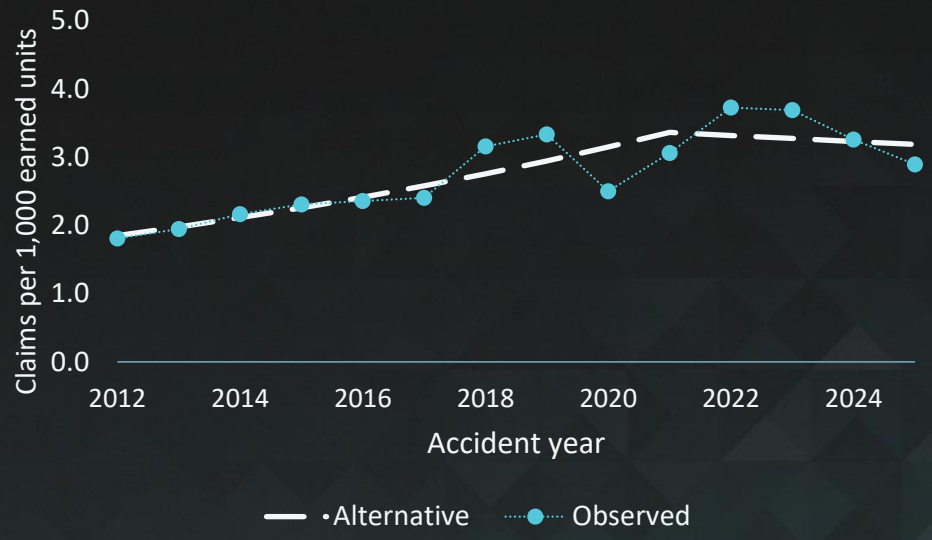
Both the trend model and the starting-year weights affect the forecast.



35 Source: CF.5.5, p. 42; CC (MPI) II-17; alternative sections 4.1 and 4.11, pp. 10 and 39–40.

Entire Theft: a flatter future or a continuing decline

Alternative segmented frequency uses the full 2012–2025 history

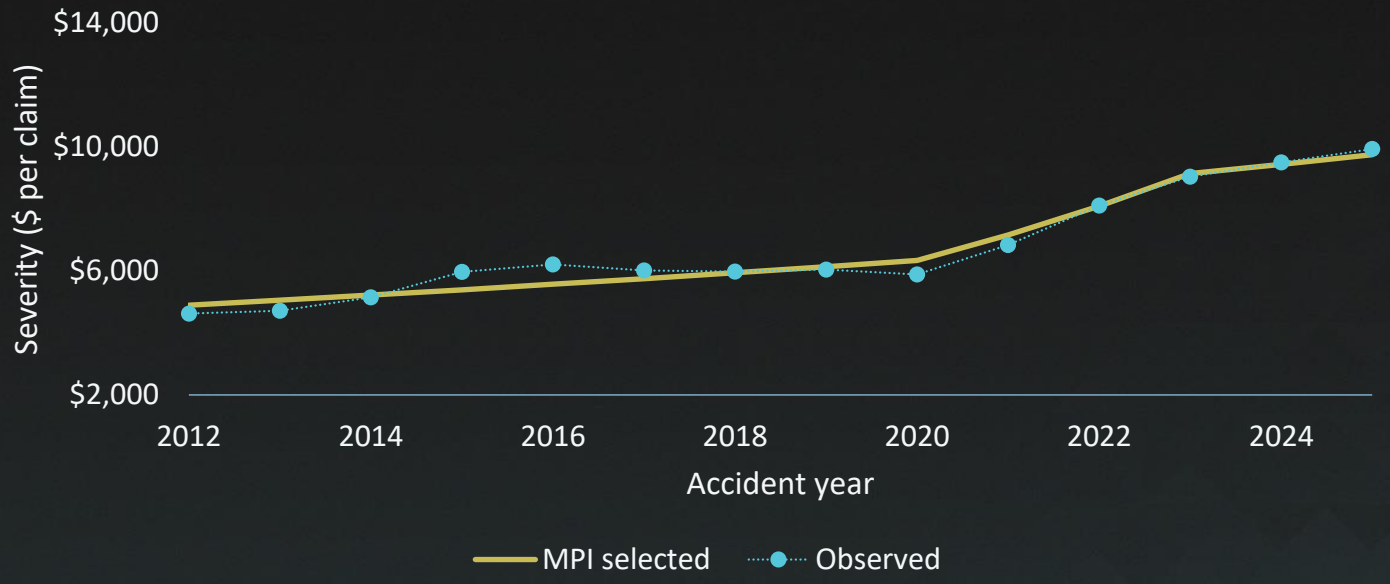


MPI: historical Time trend

2012–2025; +4.82%; future 0%

Alternative: Time + 2022 slope change

2012–2025; later fitted trend −1.35%



MPI selects 0% future frequency. The alternative continues a modest decline after a 2022 slope change.

36 Source: CF Appendix 3i, Tables 1–3; PUB (MPI) II-33(e); alternative pp. 43–44, Figure 26.

Entire Theft: MPI's severity model

MPI separates underlying annual growth from the 2021–2023 cost shift

MPI selected: 2012–2025; +3.28% annual trend

Vehicle values

+3.28%

selected underlying annual severity growth

Most claims are total losses

Settlement costs reflect vehicle values

Vehicle values inform the severity forecast, with a separate allowance for the 2021–2023 cost shift.

37 Source: CF.13.4, pp. 71–73; CF Appendix 3i, Tables 4–6.

Comprehensive perils reflect their own cost drivers

Coverage	MPI treatment	Selection rationale
Glass	Separate frequency and severity forecast	Deductible threshold and calibration costs
Fire	Exclude AY 2025 from trending	Exceptional wildfire experience
Hail	0% future frequency and severity trends	Separate catastrophe loading
Other	+8.74% loss-cost trend	Direct loss-cost model

Each model reflects the coverage's cost drivers and exceptional events.

38 Source: CF.13.2–CF.13.9, pp. 64–82.

The assumptions can be checked against emerging claims

Frequency

Claims per earned unit

Repair costs

Hours, rates, parts and prices

Injury benefits

Duration, development and claim mix

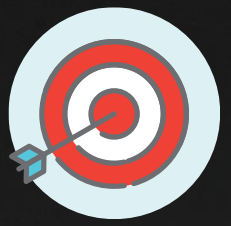
Theft

Frequency and severity by peril

Catastrophes

Net losses and reinsurance terms

Preserve the original forecast, then compare with later experience on a consistent basis.



MPI supports the forecast on this evidence

2027/28 rating year: $1.256 billion in undiscounted ultimate claims

Representative experience

Comparable years and
a stable starting level

Supported selections

Consistent criteria and
a claims explanation

A lasting mobility change

MDR evidence and
MPI frequency experience

Expected future costs

Coverage-specific drivers
and explicit assumptions

The filed forecast combines historical evidence with explicit judgments about expected future costs.

Appendix

Supporting analysis and references

MANITOBA PUBLIC INSURANCE

Appendix A. Terms used in the forecast

Term	Meaning
Accident year (AY)	Claims from accidents in a defined year. MPI years begin April 1.
Rating year (RY)	The period for which the insurance rates are set.
Ultimate loss	Payments made plus estimated future payments for those claims.
On-levelling	Adjusting historical claims to a common selected cost and coverage basis.
De-indexation	Removing benefit indexation before analysing the underlying trend.
Percentage point	An absolute difference between two percentage rates.

43 Source: CF.3–CF.5; RI.2.1, pp. 6–8; RI Appendix 1, Tables 1–2. Plain-language explanations.

Appendix B. MPI selection criteria and joint testing

Issue	MPI method	Interpretation
Adjusted R^2	Compare fit with a penalty for added parameters	Supports disciplined candidate selection
Significance threshold	MPI generally applies $p < 0.05$	Evidence for inclusion under model assumptions
Mobility and new normal	Joint F-test, pair retained or omitted	Tests their combined contribution
Individual parameter test	Contribution conditional on other terms	Answers a narrower question
Different periods	Frequency and severity assessed separately	Reflects distinct underlying processes

44 Source: CF.4.1–CF.4.5; CC (MPI) I-51–I-56 and II-16.

Appendix C. Injury and Collision trend selections

Coverage	Future frequency	Future severity / loss cost
Weekly Indemnity	0.00%	Severity 3.71%
ABO Personal Care Assistance	0.00%	Severity 5.98%
ABO Travel	−7.75%	Severity 0.00%
ABO Other Indexed	−2.79%	Severity 6.60%, loss cost 3.63%
ABO Other Non-Indexed	Direct loss-cost model	Loss cost 3.91%
Collision	0.00%	Severity 5.90% / 5.80% / 5.70%

45 Source: CF.6–CF.12. Collision severity: 2026 / 2027 / 2028 onward.

Appendix D. Other selected future loss-cost trends

Coverage	Selected loss-cost trend
Attempted and Partial Theft	8.36%
Entire Theft	3.28%
Fire	1.95%
Vandalism	−1.69%
Comprehensive Other	8.74%
Property Damage Other	3.57%

46 Source: CF.13–CF.16. Future selected trends, model form varies by coverage.

Appendix E. Interpreting mobility and home-working evidence

Observation	What it supports	Boundary
Google Manitoba workplaces	Measured restriction-period mobility	Series ends in 2022
Mostly at home: May 2025	17.4%; remains above 7.1% in 2016	National; not Manitoba claims
May 2026 arrangements	11.4% exclusive home; 9.8% hybrid	Different definition; separate series
2023 commuting comparison	Lower than earlier pattern, same workforce	Not a decline from 2016 total
MPI adjusted frequency	Insurance-specific level estimate	Annual variation remains
Joint mobility test	Contribution of both terms together	Does not prove each separately

47 Source: MDR, pp. 20–25; CF Appendix 3g; CC I-56; Statistics Canada, August 26, 2025 and June 5, 2026.

Appendix F. Choice of mobility evidence

Evidence considered	Use or limitation	Implication for selection
Google workplaces	Manitoba, 2020–2022; winter baseline	Restriction-period covariate
Statistics Canada commuting	National evidence and changing workforce	Supports the level-change explanation
Vehicle kilometres travelled	Data quality, timing and disclosure limits	Limited suitability for this model
Traffic counters	Missing data and Winnipeg concentration	Incomplete coverage of MPI exposure
Fuel sales	Efficiency, vehicle mix and tax effects	Not a direct measure of claim exposure

48 Source: CF Attachment A, Mobility Data Report, Executive Summary, pp. 5–7; CF.2.2, pp. 16–17.

Appendix G. Primary references

Subject	MPI filing or response
Forecast and calculation	CF Figures CF-1, CF-2, CF-14 and CF-15

Source: 2027 GRA filed June 24, 2026. MPI Round I responses August 6 and Round II responses September 8, 2026.

Appendix H. Collision frequency model tests

T = Time; M = Mobility; N = New Normal

Model	Period	Annual trend	Adjusted R^2
MPI: M + N	**2014–2025**	**0.00%**	**0.766**
T + M	2012–2025	-1.93%	0.725
T + M, same years	2014–2025	-1.51%	0.621
T + M + N	2014–2025	+0.70%	0.750

Explanatory-variable tests

Model	Time p	Mobility p	New Normal p	Joint M + N p
MPI: M + N	**omitted**	**<0.001**	**0.003**	**<0.001**
T + M	0.002	0.009	omitted	n/a
T + M, same years	0.032	0.013	omitted	n/a
T + M + N	0.526	0.003	0.045	0.007

Joint M + N tests the pair, conditional on Time when present. “Omitted” = term absent; “n/a” = test not applicable.

50 Source: CF Appendix 3g; alternative pp. 35–36, Figure 20; supplementary reconstructions from filed inputs.

Appendix I. Weekly Indemnity frequency model tests

T = Time; M = Mobility; N = New Normal

Model	Period	Annual trend	Adjusted R^2
MPI: M + N	**2013–2025**	**0.00%**	**0.735**
M + N, same years	2014–2025	0.00%	0.728
Alternative: T + M + N	2014–2025	+0.90%	0.715

Explanatory-variable tests

Model	Time p	Mobility p	New Normal p	Joint M + N p
MPI: M + N	**omitted**	**<0.001**	**0.007**	**<0.001**
M + N, same years	omitted	<0.001	0.012	0.001
Alternative: T + M + N	0.466	0.003	0.070	0.007

Joint M + N tests the pair, conditional on Time when present. “Omitted” means the term is absent.

51 Source: CF Appendix 3a; alternative pp. 14–15, Figure 5; supplementary reconstructions from filed inputs.

MANITOBA PUBLIC INSURANCE

Details on Overall Rate Indication

What changed from the compliance 2026 GRA filing to the filed 2027 GRA

2027 GRA
2.38%
+0.61 pts
vs. 2026 GRA Compliance

Premium bridge by component

per vehicle($)

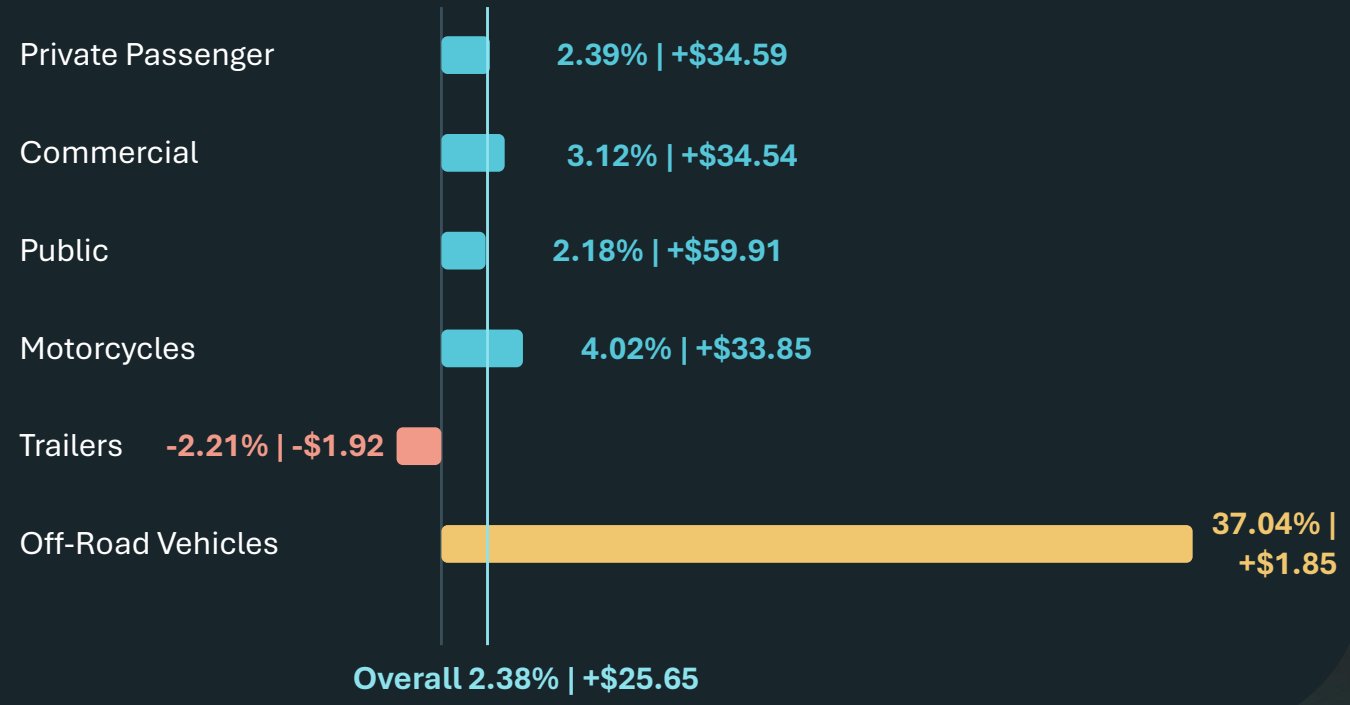
Component	2026 Compliance Filing	2027 GRA	Change
Loss cost	786.90	859.03	**+72.13**
Claims expense	132.12	148.73	+16.61
Fixed expenses	120.65	124.00	+3.35
Variable expenses	75.26	76.23	+0.97
Additional revenue	(79.14)	(78.64)	+0.50
Required premium	**1,035.80**	**1,129.35**	**+93.55**
Discounted required premium	**1,013.75**	**1,104.79**	**+91.04**
Current premium	**996.12**	**1,079.14**	**+83.02**
Required rate indication	**1.77%**	**2.38%**	**+0.61 pts**

How the indication is built

1. **Breakeven objective**
   Rates are determined without a profit provision.
2. **Required premium**
   Average premium needed to cover expected claims and expenses in rating year.
3. **Investment income**
   Discounting recognizes investment income earned before claims are paid.
4. **Rate indication**
   Adjusted required premium divided by current premium.

Main driver: loss cost increased by $72.13

Source: RI pg. 36, Figure RI-18, Overall Rate Indication in Comparison to 2026 GRA Board Order



Rate Indication by Major Class

The overall indication does not translate into the same change for every vehicle class

OVERALL
2.38% 2027 GRA

Indicated change by major class

Percentage change | Average Premium Change ($)

What stands out

1. **Most classes cluster near overall**
   Private Passenger, Commercial, Public and Motorcycles range from 2.18% to 4.02%.

2. **Trailers are below current rates**
   The indicated change is −2.21%.

3. **Off-road percentage reflects a low premium base**
   The 37.04% indication represents an increase from approximately $5.00 to $6.85 in average premium driven by higher claim costs.

Different risk profiles and pricing initiatives affect each class differently.

Source: MPI Exhibit #8 – Figure RMO-1

5

Data Quality, Corrections & Controls

MANITOBA PUBLIC INSURANCE

Exhibit #8 | Data Transmission Gap

The correction changed the allocation among major classes, not the filed overall indication

WHAT OCCURRED

Reserve changes did not transmit

Certain claim reserve changes were recorded in BI3 but were not transmitted to the Enterprise Data Warehouse.

IDENTIFIED **Actuarial Pricing was informed on 24 June 2026.**

Impact on ratemaking

The correction changed the allocation of the rate indication among major classes.

2.38% FILED OVERALL INDICATION UNCHANGED

RESPONSE AND CONTROLS

Three ongoing controls

1. **Monthly reconciliation**
   A monthly BI3-to-EDW reconciliation addresses the control gap.
2. **Expanded testing**
   Testing now includes uncommon transmission scenarios.
3. **Data & Financial reconciliation**
   Data are reconciled to the Data Warehouse and General Ledger.

Key message: allocation changed; the filed overall requirement did not.

Source: MPI Exhibit #8 and related 2027 GRA responses

Exhibit #9 | Formula Omission

The identified expense omission was quantified, disclosed and addressed through stronger formula governance

WHAT OCCURRED

Acquisition expenses were omitted

When the rating algorithm was updated to incorporate initiative expenses, the step adding acquisition expenses was inadvertently omitted.

IDENTIFIED

Found while responding to the first round of Information Requests.

Quantified impact

$6.7M
understatement of undiscounted costs

+48 bps
calculated indication 2.38% → 2.86%

FILED REQUEST REMAINS 2.38%

RESPONSE AND CONTROLS

More rigorous formula and calculation governance

1. **Peer review**
   Expand the existing peer-review process to consistently include all changes to rate indication formulas and calculation logic.
2. **Documented approval**
   Approval is required before formula changes are promoted.
3. **Expense separation**
   Acquisition expenses are maintained separately from other operating expenses.
4. **Model reconciliation**
   Ratemaking results are reconciled with financial forecast models and pro formas.

Key message: the omission was disclosed and controls were strengthened.

Source: MPI Exhibit #9 and related 2027 GRA responses

8

Risk Classification
MANITOBA
PUBLIC INSURANCE

GLM Transition | A Deliberate Multi-Year Path

The 2027 GRA is the first full implementation, not the final state

2025 GRA	**Initial comparison**	Compared GLM and MBP results for Major Class 1.
2026 GRA	**Expanded parallel review**	Compared GLM and MBP results across all major classes.
2027 GRA	**Full implementation**	Implemented GLM-derived rate-group and major-class relativities.
Future GRAs	**Further development**	Evaluate enhancements to validation, model structure and remaining MBP components.

Transition objective: modernize the estimation technique while maintaining comparability and limiting unintended customer dislocation.

Risk Classification | What Changed in the 2027 GRA

Three key risk-classification developments, with different purposes and customer impacts

1 GLMs implemented

Rate line and major-class relativities are now estimated using GLMs.

Methodology modernized

2 Rate groups expanded

The proposed structure increases from +45 to +50 while retaining the +2 annual upward cap.

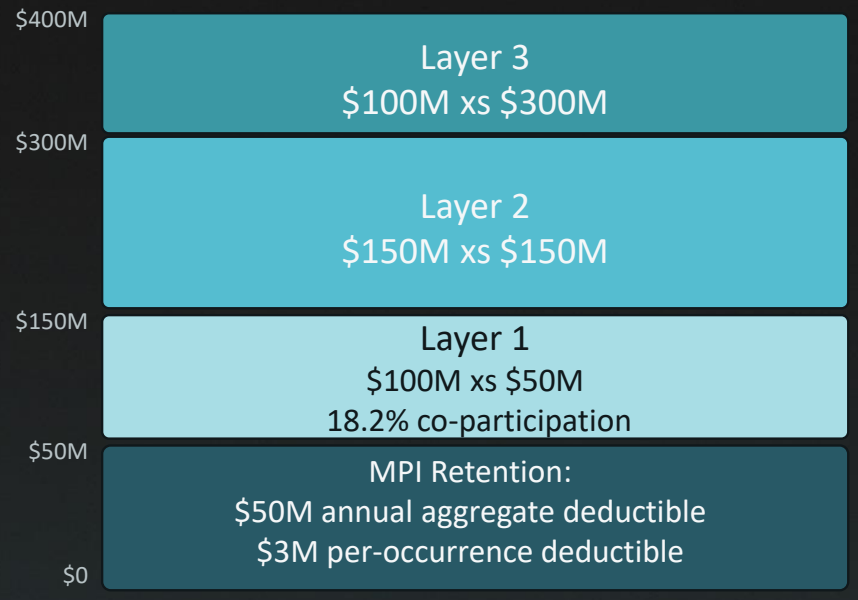
No added impact to existing portfolio

Highest assigned group: 43

With the +2 cap, existing vehicles can move to no more than +45 in the rating year.

3 DSR discounts updated

DSR discounts continue to be derived using MBP and move halfway toward indicated levels under the PUB Directive 10 of PUB Order 156/25; resulting in a 3.01% revenue reduction.



Revenue Reduction: - 3.01%

Overview of Reinsurance
MANITOBA
PUBLIC INSURANCE

Catastrophe Reinsurance at April 1, 2026

MPI entered the treaty year with $331.8M of reinsurance protection above a $50M annual aggregate retention.

PROGRAM STRUCTURE

HOW IT WORKS

01 **Three layers**

Protection applies between $50M and $400M, subject to treaty terms.

02 **Risk is shared**

MPI retains qualifying losses below and within the program; reinsurers assume their placed share of covered losses above the retention.

03 **Ratemaking basis**

The rate indication reflects an average historical catastrophe year, including retained losses and reinsurance costs.

TOTAL REINSURANCE PROTECTION **$331.8M**

KEY POINT | $331.8M of protection above MPI's $50M annual aggregate retention

13

A Major Storm Early in the 2026 Season

Four catastrophe events generated an estimated $392.4M of ultimate losses and materially reduced remaining protection early in the storm season.

$392.4M Estimated ultimate losses

$312.2M Expected reinsurance recoveries

$80.2M MPI retention

Event	Ultimate loss $M	MPI retention $M	Ceded to reinsurers $M
Parkland Flooding, 6–8 June	$6.7	$3.0	$3.7
Southern Manitoba Severe Convective Storm, 9–12 June	$329.1	$71.2	$257.9
Parkland Storms, 28 June–1 July	$10.2	$3.0	$7.2
Southwest Manitoba Storms, 5–7 July	$46.4	$3.0	$43.4
TOTAL	**$392.4**	**$80.2**	**$312.2**

WHY IT MATTERED **Most of the available limit was consumed while a significant portion of Manitoba's storm season remained.**

Estimates preliminary and subject to material change.

Source: MPI-PUB 1-29 c)

14

Additional Coverage Restored Protection

MPI purchased additional catastrophe protection effective July 10, 2026 to reduce exposure for the remainder of the treaty year.

TRANSACTION SUMMARY

Additional protection	**$200M xs $70M**
Per-occurrence deductible	**$3M**
Gross premium	**$38M**
Net premium	**~$30M**
Effective date	**July 10, 2026**

RATIONALE FOR THE PURCHASE

01 **Restore protection**
Most of the existing treaty limit had been consumed early in the year.

02 **Protect capital**
The additional cover reduced the potential impact of another significant event.

03 **Post-loss market pricing**
Protection purchased after a major loss carried materially higher cost than annual placement.

04 **Manage risk**
The decision reduced MPI's potential financial exposure if another significant event occurred

RISK-MANAGEMENT DECISION | Restore meaningful protection for the remaining season

15

2027/28 Reinsurance Considerations

Renewal decisions and prospective rate assumptions are related but occur on different timelines.

CURRENT ASSUMPTION

The filed 2027 GRA rate indication assumes the existing reinsurance program continues unchanged.

That remains the best-estimate basis for this application while updated loss and market information develops.

01

Capital and risk appetite

Evaluate MPI's capacity and appetite to retain catastrophe risk.

02

Program design

Review layers, coverage limits and retentions using updated catastrophe experience.

03

Market conditions and timing

Assess updated loss estimates, market capacity and renewal terms ahead of 1 April 2027.

2028 GRA IMPLICATION

Retain the average-year basis for the current indication.

Credible changes in expected catastrophe losses, reinsurance costs or program structure will inform the 2028 GRA.

16

Basic Ratemaking | Key Takeaways

The 2027 GRA reflects updated cost requirements, stronger controls, modernized risk classification and active catastrophe-risk management.

1 Rate indication

Claims remain the primary cost driver

The filed indication compares the required average premium needed to cover expected claims and expenses with projected premium under current rates.

2.38% FILED INDICATION

2 Corrections and controls

Two issues, targeted responses

Exhibit #8 changed the allocation among major classes, not the filed overall indication. Exhibit #9 identified omitted acquisition expenses. Controls have been strengthened.

DIFFERENT IMPACTS

3 Risk classification

Modernized with continuity

GLMs estimate rate-group and major-class relativities. DSR remains under MBP, and the rate-group expansion adds no impact to the existing portfolio in the rating year.

MEASURED GLM TRANSITION

4 Reinsurance

Retained losses plus protection

Rates provide for an average year of retained catastrophe losses and reinsurance costs. Additional 2026 coverage restored protection after early-season storms.

CATASTROPHE RISK MANAGED

Overall message: MPI's filed rate requirement reflects expected costs, strengthened controls, modernized risk classification and prudent catastrophe-risk management.
